Acid esters. Manufacture of salicylic	C. Kolbe	383,306	May 22	2134	.....	43	959
Acids of the diamidoazo-benzidines. Production of disulpho and disorbo	L. Paul	380,402	Apr. 3	140	.....	43	30
Acids of the diamidoazo-benzidines. Production of disulpho and disorbo	L. Paul	380,403	Apr. 3	143	.....	43	30
Acidometer	P. Bonte	383,433	May 29	2224	616	43	999
Adding and writing machine	A. C. Ladlam	384,378	June 12	808	210	43	1288
Adding-machine	C. C. Moore	383,973	June 5	196	57, 58	43	1158
Adjustable chair and swing	C. Bastian	383,286	May 22	1960	580	43	921
Adjustable handle	W. A. Faber	384,028	June 5	277	77	43	1174
Adjustable joint	G. C. Sweett	384,227	June 12	695	182	43	1261
Advertising-cards. Device for displaying	O. C. Hoffmann	380,391	Apr. 3	136	37, 38	43	27
Advertising-rack	I. H. Randall	380,696	Apr. 10	363	163	43	188
Aerial navigation. Apparatus for	B. Bontems	381,106	Apr. 17	1942	{383 / 384}	43	257
Air-brake	E. Andrews	385,284	June 26	2670	538	43	1546
Air-brake	A. B. Bolman	382,749	May 15	1511	344	43	709
Air-brake	T. S. E. Dixon	382,031	May 1	1357	60	43	555
Air-brake	H. S. Park	385,198	June 26	2036	581	43	1538
Air-brake attachment	G. B. Lehy	381,387	Apr. 17	1643	437	43	326
Air-brake. Automatic	E. J. Lewis	383,619	May 29	2216	770	43	1167
Air-brake. Automatic	R. Solano	382,067	May 8	1900	911	43	749
Air-brake system	H. Guela	384,067	June 19	1967	323	43	1378
Air-brake valve	H. Guela	384,066	June 19	1965	338	43	1378
Air-compressor	J. B. Erwin	382,709	May 15	1394	348	43	709
Air-compressor	W. T. Forster	384,256	June 12	779	203	43	1276
Air-compressor. Automatic	G. J. Keenan	384,589	June 12	1082	980	43	1325
Air-heater	D. Grove	384,203	June 5	538	147	43	1235
Air-ship	E. P. Johnston	765,889	June 5	50	18, 19	43	1138
Alarm:

Alarm-bolt	E. Harmon	384,761	June 19	1374	360	43	1360
Alarm-bolt for doors	E. Harmon	384,760	June 19	1373	{359 / 360}	43	1360
Alarm-lock	H. Gilles and D. Stern	382,971	May 15	1611	421	43	840
Album-clasp	T. M. Hase	382,302	May 8	636	162	43	640
Alloy	H. Ostermann and A. Prip	382,126	May 15	1413	.....	43	801
Alloy	H. Ostermann and A. Prip	382,627	May 15	1413	.....	43	801
Alloy	C. A. Paillard	384,709	June 19	1307	.....	43	1288
Alloy	C. W. Ward	384,731	June 19	1333	.....	43	1300
Alloy. Metallic	H. Ostermann and C. Lacroix	381,719	Apr. 24	2123	.....	43	451
Alloy. Metallic	H. Ostermann and A. Prip	381,718	Apr. 24	2122	.....	43	451
Alto-rilievo ornamentation. Roller for producing	J. H. Thelen	380,833	Apr. 10	198	216	43	165
Alumina from clay. Obtaining	F. J. Seymour	382,197	May 1	467	.....	43	589
Alumina from clay. Obtaining	F. J. Seymour	382,273	May 1	578	146	43	600
Alumina. Obtaining	K. J. Bayer	382,595	May 8	951	241	43	700
Aluminum. Furnace for reducing	F. J. Seymour	382,196	May 1	464	190	43	589
Ammonia and bone-black. Obtaining	F. Egner	381,632	Apr. 24	2280	508	43	481
Anchors. Machine for making building	J. Russell	385,140	June 26	1953	500	43	1528
Angle-clamp for the corners of tables, desks, &c.	D. J. Brougher	383,167	May 22	1937	504	43	911
Angles. Instrument for dividing	A. S. Yates	381,049	Apr. 10	1135	393	43	249
Animal or other power	J. Bechtold	384,603	June 19	1143	302	43	1254
Animal-releasing device	J. D. and C. A. Sullivan	385,077	June 26	1866	476	43	1502
Animal-trap	H. Barry	380,643	Apr. 3	500	140	43	102
Animal-trap	P. T. Beach	384,415	June 12	903	285	43	1293
Animal-trap	J. T. Belden	385,086	June 26	1876	479	43	1506
Animal-trap	J. Brasie	383,700	May 29	2214	717	43	1070
Animal-trap	W. Devolld and W. C. Devoll	384,627	June 19	1479	396	43	1419
Animal-trap	O. Huffman	380,439	Apr. 3	135	54	43	40
Animal-trap	C. H. Mittler	383,972	June 5	195	56	43	1158
Animals. Device for suspending and spreading slaughtered	E. Ekker	384,433	June 12	885	230	43	1320
Animals. Machine for grooming	N. Petersen	380,924	Apr. 10	237	249	43	192
Annunciator	F. E. Fisher	383,566	May 29	2231	668	43	1029
Annunciator and signaling apparatus	M. Martin	381,709	Apr. 24	2115	542	43	447
Annunciator. Clearing-out	C. E. Scribner	382,015	May 15	1494	440	43	756
Annunciator. Electric	J. Geary	381,772	Apr. 24	2198	574	43	463
Annunciator. Electric	C. E. Scribner	384,088	June 5	301	102	43	1190
Annunciator. Electrical	H. S. Dwyer	384,430	June 12	881	229	43	1307
Annunciator. Electrical needle	W. R. Gill and E. Segerdahl	383,725	May 29	2257	736	43	1078
Annunciator. Pneumatic	E. P. Garnell	384,144	June 5	448	124	43	1207
Annunciator. Pneumatic	W. E. Ostrander	382,051	May 1	365	60	43	562
Anti-friction compound	T. J. Mayall	384,920	June 19	1611	.....	43	1444

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Anti-friction roller for drawers	J. Barns	383,699	May 29	2695	712	43	1666
Arm or hand rest	W. M. Kinnard	384,221	June 12	631	170	43	1851
Armature. Dynamo	F. E. Fisher	383,585	May 29	2539	667	43	1669
Armature. Dynamo	F. E. Fisher	383,587	May 29	2538	666	43	1669
Armature. Dynamo	J. F. Kelly	381,799	Apr. 24	2060	540	43	444
Armature. Dynamo	M. A. Müller	381,636	Apr. 24	2060	537	43	436
Armature Dynamo	A. Schmid and H. M. Byllesby	383,659	May 29	2655	703	43	1657
Armature for dynamos and motors	O. B. Shallenberger	383,663	May 29	2662	708	43	1658
Armature for dynamos and motors	H. M. Byllesby	383,617	May 29	2590	687	43	1645
Armature for electric machines	H. M. Byllesby	383,619	May 29	2600	687	43	1646
Armature for electric motors	O. B. Shallenberger	383,664	May 29	2663	706	43	1659
Armatures of dynamos. Mounting	F. E. Fisher	383,564	May 29	2569	647	43	1639
	G. Westinghouse, Jr.	383,679	May 29	2683	709	43	1663
Armor-plates. Apparatus for the manufacture of	A. Wilson	381,453	Apr. 17	1741	{465 / 466}	43	355
Arrow for passing cord through pipe-lines	J. Geyser	382,257	May 1	560	141	43	616
Astronomical apparatus	E. L. Rugg	384,296	June 19	664	178	43	1857
Atomizer	J. J. Ochs	384,777	June 19	1398	365	43	1464
Auger. Spoke	S. B. Shaffer	380,701	Apr. 10	597	164	43	128
Augers. Die for making	A. Laundry	382,710	May 15	1988	330	43	769
Automatic sprinkler	C. W. Kernstetor	383,890	June 5	63	19	43	1132
Axle box. Car	J. M. Hallowes	383,738	May 29	2786	727	43	1678
Axle-box lids. Die for making car	K. Zallud	380,879	Apr. 3	113	33	43	94
Axle-box-milling machine	G. W. Morris	385,194	June 26	2031	530	43	1577
Axle boxes. Dust-guard for car	A. Paterson	383,540	May 29	2560	660	43	1661
Axle. Car	P. M. Kling	384,539	June 12	1034	270	43	1585
Axle-ends. Machine for turning	W. F. Lutz, Jr.	383,680	May 29	2918	770	43	1667
Axle for thrashing-machines	A. Paterson	382,725	May 15	1278	335	43	723
Axle for vehicles	F. W. Robinson	382,009	May 1	184	49	43	548
Axle-lubricator	J. R. Prescott	383,066	May 15	1777	459	43	872
Axle lubricator. Car	W. Cole, Jr.	382,458	May 8	878	224	43	595
Axle lubricator. Car	G. F. Godley	381,691	Apr. 24	2065	540	43	442
Axle lubricator. Car	J. J. Stever	385,213	June 26	2057	528	43	1542
Axle oiler. Car	S. Yeomet	382,946	May 1	537	137	43	612
Axle-plate for wheeled scrapers, agricultural machines, and similar purposes. Pole-attaching	E. Hounsel	380,436	Apr. 3	190	52	43	39
	G. W. Taft	382,015	May 1	196	50	43	550
Axle-skeins. Machine for making	S. B. Parsons	383,761	May 29	2814	{741 / 742}	43	1668
Axle-skeins. Manufacture of	E. Firth and A. and I. Tompkins	381,355	Apr. 17	1501	426	43	326
Axle. Vehicle	J. F. Dixon	381,849	Apr. 24	2297	597	43	461
Axle. Vehicle	A. Paterson	380,344	Apr. 3	52	18	43	13
Axle. Wagon	B. F. Richardson	382,902	May 15	1516	397	43	808
Axle. Wagon	N. W. Blevens	382,211	May 1	498	135	43	603
Axle-washer	N. L. Holmes	380,892	Apr. 10	892	250	43	193
Axles. Dust-guard for car	N. Harris	382,250	May 1	567	143	43	617
	W. S. Soule	381,591	Apr. 24	1947	513	43	414
Axles for vehicles. Manufacture of	J. G. Harrison	384,891	June 12	1022	{386 / 387}	43	1383
Axles. Manufacture of thimble-skeins for	J. F. Davidson	381,918	Apr. 17	1396	370	43	286
Axles of sheet metal. Making	T. C. Muns	383,188	May 22	1854	513	43	916
Axles. Sand-band for vehicle	J. H. Sharp	380,528	Apr. 3	334	96	43	68
Baby-jumper	M. P. Jones	382,614	May 15	1398	367	43	797
Baby-jumper	B. G. Lathrop	382,884	May 15	1493	391	43	818
Back-band	H. C. Johnson	382,365	May 8	736	188	43	656
Back-band hook	S. Ward	381,892	June 19	1565	407	43	1434
Back-band loop	E. R. Cahoone	384,423	June 12	873	227	43	1895
Badge. Designation	R. H. Lee	382,307	May 8	737	187	43	650
Bag: *See* Hand-bag. Traveling-bag.							
Bag-fastener	H. W. Comstock	384,130	June 5	495	118	43	1203
Bag-fastener	H. A. Mertens	381,365	Apr. 17	1492	393	43	300
Bag-handle. Sheet-metal	R. C. Jenkinson	381,790	Apr. 24	2223	582	43	468
Bag-holder	F. G. Fischer	380,794	Apr. 10	743	204	43	156
Bag-holder	W. F. Lewis	384,454	June 12	914	238	43	1363
Bag-holder	I. H. Weaver	384,104	June 5	381	107	43	1194
Bag-lock	T. W. Harrison	381,668	June 19	1271	333	43	1179
Bags and satchels. Fastening for hand	G. Crouch	385,243	June 26	2101	530	43	1553
Bags. Shoe for traveling	C. Reluisch	380,768	Apr. 10	702	194	43	149
Bagasse drier and furnace	A. G. De Aguiar	380,989	Apr. 10	1058	{279 / 280}	43	214
Bagasse-furnace	F. Cook	380,992	Apr. 10	1059	277	43	213
Baking-pan	E. F. Greene and F. H. Hendryx	383,177	May 22	1941	509	43	914
Bale-tie	T. T. Wells	382,396	May 8	781	198	43	667
Bale-tie. Wire	W. Hewitt	381,671	Apr. 10	1172	312	43	246
Baler. Machine for putting ties on	W. E. Dunbar	382,922	May 1	501	130	43	606
Baling-press	R. W. Archer	380,472	Apr. 3	943	66.67	43	49
Baling-press	J. N. Bartle	383,033	May 15	1719	448	43	851
Baling-press	P. K. Dederick	382,144	May 1	392	102	43	565
Baling-press	P. K. Dederick	382,954	May 15	1569	415	43	838
Baling-press	W. A. Laidlaw	382,167	May 1	464	111	43	594
	W. J. F. Liddell	381,983	Apr. 17	1457	382	43	380
Baling-press	A. Mattijets	380,810	Apr. 10	700	{189 / 190}	43	139
Baling-press	G. W. L. Meyer and F. J. Sutphen	384,993	June 26	1715	445	43	1472
Baling-press	W. F. and G. W. Shafer	385,397	June 26	2050	524	43	1561
Baling-press	E. C. Seay	384,284	June 12	977	181	43	1350
Ballot-box. Registering and canceling	H. R. Wolfe	381,975	May 1	120	29	43	280
Band-cutter	A. Bigelman	380,978	Apr. 10	1044	268	43	207
Band-cutter	J. Buchanan	382,680	May 15	1382	351	43	764
Band. Draw	J. L. Horst	381,926	May 1	30	11	43	288
Band. Elastic	J. N. Sargent	381,686	Apr. 17	1493	454	43	307
	R. W. Howard	381,579	Apr. 24	2276	617	43	426

Belting	L. Binns	383,306	May 22	1985	521	43	983
Belting. Machine	C. A. Schieren	383,373	May 22	2220	559	43	996
Belting. Machine for manufacturing rubber	J. Murphy. (Reissue)	10,930	June 12	1137	289	43	1344
Bench-stop	I. H. Terrell	384,405	June 12	840	201	43	1290
Berth, chair, &c.	P. Davey	383,868	June 5	97	9	43	1158
Berth for cars, vessels, &c.	A. D. Hobbie	384,182	June 5	477	131, 132	43	1213
Bicycle	C. F. Hadley	380,886	Apr. 10	878	236	43	180
Bicycle	A. F. Price	384,543	June 12	1052	275	43	1328
Bicycle	S. Smith	382,913	May 15	1580	401	43	925
Bicycle-lighting	W. T. Bowers	384,130	June 5	411	114	43	1199
Bicycle-pedal	W. E. Smith	383,074	June 26	1602	476	43	1568
Bill-holder	H. E. Leasure	380,685	Apr. 10	579	159	43	195
Billiard-cue	W. H. Fesler	384,614	June 19	1150	306	43	1357
Billiard-cushion	J. D. O'Connor	383,005	May 15	1602	435	43	949
Billiard-marker. Coin-actuated	E. C. Jones	383,228	May 22	9013	508, 509	43	988
Bird-cage spring	E. Wagner	385,571	May 8	1053	276	43	721
Bird-food holder	H. F. Estabrook	382,256	May 1	556	141	43	616
Bit: *See* Coal-drill bit.							
Bit-blanks. Machine for grooving	J. Swan	381,092	Apr. 10	1211	304	43	943
Bituminous substances. Machine for disintegrating	E. Groat	382,973	May 15	1613	423	43	940
Blackboard and wiping and dust-collecting apparatus	J. Kane	382,705	May 15	1255	333	43	769
Blacking-box holder	W. Taylor	384,318	June 12	731	197	43	1272
Blast-furnaces. Dust-catcher for	F. W. Gordon	381,774	Apr. 24	2199	575	43	464
Blasting-cartridges. Cap-protector for	T. De Coar and W. Keast	380,477	Apr. 3	250	60	43	51
Bleaching	E. Hermite	382,159	May 1	412	107, 108	43	580
Bleaching and dyeing apparatus	T. Davies	383,869	June 5	98	9	43	1196
Bleaching apparatus	W. R. Phillips	384,667	June 19	1541	400	43	1430
Blind fastener. Window	W. Simmonds	383,596	May 29	2565	679	43	1038
Blind. Inside	H. A. Benedict	384,954	June 26	1660	431	43	1461
Blind. Slatted	J. A. Sherington	381,649	Apr. 24	2024	531	43	429
Blind. Venetian	S. S. Patterson	383,978	June 5	204	50	43	1170
Blinds. Blind-rod for sliding	G. Poppert	380,930	Apr. 10	948	251	43	194
Block: *See* Building-block. Paving-block. Meat-block. Saw-mill head-block.							
Block-signal	G. W. Peterson	382,053	May 1	968	70, 71	43	582
Bloom shear-table and crop-end conveyer	F. H. Treat	384,220	June 5	538	153, 154	43	1229
Blow-pipe furnace	F. J. McLaren	383,971	June 5	193	56	43	1157
Board: *See* Bulletin-board. Ironing-board. Dash-board. Mold-board. Electric switch-board. Multiple switch-board. Game-board. Switch-board. Gang-board. Wash-board.							
Boat: *See* Paddle-wheel boat.							
Boat	G. N. Tibbles	381,729	Apr. 24	2143	561, 562	43	453
Boats, &c. Releasing device for	J. L. Cathcart	380,766	Apr. 10	733	201	43	154
Bobbin-winding machine	C. B. Rumsey	380,352	Apr. 3	72	24	43	17
Boiler: *See* Hot-water boiler. Steam-boiler.							
Boiler	F. W. Dean	385,102	June 26	1901	495	43	1511
Boiler	W. E. Dean	380,746	Apr. 10	663	183	43	141
Boiler	W. E. Haxtun	381,240	Apr. 17	1426	383	43	283
Boiler	G. F. Nilsson	382,722	May 15	1275	334	43	772
Boiler	A. Worthington	381,870	Apr. 24	2302	612, 613	43	493
Boiler-alarm	J. J. Ghegan	383,946	June 5	155	45	43	1150
Boiler and furnace	A. Stirling	381,595	Apr. 24	1953	515	43	415
Boiler-feed indicator	W. H. Rodgers	382,738	May 15	1288	337, 338	43	776
Boiler-feed pipe	S. B. Bryar	382,753	May 15	1315	345, 346	43	781
Boiler-feeder	A. Blatchley	384,119	June 5	410	114	43	1199
Boiler-feeding attachment	M. P. Janney	383,227	May 22	2012	528	43	988
Boiler for hot-water heaters	R. Neil and J. Morrison	384,461	June 12	923	240	43	1305
Boiler-furnace	G. W. Parkston	381,082	Apr. 10	1196	321	43	940
Boiler grate and furnace. Steam	G. Gulickson	380,719	Apr. 10	623	171, 172	43	133
Boiler-scale preventer	C. F. Baker	382,748	May 15	1309	344	43	780
Boilers. Apportioning furnace-draft for batteries of steam	N. W. Pratt	382,489	May 8	998	235	43	695
Boilers. Apportioning furnace-draft for batteries of steam	N. W. Pratt	382,490	May 8	998	235	43	695
Boilers. Automatic fuel-regulator for	G. E. Brettell	383,557	May 29	2582	685	43	1067
Boilers. Device for preventing incrustation in steam	W. B. Bull	383,795	May 29	2675	756	43	1089
Boilers. Junction-piece for steam	G. S. Strong	381,030	Apr. 10	1118	299, 300	43	226
Boilers. Removing impurities from steam	J. Binks	382,508	May 8	955	242	43	701
Bolt: *See* Alarm-bolt. Flour-bolt. Elevating-bolt.							
Bolt	C. Diebold	384,288	June 12	596	161	43	1245
Bolt	G. D. Murdock	380,813	Apr. 10	764	210	43	159
Bolt-cutter	W. L. Dutcher	382,084	May 1	230	61	43	557
Bolt-heading machine	E. N. Whitaker	385,680	June 26	1860	477	43	1504

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Bolt-heading machine	W. N. Whiteley, O. E. and A. S. Perrige.	383,083	May 15	1900	466, 467, 468, 469, 470, 471	43	676
Bolt-lock	W. A. Jordan	384,206	June 5	543	149	43	1236
Bolts. Machine for cutting the threads on	W. S. Halsey	380,867	Apr. 10	880	236, 237	43	180
Bolts, nuts, &c. Machine for shaving heads of	H. Minter	380,917	Apr. 10	922	247	43	189
Belting-reel	H. Bridenthal	381,304	Apr. 17	1539	415	43	316
Belting-reel	D. L. Hamaker	384,580	June 12	1021	266	43	1323
Belting-reel	B. Kniffler	382,695	May 1	331	86	43	574
Belting-reel	O. M. Morse	381,023	Apr. 10	1096	288	43	219
Belting-reel	M. Shaner	380,527	Apr. 3	333	95	43	68
Belting-reel frame	W. E. Gerton	382,132	May 1	491	105	43	567
Book and index. Combined	E. M. Rigby	383,543	May 29	2536	661	43	1035
Book and making the same. Record	J. W. Sea	384,248	June 12	669	179	43	1258
Book-binding and book	W. M. Kinnard	381,252	Apr. 17	1444	368	43	286

Book-cover	C. F. Morgan	382,719	May 15	1270	333	43	772
Book-cover	O. W. K. J. Nordenfalk	381,846	Apr. 24	2236	604	43	487
Book-index-cutting machine	A. Rothe	383,258	May 22	2033	530	43	936
Book. Scrap	H. Crocker	384,746	June 19	1353	353	43	1385
Book-signatures. Machine for gathering and collating	S. E. Johns	380,898	Apr. 10	901	241	43	185
Book. Turf-racing record	P. Mitchell	384,206	June 12	638	172	43	1252
Books. Binding of	A. J. Megee	383,315	May 22	9144	565, 566, 567, 568	43	952
Books. Case for the preservation of	C. D. Threlkeld	381,182	Apr. 17	1341	357, 358	43	277
Boom-fastening	J. H. Rushton	383,594	May 29	2562	678	43	1037
Boom for yachts, &c. Spinnaker	A. C. Crandall	383,172	May 22	1934	507	43	912
Boom-stick	F. H. Durell and W. Goldie	381,494	Apr. 17	1799	478	43	367
Boot. Felt	H. W. Hathorn	384,135	June 5	464	126	43	1210
Boot or shoe	G. S. Frantz	384,487	June 12	891	232, 233	43	1299
Boot or shoe	H. W. Furber	380,715	Apr. 10	616	169	43	132
Boot or shoe	O. H. Jewell	380,804	Apr. 10	753	206	43	156
Boot or shoe	J. W. Jones and E. K. Bridger	382,985	May 15	1630	427	43	842
Boot or shoe	W. F. Kearney	383,303	May 22	2131	562	43	949
Boot or shoe	C. F. Martine. (Reissue)	10,919	Apr. 3	555	151	43	112
Boot or shoe	R. N. Pratt and H. W. Johns	381,579	Apr. 24	1934	507	43	409
Boot or shoe	L. I. Shrader	380,408	Apr. 3	147	42	43	31
Boot or shoe	G. Valiant	385,218	June 26	2062	529	43	1544
Boot or shoe heel	C. H. Martin	384,634	June 19	1190	314	43	1362
Boot or shoe nail or rivet	G. A. Cavalli	382,072	May 1	298	78	43	568
Boot or shoe sole fitting machine	W. Avery	382,631	May 8	1148	294	43	736
Boot or shoe sole trimming machine	C. H. Trask	380,609	Apr. 3	456	129, 130	43	93
Boot or shoe soles. Dicing-cut machine for	W. O. Cree and G. A. Clough, Jr.	382,294	May 8	622	159	43	636
Boot or shoe soles. Machine for buffing	G. A. Fullerton	382,967	May 15	1604	410, 480, 570, 571	43	839
Boot or shoe trimming machine	C. H. Trask	383,331	May 22	2160	570, 571	43	954
Boot or shoe. Ventilated	H. A. Stevens	381,962	May 1	88	22	43	539
Boot protector. Felt	H. Saunders and E. C. Rauch	380,823	Apr. 10	779	213	43	163
Boot-tracing machine	G. W. Copeland	385,296	June 26	2197	561, 562	43	1570
Boots and shoes. Rack for holding	S. L. Saunders	380,938	Apr. 10	959	255	43	195
Boots and shoes. Rack for use in the manufacture of	A. Barrows	383,551	May 29	2514	663	43	1026
Boots or shoes. Button-piece for	A. Shea	380,731	Apr. 10	645	178	43	136
Boots or shoes. Detachable sole plate and spike for	S. Kingston and W. H. McGunnigal	383,133	May 22	1884	491	43	902
Boots or shoes. Heating apparatus for	F. Batter	382,661	May 15	1232	317	43	768
Boots or shoes. Machine for molding heel-stiffeners for	G. A. Knox	383,580	May 29	2545	672	43	1033
Boots or shoes. Machine for uniting the soles and uppers of	S. W. Robinson	380,662	Apr. 3	531	147	43	107
Boots or shoes. Manufacture of	J. C. Ivory	382,878	May 15	1487	389	43	817
Boots or shoes. Manufacture of heels for	A. L. F. Mitchell and J. P. Reynolds, Jr.	383,139	May 22	1890	493	43	903
Boots or shoes. Manufacture of welted	M. L. Keith	381,384	Apr. 17	1634	435	43	334
Boring bars. Automatic feed for	S. A. Brumbaugh	383,410	May 29	1967	521	43	922
Boring, drilling, &c. Machine for	M. C. Henley	382,730	May 29	2761	738	43	1078
Boring-machine	F. E. Keyes	384,654	June 19	1521	393	43	1407
Bottle-closure	W. Rediger	385,011	June 26	1757	455	43	1482
Bottle-filler	W. H. Comstock	384,022	June 5	984	75	43	1173
Bottle. Medicine	W. Rediger	380,456	Apr. 3	225	61	43	46
Bottle-necks. Machine for finishing	H. Semple	384,290	June 12	978	180	43	1259
Bottle. Nursing	W. F. Ware	380,635	Apr. 10	794	217	43	168
Bottle-opener and liquid-dropper. Combined	E. S. Randall	384,471	June 19	902	242	43	1396
Bottle-stopper	W. A. Caswell	384,824	June 19	1474	385	43	1418
Bottle-stopper	G. S. Chamberlin	382,277	May 22	2098	550	43	949
Bottle-stopper	J. Conner	382,459	May 8	879	224	43	685
Bottle-stopper	L. S. Hoyt	383,812	May 29	2805	767	43	1105
Bottle-stopper	W. H. Redington	382,191	May 1	456	118	43	598
Bottle-stopper	S. Twitchell	380,957	Apr. 10	990	262	43	201
Bottle-washer	J. C. Mackintosh	382,984	June 5	188	54	43	1156
Bottle-washing machine	H. Palmer	381,638	Apr. 24	2011	500	43	427
Bottles. Cork-holder for	W. Beardsley	382,650	May 15	1456	362	43	810

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Bottles. Packing for	E. J. Stewart	381,290	Apr. 17	1490	401	43	396
Bottles. Screw-stopper for	H. Barrett and J. J. Varley	380,769	Apr. 10	794	186	43	152
Bottles. Tool for grooving the mouths of	W. H. Wilson	382,929	May 15	1551	406	43	1013
Bottling machine. Beer	J. C. Bauer	382,023	May 1	214	57	43	555
Bow-drill	A. Franke	380,517	Apr. 3	342	92	43	68
Bowls. Making wooden	J. Berkey	380,742	Apr. 10	656	168	43	140

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Brush	J. J. Ashburner	381,749	Apr. 24	2189	567	43	457
Brush	H. Berry	381,926	Apr. 17	1372	367	43	268
Brush	P. Wagner	382,898	May 29	2044	646	43	1013
Brush. Blacking	W. M. Baker	383,694	May 29	2050	711	43	1065
Brush. Blacking	J. H. Beauregard and W. F. Bidwell	381,607	Apr. 24	1973	516	43	419
Brush. Fountain	J. A. Pearce	380,345	Apr. 3	53	18	43	13
Brush. Nail	G. H. Conrean	380,470	Apr. 3	250	69	43	51
Brush. Shoe and other	R. Nicol, Jr.	384,462	June 19	1304	340	43	1305
Bucket cover. Sap	H. Walcott	380,958	Apr. 10	901	228	43	192
Buckle	M. Clement	383,198	May 22	1837	481	43	893
Buckle	G. F. Eberhard	382,516	May 8	985	244	43	703
Buckle	G. F. Eberhard	382,594	May 8	1004	261	43	720
Buckle	F. C. Hall	383,121	May 22	1888	496	43	899
Buckle	J. F. Molloy	383,783	May 29	2090	736	43	1068
Buckle	D. L. Smith	383,498	May 29	2038	646	43	1011
Buckle	E. A. Smith	384,936	June 19	1631	423	43	1447
Buckle	E. H. Wheeler	381,973	May 1	119	27	43	535
Buckle and spring-hook. Combined	W. James	382,164	May 1	419	110	43	560
Buckle and trace-carrier. Combined back-band	S. H. Teles	383,788	May 29	2055	751	43	1066
Buckle. Back-band	E. T. Seamon	385,936	June 26	2040	563	43	1541
Buckle-frames. Manufacture of	G. R. Kelsey	384,449	June 12	909	237	43	1302
Buckle or clasp	W. Grise	383,390	May 22	2112	537	43	946
Buckle. Safety	J. G. Kitchell	384,981	June 26	1704	442	43	1471
Buckle-shield. Elastic	G. O. Simmons	382,944	May 1	525	136	43	619
Buckle. Suspender	C. Voorhis	382,199	May 1	488	130	43	589
Buckle. Suspender	W. J. Walters	381,360	Apr. 17	1561	405	43	309
Buckle. Trace	B. C. Smith	385,146	June 26	1992	502	43	1523
Buckle. Tug	H. C. and L. C. Minard	382,545	May 8	1014	259	43	712
Buckles. Loop for suspender	D. L. Smith	382,494	May 8	933	236	43	694
Buffet for housekeeping	A. L. Dey	383,871	June 5	31	10	43	1137
Buffing-machine	T. E. Keavy	382,641	May 1	250	64, 65	43	580
Buggy-boot	P. Bosche	382,340	May 8	712	180	43	654
Buggy prop. Top	L. Bateman	382,564	May 8	1078	277	43	728
Bugs. Machine for destroying potato	W. Heney and J. W. Bailey	383,284	May 22	2116	558	43	947
Building-block	H. S. Palmer	384,541	June 12	1650	274	43	1269
Building construction. Iron	L. S. Buffington	383,170	May 22	1931	{505 / 506}	43	911
Buckeye brace	W. Hankin, Sr	380,567	Apr. 3	305	113	43	81
Buildings. Construction of	M. H. Eaton	381,767	Apr. 24	2191	573	43	442
Bulletin-board	L. J. De Land	381,242	Apr. 17	1578	423	43	283
Bullion from slag, matter, and spelss. Apparatus for separating base	W. B. Devereux	381,119	Apr. 17	1959	337	43	262
Bung	J. H. Sherwood	381,636	Apr. 17	1711	458	43	361
Bung and air-vent	A. Pape	381,981	Apr. 10	1197	320	43	240
Bung-bushing	R. Pantlarge	384,887	June 19	894	214	43	1288
Bung-fastener	G. A. Gerlinden and A. F. Gärtner	381,980	May 1	30	9	43	532
Bung-making machine	F. M. La Boiteaux	382,004	May 1	180	46, 47	43	547
Buoys and boats. Bell-ringing device for	G. Berger	383,532	May 29	2516	664	43	1046
Burners	D. C. Clapp	381,327	Apr. 17	1565	419	43	320
Burners	D. C. Clapp	381,760	Apr. 24	2182	571	43	466
Burglar-alarm	S. C. Freeman and J. B. Seward	384,728	June 19	1361	355	43	1280
Burglar-alarm	S. Goulden and J. Clarke	382,972	May 15	1510	423	43	640
Burglar-alarm	W. E. McIntosh	380,918	Apr. 10	917	246	43	182
Burglar-alarm	W. E. McIntosh	382,484	May 8	930	232	43	694
Burglar-alarm	W. L. Swan	382,669	May 8	1203	218	43	750
Burglar-alarm. Electric	H. C. Reeme	382,430	May 8	838	{215 / 216}	43	679
Burglar-alarm. Electric	G. F. Taft	382,444	May 8	853	218	43	681
Burial-casket	J. Walker	381,194	Apr. 17	1358	363	43	260
Burial-caskets. Fastener for	E. and B. Holmes	382,160	May 1	415	109	43	569

Button. Detachable	W. W. Covell	383,441	May 29	2333	630	43	992
Button-fastener	E. P. Clark and N. D. Ingraham	384,019	June 5	256	74	43	1171

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Button-fastener	C. E. Vreeland	382,342	May 8	697	175	43	651
Button-fly-marking machine	H. R. Corkhill, Sr	380,904	Apr. 10	1653	278	43	213
Button-forming machine	R. Hörmann	380,782	Apr. 10	692	173	43	134
Button. Hinged shoe	O. C. Bugbee	381,398	Apr. 17	1543	416	43	317
Button. Hinged shoe	R. H. Lewis	381,477	Apr. 17	1773	473	43	361
Button-hole cutter	J. R. Hopkins	384,164	June 5	480	138	43	1216
Button-hole cutter	G. W. Peters	384,710	June 19	1308	342	43	1326
Button-hole cutter	W. P. Vrooman	384,653	June 19	1212	340	43	1308
Button-hole cutting and embossing machine	Z. T. French and W. C. Meyer	381,995	May 1	163	41 42 43	43	511
Button-hole files. Mechanism for stamping and cutting out	G. Valiant and C. Dancel	385,319	June 26	2064	569 550	43	1545
Button-hole opener	J. R. Stephens	383,021	May 15	1770	442	43	857
Button-loop and safety-pin	E. Pickhardt	381,639	June 19	1195	316	43	1304
Button-machine	J. Emery	383,802	May 29	2193	763 764	43	1102
Button-machine	G. W. Prentice	383,490	May 29	2421	643	43	1009
Button-machine	A. Wittig	382,786	May 15	1363	358	43	790
Button-making device	J. Stewart	384,547	June 12	1058	276	43	1329
Button-making machine	F. Bocks	380,980	Apr. 10	1029	269	43	206
Button-manufacturing machine	G. Heidmann, E. Höltgen, and C. Egen	383,881	June 5	45	15	43	1130
Button or stud. Detachable	H. F. Hambruch	383,092	May 15	1750	454	43	868
Button-setting machine	F. H. Richards	381,030	Apr. 10	1089	292 293	43	222
Button-setting machine	F. H. Richards	381,031	Apr. 10	1103	294 295	43	222
Button-setting machine	J. H. Vinton	382,341	May 8	695	175	43	651
Button-setting machine	A. G. Wilkins	381,310	Apr. 17	1517	409 410	43	311
Button-setting machines. Apparatus for making raceways for	J. H. Vinton	381,296	Apr. 17	1495	404	43	307
Button-setting machines. Die for	J. H. Vinton	382,340	May 8	694	175	43	651
Button-setting machines. Making raceways for	J. H. Vinton	381,298	Apr. 17	1498	404	43	308
Button. Sleeve	O. T. Moock and W. L. Headley	382,485	May 8	981	234	43	894
Buttons, &c. Making	S. Cottle	384,192	June 5	519	141	43	1222
Buttons. Making	S. Cottle	384,236	June 5	572	156	43	1232
Buttons. Manufacture of	D. A. Ladd	380,807	Apr. 10	756	207	43	158
Cabinet-case for holding railway-folders	G. A. Fellows	380,877	Apr. 10	863	236	43	177
Cable and car-propeller. Elevated	H. Casebolt	384,124	June 5	416	115 116	43	1200
Cable conduit and truck	W. Heckert	382,810	May 15	1303	366	43	796
Cable-covering machine	C. H. Gersch	383,353	May 22	2195	589	43	961
Cable-grip	W. J. E. Carr	381,994	May 1	12	3	43	517
Cable-grip	W. J. E. Carr	381,995	May 1	13	4	43	517
Cable-grip	F. H. Morse	385,195	June 26	2032	560	43	1538
Cable-grips and other purposes. Friction-roller for	T. J. Mayall	381,404	Apr. 17	1660	444	43	341
Cable road and machinery for operating the same	E. J. Weston	382,575	May 8	1002	271 272	43	722
Cable-road grip-gear	M. Tolle	381,489	Apr. 17	1791	477	43	365
Cable roads. Chain-grip for	W. Heckert	381,689	June 19	1272	333	43	1370
Cable roads. Driving machinery for	W. Heckert	383,486	May 29	2381	633 634	43	1002
Cable-splices. Locking device for	W. R. Patterson	382,736	May 15	1279	335 336	43	774
Caisson. Portable	H. P. Kirkham	381,797	Apr. 24	2233	584 585	43	470
Calculator. Interest	C. M. Dunham	384,431	June 12	892	230	43	1297
Calendar	J. Cussons	385,245	June 26	2105	539	43	1553
Calendar. Memorandum	A. H. Isbell	384,526	June 12	1029	269	43	1324
Calipers. Beam	C. E. Billings	382,348	May 8	712	180	43	654
Calipers. Combined outside and inside	O. D. Warfield	380,836	Apr. 10	794	217	43	166
Camera: *See* Photographic camera.							
Can: *See* Drip-can. Oil-can. Mucilage-can.							
Can-bodies. Apparatus for forming sheet-metal	F. M. Leavitt	382,537	May 8	1001	254 255 256	43	760
Can-body-making machines. Feeder for	J. Stevens	380,774	Apr. 10	709	196	43	150
Can clamp. Fruit	M. J. Hamlin	384,361	June 12	788	205	43	1278
Can cover. Milk	F. Stark	383,024	May 15	1764	443	43	858
Can-filling attachment	J. H. J. Haines	381,236	Apr. 17	1422	388	43	292
Can-filling machine	G. H. Perkins	381,281	June 5	207	61 62 63	43	1160
Can-filling machine	C. Seimel	383,505	May 29	2502	678	43	1037
Can for printers' ink, &c.	C. H. Hollis	381,553	Apr. 24	1868	498	43	402
Can-heading machine	F. M. Leavitt	382,538	May 8	1006	256 257 258	43	710
Can-heading machine	J. Solter	382,567	May 8	1047	266 267	43	719
Can-opener	J. Blakeslee	384,759	June 19	1344	351	43	1383
Can-opener	W. P. Quesnell	380,406	Apr. 3	146	42	43	30
Can-opener and sheet-metal cutter	E. Hawes	384,973	June 26	1687	439	43	1467
Cans. Nozzle for sheet-metal	W. Vogel	383,040	May 29	2344	779	43	1112
Cans with oils and other liquids. Box for filling	G. H. Perkins	383,979	June 5	205	60	43	1160
Canals, railway-beds, &c. Construction of	J. E. Robinson	380,934	Apr. 10	953	253	43	194
Candlestick	R. H. Mehl and R. Knott	380,506	Apr. 3	300	87	43	61
Cane and chair. Combined	J. H. Kamerer	382,388	May 8	642	168	43	642
Cane. Machine for cutting sugar-	L. Rea	385,484	June 26	2091	538	43	1550
Cane, umbrella, and camp-stool. Combined	M. Schiff	384,799	June 19	1415	371	43	1408

Car. Stock	J. F. Elder	384,832	June 19	1486	387	43	1439
Car. Stock	C. Langguth	380,725	Apr. 10	632	{173 / 174 / 175}	43	135
Car. Stock	W. H. Miller and N. Z. Seitz	382,238	May 1	525	{134 / 135}	43	610
Car. Stock	R. H. Ripley	384,931	June 19	1624	422	43	1446
Car. Stock	N. Z. Seitz	380,600	Apr. 3	445	125	43	90
Car. Stock	N. Z. Seitz	380,638	Apr. 3	491	138	43	100
Car. Stock	L. R. Stiles	382,843	May 15	1433	377	43	805
Car. Street	J. W. Evans	381,918	May 1	98	8	43	580
Car-switch. Automatic	J. R. Potter	381,949	May 1	71	18	43	588
Car-unloader	H. M. Barnhart	384,111	June 5	388	109	43	1195
Car-ventilator	J. Hutton	380,440	Apr. 3	196	54	43	40
Car-ventilator	W. Wright	384,184	June 5	507	139	43	1219
Car-vestibules. Equalizer for	H. H. Sessions	383,619	May 15	1698	441	43	857
Car-wheel	H. R. Allen	381,846	June 5	1	1	44	1121
Car-wheel	F. G. Myers	384,924	June 19	1617	420	43	1445
Car-wheel	W. G. Richards	383,989	June 5	210	63	43	1163
Cars. Air-brake for railway	T. S. E. Dixon	382,632	May 1	234	60, 61	43	556
Cars. Air-heating device for	L. P. Converse	383,171	May 22	1932	{506 / 507}	43	912
Cars. Apparatus for heating railway	W. H. Plumb	383,247	May 22	2041	536	43	934
Cars. Appliance for railway	J. Goodfellow	383,456	May 29	2355	627	43	996
Cars. Automatic air-supply for propelling	L. C. Pressley	383,826	May 29	2924	772	43	1109
Cars. Automatic electric gas cut-off for railway	F. C. Brower	384,676	June 19	1250	329	43	1375
Cars. Automatic pipe-coupling for railway	W. F. Grassler	383,298	May 22	2108	557	43	945
Cars. Bearing for street	H. L. Phelps	384,782	June 19	1402	367	43	1405
Cars by electricity. Apparatus for lighting railway	I. A. Timmis and S. C. C. Currie	383,502	May 29	2438	647	43	1012
Cars by electro-chemical means. Heating railway	E. E. Rice	381,819	Apr. 24	2280	{584 / 585}	43	477
Cars. Device for derailing	G. H. Gere	383,723	May 29	2735	726	43	1077
Cars. Die for making stake-pockets for	C. T. Schoen	381,175	Apr. 17	1332	356	43	275
Cars. Draft-timber for	J. B. Owens	384,588	June 12	1118	295	43	1340
Cars. Draw-gear for railway	C. H. Starr	382,840	May 15	1428	375	43	804
Cars. Electric heating apparatus for railway	E. E. Rice	381,816	Apr. 24	2264	{591 / 592}	43	475
Cars. Electric-lighting apparatus for railway	H. E. Dey	381,915	May 1	25	7	43	519
Cars. Electric motor for railway	W. M. McDougall	382,483	May 8	919	233	43	683
Cars. Electric signal for railway	J. R. De Mier	380,647	Apr. 3	507	142	43	103
Cars. Folding step for	A. J. Barber	382,670	May 15	1219	316	43	761
Cars. Frame for railway	M. A. Zurcher	384,225	June 5	568	158	43	1231
Cars. Head and back rest for railway	H. B. Smith	380,460	Apr. 3	227	62	43	66
Cars. Heating railway	E. B. Benham	381,754	Apr. 24	2175	569	43	459
Cars. Heating railway	W. M. Scott	381,647	Apr. 24	2021	530	43	429
Cars. Heating railway	C. Taylor	383,269	May 22	2228	591	43	987
Cars. Heating railway	C. S. Townley	383,639	May 29	2943	779	43	1119
Cars. Heating system for railway	J. Emerson	383,687	May 29	2923	{694 / 695}	43	1051
Cars. Indicator for street	F. Hicks	380,709	Apr. 10	748	205	43	157

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Cars. Link and pin holder for	C. L. Ward	384,655	June 19	1215	331	43	1269
Cars. Lubricating attachment for railway	J. A. Criswell	383,556	May 29	2563	685	43	1033
Cars. Metallic platform for railway	J. T. Goodfellow	385,177	June 26	2600	513	43	1521
Cars over temporary obstructions. Device for carrying	C. H. Little	382,711	May 15	1261	330	43	779
Cars. Safety appliance for railway	J. A. Jamieson	380,630	Apr. 3	481	136	43	98
Cars. Sand-box for street	W. V. H. Willson	382,947	May 1	530	137	43	812
Cars. Shield or cover for heaters and stoves for use on railway	G. A. Brown	382,615	May 29	2397	666	43	1045
Cars. Stake-pocket for	C. T. Schoen	381,174	Apr. 17	1331	355	43	275
Cars. Steam-coupling for railway	J. I. Collins	383,688	May 29	2619	691	43	1046
Cars. Steam-heating apparatus for railway	J. Emerson	382,596	May 8	1696	432	43	720
Cars. Steam-heating pipe-connection for	J. Emerson	382,597	May 8	1696	382	43	720
Cars. Street-indicator for	G. A. Piddock	382,709	May 15	1335	351	43	765
Cars. Street or station indicator for	W. F. Williams	384,468	June 12	950	249	43	1311
Cars. Ticket-holder for railway	J. B. McIntyre	380,505	Apr. 3	298	86	43	80
Carburetor	C. Bens	382,565	May 8	1679	{277 / 278}	43	726
Carburetor	C. S. King and E. G. Brown	385,121	June 26	1927	{491 / 492}	43	1516
Carburetor	L. Marks	382,619	May 15	1405	{368 / 369}	43	780
Carburetor	J. P. Wilson	383,204	May 22	1974	519	43	939
Card-hanger	H. S. Hack	384,084	June 5	225	60	43	1175
Card-rack	A. S. Greenwood	384,439	June 12	894	233	43	1289
Carding-engine	W. Brown	383,435	May 29	2367	{617 / 618}	43	991
Carding-engine	J. M. Hetherington	381,781	Apr. 24	2210	578	43	466
Carding-machines. Mechanism for operating doffer-combs of	E. Wright	381,516	Apr. 17	1637	{485 / 486}	43	374
Carding-machines. Mechanism for stripping the top-flats of	A. Falls	382,398	May 8	1100	283	43	789
Carpenter's framing-gage	L. P. Pickering	385,321	June 26	2222	572	43	1577
Carpenter's gage	A. Laporte	385,194	June 26	1932	493	43	1518
Carpet-cleaner and dust-conveyer	H. A. Widman, Jr	383,428	May 29	2303	611	43	979
Carpet-cleaning machine	A. Burckard	381,110	Apr. 17	1246	335	43	259
Carpet fabric	H. Hardwick	382,157	May 1	409	107	43	569
Carpet-fastener	G. Barrow	383,849	June 5	4	1	43	1181
Carpet-stretcher	L. R. Dey	382,925	May 8	894	159	43	639
Carpet-stretcher	B. Manning	384,456	June 12	918	238	43	1304
Carpet-stretcher	C. C. F. Nieschang	381,926	June 19	1619	421	43	1443
Carpet-sweeper	H. A. Gore, H. W. Bu Ton and G. W. Kelley.	383,806	May 29	2690	765	43	1104
Carriage. Baby	G. H. Baker	384,494	June 12	969	253	43	1313
Carriage. Baby	J. H. Gibson	381,634	Apr. 24	2302	509	43	462
Carriage-boot	J. W. Storrs	381,965	May 1	96	23	43	533
Carriage-bow	J. R. Fox	383,576	June 5	36	18	43	1138
Carriage. Child's	G. Riexinger	382,491	May 8	929	235	43	685
Carriage-curtain-cord holder	J. G. English	382,957	May 15	1563	418	43	837
Carriage-curtain fixture	F. A. Brandenburg	382,287	May 1	604	153	43	604
Carriage-top	J. Morts	381,945	May 1	66	16	43	587
Carriage-top	M. D. Taylor	384,219	June 5	557	153	43	1239
Carriage-top. Folding	J. Morts	381,944	May 1	65	16	43	587
Carriage-top spring	S. W. Cately	382,293	May 8	921	156	43	636
Carriage-wheel fender	G. C. W. Magruder	384,989	June 26	1710	444	43	1472
Carriage-window	A. W. Child and G. B. Childs	383,437	May 29	2329	618	43	991
Carriages, cribs, or cradles. Attachment for baby	S. A. Holman	381,878	Apr. 24	2275	617	43	496
Carriages. Wheel-fender for	A. C. Rogers and H. Steas	384,335	June 12	746	196	43	1271

Cash register and indicator	W. W. Wythe	384,490	June 12	962	{250 251	43	1312
Cash registering and indicating apparatus	C. B. Hopkins	384,692	June 19	1283	{336 337	43	1381
Cash-tills. Recorder for	G. R. Stokes, W. Loney, and T. M. Favell.	384,337	June 12	750	197	43	1271
Casks or barrels. Agitator for	G. M. Thompson	385,151	June 26	1970	504	43	1525
Caster	E. G. Asmus	384,886	June 19	1569	408	43	1435
Caster	A. Lehmann	381,476	Apr. 17	1772	473	43	361
Caster	M. B. Schenck	381,173	Apr. 17	1330	355	43	275
Caster attachment for stoves or furniture	M. Devoy	381,120	Apr. 17	1262	338	43	232
Caster for stoves, &c.	A. H. Conn	385,240	June 26	2000	538	43	1562
Caster-frame	H. C. Hart	383,525	May 29	2475	653	43	1018
Caster. Furniture	W. E. Gard	384,837	June 19	1498	389	43	1422
Caster-rollers. Manufacturing	R. B. Codling	380,790	Apr. 10	736	202	43	155
Caster. Trunk or furniture	J. P. Carmichael	381,759	Apr. 24	2168	570	43	460
Casting car-wheels. Apparatus for	J. R. Davies	381,115	Apr. 17	1253	336	43	230
Casting curved pipe. Core-arbor for	P. Rieth	381,645	Apr. 24	2017	389	43	494
Casting ingots. Mold for	T. Hampton and J. Facer	380,321	Apr. 3	20	6	43	6
Casting machines. Elevator for ingot	J. B. D. Boulton	384,345	June 12	760	199	43	1273
Casting metal	D. C. Stover	381,658	Apr. 24	2036	533	43	430
Casting metal. Mold for	S. D. Locke	383,060	May 15	1766	456	43	870
Casting-mold	T. H. Pasco	383,318	May 22	2148	567	43	959
Casting ordnance. Apparatus for	R. J. Gatling	380,756	Apr. 10	675	{186 187	43	144
Casting-pattern	F. M. Stevens	380,827	Apr. 10	785	{214 215	43	164
Casting saw-teeth. Mold for	H. G. Hubert	382,089	May 1	320	84	43	572
Castings. Core-arbor for hollow	W. E. Warner and F. A. Austin	383,603	May 29	2570	681	43	1039
Castrating instrument	J. Phillips	384,215	June 5	553	152	43	1228
Catamenial sack	J. Hothersall	384,525	June 12	1029	268	43	1394
Ceiling. Fire-proof	P. B. Wight	384,947	June 19	1648	428	43	1451
Ceiling. Metallic	W. R. Kinnear	382,092	May 1	327	85	43	573
Ceiling. Metallic	W. R. Kinnear	382,093	May 1	328	85	43	573
Ceiling. Metallic	W. R. Kinnear	382,094	May 1	329	86	43	574
Cellars water-proof. Rendering	F. J. De Borger	385,103	June 26	1903	485	43	1519
Celluloid surfaces. Ornamenting	A. Bensinger	380,272	May 22	2094	.....	43	941
Cement. Composition for making	J. Wolff	383,932	June 5	136	.....	43	1147
Cement for calking metallic joints	W. Watkins	381,449	Apr. 17	1737	.....	43	354
Cement. Hydraulic	J. Murphy	382,376	May 8	753	.....	43	662
Cement. Manufacture of articles from hydraulic	J. W. Stockwell	381,295	June 12	692	192	43	1260
Cement pipes. Machine for making	L. G. Haase	382,974	May 15	1614	{422 423	43	841
Centrifugal machine	G. N. Downe	380,555	Apr. 3	376	107	43	77
Centrifugal machine	A. Freitag	382,966	May 15	1603	419	43	838
Centrifugal machine	F. H. Richards	384,718	June 19	1316	344	43	1397
Cervix-clamp	W. S. How	382,039	May 1	248	64	43	559
Chain attachment. Watch	H. M. Stroud	382,697	May 8	1138	293	43	737
Chain-cutter teeth. Machine for making blanks for	C. H. Douglas	383,347	May 22	2162	578	43	980
Chain. Detachable-link	R. F. and J. H. Redick	382,554	May 8	1088	282	43	716
Chain. Drawing	C. C. Klink, F. Pinkowski, and A. Sullmann.	382,043	May 1	253	65	43	559
Chain. Drive	E. Schenck	382,057	May 1	272	71	43	563
Chain-fastener	J. F. Sears and H. E. Kelley	381,855	Apr. 24	2341	607	43	469
Chain-wrench	W. S. Rollings	381,424	Apr. 17	1690	453	43	346
Chair: *See* Adjustable chair. Barber's chair. Dental chair. Dental and other chair. Folding chair. Life-preserving chair. Rail-chair. Rattan chair. Reclining-chair. Rocking-chair. Tilting-chair.

Clipper. Hair	T. L. Phipps and W. Burman. (Reissue.)	10,931	May 15	1824	477	43	899
Clipping machine. Hair	L. S. Lee	382,998	May 1	605	153	43	624
Clock	A. and H. E. Junghans	381,926	Apr. 24	1997	524	43	494
Clock-dial	A. Bannatyne	385,109	June 26	1940	507	43	1327
Clock. Electric alarm	E. J. Colby	383,439	May 29	2231	619	43	992
Clock. Electric pendulum	A. L. Parcelle	384,271	June 12	645	174	43	1254
Clock-movement	A. E. Hotchkiss. (Reissue)	10,920	Apr. 10	1220	327	43	246
Clock-pendulum	A. L. Parcelle	383,539	May 29	2499	659	43	1023
Clock striking mechanism	C. E. Burnham	384,191	June 5	517	141	43	1242
Clocks. Circuit-closing device for electric	C. H. Pond	383,655	May 29	2650	701	43	1076
Clocks. Electric apparatus for winding	M. Vian	383,786	May 29	2680	732	43	1096
Clocks. Electric winding attachment for	A. J. Reams	384,472	June 12	932	{942 / 943}	43	1307
Clocks. Winding and setting attachment for	J. Zelly	381,603	Apr. 24	1966	517	43	418
Clod-crusher and land-roller. Combined	C. L. Jensen	382,612	May 8	1117	287	43	733
Closet:							
See Dry closet. Water-closet.							
Cloth-cutting machine	G. J. W. Galster	385,050	June 26	1824	468	43	1495
Cloth-cutting machine	G. A. Ries	381,644	Apr. 24	2016	549	43	429
Cloth-cutting machine	A. Warth	380,962	Apr. 10	996	{964 / 965}	43	202
Cloth-cutting machine	A. Warth	380,963	Apr. 10	996	{965 / 966}	43	203
Clothes-drier	W. L. Gale	384,616	June 19	1161	307	43	1356
Clothes-drier	H. Heine	382,422	May 8	815	208	43	674
Clothes-drier	J. L. Lincoln	380,332	Apr. 3	37	14	43	10
Clothes-drier	H. C. Price	382,209	May 1	573	145	43	619
Clothes-drier	O. M. Shannon	380,949	Apr. 10	973	258	43	198
Clothes-drier	E. S. Sutton	384,179	June 5	501	137	43	1218
Clothes-drier	J. Danner	384,194	June 5	523	142	43	1232
Clothes-rack	S. A. Parker	381,414	Apr. 17	1675	449	43	344
Clothes-stand	H. T. Lemon	384,453	June 19	913	236	43	1383
Clothes-washer. Atmospheric	A. T. Sheets	381,467	Apr. 17	1709	476	43	374
Clover-huller	J. Bruyière	385,093	June 26	1893	481	43	1508
Clutch	E. B. Lake	385,123	June 26	1931	493	43	1517
Clutch-coupling	G. F. Hutchins	383,297	May 22	2130	559	43	946
Clutch. Friction	H. C. Crowell	380,384	Apr. 3	130	35	43	25
Clutch. Friction	H. C. Crowell	383,104	May 22	1830	492	43	843
Clutch. Friction	W. R. Havens. (Reissue)	10,926	May 1	609	154	43	625
Clutch. Friction	J. A. Keller	380,336	Apr. 3	37	6	43	7
Clutch. Friction	A. Nelson	384,260	June 12	641	{172 / 173}	43	1239
Coal. Chain conveyer for handling	J. M. Dodge	382,638	May 8	1153	297	43	749
Coal-drill bit	D. Corgan	381,114	Apr. 17	1258	336	43	289
Coal-hod	E. Barrath	382,939	May 15	1567	408	43	852
Coaster. Wheeled	O. A. Wheeler	381,661	Apr. 24	447	126	43	91
Coat-adjuster	W. H. Osmer	384,214	June 5	552	152	43	1238
Coat and hat hook	R. and O. Lacourse	384,760	June 19	1394	363	43	1401
Coat and hat hook	W. H. Lawson	382,697	May 1	332	87	43	574
Coat and pantaloons supporter. Combined	F. Taylor	384,001	June 5	435	69	43	1166
Coat-holder. Automatic	S. L. Rice	381,898	Apr. 24	2044	545	43	434
Coats. Making	T. H. Simmons and R. M. Eastman	380,602	Apr. 3	2389	621	43	499
Cock	W. Cohen	385,058	June 26	1879	492	43	1500
Cock box. Stop	J. A. Prout	382,900	May 15	1514	396	43	632
Cock. Gage	N. Barry, Jr	380,308	Apr. 3	4	1	43	3
Cock. Stop	J. R. Hodges and W. M. Davis	385,052	June 26	1892	488	43	1495
Cocks, valves, and other steam-fittings. Non-conducting hand-wheel for	S. Hawkridge	383,356	May 22	2198	567	43	908
	F. Lunkenheimer	383,474	May 29	2.93	636	43	1004
Cocoanut-meat. Machine for cutting	J. O. Bartholomew	384,414	June 12	861	{224 / 225}	43	1293
Coffee-making machine	E. K. Sargeant	382,111	May 1	340	98	43	577
Coffee-mill	J. P. Humble	381,674	Apr. 10	1176	312	43	327
Coffee-mill	J. M. Waddell	382,742	May 15	1394	342	43	778
Coffee or tea pot	J. J. Royle	380,361	Apr. 3	288	94	43	67
Coffee-pots. Extractor for	J. C. Slaughter	383,871	May 29	2835	776	43	1111
Coffin	J. H. Chambers	382,176	May 1	388	109	43	563
Coffin-fastener	J. P. and J. S. Mahon	384,761	June 19	1360	330	43	1264
Coffin-fastener	T. A. Lethbridge and J. V. Ensfield	383,311	May 22	2139	564	43	951
Coffin-fastener	W. J. Noble	383,836	May 22	2075	531	43	931
Coffin-fastener	W. A. Sparks	382,794	Apr. 10	980	165	43	199
Coffin-fastener	W. H. Torbeck	384,181	June 5	504	138	43	1218
Coffins. Manufacture of artificial-stone	L. Mundt	382,894	May 15	1416	370	43	889
Coil. Reactive	E. W. Rice, Jr	381,669	Apr. 17	1662	451	43	395
Coiled spring	F. F. Fowler and M. V. B. Waldorf	380,881	Apr. 3	513	143	43	104

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Coin receptacle and register	E. Headley and W. G. Herten	384,583	June 12	1025	{267 / 268}	43	1222
Coin-spinner	F. M. Barber	383,512	May 29	2449	649	43	1014
Coins, &c. Apparatus for automatically closing receptacles for	P. Everitt	382,696	May 15	1945	325	43	767
Collar and cuff drier and dampener	J. G. Dixon	382,880	May 15	1383	363	43	794
Collar fastener. Horse	G. Marshall	382,540	May 8	1009	257	43	711
Collar fastening. Horse	A. H. Davis and G. Keith	384,227	June 5	573	156	43	1228
Collar for cattle. Bell	J. E. and E. R. Hill	384,037	June 5	290	81	43	1176
Collar. Horse	H. Van Wagoner	381,191	Apr. 17	1250	361	43	279
Collar pad. Horse	L. W. Noyes	383,143	May 22	1695	494	43	894
Collection-box	F. A. Kittell	383,579	May 29	2545	679	43	1033
Coloring-matter obtained by the action of tetramidiamido benzole on phenols. New	E. G. Williams	384,348	June 12	755	.....	43	1272
Coloring-matter. Producing blue-red	E. Haasenkamp	381,471	Apr. 17	1765	.....	43	350
Coloring-matter. Production of blue	E. Ullrich	384,480	June 12	947	.....	43	1289
Coloring-matter. Production of yellow	C. Radolph	382,832	May 15	1420	.....	43	803
Coloring-matters. Production of diazole	A. F. Poirrier and Z. Roussin	380,926	Apr. 10	945	.....	43	193
Colors. Production of azo	A. F. Poirrier and D. A. Rosenthiehl	380,927	Apr. 10	943	.....	43	193
Colter. Rolling	D. A. Moon	382,339	May 1	528	135	43	610
Colter. Rolling	W. E. Sefton	382,737	May 15	1299	341	43	777
Colters. Attaching	J. F. Packer	382,435	May 8	834	214	43	678
Comb:							
See Curry-comb. Electric comb.							
Combing-machine	J. Pickles and H. W. Whitehead	384,783	June 19	1405	{367 / 368}	43	1406
Combination-lock	J. Bergman	381,903	May 1	9	3	43	516
Combination-lock	H. C. Griffin	381,993	Apr. 10	1168	311	43	238
Commode	G. D. Tolman and L. D. Roberts	384,008	June 5	243	70	43	1169
Commode. Toilet jar	L. W. Swafford and C. A. Burns	384,218	June 5	556	153	43	1239
Compass. Electric alarm	H. A. Chase	385,043	June 26	1812	465	43	1492
Compass. Mariner's recording	H. A. Chase	385,042	June 26	1800	465	43	1492
Compasses. Electric alarm for ships'	A. Gross	381,893	Apr. 24	2067	{546 / 547}	43	448
Composition of matter	J. A. Kissele	382,668	May 15	1491	.....	43	617
Compressing or blowing engine	W. E. Good	381,676	Apr. 24	2370	{616 / 617}	43	495
Concentrator	J. J. Droughton	383,894	May 22	2103	555	43	944
Concentrator and amalgamator. Combined	W. M. Hartman	382,701	May 15	1951	327	43	768
Condenser and water-heater. Surface	W. E. Vols	384,944	June 19	1641	426	43	1459
Conduit	M. Meehan	384,669	June 19	1530	396	43	1423
Conduit	J. Steel	381,653	Apr. 24	2033	{532 / 533}	43	431
Confectioner's mold	S. E. Ball	382,678	May 15	1818	316	43	761
Confectionery-box	W. J. White	383,606	May 29	2575	662	43	1040
Conveyer	A. H. Brainard	383,556	May 29	2561	665	43	1037
Conveyer apparatus	G. C. Blickensderfer	381,382	Apr. 17	1536	{414 / 415}	43	316
Conveyers. Shifting gate for	D. W. Marmon	382,890	May 15	1501	393	43	819
Conveying apparatus	H. D. Palmer	382,052	May 1	306	69, 70	43	562
Cooker and frier. Combined steam	H. C. Hornish	381,784	Apr. 24	2215	580	43	467
Cooker. Steam	J. C. Smith and L. B. Barker	382,286	May 1	403	153	43	624
Cooking and can-filling apparatus. Combined	J. J. Bishop	383,792	May 29	2870	755	43	1096
Cooking utensils. Steam	J. O. Egerton	382,595	May 8	1005	262	43	709
Cooler:							
See Stock-cooler. Water-cooler.							
Cooler for soda-water apparatus, &c	A. K. Finlay	383,518	May 29	2457	651	43	1016
Coop or crate. Folding	T. J. and O. Q. Stille	383,693	May 29	2936	776	43	1111
Copal. Manufacture of artificial	E. Schaal	382,907	May 15	1523	.....	43	824
Copies. Apparatus for setting writing	J. Curson	382,143	May 1	391	102	43	585
Coping. Metallic socket-connection for stone	W. Williams	380,710	Apr. 10	810	167	43	151
Copper. Purification and alloying of	F. J. Seymour	382,198	May 1	467	.....	43	599
Copy-holder for compositors	H. F. Mass	384,374	June 12	811	210	43	1262
Copying pads moist. Receptacle for keeping press	C. L. Wise	381,454	Apr. 17	1748	466	43	355
Cork-extractor	H. J. Boggis	383,093	May 22	1827	479	43	891
Cork-extractor	R. B. Gilchrist	384,529	June 19	1509	390	43	1423
Cork-retainer	J. G. Hirsch	381,536	Apr. 17	1278	342	43	288
Corkscrew	P. McCarthy and P. Theis	382,005	May 1	183	47	43	547
Corn-husker	J. Spence	382,568	May 8	1050	268	43	720
Corn-husking implement	P. Kaufman	382,706	May 15	1256	308	43	769
Corn-husking machine	H. H. Armstead	381,748	Apr. 24	2168	567	43	457
Corn-sheller	E. Herrington	380,369	Apr. 3	125	37	43	27
Corn-sheller	S. G. Pillsbury	380,767	Apr. 10	701	194	43	148
Corn-shock binder and compressor	H. B. Puffenberger	384,979	June 12	658	176	43	1256
Corn-shuck compressor	R. F. Hageman, D. Noggle, and R. S. Eads	383,355	May 22	2198	561	43	902
Corn shucking and shelling machine	L. R. Whiting	382,985	May 1	602	152	43	633
Corn splitting and cutting machine	C. J. Porter	382,108	May 1	345	91	43	577
Corner-iron	J. Doty	380,671	Apr. 10	853	220	43	176
Cornices. Constructing	H. Berding	383,612	May 29	2592	666	43	1044
Corrugating-machine	S. Fox	384,031	June 5	480	78, 79	43	1175
Corset	P. A. Raratet	383,687	May 29	2892	712	43	1085
Corset	G. A. Close	384,307	June 12	498	188	43	1283
Corset	C. A. Griswold. (Reissue)	10,935	June 5	575	157	43	1252
Corset	C. A. Griswold. (Reissue)	10,939	June 19	1655	430	43	1472
Corset	J. Knon	382,478	May 8	914	231	43	673
Corset-busk	G. Dünninghaus	381,961	Apr. 24	1153	287	43	382
Corset-shaping apparatus	J. Stone and M. Gardner	382,416	May 22	2234	600	43	878
Cot. Folding	J. C. Porter	383,663	June 5	216	64	43	1162
Cot. Folding	C. T. Segar	381,633	Apr. 17	1707	457	43	380
Cotton-batting. Making	E. Walker and D. Williams	382,916	May 15	1534	402	43	893
Cotton-chopper	A. Fleming	380,489	Apr. 3	176	46	43	36
Cotton-chopper	S. Freeman	384,516	June 12	1017	264	43	1288
Cotton chopping, planting, and cultivating machine. Combined	D. W. Pilcod	383,148	May 22	1901	496	43	893

Draft-regulator	C. E. Gray	382,689	May 15	1249	330	42	787
Drain-cleaner. Convertible	E. J. Robinson	385,263	June 26	2174	535	43	1566
Drapery-hook	R. Tilton and M. Cowen	384,664	June 5	241	70	43	1168
Draw-bars. Die for making	J. T. Wilson	381,894	Apr. 24	2401	624	43	502
Draw-bars. Making	J. T. Wilson	381,895	Apr. 24	2402	624	43	502
Drawer. Cash	P. G. Williams and A. W. Roovers	384,010	June 5	248	72	43	1169
Dredger-dipper	M. C. Lawton	381,257	Apr. 17	1450	380	43	297
Dredger-dipper	M. C. Lawton	381,256	Apr. 17	1451	381	43	298
Dress-form	W. H. Knapp	383,479	May 29	2649	675	43	1003
Dress-form	W. H. Knapp	384,531	June 12	1034	270	43	1345
Dress-form	J. W. Littlefield	384,372	June 12	807	210	43	1282
Dress-form	E. M. McPherson	383,535	May 29	2492	657	43	1022
Drier: *See* Bagasse-drier. Clothes-drier. Collar and cuff drier. Fruit-drier. Salt-drier.							
Drier	G. W. Sharer	385,208	June 26	2061	534 / 535	43	1542
Drill: *See* Bow-drill. Dental drill. Grain-drill. Mining-drill. Portable drill. Rock-drill.							
Drill	J. C. Godwin	385,111	June 26	1909	487	43	1513
Drill-blade. Self-expanding	T. and O. Herberg	384,025	June 19	1178	310	43	1300
Drill-socket	P. Grabler	383,249	May 22	2110	557	43	945
Drill-stock	A. Allgoever	383,631	May 15	1715	446	43	699
Drills. Apparatus for making	J. H. Kane	380,577	Apr. 3	410	117	43	84
Drills. Universal table for	J. J. Hardy	389,382	Apr. 3	93	6	43	7
Drilling and countersinking apparatus	H. A. Brown	389,341	Apr. 3	7	2	43	4
Drilling. Feeding device for	W. Lodge and H. Dreses	385,057	June 26	1845	472	43	1499
Drilling-jar	C. B. McKinney	389,634	Apr. 3	497	137	43	99
Drilling-machine	S. Höninger	380,446	Apr. 3	383	73	43	84
Drilling-rig	G. Corbett	385,241	June 26	2101	536	43	1529
Drilling-tool	A. Benzie	385,008	June 26	1878	479	43	1506
Drilling-tool	H. S. Gail	381,124	Apr. 17	1286	330	43	263
Drip-can	H. L. Kinports	381,253	Apr. 17	1445	369	43	296
Drop-light attachment	W. D. Mason	384,652	June 5	215	60	43	1181
Dropper	H. J. Case	386,123	June 5	414	115	43	1300
Drums	H. G. Lehnert	382,045	May 1	256	66	42	560
Drum. Friction	H. J. McKeown	385,191	June 26	2026	518	43	1536
Drum-head strainers. Hook for	G. Van Zandt	382,124	May 1	365	95	42	560
Drum. Heating	W. Markle	382,616	May 8	1122	240	42	734
Drum. Heating	V. D. Urso	382,321	May 22	2220	591 / 592	43	967
Dry closet	L. B. Robb	384,938	June 19	1625	422	43	1446
Dry goods, &c. Apparatus for storing, measuring, and exhibiting	W. Doerflinger	384,747	June 19	1354	353 / 354	43	1395
Dumb-waiter	C. L. Lincoln	383,950	June 5	172	50	43	1153
Dust arrester and collector	R. L. Downton	382,891	May 29	2643	703	43	1102
Dust-collector	J. S. Ash	385,637	June 26	1800	463	43	1489
Dust-collector	G. Behrns	381,753	Apr. 24	2174	548 / 549	43	456
Dust-collector	C. M. Hardenbergh	385,283	June 26	2128	543	43	1560
Dust-collector	C. R. Knickerbocker	382,614	May 8	1119	239	42	733
Dust-collector	H. N. Pomeroy	381,889	Apr. 24	2392	623	43	477
Dust-pan	E. S. Celt	389,851	Apr. 3	371	100	43	76
Duster. Feather	G. M. Richmond	388,970	June 26	1957	474	43	1502
Dye-stuff by the action of tetrazo-ditolyl salts on beta-naphthylamine monosulpho-acid. Production of blue-red azo	E. Hasenkamp	383,139	Apr. 17	1275	.....	43	985
Dye-stuff. Manufacture of purple-black azo	O. N. Witt	382,645	Apr. 10	1120	.....	42	888
Dye-stuff. Purple azo	O. N. Witt	382,646	Apr. 10	1121	.....	42	888

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Dye-stuffs. Manufacture of	M. Hersberg	384,315	June 12	716	.....	43	1296
Dye-stuffs. Manufacture of	M. Hersberg	384,316	June 12	711	.....	43	1296
Dyeing apparatus	A. Harmel	382,977	May 15	1619	423 / 424	43	841
Dyeing apparatus	R. Persins	384,369	June 12	837	215	43	1296
Dyeing apparatus	U. Weldon	380,236	Apr. 10	709	218	43	166
Dyeing apparatus	U. Weldon	382,918	May 15	1538	403	43	827
Dynamo	H. B. Slater	389,709	Apr. 10	596	144	43	129
Dynamos. Apparatus for connecting alternate-current	P. Lange	383,648	May 29	2641	699	43	1054
Dynamos. Bobbin for the field-magnets of	A. Schmid	383,657	May 29	2653	703	43	1057
Dynamos. Synchronizing device for alternate-current	H. M. Byllesby	383,618	May 29	2589	687	43	1045
Ear-muff	I. R. Kleinert and R. C. Manville	381,539	Apr. 24	1988	500	43	464
Easel	R. R. Morris	384,171	June 5	490	134	43	1216
Eaves-trough hanger	H. T. and H. O. Lawrence	384,985	June 26	1796	442	43	1471
Eccentric-rod	P. Kirkevaag	383,735	May 29	2768	729	43	1069
Educational apparatus	J. Deahane	385,046	June 26	1816	466	43	1494
Educational appliances	H. O. R. Siefert	389,538	Apr. 3	339	97	43	69
Educational device	J. Deahane	383,369	May 22	2261	580	43	976
Egg-beater	E. Hadley	389,564	Apr. 3	391	112	43	80
Egg-beater	D. Peters	383,469	May 29	2430	642	43	1008
Egg-beaters. Means for operating	M. F. Bishop	384,674	June 19	1247	398	43	1375
Egg-carrier	W. Huey and E. W. Baily	381,928	May 1	40	11	43	823
Egg-cases. Making	E. L. Walker	389,909	Apr. 10	983	263	43	202
Egg crate and tray	J. L. Ritter	382,022	May 8	1133	292	43	736
Egg-rack	R. W. Beatty and G. Hoffner	381,563	Apr. 24	1852	490	43	306
Egg-tester	C. Reuter	380,518	Apr. 3	394	93	43	66
Ejector	J. M. Marty	389,907	Apr. 10	910	244	43	187
Electric accumulator	J. M. Pendleton	380,765	Apr. 10	698	193	43	146
Electric battery	E. M. Hewitt	385,386	June 26	2214	588	43	1574
Electric battery	E. A. Wildt	383,066	May 29	2519	663	43	1065
Electric cables. Anti-induction composition for	D. Brooks, Jr	383,066	May 29	1431	.....	43	894
Electric cables. Manufacturing	W. R. Patterson	382,769	May 15	1234	351	43	784
Electric-circuit-closing device	M. W. Grovesteen and F. G. Jahn	384,570	June 19	1092	287	43	1336
Electric-circuit controller	O. F. Greim	384,440	June 12	894	233	43	1299
Electric-circuit indicator	O. B. Shallenberger	383,665	May 29	2663	708	43	1059
Electric-circuit switch	C. C. Stirling	389,336	May 8	679	172	43	648
Electric-circuit switch	C. C. Stirling	388,333	May 8	681	172	43	648
Electric-circuit switch or cut-out	J. J. Wood	383,933	June 5	136	30, 40	43	1147
Electric-circuit-testing apparatus	A. D. Wheeler	383,665	May 29	2574	681 / 682	43	1040
Electric circuits. Apparatus for detecting ground-connections in	O. B. Shallenberger	383,666	May 29	2665	706	43	1060
Electric comb	C. Busch	384,561	June 12	1081	282	43	1324
Electric contact-changer	P. C. Morse	381,389	Apr. 17	1466	394	43	301
Electric-current generators. Coupling of alternate	O. B. Shallenberger	383,662	May 29	2661	705	43	1059
Electric-current regulator	E. R. Knowles	381,254	Apr. 17	1446	369	42	920
Electric currents. Converting and distributing	N. Tesla	382,282	May 1	597	151	42	622
Electric currents. Electrical indicator for alternating	O. B. Shallenberger	383,666	May 29	2667	707	43	1060
Electric currents. Indicating	O. B. Shallenberger	383,667	May 29	2666	707	43	1060
Electric currents. Indicating	O. B. Shallenberger	381,672	May 29	2675	708	43	1063
Electric currents. Production, transmission, and distribution of	C. E. Fritts	383,580	May 29	2460	631 / 632	43	1016
Electric cut-out	C. G. Perkins	385,067	June 26	1851	473	43	1500
Electric cut-out	C. G. Perkins and J. Tregoning	380,705	Apr. 10	699	193	43	148
Electric elevator	G. C. Blickensderfer and J. K. Hallock	381,499	Apr. 17	1796	478	43	366
Electric energy. Transformation and distribution of	R. Kennedy	381,794	Apr. 24	2229	583 / 584 / 452 / 453	43	469
Electric generator. Dynamo	E. E. Rice	381,421	Apr. 17	1665	453	43	345
Electric generators. Brush-holder for	A. Schmid	383,658	May 29	2654	703	43	1057
Electric generators. Commutator-brush for	O. P. Loomis	381,394	Apr. 17	1646	437	43	337
Electric indicator	O. B. Shallenberger	380,942	Apr. 10	963	256	43	198
Electric indicator	J. Tregoning	382,914	May 15	1532	401	43	833
Electric indicator	E. Weston	381,736	Apr. 24	2151	563	43	454
Electric-light carbon	T. L. Clingman	381,614	Apr. 24	1981	.....	43	421
Electric light system	B. E. Sunny	385,020	June 26	1769	457	43	1485
Electric-lighting circuits. Circuit-controlling apparatus for	O. B. Shallenberger	383,661	May 29	2660	705	43	1058
Electric locomotion. System of	H. A. Seymour	384,594	June 12	1125	297	43	1341
Electric machine. Alternating-current dynamo	E. Thomson	382,335	May 8	634	173	43	649
Electric machine and motor. Dynamo	M. Immisch	381,789	Apr. 24	2221	561 / 562	43	466
Electric machine. Dynamo	W. A. Crowdus and H. M. Sutton	380,690	Apr. 3	471	139	43	96
Electric machine. Dynamo	J. W. Easton	389,113	May 22	1858	495	43	807
Electric machine. Dynamo	E. H. Mather	381,398	Apr. 17	1652	441	43	330
Electric machine. Dynamo	R. Oliver	384,636	June 19	1194	315 / 316	43	1364
Electric machine. Dynamo	L. N. P. Poland	382,380	May 22	2150	567	43	963
Electric machine. Dynamo	J. Wenström	381,451	Apr. 17	1738	464 / 465	43	355
Electric machine or motor. Dynamo	A. L. Biker	384,077	June 5	248	98	43	1187
Electric machine. Steam dynamo	E. H. Mather	381,568	Apr. 24	1911	503 / 504	43	406
Electric machines. Armature for dynamo	R. Mackie	382,174	May 1	624	113	43	383
Electric machines. Automatic tightening device for armatures of dynamo	J. W. Easton	383,114	May 22	1850	496	43	808
Electric machines. Commutator for dynamo	N. Tesla	382,845	May 15	1436	378	43	806
Electric machines. Commutator for dynamo	J. J. Wood	384,816	June 19	1459	381	43	1416
Electric machines. Current-collector for	W. Stanley, Jr.	385,638	May 29	2636	776	43	1111
Electric machinery. Dynamo	A. Reckenzaun	385,066	June 26	1852	474	43	1500

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Electric meter	S. D. Mott	381,480	Apr. 17	1779	474	43	383
Electric meter	E. Thomson	381,441	Apr. 17	1718	460	43	352
Electric meter	E. Thomson	381,443	Apr. 17	1720	462	43	353
Electric meter	G. Westinghouse, Jr	382,676	May 29	2681	709	43	1062
Electric meter	G. Westinghouse, Jr., and P. Lange	383,680	May 29	2683	710	43	1063
Electric motor	G. F. Card	382,569	May 8	1966	279 / 280	43	727
Electric motor	P. Diehl	381,282	Apr. 17	1701	371 / 372	43	327
Electric-motor switch	R. H. Mather	382,714	May 15	1964	331	43	770
Electric motors. Governor for	W. Baxter, Jr	384,117	June 5	404	112 / 113	43	1196
Electric motors. Governor for	R. H. Mather	382,651	May 29	2645	700	43	1055
Electric motors. Means for regulating and controlling	B. A. Fiske	381,228	Apr. 17	1401	375	43	266
Electric motors. Regulation of	S. D. Field	381,768	Apr. 24	2192	573	43	488
Electric motors. Switching device for	R. H. Mather	382,715	May 15	1966	331 / 332	43	771
Electric or other conduits. Crawler for	H. G. Morris	383,756	May 29	2707	736	43	1067
Electric power-controller	G. S. Neu	383,901	June 5	78	23	43	1136
Electric shunting device	W. Baxter, Jr	384,116	June 5	402	111 / 112	43	1196
Electric smelling-bottle	C. T. Brown	383,794	May 29	3675	756	43	1069
Electric switch	P. J. Tracy	385,023	June 26	1775	459	43	1486
Electric switch-board	R. H. Welden	381,303	Apr. 17	1505	406	43	309
Electric traction. Apparatus for	E. Julien	384,580	June 12	1105	291 / 292 / 293	43	1339
Electric wires and cables. Covering for	D. Brooks, Jr	383,096	May 29	1938	490	43	892
Electric wires. Support for	D. Brooks, Jr	383,097	May 22	1831	480	43	892
Electric wires. Underground conduit for	W. F. Smith	382,778	May 15	1351	355 / 356	43	788
Electrical agricultural system	E. M. Bentley	382,941	May 15	1569	410	43	832
Electrical apparatus	C. C. Sibley	381,856	Apr. 24	2241	607	43	469
Electrical apparatus. Coin-operated	N. W. Ruse	382,734	May 15	1292	338 / 339 / 340	43	776
Electrical coil and conductor	E. Weston	381,304	Apr. 17	1506	406	43	310
Electrical coil and conductor	E. Weston	381,305	Apr. 17	1508	406	43	310
Electrical connector	F. Stitsel and C. Weinedel	385,215	June 26	2059	598	43	1544
Electrical distribution. Alternate-current and storage system of	H. M. Byllesby	383,681	May 29	2603	688 / 689	43	1046
Electrical distribution. Alternate-current and storage system of	H. M. Byllesby	383,682	May 29	2605	689	43	1047
Electrical distribution. Alternate current system of	H. M. Byllesby and O. B. Shallenberger.	381,054	Apr. 10	1143	305 / 306	43	230
Electrical distribution. Central station for alternate-current systems of	O. B. Shallenberger and H. M. Byllesby.	380,946	Apr. 10	968	257	43	197
Electrical distribution. Combined alternate-current and storage system of	H. M. Byllesby	383,680	May 29	2601	688	43	1046
Electrical distribution. Combined alternate current and storage system of	H. M. Byllesby	383,683	May 29	2606	689	43	1047
Electrical distribution. System of	T. A. Edison	382,415	May 8	805	206	43	673
Electrical distribution. System of	T. A. Edison	385,173	June 26	1993	511	43	1530
Electrical distribution. System of	W. H. Hart and J. T. Goodfellow	380,757	Apr. 10	677	188 / 189	43	145
Electrical distribution. System of	N. Tesla	381,970	May 1	107	26	43	534
Electrical governor	F. E. Prichard	380,817	Apr. 10	770	211	43	161
Electrical hand-cord tip	H. J. Swarts	380,889	Apr. 10	787	215	43	165
Electrical indicator	A. L. Riker	381,422	Apr. 17	1669	453	43	346
Electrical indicator	O. B. Shallenberger	380,947	Apr. 10	970	257	43	198
Electrical indicator	O. B. Shallenberger	383,669	May 29	2669	707	43	1061
Electrical indicator	O. B. Shallenberger	383,670	May 29	2671	707	43	1061
Electrical indicator	O. B. Shallenberger	383,671	May 29	2673	708	43	1061
Electrical purposes. Switch for	W. A. Carey	385,041	June 26	1805	464	43	1491
Electrical switch. Automatic	F. Stitsel	381,625	May 8	1135	292	43	736
Electrical transmission of power	N. Tesla	382,280	May 1	592	150	43	642
Electrical transmission of power	N. Tesla	382,281	May 1	596	151	43	642
Electrical translation. System of	R. Belfield	380,845	Apr. 10	810	220	43	168
Electrical translation. System of	R. Belfield	380,846	Apr. 10	818	221	43	169
Electricity and purifying water. Generating	J. E. Siebel	385,145	June 26	1990	504	43	1523
Electro-magnetic motor	N. Tesla	381,968	May 1	101	24, 25	43	534
Electro-magnetic motor	N. Tesla	381,969	May 1	105	25	43	534
Electro-magnetic motor	N. Tesla	382,279	May 1	589	149	43	642
Electro-magnetic motors. Governor for	C. F. Brush	381,857	June 5	11	4	43	1152
Electro-magnetic register	J. F. McLaughlin	383,563	May 29	2550	674	43	1034
Electro-magnetic separator	J. B. Hamilton	384,035	June 5	385	84	43	1176
Electro-mechanical device	E. Thomson	381,443	Apr. 17	1721	461 / 462	43	353
Electro-therapeutic battery	E. J. Murphy and J. Floyd	383,899	June 5	75	22	43	1135
Electrode for secondary batteries	R. Packer	380,998	Apr. 10	983	249	43	208
Electrolysis. Apparatus for	E. Hermite and C. F. Cooper	381,372	Apr. 17	1613	431	43	333
Electrophorus	J. D. Culp	382,165	May 22	1740	468	43	758
Electroplating. Rack for	W. W. White	384,686	June 19	1439	377	43	1469
Elevated way	N. Newman	384,229	June 12	643	173	43	1269
Elevating-belt	F. Prinz	381,848	Apr. 24	2330	625	43	532
Elevator: See Electric elevator. Grain-binder elevator. Hydraulic elevator. Portable elevator. Water-elevator.							
Elevator	E. B. Ellingham	382,715	May 29	2748	728	43	1076
Elevator	W. S. Johnson	384,149	June 5	403	111	43	1196
Elevator	G. A. Moore	382,457	May 8	825	211	43	676

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Elevator	E. J. Stellwagen	382,841	May 15	1439	375 / 376	43	804
Elevator	S. E. Stokes	384,696	June 5	871	104 / 105	43	1192
Elevator-alarm	J. Elsig	384,831	June 19	1485	367	43	1420
Elevator-alarm	J. W. Heidsworth	381,015	Apr. 10	1077	286	43	218
Elevator-boot	M. F. Seeley	382,772	May 15	1340	358	43	785
Elevator-brake	E. L. Teed	380,465	Apr. 3	223	64	43	47
Elevator-indicator	H. Eichbaum	382,354	May 8	719	182	43	655
Elevator-lock	E. J. Herman	382,9 0	May 15	1624	424	43	842
Elevator safety device	J. S. Bogue	382,206	May 1	492	124	43	602
Elevator safety device	C. Klinik, F. Piskowski, and A. Gross.	384,319	June 12	714	190	43	1206
Elevator-wells. Automatic door for	J. P. Runkel	384,083	June 5	366	101	43	1189
Ellipsograph	H. Bormann	383,696	May 29	2704	715	43	1067
Ellipsograph	H. Bormann	383,697	May 29	2707	715	43	1068
Elliptic spring	J. R. Fletcher	381,698	Apr. 24	2021	544	43	441
Elliptic spring	W. G. Holmes	381,945	May 1	93	10	43	532
Elliptic spring	W. A. Sweet	383,289	May 29	2139	570	43	954
Embalming apparatus	F. Wagner	383,565	May 29	2442	648	43	1013
Embossing-machine	M. T. Durkin	382,801	May 15	1385	363	43	794
Embossing wood or other material. Machine for	B. Ludwig	380,904	Apr. 10	907	243 / 244	43	186
Embroidering frame and stand	H. C. Ludwig	383,533	May 29	2490	657	43	1021
Embroidering-machine	J. O. Phillips	382,619	May 8	1196	290 / 291	43	735
End-gate	J. Cuningham	381,057	Apr. 10	1149	306	43	231
End-gate	J. Haish	380,483	Apr. 3	256	71	43	53
End-gate	N. Henlzer	381,070	Apr. 10	1172	311	43	236
Engine: See Carding-engine. Chemical engine. Compressing or blowing engine. Dental engine. Direct-acting engine. Expansion-engine. Gas-engine. High-speed engine. Motor-engine. Portable engine. Rotary engine. Rotary-cylinder engine. Rotary vapor-engine. Steam-engine. Steam or gas motor engine. Traction-engine. Wind-engine.							
Engines. Apparatus for controlling the speed of steam-	R. Wilby	382,577	May 8	1067	272 / 273	43	723
Engraving and chasing machine	J. A. Coburn	381,314	Apr. 17	1379	360	43	304
Engraving-machine. Pantographic	G. R. Hugon	384,764	June 19	1378	361	43	1469
Engraving or etching upon. Block for	W. C. Norman	384,566	June 12	1116	.....	43	1340
Envelope	G. A. Bobrick	380,616	Apr. 3	467	132	43	95
Envelope. Elastic folding display	H. P. Evernbach	381,019	May 1	29	9	43	209
Envelope-fastening	W. H. Hubbard	383,642	May 29	2634	697	43	1053
Envelope-holder	L. M. Culver and W. F. Smith	381,677	Apr. 24	2008	540	43	439
Envelope-tablet	H. Phillips	385,320	June 26	2230	571 / 572	43	1577
Equalizer. Four-horse	J. A. M. Tyler and J. S. Thomas	384,652	June 19	1211	320	43	1268
Eraser	J. W. Osborne	383,463	May 29	2410	640	43	1007
Eraser	C. Robinson	383,149	May 22	1906	498	43	907
Eraser. Slate	G. Wilkening	382,925	May 15	1544	405	43	798
Etching glass	E. Niemstädt	382,318	May 8	653	.....	43	644
Evaporating apparatus. Vacuum	H. T. Yaryan	383,394	May 22	2224	593 / 594 / 595	43	988
Evaporating-pan	T. Makemson	384,772	June 19	1392	364	43	1403
Evaporating-pan	M. Mathews and H. Hill	382,314	May 8	649	185 / 186	43	643
Evaporator	N. B. Rice	385,202	June 26	2043	532	43	1540
Evener. Four-horse	C. C. Isenebuth	384,167	June 5	485	133	43	1215
Evener. Four-horse	W. D. Sauer	380,882	Apr. 3	348	94	43	67
Excavating-machine	C. S. Jones	384,041	June 5	399	83, 84	43	1177
Excelsior. Machine for making	A. M. Little	382,431	May 8	688	212	43	677
Exercising-machine	J. Sanches	382,440	May 8	847	216	43	680
Exercising-machine. Coin-controlled cigar-delivering	F. Messer	381,469	Apr. 17	1469	447	43	348
Exhaust. Means for utilizing	S. Welfson	384,733	June 19	1335	348	43	1291
Exhaust. Utilizing	W. Schmidt	381,957	May 1	88	20	43	530
Expansion engine. Triple	H. F. Gaskill	384,250	June 12	619	146 / 147	43	1249
Explosive charge	J. W. Graydon	382,229	May 1	513	138	43	636
Explosive compound	C. W. Volney	383,490	May 22	2300	.....	43	979
Explosives for use. Preparing	J. W. Graydon	382,228	May 1	512	138	43	636
Express-call	C. J. Heitsman	381,472	Apr. 17	1706	471 / 472	43	389
Extension-table	S. S. Sutherland	384,178	June 5	500	136 / 137	43	1218
Extract of meat. Liquid	S. M. Caffyn	384,823	June 19	1472	.....	43	1418
Extractors: See Cork-extractor. Pipe, tube, or shell extractor. Rivet-extractor. Seed-extractor. Stump-extractor.							
Eyelet. Blank for	W. R. Webster	383,569	May 29	2447	649	43	1014
Eyelet. Die for making	J. F. Kingsley	384,438	June 12	910	237	43	1268
Eyelet. Machine for upsetting	W. Cooke and D. Carlough	380,893	Apr. 10	840	227	43	174
Eyelet. Upsetting the ends of	W. R. Webster	383,568	May 29	2446	649	43	1014
[illegible]	A. Kahn	380,491	Apr. 3	269	74	43	55
[illegible]	A. Kahn	382,837	May 15	1634	426	43	844
[illegible]	A. Gessner	384,479	June 12	988	244	43	1268
[illegible]	W. S. Wells	382,694	May 29	2673	691	43	1069

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Eyeglasses. Nose-guard for	W. S. Wells	382,848	May 15	1440	379	43	897
Eyeleting-machine	L. D. Hawkins and J. C. Paige	384,157	June 5	465	128	43	1210
Eyelets. Machine for rolling flanged	A. G. Mead	383,403	May 22	2272	604	43	974
Fabric: *See* Carpet fabric. Roofing fabric. Knitted fabric.							
Fabric-turfing implement	C. C. Harris	381,997	May 1	170	44	43	543
Fabrics. Implement for turning tubular	L. Eschner	382,958	May 15	1504	416	43	857
Fan	J. B. Baermann	382,205	May 1	479	123	43	0+1
Fan	M. Rubin	382,942	May 1	532	136	43	611
Fan for cars	J. M. V. Le Beau	382,818	May 15	1404	366	43	799
Fan for ventilating purposes	J. Stewart	382,119	May 1	357	94	43	579
Fan. Rotary	R. B. Cissel	380,788	Apr. 10	736	201	43	155
Fare-box	W. A. Crowdus	382,756	May 15	1318	347	43	781
Fare-box chute	W. S. Wales	384,654	June 19	1213	320	43	1360
Fare-boxes. Automatic locking attachment for	J. H. Claspy	382,867	May 15	1466	384 / 385	43	811
Fare-register	H. R. Coffey	384,425	June 12	875	229	43	1296
Fare-register	W. Pigott	383,008	May 15	1673	437 / 438	43	858
Farm-gate	P. Dyer	385,302	June 26	2207	586	43	1572
Farm-gate	V. D. Johnson and V. Oppfelt	382,703	May 15	1253	327	43	768
Farm-gate	W. H. Ragsdale	384,350	June 12	859	176	43	1296
Farm-gate	L. Shepard	383,078	May 15	1702	464	43	875
Fastening device	W. D. Carter and W. S. Louther	3+0,990	Apr. 10	1048	277	43	212
Faucet	E. P. J. Freeman	385,108	June 26	1905	498	43	1612
Faucet	K. H. Pedrick	384,856	June 19	1540	400	43	1430
Faucet	E. U. Scoville	383,995	June 5	930	67	43	1165
Faucet attachment for barrels	J. Paulus	382,188	May 1	449	117	43	596
Faucet. Filtering	W. H. Sargent	383,493	May 29	9425	644	43	1010
Faucet. Self-closing	T. McHugh	383,138	May 22	1669	488	43	903
Faucet. Self-closing	H. C. Montgomery	382,654	May 8	1180	305	43	745
Faucet. Wooden	O. Knipfer	382,165	May 1	422	110	43	591
Faucets. Registering attachment for measuring	L. P. White and J. D. Benson	384,805	June 19	1438	377	43	1412
Faucets. Registering device for measuring	J. A. Blondel	382,944	May 15	1574	411	43	833
Feed-cutter	O. C. Little	384,208	June 5	545	150	43	1237
Feed-cutter	G. F. Schmid	3+3,494	May 29	9428	644	43	1010
Feed-cutter	W. E. Whitman	380,966	Apr. 10	1008	267	43	204
Feed device. Automatically-adjustable	C. J. Pilliod	383,145	May 22	1680	486	43	895
Feed-regulator	E. A. Hoover	384,443	June 12	898	234	43	1300
Feed-rolls. Means for operating	L. Kissner	380,579	Apr. 3	413	118	43	84
Feed-trough	W. H. Garrett	384,357	June 12	751	204	43	1277
Feed-trough	E. P. Newtsanks and J. Mahaffa	382,721	May 15	1274	334	43	772
Feed-water heater	T. Fairbanks	381,618	Apr. 24	1986	381	43	402
Feed-water heater	E. J. Moore	382,546	May 8	1015	259	43	712
Feed-water heater	W. Oliphant	384,538	June 12	1046	273	43	1327
Feed-water heater	D. Stark	381,937	June 19	1632	424	43	1447
Feed-water heating and filtering apparatus	W. Oliphant	384,540	June 12	1049	274	43	1328
Feed-water regulator	F. Cook and B. Thoens	384,510	June 12	1006	262	43	1319
Feed-water regulator	J. W. Weaver	381,450	Apr. 17	1737	464	43	354
Feeder. Automatic shelf	W. M. Jewell. (Reissue)	10,932	May 29	2051	781	43	1114
Feeding device. Salt	C. Lindner and T. F. Hammer	382,048	May 1	250	67	43	561
Felt or felted articles. Steam-box used in making	A. A. Hawley	381,012	Apr. 10	1076	285	43	217
Fence	C. C. Bargdill	383,335	May 22	9165	578	43	955
Fence	A. B. Culp	384,564	June 12	1084	282	43	1334
Fence	N. W. French	381,496	Apr. 17	1693	579	43	360
Fence	J. Harris	382,806	May 15	1390	365	43	795
Fence	T. Houck	382,233	May 1	518	123	43	603
Fence	H. Mater	382,178	May 1	440	115	43	594
Fence	P. Miles	381,942	May 1	62	18	43	565
Fence	J. S. Orr	384,270	June 12	644	173	43	1253
Fence	A. J. and G. W. Pitts	382,382	May 8	763	194	43	664
Fence	H. Richwine	380,457	Apr. 3	324	91	43	46
Fence	G. E. Shelley	380,529	Apr. 3	335	96	43	69
Fence	J. Z. Stanley	381,858	Apr. 24	2344	606	43	469
Fence	C. E. Wilson	382,689	May 8	1139	294	43	737
Fence	F. E. Wood	381,947	Apr. 10	1131	302	43	298
Fence	J. W. Griswold	380,386	Apr. 3	124	26	43	26
Fence	O. Huffman	380,573	Apr. 3	405	116	43	62
Fence	A. Shepherd	381,793	June 19	1429	373	43	1409
Fence	J. H. Racer	384,713	June 19	1511	342	43	1326
Fence	W. H. Coker	385,343	May 22	2176	576	43	958
Fence	S. B. Husselman	3+3,396	May 22	2119	560	43	947
Fence-machine	S. Conrath	384,235	June 12	592	161	43	1245
Fence-machine	C. F. Gillet	385,304	June 26	2208	566 / 567	43	1572
Fence-machine	A. V. Harper	382,526	May 8	981	247	43	705
Fence-machine	T. F. Vandegrift and A. L. Maple	383,795	May 29	2657	726	43	1026
Fence-making machine. Upright wire-and-picket	M. Hill and J. N. Rider	381,548	Apr. 24	1684	497	43	491
Fence. Metallic	G. H. Guile	383,923	May 22	2005	538	43	927
Fence. Portable	M. C. Margeson	383,475	May 29	2394	657	43	1004
Fence. Portable	A. Wheat	381,306	Apr. 17	1540	406	43	310
Fence-post	J. W. Davy	381,673	Apr. 24	2306	615	43	404
Fence-post	S. W. Fulton	382,256	May 1	559	141	43	616
Fence-post	L. B. Harmon and J. N. Nutt	380,627	Apr. 3	478	135	43	97
Fence-post	L. W. Lindley	382,992	May 15	1630	429	43	845
Fence-post	J. J. Buchanan	384,016	June 5	256	73	43	1171
Fences. Lightning-escape for wire	P. C. Freese	383,894	May 29	2676	764	43	1048
Fences. Machine for making picket	A. Cockrell	385,665	June 26	1889	498	43	1589
Fences. Making combined wire-and-picket	J. C. Haag	380,498	Apr. 3	226	70	43	38
Fences. Tension device for use in making	W. X. Stevens	383,683	May 15	1701	442	43	887
	W. A. Farr	382,464	May 8	887	226	43	687

Filling, lining, and covering material	H. W. Johns	385,190	June 26	1906	491	43	1510
Filling and securing material	M. McDonald	381,406	Apr. 17	1683	445	43	341
Filter	F. K. Way	385,233	June 26	2254	577	43	1561
Filter	W. Wiltheeft, Jr	383,689	May 15	1516	475	43	878
Filter. Automatic stationary water	C. A. Shaw and L. W. Buxton	383,916	June 5	106	21	43	1141
Filter. Coffee	J. W. Hyatt	382,649	May 8	1173	303	43	744
Filter-cup. Porous	A. Heberer	381,389	Apr. 17	1689	430	43	336
Filter. Water	H. W. Grelle	381,667	Apr. 10	1167	310	43	235
Finger-ring	W. P. Stimeck	385,673	June 26	1902	475	43	1502
Finger-ring. Initial	W. R. Dutemple	382,736	May 15	1281	347	43	792
Fire-alarm apparatus. Electric	G. M. Stevens	384,675	June 19	1556	404	43	1478
Fire-alarm. Automatic	J. Young	382,788	May 15	1370	359 / 360	43	791
Fire-alarm circuits. Fusible coupling for electric	G. G. Smith	383,377	May 22	2236	591	43	966
Fire-alarm signal-boxes. Key-hole guard for	E. Smith	380,857	Apr. 3	81	25	43	19
Fire-alarm signal circuit	W. Carroll	382,253	May 1	554	140	43	615
Fire-alarm system. Automatic	J. Young	381,896	Apr. 24	2403	675	43	508
Fire and burglar alarm. Electric	A. Schuchman	381,898	Apr. 24	2336	608	43	488
Fire-arm. Breech-loading	P. G. D. Holmes	380,698	Apr. 10	575	156	43	125
Fire-arm. Breech-loading	H. M. Pope	384,977	June 12	655	178	43	1256
Fire-arm. Magazine	R. M. Aughenbaugh and G. E. Ruffley.	381,821	Apr. 24	2268	585	43	479
Fire-arm. Magazine	J. M. and M. S. Browning	386,228	June 26	2096	537	43	1551
Fire-arm. Magazine	J. P. Lee	383,863	May 22	2207	564 / 565 / 566	43	964
Fire-arm magazine	S. K. Hindley	384,161	June 5	475	131	43	1213
Fire-arm. Revolving	H. M. Caldwell	383,701	May 29	2715	717	43	1071
Fire-arms. Cartridge feed-indicator for	E. S. Butler	382,455	May 8	873	223	43	684
Fire-arms. Detachable magazine for	P. Mauser	383,895	June 5	67	21	43	1134
Fire-arms. Rear sight for	D. V. Bean	382,130	May 1	373	97	43	568
Fire-cracker cannon	J. J. Loud	385,127	June 26	1935	494	43	1518
Fire-cracker holder	A. Willis	386,632	June 26	1791	462	43	1489
Fire-escape	A. Bernstein and A. Goldstein	383,438	May 29	2283	616	43	990
Fire escape	W. Block	383,613	May 29	2563	666	43	1044
Fire escape	H. L. Boyle	381,968	May 1	135	32	43	539
Fire-escape	T. Brice	383,340	May 22	2173	574	43	957
Fire-escape	H. H. Calkins	383,211	May 22	1900	509	43	924
Fire-escape	S. H. Gardiner	384,143	June 5	448	124	43	1207
Fire-escape	J. Grant	383,570	May 29	2534	669	43	1030
Fire-escape	J. C. Lund	381,478	Apr. 17	1775	474	43	362
Fire-escape	W. McMullin	384,376	June 12	813	211	43	1283
Fire-escape	S. B. Parker	382,550	May 8	1020	261	43	712
Fire-escape	H. Reimers	383,491	May 29	2422	643	43	1009
Fire-escape	W. T. Smith	384,599	June 12	675	180	43	1300
Fire-escape	F. A. Westbrook	382,574	May 8	1060	270	43	722
Fire-escape. Ladder	F. L. Blem	382,868	May 15	1450	383	43	910
Fire-escape ladder	J. W. Frey	382,150	May 1	400	105	43	567
Fire-escape. Portable	W. Brown	381,672	Apr. 24	2058	536	43	447
Fire-extinguisher. Automatic	C. L. Horack	381,376	Apr. 17	1619	438	43	339
Fire-extinguisher. Chemical	T. G. Turner	381,658	Apr. 24	2040	534	43	433
Fire-extinguisher for car-heaters	G. W. Robinson	384,642	June 19	1198	317	43	1385
Fire-extinguisher for car-heaters. Automatic	L. A. Lyon	381,501	Apr. 17	1616	461	43	371
Fire-extinguisher for railway-cars	G. W. Oborn	383,004	May 15	1661	434	43	849
Fire-extinguisher for stoves and heaters. Automatic	F. L. Hotchkin and P. A. Raby	382,812	May 15	1396	366	43	797
Fire-extinguisher. Portable	E. K. Parker	381,276	Apr. 17	1475	396	43	307
Fire-extinguishers. Alarm-valve for automatic	R. Dowson and J. Taylor	384,514	June 12	1012	263	43	1321
Fire-extinguishers. Cock for	C. C. Connell	384,745	June 19	1352	333	43	1394
Fire-extinguishers. Electric valve-controller for automatic	T. Atkinson	381,450	Apr. 17	1747	467	43	358
Fire-extinguishing apparatus. Locomotive	L. E. Truesdell	380,956	Apr. 10	989	262	43	201
Fire-hydrant	A. H. Mellert	381,940	May 1	60	15	43	529
Fire-hydrant. Pneumatic	H. L. McAvoy	381,695	Apr. 24	2244	567	43	472
Fire-kindler	H. M. Hammers	381,527	Apr. 17	1472	392	43	327
Fire-kindler	J. Randall	381,951	May 1	74	19	43	529
Fire-kindler	G. D. Streeter	380,696	Apr. 3	452	126	43	92

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Fire-kindler	G. D. Streeter	380,607	Apr. 3	453	126	43	93
Fire-lighter	W. Harles	384,548	June 19	1584	391	43	1484
Fire-proof building	R. Guastavino	383,050	May 15	1756	454	43	898
Fire-proof material	J. Smith	381,430	Apr. 17	1714	439	43	351
Fires and preventing the escape of steam in railway-cars. Device for extinguishing	S. H. Harrington	381,994	May 1	35	10	43	821
Fires in railway-cars. Device for extinguishing	S. H. Harrington and E. Grafstrom	381,993	May 1	33	10	43	821
Fires in stoves. Extinguishing	A. Doetschmann	383,393	May 22	2102	566	43	944
Fish-plate	C. Licardie	382,047	May 1	259	67	43	561
Fish-plate	S. Phillips	382,763	May 22	2090	742	43	1049
Fishing-reel	G. H. Keller	381,853	June 19	1580	396	43	1497
Fishing-reel	A. F. Boardman	384,672	June 19	1944	528	43	1571
Fishing-reel	C. K. Bradford	384,743	June 19	1349	338	43	1394
Fishing-reel	H. H. Cordes	384,309	June 12	701	188	43	1264
Fishing-reel signal	L. M. Jones	380,699	Apr. 10	903	261	43	185
Flask: *See* Molder's snap-flask.							
Flat-iron heater	A. Modery and A. Leukhardt	382,718	May 15	1570	393	43	771
Flat-iron. Self-heating	J. B. Curl	383,346	May 22	2101	577	43	956
Flies. Device for catching	S. R. and F. A. Wilmot	382,590	May 8	1072	274	43	724
Flood-gate	W. S. Huston	380,653	Apr. 3	516	144	43	165
Floor. Fire-proof	W. H. Brown	384,421	June 12	871	227	43	1295
Floor, roof, or area covering	P. H. Jackson. (Reissue)	10,921	Apr. 10	1222	338	43	944
Flour-bolt	C. H. Browne	382,135	May 1	360	99	43	563
Flour-bolt	W. M. Lucas	383,092	May 15	1769	{457 456}	43	870
Flour-dresser	B. Kniffler	381,020	Apr. 10	1063	297	43	219
Flour-mill	J. J. Faulkner	385,175	June 26	1907	513	43	1531
Flour-mixing machine	H. A. Weber and J. G. Zeidler	384,656	June 19	1215	331	43	1388
Flue-stopper	J. F. Weitzel and T. Lee	384,341	June 12	755	198	43	1278
Flue-thimble	C. C. Lemly	384,918	June 19	1609	418	43	1443
Fluid drawing and measuring device	J. A. Kendall	384,766	June 19	1390	362	43	1400
Flushing-tank. Automatic	L. Howe	384,978	June 26	1692	440	43	1468
Flushing-tank. Pneumatic	J. E. Boyle	380,854	Apr. 10	925	{234 235}	43	171
Fodder-binder	W. Leupold	385,126	June 26	1934	494	43	1518
Fog-signal	E. E. Mann	380,584	Apr. 3	420	{119 120}	43	86
Folding and swinging gate	J. B. Goodwin	381,064	Apr. 10	1157	309	43	228
Folding and swinging gate	J. B. Goodwin	381,065	Apr. 10	1159	309	43	233
Folding and swinging gate	J. B. and G. Goodwin	381,066	Apr. 10	1161	{309 310}	43	234
Folding case	H. C. Fay	382,804	May 15	1398	364	43	795
Folding chair	H. J. Harwood	381,367	Apr. 17	1608	430	43	330
Folding chair	H. F. Henry	380,484	Apr. 3	258	71	43	53
Folding chair	J. F. A. Spaet, W. F. Berry, and J. T. Snoddy.	383,255	May 22	2057	540	43	936
Folding-machine	L. C. Crowell	383,798	May 29	2279	{757 758 759}	43	1160
Folding table	E. Babcock	382,937	May 15	1564	408	43	831
Folding table and blackboard. Combined	F. Trapp	380,366	Apr. 3	93	28, 29	43	91
Food for cattle, horses, and swine. Composition	W. Wernich	385,250	June 26	2067	.....	43	1545
Foot-rest	J. E. Pike	383,906	June 5	92	27	43	1139
Forceps, &c. Clamping device for	F. A. Stohlmann	385,676	June 26	1865	476	43	1503
Forging-die	H. H. Forsyth	384,751	June 19	1350	355	43	1396
Forging-machine	D. H. Downes	383,047	May 15	1751	453	43	867
Forgings. Appliance for manipulating large	G. Siddell	380,950	Apr. 10	976	{258 259}	43	199
Forgings. Die for making rolled	G. F. Simonds. (Reissue)	10,998	May 8	1212	314	43	758
Forgings. Die for making rolled	G. F. Simonds	384,091	June 5	364	103	43	1191
Forgings. Die for making rolled	G. F. Simonds	384,092	June 5	365	103	43	1191
Fork: *See* Hay and fodder fork. Hay or straw grappling fork.							
Fork-guard	F. C. Feicker	380,793	Apr. 10	742	203	43	156
Fork-guard	F. C. Feicker	384,900	June 19	1583	412	43	1424
Fork-guard	C. H. Steigleder	382,060	May 1	275	72	43	564
Foundations. Frost-protector for	H. H. Morgan	385,278	June 26	2102	532	43	1564
Frame: *See* Bolting-reel frame. Brick-kiln frame. Caster-frame. Display-frame. Draft-frame. Embroidering-frame. Match-frame. Photographic-printing frame. Pocket-book frame. Pocket-book, bag, and purse frame. Quilting-frame. Spinning-frame.							
Friction-coupling	O. Kromer	385,122	June 26	1929	492	43	1517
Frogs, switches, &c. Foot-guard for	G. Nevens	380,566	Apr. 3	423	120	43	86
Fruit-assorter. Automatic	T. Hiatt	381,941	Apr. 17	1427	{303 304}	43	293
Fruit-bleaching apparatus	A. Todd	384,880	June 19	1562	406	43	1434
Fruit-drier	Z. W. Merithew	382,617	May 8	1194	{299 300}	43	734
Fruit-drier	J. L. Phelps	383,945	May 22	2089	{550 551 552}	43	989
Fruit-jar	J. B. and R. Johns	381,250	Apr. 17	1442	366	43	296
Fruit-jar	A. Nöltner	381,462	Apr. 17	1783	475	43	345
Fruit-picker	H. Hammond	382,764	May 15	1389	349	43	792
Fruit-stoning machine	B. A. Lillie	383,739	May 29	2273	{730 731}	43	1091
Fruit-stoning machine	B. A. Lillie	384,371	June 12	894	230	43	1291
Fuel-cartridge	J. T. Wheeler	382,671	May 8	1205	312	43	730

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Fur animals. Machine for pulling hair from skins of	E. Schroeder	382,736	May 15	1380	{340 341}	43	777
Fur-plucking machine	J. W. Sutton	383,858	May 29	2269	{540 541 542}	43	987
Fur satchel and muff. Combined	A. Brahall	384,263	June 12	999	269	43	1315
Furnace: *See* Bagasse-furnace. Boiler-furnace. Blow-pipe furnace. Heating-furnace. Hot-air furnace. Oil-furnace. Ore-roasting furnace. Ore-smelting furnace. Reheating-furnace. Smoke-consuming furnace.							
Furnace-blocks. Apparatus for detecting leakage in	J. Bird	382,738	May 15	1375	341	43	783
Furnace br dge-wall	T. Reese, Jr	379,109	May 1	247	91	43	577
Furnace-doors. Apparatus for opening	F. Doyle	384,127	June 5	430	121	43	1295
Furnace for heating soldering-coppers	E. Hohn	381,788	Apr. 24	2321	{379 380}	43	466
Furnace-grate	J. Cano	380,318	Apr. 3	9	3	43	4
Furnace-grate	L. M. Woodcock	384,410	June 12	850	{222 223}	43	1289
Furnaces. Air-injecting device for boiler	E. B. Cornell	380,475	Apr. 3	348	98	43	51
Furnaces. Apparatus for charging billets, bars, &c., into	F. H. Daniels	385,248	June 26	2112	540	43	1554
Furnaces. Apparatus for charging billets, bars, &c., into	F. H. Daniels	385,249	June 26	2116	540	43	1555
Furnaces. Apparatus for charging billets, bars, &c., into	F. H. Daniels	385,250	June 26	2118	541	43	1556
Furnaces. Apparatus for charging billets or bars into heating	F. H. Daniels	385,251	June 26	2120	541	43	1556
Furnaces. Device for mixing air and gas for	H. Schlimme	385,072	June 26	1899	475	43	1502
Furnaces. Hydrocarbon-burner for	A. Heberer	384,594	June 19	1607	398	43	1394
Furniture. Article of	J. Berkey	380,741	Apr. 10	887	261	43	149
Furniture. Corner brace or bracket for	F. Vornbrook	383,841	May 29	2245	779	43	1113
Furniture. Upholstered	F. G. Johnson	384,250	June 12	689	169	43	1283
Fuse for projectiles. Contact	J. W. Grayden	3?2,227	May 1	511	131	43	697
Fuse. Magneto-electric	E. L. Zalinski	384,662	June 19	1521	385	43	1471
Fuse. Percussion	W. Lorenz	381,284	Apr. 17	1459	368	43	299
Fuse. Shell	T. Bordentsit	381,717	Apr. 24	2120	.....	43	489
Fuse. Shell	E. L. Zalinski	384,664	June 19	1523	385	43	1472
Gag-runner	H. B. Maxwell	381,400	Apr. 17	1454	441	43	339
Gage: *See* Carpenter's gage. Carpenter's framing-gage. Chisel-gage. Double gage. Machine-gage. Micrometer-gage. Planer-gage. Saw-table gage. Shingling-gage. Strap-gage. Slip and shrinkage gage. Surface-gage. Water-gage.							
Galvanic battery	H. J. Brower	380,855	Apr. 10	929	235	43	171
Galvanic battery	H. J. Brower	380,856	Apr. 10	930	235	43	172
Galvanic battery	C. A. Brown and M. M. Clark	384,958	June 26	1665	433	43	1462
Galvanic battery	C. R. B. Cladin, Jr., and J. W. Flagg	381,336	Apr. 17	1454	419	43	319
Galvanic battery	H. B. Cox	383,706	May 29	2722	718	43	1072
Galvanic battery	C. E. O'Keenan	380,569	Apr. 3	427	121	43	87
Galvanic battery	G. H. Sloane	382,726	May 15	1300	341	43	778
Galvanic battery	E. E. Starr	383,147	June 26	1964	{502 503}	43	1504
Galvanic-battery excitant	T. P. Whittier	382,262	May 22	2073	544	43	930
Galvanic-battery fluid	H. J. Von Metzradt	383,677	May 29	2661	.....	43	1063
Galvanic coil	W. Prishmuth	380,630	Apr. 3	177	49	43	30
Galvanometer	R. E. B. Crompton and G. Kapp	383,444	May 29	2235	689	43	993
Galvanometers. Differential expansion device for	W. H. Bristol and W. E. Geyer	383,695	May 22	1859	460	43	891
Game	W. C. Dunn	384,949	June 19	1502	382	43	1469
Game	G. P. Lathrop	385,199	June 26	2025	518	43	1520
Game-board	C. E. Duryea	384,193	June 5	594	142	43	1269
Game-counter	C. Fearon	380,620	Apr. 3	176	48	43	30
Game-counter	F. G. Nash	384,767	June 19	1393	341	43	1395
Game-counter	N. Rosenwasser and F. Rosewater	381,465	Apr. 17	1601	454	43	345
Game of skill	G. H. Monks	383,659	May 29	2246	701	43	1056
Gang-board. Automatic registering	H. B. Kirk	384,370	June 12	892	229	43	1289
Garment-clasp	D. L. and A. D. Smith	380,951	Apr. 10	977	259	43	199
Garment-stretcher	F. E. Bailey	381,304	Apr. 17	1370	368	43	298
Garment-supporter	F. E. Bright	385,227	June 26	2085	527	43	1521
Garment-supporter	A. G. Lull	382,893	June 5	66	20	43	1133
Garment-supporter	C. A. Preston	383,627	May 29	2236	773	43	1169
Garment. Ventilated	E. S. Helwitz	386,206	June 26	2213	567	43	1573
Garments. Reversible vest for ladies'	S. Woolf	383,550	May 29	2514	663	43	1066
Gas and air. Device for mixing	E. B. Denny	382,670	May 1	201	78, 80	43	568
Gas and air fuel mixing chambers. Sectional head for	C. H. Miller	381,638	Apr. 24	2004	396	43	425
Gas and electric-light fixture. Combined	S. B. H. Vance	383,158	May 22	1915	501	43	902
Gas and electric-light fixture. Combined	S. B. H. Vance	383,238	May 22	2102	573	43	935
Gas. Apparatus for the manufacture of	A. G. Meese	382,371	May 8	749	{187 188}	43	689
Gas. Apparatus for the manufacture of	A. G. Meese	382,375	May 8	751	189	43	691
Gas. Apparatus for washing and purifying illuminating	J. H. R. Dinsmore	383,635	May 29	2260	696	43	1050
Gas-bracket	J. Wright	384,302	June 12	883	225	43	1283
Gas-burner	A. J. English	382,692	May 15	1244	325	43	762
Gas-burner	W. M. Jackson	380,580	Apr. 10	761	208	43	197
Gas-burner	W. M. Jackson	381,370	Apr. 17	1388	423	43	320
Gas-burner. Argand	E. Beach	383,237	May 22	2102	573	43	935
Gas-burner. Argand	E. Beach	383,238	May 29	2170	{573 574}	43	988
Gas-burner. Automatic electric	E. E. Bailey	382,289	May 1	541	139	43	613

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's	Official Gazette. Vol.	Official Gazette. Page.
Gas-burner regulator	W. M. Jackson	380,888	Apr. 10	736	206	43	156
Gas-burners. Regulating-valve for	G. B. Snow	382,506	May 8	1046	206	43	719
Gas-burners. Safety attachment for	E. R. Pruitt	381,494	Apr. 17	1784	475	43	364
Gas-burning torch	J. R. Smith	383,154	May 22	1911	499	43	968
Gas-engine	C. Sintz	383,775	May 29	2344	{748 749	43	1663
Gas-engine	G. W. Stewart	381,488	Apr. 17	1780	{476 477	43	365
Gas-extinguisher. Automatic	M. Sieradorfer	383,497	May 29	2421	646	43	1011
Gas-fixtures. Cock for	J. Prentice	385,134	June 26	1946	497	43	1520
Gas from coal. Manufacturing illuminating	J. H. R. Dinsmore	383,634	May 29	2378	623	43	1050
Gas from oil and steam. Manufacturing	A. G. Meeze	382,372	May 8	746	198	43	680
Gas-fuel burner	C. H. Miller	380,913	Apr. 10	919	246	43	188
Gas-generator for locomotives	A. C. Huidekoper	383,395	May 22	2260	601	43	772
Gas-governor	B. F. Day	384,132	June 5	488	119	43	1263
Gas-governor. Automatic	F. Bredel	380,743	Apr. 10	650	182	43	141
Gas-light extinguisher. Automatic	L. Heck	381,370	Apr. 17	1611	431	43	330
Gas-light shield and reflector	A. L. Boone	381,393	Apr. 17	1538	415	43	316
Gas-lighter. Electric	C. W. Holtzer	382,001	May 1	176	46	43	546
Gas-lighting device and gas-cock. Electric	W. Tag and S. C. Smith	384,796	June 19	1424	373	43	1410
Gas. Machine for lighting and extinguishing	G. E. Thaxter	381,440	Apr. 17	1715	{459 460	43	338
Gas-mains. Sliding joint for	D. M. Marquis	381,803	Apr. 24	2242	587	43	471
Gas-mains. Water-trap for	A. Chambers	380,860	Apr. 10	835	{226 227	43	173
Gas. Making coal	A. G. Meeze	382,373	May 8	747	189	43	681
Gas. Manufacturing	A. G. Meeze	382,374	May 8	749	190	43	681
Gas-motor	R. Boekien	384,673	June 19	1246	326	43	1374
Gas-pipes. Apparatus for cleaning charged	P. McGee	380,910	Apr. 10	914	245	43	187
Gas-pressure-governing apparatus	F. H. Hambleton	380,565	Apr. 3	391	112	43	80
Gas-pressure regulator	C. L. Rowland	384,284	June 12	663	178	43	1257
Gas pressure-regulator and cut-off	G. S. Faulkner	384,967	June 26	1677	435	43	1465
Gas tip and pillar	W. M. Jackson	381,389	Apr. 17	1696	433	43	333
Gas-trap. Sewer	H. C. Montgomery	382,456	May 8	1192	306	43	746
Gas-works. Hydraulic main for	G. A. McIlhenny and T. G. Lanelen.	380,911	Apr. 10	916	245	43	187
Gases or liquids under pressure. Apparatus for transporting and transferring	J. E. Holmes	382,610	May 8	1115	286	43	732
Gaseous-fuel burner	W. T. Smith, G. A. Ely, and T. A. Bryan.	380,350	Apr. 3	83	26	43	19
Gate: *See* End-gate. Farm-gate. Fence-gate. Flood-gate. Folding and swinging gate. Hatchway-gate. Railway-gate. Railway-crossing gate. Railway or farm gate. Sliding gate. Swinging gate. Wire gate.							
Gate	H. W. Alshouse	380,366	Apr. 3	1	1	43	3
Gate	G. H. Aylworth	384,552	June 12	1065	278	43	1331
Gate	J. W. and D. H. Barnhard	380,418	Apr. 3	160	45	43	23
Gate	F. W. Berning	382,068	May 1	296	76	43	586
Gate	J. Chandler	383,213	May 22	1992	502	43	984
Gate	J. Donnelly	384,136	June 5	436	121	43	1265
Gate	M. F. Fink	382,601	May 8	1104	283	43	760
Gate	J. Flinner	384,750	June 19	1358	355	43	1396
Gate	G. Ford	381,663	Apr. 10	1156	300	43	232
Gate	J. N. Hatcher	381,694	Apr. 24	2090	547	43	443
Gate	D. McCarty	382,316	May 8	651	166	43	643
Gate	M. B and F. W. Mills	381,159	Apr. 17	1308	{349 350	43	278
Gate	H. E. Moore	381,634	Apr. 24	2006	526	43	425
Gate	J. W. Rutledge	380,636	Apr. 3	469	137	43	100
Gate	R. H. Sayre	382,906	May 15	1521	398	43	823
Gate	H. A. Spencer	381,592	Apr. 24	1948	{513 514	43	414
Gate	J. Z. Stanley	381,859	Apr. 24	2346	{608 609	43	490

Gate roller and hinge	J. J. Swarthout	382,844	May 15	1435	377	43	806
Gear. Compensating	T. Tucker	382,337	May 8	691	174	43	650
Gear-wheel	C. H. Morgan	380,454	Apr. 3	220	60	43	45
Gear-wheels. Machine for the manufacture of	F. Leman	380,498	Apr. 3	263	{80 81 82	43	56
Gearing	H. Holloway	380,731	Apr. 10	627	172	43	134
Gem-setting	W. G. Smith	384,399	June 12	838	218	43	1286
Generator: *See* Gas-generator. Electric generator. Steam-generator. Thermo-electric generator.							
Gimp-machine	G. Faustmann	385,048	June 26	1881	467	43	1494
Glass: *See* Opera, field, or marine glass.							
Glass-beveling machine	F. Armbrust	380,737	Apr. 10	652	180	43	130
Glass-blowing apparatus	W. M. Piper	381,867	Apr. 24	2388	621	43	488
Glass-cutting table	A. Hughes	382,224	May 1	519	133	43	660
Glass. Machine for grinding, smoothing, and polishing	F. Schefold	384,394	June 12	832	217	43	1287
Glass. Ornamenting	M. Fink	384,569	June 12	1491	245	43	1336
Glassware. Coloring	H. E. Mueller	382,185	May 1	342	90	43	576
Glove	W. Vaughan	385,154	June 26	1974	505	43	1523
Glove. Base-ball	F. G. Flacher	381,677	Apr. 24	2220	544	43	441
Glove-fastener	D. A. Carpenter	383,708	May 29	2717	777	43	1071

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's	Official Gazette. Vol.	Official Gazette. Page.
Glove-fastener	G. H. Courcen	384,498	June 12	880	220	43	1297
Glove-fastener	G. H. Courcen	384,499	June 12	881	220	43	1297
Glove-fastener	E. J. Kraetzer	382,366	May 8	776	186	43	639
Glove-fastener	A. Steiner	380,664	Apr. 3	440	126	43	91
Glove-fastener	W. D. Thompson	385,231	June 26	2236	577	43	1489
Glove-fastener	E. Pringle	380,694	Apr. 10	580	168	43	126
Glove-fastening	W. S. Richardson	382,904	May 15	1519	{397 398	43	823
Glove-fastening	W. S. Richardson	382,905	May 15	1520	398	43	823
Glove-fastening	W. S. Richardson	383,069	May 15	1761	460	43	973
Glove-fastening	W. S. Richardson	383,070	May 15	1762	460	43	973
Glove-fastening	W. S. Richardson	383,071	May 15	1763	461	43	973
Glove-fastening	W. S. Richardson	383,072	May 15	1764	461	43	973
Glove-fastening	W. S. Richardson	383,073	May 15	1765	461	43	973
Glove-fastening	W. S. Richardson	383,074	May 15	1766	462	43	973
Glove-fastening	W. S. Richardson and J. B. Chase	382,903	May 15	1518	397	43	823
Glove-package binder	C. Connelly	383,075	May 1	300	79	43	582
Gloves, &c. Fastener for	E. J. Kraetzer	381,703	Apr. 24	2102	550	43	445
Gloves, &c. Fastener for	E. J. Kraetzer	381,935	May 1	50	14	43	524
Goblet-holder	E. C. Baker	383,009	May 22	1967	497	43	991
Gold-plated shells, &c. Plate for shaving	J. S. Palmer	383,520	May 22	2020	509	43	1039
Governor	W. A. Bole	382,450	May 8	865	221	43	683
Governor	J. W. Thompson	381,897	Apr. 24	1958	516	43	416
Governor	J. W. Thompson	385,158	June 26	1971	504	43	1525

Governor. Steam-engine	J. B. Allfree	383,987	May 22	2079	546	43	949
Governor. Steam-engine	C. Schmid	384,286	June 12	665	178	43	1257
Governor. Steam-engine	A. Finks	383,350	May 22	2180	570	43	960
Grader. Road	J. R. Dawson	384,894	June 19	1577	410	43	1437
Grading machine. Road	F. E. R. Malke	384,708	June 19	1391	{339 340	43	1264
Grain adjuster for binders	P. Grobecker	381,449	Apr. 17	1763	471	43	339
Grain. Apparatus for testing	W. R. Baker	382,938	May 15	1565	409	43	831
Grain-binder	G. Esterly	384,140	June 5	440	122	43	1266
Grain-binder	J. A. Graham	383,462	May 22	2368	630	43	1060
Grain-binder	S. V. Kennedy and C. A. Anderson	385,059	June 26	1839	471	43	1496
Grain-binder	M. L. Nichols	381,079	Apr. 10	1186	{315 316 317	43	220
Grain-binder	W. M. Platt	384,672	June 5	343	94, 97	43	1139
Grain-binder	H. E. Pridmore	382,896	May 15	1511	392	43	821
Grain-binder	J. F. Steward	382,942	May 15	1431	{376 377	43	805
Grain-binder elevator	L. Mathews	384,458	June 12	980	239	43	1304
Grain-binder knotter	C. Farmer and G. Lieder	384,945	June 12	610	164	43	1247
Grain-binders. Automatic trip for	O. O. Storle	380,905	Apr. 3	450	127	43	91
Grain-binders. Knot-tying mechanism for	J. R. Severance	382,773	May 15	1341	{353 354	43	786
Grain-binding machine	C. Young	382,903	May 1	475	{121 122	43	600
Grain-binding machines. Bundle-ejecting mechanism for	M. A. Keller	380,901	Apr. 10	905	242	43	185
Grain-cleaner	J. S. Ash	385,036	June 26	1799	463	43	1489
Grain-cleaning cylinder	W. P. Clifford	383,627	May 29	2611	600	43	1048
Grain-cradle	J. Berry	382,024	May 1	216	57	43	553
Grain-divider	S. Ray	383,542	May 29	2505	661	43	1004
Grain-drill	D. B. Beardon	384,469	June 12	995	250	43	1317
Grain-drill tubes. Shoe for	T. K. Craue	381,465	Apr. 17	1755	469	43	357
Grain-drills. Cleaner and gage attachment for	J. T. West	384,105	June 5	382	107	43	1194
Grain-drying machine. Centrifugal	F. Melkerman	383,747	May 29	2726	733	43	1084
Grain-garners. Automatic latch for	P. E. Canfield	381,588	Apr. 24	1956	491	43	397
Grain-heater	J. Warrington	383,027	May 15	1707	442	43	950
Grain-meter	G. H. Kamman	384,963	June 26	1703	442	43	1471
Grain-meter. Automatic	J. C. King	382,383	May 22	2205	549	43	963
Grain-pipe. Flexible	T. W. Emery	384,352	June 12	773	201	43	1275
Grain-separator	G. B. Bailey	383,106	May 22	1926	503	43	910
Grain-separator	F. Melkerman	384,861	June 19	1531	396	43	1423
Grain transferring and weighing elevator apparatus	P. F. Chase	383,809	June 5	17	5, 6	43	1124
Grape must and skins. Preserving	F. Springmühl	380,463	Apr. 3	231	.....	43	47
Grapes while maturing. Envelope for protecting	E. T. Starr	383,827	May 22	2157	569	43	954
Graphophone	C. S. Tainter	380,535	Apr. 3	243	96, 99	43	70
Grapple	W. Potter	380,405	Apr. 3	145	41	43	30
Grapple	W. H. Wiley	384,107	June 5	384	106	43	1194
Grate	A. C. Morton	382,720	May 15	1271	{323 324 325	43	772
Grate	J. O'Keefe	381,866	Apr. 24	2387	{626 627	43	490
Grate	A. Tolhurst, C. A. Glasbrook, A. Philbey, and T. Lockerbie.	381,185	Apr. 17	1343	350	43	277
Grate	L. M. Woodcock	384,409	June 12	854	222	43	1291
Grate-bar	M. H. Meskevite	382,104	May 1	341	90	43	576
Grate-bar	R. Thompson	384,720	June 19	1339	347	43	1389
Grate. Dumping	P. Rossland and C. Fisher	382,055	May 1	270	71	43	563
Grate. Fire	D. M. Crumley	381,909	May 1	151	38	43	542
Grate. Sectional pedestal	H. Petersen	382,553	May 8	1027	262	43	715
Gravity apparatus. Specific	L. Simons	380,533	Apr. 3	240	97	43	69
Grease-cup	H. D. Montsel	381,157	Apr. 17	1307	349	43	271
Grinding-machine	F. A. Shoemaker	384,795	June 19	1462	373	43	1403
Grinding-mill	M. J. Althouse	385,035	June 26	1798	463	43	1489
Grinding-mill	A. Dobler	381,346	Apr. 17	1579	423	43	304
Grinding-mill	J. S. Woodcock	382,202	May 1	472	121	43	599
Grinding-mill	G. Zenes and G. Bolle	384,949	June 19	1450	429	43	1451

Guns. Elastic pedestal for mounting	A. C. Koerner	381,475	Apr. 17	1771	473	43	361
Guns. Means for controlling hydraulic apparatus for training heavy	C. H. Murray	382,377	May 8	753	189 / 190 / 191 / 192	43	662
Guns. Mounting and loading apparatus for	G. W. Rendel	383,768	May 29	2697	744 / 745	43	1090
Guns. Trigger mechanism for	B. R. Jolly	383,814	May 29	2908	767 / 768	43	1165
Guns. Vertical breech-closing mechanism for	W. Lorenz	381,698	Apr. 24	1998	365	43	494
Gunpowder	C. J. Olds	381,507	Apr. 17	1693	.....	43	378
Gunpowder-mill	P. A. Oliver	382,925	May 15	1411	371	43	800
Gunpowder or analogous materials. Compressing	W. Lorenz	380,698	Apr. 10	579	150	43	125
Guttering to the eaves of houses. Hanging sheet-metal	C. C. Frederick	381,770	Apr. 24	2194	574	43	463
Hair-crimper	C. H. Bissell	384,418	June 12	966	236	43	1294
Hair-crimper	G. Haas	381,133	Apr. 17	1275	341	43	285
Hair-crimper	I. W. Heysinger. (Reissue)	10,936	June 5	576	157	43	1233
Hair curling and crimping device	M. Campbell	381,983	May 1	127	38	43	540
Hairspring collet and stud	H. Hugnenin	384,166	June 5	484	133	43	1215
Halter	J. C. Covert	382,092	May 15	1342	294	43	708
Halter	D. C. Frost	381,123	Apr. 17	1965	338	43	283
Halter	D. M. Stuart	383,526	May 29	2240	777	43	1119
Hame	J. N. Farlow	384,089	June 5	279	78	43	1174
Hame	A. C. Matlack	381,389	Apr. 17	1453	441	43	330
Hame attachment	R. F. Russell	384,084	June 5	257	101	43	1169
Hame-fastener	J. C. Hackett	383,727	May 29	2759	727	43	1078
Hame-fastener	A. G. McLeod	382,103	May 1	340	90	43	576
Hame-link	M. E. Lasher	382,863	May 15	1491	391	43	817
Hames. Die for attaching terrets to	W. H. Walker	381,447	Apr. 17	1734	463	43	354
Hammer. Drop	F. M. Leavitt	380,608	Apr. 10	757	207 / 208	43	158
Hammer for blacksmiths. Spring	H. Stewart and W. B. Wiswall	385,018	June 26	1766	457	43	1464
Hammering machinery actuated by explosive gaseous mixtures.	C. W. Pinkney	384,869	June 19	1543	401 / 402	43	1430
Hammock	A. Dickey	381,536	Apr. 24	1873	485	43	389
Hammock or swing	M. Broderick	381,897	Apr. 24	2205	567	43	469
Hammock-spreader	T. B. Thomas	384,738	June 19	1398	346	43	1369
Hammock-spreader	V. P. Travers	381,863	Apr. 24	2351	610	43	491
Hammock-stand. Portable folding	E. Hussey	382,648	May 8	1179	303	43	744
Hammock-supporting ropes. Holder for	V. P. Travers	381,864	Apr. 24	2352	610	43	491
Hammocks, &c. Frame for	W. F. Parmelee	381,095	Apr. 10	1089	280 / 281	43	339
Hand-bag	J. Mehl, Jr	384,377	June 12	814	211	43	1281
Hand-press. Domestic	J. W. Condon, C. G. Shepard, and P. Adams.	385,165	June 26	1986	509	43	1526
Hand-rest for book-keepers	W. D. Sloan	382,776	May 22	2047	749	43	1084
Handkerchief-holder	S. M. Griswold	382,895	May 15	1389	364	43	795
Handle: *See* Adjustable handle. File-handle. Bag-handle. Saw-handle.							
Handle	T. L. Rivers	381,646	Apr. 24	2019	530	43	426
Handling material. Apparatus for	A. E. Brown	382,946	May 15	1577	412	43	834
Hanger: *See* Card-hanger. Hat-hanger. Door-hanger. Pipe-hanger. Eaves trough hanger. Shaft-hanger. Grindstone-hanger. Umbrella-hanger.							
Harness	A. N. Jenkins	383,359	May 22	2092	522	43	903
Harness	M. Williams	380,376	Apr. 3	109	30	43	32
Harness-bracket	J. Harbison	381,776	Apr. 24	2202	576	43	464
Harness-hook	D. W. Brownell	382,341	May 22	2174	573	43	997
Harness hook or snap	W. S. F. Dillon	384,518	June 12	1010	262	43	1309
Harness-horse	T. Wilkes	384,301	June 12	988	184	43	1282
Harness-mountings. Manufacture of	R. S. Grummon	384,571	June 12	1094	287	43	1327
Harness-rack	E. Phillips and A. N. Edwards	382,923	June 5	214	63	43	1168
Harness-rosette attachment	R. W. Jones	382,459	May 15	1469	388	43	817
Harness-strap attachment	E. Covert	382,256	Apr. 17	1288	370	43	305

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Harness. Trace-lock for	L. Anderson	385,923	June 26	2070	530	43	1566
Harness. Water-hook for	G. M. Streng	384,068	June 5	373	105	43	1198
Harrow	S. Cooper	382,513	May 8	961	243	43	760
Harrow	A. Corbin, Jr	384,131	June 5	426	118	43	1209
Harrow	T. R. Crane	381,464	Apr. 17	1754	469	43	357
Harrow	J. W. Dobyns	384,968	June 26	1676	455	43	1465
Harrow	B. Essig	381,467	Apr. 17	1756	470	43	358
Harrow	G. W. Gorsuch	381,835	Apr. 24	2203	580	43	488
Harrow	E. W. Herendeen	382,304	May 8	836	168	43	641
Harrow	J. Hildesheim	381,683	Apr. 24	1963	383	43	483
Harrow	W. E. Jacobs	383,398	May 22	2121	550 / 560	43	949
Harrow	P. C. King	383,395	May 22	2133	563	43	959
Harrow	A. D. Manson	384,457	June 12	919	229	43	1324
Harrow and cultivator. Combined revolving	L. S. Evans	383,298	May 22	2106	556	43	944
Harrow. Disk	A. Corbin, Jr	381,908	May 1	17	5	43	512
Harrow. Disk	L. A. Richards	382,731	May 15	1287	337	43	778
Harrow-disks. Manufacture of	W. J. Hogan	383,088	June 5	47	15, 16	43	1169
Harrow, leveler, and cultivator. Combined	P. N. Applegate	382,204	May 1	478	123	43	603
Harrow. Spring-tooth	R. A. Rose	381,171	Apr. 17	1287	354	43	274
Harrows. Spring-tooth for	W. M. Brinkerhoff	384,188	June 5	513	140	43	1221
Harvester	J. R. Beard	381,605	Apr. 24	1971	518	43	419
Harvester	J. S. Davis	384,085	June 5	267	76, 77	43	1173
Harvester	G. Esterly	385,947	June 26	1817	466 / 467	43	1494
Harvester	S. D. Maddin	382,049	May 1	361	97, 98	43	561
Harvester	J. Shickle	382,910	May 15	1526	360	43	804
Harvester	W. N. Whiteley and W. Bayley	381,306	Apr. 17	1511	407 / 408	43	311
Harvester and binder	J. Bachman	382,677	May 15	1215	315	43	761
Harvester and thrasher. Combined	D. C. Matteson	383,253	May 22	2088	530 / 531	43	930
Harvester. Berry	G. Wilkin	382,745	May 15	1306	343	43	779
Harvester bundle-carrier	O. J. Foss	383,718	May 29	2750	734	43	1076
Harvester. Clover-seed	H. Burfeind	383,786	May 29	2878	756 / 757	43	1160
Harvester. Corn	J. T. McHenry	382,100	May 1	336	88, 89	43	575
Harvester. Corn	J. A. Norton and J. A. Stones	381,163	Apr. 17	1316	361	43	272
Harvester. Corn	G. B. and J. T. Snow	385,266	June 26	2177	557 / 558	43	1567
Harvester. Cotton	O. T. Bagg	383,099	May 22	1833	499	43	898
Harvester. Grain-binding	M. L. Nichols	381,080	Apr. 10	1192	317 / 318 / 319 / 320	43	340
Harvester. Grain-binding	A. O. Sleeta	385,285	June 26	2176	556	43	1567
Harvester-reel	G. Esterly	384,139	June 5	426	122	43	1205
Harvester. Self-binding	S. V. Kennedy and C. A. Anderson	382,532	May 8	990	250 / 251 / 252	43	707
Harvesters. Bundle-carrier for	D. H. Prewitt	383,009	May 15	1885	436	43	854
Harvesters. Cutting apparatus for	J. A. Blair and W. C. Bush	385,164	June 26	1965	508	43	1523
Harvesters. Picker-stem for cotton	W. L. Langley	382,535	May 8	988	254	43	708
Harvesters. Picker-stem for cotton	W. L. Langley	382,536	May 8	1000	254	43	709
Harvesters. Pitman-box for	A. W. Braman	384,504	June 12	1009	260	43	1318
Harvesters. Platform-adjustment for	C. F. Search	383,600	May 29	2856	704 / 705	43	1058
Harvesters. Reel-driving gear for	J. Agenten	384,109	June 5	398	108	43	1195
Harvesters. Sheaf-carrier for grain	W. Bell	382,494	May 8	791	201	43	689
Harvesters. Swathing attachment for	C. M. Owen	382,317	May 22	2147	569	43	966
Harvesting-machine	A. Goodyear	381,232	Apr. 17	1400	378 / 379 / 380	43	320
Hat and coat rack. Combined	R. X. McArthur	382,315	May 8	650	168	43	643
Hat and coat rack. Folding	G. D. Tolman	385,153	June 26	1973	505	43	1522
Hat-box. Folding	S. E. Sarles	380,264	Apr. 3	91	27, 28	43	29
Hat for firemen	T. Anderson	381,088	Apr. 24	2051	527	43	435
Hat-hanger	S. L. Drake	384,897	June 19	1560	411	43	1437
Hat or bonnet holder for tables and wardrobes	V. M. Hollyday	381,616	Apr. 10	1979	326	43	350
Hat-oiling roll	C. H. Sprague and W. J. Wiley	383,998	June 5	223	66	43	1165
Hat-starching machine	E. Barrett	383,270	May 22	2098	547	43	940
Hat-stretching machine	W. Simmonds	383,254	May 22	2056	540	43	930
Hat. Ventilated	M. Postlethwaite	385,228	June 26	2172	554 / 555	43	1566
Hat-wire	A. Cary	381,530	Apr. 24	1882	498	43	397
Hats, caps, &c. Manufacture of felt	F. W. Cheetham	382,796	May 15	1241	.....	43	783
Hats. Machine for hardening	S. C. Palmer	382,379	May 8	757	192 / 193	43	666
Hats. Sweat-band for	T. W. Bracher	381,926	Apr. 17	1374	397	43	333
Hats. Sweat-band for	T. W. Bracher	385,092	June 26	1893	491	43	1527
Hatch-door	W. Stevens	380,410	Apr. 3	156	43	43	33
Hatchway-gate for elevators	C. M. Greenman	382,037	May 1	346	93	43	576
Hay and fodder fork	Z. S. and M. C. Randleman	384,221	June 12	899	177	43	1256
Hay-cap	J. Brady	384,057	June 5	1063	232	43	1402
Hay-carrier	G. H. Fowler	384,948	June 26	1678	456	43	1465
Hay-carrier	A. W. Tutton	380,412	Apr. 3	156	44	43	33
Hay-loader	E. L. Hay	381,779	Apr. 24	2205	577 / 578	43	465
Hay-loader	C. A. Henry	384,205	June 5	540	140	43	1205
Hay-loader	C. C. and D. C. Jewett	381,248	Apr. 17	1438	366 / 367	43	336
Hay-loader	M. E. Johnson	381,699	Apr. 24	2007	549	43	444
Hay-loader	W. S. Nichols	385,281	June 26	2167	552 / 564	43	1205

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Hay or straw grappling fork	E. V. R. Gardner	384,970	June 26	1661	436	43	1496
Hay-press	T. S. Gorrell and E. M. Tubbs	381,007	Apr. 10	1089	427	43	216
Hay-press	F. McKinney	382,822	May 15	1408	369	43	899
Hay-press	E. Prengel	382,664	May 8	1192	370	43	748
Hay-rack	D. C. Roby	382,328	May 8	673	210	43	747
Hay-rake	T. F. and M. O. Godding	383,454	May 29	2349	170	43	647
Hay rake and cocker	N. J. Nilson	383,479	May 29	2398	685	43	905
Hay rake and ricker. Combined	R. O. Davis	385,252	June 26	2122	539	43	1665
Hay-rake. Horse	J. H. Bally	382,667	May 1	284	542	43	1557
Hay-rake. Horse	G. Keith	381,840	Apr. 24	2314	75	43	508
Hay-rakes. Cleaner-arm for the teeth of horse	N. Stafford	381,562	Apr. 24	1950	691	43	484
Hay raker and loader	J. H. and P. Lux and S. Ede	380,336	Apr. 3	43	514	43	415
Hay-sling	A. and C. A. Church	384,940	June 26	1657	15, 16	43	10
Hay-stacker	D. M. Campbell	382,213	May 1	467	433	43	1463
Hay-tedder	G. H. Earnest	381,872	June 5	38	126	43	898
Head-rest	J. W. Campbell	382,940	May 15	1563	10, 11	43	1127
Header and thrasher. Combined	G. C. Reynolds, J. and W. Paterson	381,723	Apr. 24	2136	413	43	825
Hearse	M. F. Deisinger	380,622	Apr. 3	474	539	43	452
Heat and power to large districts of buildings. Means for supplying	W. E. Prall	382,383	May 8	764	194	43	86
Heat and power to large districts of buildings. Supplying	W. E. Prall	382,384	May 8	766	194	43	985
Heat and steam or water power to cities, towns, &c. Means for supplying	W. E. Prall. (Reissue)	10,923	Apr. 17	1842	195	43	376
Heat developer and radiator	W. M. Jackson	384,365	June 12	794	497	43	1979
Heater: *See* Air-heater. Car-heater. Feed-water heater. Flat-iron heater. Grain-heater. Liquid-heater. Sad-iron heater. Sad-iron and plate heater. Steam-heater. Tire-heater. Water-heater.							
Heater for cars and buildings	T. McCrossan	381,806	Apr. 24	2245	598	43	472
Heater for muffs, &c	F. Hiller, Jr	381,549	Apr. 24	1885	497	43	401
Heating by compressed hot or superheated air	T. J. Simpson	381,589	Apr. 24	1944	519	43	413
Heating by electricity	E. E. Ries	381,815	Apr. 24	2260	512	43	475
Heating. Electro-chemical	E. E. Ries	381,818	Apr. 24	2275	590	43	477
Heating-furnace	E. W. Anthony	380,711	Apr. 10	611	594	43	131
Heating-furnace	F. Kernan, Jr	383,469	May 29	2385	167	43	1002
Heating-furnace	J. White	381,307	Apr. 17	1509	635	43	810
Heating system. Electric	E. E. Ries	381,817	Apr. 24	2271	607	43	476
Heating water and other liquids. Apparatus for	W. T. Sugg	383,921	June 5	115	592	43	1143
Hedge	P. M. Mishler	380,448	Apr. 3	213	33	43	43
Hedge	J. A. Mitchell	380,449	Apr. 3	213	57	43	43
Hedge	J. A. Mitchell	380,450	Apr. 3	214	58	43	43
Hedge-trimming machine	R. W. Oliver	381,508	Apr. 17	1564	482	43	372
Heel-burnisher	C. J. Addy	385,291	June 26	2189	539	43	1560
Heel-burnishing machine	C. J. Addy	383,934	June 5	139	40	43	1147
Heel. Elastic or spring	E. A. Munger	380,508	Apr. 3	303	88	43	61
Heel-machine	J. H. Cunningham	381,493	Apr. 17	1798	478	43	367
Heel-mold	E. J. Le Gay	382,868	May 15	1498	393	43	819
Heel-nailing machine	E. B. Allen	384,343	June 12	756	198	43	1273
Heel-plate	C. Doney	382,694	May 15	1244	394	43	796
Heel-plate-attaching machine	W. J. Atwell	381,604	Apr. 24	1968	518	43	418
Heel-plate-attaching machine	W. J. Atwell	381,605	Apr. 24	1970	518	43	418
Heel-protector	F. J. Herrick	382,260	May 1	563	142	43	617
Heel. Spring	E. A. Munger	380,507	Apr. 3	300	87	43	61
Heel-stiffener machine	G. A. Fullerton	384,753	June 19	1362	356	43	1396
Heeling-machine	C. W. Glidden	382,709	May 15	1286	349	43	793
Heeling-machine	M. A. Tyler and E. Merritt	382,121	May 1	361	93	43	560
Heeling-machines. Breasting attachment for	E. A. Lupien	382,615	May 8	1121	360	43	733
Hides or skins. Machine for shaving	J. Rood and I. Vaughan	383,914	June 5	104	30	43	1141
High-speed engine	P. W. Willans and M. H. Robinson	380,375	Apr. 3	106	31	43	33
Hinge	C. H. Beer	382,860	May 15	1457	382	43	840
Hinge	J. Wien	385,156	June 18	1976	506	43	1567
Hinge for traveling-bags, &c	C. Reinisch	385,138	June 18	1950	499	43	1561
Hinge for trunks, bags, &c. Stay	W. Durand	385,255	June 26	2128	543	43	1656
Hinge. Lock	T. S. Beebe	385,168	June 26	1992	508	43	1568
Hinge. Spring	W. H. Beath	381,100	Apr. 17	1220	330	43	256
Hinge. Spring	L. Bommer	383,554	May 29	2519	664	43	1057
Hinge. Spring	L. Bommer	383,555	May 29	2520	665	43	1057
Hinge. Spring	H. P. Kochsmeier	385,312	June 26	2218	560	43	1574
Hinge. Spring	G. W. Warner	384,102	June 5	379	106	43	1193
Hinge. Spring	G. W. Warner	384,103	June 5	380	107	43	1194
Hobby-horse	W. Davis	381,110	Apr. 17	1254	336	43	261
Hoe	S. H. T. Tilghman	384,579	June 19	1561	406	43	1423
Hog-trap	B. W. Duncan	380,649	Apr. 3	511	143	43	104
Hog-trap	J. H. Gentry	383,216	May 22	2001	534	43	988
Hoisting-jack	W. N. Bell	383,035	May 15	1794	449	43	888
Hoisting-machine	F. H. A. Peters	382,436	May 8	635	214	43	673
Hoisting machinery	R. Schuls	380,637	Apr. 3	480	137	43	109
Hoisting-tackle	S. M. Vauclain	381,043	Apr. 10	1123	361	43	227

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Holder: *See* Bag-holder. Bill-holder. Bird-feed holder. Blacking-box holder. Broom-holder. Carriage-curtain-cord holder. Chalk-line holder. Checkrein-holder. Coat-holder. Copy-holder. Cuff-holder. Dental holder. Dentist's disk-holder. Envelope-holder. Fire-cracker holder. Goblet-holder. Handkerchief-holder. Knife-blade holder. Lamp-holder. Lamp-shade holder. Lead and rule holder. Mail-bag holder. Music-holder. Napkin-holder. Paper-holder. Paper and twine holder. Pen-holder. Pencil-holder. Photograph-holder. Photographic-plate holder. Pillow-sham holder. Rein-holder. Ribbon-holder. Sash-holder. Screw-holder. Tack or nail holder. Tag-holder. Ticket-holder. Tire-bolt holder. Torpedo-holder. Twine-holder. Wire-cloth holder.							
Honey-frames. Machine for making	J. Ware	384,549	June 12	1092	277	43	1230
Hoof-expander	L. Monahan Jr.	383,585	May 29	2553	675	43	1035
Hook: *See* Back-band hook. Cant-hook. Checkrein-hook. Coat and hat hook. Drapery-hook. Harness-hook. Painter's hook. Pneumatic hook. Snap-hook. Whiffletree-hook.							
Hook	G. C. Beals	380,974	Apr. 10	1019	286	43	208
Hoop: *See* Mast-hoop.							
Hoop	J. Leach	382,264	May 1	567	143	43	617
Hoop-iron. Machine for bundling	W. Hansen	383,686	May 29	2691	711	43	1085
Hopple	O. B. Falea	382,809	May 15	1469	385	43	812
Horns of cattle. Machine for softening and bending the	G. B. French	383,519	May 29	2456	651	43	1016
Horse-boot	M. Kinsey	381,386	Apr. 17	1640	436	43	335
Horse-detacher	J. A. Dickson	383,447	May 29	2340	621	43	994
Horse-detacher	T. Manry and E. Roubinet	383,742	May 29	2778	732	43	1088
Horse-detacher	J. McMorries	381,712	Apr. 24	2121	554	43	448
Horse-detacher	W. L. and P. M. Mitzel and J. Q. A. Haney	384,000	June 5	327	93	43	1183
Horse-detacher	G. T. Parker	385,138	June 26	1944	497	43	1560
Horse-detacher	A. M. Witherington	382,891	May 1	471	121	43	600
Horse-power	R. G. McElroy	381,807	Apr. 24	2246	598	43	472
Horse-power sweep	G. W. Crane	383,443	May 29	2334	620	43	992
Horses. Device for assisting in training	H. C. Woodnutt	381,745	Apr. 24	2164	566	43	456
Horses. Device for checking	F. T. Atkins	381,316	Apr. 17	1589	412	43	314
Horses. Device for checking	T. J. Quinn and D. McLellan	381,580	Apr. 24	1925	507	43	409
Horses. Device for hitching	C. Kauler	382,989	May 15	1636	428	43	844
Horses. Device for stopping	A. Wedekind	381,735	Apr. 24	2150	563	43	454
Horses. Hood for	C. A. and J. D. Sullivan	382,668	May 8	1208	312	43	750
Horses. Split-hoof clamp for	J. H. Wiestner	381,868	Apr. 24	2350	612	43	493
Horseshoe	J. E. and E. W. Bingham	382,131	May 1	374	97	43	562
Horseshoe	J. E. and E. W. Bingham	383,604	May 29	2702	714	43	1067
Horseshoe	I. G. Howell	380,800	Apr. 10	749	205	43	157
Horseshoe	H. Jonas and C. Hirsch	382,040	May 1	249	64	43	559
Horseshoe-calk	S. Stone	380,302	Apr. 3	88	27	43	99
Horseshoe-nail machine	S. Hansen	382,646	May 8	1163	300	43	748
					301		
Horseshoe-nails. Cutting	H. A. Wills	382,927	May 15	1546	405	43	888
Horseshoe-nails. Machine for making	H. A. Wills	382,928	May 15	1549	406	43	889
Horseshoe-pliers	S. J. Hurley	382,263	May 1	566	143	43	617
Hose and faucet coupling	T. Mackel	381,582	Apr. 24	1901	501	43	405
Hose and pipe supporter. Adjustable garden	C. Bosse	381,107	Apr. 17	1243	344	43	258
Hose carriage. Garden	J. J. Divokey	381,540	Apr. 24	1876	493	43	400
Hose-clamp	F. Schimper	382,557	May 8	1033	263	43	717
Hose-coupling	G. Kiefer	383,360	May 22	2392	569	43	983
Hose-coupling	H. A. Wahlert	383,160	May 22	1917	501	43	900
Hose-nozzle	M. O. Ruperle	381,500	Apr. 17	1815	480	43	370
Hose-nozzle	I. W. McGaffey	382,099	May 1	336	88	43	575
Hose or pipe coupling	T. Haley	382,468	May 8	895	236	43	688
Hose. Tool for applying couplings to	E. E. Sibley and C. Allen	382,776	May 15	1340	355	43	767
Hot-air furnace	C. N. Bacon	381,750	Apr. 24	2169	568	43	457
Hot-air furnace	H. Callahan	383,100	May 22	1835	481	43	893
Hot-air furnace	J. B. Oldershaw	381,574	Apr. 24	1919	506	43	409
Hot-air furnace	G. D. Sanford	384,789	June 19	1414	371	43	1400
Hot-air furnace	P. H. Scheurer	381,427	Apr. 17	1694	454	43	347
					455		
Hot-air register for fire-place heaters	W. F. Rossman	381,263	Apr. 17	1493	399	43	294
Hot-water boiler	E. S. Manny	382,313	May 8	648	165	43	645
Hot-water boiler	O. W. Noble	382,659	May 8	1186	306	43	747
					307		
Hot-water boiler	O. W. Noble	382,660	May 8	1188	307	43	747
					308		
House interiors. Finishing of	W. J. Boda	385,223	June 26	2098	535	43	1650
					536		
Hub-boring machine	W. H. Barnhart	383,848	June 5	2	1	43	1121
Hub. Vehicle	M. E. True	381,891	Apr. 24	2193	622	43	500
Huller: *See* Clover-huller.							
Hunking-pin	H. H. Perkins	380,516	Apr. 3	322	92	43	66

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Hydrant	C. G. Ette	382,642	May 8	1138	203	43	741
Hydrant	C. G. Ette	382,960	May 15	1506	417	43	837
Hydrant. Fire	D. W. Carroll	382,951	May 15	1504	412 / 414	43	835
Hydraulic elevator	W. T. Fox	384,436	June 12	868	229 / 230	43	1286
Hydraulic elevator	W. H. Marsh	383,338	May 22	2021	289	43	939
Hydraulic elevator	W. O'Keefe	384,864	June 19	1535	389 / 400	43	1429
Hydraulic-elevator mechanism	E. B. Benham	380,851	Apr. 10	680	223	43	170
Hydraulic shaping-press	A. E. Hobson. (Reissue.)	10,934	May 29	2053	799	43	1114
Hydrocarbon-burner	C. S. Jarboe and J. McHale	383,688	June 5	58	18	43	1132
Hydrocarbon-burner	J. E. Patterson and A. Noteman	384,097	June 5	337	95	43	1165
Hydrodynamic forces. Mechanism for utilizing and controlling	W. M. Jackson	383,887	June 5	55	18	43	1131
Hydrogen. Making	W. Majert and G. Richter	380,788	Apr. 10	635	178	43	126
Ice. Apparatus for the production of transparent	H. J. West	381,195	Apr. 17	1359	388	43	300
Ice-creeper	C. J. Lung	382,438	May 8	831	213	43	678
Ice-creeper	W. W. and E. F. Preston	380,616	Apr. 10	709	210	43	161
Ice-dog	T. S. Hitchcock	382,291	May 1	563	148	43	617
Ice or refrigerating machine	F. W. Wolf	385,157	June 26	1977	566	43	1327
Ice-roads. Device for making	D. J. Arpin	381,651	Apr. 10	1139	304 / 305	43	289
Ice-runs. Switch for	J. Reis	381,419	Apr. 17	1081	459 / 461	43	345
Ice-shaver	F. K. Way	383,998	June 5	138	39	43	1146
Ice-shaver	F. K. Way	384,299	June 12	667	188	43	1282
Ice-shaving machine	R. H. and D. L. Bates	380,644	Apr. 10	1000	289	43	160
Identifying device	E. R. Fitch	385,196	June 26	1905	445	43	1319
Igniting apparatus. Electric	L. Hen and R. Weinmann	382,231	May 1	516	139	43	626
Implement. Combination	W. S. Rees	384,598	June 12	1193	297	43	1341
Incrustation-preventive	F. C. Keighley	382,613	May 8	1118	287	43	723
Incubator	J. and B. F. Mullica	380,340	Apr. 3	48	.....	43	13
Incubators. Heat-regulator for	W. H. Hillier	382,587	May 8	982	247 / 248	43	705
Incubators. Temperature-regulator for	C. E. Bean	382,403	May 8	790	200	43	669
Incubators. Temperature-regulator for	J. W. Hile	383,732	May 29	2765	738 / 739	43	1079
Indicator:	G. E. Talbot	382,779	May 15	1352	356	43	788
See Boiler-feed indicator. Cash-indicator. Directory-indicator. Electric indicator. Electric-circuit indicator. Electrical indicator. Elevator-indicator. Liquid-level indicator. Office-indicator. Poison-bottle indicator. Pressure-indicator. Speed-indicator. Station-indicator. Station and street indicator. Steam-boiler indicator. Steam-engine indicator. Street and station indicator. Water-gage indicator.							
Indicator	T. J. Bartlett	381,480	Apr. 17	1749	468	43	358
Induction-coil. Repeating	J. A. Barrett	382,856	May 15	1449	381	43	798
Inductive resistance. Adjustable	O. B. Shallenberger	380,945	Apr. 10	967	257	43	197
Ingot-bars. Apparatus for breaking steel	W. R. Hinsdale	384,846	June 19	1510	393	43	1425
Ingot-bars. Apparatus for severing	W. R. Hinsdale	384,847	June 19	1512	394	43	1425
Ingot-forming apparatus	J. Illingworth	382,497	May 8	822	210 / 211	43	675
Ingot or bar for tools	F. W. Seaman	382,192	May 22	1960	514	43	917
Ingots. Making compound	L. L. Burton	381,527	Apr. 24	1857	491	43	336
Inhaler	J. B. Henry	380,730	Apr. 10	667	179	43	134
Inhaler	H. Palmer	384,589	June 12	1110	286	43	1341
Injector	C. C. Sharp	382,113	May 1	351	91	43	578
Injector	W. E. Dodge	383,109	May 22	1830	464	43	993
	E. J. Young, A. Lambert, and H. R. Ferris	384,686	June 19	1235	322	43	1372
Ink	M. C. Lefferts and J. H. Stevens	380,654	Apr. 3	517	.....	43	165
Ink-mill	T. R. Johnston	383,576	May 29	2541	671	43	1033
Ink-supplying device	H. Esser	384,899	June 19	1502	412	43	1430
Ink-well	E. J. Colby	383,514	May 29	2451	650	43	1014
Inkstand	M. H. Garland	382,696	May 15	1248	326	43	767
Inkstand	J. F. K. O'Connor	382,894	May 15	1506	394 / 395	43	800
Inkstand and frame	H. A. Reinhard	382,621	May 8	1131	291	43	725
Insect-destroyer	C. Vehring	383,199	May 22	1947	516	43	919
Insect-trap	A. H. Ingalls	381,377	Apr. 17	1068	462	43	338
Insulated wire	J. Williams	382,788	May 29	2688	702	43	1007
Insulated wire	H. Splitdorf	383,910	June 5	110	30	43	1148
Insulating-joint	J. D. Thomas	382,781	May 15	1356	362	43	788
Insulator for electrical wires	J. T. Robb	382,972	May 1	577	146	43	628
Interlocking switch and signal	F. E. Keyes	383,734	May 29	276.	732	43	1080
Iron:	G. Gibbs	381,773	Apr. 24	2197	575	43	463
See Corner-iron. Flat-iron. Molder's draw-iron. Sad-iron. Smoothing and polishing iron. Soldering-iron. Vehicle-gear iron.							
Iron and steel. Apparatus for manufacturing compound plates of	A. Wilson	382,970	Apr. 10	1010	268 / 269	43	805
Iron and steel with rustless oxide. Coating	W. T. Wells	382,647	May 8	856	219 / 220	43	689
Iron. Converter for refining molten	I. G. Johnson	384,686	June 19	1183	309 / 311	43	1366
Iron from its bed. Apparatus for transferring pig	W. H. Fredericks	380,688	Apr. 3	477	124	43	97
Iron. Manufacture of planished sheet	W. and W. H. Rogers	380,686	Apr. 10	777	213	43	165

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Iron. Manufacture of sheet	I. E. Craig	382,358	May 8	717	.....	43	655
Iron. Manufacturing oxide of	A. C. Bradley	385,235	June 26	2086	536	43	1351
Iron ores. Reducing	G. M. Westman	383,391	May 22	1970	517 / 518	43	999
Iron. Refining	G. Lindenthal	380,462	Apr. 3	198	.....	43	41
Iron with air. Refining	R. P. Wilson	384,813	June 19	1455	.....	43	1415
Ironing-board	J. J. H. Liberath	382,170	May 1	488	119	43	578
Ironing-machine	T. S. Wiles	384,487	June 12	985	248 / 249	43	1311
Ironing-table	C. Ostrander	383,189	May 22	1955	513	43	917
Jack:							
See Hoisting-jack. Lasting-jack. Lifting-jack. Lifting and lowering jack. Smoke-jack. Wagon-jack.							
Jamb. Adjustable	B. F. Cahill	381,389	Apr. 17	1545	417	43	317
Jar:							
See Drilling-jar. Fruit-jar.							
Jar	G. L. Carll	381,231	Apr. 17	1543	417	43	318
Jar-clamp	F. G. Tallman	384,659	June 5	374	105	43	1192
Jar fastening. Fruit	W. Bruce	382,512	May 1	497	128	43	673
Jewelry. Manufacture of gold-plated wire stock for	J. S. Palmer	383,240	May 22	2021	533	43	934
Jewelry. Preparing hollow stock for the manufacture of	J. S. Palmer	383,238	May 22	2020	532	43	951
Joint:							
See Adjustable joint. Insulating joint. Pipe-joint. Rail-joint. Railway-rail joint. Sheet-metal joint. Universal joint. Vehicle-top-prop joint.							
Journal-bearing. Anti-friction	J. W. Hyatt	385,266	June 26	2140	547	43	1562
Journal-bearing. Anti-friction	J. W. Hyatt	385,267	June 26	2150	549	43	1562
Journal-box	J. C. Miller	382,883	May 15	1505	394	43	800
Journal-box	J. M. Normand	382,410	May 22	2026	607	43	976
Journal-box	W. B. Turner	385,268	June 26	2184	556	43	1548
Key:							
See Ox-bow key. Telegraph-key. Tuning-key.							
Key-fastener	E Barrett and H. G. Baker	382,690	May 15	1222	316	43	793
Key-hole guard	C. R. Uhlmann	382,122	May 1	363	95	43	549
Keys. Manufacture of door	H. B. Sargent	383,012	May 15	1666	439	43	854
Kiln:							
See Brick-kiln. Lime-kiln. Malt-kiln. Porcelain-kiln.							
Kiln for burning hydraulic cement	C. R. Goething	384,905	June 19	1589	414	43	1439
Kneading machine. Dough	B. H. Melendy	381,631	Apr. 24	2003	526	43	495
Knife:							
See Surgical knife.							
Knife	M. Cowles	382,501	May 8	1068	280	43	727
Knife-blade burnisher	D. T. Brown	381,327	Apr. 17	1543	416	43	317
Knife-blade holder	E. H. Gould	381,233	Apr. 17	1413	369	43	291
Knitted fabric	C. J. Appleton	381,890	May 1	3	1	43	515
Knitting-machine	D. C. Bellis	385,163	June 26	1963	506	43	1536
Knitting-machine	R. B. Lamprey and A. C. Boghee	383,817	May 29	2813	709	43	1106
Knitting-machine	W. H. Stewart	381,963	May 1	80	22 23	43	532
Knitting-machine	H. C. Young	382,240	May 8	706	178	43	653
Knitting machine. Circular	H. Curtis	380,385	Apr. 3	121	35	43	98
Knitting machine. Circular	S. G. Hall	384,631	June 19	1168	300 / 300	43	1359
Knitting machine. Straight	C. J. Appleton	381,891	May 1	1	1	43	515
Knitting-machines. Device for adjusting the stitch-wheels of	F. P. Holt	384,163	June 5	478	132	43	1213
Knitting-machines. Electric stop-motion for	C. Draper	382,503	May 8	1092	281	43	730
Knitting-machines. Latch-needle and covering or transferring point for	W. H. Abel	382,675	May 8	1211	314	43	732
Knitting-machines. Needle-cylinder for	T. H. Worrall	381,197	Apr. 17	1362	364	43	281
Knitting-machines. Reversing mechanism for	H. C. Rightmire	385,328	June 26	2233	572	43	1577
Knob and connecting-shank for the same. Door	W. Livingstone	380,333	Apr. 3	36	14	43	10
Knockdown box	C. L. Lockwood	382,312	May 8	647	165	43	642
Lace pin or brooch	E. D. Ganter	383,719	May 29	2751	725	43	1077
Lacing-cords. Fastening for	G. M. Sawyer	380,588	Apr. 3	320	94	43	67
Ladder	E. A. Sherman	382,114	May 1	350	92	43	578
Ladder	G. H. Thompson	381,656	Apr. 24	2087	532 / 534	43	438
Ladder and bench combined. Step	J. W. Peacock	382,843	May 22	2020	584	43	990
Ladder. Extension	J. C. Gardner	382,871	May 15	1471	388	43	814
Ladder. Extension fire	L. Dederick	383,105	May 22	1843	462 / 463	43	894
Ladder. Extension fire	L. Dederick	383,107	May 22	1846	462	43	895
Ladder, fire-escape, and hose-carriage. Combined extension	C. B. Schumann	381,567	Apr. 24	1936	510 / 511	43	412
Ladder. Flexible	C. B. Schumann	381,653	Apr. 24	2337	606	43	466
Ladder for city fire-department service	B. F. Steck	382,733	Apr. 10	647	179	43	138
Ladder. Fruit	M. H. Murphy	380,763	Apr. 10	696	198	43	140
Ladder. Step	J. Elden	383,649	May 29	2648	663	43	994
Ladder. Step	J. T. Miller	384,210	June 5	547	150 / 151	43	1227
Ladder with jump-shelf. Step	J. T. W. McLaughlin	382,108	May 1	330	89	43	575
Lamp	S. W. Babbitt and H. B. Beach	382,286	May 15	1561	408	43	831
Lamp	R. A. Black	382 210	May 1	465	125	43	602
Lamp	J. G. Hallen	381,060	Apr. 10	1071	284	43	216
Lamp	C. B. Upton	381,042	Apr. 10	1123	301	43	220
Lamp and burner. Central-draft	F. Rhind	382,270	May 1	575	145	43	619
Lamp and cigar-cutter. Combined	O. Vollmann	384,881	June 19	1562	408	43	1434
Lamp and wheel. Candle	S. Clarke	383,898	June 5	19	6 7	43	1234
Lamp. Arc	C. Barton	380,546	Apr. 3	300	104	43	76
Lamp attachment. Incandescent	E. M. Doubleday	382,040	May 15	1751	453	43	687

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Lamp-burner	A. Cantius	384,744	June 19	1351	332 / 333	43	1394
Lamp-burner. Argand	E. Beach	381,089	Apr. 17	1227	239	43	856
Lamp. Candle	S. Clarke	383,861	June 5	19	6	43	1194
Lamp. Carbureting gas	A. Kitson	381,984	May 1	48	13	43	594
Lamp-chimney	C. L. Ingalls	380,801	Apr. 10	730	285	43	157
Lamp. Coach	O. W. Swift	383,690	May 15	1796	465	43	975
Lamp-collar	A. Gottschalk	382,905	May 8	1108	285	43	731
Lamp. Electric	E. C. Ohmart	383,411	May 22	2388	697 / 698	43	976
Lamp. Electric-arc	R. E. Fenner	382,421	May 8	813	207	43	674
Lamp. Electric-arc	A. Harding	380,435	Apr. 3	186	51, 52	43	36
Lamp. Electric-arc	J. J. Wood	384,817	June 19	1462	361 / 362	43	1416
Lamp-extinguisher	E. L. Bryant	380,858	Apr. 10	832	226	43	172
Lamp-extinguisher	W. M. Greene	380,985	Apr. 10	877	235	43	180
Lamp extinguisher. Automatic pneumatic car	A. Berry	380,381	Apr. 3	115	33, 34	43	25
Lamp filament. Electric	C. Seel	382,560	May 8	1037	264	43	718
Lamp-fixture	D. W. Parker	381,275	Apr. 17	1473	396	43	368
Lamp fixture. Extension	F. Rhind	383,709	May 29	2929	745	43	1091
Lamp holder. Incandescent	W. A. Carey	385,039	June 26	1803	464	43	1491
Lamp. Incandescent	H. M. Byllesby and P. Lange	383,616	May 29	2598	667	43	1045
Lamp. Miner's safety	A. Howat	382,161	May 1	416	109	43	569
Lamp. Oil	J. Roots	384,079	June 5	350	90	43	1187
Lamp. Oil spray or vapor	A. Neilson and J. Taylor	382,109	May 1	343	90	43	576
Lamp. Railway-gate	A. J. McDonald	383,968	June 5	190	55	43	1157
Lamp. Regenerative gas	C. E. Bell	381,905	Apr. 17	1371	366	43	368
Lamp-shade holder and shade	G. E. Stockwell	383,415	May 22	2393	609	43	977
Lamp socket and switch. Incandescent	J. J. Wood	384,815	June 19	1456	361	43	1415
Lamp socket. Incandescent	J. Spink and C. Ganzentee	384,478	June 12	948	244	43	1368
Lamp sockets. Protector for electric	C. P. Reilly	382,110	May 1	349	91	43	577
Lamp. Tubular	C. L. Betts	381,461	Apr. 17	1751	469	43	357
Lamps. Adjustable nipple for incandescent electric	E. F. Gennert	381,921	May 1	31	9	43	590
Lamps. Carbon conductor for electric	H. J. Von Metzradt	383,602	May 29	2570	.....	43	1030
Lamps. Cut-out for incandescent	H. Lemp and M. J. Wightman	383,891	June 5	63	20	43	1133
Lamps. Evacuating electric	E. P. Thompson	383,676	May 29	2680	709	43	1062
Lamps. Manufacture of filaments for electric incandescent	J. W. Packard	383,484	May 29	2412	641	43	1007
Lamps. Manufacture of incandescent electric	O. A. Moses	383,140	May 22	1891	493	43	804
Lamps. Manufacture of incandescent electric	E. P. Thompson	382,846	May 15	1438	378	43	806
Lamps. Manufacture of incandescent electric	E. P. Thompson	383,675	May 29	2678	709	43	1062
Lamps. Reflector for electric	H. Purdy	381,167	Apr. 17	1323	353	43	274
Land-roller	F. Grimes	383,807	May 29	2900	765	43	1104
Lantern	J. Charleson	384,234	June 12	501	130	43	1244
Lantern	H. M. Drew and J. A. Grant	381,836	Apr. 24	2304	589	43	442
Lantern	H. L. Jewell	381,557	Apr. 24	1896	500	43	404
Lantern	H. A. Matthews and D. M. Ireland	384,053	June 5	315	83, 90	43	1151
Lantern-guard	F. Rhind	383,631	May 15	1418	372	43	802
Lantern-guard	L. F. Betts	384,891	June 19	1471	384	43	1417
Lantern-supporter	C. Smith	385,015	June 26	1761	456	43	1484
Lantern. Tubular	L. F. Betts	381,755	Apr. 24	2176	560	43	439
Lantern. Tubular	J. H. Stone	382,026	May 8	1137	293	43	737
Lantern. Tubular	J. B. Stetson	384,548	June 12	1057	276	43	1329
Last	D. Ball	381,098	Apr. 17	1298	339	43	255
Last	C. H. Buchanan	384,015	June 5	255	73	43	1171
Last	J. B. Mullen	381,845	Apr. 24	2284	603	43	467
Last	J. S. Turner	382,338	May 8	692	174	43	650
Last	J. S. Turner	382,339	May 8	693	174	43	650
Last. Shoe-maker's	G. W. Keller	384,448	June 12	907	236	43	1309
Lasts. Making shoe-makers'	F. G. Hitzfeld	381,551	Apr. 24	1887	.....	43	492
Lasting-jack	G. H. Clark	384,891	June 19	1573	409	43	1436
Lasting-machine	C. H. Kelley	381,019	Apr. 10	1061	267	43	218
Lasting-tool	C. H. Helms	382,574	May 15	1476	387	43	812
Lasting-tool	J. R. Jacques	382,429	May 8	895	212	43	676
Latch	A. H. Jones	384,858	June 19	1519	395	43	1427
Latch and handle. Lever	J. F. Wollensak	381,740	Apr. 24	2156	564	43	455
Latch and lock. Combined	J. Sharpe	381,436	Apr. 17	1709	456	43	350
Latch. Double-acting	A. H. Jones	381,793	Apr. 24	2226	583	43	468
Latch. Night	R. Muench	381,162	Apr. 17	1314	351	43	272
Lathe attachment	J. W. Allen	381,097	Apr. 17	1225	329	43	255
Lathe for turning axles	J. L. Bogert	380,785	Apr. 10	727	199 / 200	43	153
Lathe for wooden handles	N. R. Flint	384,353	June 12	776	203	43	1276
Lathe. Polishing	H. H. Scoville	382,909	May 15	1585	399	43	824
Lathe-tool	A. Paterson	382,724	May 15	1377	335	43	773
Lathe. Turning	G. Philion	383,369	May 22	2217	549	43	965
Lathes. Shelf of wire-netting for	H. T. Clawson	380,789	Apr. 10	727	202	43	155
Lathing to the wooden joists and studs of buildings. Device for securing wire	M. Hegbom	383,950	June 5	163	48	43	1151
Lathing to wooden joists and studs of buildings. Device for securing wire	M. Hegbom	383,951	June 5	162	48	43	1151
Lawn-sprinkler	W. W. Lee	384,109	May 1	349	91	43	577
Lead and base bullion from slag. Apparatus for separating	W. B. Devereux	384,349	June 12	767	200	43	1274
Lead and rule holder	A. A. Low	383,959	June 5	174	51	43	1154
Lead and rule holder	A. A. Low	383,960	June 5	177	51, 52	43	1154
Lead and rule holder	A. A. Low	383,961	June 5	180	52	43	1155
Lead and rule holder	A. A. Low	383,962	June 5	183	53	43	1155
Lead bullion. Desilverising	H. H. Schlapp	382,594	Apr. 3	330	94	43	67
Lead-fumes. Apparatus for collecting and utilising waste	G. H. Ward	381,301	Apr. 17	1501	405	43	309
Lead or base bullion in smelting from slag, matte, and speiss. Apparatus for separating	W. B. Devereux	381,118	Apr. 17	1257	337	43	261
Leather-board. Machine for stripping	W. E. Frost	384,633	June 5	209	78, 80	43	1125
Leather. Composition for softening and renovating	L. C. De Willers	381,620	Apr. 24	2072	.....	43	430

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Leather-creasing machine	S. H. Randall	381,038	Apr. 10	1098	269	43	221
Leather-gauging machine	Z. T. French and W. C. Meyer	381,994	May 1	189	40, 41	43	542
Leather. Machine for splitting scrap	J. A. Josselyn	381,975	Apr. 10	1178	312	43	337
Leather-scraping machine	J. Hodskinson	382,982	May 1	564	142 / 143	43	617
Leather-trimming machine	G. Schmidt	384,287	June 12	987	179	43	1256
Lear-pan	W. C. King	381,367	Apr. 17	1630	436	43	335
Leg. Artificial	A. Gault	383,569	May 29	2533	689	43	1039
Leg. Artificial	A. Shea	382,774	May 15	1347	354	43	787
Letter-box	D. Harrigan	384,154	June 5	464	127	43	1210
Letter-box	L. A. Hoke	382,089	May 1	175	45	43	548
Letter-box	J. W. Langford	384,698	June 19	1396	358	43	1362
Letter-box	J. E. Smith	384,596	June 12	1198	298	43	1340
Letter-boxes. Air-cushion for	J. G. Cutler	381,056	Apr. 10	1150	307	43	231
Letter-sheet and envelope. Combined	W. H. Kister	381,556	Apr. 24	1897	500	43	404
Level. Ditching	E. Reichenbach	383,767	May 29	2825	744	43	1089
Level. Spirit	E. A. and C. M. Stratton	383,196	May 22	1944	515	43	918
Leveling-instrument	W. C. Holmes	381,243	Apr. 17	1431	384	43	293
Lever. Compensating spring	R. Clarke	384,510	June 19	1153	305	43	1235
Lever. Quaternary yielding	T. J. Mayall	382,967	May 1	571	144	43	618
Levers. Device for operating a set of	H. D. Ganoe	382,298	May 8	688	160 / 161	43	639
Life-buoy. Reel	A. Rust	385,323	June 26	2235	572 / 573	43	1577
Life-preserving chair	J. A. Ashworth	382,935	May 15	1559	408	43	830
Life-saving device	E. D. Moore	381,923	June 19	1615	420	43	1444
Life-saving garment	G. A. Hiler	382,306	May 8	699	163	43	641
Lifter: *See* Track-lifter. Wagon and carriage lifter. Transom-lifter.							
Lifting and lowering jack	L. J. Crecelius	383,710	May 29	2730	730	43	1074
Lifting-jack	W. N. Best	384,417	June 12	985	235 / 236	43	1293
Lifting-jack	L. J. Crecelius	383,709	May 29	2728	730	43	1073
Lifting-jack	R. M. Fraley	382,964	May 15	1601	418	43	838
Lifting-jack	M. Hedges	382,293	May 22	2115	556	43	946
Lifting-jack	J. S. Orr	384,066	June 5	336	95	43	1184
Lifting-jack	S. Z. Schwenk	382,184	May 1	460	119	43	596
Lifting-jack	J. Weathers	383,029	May 15	1710	444	43	859
Lightning-arrester	P. O. Keilholtz	384,042	June 5	301	85	43	1178
Lightning-rod. Metallic crest-tile	C. B. Nelson	381,304	June 12	921	213	43	1284
Limekiln	J. W. Devling	384,895	June 19	1578	411	43	1437
Limekiln	J. H. Wallstrom	380,706	Apr. 10	604	166	43	139
Line-protector	F. C. York	381,458	Apr. 17	1747	467	43	354
Lint collecting and compacting apparatus	J. W. Shell	382,775	May 15	1346	354	43	787
Liquid-forcing apparatus	H. B. Lytle	382,296	May 1	522	134	43	599
Liquid-heater	J. C. McNamee	384,905	June 12	638	171	43	1293
Liquid-level indicator. Magneto-electric	J. J. Ghegan	384,200	June 5	535	146	43	1284
Liquid purification	W. Oliphant	384,539	June 12	1047	273 / 274	43	1327
Liquid-reservoirs. Float and level-indicator for	W. E. Eastman	381,541	Apr. 24	1878	496	43	402
Liquid-vaporising apparatus	J. M. Kriesert	384,768	June 19	1383	362	43	1401
Liquids. Apparatus for cooling	G. C. Hanford	382,156	May 1	407	106	43	568
Liquids. Apparatus for spraying	F. F. Bourdill	384,300	June 12	687	186	43	1283
Liquids at given temperatures. Device for testing the physical condition of	G. H. Perkins	383,980	June 5	206	60, 61	43	1160
Lithographic presses. Inking apparatus for	F. Macdonald	381,708	Apr. 24	2113	553	43	447
Lithographic stones. Transferring phototypes to	O. Krebs	383,308	May 22	2136	.....	43	930
Lock: *See* Alarm-lock. Bag-lock. Bolt-lock. Brake-lock. Combination-lock. Elevator-lock. Mail-bag lock. Nut-lock. Permutation-lock. Railway-switch lock. Safe-lock. Sash-lock. Seal-lock. Switch-lock. Time-lock. Whip and robe lock.							
Lock	G. B. M. Foust	383,638	May 29	2698	695	43	1051
Lock	E. F. Goodwin	383,529	May 29	2471	652	43	1018
Lock	J. Hartsens	384,441	June 12	975	234	43	1299
Lock	J. Paillet	380,455	Apr. 3	221	61	43	45
Lock	W. H. Taylor	380,537	Apr. 3	349	100	43	78
Lock	W. H. Taylor	381,893	Apr. 17	1492	402 / 403	43	307
Lock	E. S. Winchester	384,108	June 5	385	108	43	1194
Lock for bags or satchels	A. Peterson	382,738	May 15	1282	336	43	774
Locket	J. Cohn	384,426	June 12	877	226	43	1286
Locomotive	L. S. Woodbury	383,780	May 29	2698	754	43	1088
Locomotive. Electric	S. D. Field	380,880	Apr. 10	871	234	43	179
Locomotive-spring	D. Broadhurst	380,548	Apr. 3	366	105	43	75
Locomotives. Apparatus for applying sand to the driving-wheels of	J. Greaham	381,837	Apr. 24	2305	600	43	463
Locomotor. Electric	S. D. Field	380,879	Apr. 10	885	233 / 234	43	178
Logs. Machinery for cutting	J. J. Hayes	384,763	June 19	1377	361	43	1400
Loom	R. L. Hattersley and J. Hill	383,465	May 29	2374	631 / 632 / 633	43	1000
Loom driving-gear	H. Wyman	381,518	Apr. 17	1630	466	43	375
Loom for cross-weaving	C. A. Littlefield	380,760	Apr. 10	692	190 / 191	43	147
Loom for cross-weaving	C. A. Littlefield	380,761	Apr. 10	693	191 / 192	43	147
Loom hit-off mechanism	G. F. Hutchins	381,787	Apr. 24	2218	581	43	467

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Loom let-off mechanism	J. Morton	385,979	June 26	2169	538 / 539 / 553	43	1565
Loom for weaving leno fabrics	H. and C. Topham	383,836	May 29	2042	779	43	1112
Loom for weaving loom-harness	F. Eckermann	383,215	May 22	1984	363	43	985
Loom-harness. Machine for making	T. A. Emmons	383,716	May 29	2043	728 / 733 / 734	43	1076
Loom. Needle	A. L. Skinner	383,079	May 15	1793	464 / 465	43	875
Loom picker-check	W. Driver	382,640	May 8	1158	288	43	740
Loom picker-staff check	B. F. Carter	384,108	June 12	1084	388	43	1319
Loom picker-stick	S. M. Hamblin	382,645	May 8	1163	289	43	742
Loom picking-mechanism	S. and S. M. Hamblin	384,622	June 19	1175	310	43	1360
Loom pile-wire	G. Seguchneider	383,545	May 29	2006	668	43	1025
Loom-shuttle	J. C. Sergeson	383,774	May 29	2042	747	43	1093
Loom shuttle-box	H. Wyman	381,510	Apr. 17	1640	467	43	575
Loom shuttle-motion	L. E. Ross	383,077	May 15	1791	462	43	874
Loom-shuttle relief mechanism	Z. T. McKinney	383,995	May 15	1847	431	43	648
Loom-shuttles. Thread-guide for	T. J. Mayall	381,402	Apr. 17	1657	443	43	589
Loom-stopping mechanism	H. Wyman	382,163	May 22	1990	508	43	999
Loom-temple	W. H. Taylor	383,501	May 29	2037	647	43	1019
Looms. Electric stopping mechanism for	J. Rush and E. Oldfield	384,934	June 19	1027	483	43	1447
Looms. Jacquard machine for	J. S. and S. Smith	380,462	Apr. 3	229	66	43	47
Looms. Picking sweep-strap connection for	E. H. J. Fielder	382,690	May 8	1161	283	43	730
Looms. Pile-warp delivery mechanism for double-pile-fabric	F. Pearson	383,825	May 29	2023	773	43	1106
Looms. Shuttle-holder attachment for	W. Wattie	380,736	Apr. 10	651	189	43	130
Looms. Whip-roll for	D. Durkin	381,617	Apr. 24	1964	561	43	491
Looms. Whip-roll for	A. F. Parker	381,780	Apr. 24	2133	559	43	451
Lounges and other articles of furniture. Device employed in the manufacture of spring-bottoms of	F. B. Hemingway	380,323	Apr. 3	24	7	43	7
Low-water alarm. Fire-bucket	J. Nolan	384,212	June 5	549	151	43	1228
Lubricator: *See* Axle-lubricator.							
Lubricator	G. W. Brown	382,732	May 15	1313	345	43	799
Lubricator	W. A. Carey	385,040	June 26	1804	464	43	1491
Lubricator	T. J. Hart	382,978	May 15	1628	424	43	842
Lubricator	J. R. Hodges and W. M. Davis	381,375	Apr. 17	1617	438	43	536
Lubricator	R. Marshall	381,804	Apr. 24	2043	567	43	472
Lubricator	R. Mason and J. M. Smith	384,051	June 5	312	80	43	1180
Lubricator	E. McCoy	382,745	May 29	2782	733	43	1026
Lubricator	E. McCoy	383,746	May 29	2785	733	43	1053
Lubricator	W. Millard	382,544	May 8	1014	250	43	719
Lubricator	M. Schneider	381,596	Apr. 24	1936	510	43	413
Lubricator	E. Verny	382,915	May 15	1533	402	43	888
Machine-gage	G. C. James	380,683	Apr. 10	576	166	43	125
Magnet. Polarized electro-	E. J. Mallett	384,321	June 12	730	191	43	1297
Magnetic separator	G. Conkling	383,888	June 5	20	7	43	1154
Magnetic separator	M. H. Smith	383,918	June 5	109	32	43	1141
Magnetic separator	M. H. Smith	384,845	June 19	1262	318	43	1366
Magneto-generators. Automatic shunt for	C. E. Scribner	382,016	May 15	1695	440	43	856
Mail-bag catcher	J. M. Keith	381,841	Apr. 24	2316	602	43	465
Mail-bag holder	C. W. Allen	380,543	Apr. 3	360	103	43	74
Mail-bag lock	J. C. Brown	380,986	Apr. 10	1041	275	43	211
Mail-conveying apparatus	A. D. Saunders	383,771	May 29	2038	746 / 747	43	1092
Mail-pouch	G. J. Bedford	384,736	June 19	1339	349 / 350	43	1392
Malt-kiln	G. Reisingbaus	385,127	June 26	1949	496 / 499	43	1521
Malt liquors. Making	C. C. Hanford	382,155	May 1	466	108	43	588
Malt-mashing machine	T. Evans	384,508	June 12	1069	385 / 386	43	1336
Malting-machine	H. and J. Noth	380,566	Apr. 3	425	121	43	97
Manacle	F. A. Hyatt and E. D. Tankersley	380,441	Apr. 3	197	54	43	40
Mandrel. Roller-	S. P. M. Tasker	382,916	May 1	197	51, 52	43	550
Manure-distributer	S. H. Garst	383,630	May 29	2036	695 / 696	43	1051
Map and chart support. Adjustable	W. H. Larew	383,618	May 29	2015	709	43	1107
Map-case	A. H. Hall	384,253	June 12	981	168	43	1256
Marine signal	W. G. Spiegel	385,016	June 26	1764	456	43	1484
Mash-tub	G. Tilgner and J. C. Wilcke	384,180	June 5	502	137	43	1218
Mast-hoop	C. S. Mott	383,366	May 29	2584	675	43	1035
Mat: *See* Door-mat. Wire mat.							
Match-frame	G. W. Gates	383,721	May 29	2753	735	43	1077
Match press or frame	G. W. Gates	383,722	May 29	2754	736	43	1077
Match-sticks. Machine for cutting	W. H. H. Sisum	382,442	May 8	850	217	43	649
Matting and making the same. Flag or rush	J. Bray, Jr	381,309	Apr. 17	1374	367	43	293
Mattress. Sectional	N. Clement	380,713	Apr. 10	613	169	43	131
Mattress. Tubular floating	C. J. Pigeon and L. J. T. Lacroix	381,613	Apr. 24	2256	549 / 550	43	474
Measure for fitting gloves. Hand-	A. E. McDonald	383,365	May 29	2813	567	43	954
Measure. Grain-	F. H. Ehlers	381,350	Apr. 17	1584	424	43	525
Measurement apparatus. Electrical-	H. V. Hayes	381,789	Apr. 24	2287	578	43	485
Measuring apparatus. Fabric-	J. W. Kruger	381,842	Apr. 24	2317	602	43	485
Measuring-bagger	J. H. Forsyth	381,129	Apr. 17	1284	338	43	283
Measuring device. Automatic water-	W. Lammers	385,274	June 26	2158	551	43	1564
Measuring device for ice-cream and other similar substances	T. A. Naylor	384,776	June 19	1397	365	43	1404
Measuring device. Rope-	L. J. Ross	382,193	May 1	459	119	43	590
Measuring machine. Automatic grain-	A. J. Grissom	380,718	Apr. 10	630	170 / 171	43	130
Measuring machine. Coin-controlled height-	C. R. Williams	383,668	May 29	2577	693	43	1060

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Measuring machine. Land-	R. Roberds	382,436	May 8	837	215	43	679
Measuring machine. Rattan-	E. L. Taft and C. L. Jones	383,197	May 22	1965	545 / 546	43	916
Measuring-tank for oil	M. J. Lindsay and D. M. Rose	384,968	June 26	1767	443	43	1471
Measuring the quantity of water flowing through a pipe. Apparatus for	C. Herschel	381,373	Apr. 17	1614	431	43	531
Measuring utensil	T. B. Farrington	382,670	May 15	1470	366	43	808
Measuring vertical and horizontal distances. Instrument for	J. Short	383,375	May 22	2004	809	43	985
Measuring-vessel	W. Evans, Jr	385,363	June 26	2207	606	43	1579
Meat-block. Sectional	B. A. Stevens	381,654	Apr. 24	2085	563	43	481
Meat-cutter	P. and W. Deischer	382,713	May 29	2736	721	43	1073
Meat-cutting machine	G. O. Rimmon and J. Zimmerman	382,192	May 1	467	119	43	588
Mechanical motion	W. H. Heaton and W. A. Loveas	382,289	Apr. 3	189	38, 39	43	67
Mechanical motor	S. A. Holmes	382,882	May 8	979	267	43	795
Mechanical movement	B. F. Anderson	383,956	June 26	1572	676	43	1389
Mechanical movement	A. W. Johnson	384,350	June 12	687	189	43	1314
Mechanical movement	M. R. Kellogg	383,577	May 29	2049	671	43	1033
Mechanical movement	T. B. McKnight	380,160	May 1	320	80	43	613
Mechanical movement	H. Mechring and A. Pfläger	383,467	May 29	2021	666	43	1018
Mechanical movement	H. Mechring and A. Pfläger	383,468	May 29	2023	666	43	1018
Mechanical movement	B. Scaries	380,660	Apr. 3	543	149	43	109
Mechanical movement	G. Schenck	380,697	Apr. 10	594	163	43	123
Mechanical movement	J. Wiet	382,725	May 15	1261	356	43	788
Medicines, &c. Composition of matter to be used in the manufacture of	C. F. Breadbent	382,680	May 22	2760	.....	43	1000
Medical apparatus. Electro-	P. Horst	382,811	May 15	1395	386	43	760
(Medicine.) Alterative remedy	G. M. Painter	380,346	Apr. 3	51	.....	43	13
(Medicine.) Alterative tonic	P. Hoover	3 0,878	Apr. 10	688	.....	43	177
(Medicine.) Cough remedy	G. A. Patton	384,466	June 12	926	.....	43	1266
Medicine to animals. Apparatus for administering	C. W. Collyer	383,440	May 22	2230	619	43	988
Metal articles. Machine for heating and hardening	H. White	383,030	May 15	1712	445 / 446	43	869
Metal bars. Die for upsetting	W. R. Webster	380,413	Apr. 3	155	44	43	76
Metal bars. Reticulated or open work of	T. Robbins	382,250	May 22	2044	537	43	894
Metal bars. Spreading the ends of rectangular	W. R. Webster	380,414	Apr. 3	157	44	43	76
Metal-cutter	A. C. Irvine	384,694	June 19	1291	337	43	1326
Metal. Device for handling heavy masses of	L. F. Johnson	381,474	Apr. 17	1769	472	43	568
Metal mold	C. S. Bell	382,633	May 8	1147	262	43	780
Metal plates. Interlocking the edges of	F. C. Bellinger	384,118	June 5	469	113	43	1189
Metal plates with tin and other metals. Coating	D. Edwards, R. Lewis, and P. Jones	381,286	Apr. 17	1306	272 / 274 / 275	43	268
Metal rods. Machine for reducing	H. A. Williams. (Reissue.)	10,982	May 15	1695	477	43	889
Metals by means of electrolysis. Apparatus for producing	J. Ombelt	382,183	May 1	446	116	43	585
Metals from ores. Obtaining the precious	L. W. Davies	384,688	June 19	1250	.....	43	1277
Metals. Molding viscous	W. Barnham	382,030	May 15	1720	.....	43	888
Metals with chemicals, minerals, &c. Hand-charger for combining	P. S. Reeves	384,675	June 5	346	98	43	1197
Metallic blanks. Apparatus for tapering	C. Nobs	383,142	May 22	1893	494	43	906
Metallic mold	P. F. Dillon	382,411	May 8	901	254 / 255	43	671
Metallic surface. Ornamented	F. Rhind	384,922	June 12	961	177	43	1257
Metallic surfaces. Ornamenting	D. W. Parker and L. F. Griswold	382,681	May 8	1159	269	43	747
Metallic wheel	F. A. Nickerson	382,686	May 8	1165	266	43	748
Meter: *See* Electric meter. Rotary liquid-meter. Grain-meter. Water-meter. Piston meter.							
Micrometer-gage	J. A. MacDonald	384,771	June 19	1380	353	43	1402
Microphone-transmitter	G. M. Phelps	380,925	Apr. 10	928	260	43	183
Middlings-purifier	A. Heine	382,572	May 15	1474	367	43	812
Middlings-purifier	E. Weiss and L. Fraenkel	383,388	May 22	2073	544	43	920
Milk. Machine for liquidizing condensed	G. Roth	382,915	June 5	105	31	43	1141
Milk-preserving machine	G. Roth	385,013	June 26	1760	455	43	1469
Mill: *See* Cider-mill. Gunpowder-mill. Coffee-mill. Ink-mill. Crushing-mill. Paint-mill. Crushing and grinding-mill. Roller-mill. Log mill. Rolling-mill. Flour-mill. Saw-mill. Grinding-mill.							
Mill-feed	G. Heller	381,871	Apr. 17	1619	431	43	531
Mills, factories, &c. Apparatus for moistening the atmosphere in	A. Koechlin	384,630	June 19	1185	312 / 313	43	1269
Milling-machine	A. H. Brainard	381,166	Apr. 17	1244	324	43	289
Milling-machine	A. H. Brainard	381,585	Apr. 24	1854	490 / 491	43	396
Millstone-dress	J. Buchuleh	381,289	Apr. 24	1851	490	43	395
Millstone or mill-plate dress	D. J. Ames	382,747	May 15	1269	344	43	779
Mines. Draining coal-	G. Zitsmann	381,980	Apr. 17	1367	365	43	301
Mining-drill	J. R. Howells	384,165	June 5	491	128 / 129	43	1214
Mining-machine	F. Lowry	383,661	May 15	1703	487	43	879
Mirror	J. Bay	382,891	May 8	618	157 / 158	43	657
Mirror	J. B. Vicenty	381,660	Apr. 24	1982	516	43	417
Mirror	P. Wiedorer	384,468	June 19	1442	378	43	1413
Mirror. Folding	P. Wiedorer	381,488	Apr. 17	1749	465	43	555
Mirror. Folding	P. Wiedorer	384,469	June 19	1443	378	43	1413
Mirror-pivot	A. E. Jones and E. H. Peck	383,468	May 29	2004	634	43	1008
Miter-box	C. Lymon	380,638	Apr. 3	486	136	43	99

Multiple switch-board	M. G. Kellogg	382,474	May 8	903	230	43	689
Multiple switch-board	M. G. Kellogg	382,475	May 8	907	230	43	689
Multiple switch-board	M. G. Kellogg	382,476	May 8	910	231	43	691
Multiple switch-board	M. G. Kellogg	382,477	May 8	913	231	43	692
Multiple switch-board circuit	C. E. Scribner	384,477	June 12	940	244	43	1262
Multiple switch-board-testing apparatus	C. E. Scribner	384,644	June 19	1200	317	43	1305
Multiple switch-boards. Long-distance connection for	C. E. Scribner	381,431	Apr. 17	1704	457	43	340
Multiple switch-boards. Test-circuit for	C. E. Scribner	383,495	May 29	2427	{644 / 645}	43	1010
Multiple switch-boards. Test system for	C. E. Scribner	385,205	June 26	2047	523	43	1541
Multiple transfer-pad	G. H. Arthur	381,201	Apr. 17	1368	365	43	902
Music-box	L. Campiche	382,292	May 8	619	158	43	636
Music-box	E. F. Jaccard	382,879	May 15	1488	{389 / 390}	43	817
Music-chart	G. S. Rice	383,011	May 15	1667	430	43	854
Music-holder	E. W. Robinson	385,010	June 26	1757	454	43	1462
Music-holder	D. E. Rugg	381,498	Apr. 17	1787	476	43	364
Musical box	E. Fornachon	382,040	May 1	360	61	43	570
Musical instrument. Key-board	A. L. Caldera	382,028	May 1	221	58, 59	43	554
Musical instrument. Mechanical	M. Gally	380,716	Apr. 10	617	170	43	132
Musical instrument. Mechanical	L. E. J. Thibouville	380,698	Apr. 3	454	{128 / 129}	43	93
Musical wind-instrument	A. Leforestier	382,991	May 15	1639	420	43	845
Mustard-pot. Pneumatic	M. Dehnert	382,218	May 1	496	129	43	605
Muzzle	R. B. Cole	381,615	Apr. 24	1782	500	43	421
Nail	W. B. Alden	382,676	May 15	1215	315	43	761
Nail-assorting machine	E. B. Allen	384,735	June 19	1337	{348 / 349}	43	1301
Nail-driving implement. Hand	J. Weichhart	380,612	Apr. 3	461	120	43	94
Nail feeding and distributing machine	F. F. Raymond, 2d	383,911	June 5	96	29	43	1139
Nail-machine	G. E. Buschick and F. Rautert	384,422	June 12	872	227	43	1295
Nail machine. Wire-	W. F. Bancroft and H. A. Stone	382,632	May 8	1144	{294 / 295}	43	738

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Nail machine. Wire-	A. B. Glover	383,878	June 5	29	{13 / 13 / 14}	43	1130
Nail making and distributing machine	F. F. Raymond, 2d	380,396	Apr. 3	426	{123 / 124}	43	69
Nail making and distributing machine	F. F. Raymond, 2d	380,618	Apr. 10	772	{211 / 212}	43	182
Nail making, distributing, and driving machine	F. F. Raymond, 2d	381,280	Apr. 17	1480	{367 / 368}	43	304
Nail-plate feeder	J. C. Gould	385,112	June 26	1912	{466 / 467}	43	1514
Nail-plate feeder	C. E. Houghton	380,572	Apr. 3	401	115	43	88
Nail-plate feeder	A. H. Tyrrell	381,589	Apr. 24	1960	516	43	417
Nail-strip	J. R. Prouty	383,907	June 5	93	29	43	1138
Nail-strip	J. R. Prouty	383,908	June 5	94	29	43	1138
Nail-strips. Machine for loading	J. R. Prouty	383,910	June 5	96	29, 30	43	1139
Nails. Machine for making wire	H. Essex	384,515	June 12	1014	264	43	1231
Nails, tacks, &c. Heading	G. W. Copeland	383,043	May 15	1748	458	43	866
Nailing-machine	H. W. Dean	380,645	Apr. 3	502	141	43	103
Nailing-machine	L. Godda	383,455	May 29	2350	{625 / 626 / 627}	43	996
Napkin-holder	A. P. Baker	383,847	June 5	2	1	43	1121
Napkin-supporter	F. W. Cook	382,691	May 15	1240	323	43	782
Necktie and collar-button combined	A. C. Whittingham	383,989	June 5	133	38	43	1146
Necktie-fastener	A. Heilenberg	384,020	June 5	260	81	43	1178
Necktie-fastener	W. B. Sargent	383,983	June 5	236	68	43	1164
Needle and cord. Combined	F. A. Smith, Jr	380,773	Apr. 10	709	196	43	150
Needle-bath	B. C. Smith	382,611	May 1	191	49	43	589
Needle-grooving machine	J. Berry	382,250	May 1	543	{128 / 129}	43	613
Needles. Making	S. F. Jenkins	383,733	May 29	2706	729	43	1069
Nest. Hen's	E. M. Schumacher	380,680	Apr. 10	585	168	43	126
Net. Landing-	G. W. McClintock	382,317	May 8	652	166	43	643
Newspaper-selling apparatus	C. Galland	382,321	May 8	974	245	43	704
Nickel or other metal by electrolysis. Apparatus for forming sheets of	M. G. Farmer	381,004	Apr. 10	1065	263	43	215
Nose-bag support for vehicles	J. Murray	383,623	May 29	2280	771	43	1108
Nose-rings. Machine for making barbs for beg-	J. H. Derington and H. J. Parker	382,693	May 15	1242	324	43	786
Nozzle. Filling and pouring	N. Thompson	381,971	May 1	109	26	43	534
Numbering-machine	C. S. Ellis	381,227	Apr. 17	1309	376	43	869
Numbering-machine	S. K. White	381,974	May 1	113	27	43	535
Numbering mechanism	J. M. Black	381,105	Apr. 17	1238	332	43	257
Nut-lock	L. Anderson	384,685	June 19	1548	407	43	1435
Nut-lock	H. B. Baker	383,959	May 29	2060	546	43	949
Nut-lock	J. P. Ball	383,665	May 29	2691	711	43	1065
Nut-lock	L. J. Benton	382,789	May 15	1271	300	43	791
Nut-lock	P. L. Brady	380,712	Apr. 10	812	168	43	131
Nut-lock	O. L. Castle	383,212	May 22	1901	502	43	924
Nut-lock	G. Cook	381,463	Apr. 17	1753	462	43	357
Nut-lock	W. Dunn	382,078	May 1	306	80	43	559
Nut-lock	J. A. Hard	384,904	June 5	540	148	43	1286
Nut-lock	W. B. Hohenshell	383,810	May 29	2903	766	43	1104
Nut-lock	A. B. Kerr	384,767	June 19	1382	362	43	1401
Nut-lock	J. T. Latchaw	380,494	Apr. 3	272	75	43	56
Nut-lock	J. Merrins and A. S. Muncey	384,378	June 12	815	212	43	1263
Nut-lock	W. B. Miller	382,990	May 15	1652	432	43	847
Nut-lock	A. R. Neiman and L. M. Melhorn	383,368	May 22	2214	587	43	985
Nut-lock	E. H. A. Oakley	381,573	Apr. 24	1918	505	43	408
Nut-lock	M. H. Phillips	382,054	May 1	249	71	43	563
Nut-lock	J. H. Piper	380,926	Apr. 10	941	250	43	193
Nut-lock	W. N. Sears	380,586	Apr. 3	332	95	43	69
Nut-lock	J. G. Ware	382,900	May 1	470	120	43	580
Nut-lock	G. Westinghouse, Jr	382,920	May 15	1540	{403 / 404}	43	827
Nut-lock	A. J. Wylie	383,103	May 22	1919	502	43	900
Nut-machine	F. Lackner	385,187	June 26	2021	517	43	1535
Nut-machine	F. Lackner	385,188	June 26	2022	517	43	1535
Nut-machine	A. Marland	385,198	June 26	1936	{494 / 495}	43	1518
Nut-making machine	F. Brüser	381,872	Apr. 24	2365	{614 / 615}	43	484
Nut-making machine	W. H. Johnson	380,383	Apr. 3	199	50	43	38
Oar and oar-lock	G. K. Pheatt	383,944	May 22	2038	534	43	933
Octave-coupler	F. Pritchard	381,418	Apr. 17	1660	450	43	345
Office-indicator	R. R. Garran	383,393	May 22	2258	600	43	978
Oil. Apparatus for burning crude petroleum	R. W. Smith	384,673	June 19	1552	404	43	1432
Oil-burner	C. H. Phelps	384,275	June 12	653	175	43	1255
Oil-cakes. Molding-press for	O. P. Bushnell	385,094	June 26	1885	{481 / 482}	43	1509
Oil-can	E. G. Cushman	385,244	June 26	2104	530	43	1553
Oil-can	J. Rau	381,370	May 22	2018	538	43	965
Oil-can	C. H. Straffin and G. L. Robertson	385,328	June 26	2245	575	43	1580
Oil-can	F. D. Walpole	384,602	June 19	1453	376	43	1411
Oil-cloth exhibitor and stand	R. W. Hilleary and J. F. Poulton	384,636	June 19	1179	311	43	1261
Oil-cup	C. H. Nunn	380,659	Apr. 3	527	145	43	109
Oil-distributer for vessels. Floating	J. Ericson	380,479	Apr. 3	252	69	43	52
Oil-furnace	A. A. Harwood	383,123	May 22	1880	{468 / 469}	43	880
Oil. Harness-	A. S. Ashcraft	383,511	May 29	2449	.....	43	1014
Oil-press mats. Frame for use in the manufacture of	M. T. and J. A. Murphy	381,272	Apr. 17	1479	365	43	301
Oils. Centrifugal apparatus for separating grease.	A. F. Craig, A. Neilson, and J. Snod	383,707	May 29	2725	{718 / 719}	43	1073
Oils from crude spirits. Removing fusel-	J. Panitta	384,888	June 19	1542	.....	43	1430

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Oils, &c. Package for	C. S. Homer	380,894	Apr. 10	890	246	43	184
Oiler	P. D. Hay	384,769	June 19	1376	388	43	1289
Oiling cartridge. See							
Oiling projectile. See							
Oiling shells. Projector for use	A. H. Walker	380,369	Apr. 3	97	23	43	23
Oiling shells. Projector for use	A. H. Walker	380,370	Apr. 3	99	23	43	23
Oiling shells. Projector for use	A. H. Walker	380,371	Apr. 3	1139	23	43	23
Oiling shells. Projector for use	A. H. Walker	381,738	Apr. 24	2146	532	43	454
Ointment	A. H. Walker	381,733	Apr. 24	2146	532	43	454
Open ring	A. Prochowics	381,483	Apr. 17	1783		43	344
Opera, field, or marine glass	J. Daniels	382,858	May 15	1566	414	43	1035
Opera, field, or marine glass	W. A. Cardwell	384,122	June 5	413	115	43	1289
Operating-table and desk. Surgeon's combined	G. H. Eaton	381,247	Apr. 17	1579	423	43	304
Orange-grading device	F. L. Cowles	380,886	Apr. 10	847	220	43	175
Orange mineral and red lead. Manufacturing	A. Ayer	383,385	May 22	1978	530	43	961
Ordnance	A. C. Bradley	382,070	May 1	287	76, 77	43	567
Ordnance. Breech-loading	C. M. Van Tine	380,366	Apr. 3	95	20	43	21
Ordnance. Breech-loading	C. C. Chamberlain	381,330	Apr. 17	1546	417	43	316
Ordnance. Breech-loading	B. B. Hotchkiss	381,697	Apr. 24	2094	548	43	444
Ordnance. Breech-loading	C. Röstel	383,572	May 22	2219	589	43	985
Ordnance for land defenses. Carriage for heavy	W. J. Hoyle	381,979	May 1	139	31	43	539
Ordnance for land defenses. Mounting for heavy	W. J. Hoyle	381,980	May 1	139	31, 32	43	539
Ordnance. Pneumatic	N. W. Pratt	381,950	May 1	78	18	43	536
Ordnance. Turret-mounting for	T. Nordenfelt	382,182	May 1	444	116	43	595
Ore-concentrating machines. Apron for	G. E. Woodbury	381,458	Apr. 17	1745	467	43	354
Ore-concentrator	C. C. Rueger	382,253	May 15	1481	372	43	688
Ore-concentrator	J. White	382,578	May 8	1088	272	43	728
Ore-crushing machine	S. W. Kimble	381,385	Apr. 17	1602	425	43	326
Ore-pulverizer	D. Baratini and W. P. Stevenson	380,243	Apr. 10	630	220	43	168
Ore-roasting furnace	J. L. Lovell	381,629	Apr. 24	2091	535	43	434
Ore-smelting furnace	C. W. Barry	385,230	June 26	2068	520	43	1546
Ore-washer	A. Hendey	382,433	May 8	815	204 / 205	43	674
Ores and materials containing sulphur for the extraction of metals and other constituents. Treatment of	R. and C. Oxland	381,809	Apr. 24	2046	.....	43	473
Ores and metallurgical products. Treating	E. H. Russell	381,849	Apr. 24	2330	.....	43	488
Ores and metallurgical products. Treating	E. H. Russell	381,850	Apr. 24	2334	.....	43	488
Ores. Apparatus for examining	J. R. Williamson and W. W. Hickies	380,843	Apr. 10	807	210	43	167
Organ, Reed	M. Clark	384,680	June 19	1151	304 / 305	43	1355
Organ. Reed	I. B. Taylor	382,018	May 1	286	54, 55	43	556
Organ stop-action. Reed	L. G. Billings	382,943	May 15	1573	410 / 411	43	833
Oven	L. Coke	382,673	May 1	286	70	43	580
Oven	S. Smith	384,177	June 5	490	136	43	1217
Oven attachment	C. H. Harmon	381,476	Apr. 17	1764	471	43	350
Oven attachment	C. E. Hollingsworth	382,127	May 22	1874	490	43	580
Oven. Baker's	F. Dührkop	380,536	Apr. 3	379	106	43	77
Oven. Baker's	W. C. Fowler and W. G. Schaefer	380,561	Apr. 3	387	110 / 111	43	79
Oven. Baker's	T. B. McFadden	380,389	Apr. 3	46	17	43	11
Ovens. Detachable shelf and heat-regulator for	O. F. Frost	381,229	Apr. 17	1494	375	43	290
Overshoe	A. B. Walters	384,483	June 12	949	246	43	1289
Ox-bow key	W. Ware	380,668	Apr. 3	237	64	43	48
Oyster-dredge	W. A. Stewart	382,624	May 8	1134	288	43	726
Oyster-spat. Obtaining	O. B. Beach	385,161	June 26	1981	507	43	1548
Package and preparing the same. Food	H. Salzer	381,720	June 19	1319	.....	43	1295
Package-carrier	J. W. Bridwell	384,556	June 12	1077	281	43	1233
Package for butter or similar material	S. Smyth	385,675	June 26	1864	476	43	1548
Packing for balanced valves	H. G. Hammett	382,309	May 8	833	161	43	640
Packing for steam-cylinder pistons. Metallic	J. Patten	384,972	June 12	649	174	43	1254
Packing for stuffing-boxes. Adjustable	P. Thacher, M. H. and W. D. Morris	382,334	May 8	833	173	43	640
Packing. Piston	M. J. Russell	383,253	May 22	2055	530	43	985
Packing pulverulent substances. Machine for	C. J. Mattison	383,126	May 22	1897	498	43	985
Packing. Rod	F. Pinch	382,167	May 1	450	117	43	595
Pad:							
See Abrading-pad. Collar-pad. Multiple transfer-pad. Railway-rail pad. Saddle-pad. Sweat-pad.							
Paddle-wheel boat	I. C. Monroe and W. H. H. Sieum	381,897	June 5	73	21	43	1125
Paddle-wheel. Feathering	A. H. Carpenter	381,674	Apr. 24	2082	539	43	427
Paddle-wheel. Feathering	R. J. Jones	384,367	June 12	746	208	43	1279
Paddle-wheels. Feathering	D. J. Blaster	385,230	June 26	2066	524	43	1549
Padlock	D. and I. Waino	380,961	Apr. 10	995	254	43	202
Pail. Chamber	G. W. Stilson	381,189	Apr. 17	1338	357	43	276
Pail. Dinner	F. G. O. Ehle	385,257	June 26	2130	543	43	1550
Pails. Cover for strainer	S. E. Forman	380,318	Apr. 3	16	4	43	6
Paint-mill	A. J. Gaston	383,302	May 22	2100	579 / 580	43	961
Paint. Water-proof	M. Fred	380,785	Apr. 10	744	.....	43	186
Paints, &c. Manufacturing the oxides of readily-oxidizable metals for	A. C. Bradley	382,133	May 1	377	98, 99	43	582
Painter's hook	J. B. Hopper	383,883	June 5	50	16	43	1130
Painter's stage	C. D. Bowyer and W. H. Casperson	382,250	May 1	532	140	43	635
Pan:							
See Baking-pan. Bed-pan. Dust-pan. Evaporating-pan. Leer-pan. Scale-pan.							
Pan	E. W. Monroson	383,689	May 29	2247	799	43	1089
Paneling-machine	J. A. Dean	383,711	May 29	2732	782	43	1074
Pantaloons	H. T. Caullet	382,689	May 1	288	58	43	580
Pantaloons or garment stretcher	W. W. Atkinson	384,498	June 12	936	238	43	1240
Pants-protector and pull-strap for shoes. Combined	W. H. Stewart	382,269	May 29	2036	543	43	1049
Pantry. Portable	H. M. Ramey	382,641	Apr. 24	2013	532	43	687

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Paper and twine holder	J. G. McBride	381,155	Apr. 17	1204	348	43	271
Paper bags. Apparatus for and method of making	L. D. Benner	382,662	May 15	1294	317 / 318 / 319	43	768
Paper. Bluing	G. H. Weiss	384,804	June 19	1436	377	43	1412
Paper-board machine	J. M. McCausland	383,744	May 29	2761	736	43	1092
Paper box	K. J. Collins	380,861	Apr. 10	837	207	43	172
Paper box	C. W. Elliott	380,748	Apr. 10	665	194	43	146
Paper box	W. B. Howe	384,038	June 5	200	81, 82	43	1176
Paper box	B. Osborn	383,537	May 29	2494	650	43	1042
Paper box	A. H. Zagalla	381,050	Apr. 10	1136	304	43	229
Paper-clip	J. W. King	381,702	Apr. 24	2101	550	43	445
Paper-cutting machine	C. Beck	383,692	May 29	2698	713	43	1066
Paper-cutting machine	E. P. Donnell	383,714	May 29	2738	731 / 732	43	1075
Paper-fastener. Gummed	J. M. Jones	382,813	May 15	1397	367	43	797
Paper for wrapping metallic articles to prevent tarnishing, &c. Preparing	J. C. Pennington	380,515	Apr. 3	382	.....	43	66
Paper-holder	C. W. Sherwood	382,623	May 8	1133	292	43	736
Paper holder and cutter	J. Reynolds	381,281	Apr. 17	1402	366	43	304
Paper holder. Roll	H. N. King	383,518	May 29	2543	672	43	1033
Paper-holding spindle	S. Powell	380,392	Apr. 3	431	122	43	66
Paper-machines. Renewing strainer-plates for	F. Williams	381,737	Apr. 24	2152	563	43	455
Paper-making machines. Section-box for	J. D. and W. F. Pickles	384,976	June 12	654	172	43	1235
Paper, paper bags, &c. Suspending-holder for	S. B. Palmer	381,419	Apr. 17	1674	448	43	343
Paper receptacle	O. H. Hicks	381,134	Apr. 17	1576	341	43	286
Paper receptacle	O. H. Hicks	381,135	Apr. 17	1577	342	43	285
Paper receptacle	O. H. Hicks. (Reissue)	10,929	May 15	1290	476	43	679
Paper-service machine. Roll	K. O. St. John	384,817	June 19	1558	405	43	1433
Paper vessel	T. F. W. Schmidt	382,559	May 8	1036	264	43	717
Papers. Device for stringing and filing	W. E. Klam	381,351	Apr. 17	1585	426	43	305
Papers, &c. Return-packet for the transmission of	W. B. Nolley	385,197	June 26	2035	521	43	1536
Parcel-carrier. Electro-magnetic	M. C. Mengis	384,775	June 19	1396	385	43	1404
Parer. Apple	F. R. Williams	381,044	Apr. 10	1124	302	43	267
Paring, coring, and slicing machine. Apple	B. D. Tabor	383,922	June 5	117	34 / 35 / 36	43	1143
Paring machines. Fork for fruit	W. A. C. Oaks	382,849	May 8	1019	260	43	713
Passenger-register	T. F. Hanly	384,572	June 12	1095	287 / 288	43	1237
Pasting apparatus	W. A. Lorenz and W. H. Honiss	385,064	June 26	1846	472	43	1499
Pattern:							
See Casting-pattern.							
Patterns for garments. Adjustable device for outlining	A. Wachter	383,926	June 5	128	37, 38	43	1145
Pavement	W. Bignell	382,663	May 15	1298	319	43	764
Pavement	C. H. Hoyt	382,528	May 29	2478	654	43	1019
Pavement	J. R. Pomroy	384,074	June 5	346	.....	43	1187
Pavement. Concrete	G. A. Bayard	381,667	Apr. 24	2052,	.....	43	435
Paving-block	R. I. Cowden	381,341	Apr. 17	1572	422	43	328
Paving-blocks, &c. Composition of matter for	C. E. Coffin	383,942	June 5	151	.....	43	1149
Paving streets and roads	P. Griffin	382,153	May 1	404	106	43	587
Pawl-and-ratchet coupling for bit-braces, &c	H. N. Parker	384,665	June 19	1538	400	43	1430
Pea-shelling machine	R. Karges	382,966	May 15	1635	428	43	844
Pegging-machine	E. E. Bean	380,674	Apr. 10	561	154 / 155	43	122
Pegging-machine	J. R. Prouty	383,909	June 5	95	28	43	1139
Pen cleaner and holder	J. Edson	380,650	Apr. 3	512	143	43	104
Pen. Fountain	G. Pellinger	381,417	Apr. 17	1679	450	43	344
Pen-holder	W. W. Stewart	381,179	Apr. 17	1396	357	43	276
Pen-holder	C. F. Warner	384,101	June 5	377	106	43	1193
Pen-holder. Electric	C. W. Reitler	381,953	May 1	78	19	43	539
Pen-holder. Perforated	F. M. Libby	383,185	May 22	1951	512	43	916
Pencil	O. Mussinan, Jr	382,488	May 8	925	235	43	694
Pencil	L. B. Myers	384,383	June 12	890	213	43	1264
Pencil-holder	O. Bussler	381,612	Apr. 24	1979	520	43	440
Pencil holder. Lead	O. Bussler	381,611	Apr. 24	1977	520	43	440
Pencil. Propeller	J. Hoffman	381,877	Apr. 24	2273	617	43	496
Pencil-rack and eyeglass-hook. Combined	J. Graham	381,692	Apr. 24	2087	546	43	442
Pencil-sharpener	I. Baloun	380,417	Apr. 3	160	45	43	33
Pencil-sharpener	C. W. Boman	382,132	May 1	378	99	43	580
Pencil-sharpener	P. Petry	382,437	May 8	836	214	43	678
Pencils. Addition-register for	H. C. Rose	380,519	Apr. 3	385	93	43	66
Pencils and the like. Rubber-tip attachment for	F. E. Cross	384,563	June 12	1084	283	43	1234
Pencils. Eraser-holder for	J. Hoffman	383,357	May 22	2200	561	43	988
Pencils. Machine for the manufacture of crayon	J. W. Peck	381,810	Apr. 24	2250	566	43	473
Pendant-setting	J. T. Joyce	384,629	June 19	1184	312	43	1301
Percolator	J. W. Evans	381,662	Apr. 10	1154	308	43	238
Perforating and eyeleting machine	G. B. Webb	384,597	June 12	1120	299	43	1343
Perforator	J. Whitelaw	380,614	Apr. 3	464	121	43	94
Perfumery-stand	J. C. Austin	380,473	Apr. 3	246	67	43	50
Permutation-lock	J. C. Barr	385,228	June 26	2076	531 / 532 / 533	43	1547
Permutation-lock	W. F. Peters	384,468	June 12	920	241	43	1206
Phonogram-blank	T. A. Edison	382,418	May 8	810	207	43	673
Phonogram-blank	T. A. Edison	382,402	May 8	804	225	43	696
Phonogram-blanks. Making	T. A. Edison	382,417	May 8	809	206	43	673
Phonograms. Duplicating	T. A. Edison	382,419	May 8	811	207	43	674
Phonographs. Barraishing attachment for	T. A. Edison	382,414	May 8	804	205	43	672
Phonographs. Feed and return mechanism for	T. A. Edison	382,416	May 8	808	205	43	672
Phosphorus trichloride. Apparatus for obtaining	C. Fahlberg	381,695	Apr. 24	2079	543	43	440
Photogenic powder	H. G. Pillard	384,997	June 19	1530	.....	43	1445
Photograph-holder	J. McAfferty	381,154	Apr. 17	1203	348	43	270

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Photographic and other lenses. Diaphragm and shutter for	E. Bausch	382,658	May 15	1454	362	43	980
Photographic cabinet	F. A. Garrison	384,754	June 19	1363	357	43	1397
Photographic camera	T. S. Rust	382,735	May 15	1285	340	43	777
Photographic camera	H. Swain	384,940	June 19	1635	425	43	1449
Photographic developing-box. Portable	T. W. Harvey	383,364	June 26	2139	545	43	1589
Photographic flash-light apparatus	T. H. McCollin	384,698	June 19	1193	315	43	1304
Photographic head-screen	O. C. White	382,125	May 1	267	96	43	561
Photographic image on a gelatine surface into a relief or intaglio. Converting a	H. Sutton	381,091	Apr. 10	1210	.....	43	943
Photographic impressions. Producing uncolored and colored	J. J. E. Mayall	382,369	May 8	739	.....	43	650
Photographic-plate holder	M. Flammang	384,685	June 19	1406	369	43	1402
Photographic plates. Apparatus for heating, cooling, ventilating, and drying	W. Bell	384,416	June 12	864	225	43	1293
Photographic-printing frame	L. F. Adt	381,315	Apr. 17	1288	412	43	314
Photographic-printing frame	J. Strachan	380,630	Apr. 3	493	138	43	101
Photographic sheet	I. Cohn	385,397	June 26	2197	.....	43	1570
Photographing by artificial light. Apparatus for	F. B. Gould	384,151	June 5	458	128	43	1289
Piano-action	S. R. Harcourt	381,129	Apr. 17	1272	340	43	284
Piano action. Upright	P. Krumscheid	384,917	June 19	1608	418	43	1443
Piano-case	A. F. Delano	383,179	June 26	1993	511	43	1580
Piano-forte action	S. R. Harcourt	384,254	June 12	889	168	43	1250
Piano-forte, organ, harmonium, or other musical instrument	E. A. Locke	382,461	May 8	917	238	43	693
Piano key-bottom	W. H. Ivers	382,471	May 8	890	239	43	699
Piano-mover	W. S. Reynolds	383,190	May 22	1956	513	43	917
Piano. Upright	W. H. Dutton	384,941	June 19	589	188	43	1348
Piano. Upright	W. H. Dutton	384,942	June 19	692	163	43	1347
Piano. Upright	W. H. Dutton	384,943	June 19	603	163	43	1347
Piano. Upright	W. H. Dutton	384,944	June 19	696	163 / 164	43	1347
Pianos. Automatic cylinder for	A. Capra and G. B. Rissone	384,121	June 5	412	114	43	1199
Picture and mirror backs. Board for	J. Apoll	382,852	May 15	1445	380	43	808
Picture-exhibitor	A. H. Beck	380,977	Apr. 10	1083	267	43	267
Picture-frame support	F. Servus	380,671	Apr. 3	550	150 / 151	43	111
Pigeon-trap	J. J. King	381,388	Apr. 17	1436	435 / 436	43	335
Pile	S. G. Hutchinson	383,884	June 5	51	16	43	1121
Piles. Preserving	C. C. Lane	383,531	May 29	2467	656	43	1021
Piles. Protecting	G. Brown	381,671	Apr. 24	2057	576	43	476
Piles. Protecting and preserving	C. C. Lane	383,730	May 29	2769	730	43	1040
Pill or lozenge machine	G. A. Smith	385,396	June 26	2289	574	43	1578
Pillow-sham holder	J. W. Dorst	384,320	June 12	896	168	43	1245
Pillow-sham holder	W. Watson	380,864	Apr. 10	1000	250	43	253
Pillow-sham holder and lifter	D. C. King	383,304	May 29	2138	563	43	949
Pin: *See* Crank-pin. Husking-pin. Lace-pin. Safety-pin. Thill coupling-pin.							
Pinchers	W. E. White	385,030	June 26	1785	461	43	1498
Pinchers. Grubbing	J. M. Ricketson	381,561	Apr. 24	1936	507	43	416
Pinion-blanks. Manufacture of	F. Leman	380,499	Apr. 3	267	82 / 83 / 84	43	59
Pipe: *See* Boiler-feed pipe. Grain-pipe. Stove-pipe. Tobacco-pipe.							
Pipe-coils. Appliance for cleaning	F. Farrar	382,147	May 1	306	103 / 104	43	566
Pipe conduit. Underground	T. J. Young	384,948	June 19	1649	426	43	1451
Pipe-coupling	A. Coté	383,865	June 5	22	8	43	1125
Pipe-coupling	J. Davis	381,913	May 1	23	6	43	519
Pipe-coupling	J. Davis	382,514	May 8	963	243	43	702
Pipe-coupling	S. R. Dresser	381,916	May 1	26	7, 8	43	519
Pipe-coupling	J. G. Pfister	382,107	May 1	344	91	43	576
Pipe-coupling	B. W. Poh	384,073	June 5	345	97	43	1186
Pipe-coupling	J. S. Stewart and F. Stone	383,148	June 26	1967	503	43	1594
Pipe-coupling	J. Story	381,986	May 1	97	23	43	533
Pipe-coupling	J. Story	385,287	June 26	2182	558	43	1566
Pipe-coupling and check valve or chamber. Combined	W. T. Messinger	383,488	May 22	2314	613	43	982
Pipe-coupling. Automatic	J. F. McElroy	384,991	June 26	1712	444 / 445	43	1473
Pipe-coupling. Flexible	J. H. Gould	381,008	Apr. 10	1070	264	43	216
Pipe-covering	H. W. Johns	385,119	June 26	1925	491	43	1516
Pipe cutting and threading tool. Combined	A. Saunders	380,937	Apr. 10	957	254	43	185
Pipe-expander	G. C. Van Keuren	381,094	Apr. 10	1217	306	43	945
Pipe expander and cutter	S. A. Ross	384,060	June 5	352	99	43	1188
Pipe-hanger	G. W. Luts	382,171	May 1	429	112	43	568
Pipe-joint. Spherical	H. W. Brinckerhoff	381,826	Apr. 24	2283	596 / 597	43	480
Pipe. Mechanism for the manufacture of	T. J. Bray	382,453	May 8	889	228	43	683
Pipe-molding apparatus	A. H. McNeal and W. A. Stinerock	383,534	May 29	2491	657	43	1022
Pipe or hose coupling	J. C. Sturgeon	380,363	Apr. 3	89	27	43	59
Pipe-riveting machine	G. Cumming	382,142	May 1	369	101 / 102	43	565
Pipe-stem	E. H. Rogers	381,170	Apr. 17	1327	354	43	374
Pipe-testing apparatus	G. W. Luts	382,172	May 1	429	113	43	568
Pipe-testing apparatus	G. W. Luts and J. M. Dillon	382,266	May 1	569	144	43	616
Pipe-threading die	F. Virgieu	383,767	May 29	2863	752 / 753	43	1007
Pipe. Transportation-case for coiled lead	H. J. Miller	384,327	June 12	733	194	43	1269

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Pipe, tube, or shell extractor	W. T. Scott	384,791	June 19	1416	372	43	1406
Pipe-welding apparatus	T. J. Bray	382,452	May 8	887	231 / 232	43	682
Pipe-wrench	R. Copland	382,709	May 15	1368	362	43	782
Pipe-wrench	J. Rose	383,544	May 29	2507	662	43	1025
Pipe-wrench	G. G. Smith	382,381	May 8	775	197	43	626
Pipes. Anti-freezing device for water	W. G. Browne	382,398	May 8	1034	279	43	737
Pipes. Expansible joint for	H. W. Brinckerhoff	381,825	Apr. 24	2282	596	43	480
Pipes. Joint for cement-lined	E. H. Phipps	382,413	May 22	2261	606	43	977
Pipes. Mouth-piece for	H. C. Rose	380,389	Apr. 3	93	23	43	67
Pipes. Thermo-electric apparatus for controlling the temperature of water in	E. A. Newman	383,536	May 29	2483	658	43	1023
Piston and plunger	R. Tonge	383,763	May 29	2856	751	43	1006
Piston meter	J. E. Norfolk	384,685	June 5	333	94	43	1184
Pitcher. Beer	M. Stone	381,291	Apr. 17	1401	402	43	302
Pitman-and-crank connection	E. B. Benham	380,650	Apr. 10	820	223	43	170
Plane	J. A. Biesegger	385,231	June 26	2065	534	43	1549
Plane	A. S. Haynes	384,644	June 19	1597	392	43	1434
Plane. Bench	R. T. Torkelson and I. Johnson	381,140	Apr. 17	1275	340	43	276
Plane. Bench	I. Johnson and R. T. Torkelson	381,141	Apr. 17	1295	343	43	277
Plane. Bench	T. H. B. Millsap	383,634	May 22	2083	531	43	930
Planer attachment for cutting internal gears	G. F. Hutchins	381,788	Apr. 24	2219	581	43	467
Planer-gage and calipers	W. Haddow	380,797	Apr. 10	745	204	43	157
Planers. Clamping device for cross-beams of	G. L. Marble	382,653	May 8	1179	304 / 305	43	745
Planers. Extension-tool for	H. K. Porter	382,268	May 1	572	145	43	619
Planing-machine	L. P. Hoyt	384,445	June 12	809	235	43	1304
Planing machine. Metal	L. W. Pond and F. E. Norton	380,692	Apr. 10	567	168	43	127
Planing machine. Wood	J. Rose	383,284	June 26	2175	556	43	1586
Plant-protector	J. W. McCall	382,370	May 8	741	187	43	650
Plant support. Potted	F. S. Fahnestock	383,174	June 26	1997	511	43	1731
Planter	A. W. Black	382,069	May 1	286	76	43	560
Planter and fertilizer distributer	L. and J. Charles	381,335	Apr. 17	1358	418 / 419	43	319
Planter and fertilizer-distributer. Combined	J. M. Pope	380,920	Apr. 10	946	250 / 251	43	193
Planter. Check-row corn	J. E. Bering	381,102	Apr. 17	1233	330 / 331	43	226
Planter. Corn	C. C. Du Cray	381,252	Apr. 17	1393	378	43	247
Planter. Corn	J. Fehrer	384,834	June 19	1489	388 / 389	43	1400
Planter. Corn	G. D. Haworth	380,889	Apr. 10	869	236	43	188
Planter. Corn	E. K. Hayes	384,363	June 12	788	206 / 207	43	1279
Planter. Corn	J. L. Henderson	380,571	Apr. 3	401	114	43	69
Planter. Corn	A. S. and E. Houck	381,073	Apr. 10	1175	312 / 313	43	237
Planter. Corn	W. Kecher and W. J. Ranck	381,076	Apr. 10	1179	313	43	238
Planter. Corn	F. P. Murphey	381,883	Apr. 24	2331	616 / 619	43	497
Planter. Corn	J. Selby	381,588	Apr. 24	1942	511 / 519	43	413
Planter. Corn and cotton	L. Tedder	382,540	May 8	1051	277	43	709
Planter. Cotton	F. W. Symmes	381,864	May 1	94	23	43	532
Planter. Cotton	J. R. White	380,841	Apr. 10	806	219	43	167
Planter. Cotton-seed	S. E. Hake	384,314	June 12	706	186 / 189	43	1265
Planter. Cotton-seed	B. D. and J. B. King	380,723	Apr. 10	631	173	43	135
Planter. Hand	S. A. Payne	381,023	Apr. 10	1159	301	43	241
Planter. Pea, cotton-seed, or corn	Z. T. Lee	382,666	May 15	1495	392	43	816
Planter. Peanut	R. Gardner	381,357	Apr. 17	1368	424	43	327
Planter. Potato	J. W. Estes	384,353	June 12	774	201 / 202	43	1275
Planter. Wheel	W. H. Grove	382,644	May 8	1160	299	43	741
Planters. Attachment for corn	W. H. Stevens	381,026	Apr. 10	1115	289 / 290	43	225
Planters. Check-row attachment for	I. Jackson	382,488	May 8	884	211	43	676
Planters. Drill attachment for	L. Scofield	383,994	June 5	287	97	43	1165
Plastic compound	L. F. Head	382,607	May 8	1113	.....	43	723
Plastic material. Box of	M. Gardner	383,175	May 22	1940	509	43	914
Plated-wire stock. Plate for the manufacture of	J. S. Palmer	383,941	May 22	2033	523	43	938
Platform: *See* Car-platform.							
Pliers	W. C. Marr	382,712	May 15	1393	330	43	770
Pliers or pinchers	B. J. Leslie	380,331	Apr. 3	36	13	43	9
Plow	L. D. Bell and J. T. Bender	384,936	June 26	1658	434	43	1461
Plow	A. G. Bessemer	382,949	May 15	1508	400	43	828
Plow	T. A. Blanchard	384,749	June 19	1345	351	43	1393
Plow	D. H. Carpenter	381,529	Apr. 24	1980	498	43	397
Plow	J. H. Fry	382,227	May 8	698	169	43	630
Plow	A. M. Nash	380,919	Apr. 10	949	249	43	193
Plow	J. B. Neff	380,634	Apr. 3	526	145	43	106
Plow	F. Hitschmann	381,946	May 1	67	17	43	527
Plow	A. C. Rosencrans	384,283	June 12	668	177 / 179	43	1257
Plow	J. Thompson and S. B. Scorist	385,216	June 26	2060	528 / 529	43	1544
Plow. Adjustable double	A. A. Billingsley	385,294	June 26	2198	550	43	1570
Plow and pulverizer	S. T. and C. Johnston	381,142	Apr. 17	1296	344	43	287
Plow and pulverizer. Combined	G. D. Baird	384,110	June 5	397	109	43	1195
Plow. Drill	C. Herren	383,284	May 22	2007	527	43	987
Plow-fender	R. O. Davis	380,986	Apr. 10	1057	279	43	214
Plow. Gang	H. M. Irwin	380,685	Apr. 10	896	240	43	184
Plow. Gang	A. and G. M. Shaffer	383,494	May 29	2469	645	43	1011

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Plow. Garden	W. H. Heard	385,051	June 26	1825	466	43	1495
Plow. Hillside	R. A. Corn	381,909	May 1	16	5	43	518
Plow-point	I. J. Martin	383,402	May 22	2272	604	43	974
Plow-point. Detachable	H. McCluey	382,179	May 1	441	115	43	584
Plow. Potato	S. Disbrow	384,310	June 12	702	187	43	1284
Plow. Side-hill	A. K. Snodgrass	383,997	June 5	282	68	43	1166
Plow-standard	W. H. Hodgson	381,014	Apr. 10	1076	295	43	217
Plow. Sulky	N. Lampman	383,309	May 22	2137	{563 564}	43	950
Plow. Sulky	E. C. Westervelt	382,919	May 15	1539	403	43	827
Plow. Three-wheel riding	S. B. and J. C. Tolson	382,019	May 1	209	55, 56	43	558
Plowing apparatus. Steam	E. Ingleton	382,963	May 15	1629	426	43	843
Plug and ferrule for wash-tray connections. Combined	C. J. Phillips	383,982	June 5	213	63	43	1162
Plumber's air-cushion	A. H. Walker	381,731	Apr. 24	2146	568	43	453
Plumber's trap	N. Barry, Jr	384,114	June 5	394	110	43	1196
Plumbers' traps. Device for making	A. Boll	384,956	June 26	1662	432	43	1463
Plume, tassel, &c	R. W. E. Aldrich	384,734	June 19	1336	348	43	1301
Pneumatic book	E. Berliner	380,809	Apr. 3	5	1	43	3
Pocket-book	A. H. Jocelyn	384,527	June 12	1031	269	43	1234
Pocket-book, bag, or purse frame	E. Oldenbusch	384,396	June 12	823	214	43	1205
Pocket-book fastening	R. L. Bovd	382,695	May 15	1378	362	43	793
Pocket-book frame	B. Vom Eigen	380,634	Apr. 10	783	217	43	106
Pointing, drilling, and reaming machine	F. Leman	380,496	Apr. 3	276	{76 77 78}	43	57
Poison-bottle indicator	J. C. Higgins	383,394	May 22	2280	601	43	972
Poker. Fire	J. E. Gaitley	381,356	Apr. 17	1592	426	43	326
Pole and shafts. Vehicle	A. L. Bratsch	383,930	June 5	148	43	43	1149
Pole-changer. Automatic	E. J. Mallett	384,323	June 12	722	191	43	1267
Pole-changer. Automatic	E. J. Mallett	384,396	June 12	722	193	43	1268
Pole-tip	T. J. Houghton	382,529	May 8	987	248	43	708
Polishing apparatus for wood, &c	T. Davids	385,171	June 26	1991	516	43	1530
Pool-register	C. S. Krafft	383,581	May 29	2547	673	43	1033
Porcelain-kiln	L. Boissonnet	383,696	May 29	2703	{714 715}	43	1067
Portable drill	W. C. Jennings	382,472	May 8	900	{229 230}	43	689
Portable elevator	J. Dick	382,077	May 1	305	80	43	560
Portable engine	J. Miller and M. J. Hogan	384,922	June 19	1613	{419 420}	43	1444
Portfolio	G. Auth	385,085	June 26	1675	479	43	1506
Post: *See* Fence-post.							
Post-holes. Device for making	J. W. Bailey	382,853	May 15	1446	380	43	808
Post-office dater, canceler, and register. Combined	J. T. Argo	381,976	May 1	121	28	43	536
Pot: *See* Coffee or tea pot. Mustard-pot.							
Potato-digger	J. Lee	381,706	Apr. 24	2111	552	43	447
Potato-digger	J. D. Perry	383,488	May 29	2419	642	43	1008
Potato-digger	C. Roberts	384,641	June 19	1197	317	43	1365
Potato-digger	C. Roberts	385,071	June 26	1850	475	43	1502
Potato-digger	A. B. Shantz	380,771	Apr. 10	706	195	43	150
Potato digger and separator. Combined	I. W. Hoover	382,363	May 8	733	185	43	656
Potato sorter or grader	H. D. Herrington	385,114	June 26	1916	489	43	1515
Powder: *See* Photogenic powder.							
Powder and shot cabinet	A. La Point	382,817	May 15	1403	368	43	796
Power: *See* Animal or other power. Horse-power. Water-power.							
Power. Apparatus for the transmission of	T. D. Hollick and W. E. Rickard	381,138	Apr. 17	1280	{342 343}	43	266
Power. Device for transmitting	C. T. A. H. Wiedling	384,508	June 12	1132	{298 299}	43	1243
Power mechanism	W. A. Howard	383,295	May 22	2118	559	43	947
Power transmitter. Water-current	M. V. B. Ethridge	382,950	May 15	1585	416	43	837
Preserving food	H. Salzer	384,721	June 19	1330	.....	43	1300
Press. *See* Baling-press. Cigar-mold press. Cotton-press. Filter-press. Hand-press. Hay-press. Hydraulic shaping-press. Match-press. Printing-press. Shaping-press. Stamping-press.							
Pressure apparatus. Hydro-pneumatic	T. Arthur	383,429	May 29	2317	615	43	989
Pressure-indicator. Electrical	O. B. Shallenberger	380,944	Apr. 10	965	256	43	197
Pressure-regulator	H. Gale and C. D. Wiselogel	383,877	June 5	38	13	43	1138
Pressure-regulator	A. G. Hobenstein	382,235	May 22	2009	530	43	920
Pressure-regulator and cut off	O. J. McGann	380,444	Apr. 3	201	55	43	41
Pressure-regulator and safety-valve. Automatic	A. G. Hobenstein	382,236	May 22	2010	530	43	920
Pressure regulator. Fluid	W. B. Mason	383,496	May 29	2311	613	43	991
Pressure-regulator. Self-acting or automatic	E. A. McLaughlin	383,314	May 22	2143	565	43	951
Printers' forms. Lock-up for	J. Ruesch	380,507	Apr. 3	441	124	43	99
Printer's galley	O. A. Dearing	381,117	Apr. 17	1266	327	43	261
Printers' galleys. Side-stick for	E. P. Allbe	383,698	May 29	2697	710	43	1066
Printer's rule-case	M. C. Harris	382,699	May 1	947	63, 64	43	559
Printer's standing-galley	W. Severin	385,144	June 26	1939	501	43	1523
Printing	M. D. Wilkins	385,081	June 26	1669	477	43	1504
Printing envelopes. Blank attachment for tympan-sheets for	G. F. Kimball	385,089	June 26	1842	671	43	1499
Printing-film	P. G. Caspian	383,049	May 15	1747	.....	43	896
Printing-machine	T. S. Bowman	382,694	May 15	1539	{310 309}	43	794

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Printing-machine	C. B. Cottrell	385,099	June 26	1894	{483 484}	43	1510
Printing-machine	J. H. Earl	384,432	June 12	884	230	43	1207
Printing machine. Ticket	C. F. and W. B. Huff	383,954	June 5	164	49	43	1152
Printing machine. Wad	P. Selby	382,441	May 8	848	{216 217}	43	680
Printing-machines. Air spring or cushion for	C. P. Cottrell	383,630	May 29	2614	691	43	1049
Printing-machines. Delivery mechanism for	L. C. Crowell	383,799	May 29	2883	{759 760 761}	43	1101
Printing-machines. Delivery mechanism for	L. C. Crowell	383,800	May 29	2888	{761 762 763}	43	1101
Printing-machines. Inking apparatus for	C. B. Cottrell	385,098	June 26	1893	483	43	1510
Printing-machines. Inking apparatus for	J. T. Hawkins	382,979	May 15	1623	424	43	842
Printing-machines. Sheet-delivery apparatus for	C. B. Cottrell	385,100	June 26	1898	484	43	1511
Printing-machines. Web turning and reversing device for	J. C. Fowler and E. A. Henkl	383,568	May 29	2532	668	43	1039
Printing musical and other characters. Device for	G. Becker and D. Monnier	381,902	May 1	8	2	43	516
Printing or numbering machines. Apparatus for receiving tickets from ticket	J. Graham	381,126	Apr. 17	1269	{339 340}	43	264
Printing-press	T. D. Worrall	382,345	May 8	703	177	43	632
Printing-press cylinders. Reversing-gear for	G. D. Ernst	381,901	May 1	153	39	43	543
Printing-presses. Adjustable side guide for	T. L. Knudtson and J. Ubri	382,616	May 29	2911	768	43	1106
Printing-presses. Ink-fountain for platen	W. H. Price, Jr	384,516	June 5	554	152	43	1220
Printing-presses. Perforator for	R. and G. Kennedy	380,578	Apr. 3	419	117	43	84
Printing-presses. Receiving-table for cylinder	F. W. Baltes	382,402	May 8	789	200	43	669
Printing-presses. Sheet-straightener for	H. Loewenbach and W. F. H. Matter	381,800	Apr. 24	2237	586	43	471
Privy	W. J. Wharton	380,540	Apr. 3	352	101	43	73
Projectile	J. R. Hawley	384,574	June 12	1097	288	43	1237
Projectile	E. L. Zalinski	384,662	June 19	1223	325	43	1271
Projectile. Wolfram	A. Mieg and H. Bischoff	382,717	May 15	1209	338	43	771
Propeller. Feathering	R. Wilcox	380,967	Apr. 10	1003	{256 259}	43	204
Propeller for vessels. Screw	F. G. White	382,398	May 8	782	199	43	666
Propeller. Screw	A. Vogelsang	381,193	Apr. 17	1357	363	43	280
Propeller-wheel	J. E. T. Bartlett	384,498	June 12	993	259	43	1317
Propeller-wheel	J. S. Bishop	381,104	Apr. 17	1236	{331 332}	43	257
Propellers. Paddle-belt for	W. H. Silsby	381,286	Apr. 17	1486	400	43	305
Propelling canal-boats	H. H. Baker	380,781	Apr. 10	722	198	43	152
Propelling canal-boats. System and apparatus for	C. F. Cassleman	381,675	Apr. 24	2065	539	43	436
Propelling device	W. Johnston	381,625	Apr. 24	1998	524	43	427
Propulsion. Marine	W. M. Jackson	385,182	June 26	2007	515	43	1533
Propulsion. Marine	W. M. Jackson	385,183	June 26	2011	515	43	1534
Propulsion. Marine	W. M. Jackson	385,184	June 26	2013	516	43	1534
Propulsion of ships or vessels. Apparatus for the	E. Griffon	381,235	Apr. 17	1416	{381 382}	43	291
Protector: *See* Boot-protector. Check-protector. Check and pad protector. Heel-protector. Line-protector. Pants-protector. Plant-protector. Shoe-protector. Trace-eye protector. Tree-protector. Vest-protector. Watch-protector.							
Pruning implement	M. C. Malone	380,563	Apr. 3	419	119	43	85
Puller: *See* Stump-puller.							
Pulley	H. W. Baldsmeier	384,501	June 12	998	260	43	1318
Pulley	W. H. King	382,042	May 1	252	65	43	550
Pulley	A. P. Sibley	384,871	June 19	1548	402	43	1431
Pulley. Band	J. Wiley	382,448	May 8	859	219	43	682
Pulley-bushing	J. J. Mahoney	381,151	Apr. 17	1298	347	43	269
Pulley. Friction-clutch	A. P. Kjoller	384,915	June 19	1605	417	43	1442
Pulley. Split	J. Bruss	384,014	June 5	255	73	43	1170
Pulley. Split	W. A. Willingham	383,789	May 29	2886	753	43	1097
Pulleys. Apparatus for putting driving-belts on	H. R. Leichsenring	382,046	May 1	258	66	43	550
Pulleys. Clutch for band	W. H. Smith	380,952	Apr. 10	979	259	43	199
Pulp or paper mills. Screen-scraper for	M. V. Streeter	383,026	May 15	1706	443	43	858
Pulverizer	P. W. Gates	380,432	Apr. 3	179	49, 50	43	57
Pulverizer	A. Jamieson	382,364	May 8	735	{185 186}	43	658
Pump	M. J. Althouse	384,185	June 5	509	130	43	1220
Pump	W. H. Burnham and J. H. Miller	381,212	Apr. 17	1377	366	43	284
Pump	H. M. Close	384,678	June 19	1253	329	43	1276
Pump	H. M. Close	384,679	June 19	1255	330	43	1276
Pump	W. W. Cully	381,532	Apr. 24	1685	493	43	396
Pump	J. B. Drake	384,749	June 19	1357	354	43	1305
Pump	E. D. Leavitt, Jr	380,330	Apr. 3	35	13	43	9
Pump	J. A. Murray	384,706	June 19	1304	341	43	1285
Pump	E. Neff	381,808	Apr. 24	2247	588	43	472
Pump	J. North	380,510	Apr. 3	308	89	43	64
Pump	J. North	385,319	June 26	2329	571	43	1576
Pump	J. Stevens	384,648	June 19	1206	318	43	1267
Pump	M. H. Timberlake	383,780	May 29	2853	750	43	1095
Pump	D. Waldkircher	380,466	Apr. 3	234	63	43	46
Pump and windmill head	J. P. Schuckman	384,086	June 5	356	101	43	1189
Pump apparatus. Portable force	J. A. Parsons	383,486	May 29	2417	641	43	1008
Pump attachment	T. Diffley	385,004	June 26	1663	485	43	1512
Pump. Chain	J. J. De Silva	380,625	Apr. 3	179	47	43	35
Pump. Deep-well	P. A. Myers	384,585	June 19	1114	295	43	1249
Pump. Double-acting force	J. M. Normand	381,685	Apr. 24	2265	600	43	480
Pump. Force	G. A. Carter	383,703	May 29	2718	717	43	1071

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Pump. Force	H. M. Lourie	384,633	June 19	1188	314	43	1383
Pump. Hydraulic	J. H. Martin	384,650	June 5	711	83	43	1189
Pump. Hydraulic air	E. H. Weatherhead	383,028	May 15	1704	444	43	859
Pump. Lift or force	J. North	380,560	Apr. 3	306	80	43	88
Pump-rod. Compensating	W. H. Burnham and J. H. Miller	381,911	Apr. 17	1376	368	43	894
Pump. Rotary	O. Seifert	383,998	June 5	230	67	43	1165
Pump. Spraying	A. Weaber	383,381	May 22	2070	543	43	936
Pump-valve	C. F. Hoyt	383,811	May 22	2004	766	43	1164
Pumps. Aerating attachment for chain	W. Mild	382,476	May 22	2304	627	43	1004
Pumps. Apparatus for operating oil-well	C. C. Stover	383,685	May 15	1705	443	43	858
Pumps. Vent-stopper for	A. Scougal	383,773	May 22	2041	747	43	1008
Pumping apparatus. Electrical	F. J. Sprague	385,311	June 26	2054	807	43	1543
Pumping apparatus. Horse-power	H. D. White	380,640	Apr. 10	905	219	43	167
Pumping mechanism. Oil or Artesian well	H. H. Argue	380,615	Apr. 3	465	131 138	43	94
Punch	M. D. Knowlton	384,892	June 19	1036	270	43	1385
Punch and die	E. F. Gennert and D. N. Gleason	382,857	May 8	794	188 183	43	656
Punch. Belt	H. L. T. Overbey	383,237	May 22	2087	538	43	931
Punch. Compound-lever	C. M. Brown	382,947	May 15	1569	412	43	854
Punch. Paper	J. C. Jensen	385,056	June 26	1834	470	43	1497
Punch-register. Electric	A. C. Palmer	383,485	May 29	2414	641	43	1007
Punching and shearing machine	C. Weber and H. Schneider	383,980	May 22	1988	516 517	43	919
Punching cards. Machine for	S. J. Murray	381,716	Apr. 24	2127	557 558	43	450
Punching machine. Bag	F. Hirsch	381,696	Apr. 24	2090	546	43	443
Punching-machines. Blank-holder for	R. J. Shipley	382,911	May 15	1538	400	43	825
Purses, &c. Device for closing and carrying	E. N. Ames	380,416	Apr. 3	150	45	43	33
Quilting-frame	C. A. Vestal	385,078	June 26	1867	477	43	1504
Quilting-machine	W. Koch	381,786	Apr. 24	2234	585	43	470
Quilting-machine	C. T. Landphere	384,364	June 12	636	171	43	1252
Rack: *See* Advertising-rack. Card-rack. Clothes-rack. Display-rack. Egg-rack. Harness-rack. Hat and coat rack. Hay-rack. Pencil-rack. Show-rack. Ticket-rack. Tool-rack.							
Rack for exhibiting goods	A. Neuville and A. Back	383,975	June 5	201	58, 59	43	1159
Radiator	S. E. Rhodes	381,955	May 1	80	20	43	530
Radiator for steam or hot water	W. W. Canfield	381,984	May 1	138	33	43	540
Radiator-loops. Machine for assembling	H. H. Taylor	380,536	Apr. 3	347	99 100	43	71
Radiator. Steam	S. E. Rhodes	381,954	May 1	78	20	43	529
Rail-brace from T-metal. Forming a	A. A. Strom	380,668	Apr. 3	545	149	43	110
Rail-chair	J. Quinn, Jr	383,765	May 29	2222	743	43	1000
Rail. Compound	E. G. Chamberlain	382,409	May 8	799	204	43	671
Rail. Double-grooved girder	A. J. Moxham	383,002	May 15	1650	434	43	849
Rail for street-railways and chairs	I. H. Randall	382,395	May 8	708	195	43	665
Rail. Grooved girder	A. J. Moxham	383,001	May 15	1657	453	43	848
Rail. Guard	G. Nevens	380,567	Apr. 3	424	109	43	67
Rail-joint	G. N. Hodgdon	385,116	June 26	1918	499 500	43	1515
Rail-joint	J. V. Koss	382,615	May 15	1300	367	43	797
Rail or bar bender	M. H. Brown	383,168	May 22	1928	504	43	911
Railing. Guard	J. Muser	380,657	Apr. 3	525	145	43	106
Railing. Tubular iron	E. Stephens	381,289	Apr 17	1489	401	43	306
Railway	R. M. Hunter	382,470	May 8	807	209	43	668
Railway	J. B. Sutherland	382,393	May 8	777	197	43	667
Railway	J. B. Sutherland	382,394	May 8	778	197	43	667
Railway and conveyer. Pneumatic	T. A. and A. A. Connolly	381,907	May 1	16	4	43	518
Railway and water-tobogganing apparatus. Inclined	R. A. Harrington	384,843	June 19	1506	391 392	43	1494
Railway-bedding	F. X. Georget	381,125	Apr. 17	1388	330	43	283
Railway. Cable	E. W. Wilson	384,550	June 12	1063	277	43	1330
Railway-cables. Driving-drum for	F. A. J. Beigel	385,230	June 26	2083	533 534	43	1548
Railway-chairs. Die for making	E. B. Entwisle	381,875	Apr. 24	2240	616	43	495
Railway. Combined elevated and surface	T. J. Mayall	381,405	Apr. 17	1602	444 445	43	341
Railway conduits. Trap for electric	W. M. Schlesinger	381,585	Apr. 24	1933	509 510	43	411
Railway-crossing	J. Cumming	381,056	Apr. 10	1147	300	43	230
Railway-crossing	J. T. Mabbey	382,173	May 1	432	112 113	43	563
Railway-crossing alarm-signal	G. D. and C. Rathmann	384,360	June 12	887	215	43	1288
Railway-crossing gate	R. W. Hill	384,160	June 5	474	130 131	43	1213
Railway-crossing gate	M. B. Mills	380,447	Apr. 3	210	57	43	62
Railway. Electric	G. H. Condict	384,588	June 12	1081	283	43	1334
Railway. Electric	G. H. Condict	385,097	June 26	1880	483	43	1509
Railway. Electric	S. D. Field	384,685	June 19	1262	331 332	43	1377
Railway. Electric	R. M. Hunter	381,555	Apr. 24	1891	499	43	433
Railway. Electric	R. M. Hunter	381,556	Apr. 24	1894	499	43	433
Railway. Electric	R. M. Hunter	382,576	May 15	1479	382	43	834
Railway. Electric	R. M. Hunter	382,577	May 15	1480	382 383	43	835
Railway. Electric	R. M. Hunter	384,576	June 19	1260	330	43	1376
Railway. Electric	R. M. Hunter	384,586	June 19	1260	330	43	1376
Railway. Electric	R. M. Hunter	384,680	June 19	1260	330	43	1376
Railway. Electric	R. M. Hunter	384,710	June 19	1260	330	43	1376
Railway. Electric	R. M. Hunter	384,711	June 19	1260	330	43	1376

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Railway. Electric	R. M. Hunter	384,912	June 19	1260	330	43	1441
Railway. Electric	R. M. Hunter	385,053	June 26	1827	469	43	1496
Railway. Electric	R. M. Hunter	385,054	June 26	1830	469	43	1496
Railway. Electric	R. M. Hunter	385,055	June 26	1832	469	43	1497
Railway. Electric	R. M. Hunter	385,189	June 26	2005	514	43	1532
Railway. Electrical	J. C. Love	381,395	Apr. 17	1647	426 429	43	287
Railway. Electro-motive	G. T. Woods	385,634	June 26	1798	462	43	1469
Railway. Elevated	T. J. Mayall	381,402	Apr. 17	1656	443	43	340
Railway. Elevated	T. J. Mayall	384,921	June 19	1612	419	43	1444
Railway-freight-train signal	T. M. Jenks	383,613	May 29	2206	767	43	1165
Railway-frog	T. A. Griffin	384,617	June 19	1163	307	43	1358
Railway-frog	G. W. Parsons	385,086	June 26	1848	473	43	1499
Railway-frog	I. A. Perry	380,923	Apr. 10	935	240	43	191
Railway-gate	L. M. Foster	380,319	Apr. 3	17	4, 5	43	6
Railway-gate	A. H. Johnson and A. G. Mahaffy	381,381	Apr. 17	1627	434	43	323
Railway-gate	A. J. McDonald	383,009	June 5	191	56	43	1157
Railway-gate tie	A. J. McDonald	383,007	June 5	189	55	43	1156
Railway grip. Cable	S. Gibson	380,970	May 15	1600	421	43	849
Railway grip. Cable	A. E. Roe	381,632	Apr. 10	1107	295 296 299	43	228
Railway-head evener	J. Sheridan	381,294	Apr. 17	1484	399 400	43	305
Railway or farm gate	N. Wright and S. R. Shaver	382,682	May 1	913	56, 57	43	532
Railway. Pneumatic	T. W. Pitts	384,333	June 12	744	195	43	1270
Railway-rail	D. T. Bennett	383,431	May 29	2382	616	43	990
Railway-rail crossing	J. Rice	384,717	June 19	1315	344	43	1387
Railway-rail joint	M. T. Frame	384,949	June 12	617	166	43	1340
Railway-rail joint	J. J. Mulhall	384,061	June 5	396	93	43	1183
Railway-rail pad	H. J. Fackenthall and L. Wallace	382,803	May 15	1367	364	43	795
Railway-rails. Machine for reducing	S. McCloud	380,504	Apr. 3	295	88	43	89
Railway-rails. Safety-flange for	C. M. Erwin	384,435	June 12	886	231	43	1298
Railway semaphore-signal	T. L. Chapman	381,383	Apr. 17	1550	418	43	316
Railway semaphore-signal	C. H. Keyl	384,170	June 5	488	134	43	1216
Railway-signal	J. H. Farrar	380,316	Apr. 3	14	3	43	5
Railway-signal	T. M. Jenks	381,947	Apr. 17	1436	386	43	294
Railway-signal	W. B. Sherman	381,096	Apr. 10	1202	322	43	242
Railway-signal	C. D. Tisdale	382,741	May 15	1302	343	43	778
Railway-signal. Electric	S. C. C. Currie	384,998	June 26	1963	494	43	1452
Railway-signal. Electric	C. F. De Redon	382,515	May 8	864	243	43	702
Railway-signal. Electric	B. H. Gedge	382,390	May 8	832	161	43	646
Railway-signals. Device for actuating	J. J. Turner	382,984	May 1	600	152	43	623
Railway signaling	T. A. Edison and E. T. Gilliland	384,820	June 19	1484	387	43	1419
Railway-spike	C. Baines	384,220	June 12	584	150	43	1243
Railway-spike	J. S. Fox	385,107	June 26	1906	485	43	1519
Railway. Street	R. M. Hunter	380,575	Apr. 3	407	116	43	83
Railway structures. Elevated cable-motor or other	Z. P. Boyer	382,407	May 8	795	202 203	43	670
Railway. Suspended cable and electric	G. R. Taylor and W. Heckert	381,882	Apr. 24	2350	609	43	491
Railway-switch	W. S. Arnold	380,972	Apr. 10	1017	266	43	206
Railway-switch	H. D. Baldwin	382,066	May 1	293	75	43	585
Railway-switch	L. Blackstone	384,955	June 26	1661	432	43	1402
Railway-switch	L. J. Lindsey	380,582	Apr. 3	417	118 119	43	85
Railway-switch	S. B. Sabens	385,141	June 26	1956	500 501	43	1502
Railway-switch lock	W. T. Manning	383,965	June 5	187	55	43	1156
Railway-switch stand and signal	N. W. Boyd	383,209	May 22	1986	521	43	923
Railway-switches. Locking mechanism for	C. H. Johnson and C. Allen	382,530	May 8	968	249	43	706
Railway system	T. J. Mayall	384,054	June 5	317	90, 91	43	1181
Railway system. Elevated street	J. W. Adams	382,347	May 8	707	176 179 180	43	653
Railway system. Pneumatic	T. J. Mayall	381,401	Apr. 17	1655	441 442	43	339
Railway-tie	W. H. Britton	382,134	May 1	379	99	43	563
Railway-tie and fastening for rails. Metallic	H. L. De Zeng	380,623	Apr. 3	474	134	43	96
Railway-tie. Metallic	F. Barhydt	382,855	May 15	1448	381	43	808
Railway-tie. Metallic	W. H. Donaldson	381,050	Apr. 10	1151	307	43	231
Railway-tie. Metallic	J. Reese	384,785	June 19	1406	368	43	1406
Railway-track	J. Haish	384,690	June 19	1166	308	43	1389
Railway-track	J. M. Hardy	381,130	Apr. 17	1273	341	43	285
Railway track and joint	B. S. Doran	385,253	June 26	2126	542	43	1557
Railway-track. Laying	G. F. Harris	381,366	Apr. 17	1406	429 430	43	289
Railway-tracks. Steel-tie for	M. Fitzgerald	383,118	May 22	1885	487	43	890
Railway-trains. Combined station-indicator and signaling apparatus for	J. H. Bickford	381,669	Apr. 24	2054	537	43	435
Railways. Automatic switch and frog for	L. W. Cromer and G. Gavin	381,676	Apr. 24	2086	540	43	436
Railways. Automatic switch for	J. M. Swem	384,651	June 19	1309	319	43	1287
Railways. Cable-gripping apparatus for street	J. H. Dale	385,246	June 26	2102	530	43	1553
Railways. Cable-supporting sheaf for cable	O. C. Crane	383,703	May 29	2237	719	43	1073
Railways. Combined metal tie and fastening for	E. R. Stiles	381,660	Apr. 24	2347	600	43	490
Railways. Contact-making device for electric	F. Wynne	381,040	Apr. 10	1138	303	43	228
Railways. Device for removing obstructions or preventing accidents on street	C. Mahon	381,631	Apr. 24	2277	618	43	497
Railways. Electric motor for	S. H. Short	381,680	Apr. 24	2095	531	43	430
Railways. Foot-guard for	T. A. Griffin	382,678	May 1	315	88	43	571
Railways. Guard-rail and insulator for electric	E. A. Foster	384,901	June 19	1585	412	43	1436
Railways. Motor for street	R. C. Pole	381,667	Apr. 24	2337	604 605	43	497
Railways. Overhead conducting system for electric	G. T. Woods	383,644	May 29	2230	760	43	1112
Railways. Overhead line for electric	C. Vogel	382,130	May 22	1916	501	43	849
Railways. Steam-engine for	C. F. Spencer	382,975	May 1	561	147	43	880

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Railways. Three-throw switch for	F. S. Washburn	383,382	May 22	2230	592	43	987
Railways. Underground conduit and grip for electric	E. E. Rice and A. H. Henderson	383,770	May 29	2833	746	43	1091
Railways. Underground conduit for electric	S. A. Whipple	380,469	Apr. 3	239	65	43	49
Rake: *See* Hay-rake. Rice-rake.							
Rake and fork. Combined	L. R. Stagner	381,594	Apr. 24	1952	514	43	415
Ranges. Broiling-oven for	J. G. Lyon	384,049	June 5	310	88	43	1180
Rasp	P. S. Stokes	383,999	June 5	234	68	43	1166
Ratchet	J. L. Curtis	382,637	May 8	1152	297	43	740
Ratchet-and-pawl device	A. B. Case	383,624	May 29	2698	{649 650}	43	1048
Ratchet-movement	W. S. Huson	383,054	May 15	1760	455	43	866
Rattan chair. Knockdown	B. J. Buckman	383,169	May 22	1930	{504 505}	43	911
Razor	A. L. Gayler	380,387	Apr. 3	123	36	43	96
Razors. Device for sharpening	P. J. Caesar	382,027	May 1	220	59	43	554
Reclining-chair	H. C. Kree	383,058	May 15	1765	456	43	869
Reclining-chair	S. H. Schmuck	380,525	Apr. 3	331	95	43	99
Rectum or vagina. Apparatus for cooling and warming the	J. R. Hamilton	380,626	Apr. 3	477	135	43	97
Reel: *See* Bolting-reel. Harvester-reel. Fishing-reel. Skein-reel.							
Reel and transportation-case. Combined	H. J. Millar	384,328	June 12	735	194	43	1289
Reel and transportation-case. Combined	H. J. Millar	384,329	June 12	737	194	43	1289
Reel-support	G. F. Hall	381,128	Apr. 17	1271	340	43	264
Reflector. Window	C. G. A. F. W. E. Pihl	384,784	June 19	1406	368	43	1406
Refrigerating and ice-making by the use of ammonia. Apparatus for	R. F. Roswald	383,251	May 22	2045	{537 538 539}	43	934
Refrigerator	C. A. Bluhm	385,089	June 26	1879	480	43	1506
Refrigerator	A. I. Dexter	384,965	June 26	1675	435	43	1464
Refrigerator	G. R. Hotchkiss and G. F. Smith	382,982	May 15	1697	{425 426}	43	842
Refrigerator. Shell-fish	H. C. Constantin	382,410	May 8	799	204	43	671
Register: *See* Cash-register. Hot-air register. Check-register. Passenger-register. Electro-magnetic register. Pool-register. Fare-register. Punch-register. Toll-register.							
Registering device. Electrical	S. M. Pruden	381,279	Apr. 17	1478	397	43	303
Regulator: *See* Current-regulator. Gas-burner regulator. Damper-regulator. Gas-pressure regulator. Draft-regulator. Pressure-regulator. Electric-current regulator. Speed-regulator. Steam-regulator. Feed-regulator. Tooth-regulator. Feed-water regulator. Temperature-regulator.							
Reheating-furnace	T. C. Jones	382,986	May 15	1633	427	43	843
Rein-fastener. Safety	E. E. Brown	382,796	May 15	1379	362	43	783
Rein-holder	W. E. Beisonhert	381,608	Apr. 24	1974	519	43	419
Rein-holder	E. E. Brewster	380,676	Apr. 10	585	156	43	123
Rein-holder	F. W. C. Macdonald	384,988	June 26	1709	443	43	1472

Rein-holder	D. H. Stubbs	381,292	Apr. 17	1492	402	43	307
Relay	J. E. Watson	383,843	May 29	2947	780	43	1113
Relay	J. E. Watson	384,222	June 5	564	{154 155}	43	1230
Releasing device	M. H. Whalen	384,106	June 5	383	107	43	1194
Rennet. Producing dried extract of	F. Graeff	384,358	June 12	782	.....	43	1277
Retort and burner attached. Generating	W. P. Patton	380,514	Apr. 3	319	91, 92	43	66
Retouching device	G. F. Card	383,436	May 29	2328	618	43	991
Revolver	W. H. Sprague	380,361	Apr. 3	87	37	43	20
Revolvers. Extracting mechanism for	D. H. Rice	385,009	June 26	1754	454	43	1482
Rheostat	F. J. Cronch	383,345	May 22	2180	577	43	958
Rheostat	W. H. Knight	384,044	June 5	303	80	43	1178
Rheostat	J. W. Packard	385,001	June 26	1741	450	43	1479
Rheostat	E. W. Rice, Jr.	383,913	June 5	101	30	43	1140
Ribbon-holder	W. E. Wright	381,196	Apr. 17	1363	364	43	281
Ribbon-spool	J. J. Necker and C. Gifford	383,141	May 22	1999	493	43	904
Rice-hulling machine	E. C. Engelberg	383,285	May 22	2105	556	43	944
Rice-rake, cotton-chopper, and cultivator	J. A. Gardner	380,883	Apr. 10	875	225	43	179
Rice-separator	C. J. Allen	382,931	May 15	1553	407	43	829
Ring: *See* Finger-ring. Open ring.							
Rivet	A. Kirks	384,318	June 12	713	189	43	1266
Rivet-burr remover	E. H. Perkins	383,133	June 26	1945	497	43	1520
Rivet-extractor	P. Suitzel	380,703	Apr. 10	599	165	43	130
Rivet-setting machine	W. C. Bray	382,350	May 8	714	181	43	654
Rivet-shanks. Machine for slotting	J. J. Unbehend	381,514	Apr. 17	1838	{484 485}	43	376
Riveting-machine	J. B. Frost	384,189	June 5	530	{143 144}	43	1224
Road. Apparatus for recording the direction and gradients of a	A. R. D. F. de Villepigue	382,886	May 15	1467	385	43	629
Roads. Machine for making, repairing, and clearing	G. W. Taft	380,954	Apr. 10	698	183	43	151
Rock. Apparatus for reducing bituminous	G. E. Belmore	381,321	Apr. 17	1525	414	43	315
Rock-drill	S. Ingersoll	381,698	Apr. 24	2080	545	43	433
Rock-drill	W. O'Keefe	382,685	May 15	1397	370	43	783
Rock-drilling machine	T. J. Murphy	382,683	May 15	1779	464	43	1371
Rock-drilling-machine tripod	T. J. Murphy	382,684	May 15	1776	463	43	1371
Rocker-spring	G. H. Hobbard	380,691	Apr. 10	686	180	43	148

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Rocking-chair	G. F. Hall	383,808	May 29	2901	{765 766}	43	1104
Rod: *See* Eccentric-rod. Pump-rod. Lightning-rod.							
Rod-cutter	H. V. Robinson	385,139	June 26	1939	499	43	1501
Rods and tubes. Machine for drawing	C. M. Pielsticker	382,729	May 15	1384	336	43	775
Rods. Machine for forming eyes on	C. O. Wilder	383,664	May 15	1666	471	43	977
Rodents. Implement for exterminating	E. P. Koonts	382,708	May 15	1458	389	43	769
Roller: *See* Anti-friction roller. Gate-roller. Crushing-mill roller. Land-roller.							
Roller-mill	H. A. Barnard	382,563	May 8	1076	{276 277}	43	725
Roller-mill	P. Ferrier	380,678	Apr. 10	864	233	43	178
Roller-mill	J. D. Mawhood	381,710	Apr. 24	2116	553	43	446
Roller-mill	J. D. Mawhood	384,919	June 19	1610	418	43	1443
Roller-mill	W. W. Westrup and G. T. Lantaff	384,408	June 12	853	221	43	1291
Rolling apparatus	W. L. Price	384,501	June 12	1122	290	43	1341
Rolling articles of metal. Die for	D. E. Kempster	385,186	June 26	2019	516	43	1535
Rolling machine. Metal	D. E. Kempster	380,759	Apr. 10	867	190	43	146
Rolling metal articles to form. Machine for	C. F. Tebbetts	384,878	June 19	1559	405	43	1433
Rolling-mill	J. Fawell and J. Hemphill	382,035	May 1	940	61, 62	43	556
Rolling-mill	C. A. Nighman	384,063	June 5	330	94	43	1184
Rolling-mill	J. T. Richardson and A. Rapp	383,990	June 5	220	66	43	1163
Rolling-mill for making tubes	S. P. M. Tasker	382,017	May 1	202	53, 54	43	551
Rolling-mill plant	W. Garrett and S. T. Wellman	381,689	Apr. 24	2062	545	43	441
Rolling-mills. Appliance for	D. B. Oliver	384,332	June 12	743	195	43	1270
Rolling-mills. Feeding appliance for	J. Morgan, Jr.	383,000	May 15	1653	{422 423}	43	846
Rolling mills. Reeling apparatus for rod	F. H. Daniels	381,217	Apr. 17	1304	370	43	265
Rolling mills. Rolls for iron	A. W. H. Collard	384,308	June 12	700	188	43	1264
Rolling sheet metal	F. H. Wright	381,146	Apr. 24	2164	568	43	457
Rolling tires	P. Gendron	383,521	May 29	2470	632	43	1017
Rolls. Apparatus for removing and setting	W. R. Jones	385,058	June 26	1837	470	43	1497
Rolls. Appliance for	W. R. Jones	382,704	May 15	1354	328	43	766
Rolls. Housing-cap for	W. R. Jones	383,056	May 15	1762	455	43	869
Roof	R. J. Claflin	384,961	June 26	1668	434	43	1462
Roof-climbing device	F. Kramer	380,395	Apr. 3	133	40	43	28
Roofs, &c. Construction of	H. C. Hodges	381,137	Apr. 17	1279	342	43	266
Roofing. Cap and anchor for metallic	B. F. Caldwell	381,756	Apr. 24	2179	570	43	459
Roofing fabric	A. Jones	385,057	June 26	1835	470	43	1497
Roofing-felt. Manufacture of	H. M. Miner	380,915	Apr. 10	921	246	43	188
Roofing. Machine for painting metallic	B. F. Caldwell and W. F. Peterson	381,757	Apr. 24	2180	570	43	459
Roofing. Tile	A. W. Cooper	380,864	Apr. 10	842	228	43	174
Roofing. Water and fire proof composite	W. Chadd	383,101	May 22	1836	481	43	883
Rope-grip or selvagee-strop	A. K. Evans	383,603	May 29	2695	704	43	1161
Rope transmission. Slack-take-up for	W. H. Dodge	383,282	May 22	2101	554	43	944
Rope transmission. Tension device for	J. E. Hall	384,360	June 12	785	205	43	1278
Rotary cutter	J. E. Maynadier	380,338	Apr. 3	46	16	43	11
Rotary-cylinder engine	J. S. Barden	385,226	June 26	2073	531	43	1546
Rotary engine	A. W. and W. G. Billings	382,909	May 1	483	{124 125 656}	43	602
Rotary engine	J. C. Jarvis	383,530	May 29	2485	{653 654}	43	1020
Rotary engine	A. L. Jefferis and W. C. Thurman	380,489	Apr. 3	266	72	43	55
Rotary engine	J. E. Smevely	381,287	Apr. 17	1487	401	43	305
Rotary liquid-meter	W. B. Pearson	380,784	Apr. 10	697	193	43	148
Rotary vapor-engine	R. Hewson	382,424	May 8	817	209	43	675
Roundabout	W. Seasack	384,393	June 12	831	216	43	1286
Rounding-out machine	V. H. Whittaker	384,807	June 19	1440	377	43	1412
Rovings. Machine for making heavy	J. Scholes	382,908	May 15	1594	398	43	884
Rowing-machine	W. and J. H. Tracy	381,187	Apr. 17	1346	360	43	278
Rubber boot	J. D. Thomas	382,498	May 8	936	237	43	647
Rubber boots. Strap for	F. A. Joseph	384,914	June 19	1604	417	43	1442
Rubber dam adjuster and clamp	J. W. Ivory	384,578	June 12	1102	290	43	1378
Rubber-dam clamp and napkin-holder. Combined	J. W. Ivory	384,577	June 12	1101	289	43	1338
Rubber fountains, &c. Stopper for	A. C. Eggers	385,256	June 26	2129	543	43	1558
Rubber or its compounds into hardened rubber. Composition for converting india-	W. B. McGarvey	383,137	May 22	1888	.....	43	903
Rubber shoe	E. Stout	384,097	June 5	372	107	43	1192
Ruby-pin setter	F. Hyde	384,683	June 19	1580	337	43	1382
Ruby-pin setter	P. Ramaer	384,544	June 12	1053	275	43	13 8
Rudder	W. W. Huntley	381,786	Apr. 24	2217	580	43	467
Rudder-stocks upon vessels. Bearing and support of	J. N. Long and J. McCaffrey	381,148	Apr. 17	1295	346	43	269
Rudders. Apparatus for controlling ships'	T. G. Stevens	381,035	Apr. 10	1113	{297 298}	43	225
Rudders. Combined bearing and stuffing-box for	J. H. Konitzky	383,646	May 29	2639	689	43	1054
Rule, level, and plumb. Combined	C. Adkins	384,951	June 26	1657	431	43	1461
Rule, square, bevel, calipers, dividers, &c. Combined	J. C. Spencer and J. G. Smith	380,380	Apr. 3	86	27	43	19
Ruling-machine	G. D. Barnard and E. Knapp	384,497	June 12	992	258	43	1317
Running-gear	J. M. Brosius. (Reissue)	10,922	Apr. 17	1841	467	43	315
Running-gear	R. Hickman	381,695	Apr. 24	2091	547	43	443
Sad-iron	I. C. H. Gilmore and H. B. Stafford	381,668	Apr. 10	1067	283	43	216
Sad-iron	W. Milfoil	383,494	May 22	2074	604	43	975
Sad-iron	W. H. Mull	381,572	Apr. 24	1917	505	43	408
Sad-iron	T. R. Patterson	382,349	May 22	2149	567	43	953
Sad-iron and plate heater	J. S. Sharp and J. D. Luther	381,634	Apr. 17	1760	456	43	320
Sad-iron heater	S. Spencer	384,722	June 19	1502	345	43	1302
Sad-iron	E. Terrehaw	384,662	Apr. 17	1761	471	43	320
Sad-iron	W. Andrews	384,999	June 19	1140	301	43	1359
Sad-iron	D. Wadsworth	382,446	May 8	855	218	43	691
Sad-iron	E. A. Stanstad	384,789	June 19	1388	349	43	1384

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Saddle. Harness	W. R. Knowles	383,956	June 5	170	50	43	1153
Saddle. Harness	S. A. Marker	383,741	May 29	2776	731	43	1069
Saddle. Harness	J. W. Mitchell	380,451	Apr. 3	215	56	43	44
Saddle. Harness	G. Rank	381,852	May 1	75	19	43	599
Saddle-pad	J. Morrow	383,821	May 29	2919	771	43	1106
Saddle-tree. Harness	W. S. Everett	380,624	Apr. 3	476	134	43	97
Saddle-trees. Press for forming leather	J. M. Fink	382,909	May 15	1589	{417 418	43	837
Safe. Burglar-proof	M. S. Goldsmith	380,717	Apr. 10	619	170	43	138
Safe-lock	A. G. Burton	382,071	May 1	290	77, 78	43	567
Safe-lock	A. G. Burton	383,040	May 15	1731	{450 451	43	983
Safe-lock	A. G. Burton	383,041	May 15	1737	{451 452	43	984
Safe-lock	J. White	381,893	Apr. 24	2398	665	43	591
Safe. Provision	H. Randol	381,721	Apr. 24	2134	589	43	451
Safes and vaults. Operating mechanism for doors of	A. Kirks	384,282	June 12	633	170	43	1251
Safety-pin	D. A. Carpenter	381,613	Apr. 24	1960	530	43	491
Safety-pin	H. C. Hense	382,232	May 1	518	133	43	606
Safety-pin	J. Jenkins	380,986	Apr. 10	990	240	43	184
Safety-pin	F. M. Twitchell	381,513	Apr. 17	1631	434	43	373
Safety-pins. Manufacture of	R. A. Ballou	380,360	Apr. 3	115	33	43	25
Safety-switch	W. B. St. Cyr and F. R. McDonald	381,034	Apr. 10	1110	297	43	234
Sail-grommet	W. W. Wilcox	382,921	May 15	1542	404	43	837
Sail-grommet	W. W. Wilcox	382,922	May 15	1542	404	43	838
Sail-grommet	W. W. Wilcox	382,923	May 15	1543	404	43	838
Sail-grommets, &c. Punch or die for	W. W. Wilcox	382,924	May 15	1544	405	43	838
Salt-drier	C. T. Bartlett	384,953	June 26	1658	431	43	1461
Salve	J. R. Smith	385,210	June 26	2054	.....	43	1542
Sampling apparatus. Automatic	C. Folsom	381,769	Apr. 24	2183	572	43	462
Sand-trap	A. Bradford	384,420	June 12	868	226	43	1254
Sash and frame. Window	B. F. Smith	382,117	May 1	355	93	43	579
Sash-balance	C. Kruesi	383,134	May 22	1685	438	43	983
Sash-balance	J. H. Corbin	383,280	May 22	2089	554	43	943
Sash-balance	T. Jones	380,805	Apr. 10	754	{396 397	43	158
Sash-balance	W. C. Merckel	384,459	June 12	991	259	43	1304
Sash-balance	T. G. Russell	383,414	May 22	2029	008	43	977
Sash-cord fastener	J. H. Jones	381,018	Apr. 10	1061	276	43	218
Sash-cord fastener	L. Strasser	384,649	June 19	1206	319	43	1367
Sash-cord fastener	G. L. Thompson	381,728	Apr. 24	2142	561	43	453
Sash-fastener	G. H. Aylworth	384,553	June 12	1066	278	43	1331
Sash-fastener	J. E. Brown	381,210	Apr. 17	1375	366	43	283
Sash-fastener	R. Clarke	380,424	Apr. 3	171	47	43	35
Sash-fastener	O. R. Cooke	381,113	Apr. 17	1250	336	43	260
Sash-fastener	J. Jackson	383,886	June 5	54	17	43	1131
Sash-fastener	G. D. Loder	380,501	Apr. 3	391	85	43	50
Sash-fastener	E. W. Luce	384,535	June 12	1040	271	43	1326
Sash-fastener	C. Wolcott	383,549	May 29	2513	663	43	1025
Sash-holder	I. Brokaw	384,607	June 19	1149	304	43	1355
Sash-holder	J. Hartman, Jr	381,131	Apr. 17	1274	341	43	265
Sash-holder	F. B. Moore	381,268	Apr. 17	1465	394	43	300
Sash lock and fastener	H. C. Reynolds	381,485	Apr. 17	1788	476	43	364
Saw	J. J. Ralya	381,614	Apr. 24	9258	580	43	475
Saw. Circular	A. Weymar	385,079	June 26	1867	477	43	1504
Saw. Drag	D. N. Hurd	384,979	June 26	1693	440	43	1469
Saw-filing device	R. Doak	381,830	Apr. 24	2298	598	43	481
Saw-filing machine	E. D. Eaton	384,929	June 19	1483	387	43	1419
Saw-filing machine	H. L. Bump	381,610	Apr. 24	1975	519	43	430
Saw-filing machine	D. W. Johns	381,249	Apr. 17	1440	367	43	295
Saw-filing machine. Band	S. C. Rogers. (Reissue)	10,967	June 5	570	157	43	1234
Saw-guide	A. S. Dunn	383,944	June 5	153	45	43	1149
Saw-guide	J. W. Maxwell	384,773	June 19	1393	364	43	1403
Saw-guide	J. O. Morrow	381,635	Apr. 24	2007	{502 503	43	426
Saw-guide	J. S. Robinson	381,423	Apr. 17	1690	453	43	346
Saw-guide	G. F. Striegel	380,928	Apr. 10	786	215	43	164
Saw-guide. Adjustable	D. J. Murray	385,131	June 26	1942	496	43	1520
Saw-gummer	J. P. and N. Romer	383,191	May 22	1959	513	43	917
Saw-handle	J. Beaulieu	384,500	June 12	997	259	43	1316
Saw-handle	G. E. Siebler	383,376	May 22	2025	530	43	986
Saw-handle attachment	L. T. Blegen	384,741	June 19	1347	350	43	1393
Saw handle. Crosscut	H. L. Kincaid	381,796	Apr. 24	2232	584	43	469
Saw-handles. Machine for forming	C. L. S. Walker	382,064	May 1	280	74	43	565
Saw holder. Circular	J. Slater	381,651	Apr. 24	2096	531	43	430
Saw-jointer	C. R. Black	381,307	Apr. 17	1373	367	43	283
Saw-jointer	D. C. Robinson	382,327	May 8	672	176	43	646
Saw jointer and gage. Combined	W. S. Ralya	385,006	June 26	1749	464	43	1491
Saw machine. Upright	G. Phillion	383,946	May 22	2040	535	43	932
Saw-mill	W. Gowen	383,461	May 29	2306	{889 890	43	999
Saw mill. Band	E. W. Avery	381,977	May 1	192	{39 39 39	43	537
Saw mill. Band	H. R. Barnhurst	384,112	June 5	390	110	43	1195
Saw mill. Band	W. M. Dickerson	381,496	Apr. 17	1758	470	43	358
Saw mill. Band	W. Gillis	384,228	June 12	621	167	43	1249
Saw mill. Band	W. Gowen	383,458	May 29	2303	888	43	997
Saw mill. Band	W. Gowen	383,459	May 29	2303	{888 889	43	998
Saw mill. Band	F. S. Smith and T. Kelly	381,788	Apr. 24	2240	590	43	488
Saw-mill carriages. Automatic offset for	W. Gowen	383,457	May 29	2302	887	43	997
Saw-mill carriages. Offsetting mechanism for	W. Gowen	383,460	May 29	2305	888	43	998
Saw-mill dog	M. J. Anderson and B. J. Smith	384,998	June 12	563	159	43	1243

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Saw-mill dog	J. H. Miner	380,916	Apr. 10	982	247	43	189
Saw-mill dog	R. F. and J. H. Rodick	382,555	May 8	1089	288	43	716
Saw-mill head-block	I. Swank	383,680	May 22	2567	630	43	1088
Saw-mills. Reversing-gear for	E. N. Collett	381,915	Apr. 17	1362	349	43	295
Saw. Scroll	H. L. Beach	381,751	Apr. 24	2170	580	43	458
Saw-setting device	W. T. Silcox	382,110	May 1	353	93	43	579
Saw-setting machine	W. S. Smith	384,694	June 5	367	104	43	1191
Saw-sharpening machine	W. H. Halladay	381,775	Apr. 24	2280	576	43	464
Saw-sharpening machine	R. M. Pine	385,004	June 26	1745	451	43	1459
Saw-swage	S. Hill	380,758	Apr. 10	698	180	43	142
Saw-swage	J. H. Miner	381,633	Apr. 24	2005	525	43	425
Saw swage and sharpener	W. H. Williams	385,980	June 26	2185	559	43	1560
Saw-swaging device	C. A. Schoensel	381,851	Apr. 24	2235	595	43	480
Saw-table gage	H. L. Beach	381,752	Apr. 24	2172	568	43	458
Saw-teeth. Machine for swaging	J. F. Tridell	382,602	May 1	277	72	43	564
Saw-teeth	E. Harris	381,911	Apr. 10	1073	285	43	217
Saw-teeth. Inserted	F. W. Cook	383,108	May 22	1638	431	43	983
Saw-teeth swage	J. B. Rhodes	382,335	May 8	671	169	43	646
Saws. Bench for circular	F. E. Farwell	380,560	Apr. 3	367	110	43	79
Saws. Device for jointing and sharpening	H. W. Georgia and E. Andrews	382,467	May 8	888	238	43	857
Saws. Device for side-dressing	G. Glass	384,149	June 5	455	{125 126	43	1206
Saws. Device for side-dressing the teeth of	H. W. Williams	383,931	June 5	135	30	43	1147
Saws, &c. Machine for sharpening	C. S. Farrar	384,613	June 19	1157	306	43	1286
Saws. Machine for straightening and hammering	M. Coval	380,665	Apr. 10	845	226	43	174
Saws. Machine for truing the teeth of	R. Gaskin, Jr	383,730	May 22	2752	725	43	1077
Sawing-machine	W. A. Dewberry	380,356	Apr. 3	122	30	43	26
Sawing-machine. Band	C. Bryant	380,657	Apr. 10	831	220	43	172
Sawing machine. Circular	J. W. Frank	382,021	May 1	311	81	43	570
Sawing machine. Circular	J. R. Ripley	384,176	June 5	497	136	43	1217
Sawing-machine. Power-feed	G. B. Darkee	383,112	May 22	1884	495	43	897
Sawing machine. Wood	F. W. Olds	382,733	May 15	1276	{234 235	43	772
Scaffold and staging	N. Stadler	382,945	May 1	586	137	43	615
Scaffold for wooden buildings	C. W. Randall and J. H. Smith	382,901	May 15	1515	397	43	822
Scaffold. Painter's	M. Lacy	383,471	May 29	2388	635	43	1003
Scaffolding	H. Bradds	380,546	Apr. 3	365	104	43	75
Scale. Automatic weighing and recording	E. H. Amet	380,678	Apr. 10	567	{153 154	43	191
Scale-beam	W. W. Reynolds	383,912	June 5	100	30	43	1140
Scale-beam	A. H. Smith	381,067	Apr. 10	1205	323	43	206
Scale. Counter	J. B. Butenschon	381,673	Apr. 24	2062	530	43	437
Scale for liquids. Automatic weighing	P. Whitlock	382,849	May 15	1441	379	43	807
Scale for railway-cars. Weighing	E. Duplessis	382,412	May 8	808	205	43	672
Scale-pan	H. J. Henrichson	384,256	June 12	625	166	43	1250
Scale. Platform	W. C. Kelly	381,831	May 1	45	12	43	563
Scale. Prescription-weighing	C. H. Fitch	384,947	June 19	613	165	43	1248
Scale. Registering and recording weighing	E. G. Fisher	383,451	May 29	2244	{923 924 451 452	43	994
Scale. Weighing and price	J. E. Pitrat	385,005	June 26	1746	{458 459	43	1460
Scales for weighing railway-cars	J. W. Ballard and H. L. Fisher	384,495	June 19	970	258	43	1313
Scales. Weight-recorder for weighing	J. A. Jamieson	385,310	June 26	2018	508	43	1574
Scarf. Neck	W. I. Weinberg	384,484	June 12	961	246	43	1310
Scissors. Button-hole	L. C. McNeal	382,996	May 15	1648	431	43	847
Scissors, &c. Spring for	F. C. Altmann	382,502	May 8	946	240	43	689
Scoop. Wire	L. H. Shedder	384,098	June 5	362	103	43	1191
Scraper	J. C. Pequnot	385,003	June 26	1743	451	43	1479
Scraper. Earth	G. Wilkinson and J. McCourt	380,374	Apr. 3	105	31	43	32
Scraper. Road	G. N. Miller and O. E. Meets	383,751	May 29	2795	735	43	1085
Scraper. Road	J. D. S. Read	382,083	May 15	1779	460	43	872
Scraper. Track	H. H. Littell	385,083	June 26	1844	472	43	1490
Scraper. Wheel	C. H. Sawyer	380,354	Apr. 3	76	94, 95	43	18
Scraper. Wheeled	P. Deevy	380,314	Apr. 3	11	3	43	4
Scraping machine. Road	W. F. Wellman	381,887	Apr. 24	2357	{611 612	43	492
Screen: *See* Photographic head. Window-screen.							
Screen	D. Wesemann	383,510	May 29	2448	649	43	1014
Screen or door for obstructing the passage of flame. Automatic	M. B. Feeney	384,141	June 5	443	{122 123 377 378	43	1206
Screening. Machine for making slashed metallic	J. F. Golding	381,831	Apr. 17	1487		43	389
Screw	R. Stilwell	383,834	May 29	2837	776	43	1141
Screw-cutting die	P. A. Anderson	382,933	May 15	1557	407	43	830
Screw-cutting die	F. I. Manle	380,908	Apr. 10	911	245	43	197
Screw-cutting die and stock	P. Grabler	383,354	May 22	2197	560	43	998
Screw-driver attachment	L. Kiblinger	384,043	June 5	308	85	43	1176
Screw-holder, screw-driver, and countersink. Combined	J. C. Trovillion	382,670	May 8	1204	319	43	720
Screw-stoppers. Manufacture of	H. Barrett and J. J. Varley	382,286	May 1	460	123	43	601
Screw-swaging machine	H. A. Harvey	381,849	June 5	158	46 47	43	1151
Scutching or fiber-cleaning machines. Feeding apparatus for	A. H. Death	385,300	June 26	2304	565	43	1571
Seal for checks. Safety	A. M. Woodhull	385,158	June 26	1978	506	43	1527
Seal-lock	E. C. Bartlett	384,115	June 5	386	111	43	1197
Seal-lock	P. Brown	382,434	May 29	2285	{616 617	43	999
Seal-lock	C. E. Davis	381,584	Apr. 24	1867	493	43	398
Seal-lock	E. Mates	380,446	Apr. 3	206	56	43	42
Seal-lock	A. H. Peirce	384,697	June 5	340	94	43	1183
Seal-lock	O. C. Pratt	384,549	June 12	1051	274	43	1322
Seal-lock	C. E. Watson	384,231	June 5	500	154	43	1229

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Sealing fruit-jars. Device for	W. W. Osmond	380,921	Apr. 10	932	269	43	191
Seam-rubbing machine	C. S. Fifield	383,874	June 5	34	11	43	1138
Seaming-machine	F. A. Walsh	382,572	May 8	1054	290	43	721
Seaming machine. Can-	G. W. Lore	383,400	May 22	2208	662	43	973
Seaming-machine for sheet-metal vessels	F. A. Walsh	382,499	May 8	937	{236 / 239}	43	697
Seat: *See* Car-seat. Velocipede-seat. Spring-seat. Wagon-seat. Vehicle-seat.							
Secondary battery	H. H. Carpenter	380,969	Apr. 10	1046	276	43	212
Secondary battery	N. De Benardos	380,534	Apr. 3	374	107	43	77
Secondary battery	L. Epstein	382,420	May 8	812	207	43	674
Secondary battery	L. Epstein	383,216	May 22	1908	{353 / 354}	43	985
Secondary battery	C. A. Faure	383,560	May 29	2595	666	43	1089
Secondary battery	C. A. Faure	383,562	May 29	2597	666	43	1089
Secondary battery	A. V. Meserole	381,941	May 1	61	15	43	396
Secondary battery	A. Reckenzaun	385,200	June 26	2041	522	43	1539
Secondary battery	S. Russell	382,150	May 22	1907	498	43	997
Secondary battery	J. S. Sellon	383,193	May 22	1961	514	43	917
Secondary battery	J. L. Weatherhead and J. S. Cochran	384,808	June 19	1434	376	43	1411
Seed-hulling machines. Cylinder for cotton	S. E. Toucey	381,657	Apr. 24	2030	534	43	433
Seed. Machine for delinting cotton	A. D. Catlin	380,787	Apr. 10	735	201	43	154
Seed. Machine for delinting cotton	A. Seibert	383,374	May 22	2221	590	43	986
Seed. Method of and apparatus for treating fiber-coated	J. L. Weatherhead and J. S. Cochran	384,340	June 12	754	197	43	1279
Seeder and harrow. Combined	W. F. Corne	381,616	Apr. 24	1983	521	43	421
Selling-machine	G. M. Clark	380,422	Apr. 3	165	46, 47	43	34
Semaphore signal apparatus	F. M. Leavitt	384,770	June 19	1385	363	43	1401
Separating-machine	F. Stitzel and C. Weinedel	380,409	Apr. 3	148	42, 43	43	31
Separating-machine	N. W. Holt	384,950	June 19	1651	{429 / 430}	43	1452
Separator: *See* Electro-magnetic separator. Magnetic separator. Grain-separator. Rice-separator.	A. J. Miller	384,058	June 5	325	92	43	1182
Separator	F. A. Hine	381,374	Apr. 17	1617	432	43	331
Separator	J. J. Lowden	381,150	Apr. 17	1297	347	43	249
Separator	S. Stuart	383,674	May 29	2677	709	43	1062
Sewage and night-soil desiccating apparatus	A. Wemple	380,839	Apr. 10	800	219	43	167
Sewage. Means and apparatus for collecting and separating	P. C. Close	380,383	Apr. 3	118	34	43	25
Sewer-cleaning mechanism	W. A. Pitt	382,188	May 1	451	118	43	597
Sewers and drains. Air-inlet for	J. A. Wyman	382,127	May 1	389	96	43	561
Sewers and other excavations. Cutting device for	E. S. McClellan	381,711	Apr. 24	2119	553	43	448
Sewing bags. Machine for	W. Watson	382,573	May 8	1057	{269 / 270}	43	721
Sewing books	L. Bollmann	380,981	Apr. 10	1031	{269 / 270}	43	204
Sewing comfortables and other fabrics. Machine for	W. W. Neel	384,211	June 5	548	151	43	1227
Sewing-machine	F. L. Palmer	380,815	Apr. 10	766	210	43	161
Sewing-machine	C. P. Bostian	382,794	May 15	1376	361	43	792
Sewing-machine	C. L. Fleischmann	380,317	Apr. 3	15	4	43	6
Sewing-machine	T. L. Melone	383,748	May 29	2787	{733 / 734}	43	1084
Sewing-machine	L. L. Miller	384,059	June 5	326	92, 93	43	1183
Sewing-machine	C. E. Tibbles	383,419	May 22	2296	610	43	979
Sewing-machine	C. E. Tibbles	383,924	June 5	126	37	43	1145
Sewing-machine-attachment holder	J. M. Grieat	381,546	Apr. 24	1882	497	43	401
Sewing-machine bobbins. Machine for winding	C. Woodman	381,457	Apr. 17	1746	467	43	356
Sewing-machine. Button-hole	J. S. Freese	382,466	May 8	890	{227 / 228}	43	687
Sewing-machine. Button-hole	T. F. Hagerty	382,763	May 15	1398	349	43	763
Sewing-machine button-hole attachment	H. J. Williams	383,423	May 22	2305	612	43	980
Sewing-machine embroidering attachment	E. Frankenberg	384,198	June 5	530	145	43	1224
Sewing-machine embroidering attachment	A. W. Johnson	384,257	June 12	625	169	43	1250
Sewing-machine feeding device	R. M. Hatcher	381,778	Apr. 24	2303	577	43	465
Sewing-machine for connecting soles and uppers	P. A. and J. Conpal	381,987	May 1	143	{34 / 35 / 36}	43	541
Sewing-machine for connecting soles and uppers	P. A. and J. Conpal	385,299	June 26	2199	{562 / 563 / 564 / 565}	43	1571
Sewing-machine for uniting soles to uppers	P. A. Coupal	381,988	May 1	147	{36 / 37 / 38}	43	542
Sewing-machine presser-foot	D. A. Sutherland	381,090	Apr. 10	1210	324	43	243
Sewing-machine shuttle and shuttle-operating mechanism	W. E. Bennett	384,230	June 12	581	159	43	1243
Sewing-machine tension mechanism	J. Cumming	381,912	May 1	21	6	43	519
Sewing-machine trimming attachment	J. W. Dewees	381,537	Apr. 24	1871	{494 / 495}	43	399
Sewing-machine welt-trimmer	J. W. Dewees	381,536	Apr. 24	1870	494	43	399
Sewing-machines. Cutting attachment for	H. Lefeber	382,169	May 1	498	111	43	592
Sewing-machines. Hand propelling device for	K. P. Beaird	380,573	Apr. 10	1018	286	43	205
Sewing-machines. Presser-foot for button-	W. E. Bennett	384,231	June 12	567	159	43	1244
Sewing-machines. Presser-foot-operating mechanism for	J. Mathison	380,656	Apr. 3	583	144	43	105
Sewing machines. Work-holding horn for shoe-	E. L. Sprague and G. R. Peare	385,546	May 29	2569	699	43	1605
Sewing-tool	C. K. Bradford	382,759	May 15	1312	345	43	759
Shackle	L. C. Ferrell and D. Israel	381,695	Apr. 10	1057	283	43	205

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Shackle. Spring-	J. A. Lamplugh	382,534	May 8	986	{252 / 253}	43	708
Shade fixture. Window-	D. W. Wise	382,784	May 15	1380	357	43	790
Shade-pull	C. W. Elliott	381,543	Apr. 24	1879	496	43	420
Shade-roller support	E. H. Manger	381,714	Apr. 24	2194	555	43	449
Shade. Window-	A. Huffer	383,653	May 15	1759	455	43	868
Shaft-coupling	S. H. Barnes	384,013	June 5	253	72	43	1170
Shaft-coupling	G. H. Mackay	382,765	May 15	1331	350	43	784
Shaft-hanger	A. Lechner	383,532	May 29	2468	656	43	1021
Shafts and ordnance. Manufacture of	J. H. Flagler	385,048	June 26	1822	467	43	1495
Shafts and pole for vehicles. Convertible	W. H. Kelly	380,806	Apr. 10	755	207	43	158
Shafts. Means for securing pulleys on	W. H. Dodge	382,281	May 22	2100	554	43	943
Shafts, pulleys, &c. Coupling for	B. L. Williamson	384,812	June 19	1453	380	43	1414
Shafts. Register and recorder for revolving	S. M. Terry	384,479	June 12	943	245	43	1309
Shank-burnishing device	A. Harden	384,573	June 12	1086	286	43	1337
Shaping-machine	G. W. Davison and J. Buckley	384,963	June 26	1671	434	43	1464
Shaping-press. Hydraulic	A. R. Hobson	381,949	Apr. 17	1499	384	43	332
Shawl-strap	S. Scheuer	384,395	June 12	633	217	43	1297
Shawl-strap and fire-escape	J. D. Lee and J. H. Acton	384,631	June 19	1106	313	43	1362
Sheaf-carrier	G. H. Goetze	382,663	May 8	1106	294	43	731
Sheaf-carrier	J. Miller	384,802	June 19	1532	{298 / 299}	43	1429
Sheaf-carrier	L. B. Willey	380,908	Apr. 10	1005	259	43	204
Sheep-shearing machine	G. Richardson	384,545	June 12	1054	275	43	1389
Sheet metal. Apparatus for making	E. Norton and J. G. Hodgson	382,319	May 8	654	167	43	644
Sheet-metal-bending machine	G. R. Everson	383,391	May 22	2254	599	43	971
Sheet-metal blanks. Machine for making	C. W. Judson	383,368	May 22	2129	{561 / 562}	43	949
Sheet-metal corrugating and edging machine	E. R. Stasch	382,977	May 1	585	{146 / 149}	43	681
Sheet metal. Device for forming letters and designs on	J. O'Connor	384,331	June 12	742	195	43	1270
Sheet metal. Die for shaping	O. W. Swift	383,081	May 15	1797	465	43	875
Sheet-metal folder	G. R. Everson	383,390	May 22	2252	599	43	970
Sheet-metal-folding machine	N. Koenig	380,580	Apr. 3	414	118	43	84
Sheet-metal joint	R. E. Goodrich	382,151	May 1	400	105	43	567
Sheet metal. Manufacture of	E. Norton and J. G. Hodgson	382,321	May 8	660	{168 / 169}	43	645
Sheet metal. Ornamentation of	J. Koebel	381,290	Apr. 17	1641	.....	43	336
Sheet-metal-scroll cutter	A. O. Kittridge and B. Adriance	383,398	May 22	2264	602	43	973
Sheet-metal structure	W. Orr and P. S. Brown	383,759	May 29	2812	{740 / 741}	43	1068
Sheet metal to form meshes. Machine for slashing and expanding flat	J. F. Golding and G. B. Durkee	381,230	Apr. 17	1405	376	43	289
Sheet-metal vessel	F. A. Walsh	383,507	May 29	2444	648	43	1013
Shelf. Revolving	C. Jewull	380,887	Apr. 10	900	241	43	184
Shell	J. W. Graydon	382,223	May 1	508	131	43	607
Shell	M. Von Förster	385,332	June 26	2253	577	43	1509
Shell	E. L. Zalinski	384,660	June 19	1296	294	43	1370
Shell for explosives	J. W. Graydon	382,222	May 1	502	130	43	606
Shell for high explosives	W. T. Smith	384,646	June 19	1303	318	43	1366
Shell for high explosives	E. L. Zalinski	384,661	June 19	1299	295	43	1371
Shell. High-explosive	J. W. Graydon	382,224	May 1	504	130	43	606
Shell. High-explosive	J. W. Graydon	382,225	May 1	506	131	43	607
Sheller: *See* Corn-sheller.							
Shingle. Metallic	E. E. Barker	381,318	Apr. 17	1531	413	43	315
Shingle-sawing machine	W. J. Perkins	380,346	Apr. 3	53	19, 20	43	13
Shingling-gage	M. Slane	383,507	May 29	2565	679	43	1030
Ship	J. Moffett	381,943	May 1	64	16	43	397
Ships, &c. Construction of	C. G. Lundborg	384,047	June 5	306	87, 88	43	1179
Ship's log	E. E. Haskell	384,362	June 12	767	205	43	1278
Ship's log	W. S. Hogg	382,362	May 8	731	184	43	657
Ship's log	O. Kustal	382,816	May 15	1401	{367 / 368}	43	796
Shoe	J. Condell	380,558	Apr. 3	372	105	43	76
Shoe	W. B. Hill	384,845	June 19	1509	{302 / 303}	43	1425
Shoe	J. J. Jordan	381,929	May 1	43	12	43	583
Shoe	J. J. Jordan	381,930	May 1	43	12	43	583
Shoe	C. T. Lee	381,259	Apr. 17	1452	391	43	290
Shoe	H. Witzel	383,090	May 15	1818	{475 / 476}	43	879
Shoe	M. Yeagle	384,224	June 5	567	155	43	1231
Shoe-clasp	J. J. Unbehend	384,339	June 12	752	197	43	1272
Shoe-fastening	C. Knopp	382,651	May 8	1176	304	43	745
Shoe-heel	A. Farina	381,686	Apr. 24	2079	543	43	441
Shoe or glove fastener	A. T. Perrine	383,702	May 29	2819	742	43	1079
Shoe-tongue fastening	C. F. Crowell	385,045	June 26	1815	466	43	1493
Shoe-upper-turning machine	F. D. Walden	380,859	Apr. 10	902	263	43	202
Shoes, gloves, &c. Fastening device for	G. F. Krieger	380,327	Apr. 3	28	8, 9	43	8
Shoes. Machine for treeing	G. W. Copeland and J. E. Crisp	383,279	May 22	2094	{551 / 552 / 553 / 554}	43	942
Shop-front	J. Gooch	381,361	Apr. 17	1597	427	43	327
Shore-protector	T. O'Connell	384,173	June 5	492	136	43	1216
Short-hand machines. Paper-reel for	C. S. Olcott and J. P. Ellacott	381,566	Apr. 17	1883	488	43	372
Shoveling device. Steam	A. Meyers	383,584	May 29	2532	{674 / 675}	43	1034
Show-case	F. C. Cutting	383,857	June 5	25	8	43	1126
Show-case	H. Stern	381,981	May 1	87	23	43	331
Show-case for entomological and other specimens	C. F. McGlashan	382,708	Apr. 10	695	192	43	147
Show-case. Revolving	C. H. Tully	382,445	May 8	864	218	43	661

Signaling apparatus. Telegraphic	J. B. Willis	381,738	Apr. 24	2154	563	43	455
Signaling at sea	D. Ruggles	382,056	May 1	271	.....	43	563
Signaling-box. Electric	W. D. Browne	383,941	June 5	150	44	43	1149
Signaling device for mines. Electro-magnetic	L. M. Balliett and O. C. Greene	380,382	Apr. 3	116	34	43	35
Signaling. Municipal	M. Martin	380,655	Apr. 3	580	144	43	165
Singletree	J. R. Freeland	383,351	May 22	2190	579	43	961
Siphon	G. W. Arper	381,521	Apr. 24	1851	489	43	395
Siphon	F. H. Gile	384,951	June 12	619	167	43	1349
Siphon for starting the flow of liquids	M. Sieradorfer	381,153	May 22	1910	499	43	899
Strup and beer from maize. Making	A. E. Feroe. (Reissue)	10,925	May 1	606	153 154	43	604
Strup-gage	J. Conner	384,660	June 19	1257	330	43	1276
Skate-clamp	W. L. Parmelee	380,456	Apr. 3	283	91	43	65
Skate. Snow	P. Conradson	382,254	May 1	556	140	43	616
Skein-reel	J. Garsed	381,771	Apr. 24	2195	574	43	463
Skins. Alum-tanned	A. Warter and H. C. Koegel	381,734	Apr. 24	2149	.....	43	454
Skins and other leather. Treating morocco	C. M. Kimball	381,933	May 1	47	13	43	594
Skins. Apparatus for treating	C. M. Kimball	381,932	May 1	46	13	43	594
Skirt-waistband. Woven	C. Vorwerk	383,842	May 29	2946	780	43	1113
Skiving-machines. Knife-sharpening attachment for	P. B. Clark and G. J. Klingler	384,099	June 5	261	74, 75	43	1178
Slate and ruler. Combined	L. M. Dyer	382,413	May 8	803	205	43	672
Slate and ruler therefor. School	M. W. Fleming and C. R. Le Sauvage	383,945	June 5	154	45	43	1150
Slate-frames. Machine for making school	G. L. Knauss	383,955	June 5	167	49, 50	43	1152
Slate-picker. Automatic	E. B. Coxe and S. Salmon	382,915	May 1	490	127	43	604
Slates. Muffled frame for school	G. Gray	381,363	Apr. 17	1609	420	43	326
Sled	S. L. Allen	381,665	Apr. 24	2049	536 557	43	435
Sled-brake	I. C. Thompson	384,548	June 19	1061	276	43	1330
Sled. Child's	J. F. Pratt and W. Chase	380,693	Apr. 10	589	152	43	127
Sleigh	W. S. Marble	383,401	May 22	2270	603	43	974
Sleigh	N. G. Reynolds	380,819	Apr. 10	775	219	43	163
Sleigh. Bob	J. W. Shourds	384,794	June 19	1394	345	43	1392
Sleigh. Bob	M. D. Williams	382,998	May 15	1545	405	43	1033
Sleigh-knee	J. J. Cobb	384,126	June 5	462	117	43	1292
Sleigh-knee	H. P. Titus	382,230	May 22	2086	548	43	938
Sleigh-knee	H. and H. Weale	382,307	May 8	781	198	43	667
Sleigh-runner	E. K. Van Gorden	385,289	June 26	2165	559	43	1569
Sliding gate	W. R. White	380,613	Apr. 3	462	121	43	94
Slimer and settler	T. H. Minter	382,433	May 8	802	213	43	674
Slip and shrinkage gage	H. C. Balshaugh	382,854	May 15	1447	381	43	989
Smoke-condenser	B. Roberts	382,685	May 8	1196	311	43	749
Smoke-consuming furnace	R. Affeltranger	384,818	June 19	1467	388	43	1416
Smoke-consuming furnace	J. D. Lee	383,310	May 22	2138	564	43	930
Smoke-jack. Self-cleaning	Z. B. Fifield	383,875	June 5	35	12	43	1138
Smoothing and polishing iron. Combined	W. D. Gold	384,994	June 19	1588	413	43	1430
Smut-machine	F. Prina	380,346	Apr. 3	63	21, 22	43	15
Snap-hook	J. M. Basinger	383,336	May 22	2167	573	43	976
Snap-hook	E. Crippen and W. King	380,987	Apr. 10	1656	479	43	315
Snap-hook	E. L. Howe	382,611	May 8	1118	295	43	720
Snap-hook	J. L. Martin	380,667	Apr. 10	569	139	43	168
Snap-hook	H. McPherson	384,998	June 26	1714	445	43	1473
Snap-hook	D. L. Smith	382,485	May 8	983	257	43	688
Snap-hook	R. A. Wilson	381,739	Apr. 24	2155	564	43	455
Snap-hook	W. O. Barnes	384,608	June 19	1149	299	43	1288
Snow-excavator	J. B. Hayes	384,582	June 12	1004	267	43	1288
Snow-plow	J. Vincent	383,925	June 5	127	37	43	1146
Snow-plow	E. Leslie	380,780	Apr. 10	758	200	43	189
Snow. Rotary excavator for removing	A. Domeier and O. C. Hagemann	385,165	June 26	1994	.....	43	1543
Soap and glycerine. Making resin	G. C. W. Belcher	383,853	June 5	8	.....	43	1136

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Soap. Making	R. A. McCullough	381,863	Apr. 17	1619	.....	43	371
Soda, &c. Apparatus for causticizing	G. W. Hammond	381,998	May 1	167	43	43	545
Soda. Apparatus for the recovery of	J. E. Warren and F. A. Cloudman	380,670	Apr. 3	548	159	43	149
Soda. Manufacture of bicarbonate of	M. E. Wood	384,994	June 19	1567	407	43	1434
Soda-water-dispensing apparatus	O. J. Price	381,987	Apr. 10	1695	391	43	331
Sodium, &c. Apparatus for obtaining	O. M. Thowless	380,776	Apr. 10	712	196	43	151
Sodium carbonates by sulphides of the alkaline earths. Making	E. W. Parnell and J. Simpson	382,551	May 8	1021	.....	43	713
Sodium, &c. Obtaining	O. M. Thowless	380,775	Apr. 10	711	.....	43	151
Sofa and bed. Combined extensible	C. P. Waldo	382,743	May 15	1265	342 343	43	778
Sofa and surgical table. Combined	C. S. Judy and M. W. Forbes	385,311	June 26	2217	566	43	1574
Soil-pipe ventilator	J. Haddald and F. McConnell	385,268	June 26	2137	545	43	1539
Soldering-clamp	W. H. Clay	382,590	May 8	1067	269	43	727
Soldering cylindrical cans. Machine for	J. S. Johnstone	383,391	May 22	2187	561	43	949
Soldering-iron	C. E. Danielson	381,533	Apr. 24	1866	483	43	399
Soldering-iron	R. Schlumberger	382,538	May 8	1034	263	43	717
Soldering-irons. Apparatus for cleaning	I. H. Cox	381,761	Apr. 24	2184	571	43	469
Soldering machine. Can	A. D. Coleman	384,685	June 19	1476	385 386	43	1418
Soldering machine. Can	W. M. Emmart	382,453	May 8	695	236	43	696
Soldering machine. Can	E. Norton	382,330	May 8	659	169	43	641
Soldering machine. Can	J. O'Ferrall	384,464	June 12	925	241	43	1302
Soldering-pliers	O. F. Garvey	381,544	Apr. 24	1869	486	43	400
Soldering side seams of cans. Machine for	A. B. Willcox and E. Norton	382,344	May 8	699	176	43	650
Sole-edge-burnishing machine	W. Gordon	381,497	Apr. 17	1604	479	43	360
Sole-machine	E. S. Abbott	383,986	May 29	2978	545 546	43	939
Sound. Producing records of	E. Berliner	382,780	May 15	1372	.....	43	791
Spark-arrester	H. Bruce	382,948	May 15	1568	413	43	834
Spark-arrester	H. W. Libbey	381,707	Apr. 24	2119	558	43	447
Spectacle-bridge	G. Johnston	384,280	June 19	630	170	43	1251
Spectacle-temple	M. A. Vanderwaag	384,481	June 12	948	245	43	1303
Spectacles. Electro-magnetic	J. T. Leighton	381,980	Apr. 17	1453	391	43	326
Spectacles or eyeglasses. Frame for	F. A. Henninger	385,307	June 26	2213	568	43	1576
Speculum	P. Chamberlin	380,745	Apr. 10	603	183	43	141
Speed-governor for motors	E. B. Benham	380,648	Apr. 10	815	228	43	169
Speed-indicator. Electrical	F. W. Schlepegrell	380,694	Apr. 10	780	213	43	163
Speed-regulator	T. M. Foote	383,458	May 29	2347	824 825	43	986
Spinning-frame	R. Gill, W. H. Butler, and S. Smith	380,563	Apr. 3	389	111	43	79
Spinning-frames. Fulcrum for the weight-levers for the rolls of	W. Driscoll and J. F. Boylen	381,681	Apr. 24	2072	542	43	439
Spinning-frames. Yarn-separator for	H. C. Cunningham	380,644	Apr. 3	501	140	43	102
Spinning-machine	J. Marjerison	381,566	Apr. 24	1905	503	43	406
Spinning-machine	J. Marjerison	381,567	Apr. 24	1906	503	43	406
Spinning-machines. Bearing for the journals of lower drawing-rollers in	J. Booth	384,344	June 12	759	199	43	1273
Spinning machines. Kink-preventer for silk	J. A. Chapman	384,689	June 19	1578	409	43	1436
Spinning-machines. Making banding for	T. H. Dunham	384,136	June 5	438	.....	43	1205
Spinning-machines, &c. Spindle-driving device for	L. Binns	380,784	Apr. 10	796	199	43	153
Spinning-mule	T. H. Conley	382,139	May 1	365	100	43	584
Spinning-mule	W. Hacksley	381,069	Apr. 10	1169	311	43	236
Spinning-mule. Vertical	H. T. Bardwell	384,496	June 12	972	253 254 255 256 257 258	43	1314
Spinning-mules, &c. Nosing mechanism for self-acting	R. L. Holt	380,685	Apr. 3	259	71, 72	43	83
Spinning-spindle support	W. F. and G. A. Draper	383,048	May 15	1754	453	43	867
Spinning-spindle support	A. Weed	383,091	May 15	1810	476	43	879
Spoke-drawer	J. M. Germann	381,680	Apr. 24	2054	545	43	442
Spoke-tenon	W. F. Morton	381,270	Apr. 17	1468	394	43	301
Spokeshave	J. H. and B. F. Polhemus	383,590	May 29	2557	676	43	1036
Spool or bobbin	J. N. Kelsey	382,691	May 1	826	85	43	573
Spools. Manufacturing	E. P. Brownell	384,677	June 19	1566	349	43	1375
Spoon. Medicine	C. Langguth	380,734	Apr. 10	632	173	43	185
Spring:							
See Bed-spring. Bird-cage spring. Car-spring. Carriage-top spring. Coiled spring. Elliptic spring. Locomotive-spring. Rocker-spring. Vehicle-spring. Wagon-spring. Wagon bolster-spring. Whiffletree-spring.							
Spring	J. D. Furnas	380,469	Apr. 3	253	70	43	59
Spring-motor	P. A. Dobie	382,033	May 1	339	61	43	557
Spring-motor	J. B. Powell	382,053	May 8	1199	309	43	748
Spring-motor	A. D. Saunders	382,556	May 8	1029	263	43	719
Spring-seat	M. J. Barrow	382,207	May 1	491	124	43	601
Spring-tooth	P. F. Wells	382,847	May 15	1439	378	43	807
Sprinkler:							
See Automatic sprinkler. Lawn-sprinkler.							
Sprinkler	C. M. Collins	381,966	May 1	141	33, 34	43	561
Sprinkling lawns. Device for	E. J. H. Richardson	385,089	June 26	1656	474	43	1522
Sprinkling-machine	R. P. Lovejoy	383,740	May 29	2775	731	43	1032
Sprocket-wheel	W. D. Ewart	382,679	May 1	806	89	43	589
Spur	A. McManus	384,774	June 19	1395	364	43	1404
Square, bevel, and clinometer. Combined center, T, and try	H. W. Evans	380,714	Apr. 10	614	169	43	131
Square, bevel, protractor, and level. Combined	W. Palmer, Jr.	382,942	May 22	2034	532	43	992
Stain for brick-work	S. Tuller	383,230	May 22	2109	.....	43	954
Stain or paint	W. H. Winslow	383,966	May 15	1619	.....	43	977

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Stair-steps. Top plate for	C. Momberg	381,407	Apr. 17	1685	446	43	341
Stairway	T. Rogers	385,012	June 26	1758	455	43	1468
Stalls for separating horses on race-tracks	P. A. Finigan	382,981	May 15	1597	508	43	1304
Stalls. Mat for horse	L. S. Stowe	385,149	June 26	1968	66	43	1164
Stamp and ticket holder. Pocket postal	F. Strauss	384,060	June 5	294	417	43	657
Stamp. Electrical time	C. A. Randall	380,594	Apr. 3	432	122	43	86
Stamp. Electrical time	C. A. Randall	380,595	Apr. 3	436	123	43	89
Stamp for canceling, &c	J. E. Perry	383,487	May 29	2418	662	43	1686
Stamp. Printing	H. Lang and E. Watson	381,890	Apr. 24	2376	618	43	497
Stamp. Rubber	E. Reynolds	380,349	Apr. 3	68	23, 23	43	16
Stamp. Rubber	E. Reynolds	383,321	May 22	2151	589	43	953
Stamps. Device for holding and moistening postage	J. H. Breese	383,037	May 15	1726	449	43	953
Stamps. Pocket-box for postage	J. H. Breese	383,036	May 15	1724	449	43	888
Stamping-press	W. H. H. Clark	380,423	Apr. 3	169	47	43	35
Stanchions of vessels in place. Securing	T. M. Rees	382,920	May 8	1130	291	43	745
Stand:							
See Clothes-stand. Hammock-stand. Perfumery-stand. Railway-switch stand. Show-stand. Switch-stand. Type-case stand. Wash-stand. Watering-stand.							
Staple-setting machine	W. J. Brown, Jr	382,025	May 1	217	58	43	553
Station and street indicator	J. L. Fate	382,519	May 8	970	244	43	708
Station and street indicator	J. L. Fate	382,520	May 8	972	245	43	704
Station-indicator	J. C. Ludwig	383,230	May 22	2018	{529 / 530}	43	989
Station-indicator	B. W. Lyon	385,314	June 26	2220	589	43	1575
Station-indicator	T. W. Munroe	380,341	Apr. 3	48	17, 18	43	12
Station-indicator	K. S. Nickerson	382,006	May 1	184	47	43	548
Station-indicator. Automatic	R. H. Bachlotte, Jr., and L. J. Farris	384,493	June 12	966	252	43	1315
Stave-cutting machine. Barrel	G., J. G., and M. O. Rehfuss	384,786	June 19	1407	{368 / 369 / 370}	43	1406
Staves. Jointing-machine for barrel	W. Ritter	383,949	May 22	2043	536	43	934
Steam-boiler	L. B. Battin	381,922	Apr. 24	2389	595	43	479
Steam-boiler	P. Hanrez	384,972	June 26	1685	438	43	1467
Steam-boiler	C. J. M. Hayna	381,366	Apr. 17	1606	430	43	330
Steam-boiler	J. Johnson	381,791	Apr. 24	2294	{582 / 583}	43	468
Steam-boiler	C. P. Marshall	383,364	May 22	2212	586	43	964
Steam-boiler	J. A. Mumford	382,657	May 8	1184	306	43	746
Steam-boiler	M. S. Rexford	384,716	June 19	1313	{343 / 344}	43	1397
Steam-boiler	G. S. Strong	382,061	May 1	276	72, 73	43	564
Steam-boiler	C. H. Twist	384,943	June 19	1638	426	43	1449
Steam-boiler indicator	L. D. Copeland	382,140	May 1	396	101	43	564
Steam-boiler. Sectional	J. A. Groshon	384,313	June 12	705	{187 / 188}	43	1285
Steam-chests. Apparatus for automatically lubricating	T. Fitzpatrick	384,354	June 12	776	202	43	1276
Steam-engine	W. K. Austin	383,439	May 22	2218	615	43	989
Steam-engine	D. Bowen	383,614	May 29	2505	686	43	1044
Steam-engine	W. F. Clasa	380,991	Apr. 10	1049	277	43	212
Steam-engine	F. Fischer	384,946	June 12	812	164	43	1248
Steam-engine	J. C. Gräbner and H. Ruperti	385,113	June 26	1915	488	43	1514
Steam-engine	S. E. Jarvis	380,488	Apr. 3	264	73	43	54
Steam-engine	W. K. Kight	382,309	May 8	642	164	43	642
Steam-engine	H. Lecoutenx and E. Garnier	382,479	May 8	915	{231 / 232}	43	692
Steam-engine	F. C. Morton	382,547	May 8	1016	{259 / 260}	43	712
Steam-engine	F. M. Rites	383,322	May 22	2151	588	43	953
Steam-engine	G. H. Scribner and W. Heckert	381,854	Apr. 24	2338	{606 / 607}	43	489
Steam-engine	E. S. Smith	380,825	Apr. 10	781	{213 / 214}	43	164
Steam-engine. Caustic-soda	A. H. Stow	381,967	May 1	98	24	43	533
Steam-engine. Concentric-piston	A. D. Baker and F. P. Huyck	383,609	May 29	2581	{684 / 685}	43	1041
Steam-engine. Direct-acting	M. Garland and A. D. Catlin	382,092	May 1	312	82	43	570
Steam-engine for equalizing power	W. A. Pitt	383,764	May 29	2821	743	43	1069
Steam-engine indicator	A. L. Ide. (Reissue)	10,918	Apr. 3	551	151	43	111
Steam-engine indicator attachment	J. R. Mitchell	380,918	Apr. 10	987	248	43	190
Steam-engines. Regulating live steam and exhaust from	J. J. Lowden	381,149	Apr. 17	1296	346	43	269
Steam-generator	J. V. Beekman	384,555	June 12	1068	279	43	1331
Steam-generator	J. B. Bossler	382,863	May 15	1461	383	43	811
Steam-generator	J. A. Eno	384,898	June 19	1561	411	43	1438
Steam-generator	W. Schmidt	382,895	May 15	1493	373	43	805
Steam-generator	E. H. Thompson	384,941	June 19	1638	425	43	1449
Steam heater or boiler for culinary and other purposes. Automatic	R. E. Deane	384,348	June 12	766	200	43	1274
Steam or gas motor engine	B. C. Pole	382,008	May 1	186	48, 49	43	548
Steam or other motor	H. Moehring and A. Pflüger	383,405	May 22	2074	605	43	975
Steam. Regenerating exhaust	E. O. Scharlau	381,172	Apr. 17	1339	355	43	275
Steam-regulator	J. W. Taylor	384,787	June 19	1397	346	43	1389
Steam-trap	F. G. Botsford	381,670	Apr. 24	2056	536	43	626
Steam-trap	G. Dinkel	380,791	Apr. 10	739	202	43	155
Steam-trap and boiler-feeder	W. Simpkin	385,014	June 26	1761	456	43	1463
Steam. Utilizing exhaust	M. Hornigmann	381,944	Apr. 17	1432	385	43	274
Steam-washer	J. W. Ballard	382,240	May 8	615	157	43	537
Steam-washer	J. M. Reddy	380,729	Apr. 10	643	178	43	134
Steamboats. Pilot's and engineer's signal for	C. C. Roe	380,350	Apr. 3	70	23	43	17
Steaming cloth and other fabrics. Apparatus for	V. T. Van Fleet	382,683	May 1	278	73	43	564

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Steamships. Stern-post and stern-frame for	W. T. Sylvan	382,014	May 1	194	50	43	550
Steel bands. Apparatus for tempering	J. Oldham	381,575	Apr. 24	1990	506	43	402
Steel or steely iron. Tempering	H. Schneider	384,935	June 19	1630	.....	43	1447
Steering apparatus	J. M. Wallace	380,467	Apr. 3	226	64	43	42
Steering apparatus and windlass	W. M. Gillie	380,481	Apr. 3	254	70	43	88
Steering apparatus for vessels	B. A. Fiske	385,259	June 26	2133	544	43	1520
Steering apparatus for vessels	J. H. Snelling	382,838	May 15	1498	374	43	894
Steering-gear. Locking	J. H. Rushton	383,593	May 29	2561	677	43	1037
Steering vessels	T. Skinner	382,563	May 8	1041	285	43	718
Step. Folding	A. H. Nicholas	383,908	June 5	80	23	43	1180
Step or platform	F. H. Stanwood	382,331	May 8	676	178	43	646
Stereotype-plates. Machine for planing	L. Goss	383,821	May 22	2004	566	43	888
Stereotype-plates which are cast separately from their beds. Means for securing	E. D. Rogers	381,280	Apr. 24	2367	595	43	479
Stilt	L. Hoffman	381,558	Apr. 24	1888	498	43	402
Stirrup	T. Condy	382,090	May 15	1220	333	43	725
Stirrup	T. J. Taylor	385,150	June 26	1969	504	43	1525
Stock-cooler. Portable	L. T. Schwamm	381,422	Apr. 17	1706	457	43	350
Stocking-suspender clip	F. E. Taylor	385,330	June 26	2202	576	43	1580
Stockings. Making	E. C. Chester	380,491	Apr. 3	164	44	43	24
Stockings. Manufacturing	R. Morley and W. Greenwood	385,315	June 26	2223	589	43	1576
Stoker. Mechanical	W. Whittaker	384,486	June 12	954	247	43	1310
Stone. Artificial	O. A. Tanner	380,830	Apr. 10	788	.....	43	165
Stone-channeling machine	J. F. Holloway	382,588	May 8	984	248	43	700
Stone-saw	J. Packover	381,811	Apr. 24	2253	589	43	473
Stone-sawing machines. Feeder for	P. Christa	384,125	June 5	418	116	43	1301
Stone-sawing machines. Method of and apparatus for feeding chilled shot in	E. J. Hawley	381,999	May 1	173	45	43	546
Stone-sawing machines. Sand and water distributer for	J. H. Frenier	384,615	June 19	1100	307	43	1367
Steel	H. C. Sittig	382,777	May 15	1351	355	43	788
Stool or chair. Adjustable	G. W. Tripp	381,188	Apr. 17	1347	360	43	278
Stop-motion	H. J. Johnson	384,040	June 5	207	53	43	1177
Stopper:							
See Bottle-stopper. Flue-stopper.							
Stoppers. Thimble for castings of screw	H. Barrett and J. J. Varley	384,013	June 5	254	73	43	1170
Storage-battery	C. D. P. Gibson	382,988	May 15	1605	420	43	820
Store-service apparatus	E. G. Bates	384,854	June 5	6	3	43	1132
Store-service apparatus	J. A. Duggan	380,315	Apr. 3	13	3	43	5
Store-service apparatus	J. H. Goodfellow	381,545	Apr. 24	1981	496	43	400
Store-service apparatus	T. A. and F. D. Simonds and A. Beach.	382,010	May 1	189	49	43	549
Store-service-apparatus switch	R. N. Dyer	381,495	Apr. 17	1801	479	43	387
Stove	J. V. B. Carter	382,511	May 8	950	242	43	700
Stove	M. S. Cage	384,517	June 12	1019	265	43	1288
Stove	W. J. Keep	382,531	May 8	969	{249 / 250}	43	707
Stove	K. Wehse	384,300	June 12	690	{183 / 184}	43	1268
Stove and range. Cooking	W. E. Prall	382,941	May 1	531	136	43	611
Stove-back	L. M. Devore and W. Greene	381,535	Apr. 24	1982	494	43	398
Stove-back	W. C. Metzner	381,712	Apr. 24	2122	554	43	449
Stove burner. Vapor	Z. Davis	384,511	June 12	1008	262	43	1289
Stove. Cook	C. Rathbone	385,135	June 26	1947	497	43	1521
Stove. Cooking	W. J. Keep	381,793	Apr. 24	2293	583	43	469
Stove. Cooking	J. Strupp	383,418	May 22	2486	610	43	979
Stove-door	W. F. Beecher	381,101	Apr. 17	1231	330	43	256
Stove. Gas	L. Bridge	383,783	May 29	2673	755	43	1089
Stove. Gas	A. S. Dinsmore	384,683	June 19	1259	{330 / 331}	43	1377
Stove. Gas	W. Moore	385,277	June 26	2160	532	43	1504
Stove. Gas	M. J. O'Rielly	383,316	May 22	2145	566	43	938
Stove. Gas	J. L. Sharp	380,355	Apr. 3	79	25	43	16
Stove. Gas	J. Smith and H. J. Boyd	380,732	Apr. 10	646	179	43	130
Stove-grate	H. W. Merritt	382,543	May 8	1013	258	43	712
Stove-grate	E. Walter	381,299	Apr. 17	1509	404	43	308
Stove. Heating	E. Hean	382,158	May 1	411	107	43	559
Stove. Heating	M. Peckham	383,144	May 22	1897	{494 / 495 / 496}	43	905
Stove. Heating	J. A. Price	381,036	Apr. 10	1091	{289 / 291}	43	209
Stove. Heating	W. E. Walker and G. E. Wilbur	381,086	Apr. 10	1218	327	43	208
Stove. Heating	E. A. Wiman	382,930	May 15	1552	406	43	809
Stove. Lamp	J. E. Wilbur	382,579	May 8	1071	274	43	724
Stove. Oil	G. B. Gaylord	383,805	May 29	2697	{764 / 765}	43	1103
Stove. Oil	P. J. Grinberg	384,618	June 19	1163	{307 / 308}	43	1258
Stove. Oil	G. Myers	384,368	June 12	819	213	43	1284
Stove or range	E. W. Anthony	382,851	May 15	1444	{379 / 380}	43	807
Stove. Petroleum cooking	F. Hildebrandt	382,425	May 8	819	209	43	675
Stove-pipe	U. D. Alexander	381,871	Apr. 24	2364	{613 / 614}	43	494
Stove-pipe	W. A. List	381,021	Apr. 10	1084	286	43	210
Stove-pipe thimble	A. Staab	385,212	June 26	2056	547	43	1540
Stove-polish	C. Zimmerling	385,335	June 26	2256	.....	43	1581
Stove. Self-feeding cooking	C. E. King	384,207	June 5	544	{149 / 150}	43	1226
Stove. Vapor	Z. Davis	382,670	June 5	30	10	43	1127
Stove. Vapor	B. Rein	384,301	June 12	889	{215 / 216}	43	1268
Stove. Vapor	J. B. Wallace	380,611	Apr. 3	456	130	43	93

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drfs.	Official Gazette. Vol.	Official Gazette. Page.
Stove. Vapor	J. B. Wallace	382,021	May 1	218	56	43	838
Stove ventilator. Cook	J. F. Linscott	380,500	Apr. 3	200	84, 85	43	89
Stoves. Dust-flue for	J. A. Buckwalter	383,326	May 29	2248	366	43	970
Stoves. Fire-pot for	W. J. Keep	382,080	May 1	304	84	43	572
Stoves. Oven for cooking	J. Rau	383,147	May 22	1903	477	43	986
Stoves. Portable tin oven for oil or gas	A. W. Shumaway	383,830	May 29	2303	775	43	1111
Stoves. Ventilating-flue for	W. J. Keep	381,606	June 19	1294	336	43	1363
Strainer	A. Boss	385,295	June 26	2195	561	43	1570
Strainer. Conductor	P. Drendnl	380,673	Apr. 10	856	231	43	176

Tongue-support	L. J. Manor	380,503	Apr. 3	393	96	43	60
Tool. Combination	J. D. Marsters	382,821	May 15	1467	389	43	799
Tool. Combination	M. F. McCray and J. E. Norton	382,181	May 1	443	115	43	595
Tool. Combination	G. W. Ribble	381,724	Apr. 24	2137	559	43	438
Tool rack. Agricultural	F. A. Herrick	383,527	May 29	2477	654	43	1019
Tooth. Artificial	E. A. Floyd	384,696	June 19	1497	389	43	1422
Tooth. Artificial	J. B. Parker	383,760	May 29	2813	741	43	1089
Tooth. Artificial	J. J. R. Patrick	380,512	Apr. 3	311	80	43	63
Tooth-pick	R. A. Bacon	380,739	Apr. 10	654	181	43	149
Tooth-regulator	W. S. How	385,117	June 26	1919	499	43	1515
Topsails. Rig and gear for gaff	C. A. Post	381,278	Apr. 17	1477	397	43	280
Torpedo-signal holder	R. J. Patten	381,277	Apr. 17	1476	393	43	280
Towel	F. Leake	384,946	June 5	365	88	43	1170
Towing-machine	T. J. Shaw and J. M. Spiegle	382,917	June 5	107	32	43	1170
Toy	C. M. Crandall	383,443	May 29	2884	759	43	1093
Toy	I. D. Law	381,301	Apr. 17	1442	387	43	285

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Toy	F. Weber	382,744	May 15	1306	343	43	779
Toy locomotive	J. S. Wilkins, Jr	384,656	June 19	1390	362	43	1390
Toy. Mechanical	J. W. Hale	381,982	May 1	22	9	43	530
Toy money-box	C. A. Bailey	385,225	June 26	2078	531	43	1548
Toy parachute	W. J. Kantzeck	384,533	June 12	1039	271	43	1328
Toy. Rotary	R. Teichmann	384,403	June 12	844	220	43	1300
Trace attachment	W. J. Howard	382,008	May 1	177	46	43	548
Trace-carrier	E. R. Crockett	382,216	May 1	482	127	43	604
Trace-carrier	O. I. Langworthy	382,709	May 15	1259	329	43	769
					330		
Trace-eye protector	S. M. Hartman	383,586	May 29	2476	634	43	1019
Trace-fastening	J. S. Clark	381,834	Apr. 17	1551	418	43	319
Trace-fastening	C. S. Newsom and L. Oxley	381,984	Apr. 24	2284	600	43	502
Trace-supporter	A. Anderson	380,471	Apr. 3	242	66	43	69
Track-builder	E. P. Garsed	380,640	Apr. 10	560	157	43	123
Track-clearer	J. B. Heagland	381,072	Apr. 10	1174	312	43	236
Track-lifter	G. Rainnie	383,966	June 5	219	65	43	1163
Track. Portable connecting	A. V. Du Pont	381,874	Apr. 24	2367	615	43	404
					616		
					361		
Traction-engine	F. Batter	382,857	May 15	1458	362	43	800
Traction-engine	D. B. James	382,179	May 22	1943	510	43	915
Traction-engine	H. O. Sickler	380,601	Apr. 3	446	126	43	91
Traction-wheel	E. H. Ashcroft	381,202	Apr. 17	1369	366	43	262
Traction-wheel	A. B. Case	383,625	May 29	2609	690	43	1048
Traffic. Appliance for handling rapid-transit passenger	A. M. Wellington. (Reissue)	10,927	May 1	610	155	43	605
Tramway. Electrical	H. T. Blake	383,973	May 22	2065	548	43	941
Tramway. Electrical	H. T. Blake and C. Sterling	383,974	May 22	2067	548	43	941

Vacuum-pans. Discharge mechanism for	R. G. Peters	384,071	June 5	342	96	43	1185
Valve	A. M. Grmager	382,384	May 8	678	248	43	704
Valve	P. W. Meehan	384,056	June 5	330	91	43	1183
Valve	G. H. Moore	384,330	June 12	720	194	43	1289
Valve	E. F. Williams	384,823	June 19	1561	407	43	1434
Valve and cylinder-cock. Combined relief	J. A. Seymour	382,309	May 8	674	179	43	657
Valve. Balanced governor	P. S. Kingsland	385,578	June 26	2157	551	43	1564

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drfs.	Official Gazette. Vol.	Official Gazette. Page.
Valve. Check	H. C. Montgomery	382,655	May 8	1181	305	43	748
Valve. Check	L. Schutte	380,940	Apr. 10	961	255	43	196
Valve. Engine	E. M. Hamstone	380,395	Apr. 3	26	7, 8	43	7
Valve for air-brakes. Triple	G. B. Williams	384,009	June 5	247	71	43	1160
Valve for multiple-cylinder engines	E. B. Benham	380,849	Apr. 10	818	222	43	170
Valve for steam or other engines	H. Moehring and A. Pflüger	383,406	May 22	2270	605	43	975
					606		
Valve for water-gages	W. H. Bray and C. Nickerson	381,609	Apr. 24	1974	519	43	419
Valve for water-gages	C. B. Dunton	383,448	May 29	2341	631	43	994
Valve-gear	J. Des Brisay	381,678	Apr. 24	2069	540	43	430
					541		
Valve-gear	E. D. Leavitt, Jr	380,328	Apr. 3	29	9, 10	43	8
Valve-gear	E. D. Leavitt, Jr	380,329	Apr. 3	31	11	43	8
					12		
					13		
Valve-gear	H. Leobtemberg	382,168	May 1	425	111	43	591
Valve-gear	R. Mackay	383,963	June 5	185	54	43	1156
Valve-gear	J. W. Thompson	381,596	Apr. 24	1953	515	43	416
Valve-gear	J. Young	381,747	Apr. 24	2166	567	43	457
Valve-gear. Releasing	C. A. Dixon	381,001	Apr. 10	1061	280	43	214
					281		
					282		
Valve. Governor	W. B. Mason	383,427	May 22	2218	613	43	981
Valve. Hydrant	O. B. Wilson	381,662	Apr. 24	2045	535	43	434
Valve. Hydraulic	M. B. Kirker	382,003	May 1	178	46	43	547
Valve mechanism for engines	S. Wilcox	382,578	May 8	1069	273	43	724
					274		
Valve mechanism for sewerage systems	C. H. Shepherd	384,396	June 12	834	217	43	1287
Valve mechanism for sewerage systems	C. H. Shepherd	384,397	June 12	835	218	43	1288
Valve. Pop safety	A. Hattersley	383,185	May 22	1871	489	43	899
Valve. Rotary	J. O'Donnell	383,976	June 5	302	80	43	1159
Valve. Safety	W. R. Fox	382,643	May 8	1150	298	43	741
Valve. Steam	D. H. Rice	380,661	Apr. 3	589	146	43	166
					147		
Valve. Steam-actuated	J. H. Fogarty and F. M. Wheeler	380,882	Apr. 10	873	225	43	179
Valve. Steam-actuated	W. W. Hanscom	380,888	Apr. 10	887	227	43	183
					228		
Valve. Steam-engine	W. J. Allen	383,935	June 5	140	40	43	1147
Valve. Steam-engine	J. D. Fiske	383,287	May 22	2108	557	43	945
Valve. Steam-engine	J. S. Marshall	381,152	Apr. 17	1289	347	43	270
Valve. Steam-engine	J. E. McIntosh	384,637	June 19	1193	315	43	1264
Valve. Steam-engine	F. L. Smith	382,564	May 8	1049	265	43	719
Valve. Steam-feed	L. T. Kline	384,263	June 12	634	171	43	1252
Valve. Stop	J. A. Creelman	381,055	Apr. 10	1146	306	43	239
Valve. Stop	J. Hawthorn and S. Moorhouse	382,469	May 8	896	239	43	683
Valve. Straight-way	H. P. Hood	384,849	June 19	1516	395	43	1426
Valve. Straight-way stop	H. Hall	384,906	June 19	1590	414	43	1459
Valve. Tank-supply-regulating	P. Hansen	382,301	May 8	634	161	43	640
Valve. Throttle	E. W. Lace	382,993	May 15	1640	429	43	845
Valve. Water-engine	G. and W. Ross	384,336	June 12	747	196	43	1271
Valves. Adjusting relief-plate wedges for slide	D. A. Woodbury	382,674	May 8	1209	313	43	751
Valves and other mechanisms. Device for operating	L. Schutte	380,941	Apr. 10	962	256	43	196
Valves. Cut-off mechanism for slide	J. H. Tangye and W. Johnson, Jr	380,955	Apr. 10	966	261	43	201
					262		
Valves, &c. Operating-lever for	W. Scott	384,067	June 5	359	102	43	1189
Vane. Windmill	A. J. Corcoran	384,427	June 12	876	229	43	1296
Vapor-burner	F. A. Lyman	381,843	Apr. 24	2319	603	43	498
Vapor-burner	F. A. Lyman	382,652	May 8	1177	304	43	745
Vapor-burner	E. G. Martin	381,153	Apr. 17	1301	347	43	270
					348		
Vapor-burner	W. Metzinger	382,992	May 15	1503	394	43	630
Vapor-burner	L. R. Pierpont	380,404	Apr. 3	144	41	43	30
Vapor-burner	C. H. Shultz	380,356	Apr. 3	80	25	43	18
Vapor or gas. Device for regulating the quality of carburreted	E. J. Frost	381,619	Apr. 24	1968	522	43	422
Vapors. Apparatus for automatically generating and burning inflammable	C. A. Paquelin	383,538	May 29	2497	659	43	1023
Vaporizer	R. S. Sheeley	382,836	May 15	1424	374	43	588
Vaporizer	G. M. Shermann	384,794	June 19	1422	373	43	1409
Vaporizer and burner. Hydrocarbon	J. E. Patterson and A. Noteman	384,068	June 5	339	95	43	1185
Varnish	E. N. Todd	384,005	June 5	242	.....	43	1160
Varnish. Pyroxyline	W. D. Field	381,354	Apr. 17	1590	.....	43	288
Vat:							
See Tan-vat.							
Vegetable-cutter	A. Lethert	381,261	Apr. 17	1454	391	43	328
					392		
Vegetable or root cutter	E. H. Clare	383,438	May 29	2330	619	43	991
Vegetable-slicer	V. Biesig	384,738	June 19	1344	351	43	1293
Vehicle-brake	D. E. Bowling and F. O. Barnes	382,566	May 8	1081	278	43	722
Vehicle-brake	T. J. Timmons	380,365	Apr. 3	91	28	43	20
Vehicle. Child's	F. Graff	383,946	June 5	157	46	43	1150
Vehicle. Convertible	W. H. Yates	381,663	Apr. 24	2046	536	43	434
Vehicle dash-screen	J. H. Murphy	384,297	June 26	1783	447	43	1475
Vehicle. Electrically-propelled	W. H. Knight	382,990	May 15	1637	429	43	844
Vehicle gear-iron	H. C. Swan	381,161	Apr. 17	1332	357	43	276
Vehicle. Jump-seat	C. H. Stratton	385,389	June 26	2266	575	43	1560
					576		
Vehicle. Passenger	F. B. Brownell	380,617	Apr. 3	498	132	43	95
Vehicle. Passenger	R. A. Morse	380,812	Apr. 10	763	200	43	159
Vehicle-reach coupling	S. M. Wier	380,541	Apr. 3	354	101	43	73
Vehicle running-gear	N. H and J. H. Bloom	382,498	May 8	794	208	43	670
Vehicle running-gear	G. A. Bowen	381,981	May 1	134	32	43	539
Vehicle running-gear	S. Burdall	382,625	May 8	1151	297	43	720
Vehicle running-gear	A. W. Johnson	384,366	June 12	796	206	43	1279

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Vehicle running-gear	G. W. Lee	381,146	Apr. 17	1293	345	43	988
Vehicle running-gear	T. C. Munz	383,409	May 22	2285	{606 607}	43	976
Vehicle-seat	C. W. and E. B. Robison	380,663	Apr. 3	534	147	43	107
Vehicle. Self-propelling	C. Benz	385,087	June 26	1877	{479 480}	43	1506
Vehicle. Spring-	E. Storm	382,443	May 8	851	217	43	681
Vehicle. Spring-	T. L. Sturtevant	385,019	June 26	1767	457	43	1495
Vehicle-spring	C. M. Blydenburgh	383,330	May 22	2172	574	43	957
Vehicle-spring	E. Cliff	382,137	May 1	363	100	43	568
Vehicle-spring	R. Hitchcock	380,380	Apr. 3	125	37	43	97
Vehicle-spring	R. Malholland	384,361	June 19	818	212	43	1284
Vehicle-spring	W. C. Perry	384,781	June 19	1401	366	43	1405
Vehicle-spring	P. H. Whiting	385,324	June 26	2255	577	43	1571
Vehicle spring and gear	W. H. Winter and H. Duffey	382,630	May 8	1141	294	43	739
Vehicle spring-gear	E. F. Morse	383,974	June 5	199	58	43	1158
Vehicle-spring support	G. E Bartholomew	381,850	June 5	5	2	43	1192
Vehicle-steps. Scraper attachment for	J. S. Cochennour	381,111	Apr. 17	1045	335	43	979
Vehicle-top	O. Zistel	384,685	June 19	1225	308	43	1372
Vehicle-top-prop joint	T. B. McCurdy	381,630	Apr. 24	2008	525	43	494
Vehicle. Two-wheeled	J. G. Parsons	382,602	May 8	1190	309	43	747
Vehicle. Two-wheeled	G. Beebe	383,207	May 22	1964	501	43	923
Vehicle. Two-wheeled	K. A. Brigham	380,744	Apr. 10	661	182	43	141
Vehicle. Two-wheeled	J. P. Callan	381,758	Apr. 24	2181	570	43	456
Vehicle. Two-wheeled	H. G. M. Howard	381,927	May 1	39	11	43	562
Vehicle. Two-wheeled	H. W. Jones	383,229	May 22	2016	529	43	930
Vehicle. Two-wheeled	W. Lawless	381,705	Apr. 24	2110	552	43	446
Vehicle. Two-wheeled	H. Malmberg	382,175	May 1	436	{113 114}	43	683
Vehicle. Two-wheeled	C. C. Spencer	382,839	May 15	1427	375	43	804
Vehicle. Two-wheeled	A. Warner and J. J. D. Scoles	381,448	Apr. 17	1735	{462 464}	43	354
Vehicle-wheel	J. Blais	380,858	Apr. 10	823	223	43	170
Vehicle-wheel	G. E. Broyles	381,189	June 5	515	140	43	1221
Vehicle-wheel	L. H. Donkel	384,135	June 5	435	121	43	1205
Vehicle-wheel	P. Gendron	382,356	May 8	723	192	43	656
Vehicle-wheel	T. B. Jeffery	383,129	May 22	1877	490	43	901
Vehicle-wheel	T. B. Jeffery	383,130	May 22	1878	490	43	901
Vehicle-wheel	S. Puffer	381,509	Apr. 17	1636	433	43	372
Vehicle-wheel	C. A. Reade	381,722	Apr. 24	2135	558	43	451
Vehicle-wheel	H. L. Smith	384,388	June 12	637	218	43	1288
Vehicle-wheel	J. V. Stribling	384,650	June 19	1206	319	43	1357
Vehicle-wheel	J. K. Van Pelt	384,482	June 12	949	246	43	1309
Vehicles. Boot-frame for	F. E. Roberts	380,933	Apr. 10	952	253	43	194
Vehicles by electricity. Propelling	C. A. Fanre	383,561	May 29	2525	666	43	1028
Vehicles. Device for loading	W. B. Dolsen	383,616	May 29	2622	694	43	1050
Vehicles. Endless plateway for wheeled	H. G. Tipping	384,797	June 19	1425	373	43	1410
Vehicles. Fare-indicating device for	W. F. Nedler	383,758	May 29	2809	{739 740}	43	1067
Vehicles. Spring-coupler for	F. Bacon	381,900	May 1	5	2	43	515
Vehicles. Spring-seat for	L. Warren	385,033	June 26	1792	462	43	1489
Velocipede	M. A. Cherry	382,351	May 8	715	181	43	655
Velocipede	L. H. Donkel	384,134	June 5	434	120	43	1204
Velocipede	J. E. Evans	385,258	June 26	2131	544	43	1550
Velocipede	C. H. Goodsell	384,150	June 5	456	126	43	1209
Velocipede	G. Illston	383,396	May 22	2282	{601 602}	43	972
Velocipede	T. B. Jeffery	383,131	May 22	1880	491	43	902
Velocipede	R. G. Latta	380,495	Apr. 3	273	75, 76	43	56
Velocipede	M. H. Marlin	384,900	June 26	1711	444	43	1473
Velocipede	A. H. Overman	381,274	Apr. 17	1472	396	43	208
Velocipede	T. Redman	385,136	June 26	1948	498	43	1521
Velocipede	F. Rourk	384,643	June 19	1199	317	43	1365
Velocipede	J. Schemmel	381,956	May 1	61	20	43	530
Velocipede	G. Singer and R. H. Lea	382,037	May 15	1425	374	43	803
Velocipede	C. F. Stillman	381,036	Apr. 10	1118	299	43	986
Velocipede	G. T. Warwick	384,945	June 19	1642	{436 437}	43	1450
Velocipede	G. T. Warwick	384,946	June 19	1645	{437 438}	43	1450
Velocipede-crank	J. Harrison	381,547	Apr. 24	1864	497	43	401
Velocipede. Locomotive	B. W. Annin	382,311	May 8	645	{164 165}	43	642
Velocipede-saddle	J. Knous	382,430	May 8	687	212	43	676
Velocipede-saddle	G. Salter and J. Walker	384,473	June 12	935	243	43	1297
Velocipede-seat	T. B. Jeffery	384,900	June 26	1694	440	43	1469
Velocipede-seat	H. M. Pope	381,165	Apr. 17	1321	358	43	273
Velocipede-wheel	R. G. Latta	382,665	May 15	1483	391	43	818
Vending apparatus	R. Marelle	381,397	Apr. 17	1650	440	43	338
Vending apparatus	O. Schiess	381,498	Apr. 17	1696	{455 456}	43	347
Vending apparatus	L. Stollwerck	384,930	June 19	1634	{434 435}	43	1446
Vending apparatus	J. B. Underwood	381,898	Apr. 24	2284	583	43	500
Veneer-cutting machine	E. Densmore	382,219	May 1	497	129	43	605
Veneer-cutting machine	C. L. Merrill	384,057	June 5	383	91, 92	43	1188
Veneer-machine. Rotary-cutting	H. H. Coe	384,120	June 5	469	{117 118}	43	1208
Ventilating apparatus	F. Murphy	381 078	Apr. 10	1168	314	43	228
Ventilating-wheel	E. Fox	383,217	May 22	1980	504	43	925
Ventilator: *See* Car-ventilator. Stove-ventilator. Soil-pipe ventilator. Window-ventilator.							
Ventilator	E. J. Colby	381,112	Apr. 17	1249	335	43	209

Voltmeter	P. Lange	383,649	May 29	2643	699	43	1055
Vulcanizing apparatus	A. B. Woodard	384,188	June 5	506	138	43	1219
Vulcanizing apparatus and other purposes. Automatic regulator for	O. B. Braun	385,236	June 26	2094	{536 537}	43	1551
Wagon	G. S. Conwell	383,344	May 22	2179	577	43	959
Wagon and carriage lifter	D. B. Hamlet	382,700	May 15	1251	327	43	788
Wagon-bolster	J. Haish	384,619	June 19	1164	308	43	1356
Wagon bolster-spring	J. M. Hunter	380,574	Apr. 3	406	116	43	63
Wagon-bolster standard	R. F. Koesling and W. Mecklenburg	381,927	Apr. 24	1997	524	43	464
Wagon-box	G. W. Manlove and E. A. Parker	381,479	Apr. 17	1778	474	43	362
Wagon-brake	R. Ford, Sr	380,679	Apr. 10	568	156	43	123
Wagon-brake	W. J. Mackey	380,502	Apr. 3	293	85	43	59
Wagon-brake	J. W. Martin	381,502	Apr. 17	1818	481	43	371
Wagon-brake	R. J. Mitchell	383,187	May 22	1953	513	43	916
Wagon-brake	E. A. Parker	381,413	Apr. 17	1675	449	43	343
Wagon-brake	F. Rice	382,871	May 1	578	146	43	619
Wagon-brake	J. Smith	382,912	May 15	1369	400	43	825
Wagon-brake	J. B. Walker	381,665	Apr. 24	2253	610	43	491
Wagon-brake. Automatic	J. H. Fisher	380,754	Apr. 10	672	186	43	143
Wagon. Dumping	D. A. Williams	383,930	June 5	134	39	43	1146
Wagon. Dumping	A. M. Woolfolk	382,787	May 15	1365	{356 360}	43	780
Wagon-gear	N. L. Holmes	380,893	Apr. 10	885	{230 240}	43	183
Wagon-jack	R. Harris	382,807	May 15	1301	365	43	795
Wagon-jack	A. P. Millspaugh	384,705	June 19	1304	341	43	1326
Wagon-panel fastener	H. Hotz	380,796	Apr. 10	747	205	43	157
Wagon-seat	W. A. Ladd	384,534	June 19	1040	271	43	1326
Wagon-spring	M. Baltes	382,290	May 8	617	157	43	637
Wagon-spring	D. Wilcox	381,309	Apr. 17	1515	409	43	311
Wagon-standard	J. E. Fowler	382,963	May 15	1600	418	43	836
Wagon-standard	J. B. Hutchinson	383,053	May 15	1761	455	43	866
Wagon-step	E. Scott	381,429	Apr. 17	1700	456	43	349
Wall-covering composition	C. Straub	382,740	May 15	1303	.....	43	778
Wall-paper exhibitor	M. O. Smith	384,726	June 19	1396	346	43	13-0
Walls. Finish for plastered	T. Jones	383,397	May 22	2283	.....	43	973
Walls of buildings. Facing for	A. M. Hansen	382,359	May 8	726	183	43	657
Walls of buildings. Sheet-metal siding for covering the	J. B. Determann	381,000	Apr. 10	1060	280	43	214
Wardrobe, bureau, and wash-stand. Combined	H. F. Wulff	382,400	May 8	786	199	43	668
Warming apparatus and stove. House-	J. Fries	383,119	May 22	1866	487	43	899
Warp for pattern-making	C. H. Landenberger	383,182	May 22	1947	510	43	915
Warp-splitting machine	F. Haskell	381,098	May 1	171	44, 45	43	545
Warping and balling machine	E. E. Orrell	381,184	Apr. 17	1317	350	43	273
Warping-machine	W. Beacroft	380,642	Apr. 3	496	139	43	109
Warping-machines. Lease-forming mechanism for	A. Woodman	380,641	Apr. 3	497	139	43	109
Wash-board	H. S. Brewington	382,751	May 15	1313	345	43	780
Wash-board	J. R. Cluxton	382,512	May 8	960	243	43	702
Wash-stand	J. D. Hall	381,621	Apr. 24	1991	{522 523}	43	422
Wash-stand bowl	N. O. Bond	382,251	May 1	550	139	43	614
Wash-stands, bath-tubs, and sinks. Attachment for	W. Dunnett	381,225	Apr. 17	1305	373	43	288
Wash-tub. Cement	C. Wesely	384,814	June 19	1455	360	43	1415
Washer: *See* Axle-washer. Ore-washer. Bottle-washer. Steam-washer. Clothes-washer.							
Washing-machine	J. H. Allen	383,683	May 29	2668	711	43	1085
Washing-machine	J. M. Boughton	380,675	Apr. 10	564	155	43	122
Washing-machine	N. B. Clabaugh	382,755	May 15	1317	344	43	781
Washing-machine	J. H. Doub and F. Robbins	384,311	June 12	703	187	43	1264
Washing-machine	J. C. Drake	383,110	May 22	1862	484	43	896
Washing-machine	J. R. Elliott	381,003	Apr. 10	1064	282	43	215
Washing-machine	W. Fowler	382,149	May 1	399	104	43	587
Washing-machine	O. F. Glidden	383,625	May 22	2260	612	43	991
Washing-machine	O. J. Graham	381,362	Apr. 17	1589	428	43	328
Washing-machine	J. Killefer	380,902	Apr. 10	906	243	43	186
Washing-machine	H. J. Lockhart	380,396	Apr. 3	133	40	43	38
Washing-machine	C. and J. W. Mears	380,445	Apr. 3	204	56, 58	43	42
Washing-machine	H. Naderman	380,814	Apr. 10	785	210	43	160
Washing-machine	L. Reinhardt	381,643	Apr. 24	2015	529	43	428
Washing-machine	F. Schumpe	380,930	Apr. 10	960	265	43	196
Washing-machine	T. Thorn	384,898	June 12	686	183	43	1261
Watch-balance	P. W. Rohde	380,769	Apr. 10	704	194	43	140

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Watch-box. Portable bullet-proof	P. F. Milligan	383,752	May 29	2799	735	43	1086
Watch-case	E. C. Chappatte	384,346	June 12	764	199	43	1974
Watch-case	E. F. Heffernan	384,621	June 19	1176	310	43	1320
Watch-case	C. F. Morrill and D. C. Percival	384,380	June 12	817	212	43	1394
Watch-case	R. J. Quigley	382,190	May 1	455	118	43	807
Watch-case pendant	R. J. Quigley	384,640	June 19	1196	316	43	1364
Watch-cases or other articles. Die for making	H. Gerber	383,219	May 22	2008	594	43	926
Watch hair-spring stud	F. Ecaubert	382,517	May 8	965	244	43	703
Watch-hands. Tool for removing	L. Aeby	384,668	June 19	1239	326	43	1373
Watch-plates. Machine for the manufacture of pillars for	J. C. Rand	380,407	Apr. 3	147	42	43	31
Watch-protector	F. Leman	380,497	Apr. 3	279	78 79 89	43	57
Watch. Repeating	J. Debrinke	380,669	Apr. 10	851	230	43	175
Watch. Split-seconds stop	H. O. Stauffer	383,256	May 22	2059	540 541	43	937
Watch. Stem winding and setting	C. H. Meylan	383,749	May 29	2793	734	43	1085
Watch. Stem winding and setting	L. Aeby	384,669	June 19	1240	327	43	1373
Watch. Stem winding and setting	W. D Davies	381,319	Apr. 17	1387	371	43	296
Watch. Stem winding and setting	W. H. Stevens	383,673	May 29	2777	702	43	1062
Watch. Stem-winding and setting	J. N. Whipple	381,601	Apr. 24	1963	517	43	417
Watch. Stop	E. Kuhn	383,050	May 15	1706	456	43	930
Watch. Striking	J. Walzer	383,980	May 29	2067	548	43	938
Watch-wheels. Means for beveling	H. Huguenin	381,785	Apr. 24	2216	589	43	467
Watches. Device for holding	E. J. Lezard	381,936	May 1	51	14	43	585
Watches. Machine for making pendants for	A. Stalnacke	383,398	May 22	2156	569	43	954
Watches. Mainspring for	F. Sedgwick	381,176	Apr. 17	1333	356	43	275
Water-closet	W. S. Cooper	385,167	June 26	1968	508	43	1920
Water-closet	W. S. Cooper	385,168	June 26	1980	509	43	1589
Water-closet	J. Crawford	383,045	May 15	1749	468	43	906
Water-closet	G. Michaud	383,750	May 29	2795	735	43	1085
Water-closet	F. A. Wells	381,660	Apr. 24	2043	535	43	433
Water-closet hopper and bowl	A. Ivers	382,069	May 1	323	84	43	578
Water-closet. Siphon	D. D. Buick	383,039	May 15	1726	450	43	883
Water-closet structure	W. S. Cooper	385,169	June 26	1990	510	43	1589
Water-closet supply apparatus	J. P. Adams	382,128	May 1	371	96, 97	43	561
Water-closet system	H. S. Miller	385,130	June 26	1940	495	43	1519
Water-closets. Construction of troughs for	W. B. Parsons, Jr	384,175	June 5	495	135	43	1217
Water-closets. Double flush-valve for	T. Campbell and J. H. McPartland	383,858	June 5	13	4	43	1193
Water-closets. Flushing apparatus for	J. Demarest	381,221	Apr. 17	1389	371	43	296
Water-closets. Service-box for	J. Crawford	381,911	May 1	20	5	43	518
Water-closets. Time closing-valve for	A. W. Cram	380,619	Apr. 3	470	133	43	95
Water-closets. Valve-connection for hopper	G. F. Marshall	382,820	May 15	1406	369	43	799
Water-conductor	J. W. Abrahams	381,664	Apr. 24	2048	536	43	434
Water cooler and filter	G. Van der Hylen	384,801	June 19	1430	376	43	1411
Water distributing apparatus	J. Cornell	380,313	Apr. 3	10	2	43	4
Water. Electrical apparatus for purifying	A. R. Leeds	383,184	May 22	1949	511	43	915
Water-elevator. Pneumatic	T. O. Perry	382,324	May 8	668	169	43	646
Water-elevator. Pneumatic	T. O. Perry	382,727	May 15	1280	336	43	774
Water-gage. Alarm	G. Fisher and P. Rappold	380,881	Apr. 10	872	234	43	179
Water-gage indicator	A. F. Lauderholm and O. F. Olson	382,044	May 1	255	65	43	560
Water-feeder	C. A. Southwick	381,874	June 19	1554	404	43	1432
Water-fetching machine	C. G. Mattson	381,804	June 5	66	20	43	1133
Water-heater	D. Grove	384,202	June 5	537	146 147	43	1225
Water-heater	C. G. Jewett	384,695	June 19	1283	337	43	1382
Water-heater	G. W. Lewton	385,276	June 26	2159	559	43	1564
Water, &c. Hydraulic apparatus for raising	H. D. Pearsall	382,380	May 8	760	193	43	663
Water. Means for utilizing the current force of running	C. M. Garrison	383,261	June 26	2136	544 545	43	1550
Water-meter. Disk	J. Davies	384,024	June 5	266	76	43	1173
Water-meter. Piston	F. W. Dick	382,145	May 1	394	103	43	586
Water-meter. Rotary	J. A. Tilden	380,669	Apr. 3	547	150	43	110
Water-motors. Rotary nozzle-head for	E. S. Piper	380,691	Apr. 10	586	161	43	127
Water or gas. Electrical method of automatically controlling the supply of	L. Well	381,866	Apr. 24	2354	610 611	43	492
Water-power	A. Gustlin	383,291	May 22	2113	558	43	946
Water-tank and life-boat. Combined	S. J. E. Jörgensen	384,579	June 12	1103	290	43	1338
Water-wheel	A. Georg and W. Kleindinst	384,838	June 19	1498	390	43	1423
Water-wheel. Current	J. H. Knight	384,916	June 19	1607	418	43	1443
Water-wheel governor	J. Morton	385,240	June 26	2165	553	43	1565
Water-wheel. Turbine	N. F. Burnham	382,026	May 1	219	58	43	554
Water-wheel. Turbine	S. M. Smith	383,177	May 29	2848	750	43	1094
Water-wheels with movable floats or paddles. Construction of	J. F. Lefort	382,887	May 15	1496	392	43	818
Watering-stand	A. Hanaman	380,570	Apr. 3	400	114	43	82
Watering-trough for cattle	W. E. Haskins	383,124	May 22	1871	489	43	900
Wave-power motor	F. Starkenberg	385,327	June 26	2242	574 575	43	1579
Wax-end machine	R. M. Macintosh	384,700	June 19	1296	339	43	1384
Weaner. Calf	H. W. and W. Fuller	380,796	Apr. 10	744	204	43	156
Weaning-muzzle for animals	J. F. Miller	382,937	May 1	584	134	43	610
Weather-strip	T. K. Milroy	385,065	June 26	1847	473	43	1499
Weather-strip	J. Poyton	381,166	Apr. 17	1323	353	43	273
Weather-strip	W. Syester	383,837	May 29	2941	777 778	43	1112
Weather-strip	O. Tatman and J. Byar	382,780	May 15	1355	356	43	798
Weather-strip	J. Thompson and J. O. Stephens	381,093	June 5	240	70	43	1168
Weather-strip for car-doors	E. R. Stiles	381,627	Apr. 10	1117	299	43	225
Weaving-needle	F. C. Easley and M. Bradley	382,641	May 8	1157	296	43	741
Weeding-tool	C. Maynard	384,635	June 19	1192	315	43	1383
Weigher. Automatic grain	J. Henry	383,198	May 22	1873	489	43	900
Weighing and registering apparatus. Automatic grain	L. C. Tryon	385,094	June 26	1776	459	43	1467

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Weighing and weight-printing machinery. Coin-controlled	C. C. Clawson	381,339	Apr. 17	1562	490 491	43	321
Weighing and weight-printing machinery. Coin-controlled musical	C. C. Clawson	381,338	Apr. 17	1556	490	43	320
Weighing apparatus. Grain	W. B. Avery	383,032	May 15	1716	446 447	43	861
Weighing-machine	E. Wölner	384,650	June 19	1222	322 323 324	43	1370
Weighing-machine. Coin-operated	T. A. Weber	380,837	Apr. 10	795	217 218	43	166
Weighing-machine for grain. Automatic	D. West	384,657	June 19	1217	321 322	43	1369
Weight and price indicating balance	A. Springer and W. Kent	383,499	May 29	2434	646	43	1011
Welding apparatus. Cylinder	T. F. Rowland, W. E. Hill, and A. McLachlan.	384,081	June 5	353	100	43	1186
Welding apparatus. Cylinder	T. F. Rowland, W. E. Hill, and A. McLachlan.	384,082	June 5	354	100	43	1189
Welding. Apparatus for electric	E. Thomson	385,022	June 26	1772	458	43	1486
Well-drilling machine	J. F. Moore	384,994	June 26	1716	445 446	43	1474
Well-drilling machine	C. Weber	382,500	May 8	943	239	43	699
Well point. Drive	F. H. Furniss	382,697	May 15	1246	308	43	767
Well point. Sectional jacket drive	B. B. Bignall and R. A. Marsh	380,419	Apr. 3	162	46	43	33
Well-sinking apparatus	M. T. Chapman	382,689	May 15	1234	321 322 323	43	765
Well-trap	W. W. Peay	381,577	Apr. 24	1922	506	43	409
Wells. Packer for oil and gas	I. N. Hoadley	381,013	Apr. 10	1075	285	43	217

Wheel	A. J. Hanks	384,759	June 19	1372	359	43	1399
Wheel	S. V. Kennedy	383,645	May 29	2838	699	43	1054
Wheel	H. Q. Maurino	383,966	June 5	188	55	43	1156
Wheel	H. E. Pridmore	382,899	May 15	1513	396	43	822
Wheel	W. A. Smith and I. A. Weston	380,358	Apr. 3	82	26	43	19
Wheel	J. T. Upington	381,445	Apr. 17	1731	462	43	353
Wheels. Machine for securing spokes in metal	W. P. Bettendorf	384,604	June 19	1144	302 303	43	1354
Wheels. Rim-joint and spoke-socket for vehicle	J. A. Eastman	381,121	Apr. 17	1263	338	43	292
Wheelbarrow	D. A. Garver and C. H. Straight	381,358	Apr. 17	1394	426	43	327
Wheelbarrow	W. H. C. Goode	382,523	May 8	977	946	43	704
Wheelbarrow	W. Sleicher, Jr	384,093	June 5	366	103 104	43	1191
Wheelbarrow-tray	D. A. Garver and C. H. Straight	380,502	Apr. 3	389	111	43	79
Whiffletree attachment	D. R. Lakin	381,255	Apr. 17	1447	390	43	297
Whiffletree-clip	W. M. Myers and A. Smith	383,900	June 5	76	22	43	1135
Whiffletree-hook	J. C. Davis	380,621	Apr. 3	473	133	43	96
Whiffletree snap	L. J. Bristol	381,325	Apr. 17	1540	415	43	316
Whiffletree-spring	E. C. Curry	382,353	May 8	718	181	43	635
Whip	P. S. Harrington	382,258	May 1	561	141	43	617
Whip and robe lock and line-holder. Combined	H. Martin and J. R. Palmer	380,633	Apr. 3	486	136	43	98
Whip-button-rolling machine	W. A. Heath	382,230	May 1	515	132	43	608
Whip-socket	J. F. Bower	384,605	June 19	1148	302	43	1354
Whip-socket and rein-holder. Combined	G. H. Gaskins	381,350	Apr. 17	1505	427	43	327
Wick	G. Munger	383,929	May 29	2920	771	43	1106
Wick-trimmer	A. Meyer	382,050	May 1	264	66, 69	43	562
Wind-engine	A. T. Winchell	381,313	Apr. 17	1525	411	43	313
Wind-wheel	H. V. Johnson	383,467	May 29	2383	634	43	1002
Wind-wheel shafts. Governor for	W. S. Campbell	382,950	May 15	1583	413	43	835
Winding cotton, &c., upon a core. Machine for	C. F. Bradford	383,856	June 5	11	3, 4	43	1122
Winding quills and bobbins. Machine for	J. E. Atwood	384,011	June 5	250	72	43	1170
Winding-roll for winding paper and other fabrics	J. Waldron	385,026	June 26	1780	460	43	1467
Winding spools, &c. Machine for	A. Insinger	384,416	June 12	904	235	43	1301
Windlass	E. C. Bacon	381,203	Apr. 17	1369	366	43	292
Windlass	H. F. Crandall	380,095	Apr. 10	1054	278	43	213
Windmill	T. H. and O. A. Brewer	380,547	Apr. 3	366	104	43	75
Windmill	A. W. Brodrick	384,232	June 12	580	160	43	1244
Windmill	J. Devereux	381,679	Apr. 24	2071	541	43	439
Windmill	J. B. Gorrell	384,756	June 19	1366	358	43	1398
Windmill	W. W. Hildreth	382,981	May 15	1625	425	43	842
Windmill	E. P. Miles	383,477	May 29	2396	637 638	43	1065
Windmills. Auxiliary motor for	G. C. Hunter	381,698	Apr. 24	2095	548	43	444
Windmills. Pump-rod for	D. B. Nettz	384,998	June 26	1723	447	43	1475
Window	E. E Edgerton and R. Metcalf	381,683	Apr. 24	2076	543	43	440
Window-screen	T. W. Dowling	380,747	Apr. 10	664	183 184	43	142
Window-screen	H. Speer	383,155	May 22	1912	500	43	908
Window-ventilator	C. R. Long	383,582	May 29	2549	673	43	1034
Wire-annealing apparatus	F. H. Daniels	385,247	June 26	2110	540	43	1554
Wire band. Spring	J. Jackson	381,017	Apr. 10	1040	286	43	218
Wire barb	M. Greene	380,884	Apr. 10	876	235	43	189
Wire bending and forming machine	S. T. Newman	384,999	June 26	1734	447 448 449 450	43	1475
Wire-bending implement	D. W. Norris	385,318	June 26	2238	571	43	1576

Alphabetical list of inventions, April to June, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Wire-cloth	H. Atkins	383,791	May 29	2089	754	43	1686
Wire-cloth holder	W. A. Tea	381,294	Apr. 17	1494	403	43	307
Wire coil. Ornamental	L. M. Devore	382,220	May 1	499	139	43	606
Wire-cutter	P. W. Clark	380,618	Apr. 3	468	133	43	95
Wire-drawing die	J. B. Jenkins	382,650	May 8	1175	308	43	744
Wire-drawing machine	G. G. Blakeslee	382,861	May 15	1457	368	43	810
Wire gate	A. J. Cointe	383,705	May 29	2721	716	43	1672
Wire gate	E. R. Potter	380,591	Apr. 3	439	122	43	86
Wire-gripper	B. Erbe	380,749	Apr. 10	666	184	43	142
Wire. Machine for cold-rolling	H. A. Williams	381,311	Apr. 17	1522	410 411	43	313
Wire. Machine for covering and insulating	J. D. Thomas	384,404	June 12	845	220	43	1286
Wire. Making	W. A. Sweet	383,328	May 22	2159	570	43	954
Wire mat	H. H. Schieber	383,772	May 29	2640	747	43	1692
Wire-netting	B. Scarles	385,143	June 26	1958	501	43	1583
Wire-netting machine	B. Scarles	380,664	Apr. 3	534	147 148	43	107
Wire-netting machine	B. Scarles	380,665	Apr. 3	540	148	43	109
Wire-rod-mill guide	H. Roberts	381,562	Apr. 24	1927	508	43	410
Wire-rod mills. Reel for	H. Roberts	382,492	May 8	930	236	43	695
Wire-rod-reeling machine	C. H. Morgan	381,408	Apr. 17	1666	446 447	43	342
Wire-rod-reeling machine	H. A. Young	381,199	Apr. 17	1364	364 365	43	281
Wire. Rolls for making barbed	M. J. Baumbach	381,320	Apr. 17	1533	413	43	315
Wire-rope-closing machine. Vertical	J. Withington	383,088	May 15	1812	473 474	43	678
Wire-rope-coupling device	A. Bleichert	380,983	Apr. 10	1035	274	43	210
Wire rope. Delivery and stretching mechanism for machines for the manufacture of	J. Withington	383,087	May 15	1811	472 473	43	677
Wire-rope lines. Grip for elevated	A. Bleichert	380,982	Apr. 10	1032	270 271 272 273 274	43	209
Wire-rope lines. Rail for elevated	A. Bleichert	380,984	Apr. 10	1036	274	43	210
Wire-rope-making machine	A. S. Hallidie	381,365	Apr. 17	1604	429	43	329
Wire screen, &c.	D. Weesmann	383,161	May 22	1918	501	43	909
Wire-splicing machine	W. L. Haag	383,178	May 22	1942	509	43	914
Wire-stretcher	B. Erbe	380,750	Apr. 10	667	185	43	142
Wire-stretcher	J. H. McMahon and D. D. Mangum	381,569	Apr. 24	1912	504	43	407
Wire-stretcher	J. F. Shipley	380,531	Apr. 3	337	96	43	89
Wire stretcher and tension. Combined	M. F. Connett, Jr.	381,408	Apr. 17	1752	468	43	357
Wire stretcher or clamp	W. Havens	384,255	June 12	822	168	43	1250
Wire-stretching machine	C. V. Pugh	384,929	June 19	1622	421	43	1446
Wire-tightener and staple driver and extractor. Combined	F. G. McHenry and H. Martin	383,970	June 5	192	56	43	1157
Wire twisting and winding mechanism	B. Scarles	380,667	Apr. 3	544	149	43	109
Wire-twisting tool	C. B. Rumsey	382,666	May 8	1199	311	43	749
Wire-weaving looms. Lathe-pitman for	S. O. Greening	383,879	June 5	41	14	43	1129
Wire with layers of different materials. Machine for covering	J. T. Van Gestel	380,610	Apr. 3	457	120	43	93
Wires. Tightener and fastener for	A. L. Thompson	381,295	Apr. 17	1494	403	43	307
Wood. Apparatus for impregnating	P. H. Dudley	381,682	Apr. 24	2073	542	43	440
Wood, &c. Composition for preserving	P. L. Quarante and E. D'Escalonne	380,583	Apr. 3	432	.....	43	88
Wood-cutting machine	W. Merrill	384,704	June 19	1363	340	43	1385
Wood-splitting machine	C. H. Barrows	383,690	May 22	2096	713	43	1066
Wood working and planing machine	E. H. Lee	385,125	June 26	1933	493	43	1518
Wood-working machine	E. W. Snedeker	382,330	May 8	875	171	43	647
Wool. Apparatus for carbonizing the vegetable matter in	C. Schrebler	380,598	Apr. 3	442	125	43	90
Wool. Carbonizing vegetable matter in	C. Schrebler	380,599	Apr. 3	443	.....	43	90
Wool-combing machine	W. Lund. (Reissue)	10,930	May 15	1822	476	43	879
Wool. Machinery for washing	W. Cook	383,515	May 29	2453	650	43	1015
Wool-washing machine. Automatic	F. Williams	380,470	Apr. 3	241	65	43	49
Wrench: *See* Chain-wrench. Pipe-wrench.							
Wrench	J. D. Abbott	383,334	May 22	2164	572	43	955
Wrench	B. T. Bryan	384,743	June 19	1350	352	43	1304
Wrench	M. E. Campfield	380,859	Apr. 10	834	226	43	173
Wrench	J. H. Christie	381,313	Apr. 17	1378	368	43	291
Wrench	J. H. and F. L. Coes	382,136	May 1	384	100	43	561
Wrench	A. F. M. Garrett and F. Frank	383,049	May 15	1756	454	43	867
Wrench	B. R. Hagar	382,975	May 15	1616	423	43	841
Wrench	J. S. Lang	384,451	June 12	911	227	43	1302
Wrench	W. C. Perkins	384,467	June 12	993	241	43	1306
Wrench	H. M. Ryder	380,353	Apr. 3	75	24	43	18
Wrench	W. L. Tobey	380,735	Apr. 10	650	180	43	139
Wringer: *See* Mop-wringer.							
Wringer	J. L. Miller	381,158	Apr. 17	1367	349	43	271
Yarn. Balance apparatus for ascertaining counts or numbers of	E. Stanb	380,626	Apr. 10	783	214	43	164
Yarn. Machine for making slivers for the production of clouded	J. F. Henry	384,624	June 19	1177	310	43	1300
Yarn. Making slivers for the production of clouded	J. F. Henry	384,690	June 19	1274	334	43	1370
Yoke fastening. Neck	A. P. and W. C. Koch	380,492	Apr. 3	270	74	43	56
Yoke for connecting animals	W. Carmichael	381,332	Apr. 17	1549	418	43	318
Yoke. Ox	J. S. Valentine	382,570	May 8	1058	288	43	720
Yokes for cable roads. Construction of subway	S. Gibson	382,909	May 15	1608	420 421	43	839
Zinc. Amalgamating	E. M. Hewett	385,309	June 26	2215	.....	43	1574
Zinc ores. Reducing	G. M. Westman	383,208	May 22	1972	518 519	43	989

ALPHABETICAL LIST OF DESIGNS.

Design.	Name.	No.	Date.	Official Gazette. Volume.	Official Gazette. Page.
Advertising-picture frame	F. H. Durell	18,365	Apr. 24	43	394
Apron. Miss's	L. Roys	18,319	May 15	43	709
Badge	E. A. Crawford	18,407	June 26	43	1460
Badge	F. D. Keyser	18,393	June 19	43	1358
Badge for hats	C. J. Heller	18,349	Apr. 10	43	139
Basque	H. F. Duke	18,388	June 19	43	1351
Basque. Lady's	M. Turner	18,333	May 15	43	709
Bonnet and millinery stand	J. B. Clifford	18,379	June 12	43	1242
Book-cover protector	C. W. Stiff and J. Watrous	18,298	May 1	43	514
Bottle	R. M. Atwater	18,321	Apr. 3	43	2
Bottle	A. M. Foster	18,309	May 15	43	739
Bottle	W. M. Garton	18,390	June 19	43	1351
Bottle or jar	T. B. Atterbury	18,218 to 18,220	Apr. 3	43	2
Bottle-stopper	S. P. Weld	18,405	June 19	43	1338
Box	O. P. Hamborg and G. O. Weding	18,340	Apr. 10	43	139
Broom holder. Whisk	G. C. Varwig	18,374	June 5	43	1139
Brush	L. D. Grant	18,261	Apr. 17	43	254
Brush. Bath	C. J. Bailey	18,222	Apr. 3	43	2
Brush cases. Air	C. L. Burdick	18,339	May 22	43	889
Builders' hardware. Ornamentation of	T. Villago	18,357	May 29	43	967
Burial-casket	L. Stein	18,413	June 26	43	1460
Burner. Nursery	C. T. Martin	18,274	Apr. 24	43	304
Button-hook	S. Cottle	18,331	May 22	43	889
Button-fastener	W. G. Slater	18,281	Apr. 24	43	304
Calendar	F. Mitchell	18,273	June 5	43	1139
Carpet	J. Christie	18,308	May 15	43	739
Carpet	J. L. Folsom	18,223 to 18,234	Apr. 3	43	2
Carpet	O. Heinigke	18,235	Apr. 3	43	2
Carpet	O. Heinigke	18,399	June 19	43	1358
Carpet	H. Hunt	18,236	Apr. 3	43	2
Carpet	E. Poole	18,294	May 1	43	514
Carpet	E. G. Sauer	18,296 18,297	May 1	43	514
Carpet-sweeper casing	W. J. Drew	18,360	June 5	43	1139
Carpet-sweeper casing	W. J. Drew	18,360	June 12	43	1242
Carpet-sweeper casing	W. J. Drew	18,408	June 26	43	1460
Caster. Furniture	E. Garet	18,256	Apr. 24	43	304
Certificate. Business	C. S. Garney	18,247	Apr. 10	43	139
Chamber-vessel	J. A. Davis	18,260	Apr. 17	43	254
Christmas-tree ornament	P. Knorpp and G. A. Mayer	18,238	Apr. 3	43	2
Cigar-stand and ash-receiver	F. W. Moulton	18,240	Apr. 3	43	2
Clamp-frame	P. A. Whitney	18,378	June 5	43	1139
Cloak. Infant's	E. L. Jenkins	18,293	May 1	43	514
Clock-dial	A. Bannatyne	18,264	Apr. 24	43	304
Clock-dial	A. Bannatyne	18,280	May 8	43	636
Clock-dial	A. Bannatyne	18,306 18,307 18,292 18,293	May 15	43	739
Clock-dial	O. Bartel		May 1	43	514
Clock-dial	W. Lawson	18,272	Apr. 24	43	304
Coffee-mill box	M. B. Willcox	18,243	Apr. 3	43	2
Coffee or tea pot	L. J. Richards	18,355	May 29	43	967
Coffin-plate	O. McCarthy	18,273	Apr. 24	43	304
Cord	L. Binns	18,244	Apr. 10	43	139
Costume. Girl's street	E. L. Jenkins	18,287	May 1	43	514
Costume. Lady's	H. F. Duke	18,245 18,246	Apr. 10	43	139
Costume. Lady's	H. F. Duke	18,284	May 1	43	514
Costume. Lady's	M. Kent	18,252	Apr. 10	43	139
Costume. Lady's	M. B. Kent	18,289	May 1	43	514
Costume. Lady's	E. Moran	18,317 18,318	May 15	43	709
Costume. Lady's	J. Sheils	18,305	May 8	43	636
Costume. Lady's	J. Sheils	18,321	May 15	43	709
Costume. Lady's	J. Sheils	18,346	May 22	43	889
Costume. Lady's	J. Sheils	18,396	June 12	43	1242
Costume. Lady's princess	E. Moran	18,291	May 1	43	514
Costume. Miss's	M. B. Kent	18,335	May 22	43	889
Costume. Miss's	L. Sederholm	18,256	Apr. 10	43	139
Cuff. Shirt	D. O'Brien	18,343	May 22	43	889
Cuspidor	H. Beeston	18,269	Apr. 17	43	254
Dentifrice-case	J. C. Moore	18,354	May 29	43	967
Desk. Cabinet	F. A. Coffin	18,227	Apr. 3	43	2
Desk-cabinet	F. S. Thomas	18,302	May 15	43	709
Desk. Writing	F. A. Coffin	18,226	Apr. 3	43	2
Dish	W. G. Walter	18,358	May 29	43	967

Alphabetical list of designs, April to June, inclusive—Continued.

Design.	Name.	No.	Date.	Official Gazette. Vol.	Page.
Door-trimming	G. J. Wells	18,351	May 22	43	890
Educational model	U. G. Houston	18,409	June 26	43	1460
Envelopes. Back of	J. Stern	18,414	June 26	43	1460
Fabric	B. H. Miller	18,395	June 19	43	1352
Fabric	C. B. Smith	18,347 to 18,350	May 22	43	890
Fire-basket	L. Kahn and R. Thiem	18,367	June 5	43	1120
Fringe	G. S. Hensel, L. D. Valetton, and F. E. Cook.	18,365	June 5	43	1120
Fringe	G. S. Hensel, L. D. Valetton, and F. E. Cook.	18,366	June 5	43	1120
Game-tablets. Ornamentation of	J. W. Spalding	18,383	June 12	43	1242
Glassware, &c. Ornamental border for	T. G. Hawkes	18,411 18,419	June 26	43	1460
Glassware, &c. Ornamentation of	T. G. Hawkes	18,301	May 8	43	636
Gown. Lady's tea	J. Sheils	18,267 18,268	Apr. 24	43	304
Gown. Tea	E. Moran	18,255	Apr. 10	43	190
Gum. Chewing	W. D. Chase	18,396	June 19	43	1352
Hame attachment	J. S. Schott	18,300	May 8	43	636
Handle for forks, &c	G. W. Shiebler	18,345	May 22	43	890
Jar	W. H. Barr	18,387	June 12	43	1242
Knit fabrics. Ornamentation of	J. P. Harriman	18,223 to 18,225	Apr. 3	43	2
Knit fabrics. Ornamentation of	J. P. Harriman	18,361 to 18,364	June 5	43	1120
Laces. Exhibit for shoe	W. Paton	18,389	June 12	43	1242
Lamp	S. Clarke	18,303	May 8	43	636
Lamp-fount	A. Patitz	18,378	June 12	43	1242
Lantern-body	F. L. Pisch	18,262	Apr. 17	43	254
Match	L. Kittinger	18,400	June 19	43	1352
Oil-cloth	C. T. and V. E. Meyer	18,270	Apr. 24	43	304
Oil-cloth	C. T. and V. E. Meyer	18,275 to 18,280	Apr. 24	43	304
Oil-cloth	C. T. and V. E. Meyer	18,336 to 18,342	May 22	43	890
Oil-cloth	C. T. and V. E. Meyer	18,370 18,371	June 5	43	1120
Organ-stop knob	M. Clark	18,330	May 22	43	890
Pen and pencil case	T. Richards	18,410	June 26	43	1460
Plane cutter. Bench	A. Fales	18,381	June 12	43	1242
Press frame. Cutting or forcing	J. W. Brown, Jr	18,359	June 5	43	1120
Quilting	C. T. Wagner	18,401 to 18,404	June 19	43	1352
Quilting	C. T. Wagner	18,415 18,416	June 26	43	1460
Radiator	H. C. Hodges	18,310	May 15	43	760
Radiator	C. H. Hodges	18,312 18,313	May 15	43	760
Radiator	J. B. Pierce and J. Bond	18,241	Apr. 3	43	2
Radiator ornamentation	C. H. Hodges	18,311	May 15	43	760
Radiator ornamentation	C. H. Hodges	18,314	May 15	43	760
Railway-rail	W. Wharton, Jr., and E. Samuel	18,324 to 18,328	May 15	43	760
Range. Cooking	R. F. Schermerhorn and F. S. Weller	18,254	Apr. 10	43	190
Rug	A. Petzold	18,397 to 18,399	June 19	43	1352

ERRATA FOR VOLUME XLIV OF THE OFFICIAL GAZETTE.

ANNOUNCEMENTS—VOLUME XLIV.

DISCLAIMERS—VOLUME XLIV.

TEXT OF THE OFFICIAL GAZETTE, JULY 3 TO SEPTEMBER 25, 1888, INCLUSIVE.

INDEX TO THE DECISIONS OF THE COMMISSIONER OF PATENTS AND OF THE UNITED STATES COURTS IN PATENT CASES.

DIGEST OF DECISIONS OF THE COMMISSIONER OF PATENTS AND OF THE UNITED STATES COURTS IN PATENT CASES.

INDEX OF PATENTS AND PATENTEES FOR THE QUARTER YEAR, JULY TO SEPTEMBER, 1888.

ERRATA.

385,527, page 60, in title, name of assignee, for "Maurice J. Sheehan" read *Maurice J. Sheahan.*

385,535, page 62, in title, residence of inventor, for "Columbiana" read *Salem.*

385,669, page 97, in title, name of assignee, for "United States Arc Gas Company" read *United States Arc Gas Lamp Company.*

386,119, page 241, in title, for "(No model)" read (*Specimens.*)

386,612, page 393, in title, after residence of inventor insert *assignor of one-half to Franklin C. Houser.*

386,766, page 432, second claim, line 2, strike out "and the rods for moving said levers" and insert the same after "yokes" in line 2, third claim.

387,174, page 559, in title, after residence of inventors insert *said Faber, Jr., assignor to said McCleane.*

387,200, page 566, in title, French patent, for "Aug. 17, 1886," read *Dec.* 16, 1886, *No.* 178,016; Belgian patent, for "Aug. 24, 1886," read *Sept.* 15, 1886, *No.* 74,344, and Italian patent, for "Aug. 31, 1886," read *Sept.* 30, 1886, *No.* 20,457.

387,244, page 584, in title, for "(No model)" read (*Specimens.*)

387,296, page 600, first claim, lines 1–2, insert *bed-plate or* between "attendant" and "bed-plates."

387,394, pages 625–626, strike out all after number—title, drawing, and claims—and insert CANCELED.

387,461, page 649, strike out all after number—title, drawings, and claims—and insert WITHDRAWN.

387,671, page 718, in title, name of assignees, for "Adam Wartham" read *Adam Warthman.*

387,967, page 805, in title, after "assignor to" insert *himself,*.

388,336, page 927, in title, residence of assignee, for "New York" read *New Jersey*, and claim 2, line 3, for "perforating" read *perforated.*

388,361, page 935, in title, strike out "Patented in England Nov. 26, 1887, No. 16,304."

388,445, page 964, in title, after "(No model)" insert *Patented in Canada June* 14, 1888, *No.* 29,365.

388,603, page 1008, in title, name of inventor, for "Joseph W. Vornick" read *Joseph W. Vorwick.*

388,695, page 1032, in title, after residence of inventor insert *assignor of one-half to J. Frank Bond, of same place.*

389,097, page 1153, third claim, line 2, strike out "switch-blocks" and insert instead *electric-circuit-changing switch*, and in fourth claim strike out "electric-circuit-changing switches" and insert *switch-blocks* instead.

389,221, page 1199, in title, name of assignee, for "E. A. Blatchford" read *E. W. Blatchford.*

389,325, page 1233, in title, name of assignee, for "Gustav A. Adler" read *Gustav A. Edler.*

389,385, page 1250, in title, name of assignee, for "E. S. Blatchford" read *E. W. Blatchford.*

389,507, page 1282, in title, name of assignee, for "Ira S. Milliken" read *Ira S. Millikin.*

389,551, page 1303, first claim, line 4, for "cable N" read *cable M.*

389,829, page 1384, in title, after "assignor" insert *of one-half.*

389,849, pages 1391–1392, strike out all after number—title, drawings, and claims—and insert CANCELED.

389,857, page 1394, in title, for "assignor of one-half, by mesne assignments, to Charles A. Kellogg, Newton, Mass.," read *assignor, by direct and mesne assignments, to the American Electric Register Company, Portland, Maine.*

390,195, page 1504, in claim, line 5, for "number" read *members.*

18,562, Design, page 948, firm-name of assignee, for "Warren, Lang & Co." read *Warren, Lange & Co.*

18,618, Design, page 1296, after residence of inventors insert *said Adams assignor to Walter J. Shepard.*

The Official Gazette.

THE OFFICIAL GAZETTE is published every Tuesday, simultaneously with the weekly issue of patents. From January 1, 1872, (the commencement of its publication,) to June 30, 1883, it was published and bound in semi-annual volumes; since July 1, 1883, in quarterly volumes. All subscriptions must commence with the beginning of a volume; none taken for less than three months. Terms: To all subscribers within the United States and Canada, $5 per annum; to foreign subscribers, $7; single copies, 10 cents; bound semi-annual volumes, (prior to June 30, 1883,) full sheep, $4 per volume; bound quarterly volumes, (subsequent to July 1, 1883,) full sheep, $2.75 per volume. No club rates. *Payment in advance.* All orders should be addressed to "The Commissioner of Patents, Washington, D. C."

Fraudulent Practices by Attorneys.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., April 18, 1888.

The attention of this Office having frequently been called to circulars and communications of persons pretending to have access to the records of this Bureau, and claiming to possess information of the pendency of applications for patents, notice is hereby given the public that all such persons in so advertising themselves are acting under false representations and are guilty of unprofessional conduct, and should not be entitled to credit.

The Office has also received information that certain attorneys disbarred from practice under section 487 of the Revised Statutes are continuing to prosecute applications for patents under the names of other persons.

Hereafter a list will be published in the OFFICIAL GAZETTE containing the names and addresses of all such persons, and the public warned against employing them or intrusting applications or interests to their charge.

BENTON J. HALL, *Commissioner.*

The Office has information that *Isaac S. McGiehon, No. 155 Broadway, New York*, a disbarred attorney, has been practicing under the name of *Alexander Mellado.*

Publishers' Catalogues.

This Office would be pleased to receive from manufacturers and publishers such catalogues, circulars, price-lists, or other advertisements relating to the sciences and mechanical arts as are published by them for gratuitous distribution; but notice is hereby given such manufacturers or dealers who feel disposed to send their publications that not less than three copies should be forwarded in order that the subjects may be properly indexed, classified, and subclassified in the Scientific Library for convenient and ready reference.

Issue of July 3, 1888.

DESIGNS.

18,417.—GLOVE.—*Charles P. Button*, Milwaukee, Wis. Application filed February 28, 1888. Serial No. 265,560. Term of patent 7 years.

18,418 and 18,419.—UPHOLSTERY FABRIC.—*George A. Crimson*, Philadelphia, Pa. Applications filed May 28, 1888. Serial Nos. 275,408 and 275,404. Term of patents 3½ years.

18,420.—NURSING-BOTTLE.—*Andrew Geyer*, Cambridge, Mass. Application filed April 28, 1888. Serial No. 271,645. Term of patent 7 years.

18,421.—CIGAR LIGHTER AND CUTTER STAND.—*Joseph Kaufmann*, New York, N. Y. Application filed April 17, 1888. Serial No. 270,960½. Term of patent 3½ years.

18,422.—HEATING-STOVE.—*Edward J. King* and *William H. Wilkinson*, Rochester, N. Y., assignors to *The Co-Operative Foundry Company*, same place. Application filed May 16, 1888. Serial No. 274,082. Term of patent 7 years.

18,423 to 18,430, inclusive.—SURFACE ORNAMENTATION OF WALLS.—*Frederick Koebel*, Williamsport, Pa. Applications filed March 17, 1888. Serial Nos. 267,570, 267,571, 267,572, 267,575, 267,576, 267,577, 267,579, and 267,582. Term of patents 14 years.

18,431 to 18,433, inclusive.—RUG.—*Julius Pegel*, Philadelphia, Pa., assignor to *John Bromley & Sons*, same place. Applications filed June 4, 1888. Serial Nos. 276,021 to 276,023, inclusive. Term of patents 3½ years.

18,434.—DRESS-TRIMMING.—*Annie V. Schoonmaker*, New York, N. Y., assignor to *Dunham, Buckley & Co.*, same place. Application filed February 21, 1888. Serial No. 264,874. Term of patent 3½ years.

18,435.—HOT-AIR-REGISTER FRONT.—*Enoch Shenton*, Malden, Mass. Application filed May 31, 1888. Serial No. 275,655. Term of patent 7 years.

18,436.—PADLOCK-CASE.—*John J. Tower*, Brooklyn, N. Y. Application filed May 25, 1888. Serial No. 275,079. Term of patent 14 years.

18,437 to 18,439, inclusive.—RUG.—*Albert Weiss*, Philadelphia, Pa., assignor to *John Bromley & Sons*, same place. Applications filed June 4, 1888. Serial Nos. 276,017 to 276,019, inclusive. Term of patents 3½ years.

TRADE-MARKS.

[Certificates of registration of Trade-Marks numbered 8,191 and upward are registered under the act of March 3, 1881.]

15,649.—CORSETS.—*Wallis I. Allen*, New York, N. Y. Application filed May 29, 1888. Used since September 1, 1887.

"The word 'EULALIE.'"

15,650.—EXTRACTS OR SIRUPS FOR MAKING A BEVERAGE.—*Coffin & Wood Chemical Company*, Detroit, Mich. Application filed May 28, 1888. Used since February 13, 1888.

"The words 'CELERY PHOSPHATE.'"

15,651.—REMEDY FOR DYSPEPSIA, LIVER COMPLAINT, AND CONSUMPTION.—*John L. Connelly*, New York, N. Y. Application filed May 11, 1888. Used since September 1, 1886.

"The word 'FLORAPLEXION.'"

15,652.—BUTTER IN PRINTS.—*Samuel T. Edel, Sr.*, Baltimore, Md. Application filed May 28, 1888. Used since 1847.

"The representation of a bee-hive."

15,653.—LIQUID SHOE-DRESSING.—*Robert F. S. Heath*, Camden, N. J. Application filed May 28, 1888. Used since February 1, 1888.

"The word 'CLIMAX.'"

15,654.—PORTER, ALE, STOUT, LAGER-BEER, AND SODA AND MINERAL WATERS.—*William Frederick Hollwedel*, Brooklyn, N. Y. Application filed March 2, 1888. Used since July, 1886.

"The three capital letters 'W. F. H.' with a small-capital 'w' placed at the right and bottom of the large capital letter 'H.'"

15,655.—DRESS GOODS.—*R. B. MacLea & Co.*, New York, N. Y. Application filed May 29, 1888. Used since December, 1886.

"The picture of a shield, a ribbon-like scroll passing across it, a branch having berries thereon arranged at one side, and a branch carrying acorns at the opposite side of the shield."

15,656.—NEEDLES.—*Henry Milward & Sons*, Redditch, England. Application filed May 28, 1888. Used since January 1, 1887.

"The word 'CALENDRED.'"

15,657.—BAKING-POWDER.—*Harry W. Mott*, Chicago, Ill. Application filed March 12, 1888. Used since September 1, 1887.

"The words 'GOLDEN ROD.'"

15,658.—ALLOY FOR JEWELRY.—*Joseph Muhr*, Philadelphia, Pa. Application filed May 28, 1888. Used since May 1, 1888.

"The word 'CROWN' or a pictorial representation thereof."

15,659.—SKATES.—*Charles L. Peirce*, Milwaukee, Wis. Application filed April 26, 1888. Used since May 1, 1885.

"The word 'MERCURY.'"

15,660.—C. ALDEN'S CHOCOLATE.—*Henry L. Pierce*, Boston and Milton, Mass. Application filed May 17, 1888. Used since March 1, 1888.

"The representation of a circular plate with a border of points and bearing the letters and figure 'No. 1,' and above a scroll having on it 'DIRECTIONS,' all appearing on a background of a branch of cocoa-plant with leaves and pods thereon."

15,661.—CERTAIN NAMED MEDICAL COMPOUNDS.—*William B. Riker & Son*, New York, N. Y. Application filed February 2, 1888. Used since January, 1886.

"The mottoes 'PRO BONO PUBLICO' and 'QUID PRO QUO' and a fac-simile of the signature of 'WM. B. RIKER & SON.'"

15,662.—WHISKY.—*M. Shaughnessy & Co.*, St. Louis, Mo. Application filed May 10, 1888. Used since April, 1882.

"The representation of a club-house, race-track, and stand and the words 'CLUB HOUSE.'"

15,663.—RAZORS.—*Son Brothers & Co.*, San Francisco, Cal. Application filed May 24, 1888. Used since January 1, 1888.

"The word 'SULTANA.'"

15,664.—ELECTRIC BELLS.—*John F. Wollensak*, Chicago, Ill. Application filed May 17, 1888. Used since February 14, 1888.

"The word 'CROWN' or the representation of a crown."

15,665.—TRANSOM-LIFTERS.—*John F. Wollensak*, Chicago, Ill. Application filed May 17, 1888. Used since February 14, 1888.

"The word 'EAGLE' or the representation of an eagle."

LABELS.

5,643.—Title: "COMPOUND EXTRACT OF GINGER WITH CHAMOMILE." *Horatio S. Bagnall*, Brockton, Mass. Application filed June 5, 1888.

5,644.—Title: "AMERICAN FURNITURE POLISH."—*Thomas W. Brennan*, Washington, D. C. Application filed June 11, 1888.

5,645.—Title: "PHILADELPHIA EXTRA. WEIGHT & COLOR." (FOR GINGHAMS, TICKINGS, AND OTHER COTTON GOODS.)—*John Farnum & Co.*, Philadelphia, Pa. Application filed June 8, 1888.

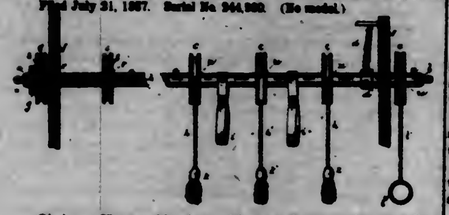
5,646.—Title: "VACUUM." (FOR FEED WATER PURIFIERS AND HEATERS.)—*Warren Webster & Co.*, Philadelphia, Pa. Application filed June 6, 1888.

5,647.—Title: "WILLIAMS SURE CURE." (FOR SALVE.)—*George H. A. Williams*, Concord, N. H. Application filed June 5, 1888.

PATENTS

GRANTED JULY 3, 1888.

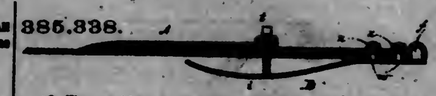
385,336. MACHINE FOR CLEANING PIGS' FEET. WILLIAM ARMSTRONG, Indianapolis, Ind., assignor to Mary T. Archibeson, same place. Filed Feb. 7, 1888. Serial No. 263,502. (No model.)



Claim.—1. A machine for cleaning pigs' feet, consisting of a suitable frame, a cylinder mounted on a driving-shaft in said frame, and knives or scrapers secured to said cylinder by a flexible connection, substantially as set forth.

2. In a cleaning-machine, the combination, with the cylinder carrying the scrapers, of a disk provided with pointed knives in its edge for cleaning the creases, substantially as set forth.

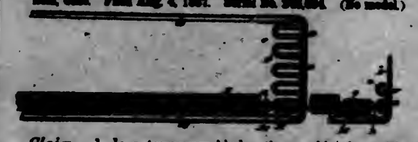
3. The combination, with the cylinder C, of the strips of flexible material C', secured thereon, the scrapers *c*, mounted on the outer edge of said flexible material, and means for driving the same, substantially as set forth.



4. In a machine for cleaning pigs' feet, the combination of the frame A, the driving-shaft B, the cylinder C, mounted on said driving-shaft, the disk C', secured at one end thereof and provided with knives *c'* in its periphery, the strips of flexible material C', secured at intervals on said cylinder C longitudinally thereof, and the scrapers *c*, secured to the outer edge of said strips of flexible material, substantially as set forth.

385,337. CAR-BELL STRAP. JOSEPH ARBAIB, New York, N. Y. Filed July 21, 1887. Serial No. 244,902. (No model.)

Claim.—The combination, with a stationary tube extending through the whole length of a car, supported by and projecting outwardly beyond the end walls thereof, and a rod within the bore of said tube extending through its whole length and movable therein, of pulleys mounted on said tube having each a screw passing through a transverse slot in said tube and connecting said pulleys with said interior rod to turn the same within said tube, when said pulleys are turned, through the length of said transverse slot, mechanism connecting said rod with bells fixed on each end of said car to ring said bells, and means for turning said pulleys, substantially as and for the purpose set forth.



385,338. SHUTTLE-BINDER FOR LOOMS. HENRY BARNLEY, Fitchburg, Mass., assignor of one-half to William Barnley, same place. Filed Jan. 10, 1888. Serial No. 260,288. (No model.)

Claim.—1. A shuttle-binder comprising a body provided with a groove in its heel for the pivot-pin and a curved face-plate detachably secured to said body, said face-plate extending past said heel-groove for closing it, substantially as described.

2. The combination of a shuttle-binder body provided with a groove in its heel for the pivot-pin, a face-plate detachably secured to said body and extending over said groove for closing it, and a set-screw passing through said body in contact with said face-plate for adjusting the latter, substantially as described.

385,339. TEMPORARY BINDER. FREDERICK W. BARNETT, Springfield, Ohio. Filed Aug. 4, 1887. Serial No. 246,094. (No model.)

Claim.—1. In a temporary binder, the combination, with the cover and pads, of a series of tubes and a series of spindles, one series being arranged to engage with the other series, and both series being located between the back of the cover and the ends of the pads, and running transversely to the cover and pads, and adapted to connect the back and pads together.

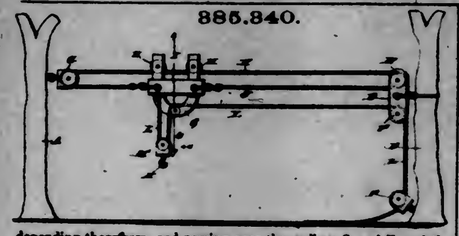
2. In a temporary binder, the combination, with the back and a series of tubes secured thereto, of pads and a tube secured to each pad, and a locking device which engages the ends of the tubes secured to the back with those secured to the pads.

3. In a temporary binder, the combination, with the cover and pads, of tubes secured to the back of the cover and tubes secured to the pads, and having two sides flattened and a slot in one of the narrower portions of the tube, near each end thereof, and a connecting device composed of two members, one of which has a bend therein, whereby when the members are projected into the tubes the bends extend into either of the said slots.

4. In a temporary binder, the combination, with the back, of a series of tubes on the inside thereof, and a strip of strong material secured to the back and passed over the successive tubes, whereby they are held in place.

5. In a temporary binder, the combination, with the back, of a series of tubes secured to the inside thereof, and a strip of strong material united to the back and said tubes by an adhesive material.

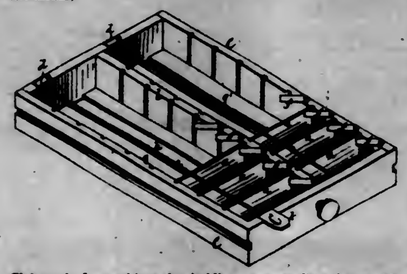
6. The combination, with a pad of printed forms, of a tube secured thereto along one end thereof and in the direction of the edges of the sheets of which the pad is composed.



7. The combination, with a pad composed of blank forms, of a tube and a strip of material passing around the tube and connected to the pad by an adhesive substance.

8. The combination, with a tube, of a strip of material secured thereto and constructed to be secured to the pad along one end thereof, so as to secure the tube in the direction of the edges of the sheets composing the pad.

385,340. STUMP-EXTRACTOR AND LOG-MOVER. JULIUS C. BURKE and CHARLES EKERMEIR, Winona, Wis. Filed Jan. 21, 1888. Serial No. 261,512. (No model.)

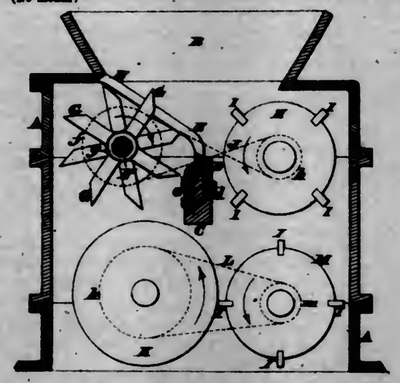


Claim.—The improved stump-extractor and log-mover herein described and shown, comprising the pulley C, the elongated block D, having the pulleys E F in its ends, the cable J, passing around the pulleys C E and forming two parallel branches, the carriage having the rollers H H in its upper portion, resting on the upper branch of the cable J, the longitudinal block I, secured to the carriage and having the ends of the cable attached thereto, the pulley O, mounted in the lower portion of the carriage, the cable L, secured to the carriage,

385,840.

depending therefrom, and passing over the pulleys O and F, and the pulley M, mounted loosely on the cable L, between its point of securement and the pulley O, substantially as specified.

385,841. CABINET FOR HOLDING ACCOUNT-SLIPS. JAMES R. CHESEBROUGH, Cameron, N. Y. Filed Sept. 12, 1887. Serial No. 249,698. (No model.)



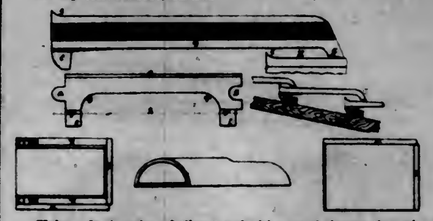
Claim.—1. In a cabinet for holding account-slips, the combination, with the drawers C C, of the strips *g g*, with the opening *h* between the partitions *a a*, forming cells, the wire *c*, extending longitudinally over the top of the drawer on one side, and the pivoted clamps *f f*, for holding the papers down, as herein shown and described.

2. In a cabinet for holding account-slips, the combination, with the drawers C'C, of the strips *g g*, the partitions *a a*, the wire *c*, the clamps *f f*, and the tags *k k*, as shown and described, and for the purpose specified.

3. In a cabinet for holding account-slips, the combination of open frames, forming drawers containing separate cells to hold the folded papers, and index-tags projecting outward from the drawers with letters thereon indicating surnames, as and for the purpose specified.

385,842. CLAY-PULVERIZER. JONATHAN CREAGER and HARRY M. CREAGER, Cincinnati, Ohio. Filed Nov. 3, 1887. Serial No. 254,164. (No model.)

Claim.—1. The combination, in a pulverizer, of cutting-bar D, a grating, E, sloping down to said bar, blades G, operating within the slots of said grating, and a cylinder, H, having knives I, which knives reduce the clay, as described.



2. The combination, in a pulverizer, of a pair of regrinding-cylinders, K M, the cylinder K having a smooth periphery and revolving in the same direction as the other cylinder, M, which latter is armed with knives or cutters I, as herein described.

3. A grinding-cylinder having a chamber, P, knives I, and throats T, which latter communicate with said chamber, as herein described.

4. The combination, in a pulverizer, of cutting-bar D, inclined grating E, blades G, main cutting-cylinder H, and regrinding cylinders K M, as described.

5. A grinding-cylinder having a chamber, P, throats T, and flat faces *e*, to which faces the slotted knives I *r* are secured by bolts S, as herein described.

385,843. TILE. ALBERT DIETRICH, Berlin, Germany. Filed Nov. 12, 1886. Serial No. 218,737. (No model.) Patented in Germany Feb. 17, 1886, No. 36,649; in England June 7, 1886, No. 7,947; in Belgium June 15, 1886, No. 73,314; in France Oct. 6, 1886, No. 176,471, and in Norway Mar. 30, 1887, No. 266.

Claim.—1. A series of tiles interlocking at their meeting edges by means of grooves B and ridges A, and provided with bearing-ribs D, sloping elevations IV, gutter-edges F, and recess *e*, all substantially as set forth.

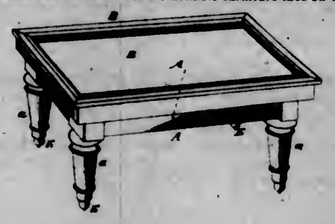
2. A series of tiles, each having a groove, B, in one edge and a ridge, A, in the other, for interlocking with neighboring tiles, and being provided with a downwardly-inclined gutter-edge, F, at its lowest point, and with a raised edge, *g*, at its highest point, the gutter-edge of each higher row of tiles resting on the edge *g* of the next lower row, for the purposes set forth.

3. In combination with roof-tiles interlocking laterally and provided with the parts *F e g*, arranged and operating as set forth, a curved tapering ridge, substantially as shown.

385,844. POROUS CUP FOR GALVANIC BATTERIES. ASAHEL K. HATCH, Brooklyn, N. Y., assignor of one-third to Colin M. Thompson, same place. Filed Oct. 7, 1887. Serial No. 251,782. (No specimens.)

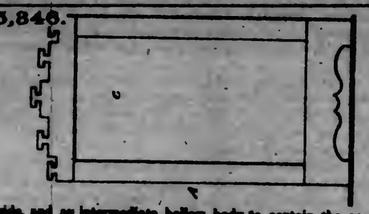
Claim.—The method of producing an indestructible cup for a galvanic battery, which consists in first forming the cup of sheet-asbestos or pressing pulp-asbestos into a suitable mold to form the cup, then soaking the cup thus formed in a mixture of suitable carbonaceous substance and silicate of soda, removing it from the mixture and allowing it to dry, and finally subjecting the cup to a high heat to leave a strengthening and binding material in the body, substantially as described.

385,845. PROCESS OF OBTAINING ALUMINIUM CHLORIDE. CAMILLE A. FAURE, New York, N. Y. Filed Feb. 20, 1886. Serial No. 264,065. (No specimens.)



Claim.—1. The process of manufacturing chloride of alumina, which consists in heating an ore containing aluminium in direct contact with the flame of a furnace, cutting off the flame, passing over the heated ore a gaseous mixture containing a hydrocarbon vapor and a gas containing chlorine, and then condensing the resulting vapor.

2. The process of manufacturing aluminium chloride, consisting in heating the aluminium ore to a proper combining-temperature, passing over the heated ore a mixture of hydrochloric-acid gas and hydrocarbon vapor, and then condensing the resulting vapor.

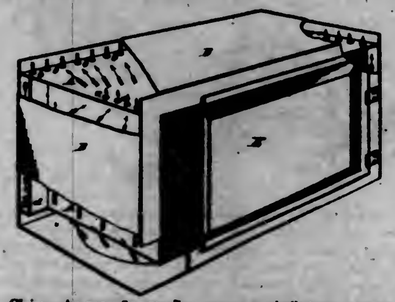


3. The process of manufacturing aluminium chloride, consisting in heating the aluminium ore to a proper combining-temperature, cutting off the flame, passing over the heated ore a gaseous mixture containing carbon and chlorine, and then condensing the resulting vapor.

385,846. BILLIARD-TABLE. WILLIAM P. FLINT, Marysville, Cal. Filed Nov. 26, 1887. Serial No. 256,115. (No model.)

Claim.—The described article having an undivided billiard-table face on one side, an undivided detachable furniture-face on the opposite side, and an intermediate hollow body to contain the appurtenances of a billiard-table, as set forth, and for the purpose specified.

385,846.



385,847. METAL-HARDENING DEVICE. JOHN G. PRINCE, Winchendon, Mass. Filed Dec. 28, 1887. Serial No. 259,792. (No model.)

Claim.—1. The hardening device, as described, consisting of a series of clamping jaws or levers, *a a*, pivoted in one end to a base-plate, *b*, or its equivalent, with inner convex faces adapted to fit or mesh the grooves on screw-taps, and having means, substantially as described, for clamping the article between such levers, as and for the purpose set forth.

2. The hardening device, as described, consisting of a series of clamping jaws or levers, *a a*, pivoted in one end to a base-plate, *b*, or its equivalent, in combination with the clamping ring or annulus *d*, substantially as and for the purpose set forth.

385,848. OVEN FOR GASOLINE, GAS, OR COAL-OIL STOVES. ANDREW GREBE, St. Louis, Mo. Filed Nov. 14, 1887. Serial No. 255,170. (No model.)

Claim.—An oven for gasoline, gas, or coal-oil stoves, composed of an outside and an inside shell having a space between the shells, the outside shell being provided with an opening or openings at the back near the bottom for the escape of the heat, said shells being united together at both ends at the top and back, and at the back near the bottom by partitions, the partitions uniting the shells at the top being provided with holes or a slot near the front of the inside shell, substantially as described.

385,849. GRAVEL-FOUNTAIN SPRING. GEORGE W. GRAY, Sr., Ariel, Va. Filed Oct. 1, 1887. Serial No. 251,207. (No model.)

Claim.—The filter herein described, consisting of the upright frames A F F K, which are inserted in a spring or well and form containing-walls for the filtering media, N, in combination with the communicating reservoirs F' J', formed by the said upright walls and cross-pieces B E, the hinged top C, and the aperture M', the base O, and the wall G, having apertures H M, for the purpose set forth.

385,849.

385,850. VELOCIPEDE. CHARLES F. HARLEY, Chicopee, assignor to the Overman Wheel Company, Boston, Mass. Filed Sept. 3, 1887. Serial No. 248,666. (No model.)

Claim.—1. In a velocipede, the combination, with a sleeve connected with the frame of the vehicle, of a tubular steering-rod entering such sleeve, bearings between the sleeve and rod, and a spring located within the rod and adapted to pull the bearings of the sleeve and rod together, substantially as set forth.

2. In a velocipede, the combination, with a sleeve connected with the frame of the vehicle and provided with bearings at its upper and lower ends, of a steering-rod entering such sleeve, a collar loosely mounted on the rod and co-operating with the upper bearing of the sleeve, a head connected with the steering-wheel and having the lower end of the rod attached to it, a bearing co-operating with the lower bearing of the sleeve carried by such head, and a spring located within the rod and pulling the said bearings together, substantially as set forth.

3. In a velocipede, the combination, with a sleeve connected with the frame of the vehicle, of a steering-rod turning in such sleeve, a movable bearing for the upper end of the sleeve, a coupler located within the rod and connected with such bearing, a follower carried by the lower end of the coupler, a spring-stop located in the rod and coupled with the sleeve so as to permit the same to slide over the rod, a spring located within the rod and interposed between the said follower and stop, a wheel-head to which the lower end of the rod is attached, and a bearing carried by such head for the lower end of the sleeve, substantially as set forth.

4. In a velocipede, the combination, with a sleeve connected with the frame of the vehicle and provided with a bearing at its upper and at its lower end, of a steering-rod turning in such sleeve, a bearing-collar for the upper bearing of the sleeve loosely mounted on the rod, a bolt passing through such collar and through elongated slots in the rod, a coupler located in the rod and having an eye in its upper end through which the bolt passes, and a spring located in the rod and pulling such coupler down to pull the movable collar down onto its bearing, substantially as set forth.

5. In a velocipede, the combination, with a sleeve connected with the frame of the vehicle and having a bearing at its upper end and at its lower end, of a steering-rod entering such sleeve and turning therein, a movable collar co-operating with the upper bearing of the sleeve and embracing the rod, a bolt carried by such collar and extending transversely through the rod thereto provided with elongated openings, a coupler located in the rod and extending lengthwise thereof and provided at its upper end with an eye receiving the said bolt, and at its lower end with a follower, a spiral spring supported by such follower

and controlling the coupler, a spring-stop located in the rod and coupled with the sleeve, a wheel-head to which the rod is attached, and a bearing carried by such head and co-operating with the lower bearing of the sleeve, substantially as set forth.

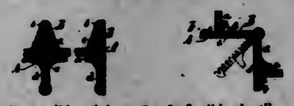
6. In a velocipede, the combination, with a sleeve connected with the frame of the vehicle and provided with a bearing at its upper end and at its lower end, of a steering-rod turning in such a sleeve, a coupler connected with such movable bearing, a spring-stop consisting of a disk coupled with the sleeve by screws passing through elongated openings in the rod in which the coupler is located, and a spring located in the rod and pushing from the stop to pull the movable collar and sleeve down over the rod, substantially as set forth.

7. In a velocipede, the combination, with a sleeve connected with the vehicle-frame, of a steering-rod turning in such sleeve, a spring located in the rod and pulling the said bearings together, and means for adjusting the tension of the spring, substantially as set forth.

8. In a velocipede, the combination, with a steering-rod, of a sleeve receiving the lower end of the rod and provided upon its lower face with an extension having segmental slots, and with a perforated lug, two parallel perforated arms extending forward from the machine-frame and embracing such extension and lug, and means for coupling the said extension, lug, and arms together, substantially as set forth.

9. In a velocipede, the combination, with a steering-rod, of a sleeve receiving the lower end of the steering-rod and provided upon its lower face with a perforated lug, perforated arms extending forward from the machine-frame, a spindle passing through such arms and lug and forming a fulcrum and a foot-rest, and means for limiting the pivotal action of the sleeve and arms on the spindle, substantially as set forth.

10. In a velocipede, the combination, with a handle-bar having its ends exteriorly threaded in one direction and interiorly threaded in an opposite direction, of a handle-frame having a sleeve interiorly threaded to correspond to the exterior threading of the bar, and a screw passing through the handle-frame concentric with the sleeve and entering the end of the bar and threaded to correspond to the interior threading thereof, substantially as set forth.



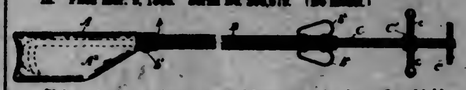
385,351. CHURN-DASHER. THOMAS H. HAMLIN, Pittsburg, Pa. Filed Feb. 10, 1888. Serial No. 263,947. (No model.)

Claim.—1. The combination of a sleeve fixed to a staff or handle and having a socket in its lower end, a spindle adjustable longitudinally in the socket and having means for holding it in position thereon, and the metallic sleeves *b*, fitted loosely on the lower end of the spindle and provided with the annular flanges, which are inserted in the blades of the dashers, substantially as and for the purpose described.

2. The combination of a sleeve having open sockets in its opposite ends, a staff fixed in the upper socket of the sleeve, a spindle adjustable longitudinally in the lower socket of the sleeve and having a flange, *c*, at its lower extremity, a bolt for securing the spindle to the sleeve, the dashers, and the sleeves fitted loosely on the spindle and provided with the annular rims, which are fixed to the blades of the dashers, substantially as and for the purpose described.

385,352. BAR FOR SKYLIGHTS, CONSERVATORIES, &c. GEORGE HAYES, New York, N. Y. Filed July 30, 1887. Serial No. 245,073. (No model.)

Claim.—1. A solid sash-bar of soft, flexible, ductile, and pliable metal, molded upon a hard-metal core apertured at intervals throughout its length, through which apertures the soft metal unites, securing the parts together, essentially as shown and described.



2. A solid soft-metal sash-bar, A, grooved, as at *c*, re-enforced and stiffened edgewise by a hard-metal core, B, completely inclosed within the soft metal, said core apertured, as at *c*, the soft metal uniting in said apertures and keying with said core, essentially as shown and described.

3. A solid sash-bar formed of soft metal, having two sets of rabbets for double glazing, two caps, one at each edge, and a body between the rabbets, completely inclosing a hard-metal core provided with spaces through which the soft metal unites and keys with the core, essentially as shown and described.

4. A soft-metal sash-bar having an outward ridge with cap solid thereto, grooves to receive glass plates, rabbets or ledges to sustain glass plates, narrow body below the rabbets, and gutters at the base or interior edge, all molded solid upon a hard-metal core provided with apertures or spaces intermediate of its width, through which the soft metal unites and keys with the core, essentially as shown and described.

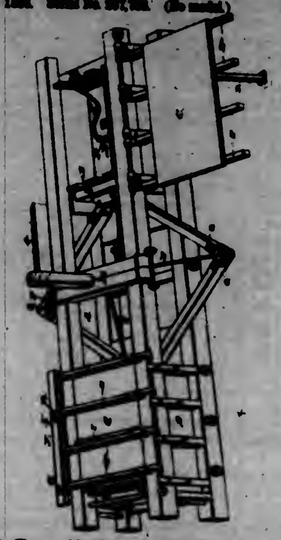
5. An angle-bar formed as two wings of soft, ductile, flexible, and pliable metal molded solid upon a core of hard metal apertured at intervals throughout its length and adapted for adjustment to suit angles, essentially as shown and described.

385,353. VETERINARY SURGICAL INSTRUMENT. JOSEPH HUTTON, Aurora, Ind., assignor of one-third to Charles H. Sayre, Chicago, Ill. Filed Mar. 9, 1888. Serial No. 266,672. (No model.)

Claim.—1. A veterinary surgical instrument having a flat shield the body of which is extended laterally from the line of the handle, in combination with a series of interchangeable operating-instruments extending laterally from the line of the shank, substantially as shown and described.

2. A veterinary surgical instrument having a flat shield the body of which is extended laterally from the line of the handle, in combination with a series of interchangeable operating-instruments extending laterally from the line of the shank, each of said instruments having its said shank constructed in a polygonal shape with the shield conforming thereto, while the handle thereof is round, substantially as shown and described.

385,354. MOWING-MACHINE. IRA T. JAMES, Lincoln, Nebr., assignor of one-half to Charles H. Hunt, same place. Filed May 9, 1887. Serial No. 237,255. (No model.)

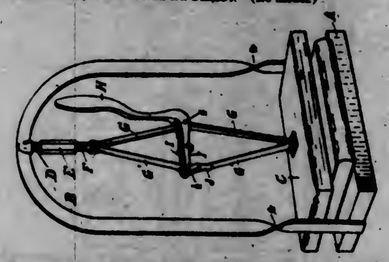


Claim.—1. The combination of the driving-wheel F, having cylinders G on its opposite sides formed with cams on their outer face edges, the frame A, having bearing-arms 27 28 projected from the side pieces of the frame, the vibrating arms H, formed with vertical sleeves 31, having cross-heads 32, with rollers 33, the bearing-pins 34, arranged in said bearing-arms and sleeves, and the cutter-bars, all substantially as described.

2. The combination of the frame A, supported on the drive-wheel at the rear and pivotally connected to standards on the gear-shoe at its front end, the forward-projecting arms 8 9, pivotally connected at their rear ends to the standards of the gear-shoe, the front carriage carrying the front ends of the arms 8 9, the seat-platform arranged on the machine with its front end to slide on the front carriage, the rack-bar 15, connected to the gear-shoe and projected through the seat-platform, and a lever mounted on the platform, having a segmental rack to engage the rack-bar and fit the gear-shoe and frame-bars, substantially as described.

3. The combination, with the driving-wheel, the gear-shoe, and the front carriage, of the main frame supported at the rear on the drive-wheel and having the front ends pivotally connected to standards on the gear-shoe, the forward-projecting arms 8 9, having their rear ends pivotally connected to the standards of the gear-shoe and their front ends secured to the front carriage, the seat-platform supported

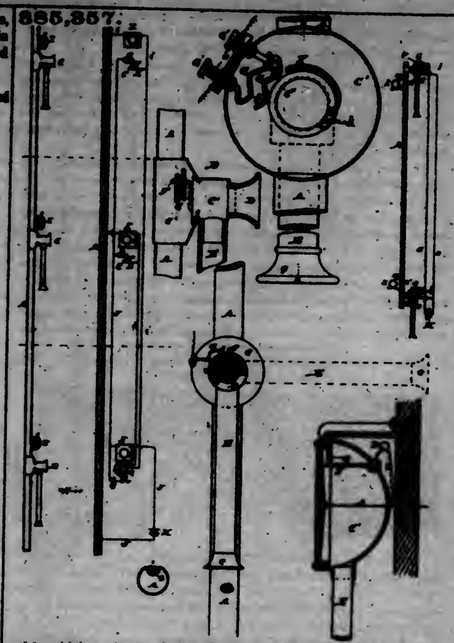
at its rear on the main frame and at its front on the front carriage, and formed at its front end with a slot, 10, to engage the king-bolt in the front carriage, and a lever mounted on the seat-platform connected with the gear-shoe to lift it, substantially as described.



385,355. BALING-PRESS. ARMAN JAMISON, Wilmot, Ill. Filed Mar. 19, 1888. Serial No. 267,722. (No model.)

Claim.—1. The combination of the press-boxes having the closed outer ends, the plungers moving therein and carrying the pins D on their upper sides, and the ropes E, secured permanently to the closed ends of the press-boxes and having the loops F on their free ends adapted to engage the pins D, whereby, when the plunger is withdrawn, the bale will be raised, as set forth.

2. The combination of the frame-work having the press-boxes at its ends, the plungers working in the press-boxes, the jointed levers extending between the plungers and connected thereto, the windlass erected centrally in the frame-work, the cables O, secured to the windlass and the plungers, and the cables P, secured to the windlass and the joints of the levers, as set forth.



385,356. COPYING-PRESS. JEREMIAH P. JOHNSON, Detroit, Mich. Filed June 25, 1887. Serial No. 242,287. (No model.)

Claim.—1. In a letter-press, the combination of the frame B and platen C, having a vertical adjustment in said frame, with the toggle-levers G G', threaded bolts D F, the latter pivotally connected directly to the upper ends of the toggle-levers, bifurcated lever H, and links I, the parts being constructed, arranged, and operating substantially in the manner and for the purpose described.

2. In a letter-press, the combination of the bed A, frame B, platen C, screw-bolts D F, turn-buckle E, toggle-levers G G', bifurcated lever H, links I, spring J, and stop *c*, all combined and operating substantially in the manner and for the purpose described.

385,357. SPEAKING AND SIGNALING APPARATUS. JOHN R. KELLY, Camden, N. J. Filed May 12, 1887. Serial No. 238,017. (No model.)

Claim.—1. The combination of a speaking-tube, two mouth-pieces, and hearing or ear pieces, arranged in pairs and at a distance apart, and in which each mouth-piece has a movable ear-piece, an electric circuit, including electric signals in said circuit and located near the ear-piece, and switches operated by the movable ear-piece to complete or break said circuit to ring the distant signal.

2. The combination of a speaking-tube, two mouth-pieces, and hearing or ear pieces, arranged in pairs and at a distance apart, and in which each mouth-piece has a movable ear-piece, an electric circuit, including electric signals in said circuit and located near the ear-piece, and switches operated by the movable ear-piece at one transmitter to complete or break said circuit to ring the home and also the distant signal.

3. The combination of an office speech-transmitting instrument, two or more distant transmitting-instruments, the office-transmitter having a movable ear-piece, electric signals at the office and distant transmitting-instruments, a separate electric circuit to connect each of the distant signals with the office, two or more circuit-controlling devices operated by the movable ear-piece of the office-transmitter, and key-board to bring either circuit-controlling device into operative position.

4. The combination of an office speech-transmitting instrument, two or more distant transmitting-instruments, all of said instruments having movable ear-pieces, electric signals at the office and distant transmitting-instruments, a separate electric circuit to connect each of the distant signals with the office, two or more circuit-controlling devices operated by the movable ear-piece of the office-transmitter, a key-board to bring either circuit-controlling device into operative position, and a signal in the office, also operated by the movable ear-piece, whereby the office and distant signals are simultaneously rung.

5. The combination of an office speech-transmitting instrument, two or more distant transmitting-instruments, all of said instruments having movable ear-pieces, electric signals at the office and distant transmitting-instruments, a separate electric circuit to connect each of the distant signals with the office, two or more circuit-controlling devices operated by the movable ear-piece of the office-transmitter, a key-board to bring either circuit-controlling device into operative position, an electric circuit from said distant transmitting-instruments, including the office-signal, and circuit-controlling devices operated by the movable ear-piece of either of said distant transmitters.

6. The combination of an office speech-transmitting instrument, two or more distant transmitting-instruments, all of said instruments having movable ear-pieces, electric signals at the office and distant transmitting-instruments, a separate electric circuit to connect each of the distant signals with the office, two or more circuit-controlling devices operated by the movable ear-piece of the office-transmitter, a key-board to bring either circuit-controlling device into operative position, an electric circuit from said distant transmitting-instruments,

including the distant and office signal, and circuit-controlling devices operated by the movable ear-piece of either of said distant transmitters to simultaneously ring the office and distant signals.

7. A speech-transmitting instrument consisting of a stationary part and a movable ear-piece, a signaling contact-finger secured to the stationary part, and a signaling contact-finger secured to the movable ear-piece, said contacts being insulated from each other and adapted to touch upon moving the ear-piece, and a signaling-circuit including said contacts.

8. A speech-transmitting instrument consisting of a stationary part and a movable ear-piece, in combination with two or more movable signaling contact-fingers carried by the stationary piece, and a movable signaling contact-finger carried by the ear-piece, whereby either contact carried by the stationary piece may be moved into operative position for contact with the movable contact-finger carried by the ear-piece, and signaling-circuits, each including one of said contacts.

9. The combination of stationary part C³ with movable part C of a transmitting device for speech, a movable spring contact-finger, F, secured to part C, and a stationary contact-finger, G, made W-shaped, to interrupt the circuit, substantially as and for the purpose specified.

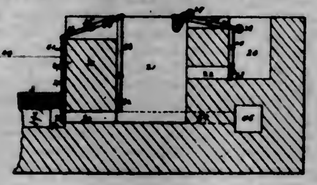
385,358. COFFER-DAM. ARMEN KIRK, Sharpsburg, Pa. Filed July 2, 1888. Serial No. 30,720. (No model.)

Claim.—1. The combination of an air-tight pontoon or float provided with a suitable scuttle-valve and with pipes for exhausting the water therefrom and admitting it thereto, with the platform placed on top and hinged to one side of the same, substantially as and for the purposes described.

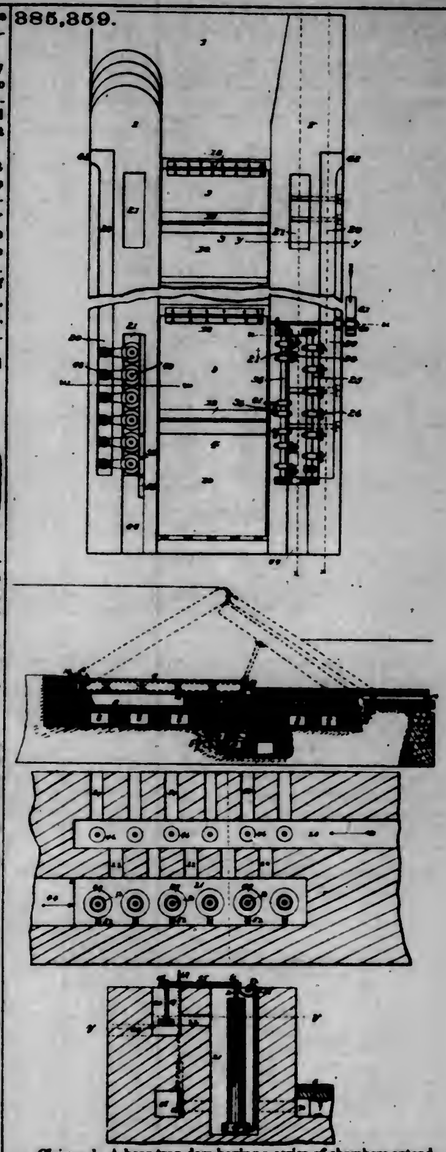
2. The combination of an air-tight float having means for admitting and exhausting water therefrom, with a platform placed upon and hinged thereto, and movable braces for sustaining the platform in an inclined position on the pontoon, substantially as and for the purposes described.

3. The combination of an air-tight float having means for admitting and exhausting water therefrom, with a platform placed upon and hinged thereto, pivoted braces for sustaining the platform in an inclined position, and means for withdrawing the said braces from their supporting position to permit the return of the platform to its normal position, substantially as and for the purposes described.

4. A tipping dam having a mat or cushion of fibrous material at its lower outer corner or edge, and a skirt of gum-cloth or similar material secured along its outer edge, substantially as and for the purposes described.



5. A tipping-dam platform provided with a skirt attached by one edge to its outer side, in combination with movable pins placed in sockets in the upper side of the platform, bolts projecting below the lower side for dislodging the pins, and cords fastened to the outer edge of the skirt, secured to the pins and extending to the inner side of the platform, substantially as and for the purposes described.



6. A tipping-dam platform pivoted at or near the middle to a suitable pontoon or base, so that one edge shall project beyond the same over the water, in combination with a tank extending along said projecting edge, and means for admitting and removing water from the tank, substantially as and for the purposes described.

7. A tipping-dam platform provided with tanks extending along its inner and outer edges, and with pipes for admitting and withdrawing water from the tanks, substantially as and for the purposes described.

8. A tipping-dam platform pivoted at or near its middle to one edge of its support, with one edge projecting beyond the side of the support, so as to be capable of being tipped downward to constitute a dam, substantially as and for the purposes described.

385,359. NAVIGATION-LOCK. ARMEN KIRK, Sharpsburg, Pa. Filed July 2, 1888. Serial No. 30,742. (No model.)

Claim.—1. A bear-trap dam having a series of chambers extending longitudinally of the dam under the same and communicating with the inlet and outlet openings, in combination with a floor having holes extending vertically from said chambers up to the gates, substantially as and for the purposes described.

2. A bear-trap dam, in combination with a shaft extending under the gate, and pitmen pivotally connected to such shaft and gate, substantially as and for the purposes described.

3. A lock having a bear-trap gate or gates, in combination with a forebay communicating with the upper pool and with the under side of the gate or gates, and an elevated tail-sheate for sustaining the gate at the desired level, substantially as and for the purposes described.

4. A lock having a bear-trap gate or gates, in combination with inlet and outlet passages controlled by suitable valves for admitting water to and discharging it from under the gate or gates, said valves being connected with and operated by a common shaft, whereby the outlet-passages are closed as the inlet-passages are opened, and vice versa, substantially as and for the purposes described.

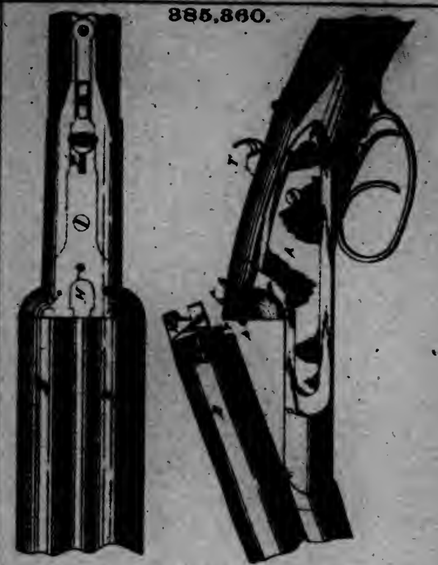
5. A lock having a bear-trap gate, in combination with a forebay, an intermediate supply-chamber, passages controlled by valves leading from the forebay to the supply-chamber and from the supply-chamber to below the gate, a discharge-passage leading from under the gate, and a valve controlling said passage, whereby the entrance of the water to the gate and its discharge therefrom may be regulated or controlled, substantially as and for the purposes described.

6. The combination, in a bear-trap dam, of an inlet or discharge valve, with devices for causing the closing or opening of the same, respectively, automatically by the gate itself when raised to an abnormal height, substantially as and for the purposes described.

7. The combination, in a bear-trap dam, of inlet and discharge passages controlled by valves, with devices for automatically closing and opening the same, respectively, by the gate itself when raised to an abnormal height, substantially as and for the purposes described.

8. The combination, with a bear-trap dam having inlet-passages through the end wall for admitting the water under the dam to raise it, of an inlet-valve secured to one end of a pivoted lever, tanks or buckets with a retarded outlet mounted on the other end of the lever, and when filled capable of overbalancing and thereby opening or closing the valve, and a pipe for discharging water into the buckets, substantially as and for the purposes described.

9. The combination of a bear-trap dam, which opens below the lower level of the stream, with devices for raising and discharging the water from under the gate, substantially as and for the purposes described.

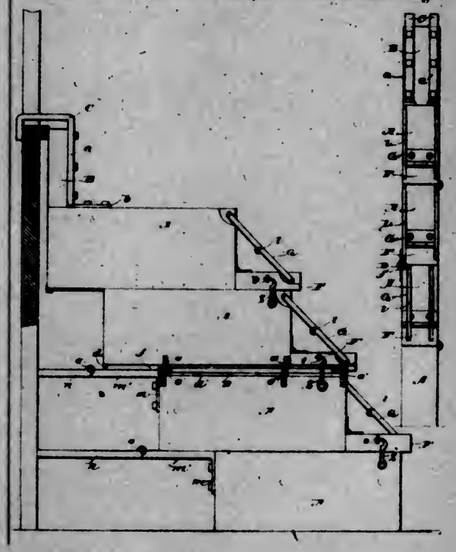


10. The combination of a bear-trap dam which when open is below the lower level of the stream, with an elevated forebay, turbine wheels placed and operating in the forebay, and pumps placed below the level of the gate and operated by the turbine wheels for raising and discharging the water from under the gate, substantially as and for the purposes described.

11. In combination with a bear-trap dam having outlet-valves, a paddle or bucket placed above the ordinary level of the stream so as to be acted upon thereby when at an abnormal height, and power connections between the said paddle and the outlet-valves of the dam, substantially as and for the purposes described.

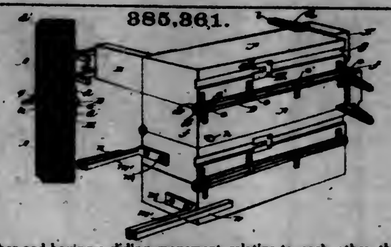
385,360. CHARGE-INDICATOR FOR BREECH-LOADING FIRE-ARMS. RASMUS M. LEUVER, Syracuse, N. Y., assignor to the Le Power Arms Company, same place. Filed June 18, 1887. Serial No. 241,703. (No model.)

Claim.—1. The combination, with the barrel of a breech-loading fire-arm formed with a recess in its rear end, separated by a perforated web of metal from the base, of an indicator-pin having an inclined end projected into said base, a spring seated in the recess to bear on the indicator, and a screw-cap for holding the spring in place, perforated for the passage of the stem of the indicator, substantially as and for the purpose set forth.



2. The combination, with the barrel B, formed with a recess, *d*, having a slotted bottom web, of the indicator *a*, formed with the shouldered spring-seat *c* and inclined extension *b*, the spring *f*, and the confining screw-cap *e*, all constructed and arranged for use substantially as and for the purpose set forth.

385,361. FIRE-ESCAPE. SOLOMON LEVY, Harrisonville, Mo. Filed Mar. 13, 1888. Serial No. 267,169. (No model.)



Claim.—1. The combination, in a fire-escape, of a series of hinged blocks having a longitudinal sliding movement relative to each other and devices for locking said sections together after each sliding movement, as set forth.

2. The combination, in a fire-escape, of a series of hinged blocks adapted to slide relative to each other and a hinged step connected to each block, as set forth.

3. The combination, in a fire-escape, of a series of blocks hinged

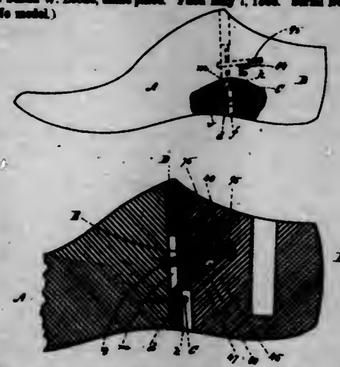
385,861.

together and having a sliding movement relative to each other, the top block being provided with grappling-hooks, as set forth.

4. The combination, in a fire-escape, of a series of pivoted blocks having a sliding hinged connection, each block having a groove and key-plate in its lower face and a pin upon the upper face, as set forth.

5. The combination, in a fire-escape, of a series of blocks having alternate-sliding hinged connections, as set forth.

6. The combination, in a fire-escape, of a series of blocks each having one of its corners beveled and located adjacent to the beveled face of the block beneath, eyebolts located at said beveled edges, and a rod passing through both sets of eyebolts, as set forth.



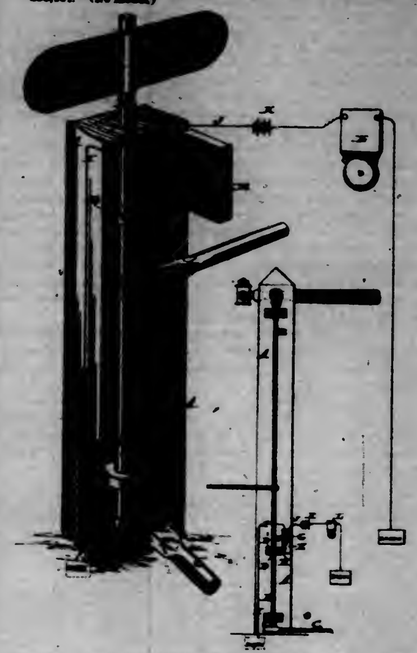
7. The combination, in a fire-escape, of a series of blocks having a sliding hinged connection and a hinged step connected to the end of block and connected by braces having rule-joints, as set forth.

8. The combination, with the sliding blocks, of a hinged step connected to the end of each block and connected by braces having rule-joints, and hooks located on the sides of the blocks for engaging loops on the side of the step, as set forth.

9. The combination, with the blocks, of a hinged step connected to the end of each block, the lower step being slotted, and rule-joint brace having its lower end pivoted in said slot, as set forth.

10. The combination of the series of blocks and the end braces secured thereto and consisting of a fixed and a swinging member, as set forth.

385,862. LAST. EDWARD G. LOCKE, Weymouth, Mass., assignor to Susan W. Locke, same place. Filed May 7, 1888. Serial No. 273,033. (No model.)



Claim.—1. In a boot or shoe last, the body-section A, provided with the groove *m*, eye C, and spring *f*, and the heel-section B, provided with the socket *h*, guide-piece D, and plate E, having the notched bar *d*, combined and arranged to operate substantially as described.

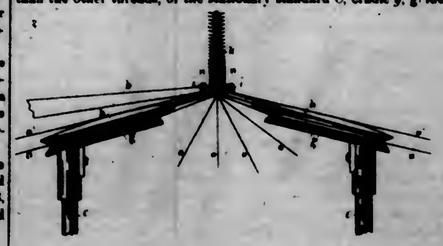
2. In a boot or shoe last, a section, as A, provided with a socket, as *t*, for receiving the end of the locking-bar, and a section, as B, provided with a socket, as 40, a slot, as 64, opening into the socket 40, a stop-plate, as 47, a spring, as 95, and a locking-bar, as 75, said stop-plate, spring, and bar being disposed in the socket 40, and said bar provided with a spur, as 80, and adapted to enter the socket *t*, substantially as set forth.

3. In a boot or shoe last, the body-section A, provided with the groove *m*, socket *t*, eye C, and spring *f*, and the heel-section B, provided with the socket *h*, guide-piece D, socket 40, spring 95, stop-plate 47, locking-bar 75, having the spur 80, and the plate E, having the notched bar *d* and hole 88, all being combined and arranged to operate substantially as described.

4. In a boot or shoe last, the body-section A, provided with the eye C and having the socket *v* and spring *f*, said spring being disposed longitudinally in said socket, in combination with the heel-section B, provided with the bar *d*, having the notch *i*, said notch being provided with inclined sides, substantially as set forth.

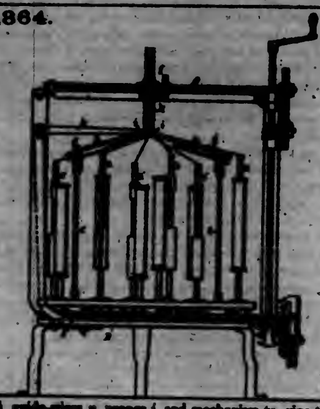
385,868. SWITCH-SIGNAL. ARMAND F. HARRIS, Montreal, Quebec, Canada, assignor of three-fourths to Jean Baptiste Amable Bourgeois, Bignal, and Narcisse Dresseau and Marie H. Philomène Guig, both of Montreal, Quebec, Canada. Filed Oct. 22, 1887. Serial No. 253,101. (No model.)

Claim.—1. In combination with post A and shaft B, a collar, D, provided with pin D' and secured to the shaft, contact-arms F G, mounted upon the post or a plate thereon and included in an electric circuit, a link, H, connected at opposite ends with the pin D' and arm G, and a bell or signal also located in the circuit.



2. In combination with post A, a shaft, B, provided with a two-part collar, D, having a pin, D', an electrical circuit, contact-arms F and G, secured to the post and included in the circuit, a link connecting the pin D' and the arm G, and a bell or signal included in the circuit.

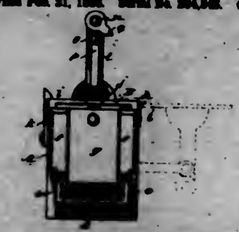
3. In combination with a switch-stand and its operating-shaft, the devices herein described for electrically indicating whether the switch is open or closed, comprising a plate with suitable contact-fingers, a collar provided with a pin or stud and secured to the operating-shaft, a link connecting the pin or stud with one of the contact-arms, wires I and J, connected with the contact-arms and with the earth, and a battery and an alarm or signal also included in the circuit formed by the wires and the contact-fingers.



385,864. BRAIDING-MACHINE. JOHN MCCARRY, Providence, R. I., assignor to the New England Butt Company, same place. Filed Mar. 9, 1888. Serial No. 266,709. (No model.)

Brief.—The object of the invention is to produce improved mechanism for making loop-edged braid.

Claim.—1. The combination, with mechanism for interbraiding threads, embracing devices for carrying intermediate threads higher than the other threads, of the stationary standard C, cradle *g*, guide-



385,864.

holder A, guide-wires *n*, prongs *i*, and mechanism to give the prongs an intermittent motion.

2. The combination, with mechanism for interbraiding threads, having two sets of guide-bars of different lengths, of the stationary standard C, cradle *g*, guide-holder A, guide-wires *n*, prongs *i*, cam *c*, lever *b*, and spring *d*, substantially as and for the purpose set forth.

385,865. SAD-IRON. PETER KIESELS and JOSIAH KLEMMER, Chicago, Ill. Filed Feb. 21, 1888. Serial No. 264,963. (No model.)

Claim.—In a sad-iron, the combination, with casing or body A, of cover B, secured by hinge *h* and provided with standards *l*, for securing handle *m*, one of which standards *l* has a shoulder, *q*, and of arm *p*, pivoted against each standard *l* and swinging against shoulder *q*, all substantially as set forth.

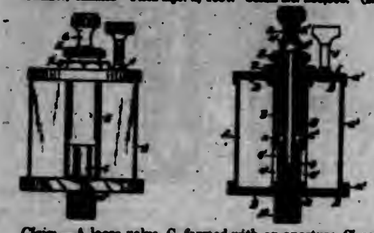
385,866. WRENCH. JAMES P. HUTCHINS, New Bedford, Mass. Filed Mar. 22, 1888. Serial No. 268,178. (No model.)

Claim.—In a wrench, the combination of the jaw *a*, having angular recess *c*, shank *d*, exteriorly screw-threaded at *e* and provided with the stop *k*, the jaw *b*, having angular recess *c*, rectangular opening *s*, round opening *w*, and shoulder *i*, the tube *g*, having enlarged head or shoulder *h* and interiorly screw-threaded in a portion of its length, the remaining portion enlarged to the depth of the screw-thread and provided with the holes *t x v*, the collar *m*, adapted to be rigidly secured to the tube *g*, and the handle *x*, adapted to be secured to and inclose that portion of the tube *g* which projects below the collar *m*, all as shown and described.

385,867. PROCESS OF RECOVERING GLYCERINE FROM SPENT SOAP-LYES. BENJAMIN K. HUTCHIN, Brooklyn, N. Y., assignor to Joseph Gleis, same place, and Albert Bommer, London, England. Filed Sept. 16, 1887. Serial No. 249,761. (No model.)

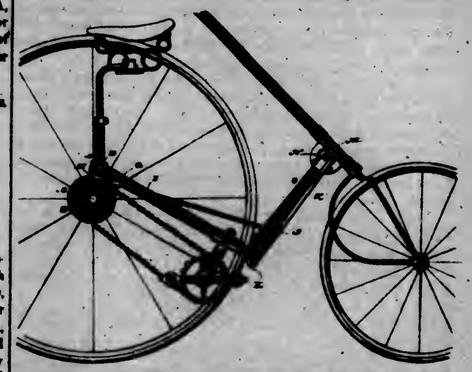
Claim.—1. The process herein described of treating lye for the recovery of glycerine, which consists in first adding acid to neutralize any free alkali, then heating the lye, and in then adding a soluble salt, of barium or strontium, and, finally, sulphuric acid, as set forth.

2. The process herein described of treating lye for the recovery of glycerine, which consists in adding thereto a soluble salt of barium, and in then adding sulphuric acid and producing in the lye the insoluble sulphate of baryta, which constitutes a mechanical carrier of the precipitate in the lye, as set forth.



3. The process herein described of recovering glycerine from lye, which consists in first adding acid to neutralize any free alkali, next adding a soluble salt of barium, then adding sulphuric acid, then an alkali, and, finally, concentrating the remaining liquid by boiling, as set forth.

385,868. BASE-BURNER. SAMUEL HYDES and MARION H. WHITE, Manheim, Pa. Filed Oct. 24, 1887. Serial No. 252,902. (No model.)

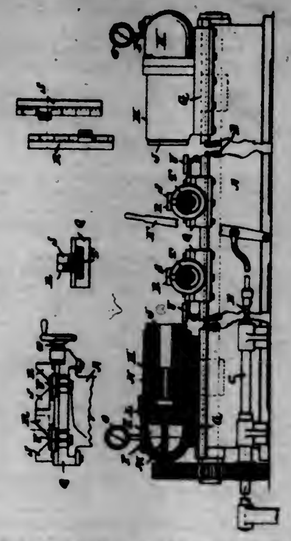


Claim.—A cook-holder comprising the plates C C, secured together and having the aligned grooves G G in their inner faces, thereby forming sockets, the spring-loop H, secured at the ends in the said sockets, and the roller journaled on the end of the loop, substantially as and for the purpose specified.

385,869. AUTOMATIC LUBRICATOR. THOMAS HOPPER, London, Ontario, Canada. Filed Apr. 2, 1887. Serial No. 233,203. (No model.)

Claim.—A loose valve, C, formed with an aperture, C', extending longitudinally through the same to permit the free access of air to the lubricant under the valve, and to allow the lubricant to flow regularly and perfectly true when the valve is raised, in combination with a guide, E, set-nut G, formed with a longitudinal aperture, G', and reservoir A, substantially as shown and described, and for the purpose set forth.

385,870. BRAKE FOR VELOCIPEDES. ALBERT H. OVERMAN, Boston, and CHARLES F. HARLEY, Chicopee, assignors to the Overman Wheel Company, Boston, Mass. Filed Sept. 6, 1887. Serial No. 249,095. (No model.)



Claim.—1. In a velocipede, the combination, with a drum located upon the driving-axle, of a strap for engaging the periphery of such drum and provided with an opening located near its fixed end, a rod connected with the free end of the strap through such opening, and a foot-lever fulcrumed to the machine-frame and having the rod pivoted to it, substantially as set forth.

2. In a velocipede, the combination, with a drum located upon the driving-axle, of a strap for engaging the periphery of such drum, a threaded sleeve connected with the free end of the strap, a rod threaded into such sleeve, and a foot-lever fulcrumed to the machine-frame and having the rod pivoted to it, substantially as set forth.

3. In a velocipede, the combination, with a drum, of a strap for engaging the periphery thereof, a rod connected with the free end of the strap, a foot-lever fulcrumed to the frame of the machine and having the rod pivoted to it, and a foot-rest holding the foot-lever in place, substantially as set forth.

385,871. AXLE-COLLAR PRESS. ANDREW PATTERSON, Highland Park, Pa., assignor to the National Tube Works Company, Boston, Mass. Filed Mar. 5, 1888. Serial No. 266,242. (No model.)

Claim.—1. In an axle-collar press, the combination, substantially as set forth, with means for holding an axle, of a socket arranged for forcible movement longitudinally upon the end of the axle, a plunger fitted therein and adapted to go over the end of the axle and bear upon the collar to be pressed thereon, and a plunger to the rear of said plunger arranged to make contact at the end of the axle and limit the degree of advance of the axle within the socket.

2. In an axle-collar press, the combination, substantially as set forth, with means for holding an axle, of a socket arranged for forcible movement longitudinally upon the end of the axle, a plunger fitting said socket and adapted to receive the end of the axle and press against the collar, a water-cylinder arranged to the rear of said socket provided with a pressure-indicator, and a piston in said water-cylinder arranged to receive pressure from said plunger.

3. In an axle-collar press, the combination, substantially as set forth, with means for holding an axle, of a socket arranged for forcible movement longitudinally upon the end of the axle, a plunger fitting said socket and adapted to engage the end of the axle and the collar thereon, a water-cylinder to the rear of said socket provided with a pressure-indicator, and a piston in said water-cylinder arranged to receive pressure from said plunger and provided with a stop-piece to limit its retreat.

4. In an axle-collar press, the combination, substantially as set forth, with means for holding an axle, of a socket arranged for forcible movement longitudinally upon the end of the axle, a separable plunger fitting said socket, and having a bore suited to the diameter of axle being operated upon and having a length suited to the spindle length of the axle, and a separable plunger to the rear of said first-mentioned plunger, having a bore suited to the nipple of the axle being operated upon.

5. In an axle-collar press, the combination, substantially as set forth, of a bed provided with means for holding an axle, a saddle fitted to slide on said bed and carrying an axle-forcing socket, a screw journaled in said bed and engaging said saddle, and a driving-shaft arranged for the transmission of motion to said screw, and friction-pulleys upon said driving-shaft.

6. In an axle-collar press, the combination, substantially as set forth, of a bed, A, saddles G, fitted thereon, sockets H, carried thereby, means, substantially as described, for forcibly approaching the saddles, water-cylinders K, provided with pressure indicators and pistons, and plungers within the sockets adapted for engagement with the ends of the axles.

7. In an axle-collar press, the combination, substantially as set forth, of a bed, a saddle upon each end thereof fitted for sliding movement thereon, plunger-receiving sockets carried by said saddles and adapted to engage the ends of axles, and means, substantially as described, for moving the two saddles to and from each other.

8. In an axle-collar press, the combination, substantially as and for the purpose set forth, of a bed, saddles carrying sockets and plungers and fitted for movement thereon, means, substantially as described, for moving the saddles to and from each other, rests Q, supported by the bed between the saddles, jaw-pieces R and S, disposed in pairs alongside each other and fitted for sliding motion in the rests transverse to the bed, and provided with oppositely-facing inclined upward projections, and screws T, for adjusting said jaw-pieces endwise with reference to each other.

9. In an axle-collar press, the combination, substantially as set forth, of a bed, saddles fitted to slide thereon and carrying sockets and plungers, means, substantially as described, for moving said saddles to and from each other, and vertically-adjustable gage-tables U, disposed below the axial lines of said sockets.

10. In an axle-collar press, the combination, substantially as set forth, of a bed, pressing-sockets carrying plungers and fitted for sliding movement on said bed, screw B, engaging said saddles, hollow driving-shaft C, geared to said screw, friction-clutches D on said driving-shaft, clutch-rod E, disposed in the hollow of said driving-shaft, and arranged, substantially as described, for operating said friction-clutches, and hand-lever F, for longitudinally shifting said rod.

11. In an axle-collar press, the combination, substantially as set forth, of a bed, a screw journaled therein, means, substantially as described, for rotating said screw in either direction, saddles G, fitted to slide on said bed and engaging said screw, sockets H, carried by said saddles and provided with plungers, rests Q, adjustably secured to said bed between said saddles, and rest-jaws R and S, carried by said rests.

385,872. CARPET-STRETCHER. SHERMAN S. PEASE, Halsey, Oreg. Filed Dec. 14, 1887. Serial No. 257,886. (No model.)

Claim.—1. The combination, with the upright and the arm C, secured thereto and extending at right angles therefrom, of the curved rack uniting the outer end of the arm with said upright, the lever pivoted to said arm near the base of the upright, and the claw carried by said lever and working in the guide at the junction of the arm and rack, substantially as described.

2. The combination, with the upright formed with handle and grip, and the arm C, extending at right angles from the base of said upright, of the curved bar uniting the outer end of said arm and the upright, the slotted lever embracing said arm and bar, and the claw pivoted between the bifurcations of the lever and working through a guide at the junction of the arm and bar, substantially as shown and described, and for the purpose specified.

385,873. METHOD OF MAKING CUT NAILS. REUBEN H. PLAIS, New York, N. Y. Filed Sept. 10, 1888. Serial No. 313,817. (No model.)

Claim.—The improvement in the method of making cut nails which consists in rolling a piece of metal into sheets, to provide said sheets with heads or flanges at each edge and a corresponding flange of double width along the center, each of said flanges projecting a uniform distance beyond both surfaces of the sheet, and then stamping, cutting, or shearing out the finished nails in such manner that the smaller portion of one nail is adjacent to the larger portion of the next nail, substantially as described.

385,874. THILL-COUPLING. PHILIP A. REMY, Holden, Mass., assignor of one-half to Albert M. Hitz, same place. Filed Feb. 16, 1888. Serial No. 264,267. (No model.)

Claim.—1. In a thill-coupling, the combination of the clip, two parallel lugs thereon, and two rollers pivoted between said lugs, said

385,874.

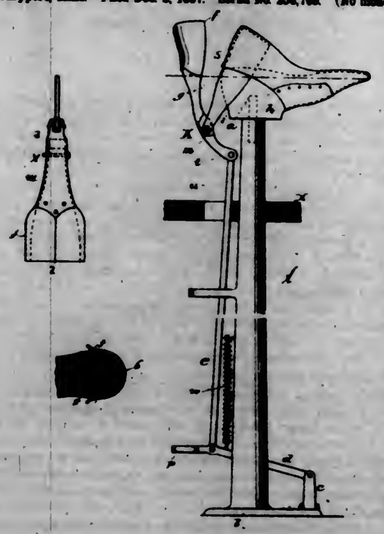
rollers being located so as to receive a thill-iron between them, and one of said rollers having a circumferential groove to receive the thill-iron, substantially as and for the purpose set forth.

2. The combination of the clip A, provided with lugs B B, rubber roller C, roller D, pivots *c* and *d*, thill-iron E, and strap F, substantially as described.

3. The combination of the clip A, provided with lugs B B, roller C, having a circumferential groove, roller D, thill-iron E, formed to partly surround the roller D, and the strap F, substantially as described.

4. The combination of the clip A, provided with lugs B B, roller C, having a metallic bushing, roller D, and pivots *c* and *d*, said rollers being suitably formed and located to receive and press upon a thill-iron between them, substantially as set forth.

385,875. GRAIN-ADJUSTER FOR BINDERS. HERBERT O. BENSON, Minneapolis, Minn. Filed Nov. 10, 1887. Serial No. 254,732. (No model.)

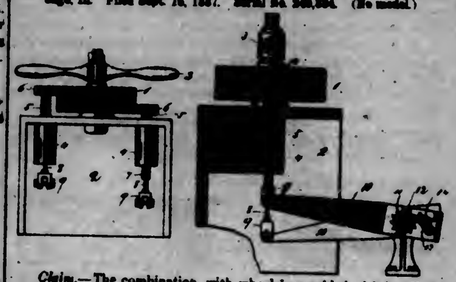


Claim.—1. In a butt-adjuster for grain-binders, an endless slatted adjuster-belt having the non-elastic portion 5, the elastic portion 6, and the slats 7, in combination with the rivets 10 and washers 11, for joining the ends of the elastic and the non-elastic portions and attaching the slats thereto at the junction thereof, as described.

2. In a butt-adjuster for grain-binders, an endless slatted adjuster-belt formed partly of elastic and partly of non-elastic material, and having the junction of the latter with the former made at the point of attachment of the slats, whereby the same means used to attach the slats to the belt may be used to join the ends of the elastic and non-elastic portions, in combination with the adjuster-frame 1, the supporting-bracket 2, and the removable clip 3, whereby the adjuster-frame may be removed from the supporting-bracket to remove or replace the adjuster-belt, as described.

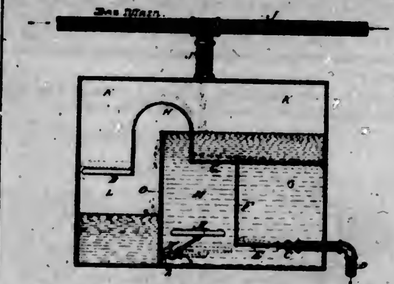
3. In a butt-adjuster for grain-binders, an endless slatted adjuster-belt formed partly of elastic and partly of non-elastic material, and having the union or junction of the former with the latter made at the point of attachment of the slats, whereby the same means used to attach the slats to the belt may be used to join the ends of the elastic and non-elastic portions, substantially as described.

385,876. RELASTING-MACHINE. WARREN R. SARGENT, Newburyport, Mass. Filed Dec. 2, 1887. Serial No. 256,769. (No model.)



Claim.—1. The herein-described relasting-machine for turned boots and shoes, which consists of a relasting-horn, *g*, and auxiliary horn *f*, with their co-operating mechanism, in combination with a relasting-post, A, constructed and adapted as and for the purpose specified.

2. In a relasting-machine for turned boots and shoes, the auxiliary horn *f*, with the slot *l* and shank *m*, or its equivalent, constructed and adapted as and for the purpose specified.



3. In a relasting-machine for turned boots and shoes, the relasting-post A, having a projecting shaft, *a*, and iron shoe *l*, with the beam *e* and the treadle-lever *d*, in combination with the spiral spring *w*, the connecting-bar *c*, auxiliary horn *f*, and relasting-horn *g*, constructed and arranged as and for the purposes set forth.

385,877. MECHANICAL MOVEMENT. JOHN F. SCHEETTER, Chicago, Ill. Filed Sept. 16, 1887. Serial No. 249,804. (No model.)

Claim.—The combination, with wheel 1, provided with handle 3 two oppositely-threaded screws, 5, with pinions 6, and with connecting-rods 8, of levers 10, pivoted on shaft 11, and provided with ratchet wheels 12, mounted upon such shaft 11, all substantially as described to operate as specified.

385,878. DEVICE FOR REMOVING WATER FROM GAS AND OTHER PIPES. JAMES F. SHAY, Toledo, Ohio. Filed July 7, 1887. Serial No. 243,615. (No model.)

Claim.—1. As a draining device for gas, steam, or other pipes, the combination of a fluid receptacle or tank, a discharge-valve controlling it, a secondary fluid-receiving chamber or receptacle, and a float situated within this secondary chamber and controlling the discharge-valve, substantially as and for the purposes described.

2. As a draining device for gas, steam, or other pipes, the combination, with the tank having two compartments or chambers, L and M, connected by an overflow, of a discharge pipe and valve in one chamber, M, a float in the other chamber, L, controlling the valve of the chamber M, and a discharge-valve from the chamber L, which valve is opened by the fall of water in the chamber M, substantially as and for the purposes described.

385,879. CURRENT-COLLECTOR FOR SERIES ELECTRIC RAILWAYS. ERNEST H. SHORT, Denver, Colo., assignor, by direct and mesne assignments, to the United States Electric Company, same place. Filed Feb. 16, 1887. Serial No. 226,924. (No model.)

Claim.—1. The current-gatherer for electrical railways, composed of a bar of insulating material provided with contact conducting-strips connected to said bar and adapted to move thereon when the bar is bent, whereby buckling of the strips is prevented, substantially as described.

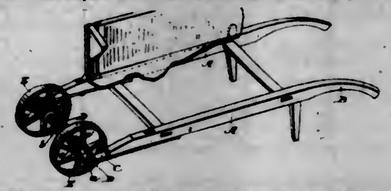
2. The current-gatherer for electrical railways, composed of a bar of insulating material provided with metallic strips on its sides, strips being bent around the ends of the bar and arranged to leave insulated spaces on the bar between the ends of the strips, said strips

385,379.

being connected to the bar by slipping connections, substantially as described.

3. The combination, with a current-collector consisting of an insulating-bar having metallic contact-strips upon its sides, insulated supports for said bar, a shoe connected with said supports and adapted to travel above the slot of the conduit, guides at each end of said shoe adapted to travel within the slot, and wearing-plates connected on each side of the insulated supports on the line of the slot, above and below the same, substantially as described.

4. In combination, an insulated bar having contact-strips upon each side, shoes for supporting said insulated bar, adapted to travel above the slot of the conduit, guides on said shoes extending into the conduit, and stay-rods m between the series of shoes, substantially as described.



385,380. PIANO. FREDERICK G. SMITH, Brooklyn, N. Y. Filed Nov. 26, 1887. Serial No. 256,147. (No model.)

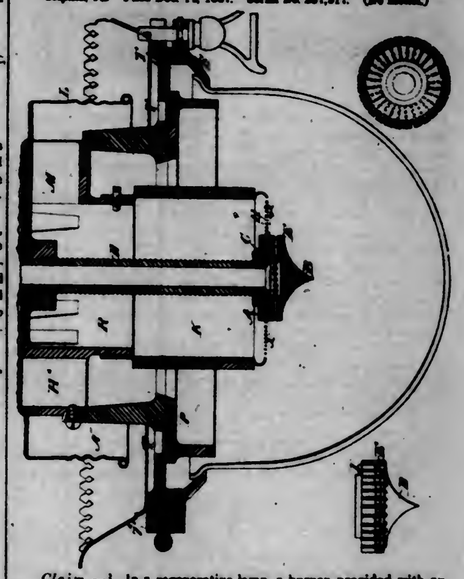
Claim.—1. In combination with the bottom frame and pedals of a piano, said pedals having horizontal pivots, a front plate attached to the face of said frame and having on its back abutments, upon the shoulders of which said pivots are supported, substantially as herein-before set forth.

2. In combination with the bottom frame and pedals of a piano, the front rail of said bottom frame having recesses in its lower edge to accommodate the shanks of said pedals, and the latter having horizontal pivots at the face of said rail, a front plate attached to said face of the front rail and having openings which coincide with said recesses, and bottom guards integral with the body of the plate to partly close said openings beneath the pedals, substantially as herein-before set forth.

385,381. WHEELBARROW. CHARLES D. SPALDING, Rice Lake, Wis. Filed Apr. 7, 1888. Serial No. 269,949. (No model.)

Claim.—As a new article of manufacture, the wheelbarrow A, having the usual handles, B, terminating forwardly in the bearing-shaft D, whereon two wheels, E, are adjustably mounted by reason of the collar *c*, having a bayonet-joint, *c*², and a set-screw, *c'*, whereby the distance between said wheels is variable and their directions of motions in turning opposite to each other.

385,382. COMBINED HARROW AND PULVERIZER. JONATHAN F. STARK, Losta, Ind. Filed Feb. 25, 1888. Serial No. 265,244. (No model.)

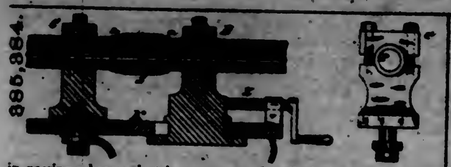


Claim.—1. The combination, with the main frame, of the drums mounted therein, the carrying-wheels, the gear-wheels E on the shafts of the carrying-wheels, the gear-wheels *a* on the shafts of the drums, the yokes *d*, pivoted to the main frame, and the gear-wheel J, carried by said yokes and adapted to mesh with the gear-wheels E and *a*, as set forth.

2. The combination of the main frame, the drums mounted therein, the gear-wheels *a* on the shafts of the drums, the carrying-wheels, the gear-wheels E on the shafts of the carrying-wheels, the standards *b* on the main frame, the yokes *d*, pivoted at their lower ends to the main frame and adjustably connected at their upper ends to the standards *b*, and the gear-wheel J, carried by the yokes and adapted to mesh with the gear-wheels E and *a*, as set forth.

3. The combination of the main frame having the slotted side bars, the drums mounted in the said frame, the gear-wheels *a* on the shafts of the drum projecting through the slotted side bars of the main frame, the stub-shafts F, mounted in the said side bars, the carrying-wheels mounted on said shafts, the gear-wheels E, mounted on said shafts and projecting through the slotted side bars, the standards *b*, erected on the side bars, the yokes *d*, pivoted at their lower ends to the side bars and adjustably secured at their upper ends to the standards *b*, and the gear-wheel J, carried by said yokes and adapted to engage the gear-wheels E and *a*, as set forth.

385,383. REGENERATIVE GAS-LAMP. SAMUEL SUSSE, Philadelphia, Pa. Filed Dec. 14, 1887. Serial No. 257,917. (No model.)



Claim.—1. In a regenerative lamp, a burner provided with an interior gas-chamber and radial gas-conduits leading outward therefrom, together with vertical slits or air-conduits on the outside of said burner, through which the air passes downward between the gas-conduits, as and for the purposes described.

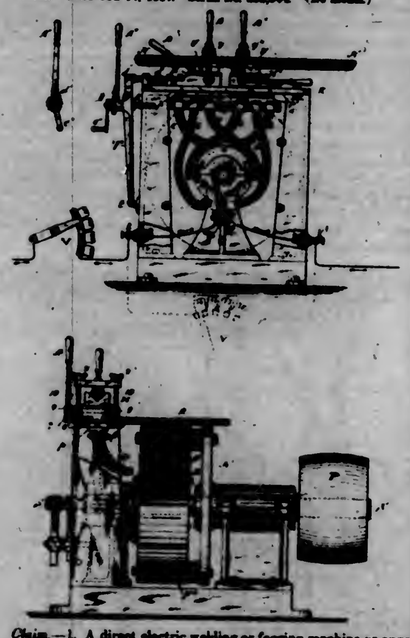
2. In a regenerative lamp, the combination of the globe, the supporting-frame provided with air-inlets, the flue, the central air-supply cylinder, the tubes extending through said flue and connecting the central cylinder with the outer air, the burner made in the form of a short cylinder with a conoidal lower portion, the central part of said cylinder being hollowed out, forming a gas-chamber and having horizontal radial gas-passages extending from the chamber to the outside of the cylinder, and vertical slits on the outside of the said cylinder, alternating with the openings of the said gas-passages, the gas-pipe connected with and supporting said burner, and a perforated air-distributing plate extending from the burner to the air-supply cylinder, as and for the purposes described.

385,384. METHOD OF JOINING PIPES BY ELECTRICITY. ELIHU THOMSON, Lynn, assignor to the Thomson Electric Welding Company, Boston, Mass. Filed Aug. 22, 1887. Serial No. 247,003. (No model.)

Claim.—1. The herein-described method of uniting sections of pipe, consisting in applying a sleeve or collar or coupling-tube to the adjoining ends of the sections, and then passing a heavy electric current through the parts to effect a union of the sleeve and pipe, thus completing the joint.

2. The herein-described method of making pipe-joints, consisting

in passing a heavy electric current, as described, through the sleeve or collar or coupling at the abutting ends of the pipes, and of a volume sufficient to raise the parts to welding temperature, and then welding the sleeve or its equivalent and the pipes together, as and for the purposes described.



385,385. METHOD OF ELECTRICALLY WELDING CHAINS AND LINKS. ELIHU THOMSON, Lynn, assignor to the Thomson Electric Welding Company, Boston, Mass. Filed Aug. 22, 1887. Serial No. 247,002. (No model.)

Claim.—1. The herein-described process of manufacturing links, rings, and other endless shapes of metal, consisting in forming two U or horseshoe shaped portions, placing the open or free ends of the same together, and then passing a welding, soldering, or brazing current of electricity across the joint between the two halves or portions, as and for the purposes described.

2. The herein-described process of manufacturing chains, which consists in forming looped, bent, or horseshoe-shaped pieces, placing the two free ends of one piece in contact with the two free ends of another while threaded through a formed link, and passing an electric current across the joint from one piece to the other of a volume sufficient to heat the same to the requisite welding, soldering, or brazing temperature.

385,386. DIRECT ELECTRIC WELDING-MACHINE. ELIHU THOMSON, Lynn, assignor to the Thomson Electric Welding Company, Boston, Mass. Filed Oct. 17, 1887. Serial No. 252,004. (No model.)

Claim.—1. A direct electric welding or forging machine or apparatus consisting of a dynamo-generator constructed to generate currents of great volume, and suitable clamps or holding devices connected with the part of the machine in which the heavy currents are generated, said devices being all mounted in a proper frame and in convenient proximity to one another, as and for the purpose described.

2. A direct welding or forging apparatus consisting of a dynamo-generator having a stationary armature, suitable clamps or holding devices for holding the work, and direct electrical connections from the terminals of the armature-coils to said clamps, as and for the purpose described.

3. The combination, in a direct electric welding-machine, of an armature-conductor in which currents are induced by the revolution of the moving parts, extensions or connections from said armature-conductor, and welding-clamps and guides or supports attached to or supported by the frame of the machine bearing said clamps.

4. In a direct electric welding or forging machine, a revolving multipolar field-magnet, in combination with a fixed armature and conductors wound thereon and connected to a set of holding and welding clamps.

5. In a direct electric welding or forging machine, a multipolar revolving field-magnet, in combination with fixed armature and conductors wound thereon, and direct connections from said conductors to a set of holding or welding clamps, one or both of which clamps are movable.

6. In a self-exciting direct electric welding or forging machine, an armature-conductor in which currents are induced by the revolution of moving parts, extensions or connections from said armature-conductors to a set of holding and welding clamps, and guides or supports attached to or supported by the frame of the machine bearing such clamps, in combination with a second and distinct armature-conductor and connections therefrom to a variable resistance, *r*, through a variable reactive coil or its equivalent to commutating devices or commutator, which commutes the currents for the excitation of the field-magnet.

7. In a dynamo-electric machine for electric welding or forging, a laminated and grooved armature-core, the armature-conductors in said grooves consisting of bundles of insulated wires whose ends or terminals are connected with the welding-clamps, either directly or indirectly, which armature-conductor passes solely from one end of the armature-core to the other and back, forming thereby about one complete convolution on the core.

8. In a machine of the kind described, an armature having two sets of grooves, relatively large and small, in one of which are wound the main-circuit conductors and in the other and smaller grooves the exciting conductor or conductors for the field-magnets.

9. In a dynamo-electric machine or motor, an armature-core with two sets of grooves, large and small, alternately cut in the core.

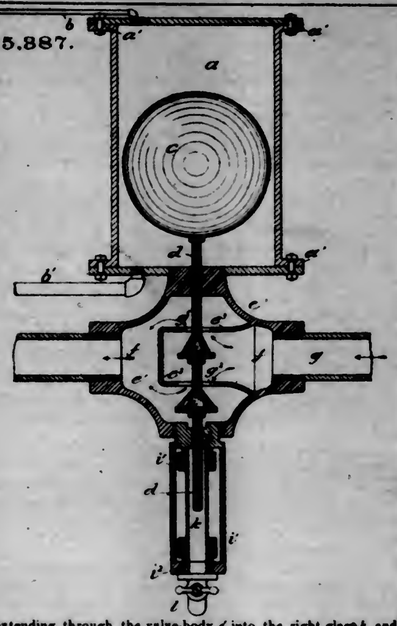
10. In a dynamo-electric machine, a circular laminated field-magnet core made in sections, having pole-pieces pointing radially inward, in combination with an iron or other metal external ring or casing in which the sections are borne or carried, substantially as shown and described.

11. In an electric welding or forging apparatus, the combination, with one of the clamps, of a ratchet-wheel and lever and an intermediate screw-connection, as and for the purpose described.

12. The combination, in an electric welding or forging apparatus, of a movable clamp, a propelling rod loosely connected therewith, a screw provided with a ratchet-wheel, and an operating-wheel having a propelling-pawl, as and for the purpose described.

13. The combination, in an electric welding or forging apparatus, with a movable portion of the clamp, of a rock bar or shaft having an attached operating-handle, one or more eccentrics secured to said shaft, and one or more collars or sleeves embracing said eccentrics and connected with a movable portion of the clamp, as and for the purpose described.

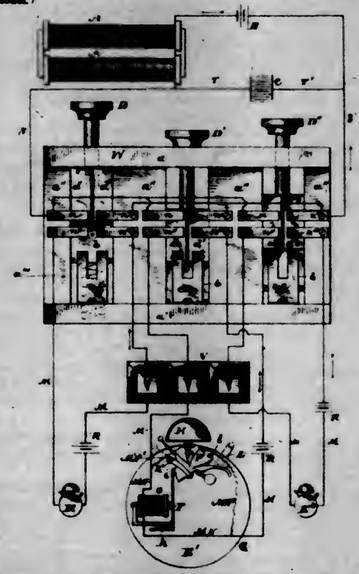
14. The combination, in an electric welding or forging apparatus, of a clamp, a base-plate, *p*, connected with a source of heavy currents, and a gang of contact-springs between said base-plate and the movable clamp, as and for the purpose described.



15. In an electric welding or forging apparatus, a self-exciting dynamo-machine having a stationary armature and a movable field-magnet, said armature being provided with two sets of conductors, one of which is connected directly with the clamps or holders of the apparatus without the intervention of conducting-rings or other moving devices, while the other armature-conductor is connected with the field-magnet of the machine through a suitable rectifying-commutator.

385,387. FEED-WATER REGULATOR. WALLACE TROMPEN, South Manchester, Conn. Filed Nov. 26, 1887. Serial No. 256,217. (No model.)

Claim.—1. In combination with the float-chamber having the pipes *b b'*, the valve-body *c'*, with threaded stem *c*², and throughway *f*, divided by the diaphragm *c*³, having therein the ports *g g'*, the float *e*, secured to the upper end of the valve-rod *d*, that bears the conical valves *h h'*, and extending through the valve-body *c'* into the sight-glass *k*, and the frame *i*, supporting the glass and secured to the bottom of the valve-body, all substantially as described.



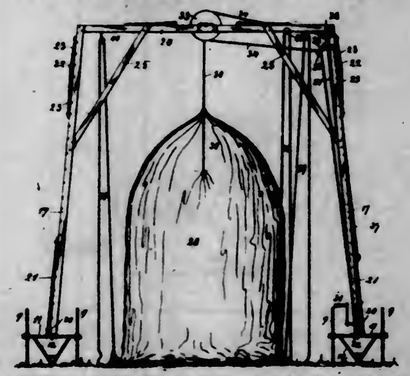
2. In combination with the float-chamber having the pipes *b b'*, the valve-body *c'*, with threaded stem *c*², and throughway *f*, divided by the diaphragm *c*³, having therein the ports *g g'*, the float *e*, secured to the upper end of the valve-rod *d*, that bears the conical valves *h h'*,

385,387.

and extending through the valve-body *c'* into the sight-glass *k*, and the frame *i'*, supporting the glass and secured to the bottom of the valve-body, and the plug i^2, secured in the lower end of the frame and bearing a petcock, *l*, all substantially as described.

385,388. ELECTRIC SIGNAL-TRANSMITTER. WILLIAM C. THOMPSON, Minneapolis, Minn. Filed Apr. 19, 1887. Serial No. 235,413. (No model.)

Claim.—1. In an electric-call system, the combination, with the main electric circuit, of a local electric circuit, a call-box in said main electric circuit, having an answering device inoperative under the normal force of the main and local circuits, self-inductive coils in the local circuit, and switches for breaking said local circuit and closing said local and main circuits in series, substantially as described.



2. In an electric-call system, the combination, with a central station and switch-board thereat, of a main line provided with an electric circuit normally closed through said switch-board, a local circuit at the central station connected with the switch-board, normally open, self-inductive coils in said local circuit, a call-box in the main line having an electro-magnet operating an answering device, said magnet being inoperative under the normal power of the main and local circuits, and switches for closing the local circuit, then breaking the local circuit and throwing the local and main circuits in series, substantially as described.

3. In an electric-call system having a central and outlying stations, the combination, with a switch-board in the central office, of electric call-boxes at the outlying stations, provided with an electro-magnet and an armature-lever adapted to operate a bell or other signal device, a main battery, a main-line circuit normally closed through said battery, electro-magnet and switch-board, a local battery in the central office, a local circuit through said local battery, and said switch-board normally open at said board, a resistance to the movement of the armature-levers in the call-boxes slightly exceeding the power of the magnet from the main and local circuits combined, and a switch for closing said local circuit at the board and then breaking the local circuit and throwing the main and local circuits in series, substantially as described.

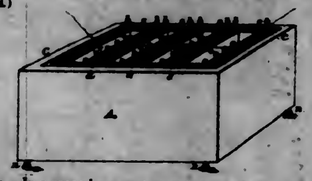
4. In an electric-call system having a central and outlying stations, in combination, the switch-board W, provided with a suitable groove or seat for a movable switch-block, and having the contact-strips *n*, *n'*, *n''*, *n'''*, and *c* projecting over said switch-block seat, the movable spring-retracted switch-block D, provided with the contact-strips *d d' b*, insulated from each other, the main-line battery R, the main-line wire M through battery R and connecting with the contact-strip *n n'*, an electric call-box, E, on said main circuit, provided with the magnet *e* on the main circuit, the hooked armature-lever F, resistance-spring *h*, ball H, spring-actuated bell-hammer K, provided with the notch *i*, self-inductive coils A A, local battery B, and the local wires S S' through said local battery and said coils, and connecting with the contacts *n n'*, respectively, substantially as and for the purpose set forth.

5. In an electric-call system having a central and outlying stations, in combination, the switch-board W, provided with a suitable seat for a movable switch-block, the contact-strips *n*, *n'*, *n''*, *n'''*, and *c*, attached to said board adjacent to said switch-block seat, the movable spring-retracted switch-block D, located in said seat and provided with contact-strips *d d' b*, insulated from each other, the main-line battery R, the main-line wire M through battery R and connecting with the contact-strips *n n'*, an electric call-box, E, on said main circuit and provided with an electric answer-back device, consisting of the magnet *e*, hooked armature-lever F, resistance-spring *h*, ball H, spring-actuated bell-hammer K, provided with the notch *i* for engagement with the hook on the lever F, self-inductive coils A A, local battery B, local wires S S through said local battery and inductive coils, and connecting with the contacts *n n'*, respectively, the condenser C, and the branch wires T T', connecting the same with wires S S', respectively, all substantially as and for the purpose set forth.

385,389. DEVICE FOR FUMIGATING TREES. LUTHER H. TITUS, San Gabriel, Cal. Filed July 5, 1887. Serial No. 243,494. (No model.)

Claim.—1. The combination, with a portable frame adapted to travel between rows of trees, of a vertically-movable tent suspended from the top of the frame and ropes for manipulating the same, whereby the said tent may be adjusted to envelop trees of various sizes, substantially as specified.

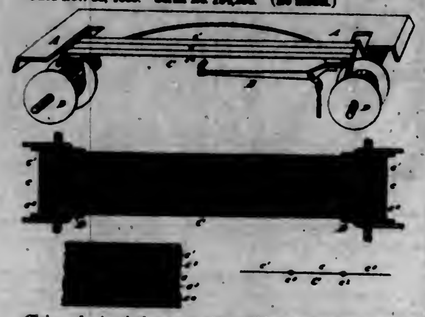
2. The combination, with a portable frame adapted to travel between rows of trees, of a rotatable drum journaled in the top thereof and a rope suspending a tent and connected with the drum, substantially as specified.



3. The combination, with a vertical frame adapted to travel between rows of trees, of a horizontal rotatable drum journaled in the top thereof, a vertically-movable tent suspended from the said drum, ropes for raising and lowering the tent, and ropes for manipulating its lower edges, substantially as specified.

4. In a device to fumigate trees, the combination of an upright frame consisting of horizontal sills 20, standards 17, angular braces, top longitudinal rails, top cross-rails, 24, wheels whereon said frame rests and moves, a tent suspended from the upper horizontal portion of the frame, and suitable ropes to raise and lower said tent, as and for the purpose specified.

5. In a device to fumigate trees, the combination of a suitable frame, the uprights of which each rest on an individual truck of wheels or runners, a horizontal drum journaled in the top of said frame, and a tent suspended therefrom.

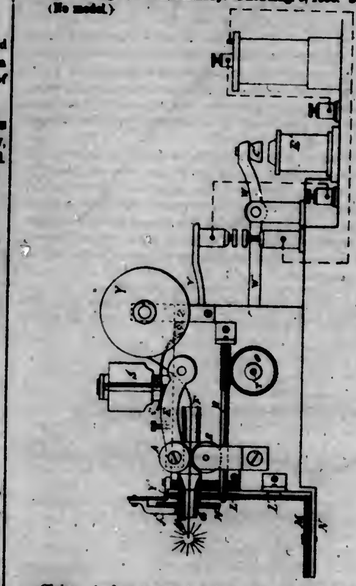


6. In a device to fumigate trees, the combination of an upright frame resting on trucks, a drum supported in the top of said frame, a tent suspended from the drum, and ropes to raise and lower said frame, so as to suit the height of the tree.

385,390. SECONDARY OR STORAGE ELECTRIC BATTERY. SYLVANUS L. TRIPP, Denver, Colo., assignor to the Electric Storage Light and Power Company. Filed Aug. 27, 1888. Serial No. 283,988. (No model.)

Claim.—In a secondary or storage battery, the wooden insulated case, in combination with the glass or porcelain cans provided with a cover of the same material, said cans having coils the outer walls of which are provided with perforations, substantially as described.

385,391. INK-RIBBON FOR TYPE-WRITING MACHINES. JOHN T. UNDERWOOD, Brooklyn, N. Y., and W. COLBURNE BRUSHA, Jersey City, N. J.; EMMA Brusha executrix of said W. Colburne Brusha, deceased. Filed Nov. 30, 1888. Serial No. 194,998. (No model.)



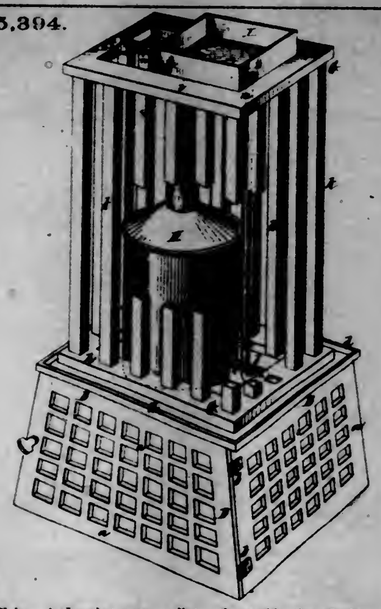
Claim.—1. A printing or marking ribbon or band composed of a plurality of connected parallel sections, each section being coated or saturated with printing or marking material of different color or character, and adapted to be employed intermittently at will or continuously in position in a type-writing or marking machine to produce the desired color or description of impression, substantially as and for the purpose stated.

2. A printing or marking ribbon or band having a plurality of parallel sections provided with printing or marking material of different colors or character, each adapted to be employed intermittently at will or continuously in position in a writing or marking machine, the coated or saturated surfaces of the sections of the said ribbon or band being separated one from the other by a dividing means, *c*, substantially as shown and described.

385,392. HORSE-POWER. ALBERT B. VARY, Marshall, Mich. Filed Aug. 11, 1887. Serial No. 246,782. (No model.)

Claim.—In a horse-power, the vertical shaft *g*, having a rib, *i*, in combination with the sweep-plate B, having a groove, *k*, and set-screws *n* and *u*, substantially as shown and described.

385,393. MAGNESIUM LAMP. THEODOR WEIMER, Vöröstorok, near Villingen, Baden, Germany. Filed Aug. 9, 1888. Serial No. 282,465. (No model.)

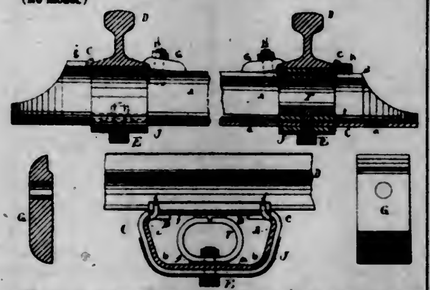


Claim.—1. In a magnesium lamp, the combination of the tube F, the rollers A and B, the rotating tube G, and means for operating said rollers and tube, substantially as described.

2. In a magnesium lamp, the combination of the rotating tube G, with disk H, and stationary scraper *f'*, with cutter *g'*, substantially as set forth.

3. In a magnesium lamp, the combination of the rollers A and B, pinion *a''*, wheel U, wheel Z, with pin Z', lever V, an electric motor, pinion *b'*, wheel T, and the lever W, with segment *a'*, wheel X, provided with pawl and ratchet, and spring-box P, substantially as and for the purpose described.

385,394. HOT-WATER RADIATOR. MARY S. WEST, West Somerville, Mass., administratrix of CLARK S. WEST, deceased. Filed Aug. 6, 1887. Serial No. 246,302. (No model.)



385,394.

Claim.—1. In a hot-water radiator, the combination of a burner a water-heating receptacle, a radiator connected therewith at different levels, a water-receptacle, I, supported above the radiator, a pipe, *m*, connecting the water-receptacle I with the water-heating receptacle, and a steam-pipe leading into the water-receptacle I below the water-level, whereby escape-steam is condensed, substantially as described.

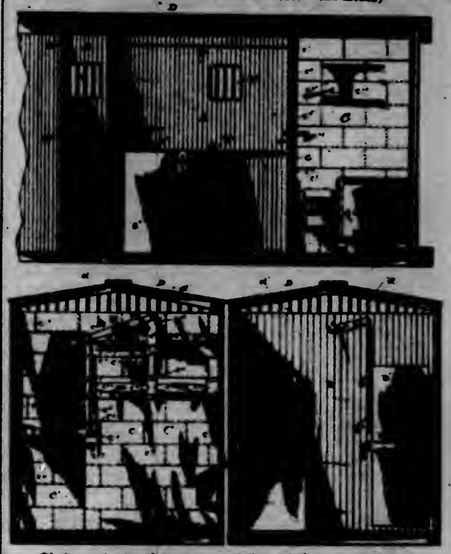
2. The combination of the hollow frame B, having a flat top provided with a central opening, the burner mounted therein below the opening, a water-heating receptacle, H, arranged over said opening, a radiator, G, having a hollow stand, *h*, resting on the flat top of the frame B, a hollow top, *i*, and connecting-tubes *k*, water-connections at different levels between the radiator and the boiler, and a water-receptacle, I, resting upon the top *i* of the radiator and connected with the heating-receptacle, as set forth.

385,395. METALLIC TIE OR SLEEPER FOR RAILROADS. REYNOLDS T. WHITE, Boston, Mass. Filed Oct. 10, 1887. Serial No. 251,888. (No model.)

Claim.—1. A tie or sleeper, A, consisting of a sheet of steel bent to the form shown—that is, flat on the bottom A, rounded at the bottom corners, *b*, then straight, but on a slight outward incline, to the upper corners, *c*, and then turned over inwardly to form the flanges B B—in combination with the bands C, shrunk around the said tie and which carry the rails D, substantially as shown and described.

2. A tie or sleeper made of sheet-steel constructed to form a spring its entire length and provided with bands around said tie under the rails to prevent the body of the tie from flattening down, substantially as set forth.

3. A tie or sleeper made of sheet-steel to form a spring its entire length, having bands shrunk around it at or near its ends, in combination with springs secured between the under side of the bands and bottom of the tie, substantially as and for the purposes set forth.



4. The combination of the tie or sleeper A, constructed as described, the straps C, spring F, wearing-plates *f*, and clamps G G, substantially as shown.

5. In combination with a metallic tie or sleeper, A, a layer, J, of paper, felt, or other material saturated with any water-proof substance and secured to the under side of the bearing-surface, substantially as shown and described, and for the purposes set forth.

6. A tie or sleeper, A, having straps or bands C around its outside, and having stud K in flanges B at one end and a part of flanges B turned upward on the other end outside of straps C and rails D, as and for the purposes set forth.

7. A railroad tie or sleeper for steam-railroads having the following elements: a sheet of steel formed to make it flexible, and bands around its outside, with a part of said bands on the top of the tie formed to fit the lower edge of a rail, and springs between said bands and bottom of tie, and studs on one end of the flanges, and a part of the flanges turned up on the other end, all arranged substantially as shown and described, and for the purposes set forth.

385,396. SAFETY EXPRESS-CAR. SAMUEL WORKMAN, Boston, Mass. Filed Oct. 16, 1886. Serial No. 216,662. (No model.)

Claim.—1. A safety-car consisting of three compartments—namely, an outer narrow compartment, a middle compartment, and an inner compartment—the doors between the said compartments being provided with locking devices operated from the inner compartment.

2. A railway-car having three compartments, the doors between the said compartments being provided with locking devices and connected by means of a shaft in such manner that the motion of one locking device is communicated to the other, substantially as described.

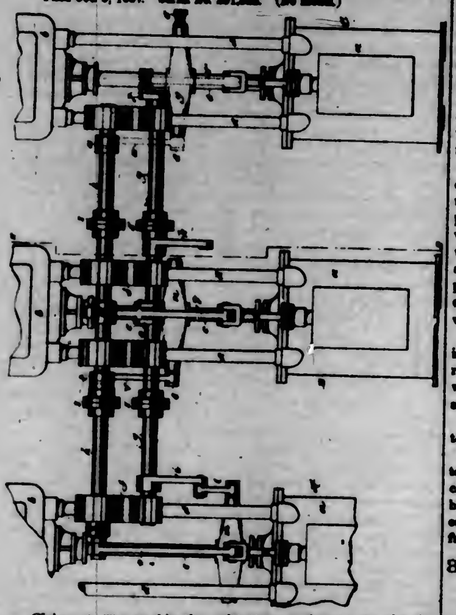
3. A railway-car divided into compartments, devices locking the doors between the said compartments, and a common lever situated in an inner compartment and operating said locking devices.

4. A railway-car divided into compartments, the partitions between the compartments being provided with doors locked by means of hasps, staples, and bolts, the bolts of the two doors being so arranged that they shall move simultaneously in opposite directions in order that one may be locked simultaneously with the unlocking of the other, and a lever operating both bolts.

5. In a railway-car, the compartments, doors leading into the same, and the mechanism for locking the doors, consisting of the vertically-sliding bolts, the lever for operating these, and the spring-bar for holding the bolts in the desired position, substantially as described.

6. In a railway-car, the compartments, doors to the same, and mechanism for locking the doors, consisting of vertically-sliding bolts and the spring sliding bars for holding the parts in any desired position, one of the sliding bars being provided with a beveled end engaged by a door to release the parts when the door is closed, substantially as described.

7. The herein-described means for locking a door and simultaneously unlocking a distant door, consisting of vertical locking-bolts and the operating-lever, to which one of the said bolts is connected directly and the other indirectly by means of a rock-shaft and arm, substantially as set forth.



8. The means herein described for locking a door and simultaneously unlocking a distant door, consisting in the vertical locking-bolts, the operating-lever, to which one of the said bolts is connected directly, and to which the other is connected by means of the rock-shaft and a second lever, and the spring slide-bars for locking the parts, substantially as described.

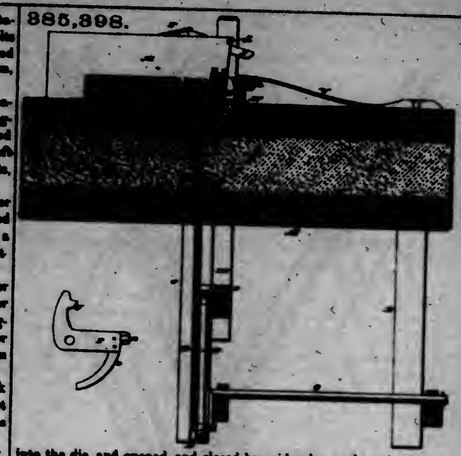
9. A safety-car divided by transverse partitions into a narrow outer compartment, a middle receiving-compartment formed with a caged receiving-door, and an inner compartment or magazine, there being a lever and intermediate devices for locking from the inner compartment the doors in the partitions between the compartments.

10. The safety-car divided by the transverse partitions, the inner one of which, with its door, is bullet-proof, into the narrow outer chamber, the middle receiving-chamber having the caged receiving-door, and the bullet-proof chamber, safe, or magazine, and the lever and intermediate devices for locking the doors in the partitions from the inner chamber or magazine.

11. A safety express-car having a bullet-proof partition, a block journaled therein, and another or inner block pivoted in a different plane to the first block and perforated for a fire-arm, substantially as described.

385,397. ENGINE. CHARLES C. WORTHINGTON, Irvington, N. Y. Filed Oct. 5, 1887. Serial No. 251,852. (No model.)

Claim.—1. The combination, with three engines arranged to be operated in pairs upon the duplex principle, of valve-operating connections for operating the valve or valves of each engine from either of the others, substantially as described.



2. The combination, with the three engines A B C, of the rock-shafts *g A*, each having connections for attachment to the piston-rods of two of said engines and to the valve-rods of two of said engines, substantially as described.

3. The combination, with the three engines A B C, of the rock-shafts *g A*, made in parts and connected by couplings, as S, substantially as described.

4. The combination, with the shafts *g A*, having the rock-arms *s x*, of the link *q*, connected to the valve-rod *s* and arranged to be connected to either of said arms, substantially as described.

385,398. BRICK CUTTING AND SANDING MACHINE. PETER S. SOUER, Glen Morris, Md. Filed July 11, 1887. Serial No. 243,903. (No model.)

Claim.—1. The combination, with a brick-forming die, of a blade mounted to reciprocate across it, a valve, and a sand-passage leading into the die and opened and closed by said valve, and mechanism to operate the blade and the valve.

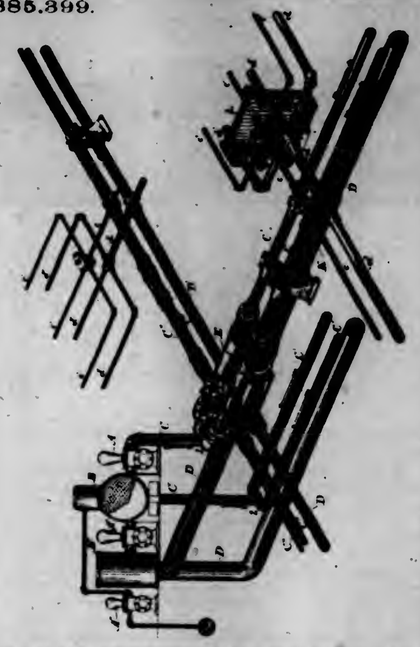
2. The combination, with a brick-forming die, of a blade mounted to reciprocate across it, a valve located opposite the blade, and a sand-passage leading into the die opposite the blade and opened and closed by the said valve, a bar or projection connected with the blade and arranged to engage the valve and open the passage as the blade nears the limit of its cutting stroke, and a trip which holds the valve in an open position during the reverse movement of the blade until it nears the limit of the said movement, and devices carried by the blade to release said trip when the blade is in the said latter position.

3. The combination, with a brick-forming die having a slot in the one side and a sand-passage leading into it at an opposite point, of a reciprocating blade fitted in said slot, a valve located across the sand-passage, and pivotal arms, to which the valve is connected, springs which hold the valve in a closed position, spring-actuated detents which engage the ends of said arms, bars connected with the blade and having projections which engage the valve when the blade accomplishes its cutting stroke, and other projections which engage said detents and release the pivotal arms when the blade reaches its reverse limit of movement, and mechanism which actuates the blade.

4. The combination, with a brick-forming die, one wall of which is recessed, of a sand-receptacle leading into the die adjacent to said recess, and a curved valve fitted in said recess, pivotal arms connected with the valve, detents arranged to engage the free ends of the said arms, and springs to return the valve to normal position.

5. The combination, with a brick-forming die, of a blade mounted to reciprocate across the same and mechanism to actuate said blade.

6. The combination, with a brick-forming die, of a blade or cutter arranged to move transversely to the die and through a bar of clay, and to form a partial vacuum when withdrawn from the severed bar, and a sand-supply passage or duct leading between the severed ends of the bar, to coat said ends as the bar throws the severed brick from the die, and suitable operating mechanism.



385,399. CENTRAL-STATION HEATING SYSTEM. ARTHUR V. ARNOT, Chester, N. J., and FRANK C. P. KRAAK, New York, N. Y., assignors, by mesne assignments, to the National Heating Company, New York, N. Y. Filed Oct. 7, 1887. Serial No. 251,703. (No model.)

Claim.—1. In a heating system, the combination of a heater, a double-supply main, a force-pump, pipes for conducting the heating medium from the supply-main to the building to be heated, a coupler for the main having a chamber with which both branches of the main communicate, and valves located in the coupler for controlling the flow from one branch of the main to the other, and whereby either or both branches of said main may be employed for circulating purposes, substantially as shown and described.

2. In a hot-water-heating system, the combination of a heater, two supply street-mains, a force-pump, pipes for conducting the water from the mains into the building to be heated, return-pipes and a return-main for conveying the water after it has been used for heating purposes back to the heater, a coupler having a central chamber with which both of the supply-mains communicate, and valves for controlling the flow from one main to the other, and whereby either or both of the supply-mains may be employed for circulating purposes, substantially as shown and described.

3. A coupler cast in a single piece having a central cavity or chamber, two longitudinal and two transverse bores each in the same

385,399.

plane and each communicating with said central chamber, a longitudinal and a transverse bore arranged in a plane parallel to that of the first-named bores, communicating at their junction, and cocks or valves by which the communication between the said first-mentioned bores and the central chamber is controlled, substantially as shown and described.

4. A coupler cast in a single piece provided with a central cavity or chamber, two longitudinal bores communicating with said central chamber at opposite sides thereof by means of a single opening, two transverse bores communicating with the central chamber at opposite sides thereof by means of a single opening, and cocks or valves, as F F and G G, by means of which the communication between each or all of the said bores and the central chamber is controlled, substantially as shown and described.

5. The combination, with the supply-mains C C and the branch mains C' C', of the coupler provided with the central chamber, E", the longitudinal bores E' E', the transverse bores E" E", and the cocks F F and G G, the construction and arrangement being substantially as described and shown.

6. The combination, with the supply-mains C C, the return-main D, and branch return-main D', of the coupler cast in a single piece, provided with a central chamber, and two longitudinal and two transverse bores arranged in the same plane and each communicating with the central chamber, and a longitudinal and transverse bore arranged in a plane parallel with that of the first-named bores, communicating at their junction, and cocks or valves by which the communication between the first-named bores and the central chamber is controlled, substantially as shown and described.

7. In a heating system, the combination of a heater, two supply-mains, means for directing the flow of the heating medium through either or both of said mains, a coupler cast in a single piece provided with a central chamber or passage, two longitudinal bores communicating at separate points with the central chamber or passage, a transverse bore communicating at opposite points with the central chamber or passage, and a valve, H, provided with a central cavity and four passages communicating therewith, the construction being such that communication between either of the longitudinal bores and either of the transverse bores, or both of them, with the central cavity of the cock or valve may be established, or the communication of the transverse bores with the central cavity may be cut and the communication of all the longitudinal bores with the central cavity established, or the communication between each of the longitudinal and each of the transverse bores of the said cavity may be cut off, substantially as shown and described.

8. In a heating system, the combination, with a heater, a double-supply main, and means for directing the flow of the heating medium through either or both branches of said main, of a coupler cast in a single piece provided with a central chamber and with two longitudinal bores which communicate at four separate points with the said central chamber and with a transverse bore which communicates at opposite points with said central chamber, and a cock or valve located in said chamber and having a central cavity and four passages communicating therewith, whereby communication between the said longitudinal and transverse bores and the central cavity of the cock or valve may be controlled, substantially as shown and described.

9. In a heating system, the combination, with a heater and two supply-mains provided with means whereby the flow of the heating medium may be directed through either or both of said mains, of a coupler cast in a single piece having a central chamber, two longitudinal and one transverse bore, each of which communicates with the central chamber at two separate points, and a cock or valve having a central cavity and passages communicating therewith, whereby the communication between the said cavity and each of the longitudinal and transverse bores is established, regulated, or prevented, as desired, substantially as shown and described.

10. In a heating system, the combination, with a heater and a double-supply main provided with means for directing the flow of the heating medium through either or both branches thereof, of a coupler having a central chamber, two longitudinal bores extending from each end thereof and communicating with the central chamber at separate points, a transverse bore communicating with the said chamber at separate points, and means for controlling the communication between said chamber and each of said bores, substantially as shown and described.

11. In a heating system, the combination, with a heater and a double-supply main provided with means for directing the flow of the heating medium through either or both of the branches thereof, of a coupler, K, having the longitudinal bores K' K" and central chamber, K", of the cock or valve H, having a central cavity and passages communicating therewith, substantially as shown and described.

12. In a heating system, the combination, with a heater, the supply-mains C C, and means for directing the flow of the heating medium through either or both of said mains, of the coupler K, having the bores K' K", the central chamber, K", and cock H, having a central cavity and passages communicating therewith, and the pipes for conducting the heating medium into the building or buildings where heat is required, substantially as shown and described.

13. In a hot-water-circulating system, the combination, with the heater and the supply-mains C C, of a bracket for supporting the mains, composed of a base, H, and top H', having openings M and A A, substantially as shown and described.

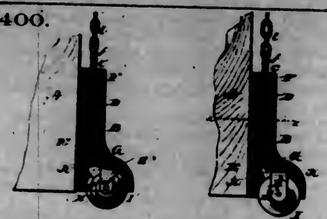
14. In a heating system, the combination of a heater, double-supply mains C C, and a bracket for supporting the street-mains of a hot-water-circulating system, consisting of a base, H, and top H', said bracket being provided with openings M and A A and rollers m and N N, substantially as shown and described.

15. The combination of the heater, the double-supply mains, the return-main, and the bracket provided with the openings M and A A, substantially as shown and described.

16. The combination, with the heater and supply-mains, of a coupler provided with a flanged base, as p, a perforated plate, as O', and a grooved support, P, provided with a pinion or pivot, the parts being loosely connected, substantially as shown and described.

17. The combination, with the heater and supply-mains, of the supply-pipes c', a perforated plate, O', a grooved support, P, and a coupler, R, provided with a flanged base, R', substantially as shown and described.

18. The combination, with the heater and supply-mains, of the housing L, the supply-main, the plate O', the pivoted support grooved to receive the dovetail shank of the coupler, the supply-pipe, and the coupler, substantially as shown and described.



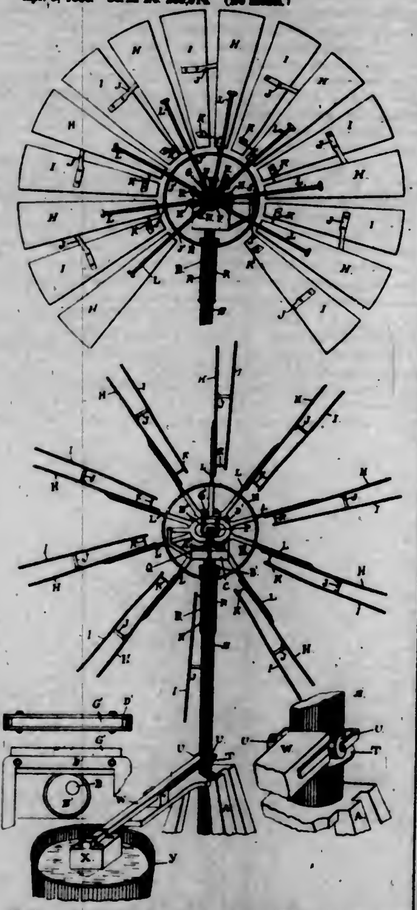
19. The combination, with the heater and supply-main, of a coupler provided with a flanged base and a pivoted support provided with a dovetail groove, the flanged base of the coupler being movable within the groove of the support, substantially as shown and described.

20. In a heating system, the combination of a heater, two supply-mains leading from and returning to the heater, a force-pump, and pipes for conducting the heating medium from the supply-mains to the building to be heated, said mains being in communication and provided with cocks or valves for controlling the flow from one of said mains to the other, whereby either or both of said mains may be employed for circulating purposes, substantially as shown and described.

385,400. DOOR-CHECK. JOSEPH A. BACHMAN, Austin, Tex. Filed Nov. 8, 1887. Serial No. 254,656. (No model.)

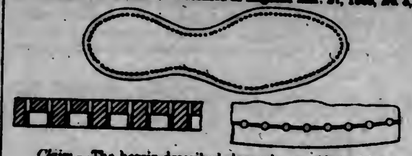
Claim.—1. The combination, with the housing or sheath fixed to the door and the bearing-wheel journaled therein, of the brake provided with a spindle, and the spring influencing said brake and wheel, as and for the purpose specified.

385,400.



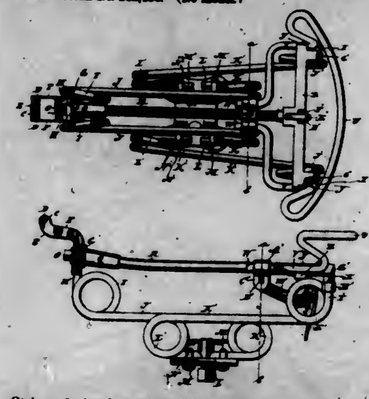
2. The combination, with the wheel journaled in a movable bearing, as set forth, the brake, under the influence of the spring, resting upon a bearing-surface of the wheel, of the sheath or housing secured to the door, substantially as specified.

3. The combination, with a wheel provided with annular offsets and journaled in a movable bearing, the brake, and the spring, of the sheath provided with vertical grooves for the U-shaped bearing, as and for the purpose set forth.



4. The combination, with the brake and bearing-wheel, of the lever pivoted to the door and the chain or cord connecting said lever and brake, as and for the purpose specified.

385,401. WINDMILL. FRANCIS BOSSARD, Oakland, Cal. Filed Apr. 3, 1888. Serial No. 269,514. (No model.)



Claim.—In combination with a wind-wheel having the wings formed of the sections H and I, connected by bars J and K and attached to the pivot-rods L, the crank N, connecting-rods G, hinge-plate F, central connecting-rod, O, link P, lever Q, rods R, sleeve S, shaft T, lever W, and foot X, for the purpose of regulating and adjusting the wings H I, constructed and operated substantially as and for the purposes set forth.

385,402. SOLE FOR BOOTS OR SHOES. JAMES BOOTH, Birmingham, County of Warwick, England. Filed Mar. 28, 1887. Serial No. 232,621. (No model.) Patented in England Mar. 27, 1886, No. 3,905.

Claim.—The herein-described shoe-sole, provided with marginal perforations and indentations connecting said perforations, as shown, whereby the sewing-thread is embedded within the sole, as set forth.

385,408. VELOCIPEDE-SADDLE. LOUIS BOUDREAU, Boston, Mass., assignor to the Overman Wheel Company, same place. Filed Jan. 27, 1888. Serial No. 262,124. (No model.)

Claim.—1. A velocipede-saddle having a covering, spring-support for the forward end thereof, and a horn made vertically adjustable upon such support, substantially as set forth.

2. A velocipede-saddle having a covering, spring-support for the forward end thereof, and a bent and flanged horn, such support and horn being secured together for vertical adjustment between them, substantially as set forth.

3. A velocipede-saddle having a covering, spring-support for the forward end thereof, a horn, and a bar, the horn and bar being clamped to the spring-support, upon which they are vertically adjusted, substantially as set forth.

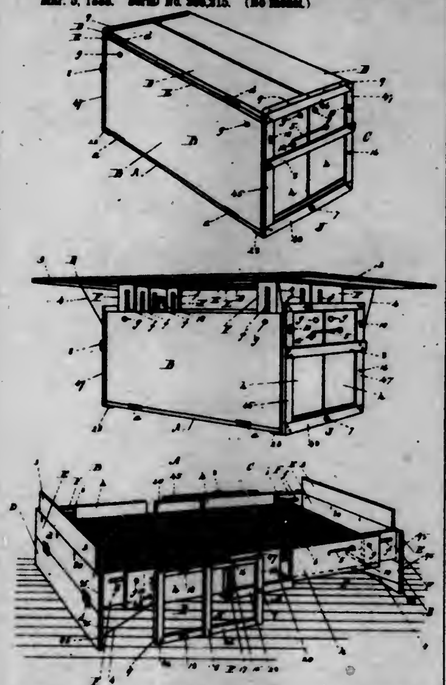
4. A velocipede-saddle having a covering, a spring-support for the forward end thereof, a horn, a bar provided at its forward end with a head, and a bolt passing through the horn and into such head and clamping them to the spring-support, which is located between them, substantially as set forth.

5. A velocipede-saddle having a covering, two spring ends, a horn, a bar having a head provided with two vertical grooves, and a bolt clamping the horn and head upon the spring ends, which enter the grooves of the head, substantially as set forth.

6. A velocipede-saddle having a covering, a rear spring-support, and a horizontally-movable frame mounted upon such support, adapted to have the rear end of the covering removably connected with it, and made of wire bowed and bent downward at the ends for mounting upon the said spring-support, substantially as set forth.

7. A velocipede-saddle having a covering, a movable frame with which the rear end of the covering is connected, a support for such frame, and a hand-lever connecting the support and frame for shifting the latter, so as to slack the covering for its removal and put it under tension for use, substantially as set forth.

8. A velocipede-saddle having a covering, a bar having a cross-piece at its rear end, a bowed frame having movable bearing in the ends of such cross-piece, a head movably mounted on the bar and having the frame connected with it, and a lever connected with the head and bar for operating the frame, substantially as set forth.



9. A velocipede-saddle having a cross-piece located at its rear end and provided with split sockets opening downward and carrying nuts,

and spring ends entering such sockets and secured in place by the said nuts, substantially as set forth.

10. A velocipede-saddle having two forward and two rear coiled springs, the lower ends of each springs being arranged to pass each other, substantially as set forth.

11. A velocipede-saddle having a forward spring-support, a horn, a horizontal bar having a head at its forward end, such head and horn being clamped to opposite faces of the said spring-support, a cross-piece located at the rear end of such bar, a bowed frame horizontally movable upon the said cross-piece, a rear spring-support for the cross-piece, and a hand-lever for operating the said frame, substantially as set forth.

385,404. TRUNK. WILLIAM J. BOYNTON, Boston, Mass. Filed Mar. 5, 1888. Serial No. 266,215. (No model.)

Claim.—1. In a trunk of the character described, the combination of the following instrumentalities, to wit: a bottom piece provided at each end with an upwardly-projecting board adapted to form a portion of the side of the bed, a side piece hinged to each side of said bottom and provided with a laterally-projecting board at each end adapted to form a portion of the end of the trunk, two top pieces each provided with slides fitted to work in the free or outer ends of said side pieces, a leaf hinged to the outer edge of each of said top pieces and adapted to be folded inwardly onto the same, a frame loosely pivoted to each end of the bottom piece, said frames being adapted to assist in keeping the trunk closed and also to serve as legs for the bed, means for adjustably securing said slides on said side pieces, and means for securing the sides, ends, top, leaves, and frames in position when the trunk is closed, substantially as set forth.

2. In a trunk of the character described, the bottom A, provided with the upright boards 20, the sides B C, hinged to said bottom and provided with the laterally-projecting boards A, the tops E, provided with the slotted slides F, fitted to work on the sides B C, the leaves D, hinged to the tops E, the frames J, loosely pivoted to the bottom A, the staples 10, connected with the sides B C and adapted to enter mortises in said frames, the nuts i and bolts g, for adjustably securing said slides, and the hasps 4 and 5, combined and arranged to operate substantially as described.

3. In a trunk of the character described, the cloth 6, having its ends attached to the square bars 19, in combination with the slides F and lugs 18, said lugs being provided with angular recesses 75, for receiving said bars and preventing them from turning therein, whereby any desired tension may be exerted on the cloth, substantially as set forth.

4. In a trunk, the combination of a bottom, sides hinged to said bottom and provided with laterally-projecting boards at their ends adapted to form portions of the ends of the trunk, adjustable slotted extension-slides attached to said laterally-projecting boards, fastening devices for locking said slides in position, and tops connecting the ends of said slides.

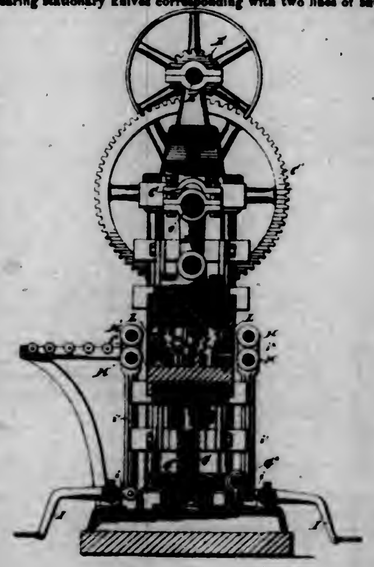
5. In a trunk, the combination of a bottom, sides hinged to said bottom and provided with laterally-projecting boards at their ends adapted to form portions of the ends of the trunk, adjustable slotted extension-slides attached to said laterally-projecting boards, fastening devices for locking said slides in position, tops connecting the ends of said slides, and leaves hinged to said top.

6. In a trunk, the combination of a bottom, sides hinged to said bottom, extension-slides adjustable on said sides, tops connecting said slides, leaves hinged to said tops, end frames pivoted to said bottom and provided at their upper ends with inwardly-projecting flanges for holding the leaves in folded position when the trunk is closed, and fasteners for said frame.

7. The combination, with the folding trunk-body, of end frames pivoted to said body, said frames being provided with transverse braces, which serve as handles for the trunk.

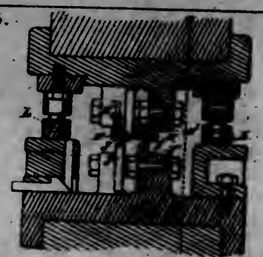
8. In a trunk, the combination of a bottom, sides hinged thereto, adjustable slides connected with said sides, lugs attached to said slides, bars supported by said lugs, and a bed-bottom stretched between said bars.

9. In a trunk, the combination of a bottom, sides hinged thereto, adjustable slides connected with said sides, lugs attached to said slides, bars supported by said lugs, a bed-bottom stretched between said bars, and spiral springs interposed between said bottom and said bed-bottom.



10. In a trunk, the combination of a bottom, sides hinged thereto, adjustable slides connected with said sides, tops connecting said slides, leaves hinged to said tops, said tops and leaves being provided with dowel-sockets at their ends, and auxiliary boards provided with dowels for engaging said dowel-sockets when the trunk is converted into a table.

11. In a trunk, the combination of a bottom, A, provided with staples 17 at its opposite ends, sides hinged to said bottom, end frames, J, pivoted to said bottom, and hasps 15, pivoted to said frames and adapted to engage said staples.



12. In a trunk, the combination of the bottom A, provided at its opposite ends with the angular guards 23 and near said ends with vertical end boards 20, and sides hinged to said bottom, provided with inwardly-projecting end boards A, which close between the guards 23 and boards 20 and constitute the ends of the trunk.

385,405. MACHINE FOR SLITTING METALLIC SHEETS FOR METALLIC LATHING. JEFFERIS B. BRADBURY, Detroit, Mich., assignor to Charles G. Hodges and Henry C. Hodges, same place. Filed Feb. 17, 1888. Serial No. 264,562. (No model.)

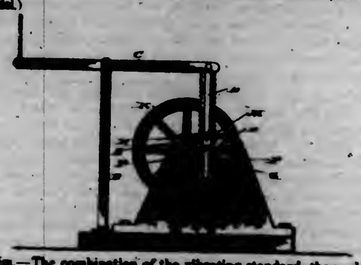
Claim.—1. In a slitting-machine for slitting metallic sheets for the manufacture of lathing, &c., the combination of a lower platform bearing stationary knives corresponding with two lines of slits, those

385,405.

in one line breaking joints with those in the other, an upper reciprocating platen bearing the companion knives of the lower set, driving mechanism for reciprocating the platen, and feeding mechanism adapted to automatically feed the sheet, substantially as described.

2. In a slitting-machine for slitting metallic sheets for lathing, &c., the combination of an upper reciprocating platen with means for reciprocating the same, a lower platform with means for adjusting the same to a higher or lower level, said platen and platform provided with companion knives corresponding with two adjacent lines of slits, and automatic feeding mechanism for feeding the sheet, substantially as described.

3. In a machine for slitting a metallic sheet for the manufacture of lathing, &c., the combination, with an upper reciprocating platen, lower adjustable platform, and knives corresponding with two adjacent lines of slits, of feed-rolls between which the sheet is fed, means for operating said rolls, and an adjustable crank for regulating the amount of feed, substantially as described.



4. The combination, with the upper platen and lower platform and their knives, of feeding mechanism for automatically feeding the sheet, and spring-grips L, constructed to engage and hold the sheet during the operation and retraction of the knives, substantially as described.

5. The combination, with the platen, the platform, and their knives, of the feed-rollers, springs for pressing the upper roller against the lower, and mechanism for separating the rolls, substantially as described.

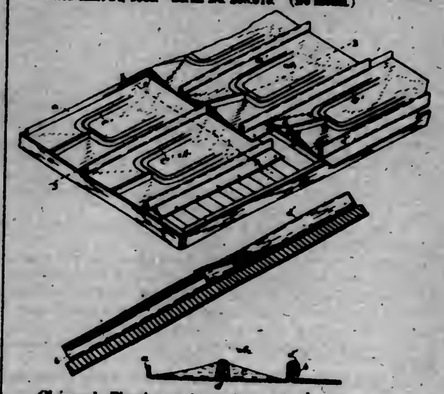
6. The combination, with the cutting-knives, of the feed-rollers at the entrance and exit ends of the machine; those at the exit end made a shade larger than those at the entrance end, substantially as and for the purpose described.

7. The combination, with the knives, of the freeing-bars N, constructed to strip the metal from the knives, substantially as described.

385,406. DEVICE FOR CONVERTING MOTION. ROBERT BRETTHOWER, Jr., Albion, Nebr. Filed Mar. 24, 1888. Serial No. 268,373. (No model.)

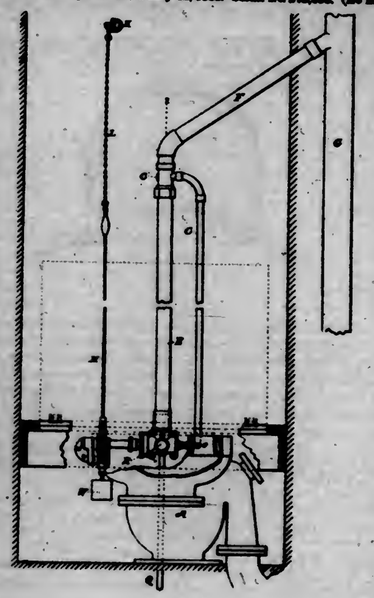
Claim.—The combination of the vibrating standard, the rocking lever mounted at the upper end thereof, the rack-bar pivoted to and depending from the rocking lever, the guide through which the rack-bar passes, the parallel shafts, the gear-wheels loosely mounted on said shafts and engaged by the rack-bar, the sprocket-wheels, the sprocket-chain connecting the same, and the pawl-and-ratchet connection between the gear-wheels and the shafts, substantially as specified.

385,407. FASTENING FOR MINERS' CAR CHECKS OR LABELS. HARLEY CORNELIUS, Forest City, Pa. Filed Mar. 12, 1888. Serial No. 267,120. (No model.)



385,407.

Claim.—A miner's car-check fastener consisting of a bolt or pin with a bifurcated shank and a gravity drop-latch pivoted between the prongs of the bifurcation, the bolt or pin being headed to retain a tag or label and being locked in position by the drop-latch after said bolt or pin has been passed through a suitable opening in the side of a car, substantially as described.



385,408. METAL ROOFING. ABEL A. CORNELIUS, Shreve, Ohio. Filed Mar. 24, 1888. Serial No. 268,310. (No model.)

Claim.—1. The shingle A, provided with the bent or tongued-up portion *a*, the groove *b*, the ridge *d'*, the bent portion *c*, and the notch *d*, substantially as and for the purpose specified.

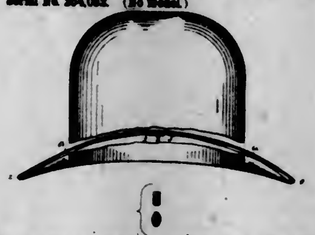
2. The shingle A, provided with the ridge *d'* and pitched from the center to each side upon its lower portion, the bent portions *c*, and the notch *d*, substantially as and for the purpose specified.

385,409. WATER-CLOSET. ALBERT HAMMOND, New London, Conn., assignor of one-half to Stephen A. Gardner and Charles Prentis, both of same place. Filed May 12, 1888. Serial No. 273,093. (No model.)

Claim.—1. In a water-closet, the combination of a flushing stand-pipe connected to the service-pipe and a ventilating-extension thereof, with a ventilating-pipe opening at its upper end into the stand-pipe and at its lower end into the air-space of the bowl, and a valve at its upper end opening inward toward said stand-pipe, all as and for the purpose described.

2. In a water-closet, the combination of a flushing stand-pipe connected to the service-pipe by a three-way cock, and a ventilating-extension of said pipe, with a ventilating-pipe provided with a valve opening into its upper end and at its lower end into the air-space of the bowl, and with a float-valve at the upper end of the stand-pipe to cut off the flow of water when said pipe is full, all as and for the purpose set forth.

3. In a water-closet, the combination of a flushing stand-pipe with a ventilating-pipe connecting the air-space of the bowl with said stand-pipe, and of the floating valve at the upper end of the stand-pipe to cut off the flow of water, a valve in the stand-pipe above its connection with the ventilating-pipe opening upward and adapted to be closed by a current flowing down the pipe from the flue or roof-pipe, and a valve in said ventilating-pipe, all as and for the purpose set forth.



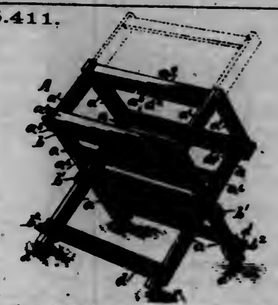
4. In a water-closet, the combination of the following elements, viz: a flushing stand-pipe, a three-way cock connecting its lower end with the service-pipe, a float-valve at its upper end to cut off the flow of the water, a ventilating-extension of said pipe, a ventilating-pipe entering the stand-pipe above the float-valve and opening at its lower end into the bowl, and a valve above the connection of the stand-pipe and its ventilating-extension to prevent undue air-pressure from above, all as and for the purpose set forth and described.

5. The combination of a flushing stand-pipe, a ventilating-extension thereof, a ventilating-pipe connecting the stand-pipe with the bowl, and the valves, all as set forth, with the three-way cock at base of stand-pipe, with its openings arranged, as set forth, for filling the stand-pipe while in one position and flushing the bowl when turned to another, and with the small drip orifice or pipe in the three-way-cock cone to permit a slight flow of water to moisten the bowl while it is in use and before the cock is opened for flushing, all as and for the purpose described.

6. The combination of the stand-pipe with its valves, the ventilating-extension thereof, the ventilating-pipe connecting said pipe with the bowl and provided with its openings and valves, as set forth, the three-way cock, located as described, with the drip-pipe in its cone, and a set-screw for regulating the amount of flow of water through the same for moistening the bowl, all as and for the purpose set forth.

7. In a water-closet, the combination of the following elements, viz: the stand-pipe, the three-way cock located at the lower end of the same, the ventilating-pipe and valves connected, as described, with the stand-pipe and the bowl, a ventilation-extension of the stand-pipe, and the valves and slip-joint located at the junction of the stand-pipe, its ventilating-extension, and the bowl-ventilating pipe, all substantially as described.

385,410. HAT-WIRE. FREDERICK D. FRY, Danbury, Conn., assignor of one-half to Theodore H. Benedict, same place. Filed Nov. 2, 1887. Serial No. 254,052. (No model.)

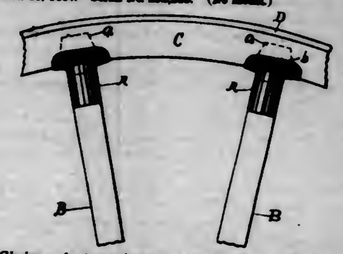


Claim.—A hat-wire having a greater and a less diameter in cross-section, and being completely turned twice before the ends are joined, so that at the front, back, and sides of a hat-brim the greater diameter lies in the horizontal plane and at points midway between in the vertical plane, thereby giving great strength at the quarters of the brim and permitting the brim to be pressed over backward at the front and back.

385,411. MERCHANT'S DISPLAY-FRAME. GEORGE R. FULLER, Savanna, Ill. Filed Oct. 20, 1887. Serial No. 253,710. (No model.)

Claim.—1. A merchant's display-rack the open or skeleton body whereof is in the form of a parallelopipedon and set at an angle to bring the sides thereof in a diagonal plane relative to a vertical line, the lower end bars of said body being a continuation of the supporting-legs, substantially as and for the purpose set forth.

2. In a display-rack of the character described, the combination, with the inclined cross-bars $a\ a\ a\ a$, of the bars $a'\ a'\ a'\ a'$, extending in-



385,411.

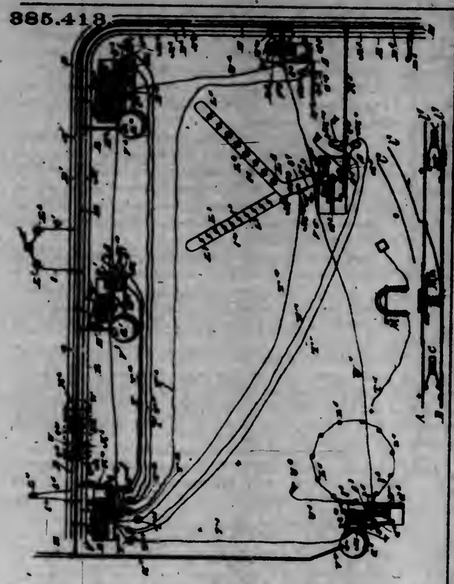
wardly and upwardly from the bars a, the longitudinal bars $a^2\ a^2$, the inside bars, $a^3\ a^3$, and the companion bars $a^4\ a^4$, forming the hollow body of said rack and supporting the same in the required position, substantially as and for the purpose set forth.

3. A display-rack comprising the inclined cross-bars $a\ a\ a\ a$, the short connecting-bars $a'\ a'\ a'\ a'$, the longitudinal bars $a^2\ a^2$, the inside lengthwise bars, $a^3\ a^3$, the companion bars $a^4\ a^4$, arranged to provide the ledge b, and the lower longitudinal bars, $b'\ b'\ b^2\ b^2$, the latter two of which are provided with the ledges d, all constructed and arranged substantially as and for the purpose set forth.

385,412. SPOKE-SOCKET. JOHN T. GIBBLY, Troy, N. Y. Filed Oct. 12, 1887. Serial No. 252,295. (No model.)

Claim.—1. As an improved article of manufacture, a metallic spoke-socket consisting of an integral casting having on one end a spoke-receiving sleeve and on the other end a flanged rim-seat and longitudinal and transverse rim-tenons projecting about centrally from the seat, substantially as described, and for the purpose set forth.

2. The combination, with a wheel-rim, of a metallic tenon mortise-case inserted therein and a metallic spoke-socket having on one end a rim-seat and tenon and on the other end a spoke-sleeve, substantially as described.



385,418. ELECTRIC RAILWAY, POWER, AND LIGHTING APPLIANCE. ISAAC W. ENTERLINE, Philadelphia, Pa. Filed Apr. 21, 1887. Serial No. 236,104. (No model.)

Claim.—1. In an electric supply service, a series of conducting-leads extended from a central station and divided into two or more longitudinally-insulated sections forming independent circuits, in combination with a series of independent generating-dynamos, each dynamo contiguous to and supplying one of said sections, and a series of driving-engines, each contiguous to and operating one of said dynamos, each of said driving-engines operated by a source of power independent of and not derived from said central station, together with a series of electric conducting-wires connecting each of said sub-circuits with said central station, substantially as and for the purpose described.

2. The longitudinally-insulated electric leads A B, A′ B′, A^2 B^2, A^3 B^3, l^9 l^9, l^{10} l^{10}, extended along the lines of an electric supply system to form a series of more and more distant sub-circuits, in combination with a parallel series of independent generating-dynamos, each adapted to supply electricity to one of said sub-circuits, and a series of fuel-gas engines, operated by the combustion of fuel-gas mixed with atmospheric air, each of said engines provided with a combustion-chamber and an incandescent igniter, S, adapted to cause said mixed gases to combine with heat and expansion and operate the piston of said engine, and each connected with and operating one of said dynamos, together with a line of closed fuel-gas-supply pipes extended along said supply system and provided with branch pipes supplying fuel-gas to each of said engines, substantially as described.

3. The compound fuel-gas and electric railway, consisting of a trackway and an electric supply-plant having a series of longitudinally-

385,418.

insulated conducting-leads extended along said trackway and adapted to supply electricity to an electric motor-car in contact therewith, in combination with a generating-dynamo contiguous to and supplying each of said sub-circuits, and a fuel-gas power-supplying service, parallel with said electric service, consisting of a line of fuel-gas mains extended along the lines of said conducting-leads, conveying a current of combustible gas with a pressure less than that required to operate said power-supplying device, said gas adapted to be mixed with atmospheric air to produce motive power by the combustion and expansion thereof, and a series of fuel-gas engines, each provided with a chamber for the combustible admixture of said fuel-gas, with a suitable proportion of atmospheric air supplied from the atmosphere at said station, and means for igniting said mixture in said engine, each coupled to and operating one of said dynamos, said engines supplied with said fuel-gas to furnish motive power for the same, substantially as described.

4. In combination with a central electric supply-service station having a generating-dynamo and a source of motive power to operate the same, and a series of longitudinally-insulated and independently-supplied electric conducting-leads extended therefrom to supply more and more distant parts, said insulated conducting-leads forming independent sub-circuits, a series of independent generating-dynamos contiguous to said sub-circuits and supplying electricity thereto, and a series of independent sources of motive power operating said dynamos, together with a series of electric conducting-wires independent of said insulated sub-circuits and extended from said sources of motive power along said lines of conducting-leads and operating through electro-magnets contiguous to said sources of power to set in operation or stop the motion of said generating-dynamo as a current of electricity is sent through said electric wires or the same are put out of circuit, substantially as described.

5. In an electric supply service, in combination with the central station, V, the sub-stations V' V^2 V^3 V^4 V^5, generating-dynamos D' D^2 D^3 D^4 D^5, and independent driving-engines d' d^2 d^3 d^4 d^5, located at said sub-stations, valves f' f^2 f^3 f^4 f^5, operated by electro-magnets M M^{10}, M′ M^{11}, M^2 M^{12}, &c., arranged in pairs on opposite sides of said valves, said magnets M M′ M^2, &c., operating to open said valves by acting upon armatures connected therewith, and said opposite magnets, M^{10} M^{11} M^{12}, &c., operating to close said valves by like means, the coils of said magnets charged through independent conducting-wires T T^{10}, T′ T^{11}, T^2 T^{12}, &c., or their equivalents, extended along said supply service and provided with terminal electric contacts to turn on an electric current or cut the same off from said electro-magnets and open or close the supply-valves of said engines, substantially as described.

6. In an electric supply service for railway purposes, having a continuous trackway and electric conducting-leads divided into a series of longitudinally-insulated sections, in combination with a generating-dynamo and a source of motive power contiguous to each of said sections, and a motor-car moving upon said trackway in electric contact with said leads, the independent electric conducting-wires extended from the said source of motive power in opposite directions along the lines of other sections not operated thereby, adapted to be put in circuit by terminal contacts operated by the passage of the motor-car along other sections of said railway, said wires connected with electro-magnets and an armature controlling the supply-valve of said source of power, the whole so constructed that said motor-car, advancing upon a different section and operated by electricity generated by a different dynamo and driving-engine, will make contact upon one of said wires and start the engine and dynamo upon a section in advance, and when said car has passed beyond said section will insert the opposite contact and send back a current through the opposite wire to reverse said valve and stop said engine and dynamo, and so on successively, substantially as described.

7. In combination with the generating-dynamos D' D^2 D^3 D^4 D^5, located at various distant parts of an electric supply service, one or more independent electric conducting-wires extended from a central station to each of said generating-dynamos, said wires provided with detachable contacts operated by a moving part of each of said dynamos and adapted to make or break the circuit in said wires at definite intervals relatively to the operation of said dynamos, together with a recording or sounding apparatus in the circuit of said wire or wires at said central station, the whole constructed to operate substantially as and for the purposes herein shown and described.

8. In combination with the generating-dynamos D' D^2 D^3 D^4 D^5, located at different distant points along the longitudinally-extended conducting-leads of an electric supply plant, the electric wires U U^2 U^3 U^4, having breaks f' f^2 f^3 f^4 f^5 at said dynamos held in detachable contact with each other normally, so that a current will traverse the whole line U U^4, each of said dynamos provided with a circuit-breaker adapted to break the circuit in the wire U U^5 in a manner peculiar to itself while said dynamo is in motion, the whole so constructed that at each revolution of the armature of each dynamo mechanism connected therewith will be operated, and at regular intervals proportioned to the speed of said dynamo a record will be sent along said wire U U^5 to a recording-instrument, t, in contact therewith, and a characteristic record will indicate the speed of each dynamo of the series, substantially as described.

9. In combination with the independent generating-dynamos D' D^2 D^3, &c., of an electric supply service, the electrically-charged wire U U^4, having detachable contacts at each dynamo of said service held in contact with a rotating part, D^{13}, connected with said dynamos by springs and adapted to be instantaneously separated and closed at short intervals by a suitable circuit-breaker, with a number of rapid interruptions of current of greater or less number or length peculiar to each dynamo of the series, and the recording apparatus t, provided with a marking-point to mark a strip of paper passing under the same, the whole so constructed that each break of the wire U U^4 will cause the said point to mark upon the said strip a permanent record of the operation of each of said generating-dynamos at alternating intervals, substantially as and for the purposes described.

10. In combination with the rotating part of a dynamo-electric generator, the gear D^{10} D^{11}, electrically-charged wire U', attached to spring-lever U^{14} U^{15}, and in electric contact with block U^{13} of wire U, the toothed projections U^{16} at one part of the circle D^{10}, having a definite size and spaces for each apparatus f' f^2 f^3, so constructed that the rotation of said dynamo will cause the gear D^{10} D^{11} to rotate at a relatively-adjusted speed, the teeth U^{16} to engage rapidly and successively at one part of the rotation of D^{11} with the free end of the lever U^{15} and break the circuit in the wire U U' once or oftener, in a characteristic manner, for each dynamo, substantially as and for the purposes described.

11. In an electric supply service, in combination with a central station, V, and one or more generating sub-stations, V^2, supplying smaller circuits, l^2 l^2 l^{10} l^{11}, for special distribution of electricity, said sub-stations at distant points along the lines of said electric service, the electric key T^{10} at said central station, and wire T^{13}, connected with the coils of an electro-magnet at said distant sub-circuit, together with a circuit-breaker, M^{17}, connected with the armature of said electro-magnet, operating to insert or cut out said smaller circuit or circuits as said key is operated, substantially as described.

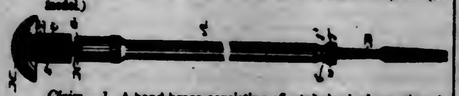
12. A gas-main extended along the lines of an electric supply service supplying fuel-gas under pressure to a series of gas-engines located at various distant parts thereof, said engines coupled to and operating a similar series of generating-dynamos along the same, in combination with one or more gas-blowers operated thereby and connected with said gas-main, said blowers operating to force the said gas along the same under suitable pressure adapted to convey the said gas to and supply the next succeeding engine or engines of the series, substantially as and for the purposes described.

13. The fuel-gas supply-main E, branch pipes E' E^2 E^3, gas-reservoirs G' G^2 G^3, check-valves i' i^2, &c., and supply-pipes E^{11} E^{12} E^{13},

leading from said reservoirs and supplying combustible gas to the engines d^1 d^2 d^3, located at various points along the line of gas-supply, in combination with a series of said engines, d^1 d^2 d^3 d^4, operated by the combustion of a mixture of atmospheric air or other gases with the fuel-gas of said main B, said engines coupled to and driving the series of generating electric dynamos D' D^2 D^3 D^4, substantially as and for the purposes described.

14. In an electric railway having a central station, V, and a series of independent sub-stations, V' V^2 V^3, and the independent sub-circuits A' B', A^2 B^2, A^3 B^3, extended along the lines of said railway, the fuel-gas main E, parallel therewith and supplying combustible gas to a series of driving-engines, d^1 d^2 d^3, for operating the same, in combination with a series of generating-dynamos coupled to and operated by said engines, and each dynamo supplying electricity to one of said sub-circuits, together with a series of opposite electric wires extended from said sub-stations along said railway and provided with terminal contacts operated to make or break circuit in said wires, and electro-magnets and armatures connected therewith, operating to control the supply-valves of said engines as an electric current is sent through said wires and admit a supply of said gas to the combustion-chamber of said engines or cut off the same, substantially as described.

15. A supporting-structure for an electric railway, consisting of the track-way R R, extended along the same, having supports J^1 and a conduit, J, between said rails R R, and having longitudinal slot J^2 and electric conducting-leads A B within the same, supported by and insulated from said conduit, and the fuel-gas-conveying main E, extended along said railway, having lateral branch pipes E', extended laterally from said main E to fuel-gas engines supplied thereby at various points along said railway, said gas-engines coupled to and operating dynamo-electric generating-machines to supply electricity to said conducting-leads at various points along said railway, said leads supplying electro-motive energy to an electric motor-car traveling along said track-way, substantially as described.



16. An electric-railway structure consisting of the track-way R R, supports J^3 E', electric conducting-leads A B, and gas-main E, extended along the same, the longitudinal trough J^7, surrounding said gas-main E, the interspaces J^8, filled with an insulating substance, J^9, and the electric conducting-wires T U J^6 l l' m m, contained within said trough, out of contact with said gas-main and insulated by said substance J^9, substantially as and for the purposes herein shown and described.

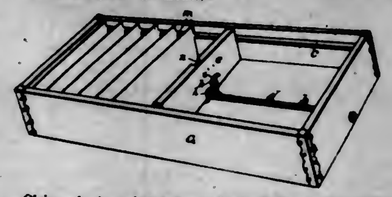
17. In combination with a generating electric dynamo and a fuel-gas engine contiguous to and operating the same, a fuel-gas main, E, extended from a relatively distant source of supply to said engine and supplying combustible gas to operate the same by its combustion, together with a valve controlling said supply of fuel-gas to said engine, said valve opened and closed by a pair of oppositely-placed electro-magnets attracting an armature attached to the same to and fro, each of said opposite electro-magnets provided with one or more electric wires extended from a relatively-distant point to said engine, said wires having terminal electric contacts adapted to insert or cut out the same, and through one or the other electro-magnet operate the said valve to start or stop the said engine and said dynamo, substantially as described.

18. In combination with a fuel-gas engine operated by the combustion of said gas, and a generating electric dynamo contiguous to and driven by said engine, one or more electrically-charged conducting-wires extended from said engine and dynamo to convey to a distant point intelligence of the operation of the same, and one or more electrically-charged conducting-wires extended from and operating the supply-valve of said engine by electric currents supplied through one or more terminal contacts, said wires extended to a distant point from said supply-station and controlling said engine therefrom, substantially as and for the purposes herein shown and described.

19. In combination with one or more fuel-gas engines and a fuel-gas-supply main conveying said gas from a distant source of supply to said engines, a trough surrounding said gas-main and containing one or more electric wires extended along the same, together with a mass of insulating material in said trough extended along said main, supporting and insulating said electric wires, substantially as and for the purposes described.

385,414. BRACE FOR SCREW-DRIVERS, BITS, &c. GEORGE W. HERR, Philadelphia, Pa. Filed Oct. 10, 1887. Serial No. 251,914. (No model.)

Claim.—1. A hand-brace consisting of a tubular body portion, A, with an angular opening in the upper part of its bore, a nut having an angular lower portion adapted to fit in said angular opening, and a rounded upper part adapted to slide in said bore, a handle with the screw C working in the said nut, and a washer with a spring bearing against the said nut, said parts combined substantially as described.



2. A hand-brace consisting of the tubular body portion A, with a portion of its bore of angular form, a nut having a lower portion adapted to fit in said angular opening in the bore, and its upper portion adapted to slide in said bore, a plug, G, with slot K, the screw C, with handle H, having the shoulder L, the said screw working in said nut, and a washer and spring bearing against said nut, said parts combined substantially as described.

3. In a hand-brace, the tubular body A, having a nut fitted therein and a screw working in said nut, the plug G, inserted in the upper end of said body A, and having a diametric groove or recess on its upper face, the handle H, with depending tubular guard S, and an inner central projection or shoulder, the latter adapted to fit in said diametric groove in said plug, said parts being combined, substantially as and for the purpose set forth.

4. A hand-brace consisting of a tubular body with a nut fitted therein, a screw working in said body, a handle secured to said screw and having a central shoulder and a tubular guard, a plug inserted in the end of said body, said having a diametrical recess adapted to receive said shoulder, said parts being combined substantially as and for the purpose set forth.

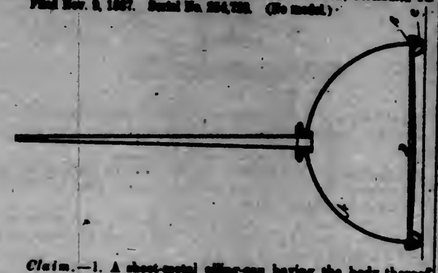
5. A hand-brace having a tool-holder with peripheral groove g, the slot g', and a groove, g^1, at right angles to said slot, and the wire spring w, secured at one end to the holder and adapted to fit in the groove g and across the slot g', and having a thumb-piece, the latter adapted to fit in said groove g^1, said parts being combined substantially as and for the purpose set forth.

385,415. BANK-CHECK FILE. FRANK A. JAGER, WILLIAM M. LEVEY, and LOUIS H. LEVEY, Indianapolis, Ind. Filed Jan. 28, 1888. Serial No. 261,805. (No model.)

Claim.—1. As an improvement in check-files, a series of movable partitions having projections at either end, said projections adapted to slide in longitudinal grooves in the sides of the case, a follower, and a locking device, constructed substantially as shown and described, for securing said partitions and follower in place, as set forth.

2. In a check-file, the combination, with the case, its partitions and follower, of a rod placed longitudinally in a groove in the bottom of the case, said follower being movable upon and supported by the rod, and a locking device consisting of a spring-actuated cam attached to and moving with the follower and engaging with the rod, substantially as and for the purpose specified.

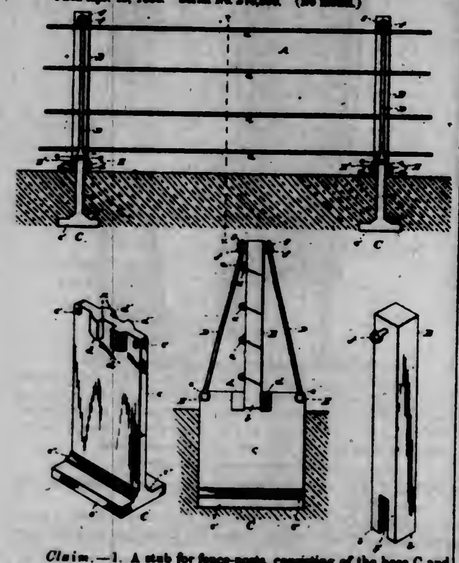
385,416. BOMB-LANCE. FREDERICK W. LINDSEY and DAVID A. COREY, New Bedford, Mass., assignors to William Lewis, same place. Filed Feb. 8, 1888. Serial No. 263,401. (No model.)



Claim.—1. The combination of the magazine with a front stopper and point-section, and fuse-tube secured in the said stopper and projecting forward toward the point-section and provided with a nipple at its forward end, with a hammer contained within a recess at the front of said stopper, and having a tubular shank surrounding the said nipple and a portion of the fuse-tube, and a spring by which the said hammer is normally retained at the forward end of said recess, but permitted to move backward with relation to the said nipple, substantially as and for the purpose described.

2. The combination of the magazine having a stopper in the forward end, with a fuse-tube fastened in and extending through the said stopper, provided with a nipple at its forward end and a lateral vent-passage in the part in advance of the stopper, a hammer having a tubular shank surrounding said nipple, and a portion of the fuse-tube provided with vent-passages from said recess that contains the said hammer and nipple, substantially as and for the purpose described.

3. The combination of a magazine of a bomb-lance closed at its forward end and provided with a point-section, and having a recess at the front of the magazine and a lateral vent-passage and sealing-plug therein, with a fuse-tube extending from the magazine into the recess in advance thereof and provided with a nipple, and a hammer having a tubular stem surrounding said nipple, substantially as described.



385,417. GELDER-GAS. JOHN W. MACDONALD, Pittsburg, Pa. Filed Nov. 9, 1887. Serial No. 254,722. (No model.)

Claim.—1. A sheet-metal ceiling-can having the body thereof extending down below the bottom of the can and having said body-extension crimped over in such shape against the outside of the bottom as to form an annular space, and a soldering or brazing material within the space.

2. A sheet-metal ceiling-can having a spring or flexible bottom, and having near its base a shoulder or bottom-support, against which the bottom is held by the metal of the body below said bottom turned inward and against the outside of said bottom, the said bottom and body being joined by soldering or brazing material placed within an annular space formed by the metal of the can-body below the bottom of the can.

385,418. STUB FENCE-POST. JAMES MARSH, Mansfield, Ohio. Filed Apr. 13, 1888. Serial No. 270,889. (No model.)

Claim.—1. A stub for fence-posts, consisting of the base C and post-support c, at right angles thereto, the latter at its upper edge on opposite sides having short lugs d d', forming a seat for the bifurcated fence-post B, substantially as specified.

2. The combination with the stub C c, having short lugs at its upper edge, of the fence-post B, slotted at its lower end and seated between said lugs, substantially as specified.

385,419. FIRE-ESCAPE LADDER. PETER B. MARTIN, Dubuque, Iowa. Filed Dec. 30, 1886. Serial No. 223,043. (No model.)

Claim.—1. In a lighting device, the combination, with a standard, of a gas-burner, match-chamber, bolt, and cap supported by said standard, an actuating device, a cylinder, valve, and operating-lever, substantially as described.

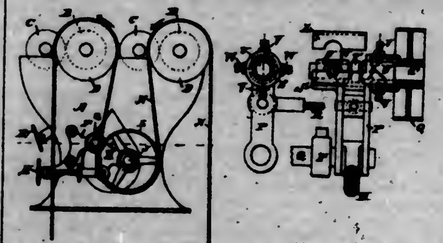
2. The combination, with a standard, of a gas-burner, match-chamber, bolt, and cap supported by said standard, said cap being provided with a spring, a cylinder, valve, and operating-lever, substantially as described.

3. The combination, with a standard, of a gas-burner, match-chamber, bolt, a cap supported by said standard having a spring secured to said standard and provided on its under face with a roughened surface, a cylinder, valve, and operating-lever, substantially as described.

4. The combination, with a standard, of a gas-burner, match-chamber, and cap provided with a recess and having a spring, a bolt secured within a chamber in the standard and provided with a rod which is connected to an operating-lever, said lever, a cylinder, and valve, substantially as described.

5. The combination, with a standard, of a gas-burner, a cap provided with a spring and bolt, a match-chamber, a plate having a spring for ejecting the matches after use and a clamp for holding them in place, a cylinder, valve, and operating-lever, substantially as described.

6. The combination, with a standard, of a match-chamber and a cap provided with a spring and formed with a recess, a bolt provided with a button and arranged to enter said recess, a rod secured to said bolt and provided with a spring, a cylinder, valve, and operating-lever, substantially as described.



7. The combination, with a standard, cylinder, and operating-lever, said cylinder being provided with a valve, induction-pipe and eduction-pipe, of a connecting-rod secured at one end to the stem of said valve and at the other end to said operating-lever, a cap having a spring, gas-burner, match-chamber, and bolt, substantially as described.

8. The combination, with a standard, of a cap provided with a spring, gas-burner, match-chamber, bolt, cylinder, valve, and operating-lever, and a connecting-rod pivoted at one end to the valve-stem and secured at its other end to the said operating-lever by an open joint, substantially as described.

9. The combination of the operating-lever A, connecting-rod C, having the ring K, the headed rod J, secured at one end to said ring, the bell-crank lever I, with one arm fastened to said rod J, the rod m, fastened to the other end of said lever, the bolt M', connected to the rod m, the standard H, the cap P, and the spring actuating said cap, substantially as described.

10. The combination, with a standard, of a cap provided with a spring, gas-burner, match-chamber, bolt, cylinder, valve, and operating-lever, and a rod, C, connected at one end to the valve-stem and at its other end to the short arm of the lever A, said lever A being pivoted at a and having its long arm inclined upwardly, substantially as described.

385,420. ROLLER-MILL. JONATHAN D. MAWHOOD, Richmond, Ind., assignor to the Richmond City Mill Works, same place. Filed Apr. 4, 1887. Serial No. 233,571. (No model.)

Claim.—1. The combination of a transversely-movable counter-shaft, two pulleys thereon, two belts engaging said two pulleys, respectively, and driven pulleys engaging said belts, respectively, and so disposed with reference to the path of movement of the counter-shaft that the belt to be tightened by the movement of the counter-shaft will lead from the counter-shaft in a direction substantially parallel to the path of movement of the counter-shaft, and the other belt lead from the counter-shaft in a direction substantially at right angles to said path, substantially as and for the purpose set forth.

2. In a roller-mill, the combination of two belts, two driven shafts for each belt, rolls thereon, a pulley on one end of each of said shafts, a movable counter-shaft with a pulley on each of its ends, and a tightening-pulley, the one belt to be tightened by the movement of the counter-shaft leading from the counter-shaft in a direction substantially parallel to the path of movement of said shaft, and the other belt leading from said shaft in a direction substantially at right angles to said path, substantially as and for the purpose set forth.

3. The combination of a pair of contiguous bearings, a movable support for said bearings, devices, as set-screws V and W, connecting said bearings with said support, a shaft free to revolve in said bearings and projecting at one end outwardly therefrom, a tightening-pulley rigidly secured to said shaft projection, and a collar fast upon said shaft and engaging the end of one of said bearings, substantially as and for the purpose set forth.

4. The combination, with pulleys and a belt engaging the same, of shaft T, overhung pulley Q, tray S, bearings U, with their inner ends contiguous, and set-screws V W, in pairs at right angles to each other, engaging grooves Y in said bearings and serving to permit the bearings to automatically adjust themselves into a common axis, and as a means by which the plane of that axis can be adjusted, substantially as and for the purpose set forth.

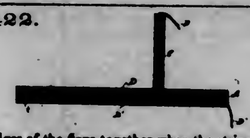
385,421. **ANIMAL-TRAP.** GEORGE J. MCMILLAN, Treadwell's, N. C. Filed Apr. 9, 1888. Serial No. 270,103. (No model.)

Claim.—1. The combination, with the box provided with an opening in its bottom, of the pivoted lever, the platform carried thereby, the vertically-operating door, the link normally holding said door in an elevated position, and the vertical arm on said lever to operate said link, substantially as and for the purpose specified.

2. The combination, with the pivoted lever and the arm *f'*, carried thereby, of the vertically-operating door, the catch thereon, the link engaging said catch, and the gravity-arm above the door, all substantially as and for the purpose specified.

3. The combination, with the vertically-operating door and the catch carried thereby, of the pivoted lever, the vertical arm carried thereby, the link engaging said catch, the gravity-arm, and the piece *g* on said door at right angles to the height thereof, substantially as shown and described.

4. The combination, with the vertically-operating door and the piece *g* thereon, near the top thereof, and extending at right angles thereto, of the tilting lever I and the lug on said lever engaging said piece *g*, substantially as and for the purpose specified.



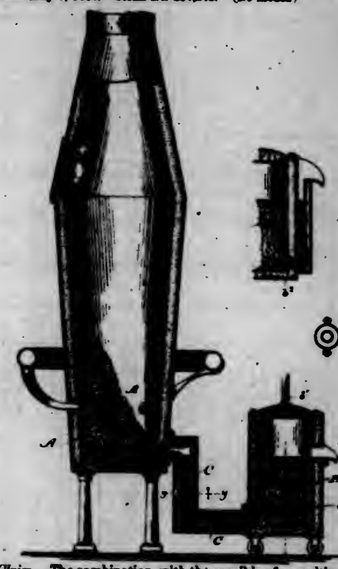
5. The combination, with the vertically-operating door, the arm *g* thereon, and the gravity-arm, of the tilting lever and the lug carried by the short arm thereof and arranged to engage the piece *g* on the door, substantially as and for the purpose specified.

6. The combination, with the vertically-operating door, the catch thereon, the link engaging said catch, the pivoted lever E, and the vertical arm carried by said lever, of the piece *g* on the upper end of said door, the gravity-arm, and the lever I, carrying lug adapted to engage said piece *g*, substantially as and for the purpose specified.

7. The cage provided with partition N, having opening *p*, combined with the tilting lever P, pivoted within said cage, and the strip *q*, carried by the end of said lever and serving to close said opening, substantially as and for the purpose specified.

385,422. **BLANKET-CASE.** WILLIAM G. HOEFNER, Minneapolis, Minn. Filed Dec. 10, 1887. Serial No. 257,457. (Model.)

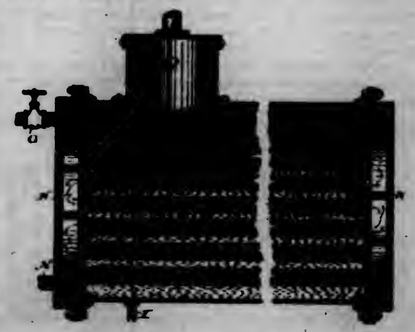
Claim.—The combination, with a rectangular frame provided with a sack-cloth bottom, of an openable cloth cover having its edges turned down and its corners overlapped and adapted to fit over said frame when filled with blankets, fastening-strings attached to said frame at its corners, and draw fastening-strings passing through the overlapping corners of the cover at such points, so as to draw the side



and end edges of the flaps together when the string is drawn taut and secured to the frame-strings, substantially as and for the purpose set forth.

385,423. **INSECTICIDE.** MICHAEL OSSENTE, Alameda, Cal., assignor of one-half to Bernard Steele, same place. Filed July 6, 1887. Serial No. 243,451. (No specimens.)

Claim.—The herein-described composition for use in exterminating insects, consisting of naphthaline, a fatty oil, and lime-water, mingled in suitable proportions, as specified.

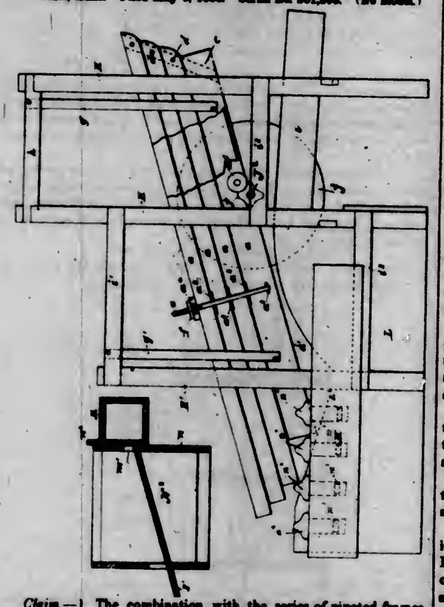


385,424. **SMELTING-FURNACE.** ORRIN B. PERK, Chicago, Ill. Filed May 5, 1887. Serial No. 237,272. (No model.)

Claim.—The combination, with the crucible of a smelting-furnace, of a receiver air-tight when its overflow is stopped, a connecting passage entering the receiver at or near its bottom, and means whereby the slag in the receiver may be forced or returned through the passage to the smelting-furnace, substantially as described.

385,425. **STEAM-GENERATOR.** ORRIN B. PERK, Chicago, Ill. Filed Sept. 26, 1887. Serial No. 250,672. (No model.)

Claim.—The process of generating steam which consists in bringing water and heated slag in contact in a steam-tight receptacle, substantially as described.



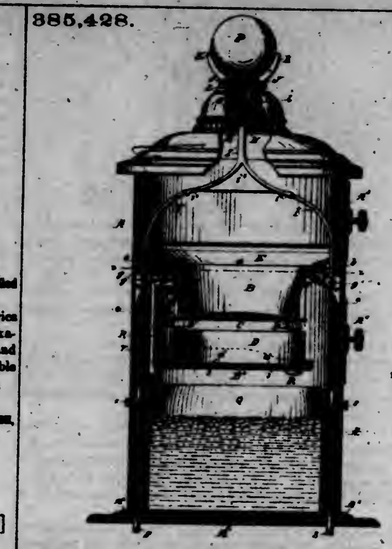
385,425.

385,426. **DYEING.** JOHN C. PENNINGTON, Paterson, N. J. Filed Sept. 22, 1887. Serial No. 250,483. (No specimens.)

Claim.—The process of dyeing silks, wools, and mixed fabrics with azoïne colors by impregnating them with a solution of the alkaloïdal bases of such colors in ether or other equivalent liquids, and afterward submitting them to the action of steam containing suitable acid to reconstitute the color and to volatilize the residual solvent.

385,427. **GRAIN SEPARATOR AND GRADER.** ELIJAH H. PUSH, Wilts, Kans. Filed May 6, 1886. Serial No. 201,269. (No model.)

Claim.—1. The combination, with the series of pivoted frames, each, excepting the lowermost, provided with a screen, of a pair of rods pivotally secured to the sides of the lowermost frame, the bar a^4, provided with the end slots, and the clamping-nuts adjustable on said rods, whereby said frames are bound together, substantially as described.



2. The combination, with the end pieces, *c*, the frames *a*, pivotally secured thereto, and the intermediate frames having the U-shaped lugs a^3 and the removable pivot-pins *d*, of the rods *c*, having screw-threaded portions *c'* and the clamping-nuts *f*, and the bar a^4, extending across the uppermost frame and having the slotted projecting ends, substantially as set forth.

385,428. **SAFETY CAR-STOVE.** JOHN S. RUSSELL, Bay City, Mich., assignor to Selwyn Eddy, John F. Eddy, and Stephen H. Rabbitt, all of same place. Filed Aug. 27, 1887. Serial No. 248,097. (No model.)

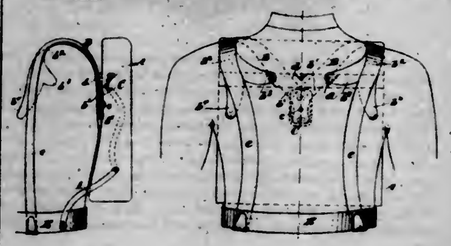
Claim.—1. The combination, with the fire-pot, grate and ash-pit detachably supported therein, the tank located at the bottom thereof, and the tripping mechanism, of a support located on the top of the stove and an adjustable rest and removable weight sustained by said support, whereby the weight may be discharged to release the fire-pot when the stove is tilted, substantially as specified.

2. The combination, with the triggers or movable supports which

385,428.

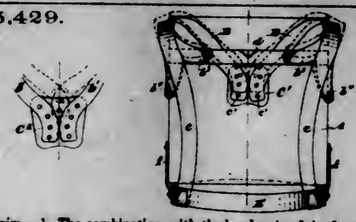
hold the fire-pot, of the vertical stem and the rods connecting the same with the said triggers, the cup-shaped disk mounted upon the upper end of said stem, the adjustable nut, also mounted on said stem and located in the cup, and the curved fingers pivoted to said nut and arranged to ride in said cup, whereby an adjustable seat is formed for the weight in order to discharge it at any angle of the stove and of a vertical line, substantially as specified.

3. The combination, with the casing of the stove and the fire-pot and ash-pit thereof, of the vertical guides on the inside of the casing, and the slotted lugs secured to the fire-pot section and arranged to slide on said guides to direct the detached fire-pot, grate, and ash-pit into the tank when released, substantially as specified.



4. The combination, in a safety car-stove, of the movable supports for detachably suspending the fire-pot, the ash-pit, and the connecting-straps, the vertical guides on the inside of the stove-casing, and the slotted lugs secured to the straps and arranged to slide on said guides, substantially as specified.

5. In a safety car-stove, the combination, with the fire-pot B, of the pivoted catches G, rods I, pivoted to said catches and to stem I', the said stem I', weight P, and spring M, all constructed and arranged substantially as described.



6. The combination, with the stem I', having threaded end *i*, of the disk L, ball P, nut J, having lugs *j*, and the fingers K, pivoted to said lugs to support the ball, substantially as specified.

7. The combination of the ball or weight P, the fingers K, holding said weight, the disk L, whereby the fingers are adjusted, the stem I', to which the fingers are pivoted, the arms I, pivoted to the branches of the stem I', the trigger G, pivoted to the arms I and to suitable supports, the fire-pot B, normally held by the triggers, the ash-pit D, and straps B', connecting it with the fire-pot, the lugs b^3, secured to the said straps, the guide-strips R, secured to the inner wall of the casing, and the tank Q, located below the ash-pit, the whole arranged to operate substantially as specified, and for the purpose set forth.

385,429. **FRAME FOR CARRYING KNAPSACKS, &c.** ADOLPHUS MÜLLER, Berlin, Germany. Filed June 27, 1887. Serial No. 242,692. (No model.)

385,429.

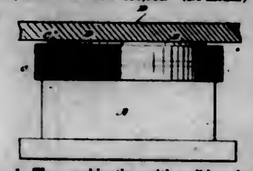
Claim.—1. The combination, with the burden A, of the frame for carrying said burden on the back, said frame comprising two hooks, B B, adapted to the form of the body and having holes in their longer arms, the perforated plate C, having a series of holes, and means, as the bolt C', engaging the holes in the hooks and plate for adjusting the former in height and width, said burden being secured to said plate by a bolt, substantially as specified.

2. In a burden-supporter, the hooks B, whose front arms, b^3, are forked, as at b^3 b^4, for the purpose set forth, in combination with the plate C, to which the rear ends of said hooks are secured, the bolt E, and flexible straps *e*, passing over the shoulders and connecting said bolt with said plate, substantially as specified.

3. In a burden-supporter, the transverse strap *d*, in combination with the burden A and with the hooks B B, adjustably secured thereto, the strap passing between said hooks and the wearer and adapted to hold the upper part of the burden reliably to the hooks, while allowing the latter to be adjusted as to height and width, substantially as specified.

4. In combination with the hooks B B, for carrying burdens, the stays *f f*, pivoted to the lower portion of the burden, the buttons *g*, adapted to hold the stays when out of use, and suitable provisions for engaging said stays with the waist-belt E, adapted to allow the burden to be partially borne by the haunches when required, as herein specified.

385,430. ADVERTISING-CLOCK. ANDREW V. STRAIT, Sidney, N. Y. Filed Feb. 20, 1888. Serial No. 265,703. (No model.)

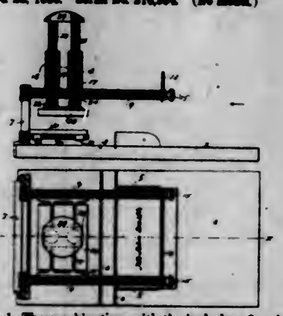


Claim.—1. The combination, with the clock and the upright and horizontally-revolving cylinders, one of which is provided at its upper end with radial spokes, of the intermediate lever, vertical holding-rods carried by said lever and operating between the spokes, and a rod connected to said lever and operated by mechanism on the post of the clock, substantially as and for the purpose specified.

2. The combination, with the clock and the revolving cylinders, one of which is provided with radial spokes at its upper end, of a holding and releasing mechanism operated by the clock-works, and consisting of a cam-wheel on the post of the clock, the intermediate pivoted lever, I, the rod H, actuated by said cam-wheel and connected with said lever, and the pins carried by said lever and extending down between said spokes, substantially as described.

3. The combination, with the clock and the revolving cylinders, one of which is provided near its upper end with radial spokes, of a holding and releasing mechanism operated by the clock-works, and consisting of a cam-wheel on the post of the clock, the pivoted lever G, the intermediate pivoted lever, I, the rod connecting said levers, and the downwardly-projecting pins carried by the intermediate lever and extending between the spokes, substantially as and for the purpose specified.

4. The combination, with the clock and the revolving cylinders, one of which is provided near its upper end with radial spokes, of a holding and releasing mechanism operated by the clock-works, said consisting of a cam-wheel on the post of the clock, the pivoted lever G, the intermediate pivoted lever, I, the rod connecting said levers, the downwardly-projecting pins carried by the intermediate lever and extending between the spokes, the bell, and the bell-hammer carried by said intermediate lever, substantially as described.



385,431. SLIDE-VALVE. WILLIAM J. TREMAIN, Evansville, Ind. Filed Jan. 9, 1888. Serial No. 260,011. (No model.)

Claim.—1. The combination, with a slide-valve, of a top plate having an annular groove in it, the inner wall of which groove is conical, as shown and described, and an expansive ring, E, tapered to fit the conical wall and of a size to stand above the upper edge thereof, as set forth.

2. The combination, with a slide-valve, of a top plate having an annular groove in it, the inner wall of which is conical, and an expansible ring, E, tapered to fit and stand above the face of the top plate and breaking joints both vertically and horizontally at its point of division, as set forth.

385,432. HAND-STAMP. JAMES S. TREMBLY, New York, N. Y. Filed Oct. 22, 1888. Serial No. 216,994. (No model.)

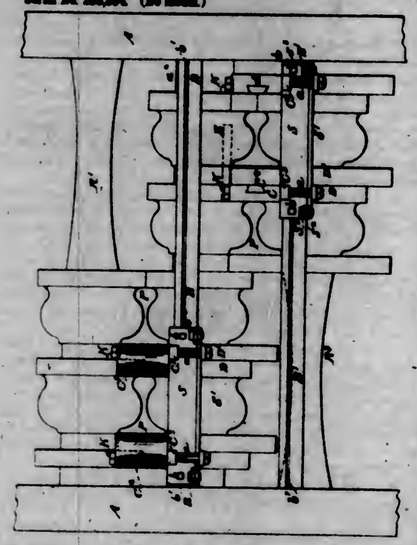
Claim.—1. The combination, with the bed-plate 2 and standard 7, of the two rods 9, extending horizontally from said standard, and each grooved longitudinally on its inner face, the slide 17, provided with the plunger carrying the platen 22 and fitting between said rods, and having its opposite edges entering and moving in the grooves formed in the inner face of said rods, substantially as and for the purpose described.

2. The combination, with the bed-plate 2, of the standard 7, the horizontal rods 9, projecting from the standard over said base, the slide carrying the plunger and movable along said rods, a plate, 13, fitting over the ends of said rods and connecting the same, and nuts 15 on the ends of said rods holding said plate in position and permitting the removal of said plate and the slide, substantially as described.

3. The combination, with the base-plate and the standard 7 rising therefrom, of the rods 32, projecting from said standard above said base-plate, and the pad 31, formed with holes for the passage of rods 32, substantially as and for the purpose set forth.

385,433. LETTER-COPYING BOOK. HENRY H. UNDERWOOD, Waukegan, Ill. Filed May 19, 1887. Serial No. 238,734. (No model.)

Claim.—1. A rocking platen for letter-copying presses, consisting of the rigid supplementary cover A, having a face adjacent to the closed book C slightly raised from a plane at or near its center, in combination with the letter-copying book C and a bed-plate having a plane face adjacent to the book C, substantially as shown and described, and for the purpose specified.

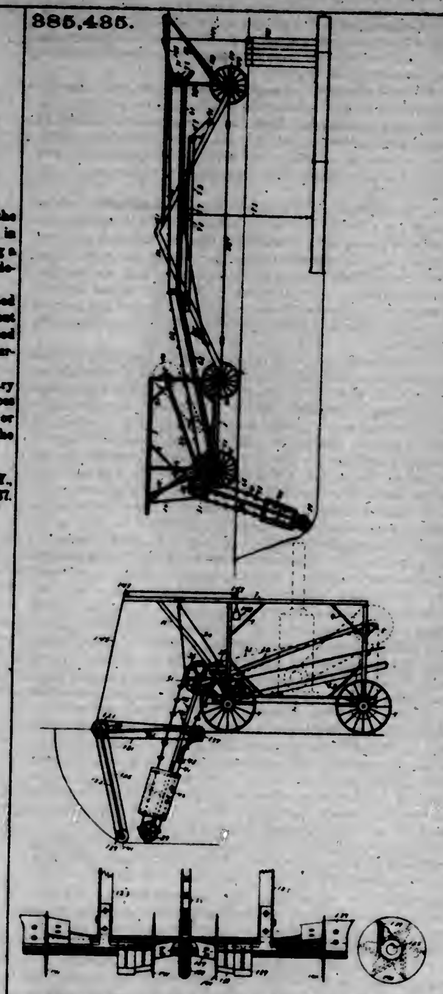


2. The rigid supplementary covers A and B, removably attached to the letter-copying book C, and having the faces of each adjacent to the closed book and fining toward its fellow cover slightly raised from a plane at or near its center, substantially as and for the purpose shown and described.

3. A letter-copying book provided with rigid supplementary covers, which covers adjacent to the closed book shall present faces slightly raised from a plane at or near their centers as being bent or curved outward, or as being convex or being slightly conical, for the purpose substantially as described and shown.

385,433.

385,434. ROLLING-MILL GUIDE. JAMES W. WALSH, Troy, N. Y., assignor to Mary Elizabeth Welsh, same place. Filed Nov. 18, 1887. Serial No. 255,934. (No model.)



Claim.—1. A guide for rolling-mills, consisting of two sides bolted to a common sleeve adjustable longitudinally upon the crane-bar, substantially as described, and for the purposes set forth.

2. In a guide for rolling-mills, the combination, with a side plate, of a face-plate secured to the side plate and adjustable longitudinally thereon, substantially as described, and for the purposes set forth.

3. In a guide for rolling-mills, the combination, with a side plate, of a face-plate connected therewith by tongue and groove extending longitudinally of the plates, and a key fitting a vertical slot in said tongue and groove, substantially as described, and for the purposes set forth.

4. In a guide for rolling-mills, the combination, with a side plate, of a detachable face-plate beveled to present an inclined face, substantially as described, and for the purposes set forth.

385,435.

385,435. EXCAVATING AND PIPE-LAYING MACHINE. WILLIAM WARNER, Minneapolis, Minn., assignor to the National Steam Excavating Company, of Minnesota. Filed Dec. 21, 1887. Serial No. 258,963. (No model.)

Claim.—1. The combination, in a machine of the class described, of a suitable carriage, an excavating-elevator adapted to raise the material from the excavation, an independent frame connected with said carriage and extending from the rear thereof, a conveyer-trough extending from the opposite end of said carriage, supported upon said frame and adapted to receive material from said elevator, and a conveyer arranged to draw said material along in said trough and to dump it back into the excavation, substantially as described.

2. The combination, in a machine of the class described, of a suitable carriage, a sweep pivoted upon said carriage, an elevating-excavator pivotally supported upon said sweep and arranged at one end of said carriage and adapted to raise material, and a frame extending from the opposite end of said carriage, a conveyer-trough supported upon said frame and extending to a point beneath the upper end of said elevator, and a conveyer-belt arranged in said trough and adapted to convey material from said elevator to a point distant from the carriage, substantially as described.

3. The combination, in a machine of the class described, of a suitable carriage, a sweep pivoted upon said carriage, an excavating-elevator pivotally supported upon said sweep and arranged at one end of said carriage, a supporting-frame extending from the opposite end of said carriage, a conveyer extending from said carriage over said frame, and an apparatus for raising and lowering pipe arranged upon said frame between said carriage and the discharging end of said conveyer, substantially as described.

4. The combination, in a machine of the class described, of a suitable carriage, 2, the sweep 24, pivoted to standards 6 upon said car-

riage, the elevator-frame 37, pivoted upon the free end of said sweep, the elevator-belt 41, arranged upon said frame, and the hoisting-ropes 26 26, connected with said sweep and adapted to be wound upon windlasses, substantially as described.

5. The combination, in a machine of the class described, of a suitable carriage, the pivoted sweep 24, mounted upon said carriage, the excavating-elevator pivotally mounted upon the free end of said sweep, a hopper arranged beneath the upper end of said elevator and adapted to receive material therefrom, and a conveyer extending from said hopper to a point distant from said carriage, substantially as described.

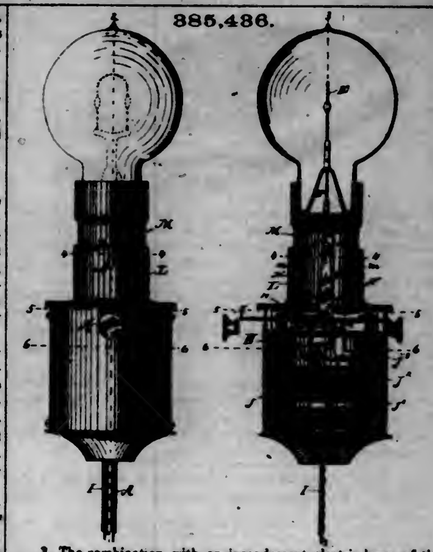
6. The combination, in a machine of the class described, with the carriage 2 and the elevator mounted thereon, of the truss-frame connected with the opposite end of said carriage, the stationary conveyer-trough 61, supported upon said frame, the conveyer-trough 63, hinged to said trough 61 and adapted to receive material from said elevator, the conveyer-belt 67, arranged to run in said troughs, and the pipe raising and lowering apparatus arranged upon said truss-frame, between said carriage and the discharging end of said conveyer, substantially as described.

7. The combination, with the carriage 2, the excavating-elevator mounted thereon, and the driving mechanism arranged upon said carriage, of the truss-frame connected with the rear end of said carriage and consisting of the inclined bars 51, the horizontal bars 53, the conveyer extending from a point beneath the discharging end of said elevator to the rear end of said truss-frame, the trolley 87, supported upon said truss-frame and adapted to be moved longitudinally thereon, the windlass 85, and the rope or cable 83, connected with said windlass and passing over said trolley-frame, substantially as described.

8. The combination, with the carriage 2 and the excavating-elevator mounted thereon and arranged at one end of said carriage, of the truss-frame connected with the opposite end of said carriage and having its rear end supported on suitable wheels, 59, and provided with the standard 75, the shaft 73, mounted in bearings in said standards, the stationary conveyer-trough 61, supported upon said truss-frame and extending to the rear end thereof, the conveyer-trough 63 hinged to the forward end of the said trough 61, and having its forward end resting upon said carriage and adapted to receive material from the said elevator, the idler-pulleys 77 77, the pulleys 71 on the shaft 73, and the endless conveyer-belt 67, arranged in said trough and passing around said pulleys 71 and 77, for the purpose set forth.

9. The combination, with the carriage 2, of the excavating-elevator mounted thereon, driving mechanism mounted on said carriage, the shaft 8, mounted in bearings on standards fixed upon said carriage, a frame connected with said carriage and extending to the rear thereof, a driving-shaft at the rear end of said frame, a conveyer extending from said carriage to the shafts at the rear end of said frame, and driving-belts extending from said shaft 8 to the shaft at the rear of the frame and to said elevator, substantially as described.

10. The combination, with the carriage provided with the elevator, of the frame connected with the rear end of said carriage, the conveyer extending from said carriage to the rear end of said frame, the pipe hoisting and lowering apparatus mounted upon said frame, between said carriage and the discharging end of said conveyer, and the plank-hoisting apparatus mounted upon the rear end of said frame, substantially as described.



11. In a machine of the class described, the combination, with the excavator, of the swinging frame provided with the shaft 125, the series of cutters 139, arranged upon said shaft, and the disks 141, arranged upon said shaft, substantially as described.

385,436. ELECTRIC-LAMP SOCKET. JOHN S. ADAMS and ALBERT W. MORRELL, Indianapolis, Ind., assignors to the Jenney Electric Company, of Indiana. Filed Apr. 10, 1883. Serial No. 270,167. (No model.)

Claim.—1. The combination, in an incandescent electric lamp, of a socket having slots with notches at the lower ends, a sleeve inside said socket having corresponding slots, but no notches, the lamp-shank being formed to fit inside said sleeve, and provided with projections which extend out through said slots, and a reciprocating cut-out switch passing horizontally below said shank, socket, and sleeve, said sleeve being provided with a downwardly-projecting portion, which is bifurcated and extends over the bar of said switch, said switch-bar being provided with a notch which, when said switch is moved so as to cut out the lamp, is in such position that one of the prongs of the downwardly-extending portion on the sleeve may enter said notch, substantially as and for the purposes set forth.

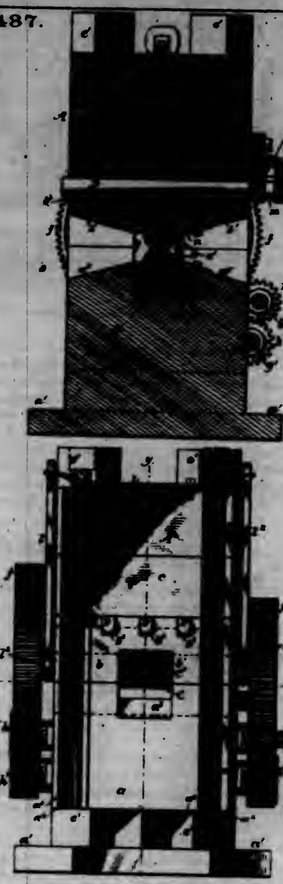
2. The combination, in an incandescent electric lamp, of the shank thereof, having pins *m*, a socket, L, therefor having slots with notches therein, a sleeve interposed between said shank and said socket, having corresponding slots, but no notches, and a downwardly-projecting bifurcated part which passes astride the bar of the cut-out switch, and a notch in said switch-bar arranged to register with the edge of the downwardly-projecting part of the sleeve when the lamp is cut out, and then only, substantially as shown, and for the purposes set forth.

385,436.

3. The combination, with an incandescent electric lamp, of the shunt-magnet J, the spring J', secured to the frame thereof and extending forward to above its pole-piece, an armature, J^2, having a notched tongue which extends through a hole in the forward end of said spring, said spring being provided with a saddle-piece having contact-points, and contact-points upon the frame-work, with which the contact-points on the spring will come in contact when said spring is released after said magnet is energized and its armature then drawn out of engagement with said spring, substantially as set forth.

4. The combination, with an incandescent electric lamp, of the contact-points *b* and *b*, attached to the frame parts forming portions of the electrical path, a shunt-magnet connected to said frame parts by fine wires, an armature pivoted in front of the pole-piece of said magnet, and a spring carrying a saddle-piece which engages with and is normally held down by said armature, but when released (as said magnet is energized and the armature thereby drawn out of engagement with said spring) will come in contact with said contact-points, and thereby cut out the lamp, substantially as set forth.

5. The combination, in an incandescent electric lamp, of a shunt-magnet, an armature thereto, which forms also a catch for the spring, said spring having a saddle-piece which, when said spring is released, comes in contact with other portions, and thereby establishes a cut-out circuit, a positive cut-out switch, an opening through the plate forming part of the frame-work above said spring, and a corresponding opening through said cut-out switch, which, when the lamp is cut out thereby, registers with the opening in said plate, whereby an instrument may be inserted and the spring forced downwardly so as to re-engage with the armature of the magnet, substantially as shown and described.



6. The combination, in an incandescent electric lamp, of the ordinary contact-springs and frame portions forming a part of the electrical path, a positive cut-out switch arranged to move transversely across the lamp structure, a shunt-circuit composed of projections on the frame-work, and a spring having a saddle-piece which is normally held in position by the armature of the shunt-magnet, said spring being inclosed by the frame-work, said frame-work being provided with an opening above said spring, which is covered by the switch except when in cut-out position, whereby it can only be re-engaged with said armature when the lamp is cut out by the positive cut-out switch, substantially as set forth.

385,437. METAL-WORKING ROLLING-MILL. STEPHEN W. BALDWIN, Yonkers, N. Y. Filed July 2, 1887. Serial No. 243,205. (No model.)

Claim.—1. The combination, substantially as hereinbefore described, of a strong unyielding housing, a pair of metal-working rolls, and unyielding bearings for both of said rolls located immediately opposite their working-faces, whereby when in service said rolls adjacent to the pass are rendered incapable of springing, bending, or yielding.

2. A housing for metal-working rolls, substantially as hereinbefore described, composed of piled horizontal metal sections bound together by vertical clamping rods or bolts and forming a practically-integral mass having central chambers for the reception of roll-boxes, and a transverse central pass-opening, whereby rolls mounted in said housing can be maintained in positively-fixed relations and the liability of derangement through springing of the housing reduced to a minimum.

385,437.

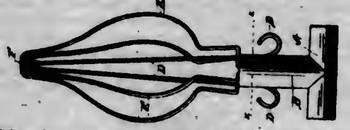
3. In a housing for metal-working rolls, the combination of a horizontal base-section, a top or bridge section having its bearing-surface inclined from the center toward each end, one or more intermediate sections, and a series of rods or bolts, by which said bridge-section is strained into general contact with the next underlying section, and all of said sections bound solidly together into a practically-integral mass containing interior grooves or chambers for the reception of boxes for the rolls, and a transverse central pass-opening.

4. The combination, substantially as hereinbefore described, of a pair of metal-working rolls, boxes or bearings which serve as supports for said rolls substantially throughout their length, a housing composed of a practically-integral mass of metal centrally chambered for the reception of the rolls and their boxes, and also having a central transverse pass-opening, and a series of adjustable sliding wedges interposed between the back of one of the roll-boxes and coincident surfaces within said housing.

5. The combination, substantially as hereinbefore described, of the pair of metal-working rolls, the boxes or bearings which support said rolls substantially throughout their length, a housing centrally chambered to receive said boxes, and having also a transverse central pass-opening, the springs for lifting the upper roll and its box, and a series of sliding wedges for forcing said roll downward and maintaining it in working position.

6. The combination, substantially as hereinbefore described, of a pair of metal-working rolls, each having a large driving-gear mounted directly thereon, a pair of parallel driving-shafts geared together, positively rotated, and geared to said roll-gears, whereby, however small the diameter of said rolls may be, they can be smoothly operated and heavy working-power applied thereto.

7. The combination of a pair of plain-surfaced metal-working rolls, boxes which afford bearings above and below the working-faces of said rolls, and clearers which engage with said working-faces for protecting the bearings against the entrance of abrasive matter, substantially as described, whereby the liability of defacing said working-faces in said bearings is reduced to a minimum.



385,438. COVERED DEMIJOHN. GEORGE W. RAMER, Brooklyn, N. Y. Filed Jan. 26, 1888. Serial No. 261,889. (No model.)

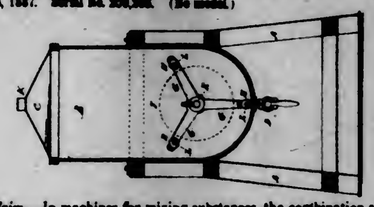
Claim.—1. The combination, with a demijohn or other vessel, of a covering or casing of suitable material, the upper part of which conforms to and envelops the neck of the same, and is made close for a suitable distance, and the body portion having openings or slots formed circumferentially therein of sufficient size to permit the interior to be inspected, substantially as set forth.

2. The combination, with a demijohn or other vessel, of a covering or casing of suitable material, having an upper part which envelops and conforms to the neck of the same and a lower portion which extends upward for a suitable distance, said upper and lower portions being made close, as described, and connected by an intermediate part having openings or spaces arranged circumferentially therein, substantially as and for the purposes set forth.

385,439. LAMP-CHIMNEY CLEANER. ELI W. BIRWAY, Independence, Kans., assignor of one-half to Benjamin F. Masterman, same place. Filed Oct. 4, 1887. Serial No. 251,450. (No model.)

Claim.—In a chimney-cleaner such as described, the combination of the handle A, provided with a cylinder, B, flexible wires E E, the ends of the said wires resting in the said cylinder, the wooden plug G, driven into the end of the said cylinder and adapted to hold the said ends of the wires E resting therein, and pulling-wires D D, attached to the upper end of the said flexible wires and provided with hooks at the lower end near the said handle, substantially as and for the purpose described.

385,440. FILTER. CORNELIUS BERKEY, Hartford, Conn., assignor of one-half to Owen H. Jones, same place. Filed Feb. 2, 1883. Serial No. 262,771. (No model.)

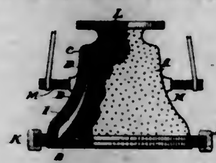


Claim.—1. As a new article of manufacture, a filter consisting of a body provided with an integral spiral web that forms a spiral channel, and a conduit that forms an opening from the outer end of the

spiral channel to the opening through the bottom of the body, and the cover-plate having an opening into the center of the body over the inner end of the spiral channel, and the filtering substance packed into said channel, substantially as described.

2. As a new article of manufacture, a filter consisting of a cast-metal body provided with an integral spiral web and an integral conduit, which forms an opening from the end of the spiral channel formed by the web to the opening through the body, the interiorly-threaded nut *a'*, attached to the body surrounding the hole *f*, the cover *b*, the interiorly-threaded nut *b'*, attached to the cover-plate surrounding the hole *f'*, the nozzle *g*, adapted to fit within either of said nuts, and the filtering substance, all substantially as described.

385,441. PAINT-MILL. JOHN BRAGG, Boston, Mass. Filed Dec. 28, 1887. Serial No. 259,202. (No model.)

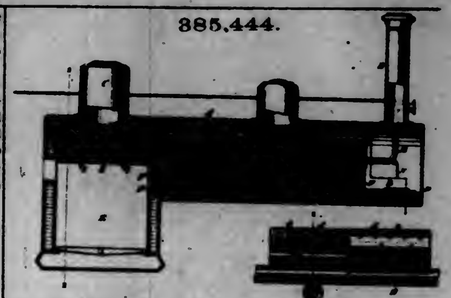


Claim.—In machines for mixing substances, the combination and arrangement of a containing-tank with the lower portion of its inner surface in the shape of an arc of a circle, or nearly so, and a vacant space forming the upper portion of the tank, the tank provided with an entrance-aperture above, with a rotating shaft passing from end to end of the tank parallel with its axis in the largest direction, the shaft carrying one or more rotating rollers whose bearings are permanently fixed at any certain distance from the center of the shaft, all constructed, arranged, and fitted for the purpose named, substantially as shown and described.

385,442. NUT-LOCK. ROBERT W. BURTON, New River, Va. Filed Feb. 24, 1888. Serial No. 265,112. (No model.)

Claim.—In a nut-lock, the combination, with the bolts, washers surrounding the bolts, and nuts screwed on the bolts and bearing on the washers, of the locking-plate comprising the arms K, arranged under the nuts and provided with slots G, embracing the said washers, the upturned ears E E at the outer ends of the said arms, having ratchet-teeth on their inner edges, and the spring D, connecting the adjacent ends of the arms and drawing them toward each other, whereby the ratchet-teeth on the said ears are normally held in engagement with the angles of the nuts, substantially as specified.

385,443. MOLD FOR CASTING BELLS. GARDINER CAMPBELL, Milwaukee, Wis. Filed Apr. 11, 1887. Serial No. 234,363. (No model.)



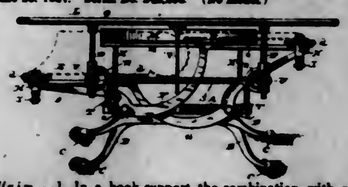
Claim.—1. A flask or frame for the mold, having a roughened surface for retaining sand, a coat of sand thereon, and thereon a coating of molding-loam shaped and formed for the reception of the molten metal, substantially as described.

2. An inner and an outer flask or frame and on the surface of both inner and outer flasks a lining of sand and thereon a coating of loam, said lining of sand and coating of loam being so molded and shaped and said inner and outer flasks so secured together as to form a matrix for the reception of the molten metal, substantially as described.

385,444. STEAM-BOILER FURNACE. JOHN F. CLARK, New York, N. Y. Filed Dec. 28, 1887. Serial No. 258,794. (No model.)

Claim.—1. In the fire-box of a boiler-furnace, the pipe supporting the air-distributers, combined with the pipes I, which open into the water-space and support the said pipe, and a pipe leading to the

385,444.

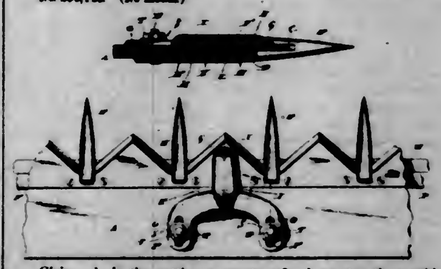


open air and being in connection with the air-distributers, substantially as set forth.

2. In a boiler-furnace, the air-distributers composed of hollow apertured sections *c*, having the downwardly-extending leg-extensions *h*, and being concave on their lower contact-surfaces, combined with the hollow supporting-pipes H, which open into the water-space around said fire-box, the flues L, and pipes M, substantially as and for the purposes set forth.

3. In a boiler-furnace, the supporting-pipes H, having threaded ends and composed of sections *a b*, and sleeve *d*, combined with the air-distributers supported by said pipes, and flues leading from the open air to said distributers, substantially as and for the purposes set forth.

385,445. BOOK-SUPPORT. JOHN B. CLEES, Jefferson, Iowa. Filed June 23, 1887. Serial No. 242,208. (No model.)



Claim.—1. In a book-support, the combination, with a book-holder composed of two oppositely-movable parts, of connecting-levers arranged one in front of the other, and each lever connected to both parts of the book-holder at respectively-opposite sides thereof, substantially as described.

2. In a book-support, the combination, with a book-holder composed of two oppositely-movable parts, of centrally-pivoted connecting-levers, each lever connected at the ends to both parts of the book-holder at respectively-opposite sides thereof, substantially as described.

3. In a book-support, the combination of the main frame, the two-part book-holder, and the levers pivoted to the main frame at opposite sides thereof, and each lever pivoted to both parts of the book-holder at their respectively-opposite sides, substantially as described.

4. In a book-support, the combination, with the book-holder, of a clamp consisting of a spring-actuated lever provided with a clamping-finger and an adjusting-screw, substantially as described.

385,446. ADJUSTABLE CUTTER-BAR KEEPER. JOHN CRISP and JONAH H. ALEXANDER, Browning, Mo. Filed Nov. 28, 1887. Serial No. 256,148. (No model.)

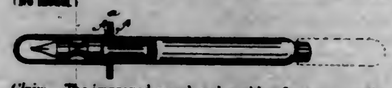
Claim.—1. In the cutting apparatus of a harvester, the combination of the finger-bar having the recess E in its front edge, the guard-fingers having the recesses D, the cutter-bar mounted to slide in the recesses in the guard-fingers, the block I, adapted to fit the recess E

in the finger-bar and having the forward and rearward projecting lips, I, M, bearing, respectively, under the cutter-bar and finger-bar, and having the forward-projecting finger N, overlying the upper side of cutter-bar, and the rearward-extending arms secured to and adjustable on the finger-bar, substantially as described.

2. In the cutting apparatus of a harvester, the combination of the finger-bar having the recess E in its front edge, the guard-fingers having the recesses D, the cutter-bar mounted to slide in the recesses in the guard-fingers, the guide-bar H, also in said recesses and bearing against the front side of the cutter-bar, the block I, adapted to fit the recess E in the finger-bar and having the forward and rearward projecting lips L M, bearing, respectively, under the cutter-bar and finger-bar, and having the forward-projecting finger N, overlying the upper side of the cutter-bar, and the rearward-extending arms secured to and adjustable on the finger-bar, substantially as described.

385,447. NOZZLE FOR OIL-CANS. BENJ A. DEVEBALL, Brooklyn, N. Y. Filed Dec. 8, 1887. Serial No. 256,988. (No model.)

Claim.—1. In a nozzle for oil-cans, the threaded flange C, having the base G and inwardly-extending flange H, combined with the packing J, the screw-cap D, applied within said flange C, the discharge-spout secured to the side of said cap, the valve F and stem *e*, the bottom of the cap D being open and the packing J serving as a seat for both the cap and said valve, substantially as and for the purposes set forth.



2. In a nozzle for cans, the detachable threaded screw-cap D, the threaded flange C, secured to the can and adapted to receive within its circle the threaded cap D and the packing J, the top of said cap consisting of a double thickness of metal inclosing the internally-threaded nut *d*, combined with the threaded stem *e*, engaging said nut, and the valve secured to the lower end of said stem and adapted when depressed to engage the packing J, substantially as and for the purposes set forth.

3. In a nozzle for cans, the threaded flange C and the packing J, encircling the mouth of the can, combined with the detachable threaded cap D, carrying the discharge-spout M on its side, the threaded stem *e* and the valve F, the upper end of the stem having a cap, N, and the valve consisting of two plates or disks inclosing the head on the lower end of the stem and having their outer edge depending downward to engage the packing J, substantially as and for the purposes set forth.

4. In a nozzle for cans, the threaded flange C and packing J, encircling the mouth of the can, combined with the threaded cap having the discharge-spout M, the threaded stem *e* and valve F, said valve consisting of plates *m n*, inclosing the head on the lower end of the stem *e* between them, and the plate *n* having at its outer edge a flange which turns upward upon but does not rigidly hold the outer edge of the plate *m*, substantially as set forth.

5. The can having the opening B, the encircling threaded flange C, and the packing J, combined with the threaded cap D, carrying the discharge-spout M and passing within the flange C, the vertical threaded stem *e*, passing downward through said cap, and the valve F, secured on the lower end of said stem, the outer edge of the valve being turned downward toward said packing, so as to engage the same by a single narrow edge, substantially as set forth.

385,448. PACKING AND GUARD FOR STYLOGRAPHIC PENS. ROBERT H. BURNEY, Newark, N. J. Filed Oct. 3, 1887. Serial No. 251,268. (No model.)

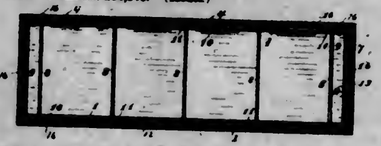
Claim.—The improved guard and packing for pens, pencils, and the like, consisting of a flat rubber plate which is angular at its periphery, having a projecting stiffening-ridge on its face, and perforated within said ridge and provided with a flange which lies in the plane of said plate, said parts being arranged and combined substantially as set forth.

385,449. TRACTION-TRUCK. GEORGE H. EDWARDS, Chicago, Ill. Filed May 31, 1887. Serial No. 239,321. (No model.)

Claim.—1. In a traction-truck traveling on an endless track supported by a braced chain, the combination of a frame, B B C, two or more axles, A, wheels D, and a braced chain having curved or angled slotted links *d* on the inner chord and cogs W on the outer chord of said brace-chain.

2. In a truck or wagon, the combination of a frame, B B C, two

385,449.



or more axles, A, wheels D, brace-links secured to the planks *a* and jointed together by the pins *c*, and chord-links secured to the brace-links by the pins *c*, one or more of the driving-wheels being provided with notches in its periphery, and the pins *c* having the cogs *w*, of such shape and so located that they will mesh with the notches of the driving wheel or wheels.

3. In a traction-truck traveling on an endless track supported by a braced chain, the combination of the wheels D, the curved or angled slotted links *d*, the diagonal braces *b*, and the planks *a*.

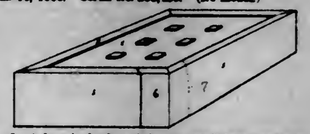
4. The combination of a frame, axles, or shafts, wheels, longitudinal and diagonal brace-links joined together at one end by the pins *c*, and chord-links joined to the brace-links at their other ends by the pins *c*, the chord-links having the diagonal or curved slots d^3, as described.

5. The combination of longitudinal and diagonal brace-links joined together by the pins *c*, slotted chord-links joined to the brace-links by the pins *c*, and the loose rollers *f*.

385,450. EGG-CARRIER. ADELBERT L. ELLIS, Pueblo Springs, assignor of one-half to Harvey W. Furman, Denver, Colo. Filed Dec. 12, 1887. Serial No. 257,573. (Model.)

Claim.—1. In an egg carrier or case, the combination of the cellular structure for containing the eggs, and a false or extra top therefor and a false or extra bottom therefor, both supported at points corresponding to the intersections of the cell-walls away from the outer walls of the carrier or case, substantially as set forth.

2. In an egg carrier or case, the combination of a cellular structure for containing the eggs, and a false or extra bottom and a false or extra top therefor, both provided with projections or supports at points corresponding to the intersections of the cell-walls maintaining them away from the walls of the carrier or case, substantially as set forth.



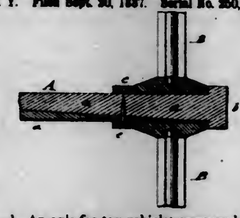
3. In an egg carrier or case, the combination of a folding or knockdown body, a folding or knockdown cover, a cellular structure for containing the eggs, and an extra top and an extra bottom for such structure, each provided with projections at points corresponding to the intersections of the cell-walls holding it away from the exterior walls of the carrier or case, substantially as set forth.

4. In an egg carrier or case, the combination of an inclosing-body and a cover therefor, a cellular structure for containing the eggs, having its cell-walls extended beyond the outer walls of the outer rows of cells, a false or extra top and a false or extra bottom for the cellular structure, and supports or projections at points corresponding to the intersections of the cell-walls holding such extra top and bottom away from the exterior walls of the case, whereby air-spaces are formed all around the cellular structure and the cells are removed from contact with the outer walls, substantially as set forth.

5. An egg-package for transportation and sale, consisting of an inclosing case or body, a cellular structure therein containing a single egg in each cell, top and bottom pieces having projections on their exterior faces arranged at points coinciding with the intersections of the cell-walls, and a sealing-strip pasted around the sides and ends and having its edges folded over upon the top and bottom, securing together the parts of the body or case and hermetically sealing the package, substantially as set forth.

6. A sealed package or box consisting of a box-body having side wings or flaps, a cover having side wings, 13, with extending flaps 7, and a sealing-strip pasted around the sides and ends of the box or package and having edges folded over upon and pasted upon the top and bottom, whereby the flaps 7 are held against the sides, the body and cover are secured together, and the package is hermetically sealed substantially as set forth.

385,451. KNOCKDOWN BOX OR PACKAGE. ADELBERT L. ELLIS, Pueblo Springs, assignor of one-half to Harvey W. Putnam, Denver, Colo. Filed Jan. 11, 1888. Serial No. 260,699. (No model.)



Claim.—1. A box in its knockdown condition, consisting of the following elements: sideless rectangular top and bottom pieces, each having projections, as described, upon one of its faces, and a strip for forming the sides and ends, having side wings or extensions creased and adapted to be folded over upon the top and bottom pieces, substantially as set forth.

2. The combination, in a knockdown box, of sideless top and bottom pieces having projections upon their exterior faces, and a strip forming the sides and ends, having wings or extensions folded over upon and secured to the top and bottom pieces, substantially as set forth.

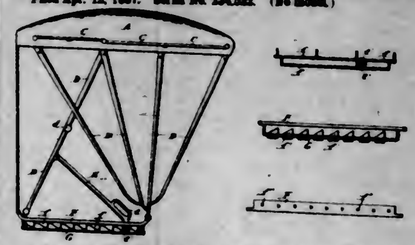
3. The combination, in a knockdown box, of sideless top and bottom pieces, having projections upon their exterior faces, an interposed cellular structure, and a strip forming the sides and ends, having wings or extensions folded over upon and secured to the top and bottom pieces, substantially as set forth.

385,452. AXLE FOR TOY VEHICLES. LESTER FRANK, New York, N. Y. Filed Sept. 20, 1887. Serial No. 250,175. (No model.)

Claim.—1. An axle for toy vehicles composed of two diagonally-split sections having enlarged heads at the outer ends and fastening devices at their inner parts, substantially as set forth.

2. An axle for toy vehicles composed of diagonally-split sections having enlarged heads at their outer ends, fastening devices at their inner parts, and fixed bands or stops on the inner parts of the axle adjoining the wheel-hubs for retaining the wheels in position, substantially as set forth.

385,453. SHADE OR GLOBE HOLDER FOR LAMPS. ELLIOTT P. GLEASON and EMIL P. GEBHERT, Brooklyn, N. Y. Filed Dec. 2, 1887. Serial No. 256,736. (No model.)



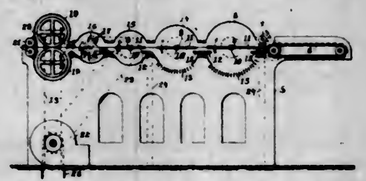
Claim.—1. In holders for lamps or shades, a shade-ring provided with suitable means for attaching a globe or shade and having curved elastic or flexible arms, as C C, extending inward, in combination with a separate center or band, as B, attached to the inner end of said arms, which band is of elastic or flexible nature, and provided with lugs, as *b b*, and set-screw, as *c*, arranged and constructed substantially in the manner and for the purpose set forth.

2. In holders for lamps, shades, or globes, a shade-ring provided with suitable means for attachment to a globe or shade and having two or more inwardly-extending curved arms, in combination with a separate band, as B, attached to the inner end of said arms, which band is severed and provided with means for adjustment to larger or smaller diameters, and so positioned with one of its ends close to one of the arms that the other end will include a long free portion of the said band extending past the other of the arms, in the manner shown, and for the purpose set forth.

3. In a globe or shade holder for lamps or lighting fixtures, a shade-ring provided with lugs, as *d d d*, and inwardly-extending integral arms, as C C, the inner ends of which are bent to extend circumferentially, in combination with a covered band, as B, which is firmly attached to the inner end of said arms C C, and which is provided with the lugs *b b* and set-screw *c*, adapting it for adjustment to the varying diameters of lamp sacks or collars, substantially as and for the purpose described.

385,454. CARRIAGE-TOP. EDWARD R. GOSLEY, Fort Worth, Tex. Filed Apr. 13, 1887. Serial No. 234,852. (No model.)

Claim.—1. The combination, with a vehicle-seat, a series of top-supporting bows pivoted thereto, and a jointed brace having its lower end pivoted to the seat and its upper end to one of the bows, of a rigid operating-lever having its upper end pivoted to said jointed brace and its lower end adjustably connected with the seat, whereby the position of the lower end of said lever may be varied and the brace and top secured in any desired position, substantially as and for the purpose set forth.



2. The combination with a carriage-seat, bows pivoted to the carriage, and a brace having its lower end pivoted to the seat or an attachment thereof and its upper end to one of the bows, of a ratchet-bar secured to the end of the seat, and an operating-lever having its rear end pivoted to said brace and its front end provided with means, substantially as shown and described, for connecting it at any desired point with said ratchet-bar, substantially as and for the purpose set forth.

3. The combination of the bows B and horizontal braces C, the oblique brace D, the double ratchet-bar having teeth *f*, and the hand-lever E, having its rear end pivoted to the oblique brace and its front end provided with a transverse pin adapted to engage the teeth of the ratchet-bars.

4. The combination of the bows B, the horizontal braces C, and oblique brace D, the double ratchet-bar having teeth *f*, the operating-lever E, having its rear end pivoted to the brace D and its front end provided with the pin *e*, adapted to engage the ratchet-bars, and the spring G, lying beneath the end of the operating-lever and adapted to prevent the accidental displacement thereof from the ratchet, substantially as shown and described, and for the purpose set forth.

385,455. COMBINED COTTON-WASTE PICKER AND LAPPER. WILLIAM H. GOLDSMITH, Fall River, Mass. Filed Nov. 8, 1886. Serial No. 218,342. (No model.)

Brief.—The object of the invention is to produce an improved machine for extracting the short-fiber cotton from cotton waste or ordinary spinning-machine refuse, and then forming the picked cotton into a lap.

Claim.—1. The combination, with one or more beater-cylinders having lateral openings therein and each provided with revolving beaters, of a catch-box communicating with said cylinder or cylinders and provided with one or more revolving thread-catching bars, all constructed substantially as described, whereby the cotton waste may be passed through the beater cylinder or cylinders, thence through the catch-box, and be picked, as described.

2. The combination, with one or beater-cylinders having lateral openings therein and each provided with internal fixed pins and a revolving beater, of a catch-box placed in communication with said cylinder or one of said cylinders and provided with one or more revolving thread-catching bars, all substantially as described, whereby the cotton waste may be passed in succession through the beaters and the catch-box and the short fiber and threads be separated therefrom, as described.

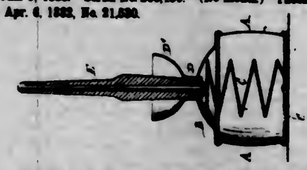
3. The combination, with a series of beater-cylinders placed in lateral communication and provided each with a revolving beater, of a catch-box communicating with said cylinders and provided with a set of revolving thread-catching bars, a set of fleece or cotton catching lapper-drums in free communication with the said catch-box, substantially as described, whereby the cotton waste may be passed in succession through the beater-cylinders and catch-box and the short fiber therein extracted and subsequently caught and lapped by the lapper-drums, as described.

4. The combination, with a series of beater-cylinders arranged in lateral communication and each provided with a revolving beater and internal fixed pins, and one or more of the cylinders formed with a sifting-grate in the bottom or bottoms thereof, of a catch-box opening laterally into the adjacent beater-cylinder and, provided with a set of revolving thread-catching bars, and a set of revolving cotton-catching gauze lapper-drums, all constructed and operated substantially as and for the purpose herein described.

5. The combination, with a series of intercommunicating beater-cylinders placed laterally together and each provided with internal fixed pins and with a revolving shaft having beater-arms and longitudinally-disposed stripping-grooves formed thereon, of a catch-box opening laterally into the adjacent or terminal beater-cylinder and provided with a set of revolving thread-catching bars, each formed with longitudinally-disposed stripping-grooves, a set of cotton-catching lapper-drums adjacent to and communicating with said catch-box, and exhaust-fans for said lapper-drums, all constructed and arranged substantially as and for the purpose herein described.

6. The combination, with a series of horizontal intercommunicating beater-cylinders placed laterally together and each provided with a revolving shaft having stripping-grooves thereon and radial beater-arms, and each cylinder provided with a set of fixed pins having their ends cleared by the passing beater-arms, of a catch-box adjacent to and opening into the terminal beater-cylinder and provided with a set of horizontal revolving thread-catching bars, each provided with one or more longitudinal stripping-grooves, a set of horizontal revolving gauze lapper-drums provided with exhaust-fans, and delivery prem-rolls, all arranged and constructed substantially as described, whereby the cotton waste may have the short-fiber cotton picked therefrom and formed into a lap, as described.

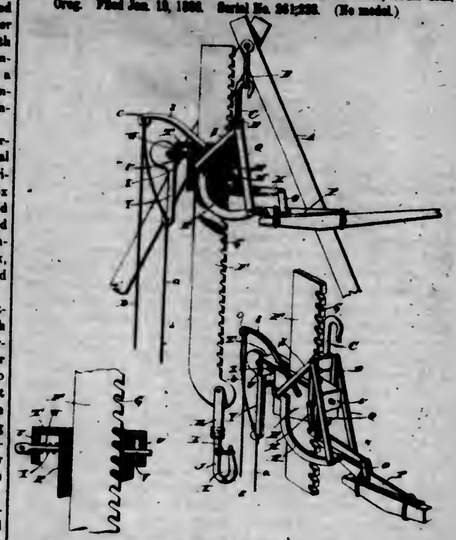
7. The combination, with a series of three horizontal beater-cylinders of decreasing sizes having lateral openings therein and placed together in communication, and each provided with a revolving shaft having stripping-grooves and fixed beater-arms and a set of fixed pins, the first and second of said cylinders formed with a sifting-grate in the bottoms thereof, of a catch-box provided with a set of horizontal revolving thread-catching bars formed with longitudinal stripping-grooves, said catch-box being in lateral communication with the third beater-cylinder, a set of cotton-catching lapper-drums and exhaust-fans and prem-rolls for said drums, the said lapper-drums formed of gauze and placed horizontally and in communication with said catch-box, and a set of feeding devices for the first beater-cylinder, all constructed and arranged substantially as and for the purpose herein described.



8. The catch-box consisting of a suitable casing and of a set of revolving thread-catching bars provided with one or more stripping-grooves, constructed substantially as described, for catching the threads from cotton waste or the like, as described.

9. The combination, with a series of communicating beater-cylinders provided with shafts 9, having the beater-arms 11 thereon, of the connected catch-box 16, provided with thread-catching bars 17, and of the set of gauze lapper-drums 20, provided with a suction-fan, all substantially as and for the purpose described.

10. The combination, with the communicating series of beater-cylinders 8, 14, and 15, provided with the shafts 9, having stripping-grooves 10 and beater-arms 11, and formed with the sifting-grates 13, of the communicating catch-box 16, provided with the thread-catching bars 17, formed with stripping-grooves 18, the casing 19, provided with the gauze lapper-drums 20 and prem-rolls 21, and the exhaust-fan 22, all constructed and operated substantially as described.



11. The catch-box 16, provided with the revolving thread-catching bars 17, formed with the stripping-grooves 18, substantially as and for the purpose described.

385,456. POWDER-DUSTER. LOUIS W. GRAESSER, Brooklyn, N. Y. Filed Jan. 9, 1888. Serial No. 260,159. (No model.) Patented in Germany Apr. 6, 1882, No. 21,580.

Claim.—An elastic bulb consisting of a cylindrical body of elastic material, top and bottom plates having circumferential flanges, ring-shaped washers introduced between the flanges of the top and bottom plates and the edges of the elastic body, so as to secure the latter to the top and bottom plates, a spiral spring interposed between the top and bottom plates and attached to one of said plates, and an outlet-tube applied to the top plate, substantially as set forth.

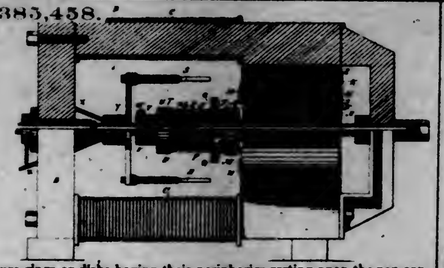
385,457. STUMP-EXTRACTOR. ALFRED C. HALL, Cedar Mill, Oreg. Filed Jan. 18, 1888. Serial No. 261,223. (No model.)

Claim.—1. The combination of the lifting-bar, the hollow block through which the lifting-bar works, the suspension-hook secured to the said block, the lever suspended from said hook and engaging the lifting-bar, and the locking-plate supported by the hollow block, substantially as set forth.

2. The combination of the lifting-bar, the hollow block on said bar, the suspension-hook, the bifurcated hanger depending from said hook and secured to the hollow block, the links depending from said block, and the lever fulcrumed in the said links and engaging the lifting-bar, as set forth.

3. The combination of the lifting-bar, the hollow block, the suspension-hook secured to said block, the links depending from said block, the braces depending from the hook and the hollow block, the lever fulcrumed between the links and engaging the lifting-bar, and the lever fulcrumed to said braces and connected to said first-mentioned lever, substantially as specified.

4. The combination of the lifting-bar, the hollow block, the suspension-hook secured to said block, the lever suspended from said hook and engaging the lifting-bar, the locking-plate mounted on the hollow block, and the cam-lever for throwing said locking-plate into and out of engagement with the lifting-bar, substantially as specified.



5. The combination of the hollow block, the lifting-bar, the suspension-hook secured to said block, the lever suspended from said hook and engaging the lifting-bar, the locking-plate mounted on the hollow block, the pin projecting from the hollow block and through the locking-plate, the spring coiled around said pin and acting on the locking-plate, and the cam-lever mounted at the outer end of said pin and bearing on the locking-plate in opposition to the spring, substantially as specified.

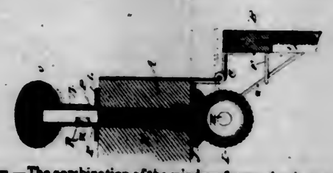
6. The combination of the hollow block, the lifting-bar, the suspension-hook secured to said block, the lever suspended from said hook and engaging the lifting-bar, the locking-plate mounted on the hollow block, the cam-lever for operating said locking-plate, the rod projecting from the hollow block and having an eye at its end, and the cords secured to said cam-lever, one depending from said lever and the other passing up to and through the eye in said projecting rod, substantially as specified.

385,458. DYNAMO-ELECTRIC MACHINE. AUGUST HARDING, Oakland, Cal. Filed June 11, 1887. Serial No. 241,076. (No model.)

Claim.—1. In a dynamo-electric machine, the spider formed of non-magnetic material having the radial arms of narrow cross-section in the direction of rotation, and having the expanded plates or segments at their outer ends with an exterior coating of insulating or non-conducting material, in combination with the independent arma-

385,458.

ture rings or disks having their peripheries resting upon the non-conducting material upon the exterior of the segments, and the insulating-wire wound around the disks, substantially as herein described.



2. The spider composed of radial arms having outwardly-turned portions at one end and provided with the cylindrically-curved segments extending from one end to the other of the arms, with an insulating material upon the periphery of the segments, in combination with the independent rings or disks fitting outside the segments and separated therefrom by insulating material, the front end disk being provided with lugs which enter corresponding depressions at that end of the spider to prevent it from turning upon the same, and bolts extending through the rings and screwing into the upturned flanges at the rear end to hold them in place, substantially as described.

3. A commutator consisting of independent sectors surrounding a common center, having the ends or extensions R made thinner than the central portion, with which the brushes form contact, and slotted insulated rings supporting the ends, so that air-spaces are formed between them, substantially as described.

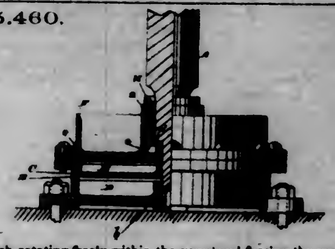
4. In a dynamo-electric machine, the commutator consisting of independent sectors having their ends reduced in the direction of the commutator circumference and supported in slotted insulated rings, with insulating material upon the outside of these ends, in combination with a fixed hollow cap having an inclined inner face, in which one end of the sectors are forced, and a movable cap having an inclined inner face for receiving the opposite ends of the sectors, substantially as herein described.

5. Commutator-sections having tapered ends reduced in the direction of the commutator circumference, a fixed and a movable cup-shaped cap having each an inclined face for receiving the tapering ends, and the slotted insulating-rings, in combination with a screw collar or sleeve bearing against the movable cap and locking and holding the sections in place, substantially as herein described.

385,459. SHUTTER-WORKER. WILLIAM H. HENDRICK, Ottawa, Kans. Filed Oct. 11, 1887. Serial No. 252,056. (No model.)

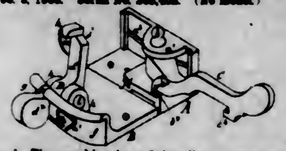
Claim.—The combination of the window-frame, the shutter hinged thereto, the eye F, secured to the rail of the shutter at a suitable height and between two adjacent slats, the vertical bracket G, secured to the frame, the bevel-gear journaled on the pintle H, in a recess on said bracket, the rod Q, entering the eye F, the shaft K, the gear-wheel J on the outer end of said shaft, the handle O, the sleeve N, sliding on the squared part of the shaft K, and having the angular pinion P, to enter the corresponding recess in the plate L, and the screw R, entering the recess M, all constructed and arranged substantially as and for the purpose specified.

385,460. HYDRAULIC STEP. FREDERICK G. HERR, Oakland, Cal. Filed Sept. 10, 1887. Serial No. 249,269. (No model.)



Brief.—A chambered vessel containing water encircling the foot of a shaft, a ribbed plate on the shaft rotating in the vessel, acting to force the water above it centrifugally, thereby creating pressure below the plate.

Claim.—1. A hydraulic step for shafts, comprising a vessel containing water, said vessel having communicating chambers and surrounding the foot of the shaft, a ribbed disk or plate secured to said shaft, and fixed ribs or flanges in the vessel beneath the disk or plate, said disk rotating freely within the vessel and forcing the water above it centrifugally, whereby the pressure of water in the lower compartment is equal to the maximum pressure in the one above it.



2. A hydraulic step for shafts, consisting of a vessel encircling the foot of the shaft and containing water, a plate or disk fast upon the shaft and rotating freely within the vessel, blades or flanges on the upper surface of said disk or plate, and fixed ribs or flanges in the vessel under the plate or disk, substantially as herein described.

3. A hydraulic step for shafts, consisting of a vessel encircling the foot of the shaft and containing water, a plate or disk on the shaft and rotating freely in the vessel, blades or flanges on the upper surface of the plate or disk, fixed ribs or flanges in the base of the vessel under the plate or disk, and an inclosing-vessel in which the disk or plates operate, substantially as herein described.

385,460.

385,461. SASH-FASTENER. ELIJAH A. HOLT, Hudson, N. H. Filed Feb. 8, 1883. Serial No. 269,462. (No model.)

Claim.—1. The combination of the elbow-lever D, pivoted to the plate B, having keeper *f*, with latch C, pivoted to plate A, substantially as described.

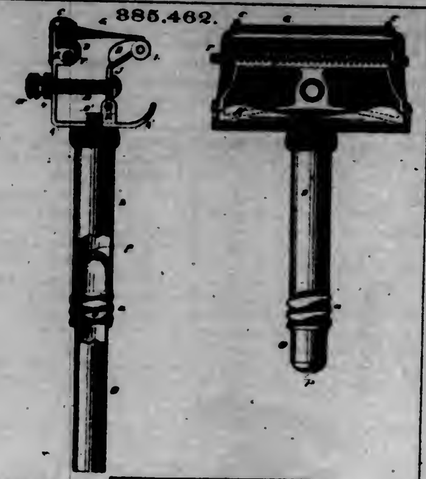
2. A sash-fastener comprising the plate B, having a keeper, *f*, and an elbow-lever, D, pivoted to ears of said plate and provided at the end of its long arm *d'* with an end stop, *k*, and side guard-plate, *m*, a plate, A, and a latch, C, pivoted to the plate A, substantially as and for the purpose described.

3. The combination, with the fastener-plate A, provided with the shoulder *a*, having the beveled surface *j'* and vertical side flange, *b*, and plate B, provided with keeper *f*, having slot *g* and ears A A, of elbow-lever D, formed with bevel surface *j*, stop *k*, plate *m*, and the latch C, formed with shoulders *b'* and *c*, substantially as and for the purpose described.

4. The described elbow-lever D, having its short arm *d*² weighted, in combination with the described fastener-plates A and B, and latch C, substantially as described.

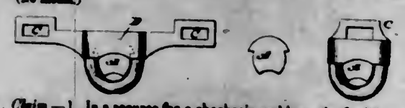
385,462. SAFETY-RAZOR. FREDERICK KAMPE, RICHARD KAMPE, and OTTO KAMPE, Brooklyn, N. Y. Filed Mar. 12, 1886. Serial No. 194,940. (No model.)

Claim.—1. In a razor, the combination, with the frame or casing on which the blade can be held, of a swinging frame pivoted in the frame on which the blade is held, a spirally-grooved roller or worm mounted to turn in the swinging frame, and a screw connected with the swinging frame for the purpose of adjusting it, substantially as shown and described.



2. In a razor, the combination of the frame A, having the lugs K of the frame J pivoted in said lugs, the spirally-grooved roller or worm L, mounted to turn on the swinging end of the frame J, and the screw N, passed through the frames A and J for the purpose of adjusting the frame J, substantially as shown and described.

3. The combination, with the frame A, of the pivoted frame J, having the wings H, provided with upper rounded edges, the spirally-grooved roller or worm L, mounted to turn on its longitudinal axis in the wings H, and of mechanism for adjusting the frame J, substantially as shown and described.



4. In a razor, the combination, with a frame having hooks, of an eccentrically-mounted clamping-roller below the casing for the purpose of pressing the blade against said hooks and thus holding it in place, substantially as shown and described.

5. In a razor, the combination, with a frame having lugs E and hooks C, of a roller, D, mounted eccentrically in said lugs and provided with a square pivot, F, substantially as shown and described.

385,462.

385,468. ATTACHMENT FOR CHECK-REIN LOOPS OR BARS. HARRY LOWE, Montpelier, Vt. Filed Apr. 6, 1887. Serial No. 233,942. (No model.)

Claim.—1. In a securer for a check-rein and loop, the flexible and compressible piece, as shown, with an enlarged part to fit the recess or hole D, whereby it can be securely held and quickly inserted and removed, substantially as described.

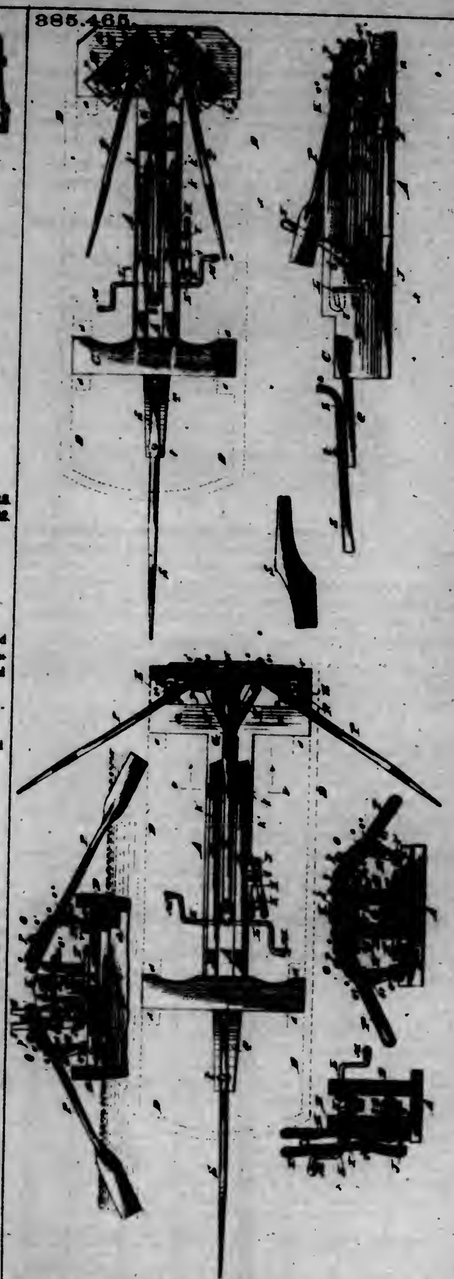
2. In combination with a check-rein-bar, the flexible securer having an enlarged part, for the purpose described.

385,464. WRENCH. RICHARD L. MASSEY, Doughton, Ala. Filed Nov. 15, 1887. Serial No. 255,276. (No model.)

Claim.—In a wrench, the combination of the bar A, having a lug, A', projected from its upper edge and provided with serrations on the face of said lug, the bar B, having pivot-studs projected from its sides, the bail-shaped pawl having its arms pivoted on the said studs and provided in one of said arms with a recess opening onto said stud, and having its cross-bar serrated to engage the serrated face of the bar A, and the spring secured to the pivot-stud and entering and bearing in the recess of the pawl-arm, substantially as set forth.

385,465. ROWING APPARATUS. ROBERT MASAY, Nashville, Tenn. Filed Nov. 10, 1887. Serial No. 254,736. (No model.)

Claim.—1. In a rowing apparatus, the combination, with a frame or support, of bearer-plates E E, pivoted thereto, ear-supports held to said plates, a sliding bar, G, fitted to the frame, links F F, connecting said parts E G, and means for locking the bar G in position, substantially as described, for the purposes set forth.



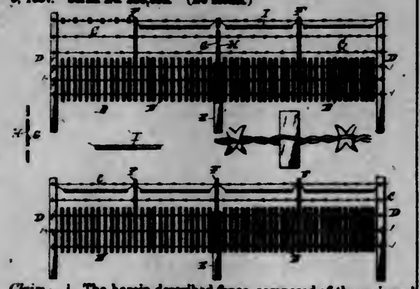
2. In a rowing apparatus, the combination, with a frame or support, of bearer-plates E E, pivoted thereto, ear-supports held to said plates, a sliding bar, G, fitted to the frame, links F and F, connecting said parts E G, a lever, H, fulcrumed on the frame, a pin, *g*, connecting the parts G H, and a latch-bar, I, held to the lever H and provided with a pin, J, adapted to lock into the frame, substantially as shown and described.

3. In a rowing apparatus, the combination, with a frame or support, of bearer-plates E E, pivoted thereto, ear-supports held to said plates, a sliding bar, G, fitted to the frame, links F, connecting said parts E G, a lever, K, fulcrumed in slots in the frame, means for reciprocating and rocking the lever, and connections from the lever to the oars, substantially as described, for the purposes set forth.

4. In a rowing apparatus, the combination, with a frame or support, of bearer-plates E E, pivoted thereto, ear-supports held to said plates, a sliding bar, G, fitted to the frame, links F, connecting said parts E G, a lever, K, fulcrumed in slots in the frame, a cranked shaft journaled in the frame and connected to the lever for operating it, and connections from the lever to the oars, substantially as shown and described.

5. In a rowing apparatus, the combination, with a frame or support, of bearer-plates E E, pivoted thereto, a sliding bar, G, fitted to the frame, links F F, connecting said parts E G, a lever, K, fulcrumed in slots in the frame, means for reciprocating and rocking the lever,

385,465.

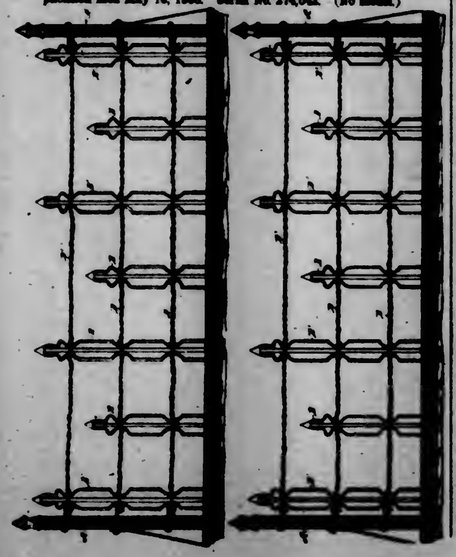


a link, N, held to the lever, rocking blocks R, held to the plates R, and clamps holding the ears P and connected to the link N, and blocks R, substantially as described, for the purposes set forth.

6. In a rowing apparatus, the ear-clamps O, made with end eyes, *o o*, adapted to encircle the oar, an eye, *o'*, adapted to receive a pin entering the oar to lock it against axial movement, an eye, *o²*, adapted to receive a pin entering a support for the oar, and an end or head, *o³*, adapted to hold the oar to an operating-lever, substantially as herein set forth.

7. The combination, with the rowing-apparatus frame having an extension, T, hold thereto, provided with a pin, *t*, of a rudder-oar, S, held to said pin, substantially as shown and described.

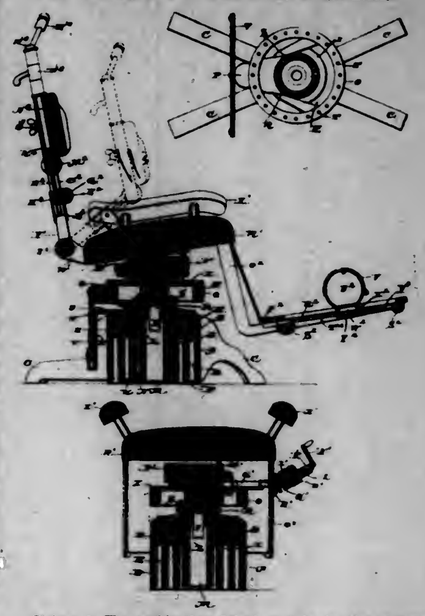
385,466. FENCE. DAVID R MATLOCK, San José, Cal. Filed Mar. 3, 1887. Serial No. 229,682. (No model.)



Claim.—1. The herein-described fence, composed of the main end posts, D, short intermediate post, E, a panel of pickets formed of short pickets B and long binding-pickets F, secured together and to the end posts by wires and to the short posts by one of the binding-pickets, and horizontally-arranged wires C above the short pickets and fixed to the end posts and the projecting parts of the long binding-pickets, substantially as described.

2. The combination, with a line of fencing composed of a lower line of pickets and an upper line of wires, of binding-pickets consisting of detachably-connected sections G, whereby the slack of the strands may be taken up, substantially as described.

3. The fence herein described, composed of the main posts D, short intermediate posts, E, a line of pickets shorter than the line of fencing secured together and to the posts by wires, long binding-pickets at intervals in the line of pickets, long pickets consisting of detachably-connected sections extending above the main line of pickets, and horizontally-arranged wires C above the pickets and fixed to the main posts, the long binding-pickets, and the sectional binding-pickets, substantially as described, and for the purpose stated.



385,467. FENCE. DAVID R MATLOCK, San José, Cal. Original application filed Mar. 3, 1887, Serial No. 229,682. Divided and this application filed May 16, 1888. Serial No. 274,042. (No model.)

Claim.—1. A fence formed of long and short pickets held together by twisted wires, and the long pickets connected together above the short pickets by twisted wires.

2. A fence formed of long and short pickets held together by twisted wires, the long pickets being connected by twisted wires above the short pickets and all the wires reversely twisted between the long pickets.

385,468. DENTAL OPERATING-CHAIR. WILLIAM B. MATTHEWS, Fort Worth, Tex., assignor to W. F. Hayfield and I. T. Hayfield, same place. Filed Aug. 12, 1887. Serial No. 246,791. (No model.)

Claim.—1. The combination of the base A, having the telescopic nested elevating-screws, the support O, having the arm R swiveled to the upper end of the inner screw, the gear-wheel S, rigidly secured to the upper end of the said inner screw, the platform A', having the depending spindle Y swiveled in the upper end of the inner screw, the chair-seat supported on the platform, and the crank-shaft journaled to the platform and having the wheel D' meshing with the wheel S, and the extensible devices connecting the support O to the base, substantially as described.

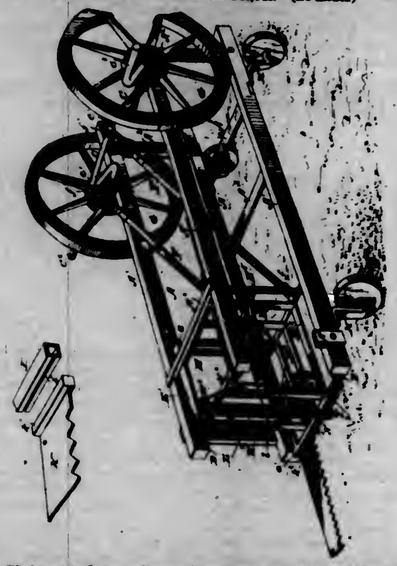
2. The combination of the base A, having the vertically-slotted guide-plate attached thereto, the telescopic elevating-screws supported on the base, the support swiveled to the upper end of the elevating-screws, and the lazy-tongs connecting the base to the support, having the fulcrum-bolts engaging the slot in the guide-plate, substantially as described.

3. The combination, in a chair, of the elevating-screws, the support O, swiveled to the upper end thereof and having the series of openings T, and the chair-seat swiveled to the upper end of the screw and provided with a detent to engage the openings T, substantially as described.

4. The combination of the base A, having the telescopic elevating-screws, the support O, having the arm R swiveled to the upper end of the inner screw, the platform A', having the depending spindle Y swiveled in the said inner screw, whereby said platform is adapted to turn on said support, the crank-shaft journaled to the platform and geared to the elevating-screws, the detent T', secured to the platform, and the chair-seat hinged or pivoted to the platform, adapted to tilt or incline thereon, and provided with the arm U', adapted to be engaged by the detent, substantially as described.

5. The combination, in a chair, of the foot-board having the longitudinal slot, the rod arranged under the said slot, the foot-rest arranged on the foot-board, and the clip sliding on the rod and attached to the foot-rest, whereby the latter may be longitudinally adjusted on the foot-board, substantially as described.

6. The combination, in a chair, of the foot-board having the longitudinal slot, the rod arranged under the said slot and provided with ratchet-teeth on its upper side, the foot-rest arranged on the foot-board



and having the depending ear extending through the slot, and provided with a point adapted to engage the teeth of the rod, and the clip sliding on the said rod, and to which the depending ear of the foot-rest is pivoted, substantially as described.

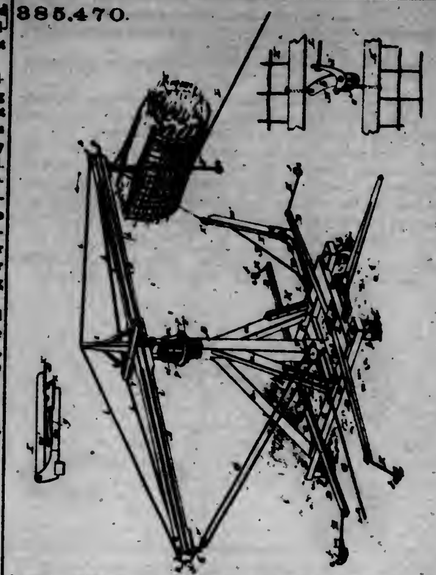
7. The combination of the chair-seat having the rearward-extending brackets W', the arms Y', pivoted to the said brackets and having the guide-flanges B², the arms C², having the slots D² and fitted against the inner sides of arms Y', and the rod E², extending through the slots D² and the arms Y', and having the clamping-nut and the back pivotally connected to the upper ends of the arms C², substantially as described.

8. The combination, with a pair of elevating-screws, the miter-wheel S, attached to the inner screw, the support swiveled to the elevating-screw, the chair-seat attached to the support and having the curved arm projecting from one side, the shaft-sections C' and E', journaled to the curved arms and arranged at an angle to each other therein, the shaft-section C', having the miter-wheel D' at its inner end to engage the wheel S, and the flexible coupling G', connecting the opposing ends of the shaft-sections, substantially as described.

9. The combination, in an operating-chair, of the rod A², attached to the back and vertically adjustable thereon, said rod having the ball at its upper end, the head-rest having the ball on its lower side, the sleeve having the sockets in its ends to receive the balls, the cam pivoted in the sleeve, and the clamps arranged in the sleeve between the cam and the balls, substantially as described.

385,469. SAWING-MACHINE. GEORGE MCGREGOR, Washington, D. C. Filed June 3, 1887. Serial No. 240,142. (No model.)

Claim.—1. In a sawing-machine for cutting both standing and fallen timber, the combination, with the rectangular supporting-frame, of the rectangular sliding frame provided at its forward end with a horizontal tubular saw-guide and with a vertical tubular saw-guide, a saw adapted to fit either of said guides, and a crank-shaft and pitman for reciprocating the sliding frame and saw, substantially as described.



2. In a sawing-machine, in combination with the supporting-frame, the sliding frame having a horizontal tubular guide and a vertical tubular guide, the saw adapted to fit said guides, a cord attached to the saw, held in the horizontal guide, passing over pulleys on the sliding frame, and a weight supported to move upon the tubular guide, substantially as described.

385,470. GRAIN OR HAY STACKER. DONALD MCRAE, Umatilla County, Oreg. Filed Jan. 23, 1887. Serial No. 225,242. (No model.)

Claim.—1. The combination, with the base-frame of the stacker having the parallel cross-bars *d* and bands *g* attached to their inner sides, of the stay-bars D, having shoulders A, and the ropes and stakes, as specified, the said stay-bars being arranged horizontally opposite each other in pairs and projecting laterally across the longitudinal side bars of the base-frame, which the said shoulders abut, as shown and described.

2. The combination, with the post B, the base-frame, the pivoted

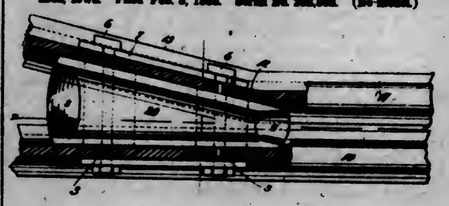
385,470.

lever A, and the hauling-rope G, attached at base of said post, of the abutment H, composed of a series of friction-rollers mounted on a rod or journal arranged in an inclined position relative to the post and projecting laterally to come in the path of the rope, as shown and described.

3. The combination, with the base-frame and pivoted lever supported on the latter, of the counterbalance-device I, consisting of two bars hinged end to end, a cord connecting them, and hooks for attaching with both frame and lever, as shown and described.

4. The combination, with the post B, having the conical step-block placed in its socket, as shown, of the lever and its vertical pivot having a conical seat, whereby it is adapted to be stepped on said block, as shown and described.

5. The combination, with the post and lever and the circle-plate fixed on the former, of the upper inverted saddle to which the lever is pivoted, the lower saddle, *n'*, bestriding the top of said post and having anti-friction rollers which run on said circle-plate, and the vertical pivot *m'*, attached to said saddle, as shown and described.



6. The combination, with the lever A, the upper inverted saddle, *n*, and the horizontal pivot *m*, of the loop-fastenings U, the cross-bar *l*, and metal plate *r*, and the diagonal braces M, all arranged as shown and described.

7. The combination of the diagonal braces M with the lever, the horizontal pivot *m*, the saddle *n*, the horizontal cross-bar *l*, and plate *r*, and bolts for securing said braces, bar, and plate together, as shown and described.

385,471. WATER-PROOF COMPOSITION FOR FLOORS, WALLS, &c. CHARLES V. MEYER, Brooklyn, N. Y. Filed Oct. 26, 1887. Serial No. 253,453. (No specimens.)

Claim.—The herein-described composition of matter to be used as a water-proof compound for the floors and walls of buildings and kindred purposes, consisting of cement, cream of tartar, pulverized ivory, quicksilver, isinglass, marble-dust, sand, and soft water, in substantially the proportions specified.

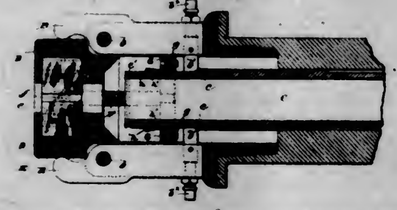
385,472. FASTENING-BLOCK FOR GUARD-RAILS, SWITCH-RAILS, OR FROGS. BENJAMIN J. MOORE and AARON R. PARLIN, Vinton, Iowa. Filed Feb. 3, 1888. Serial No. 262,962. (No model.)

385,472.

Claim.—1. A railroad-rail-guard fastening consisting, essentially, of a block formed with an inclined side face, a concave upper face, and elongated transverse slots, substantially as described.

2. The combination, with a main-line rail, of a guard-rail formed with an angular section, a block, 20, having a straight face next to the main-line rail, an inclined face next to the angular section of the guard-rail, formed with transverse slots 4, and bolts 6, which pass through apertures formed in the rail-webs and through the apertures of the block, substantially as described.

385,473. HARMONICA-HOLDER. WILLIAM E. MULHOLLAN, Portland, Oreg. Filed Jan. 16, 1888. Serial No. 260,966. (No model.)



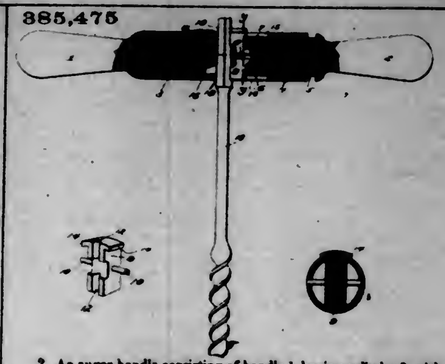
Claim.—1. In a mouth-instrument holder, the combination of a breast-plate, adapted to support a shank having a catch or clamp, and a collar connected to the breast-plate, substantially as described.

2. In a mouth-instrument holder, the combination of a flat or nearly flat plate, adapted to support a shank having a catch or clamp, and a stiff loop projecting from the edge of the plate, substantially as described.

3. In a mouth-instrument holder, the combination of a flat plate, having a cross-strip projecting from opposite edges thereof, and a transverse strap attached to the cross-strip, substantially as described.

385,474. LATHE-CHUCK. FREDERICK MÜLLER, Elizabeth, N. J. Filed Sept. 26, 1887. Serial No. 250,754. (No model.)

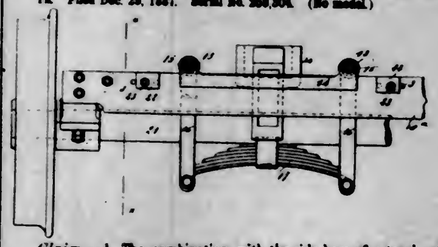
Claim.—1. In a chuck, the combination, with the jaws a and their operating-levers B, of the wedges D, interposed between the outer ends of the said levers and the said jaws, and a sliding bar or tube having a frictional connection with the said wedges, substantially as set forth.



2. The combination, with the chuck-head having the jaws a, of the levers B, having the studs *b'*, the sliding-tube C, having the inclined shoulder *c*, the wedges D, the ring E, carrying the said wedges and having the inclined slots *e*, the sliding rods F, having studs working in said slots, and the ring G, frictionally connected with the said tube, substantially as set forth.

3. The combination, with the chuck-head having the jaws a, of the levers B, having the studs *b'*, the sliding tube C, having the inclined shoulder *c* and the annular groove *c'*, the wedges D, the ring E, carrying the said wedges and provided with the inclined slots *e*, the sliding rods F, having studs working in said slots, the ring G, and the hooked springs *h'*, substantially as set forth.

385,475. AUGER-HANDLE. HARRY HAYLOR, Oil City, Pa. Filed Oct. 5, 1887. Serial No. 251,512. (No model.)



Claim.—1. An auger-handle formed with a cylinder having openings, in the lips of which project a fixed notched cross-piece and a rocker-clamp adapted to move lengthwise of the handle, and means, substantially as described, to force the rocker-clamp toward the cross-piece and clamp a bit, substantially as described.

385,475

2. An auger-handle consisting of handle 1, having cylinder 3, with central opening, 18, at top and bottom thereof, corresponding with each other, and a horizontal notched cross-piece, 16, extending across and at one side of the vertical line of said openings, a rocker-clamp, 9, having flanges 14, overlapping cylinder 3, and provided with an angular slot, 12, and pivot-pins 10, adapted to slide in slots 11 in cylinder 3, the ends of clamp 9 being also adapted to slide in slots 15 in cylinder 3, and said clamp having a projection, 7, and the screw-threaded handle 2, with cavity 6, fitting over projection 7, substantially as described.

385,476. LOCOMOTIVE-TRUCK. ALFRED C. PARKER, Pittsburg, Pa. Filed Dec. 29, 1887. Serial No. 260,304. (No model.)

Claim.—1. The combination, with the side bars of a truck, of bars or shafts placed at right angles thereto, rollers carried by the said bars or shafts and resting on the truck, side bars, hangers suspended from the roller-carrying bars, springs supported by the hangers, and a center plate supported by the springs, substantially as described.

2. The combination, with the side bars of a truck, of rollers resting thereon, shafts upon which the rollers are journaled, hangers loosely mounted upon the shafts, links connecting the shafts, springs carried by the hangers, and a center plate carried by the springs, substantially as described.

3. The combination, with the side bars of a truck, of rollers resting thereon, shafts upon which the rollers are mounted, links connecting the shafts, stops arranged at each end of the links, hangers loosely mounted on the shafts, springs supported by the hangers, and a center plate supported by the springs, substantially as described.

4. The combination, with the side bars of a truck, of adjustable stops connected thereto, rollers resting on the truck, side bars, shafts upon which the rollers are mounted, links connecting the shafts, hangers loosely mounted upon the shafts, springs supported by the hangers, and a center plate supported by the springs, substantially as described.

385,477. STRIKER FOR HAND FIRE-EXTINGUISHERS. ALBERT L. PITNEY, Washington, D. C. Filed Sept. 21, 1887. Serial No. 250,211. (No model.)

Claim.—1. The combination of the cylinder having a screw-threaded nozzle with the detachable piston, the removable screw-threaded piston-rod, the handle, and its washer, these being close to the cylinder-head when the rod is screwed into the nozzle, substantially as described.

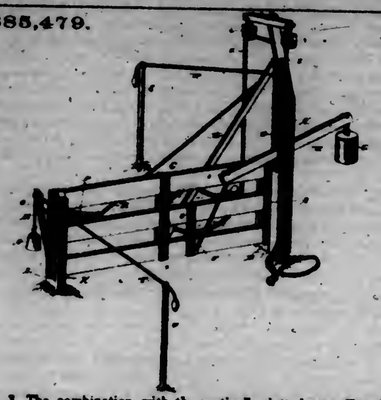
2. The combination of the cylinder having a perforated head and a screw-threaded nozzle, with the removable piston-rod provided with a collar or stop and screw on its end, a washer between the collar and nozzle, a handle on the rod, and a washer between the handle and the cylinder-head, the handle and its washer being normally close to the cylinder-head when the rod is screwed into the nozzle, substantially as described.

3. The combination of the cylinder with the detachable piston provided with spring-teeth, the rod provided with a groove for engaging with the teeth, and also provided with a collar and screw-thread on its end, a washer between the collar and cylinder, a handle on the rod, and a washer between the handle and the cylinder-head, substantially as shown and described.

385,478. FOLDING PAPER BOX. DAVID J. REE, Pittsburg, Pa. Filed Apr. 16, 1888. Serial No. 270,912. (Model.)

Claim.—1. The folding paper box consisting of the blank of which the top end extension of the front side is formed integrally with an extension of an adjoining side, which top end extension and adjoining side extension are folded inwardly upon said front and adjoining sides, respectively, the top end extensions of the rear side and an adjoining side folding, one upon an inwardly-folding flap of the front side, while the other folds upon the first named of the latter extensions, and is inserted through a slit in the front side and tucks into a pocket between the front side and its inwardly-folding extension, substantially as specified.

2. The folding paper box made from a blank of which the portions forming the sides are provided with end extensions, the extensions of the front and rear sides having one a slit and the other a diagonally cut and notched edge, while at the opposite end the front side is provided with a semicircular cut or slit, providing the same with a flap, the top end extension of said front side being formed integrally with an extension of an adjoining side, and adapted to fold inwardly upon said front side, substantially as set forth.

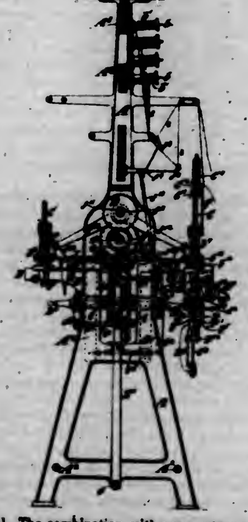


3. As a new article of manufacture, the folding paper box made from the blank of which the portions forming the sides are provided with end extensions and one with a side flap, the extensions of the front and rear sides having one a slit and the other a diagonally cut and notched edge, while at the opposite end the front side is provided with a semicircular cut or slit and the extension at its top end formed integrally with an extension of an adjoining side and adapted to fold inwardly, the top end extensions of the rear and an adjoining side being provided with flaps, substantially as set forth.

385,479. GATE. WILLIAM H. RISDEN, Van Buren, Ohio. Filed Feb. 18, 1888. Serial No. 264,625. (No model.)

Claim.—1. The combination, with the post A, having the slot B and the slotted vertical extension A', of the gate pivoted in the base of the slot B, the lever E, pivoted within the slotted extension A' and having a weight on its rear end, the link F, connecting the said lever to the gate, the bar H, secured to the gate and projecting upward therefrom, the cross-head secured to the upper end of the extension A', the pulleys depending from ends of said cross-head, and the ropes passing over said pulleys and having their ends secured to the upper end of the bar H, as set forth.

2. The combination, with the gate having a stud or projection on its free end, of the latch mounted on a suitable post and having its upper end weighted, the cord, wire, or chain secured to the post at one end and to the upper end of the latch at the other end, and the lever mounted on the gate and bearing at its free end on the said cord, wire, or chain, whereby when its rear end is raised the latch will be operated, substantially as specified, for the purpose set forth.



385,479.

3. The combination, with the vertically-slotted post K and the gate adapted to engage at its free end in the slot in the post, of the weighted latch adapted to engage a stud or projection on the gate, the cord, wire, or chain O, attached at its opposite ends, respectively, to the post and the upper end of the latch, the lever mounted on the gate and projecting at its free end beyond the end of the gate, and bearing on the cord, wire, or chain O when the gate is in its closed position, and the latch-cord attached to the rear end of the lever and passing through a suitable keeper or guide, whereby when the cord is pulled the rear end of the latch is raised, substantially as and for the purpose specified.

385,480. MACHINE FOR WINDING QUILLS AND BOBBINS. VERNON BOYLE, Paterson, N. J. Filed June 26, 1888. Serial No. 278,194. (No model.)

Brief.—The invention consists in improved means for feeding the spindle as successive layers of thread are wound upon the quill; in the construction and arrangement of the spindle and its associated parts; in improved means for stopping the flier upon the breaking of the thread; in improved means for traversing the quill and for driving the flier, and in an improved chuck for holding the quill on the spindle.

Claim.—1. The combination, with a non-rotary spindle to receive a quill or bobbin and a rotary flier for laying the thread upon the quill or bobbin, of a clutch wherein the spindle is held by frictional contact of substantially smooth and toothless surfaces, mechanism, substantially as described, for imparting to the clutch a definite length of traverse motion, and a stationary abutment supported independently of and concentric with the spindle, and against which the body of thread on the quill or bobbin will strike at the termination of each

traverse movement in one direction, and by which the spindle and quill or bobbin will be fed lengthwise, substantially as herein set forth.

2. The combination, with a tubular spindle to receive a quill or bobbin, of a clutch wherein the spindle is held by friction, mechanism, substantially as described, for traversing the clutch, a stationary rod within and projecting beyond the spindle, and an abutment supported by said rod and against which the body of thread on the quill or bobbin will strike at the termination of the traversing movement of the spindle in one direction, substantially as and for the purpose herein set forth.

3. The combination, with a bracket or frame portion constructed with a cylindric socket, of a slotted tube fixed therein, a spindle to receive a quill or bobbin arranged within the fixed tube, a rotary flier and its driving-whirl external to and concentric with the fixed tube, and a friction-clutch sliding on the exterior of the fixed tube and having jaws grasping the spindle through the slots in said tube, and mechanism, substantially as described, for traversing the clutch, substantially as herein set forth.

4. The combination, with a bracket or frame portion, B, constructed with a cylindric socket or hub, of a tube, b^3, fixed therein, a spindle to receive a quill or bobbin arranged within the fixed tube, the flier b^7, journaled on the fixed tube above the cylindric hub, and the whirl b^8, journaled on the hub and having a clutch-connection with the flier, and mechanism, substantially as described, for traversing the spindle within the fixed tube, substantially as herein set forth.

5. The combination, with a bracket or frame portion constructed with a cylindric socket and hub, of a tube fixed therein, a spindle concentric within the fixed tube and to receive a quill or bobbin, a flier journaled on the fixed tube beyond the cylindric hub, a whirl journaled on the hub and having a clutch-connection with the flier, a clutch wherein the spindle is held by friction, mechanism, substantially as described, for traversing the clutch, and an abutment against which the body of thread on the quill or bobbin will strike at the termination of the traverse movement in one direction, substantially as and for the purpose herein set forth.

6. The combination, with the clutch body or sleeve D, the jaws d^2, sliding transversely therein, the pivoted levers d^3, bearing on said jaws, and a spring connecting the levers, of a spindle held in the body or sleeve by the frictional contact of the said jaws with the spindle, substantially as herein described.

7. The combination, with the clutch body or sleeve D and its sliding jaws d^2, the levers d^3, provided each with a series of notches and bearing on said jaws, and a spring, d^4, connecting the levers and adjustable along their notched edges to vary the pressure of the jaws, of a spindle held in the body or sleeve by the frictional contact of said jaws with the spindle, substantially as herein described.

8. The combination, with a spindle and rotary flier and a whirl having a clutch-connection with the flier, of a movable shipper controlling the whirl, a pivoted lever, and a rod or link whereby the shipper will be sustained in position to make the whirl operative when the lever is set, a reciprocating knocker, and mechanism, substantially as described, for operating it, a shouldered rod connected with said lever, and a faller and faller-connection, through which said shouldered rod will be moved into the path of said reciprocating knocker on the breaking of a thread, substantially as and for the purpose herein set forth.

9. The combination, with a spindle and rotary flier, a whirl having a clutch-connection with the flier, and a movable shipper for controlling the whirl, of a pivoted stop-lever having an arm-and-rod connection, through which the shipper and whirl are held up when the point of connection of said arm and rod is made to pass the pivotal point of the lever by setting the lever, a reciprocating knocker, and mechanism, substantially as described, for operating it, a faller and faller-connection, and a shouldered rod connected with said stop-lever, and which, by the movement of the faller consequent on the breaking of a thread, will be moved into the path of said reciprocating knocker, substantially as herein set forth.

10. The combination, with a spindle, a rotary flier, a whirl having a clutch-connection with the flier, a shipper controlling the whirl, and a spring for moving the shipper to throw off the whirl, of the stop-lever F, fulcrumed at f and provided with the arms f^6 f^7, the rod f^8, connecting the arm f^6 and the shipper, the shouldered rod f^9, connected with the arm f^7, a faller and faller-connection for moving said rod f^9, and the reciprocating knocker G and mechanism, substantially as described, for operating it, substantially as and for the purpose herein set forth.

11. The combination, with a spindle and mechanism, substantially as described, for traversing it lengthwise and for imparting a feed thereto, and having a stop projection or shoulder, as A^{14}, of a rotary flier, a whirl having a clutch-connection with the flier, stop mechanism, substantially as described, for throwing off the whirl on the breaking of a thread, and having a stop-lever, as F, the shouldered rod F', depending from said stop-lever, and a stop-gage moving with the spindle and by which said rod is held out of the path of the stop projection or shouldered A^{14} until allowed to escape by the stop-gage clearing its lower end, substantially as herein set forth.

12. The combination, with a spindle to receive a quill or bobbin, a clutch wherein the spindle is held by friction, and which has a projection, A^{14}, mechanism, substantially as described, for traversing the clutch, and an abutment at the top of the spindle against which the body of thread on the quill or bobbin may strike to produce downward feed of the spindle, of a rotary flier and a whirl having a clutch-connection therewith, a shipper for controlling the whirl, and stop mechanism, substantially as described, for throwing off the whirl on the breaking of a thread, and having a pivoted stop-lever, as F, a shouldered rod depending from said lever F, and an adjustable stop-gage carried by the spindle and by which the said shouldered rod is held out of the path of the projection A^{14} until the gage clears the lower end of said shouldered rod, substantially as and for the purpose herein set forth.

13. The combination, with the bracket B and the tube b^3, fixed therein and carrying at its lower end the yoke and stop-gage guide D^3, the spindle C, sliding within said tube b^3, the rod C^3, concentric with the spindle and supported by said yoke D^3, the friction-clutch D, provided with the stop projection A^{14}, mechanism, substantially as described, for reciprocating said clutch, and an abutment for a quill or bobbin above the spindle, of a rotary flier and a whirl having a clutch-connection therewith, a shipper for controlling the whirl, and stop mechanism, substantially as described, for throwing off the whirl on the breaking of a thread, and having a pivoted stop-lever, as F, the shouldered rod F', depending from the stop-lever F, and the stop-gage F^9, carried by the spindle, substantially as and for the purpose herein set forth.

14. The combination, with a spindle and flier and mechanism, substantially as described, and including a clutch for rotating one relatively to the other and for reciprocating the spindle, of a shipper for the clutch, a lever, F, and rod-connections between it and the shipper, the shouldered stop-rod F', and the stop-gage F^9, having an arm, A^{11}, beveled at the back from its top downward, substantially as and for the purpose herein set forth.

15. The combination, with a spindle, its flier, and a flier-driving whirl, of stop mechanism, substantially as described, whereby the whirl is thrown of to stop the flier, and a faller pivoted between its ends and having on one side of its pivot a thread-eye and on the other side a faller-connection, f^{10}, through which the stop-motion is made operative to throw off the whirl, substantially as herein set forth.

16. The combination, with a spindle to receive a quill or bobbin, of a traverse-cam having a succession of long inclines and short inclines arranged alternately for producing slow and quick traverse, said long inclines being of different lengths relatively to each other, and said short inclines also being of different lengths relatively to each other, and traverse mechanism, substantially as described, through which said cam traverses the spindle, substantially as and for the purpose herein set forth.

17. The combination, with a spindle to receive a quill or bobbin, of a traverse-cam having a succession of long inclines and short inclines arranged alternately for producing slow and quick traverse, the said inclines having substantially uniform throw or projection, but terminating in different paths, and traversing mechanism, substantially as described, through which said cam traverses the spindle, substantially as and for the purpose herein described.

18. The combination, with a spindle to receive a quill or bobbin, of a rotary face-cam having a succession of long inclines and short inclines arranged alternately for producing slow and quick traverse, said long inclines being of different lengths relatively to each other, and said short inclines also being of different lengths relatively to each other, and traversing mechanism, substantially as described, through which said cam traverses the spindle, substantially as and for the purpose herein set forth.

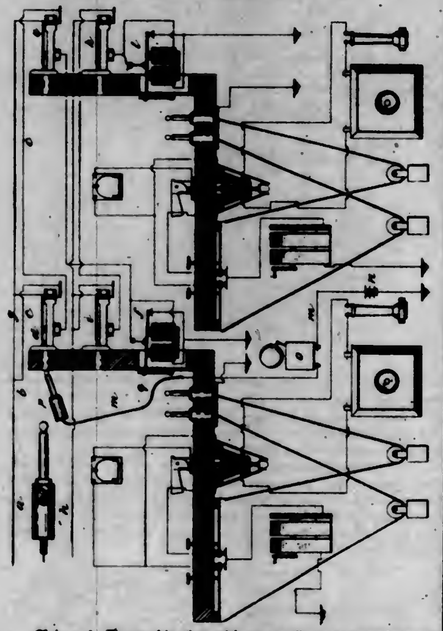
19. The combination, with the two rows of spindles G on opposite sides of the machine and friction-clutches receiving the spindles through them, of the rock-shafts D', provided, respectively, with arms c^4 c^4, which extend in opposite directions, and with other arms, D^3, engaging said clutches, a single traverse-cam, E, and a lever, E', connected with the rock-shaft arms c^4 c^4, and on which said cam acts, substantially as herein described.

20. The combination, with spindles and whirls on opposite sides of a machine, of a central driving-pulley, H', and a single driving-band, I, for both whirls, substantially as and for the purpose herein described.

21. The combination, with a spindle, of a chuck-body thereon for receiving a quill, and a keeper, m, for engaging the groove in a quill, and having a screw-threaded shank or stem, m', whereby it is adjustably connected with the chuck-body, substantially as herein described.

385,481. KNIT FABRIC. LEVI R. SALISBURY, Providence, R. I. Filed Dec. 14, 1886. Renewed Dec. 7, 1887. Serial No. 257,214. (Specimens.)

385,481.



Claim.—1. The improved knitted fabric having filling or plush threads, each passing around the front and back, alternately, of wales formed by base-threads of a similar or of different material, and having the base-threads nearly or quite concealed on both sides of the fabric by the said filling-threads.

2. The improved knitted fabric hereinbefore described, consisting of wales formed by the base-threads 4 and the filling or plush threads 3, of similar or of different material, each passing around the front and back, alternately, of one or more of the said wales, and having the base-threads nearly or quite concealed on both sides by the filling-threads.

3. The improved knitted fabric B, hereinbefore described, consisting of base-threads forming the plain portion, and having tufted and corded filling or plush threads of similar or of different material, each passing around the front and back, alternately, of wales formed by the said base-threads and entirely concealing the latter on both sides of the fabric, substantially as shown and set forth

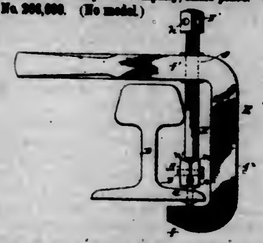
---

385,482. TEST-SIGNAL CIRCUIT. CHARLES R. SCRIBNER, Chicago, Ill., assignor to the Western Electric Company, same place. Filed Dec. 27, 1886. Serial No. 222,703. (No model.)

Claim.—1. The combination, with a normally-open ground-circuit including a bell or signal device of low resistance, of a telephone-line provided with two branches, one branch connected through the switches of the line on two or more switch-boards and through a polarized annunciator to ground, the other branch being connected to the insulated frames or test-pieces of said switches, the armature of said polarized annunciator, and a ground contact-point, whereby on closing said ground-circuit to the frame or test-piece of one of the switches the coils of the polarized annunciator will be shunted out of circuit and the signal-instrument operated, substantially as described.

2. Two or more multiple switch-boards, in combination with telephone-lines connected therewith, each switch consisting of a spring or lever and its opposing contact-point and an insulated frame or test-piece, each line being connected in one branch through the spring and contact-point of its switch on each of the boards and through a polarized individual annunciator to ground, the other branch being permanently connected with the insulated frames or test-pieces of the switches of the line, a shunt-circuit to ground being provided which may be closed around the coils of each individual annunciator by the operation of the armature thereof, and at each of the boards a normally-open ground branch containing battery and bell of low resistance, whereby any line at either of the boards may be tested to determine whether the line is in use.

3. The combination, with two or more multiple switch-boards, of two or more lines connected with the different multiple switch-boards, polarized annunciators, one polarized annunciator in the circuit of each line, a contact-point upon the armature of each annunciator, a co-operating contact and wire, by which the coils of the annunciator may be shunted out of circuit when current of one polarity traverses the coils, test-contacts, one test-contact connected with each line on each board, a test-battery, and an electro-magnetic test-signal included in circuit with said test-battery, and a contact-piece connecting with the circuit of said test-battery, whereby, upon applying the contact-piece to one of the test-pieces, current from the test-battery may be closed through the polarized annunciator and its contact-points closed to operate said electro-magnetic test-signal.



385,488. PHOTOGRAPHIC SHUTTER. FRANK. H. SPARLING, Kalamazoo, Mich. Filed Jan. 16, 1888. Serial No. 260,990. (No model.)

Claim.—1. In a lens-tube used in a photographic camera, the combination of the tube F, having the semi-globular-shaped end, the aperture a, and the wings c c, adapted to open and close said aperture, as shown and described.

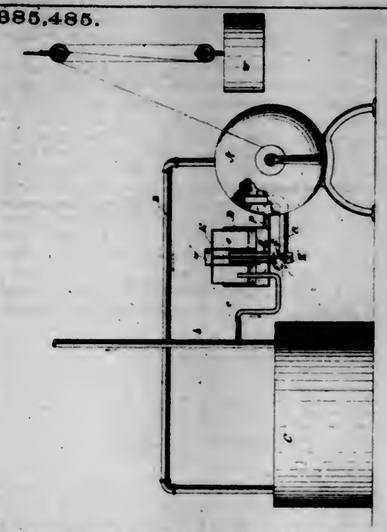
2. In a lens-tube used in a photographic camera, the combination of the globular-shaped end of tube F, the aperture a, the wings c c, the spring-lever d, adapted to stop said wings, the L-shaped slots in the semi-globular-shaped wings, as described and shown.

385,484. DEVICE FOR SECURING WIRE TO RAILROAD-RAILS. FREDERICK STEEL and CHARLES WERNER, Louisville, Ky., assignors to the American Semaphore Company, same place. Filed Mar. 2, 1888. Serial No. 266,060. (No model.)

Claim.—1. In a device for holding wire the end of which is to be upset, the combination, with a yoke and a screw, of two clamping-blocks for holding the wire to be upset, substantially as set forth.

2. The combination, with a yoke, a screw passing through an arm of said yoke, and an arm of the yoke to form a bearing or support for the yoke, of two clamping-blocks having curved grooves for holding the wire in position, substantially as set forth.

3. The combination, with a yoke, a screw passing through one arm of same, and an arm of the yoke forming a support or bearing for the yoke, of two clamping-blocks having curved grooves for the reception of a wire to be held in position to be clamped, said grooves being provided with teeth or serrations, substantially as set forth.



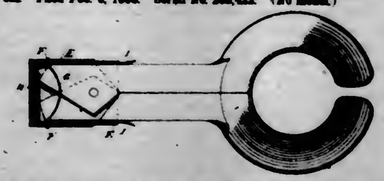
4. In a clamping device, the combination, with a yoke carrying a screw, of two clamping-blocks having curved serrated grooves for holding a wire in position to be clamped, substantially as set forth.

5. In a clamping device, the combination, with a yoke, a screw passing through an arm of the yoke, a pin secured in the end of said screw, and an arm of the yoke forming a support or bearing for the yoke, of two clamping-blocks having a recess for the reception of the pin in the end of the screw, said blocks being provided with serrated grooves for the reception of a wire, and a screw-bolt passing through these clamping-blocks to clamp the wire between them, substantially as set forth.

385,485. CARBURETOR. JOSEPH SYDENHAM, Cincinnati, Ohio, assignor to Andrew J. English and Pearl Crosley, both of same place. Filed Aug. 1, 1887. Serial No. 245,812. (No model.)

Claim.—1. In an automatic gas-machine, in combination with the air-pump, carburetor, and their connections, an open tank or vessel containing liquid, an inverted-cup float carried within the same, a

385,485.

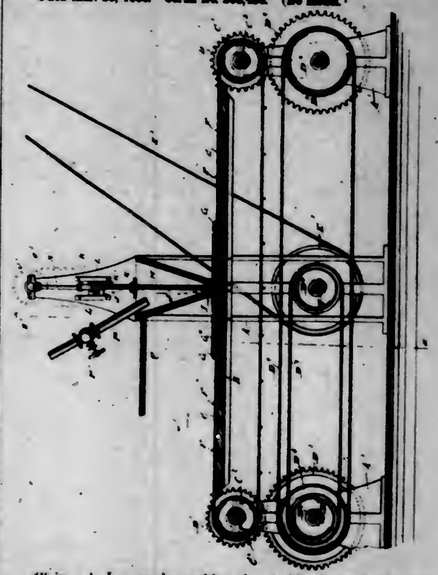


pipe-connection from the gas-delivery pipe of the carburetor to the open space within the float, a valve controlling the inlet-orifice of the pump, and suitable connections between said float and air-ingress valve, whereby the pressure of gas in the delivery-pipe acts through the float to directly control the quantity of air admitted to the pump, substantially as set forth.

2. In an automatic gas-machine, in combination with the air-pump, carburetor, and their connections, an open tank or vessel connected with the pump-chamber below the liquid-line and carrying liquid thereby at a corresponding level, an inverted-cup float carried within said tank or vessel, a valve controlling the inlet-orifice of the pump, and connections between said float and valve whereby variations in the back-pressure of gas from the delivery-pipe of the carburetor causes a rise of all of the float and actuates the air-inlet valve of the pump, substantially as set forth.

3. In an automatic gas-machine of the character described, in combination with the air-pump, carburetor, their connections, and a regulating-valve controlling the admission of air to said pump, an open tank or vessel connected with the liquid-chamber of the pump and carrying liquid at a corresponding level, an inverted-cup float arranged in said tank or vessel to rise and fall with variations in the height of the liquid or in the pressure of the confined gas, a pipe-connection between the interior air-space of the float and the burner delivery-pipe, and operating connections between said float and regulating-valve, substantially as set forth.

4. A regulator for gas-machines embodying an open tank or vessel partly filled with liquid and having a central tube opening through the bottom and extending above the liquid-line, an inverted-cup float provided with a central tube extending from the top downward to or below the plane of its lower edge and embracing loosely the open tube of the containing-tank, a rod or stem depending centrally from the bottom of the float within both tubes below through the bottom of the containing-tank and adapted to connect with and operate a controlling-valve of the inlet-pipe, and a pipe-connection from the ultimate gas-delivery pipe opening through the bottom of the containing vessel into the gas-space of the float above the liquid, constructed and arranged substantially as set forth.



385,486. LAMP-BRACKET. ALFRED THURBER, San Francisco, Cal. Filed Feb. 8, 1888. Serial No. 263,422. (No model.)

Claim.—1. In a lamp-bracket, the hinged swinging arm having the horizontal table with the central vertical pin at its outer end, in combination with the rearward-extending arms of the lamp-holding jaws, said arms being halved together and fitting on the vertical pin, and having an inclosing compressing-spring by which the jaws are closed, substantially as herein described.

2. In a lamp-bracket the hinged swinging arm having the horizontal table and the vertical pin projecting from its center, in combination with the cup-shaped lamp-holding jaws having their rear arms halved together and fitting upon the pin, a flat spring bent to fit around the outside of these ends to keep the jaws pressed together, an inclosing box or cap fitting over the hinge and spring, and the bracket-table, together with a pin by which it is held in place, substantially as herein described.

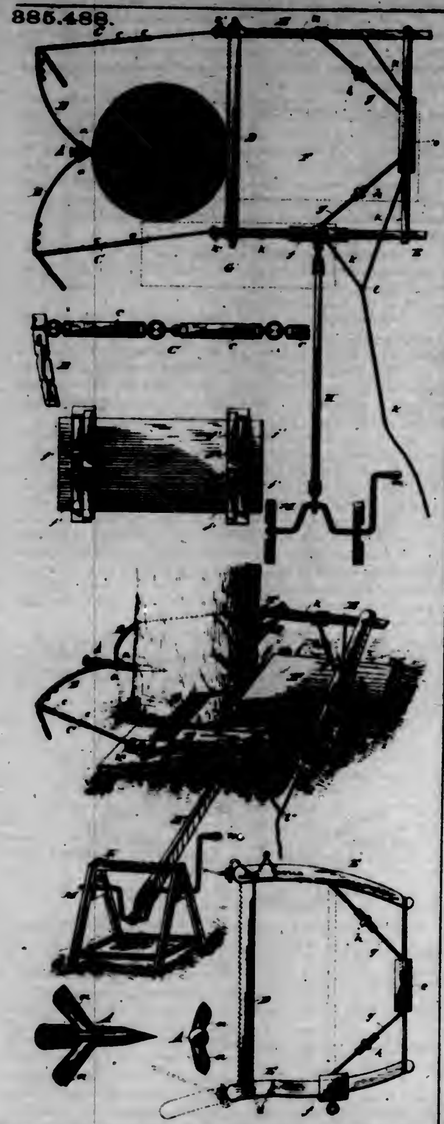
385,487. CANDY-MACHINE. GEORGE THURBER, Brooklyn, N. Y. Filed Mar. 26, 1883. Serial No. 269,498. (No model.)

Claim.—1. In a candy-machine, the combination, with the main frame and a funnel having a series of apertures in its bottom, of a bar sliding in ways in the frame, the pieces J^3, adjustably secured in the said sliding bar, and the plungers J, detachably secured to the pieces J^3, substantially as herein shown and described.

2. In a candy-machine, the combination, with an endless apron, form-plates on the apron, and means for operating said apron, of a funnel having a series of apertures in its bottom, a bar sliding in ways in the frame, rods adjustably secured to said bar, plungers detachably secured to said rods, and means for operating the sliding bar, substantially as herein shown and described.

385,488. TREE-FELLING SAW. WILLIAM A. VAN BENTHUYSEN, New York, N. Y. Filed Aug. 1, 1887. Serial No. 246,304. (No model.)

Claim.—1. A sawing device, made substantially as described, consisting of the following elements operated in combination, namely: a reciprocating saw, a tree-spike, yielding arms extending from the spike, and flexible connections between the yielding arms and the extremities of the saw, as set forth.



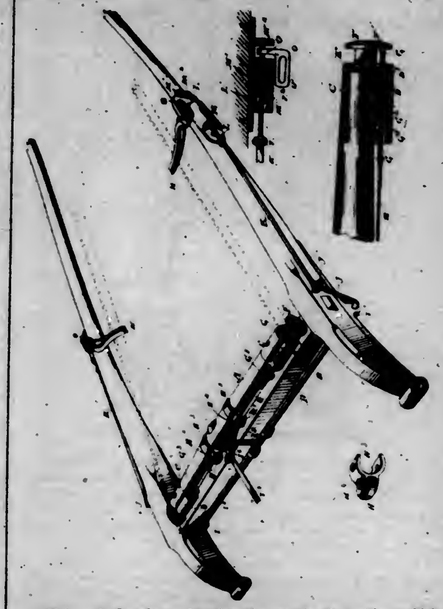
2. In a tree-sawing device, the rod or spike A, constructed with a central point and socketed side arms at each side, as shown and described.

3. In a tree-sawing device, the rod or spike A, constructed with a central spike or point and tubular arms on opposite sides, said tubes having open outer ends forming sockets for the spring-arms hereinbefore referred to, and the sockets being enlarged or extended longitudinally along their outer sides, as shown and described, and for the purpose set forth.

4. The combination, with a saw and its frame, a pitman, and operating-crank, of a bar or spike formed with sockets *a a*, adapted to receive spring-arms, said arms, and connections between the arms and the saw, substantially as described.

5. The combination, with a saw and its frame and a means for reciprocating the saw, of a bar or spike, spring-arms carried thereby, spring-releasing catches arranged at each end of the saw, connections

385,489.



between the catches and the spring-arms, and an operating-cord arranged in connection with the catches, substantially as described.

6. The combination, with a bar or spike having sockets *a a*, adapted to receive spring-arms, said arms, and connections between the arms and the saw, and means for reciprocating the saw, of a buck-saw with its central bar removed, the saw-holding ends of its frame held apart by screw-threaded bracing-rods from the back of the frame and the central portion of the back of the frame, and a portion of one end of the frame carrying fixed metal or other sleeves of nearly rectangular shape, but having flat bottom sliding faces, in the manner and for the purpose described.

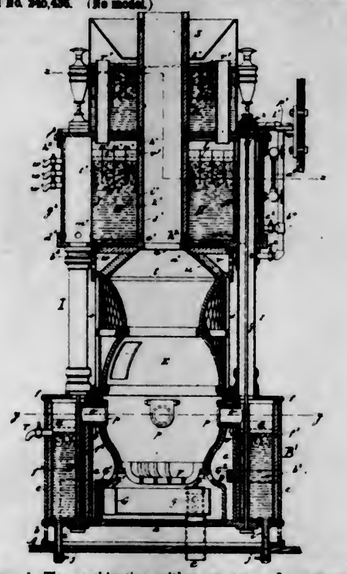
385,489. CHIMNEY-PROTECTOR. WASHINGTON VAN GAASBEEK, New York, N. Y. Filed Mar. 17, 1888. Serial No. 267,518. (No model.)

Claim.—The chimney top or protector consisting of a cap composed of strips bent to form a vertical flange having one end perforated for securing devices and the opposite end slitted, and its horizontal portion elevated above the plane of the main body to receive the perforated end of the adjacent strip, whereby the said strips may intersect each other for adjustment, and also having a vertical rectangular flange to embrace the chimney-corner, substantially as specified.

385,490. HORSE-DETACHER. WILLIAM R. WALKER, Hovada, Mo., assignor to himself and John R. Robinson, same place. Filed Feb. 21, 1888. Serial No. 264,926. (No model.)

Claim.—1. In a horse-detacher, the combination, with a vehicle-tongue and singletree, of spring-projected trace-bolts on the singletree, a strap or flexible line connecting the two bolts, guide-pulleys for the strap or line on either side of the middle of the singletree, a transverse rock-shaft on the tongue, a finger on the rock-shaft projecting upward behind the strap between the two guide-pulleys, and a draw shaft or line for swinging the finger rearward, substantially as described.

2. In a horse-detacher, the combination, with vehicle-shafts and a singletree, of retractible brace-bolts on the singletree, a strap or line connecting them, a transverse rock-shaft having a finger for drawing on said strap or line and retracting the trace-bolts simultaneously, a strap or line for swinging the rock-shaft, projecting arms on the rock-shaft outside the shafts, retractible breeching-strap bolts on either shaft, and a strap or draw-line connecting the breeching-strap bolt on each shaft with the respective arm of the rock-shaft, substantially as described.



3. In a horse-detacher, the combination, with a vehicle-tongue and singletree, of spring-projected trace-bolts on the singletree, a strap or line connecting them, a transverse rock-shaft having a finger projecting upward back of the connecting strap or line, bent rearward to

retain the strap, and formed with an eye, and a draw strap or line connected with said eye, substantially as described.

4. In a horse-detacher, the socket C, formed on its side with the parallel tube D, neck E, projecting beyond the end of the socket and tube, the head F, parallel with the end of the socket to form a trace receiving space, and a spring-projected bolt, G, extending through the said tube across the trace-receiving space and above the neck E into the aperture F', substantially as set forth.

5. In a horse-detacher, the attaching-plate M', formed on its outer face with a longitudinally-extending socket, M, and an abutment, M^2, parallel with the front end of the socket and apertured in line therewith, the spring-projected bolt L, extending across the space between the end of the socket and the abutment into the aperture in the latter, and the L-shaped breech-strap coupling O, the arm or lug O^2 of which extends downward into said space and has an aperture to receive the bolt, the rearward longitudinally-extending arm of said coupling forming a flat loop, O^3, at right angles to the aperture in lug O^2, substantially as set forth.

385,491. CAR-STOVE. WILLIAM P. WHEELER, Louisville, Ky., assignor to himself and John S. Cain, same place. Filed July 27, 1887. Serial No. 245,436. (No model.)

Claim.—1. The combination, with a car-stove, of a water-reservoir arranged above the stove and one or more siphons connected with the water-reservoir and communicating with the fire-pot of the stove, the said siphon or siphons being arranged to remain normally inactive, but arranged to be charged and set in operation when the stove is unduly tipped, substantially as specified.

2. The combination, with a car-stove, of a water-reservoir arranged around the fire-pot of the stove, a water-reservoir arranged above the stove, and a series of siphons communicating with the upper reservoir, extending into the lower reservoir, and communicating with the fire-pot of the stove, substantially as specified.

3. The combination, with a car-stove, of a water-reservoir arranged around the fire-pot of the stove, a water-reservoir arranged above the stove, a series of siphons communicating with the upper reservoir, extending into the lower reservoir, and communicating with the fire-pot of the stove, and automatic valves arranged to close the communication between the siphons and the fire-pot, substantially as specified.

4. The combination, with a car-stove, of the reservoir H, siphons formed of the pipes I J, and the auxiliary reservoir K, provided with open pipes i', extending upward into the said reservoir and communicating with the reservoir H, substantially as specified.

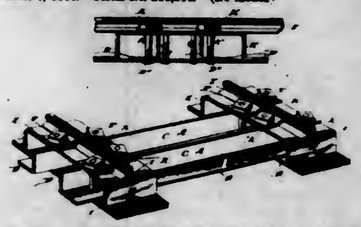
5. The combination, with the auxiliary reservoir K, of the inset head S, provided with the perforated portion s', substantially as specified.

6. The combination, with the reservoir, of the wave-arrester therein, formed of a series of horizontal vertically-aligned apertured disks, f', and the concentric series of imperforate hoops u' between the disks of the series, substantially as set forth.

7. The combination, with the reservoir, of the wave-arrester therein, formed of horizontal vertically-aligned apertured disks f', a concentric series of hoops, u', placed edgewise between the disks, and the radial partitions v', dividing the spaces between said hoops and disks, substantially as set forth.

8. The combination, with the stove having a conical top, t, provided in its apex with an outlet for the products of combustion and with the insulating material, u, of the outer surrounding air-chamber having no communication with the interior of the stove, the ring b^2, forming the outer side wall of said chamber and having apertures w, the reservoir H, having a vertical central smoke-outlet and a bottom plate centrally apertured to register with the opening in the top t, and the insulating material in the upper part of the said air-chamber, substantially as set forth.

9. The combination, with a car-stove, of an outer reservoir composed of the outward-curved plates e, the inward-curved plates c, the bottom plate, a, and the top plate, f, with an inner water-tight reservoir, B, substantially as described.



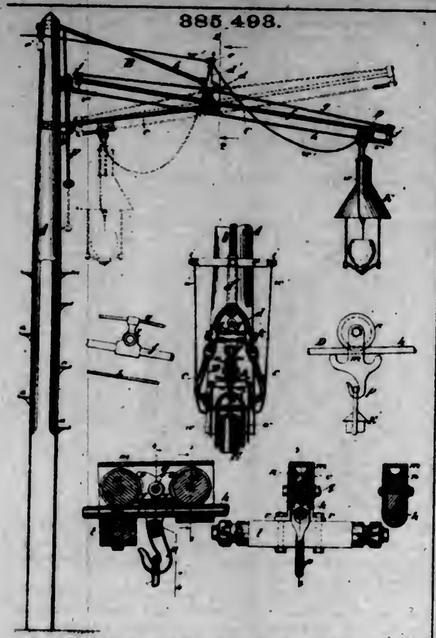
10. The combination, with the inner reservoir, B, and the rods j' and d, passing through the same, of open tubes i, secured water-tight to the bottom of the inner reservoir, B, substantially as described.

11. The combination of a car-stove and surrounding annular reservoir, and the intercommunicating pipes e, with the rings d' around the pipes e, which serve to hold rigidly all of the above-named parts in their proper relative position, substantially as described.

12. The combination, with the car-stove E, of the reservoir B, arranged around the fire-pot of the stove, the reservoir H, arranged above the stove, the pipe I, extending into the reservoir H, and provided with perforations l' at its upper end, the pipe J, inclosing the upper part of the pipe I and provided with perforations m' at its lower end, and the pipe b^4, provided with the valve c^3 and communicating between the reservoirs H K and pipe I, substantially as specified.

13. The combination, with the stove E, having a sectional combustion-chamber formed of upper and lower connected rings or sections having annular grooves, as shown, of the cylindrical screen fitting at its upper and lower ends in said grooves and forming part of the stove, substantially as set forth.

385,492. RAILWAY CROSS-TIE. DAVID Y. WILSON, Glen Tree, assignor of one-half to Robert L. McClellan and S. Park Rutherford, Coalranville, and John Rudy and Sebastian Cremleigh, Parkersburg, Pa. Filed Mar. 8, 1888. Serial No. 266,510. (No model.)



Claim.—1. The combination of the parallel angle-bars A, having the horizontal lower sides, B, and vertical inner sides, C, the base-plates arranged transversely under the ends of the angle-bars, the bridge-plates arranged transversely over the ends of the angle-bars, and having their ends bent downward and outward and bearing on the projecting ends of the base-plates, and the bolts F, extending through the base and bridge plates and through the lower sides of the bars, and securing said bars and base and bridge plates together, substantially as described.

2. The combination of the parallel bars A, arranged at a suitable distance apart, the base-plates arranged transversely under the ends of said bars, the bridge-plates arranged transversely over the ends of said bars and the bridge-plates, the bolts F, connecting the said base and bridge plates together and clamping the same to the bars A, the said bridge-plates being further provided with the openings G between the bolts, for the purpose set forth, substantially as described.

3. The combination of the parallel angle-bars A, arranged at a suitable distance apart, the base-plates arranged transversely under the ends of said bars, the bridge-plate arranged transversely over the ends of said bars, the bolts connecting the base and bridge plates together and bearing against the opposing sides of the vertical portions of the angle-bars, and the bolts connecting the base and bridge plates together bearing against the outer sides of the vertical portions of the angle-bars, and extending through the horizontal or base portions of said angle-bars, substantially as described.

385,493. SUSPENSION-ARM FOR ELECTRIC LAMPS. JAMES J. WOOD, Brooklyn, N. Y. Filed Feb. 13, 1883. Serial No. 263,800. (No model.)

385,493.

Claim.—1. The combination, with an electric lamp, of a carriage from which it is suspended, and a rocking arm bearing said carriage and along which it may travel, constructed to vibrate to opposite sides of the horizontal, the support to which said arm is pivoted, and the circuit-wires of said lamp fastened to said support and looped with sufficient slack to permit the movement of the lamp to either end of said arm.

2. The combination, with a supporting structure, of a rocking arm arranged with its inner end approaching said structure and its outer end extending away therefrom and constructed to vibrate to opposite sides of the horizontal, and a carriage adapted to travel along said arm and to carry an electric lamp hung beneath it, whereby on lowering the inner end of the arm said carriage will run inwardly toward said structure, and on raising it the carriage will run outwardly therefrom.

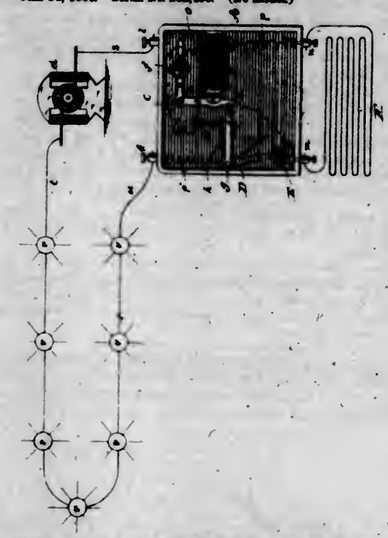
3. The combination with a supporting structure, of a bracket projecting outwardly therefrom, a rocking arm arranged with its inner end approaching said structure and its outer end extending away therefrom, fulcrumed to said bracket and constructed to vibrate to opposite sides of the horizontal, a carriage adapted to travel along said arm and to carry an electric lamp hung beneath it, and the circuit-wires attached to said bracket and to said carriage and looped between them with sufficient slack to permit the endwise movement of the carriage along said arm.

4. The combination, with a supporting structure, of a rocking arm arranged with its inner end approaching said structure and its outer end extending away therefrom and constructed to vibrate to opposite sides of the horizontal, a carriage adapted to roll along said arm and to carry an electric lamp hung beneath it, and a vertically-moving operating-rod jointed to the inner end of said rocking arm.

5. The combination, with a supporting structure, of a rocking arm arranged with its inner end approaching said structure and its outer end extending away therefrom, fulcrumed to vibrate to opposite sides of the horizontal, with its fulcrum nearer its inner end than its center of gravity, whereby its outer portion overweights its inner portion, and a carriage adapted to roll along said arm and to carry an electric lamp hung beneath it.

6. The combination, with a supporting structure, of a rocking arm arranged with its inner end approaching said structure, constructed to vibrate to opposite sides of the horizontal and fulcrumed on an axis between its middle and its inner end, whereby its outer portion beyond said fulcrum is longer than its inner portion, and a carriage adapted to roll along said arm and to carry an electric lamp hung beneath it.

7. The combination, with an electric lamp, of a carriage from which it is suspended, a rocking arm constructed to vibrate to opposite sides of the horizontal, bearing said carriage and along which the latter may roll, and elastic buffers at the opposite ends of said arm in position to receive the impact of the carriage.



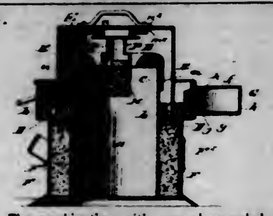
8. The combination, with an electric lamp, of a rocking arm constructed to vibrate to opposite sides of the horizontal, a carriage adapted to roll along said arm and from which said lamp is suspended, and an automatic brake applied to said carriage and constructed to check the movement thereof when the said arm is tilted to its extreme inclination.

9. The combination, with a rocking arm constructed to vibrate to opposite sides of the horizontal, of a carriage adapted to roll along said arm and constructed with two wheels, and a suspension-hook pivoted to said carriage between said wheels and formed with opposite projections, adapted, when the hook is tilted relatively to the carriage, to come against the peripheries of said wheels and act as a brake therefor

10. The combination, with an electric lamp and a traveling carriage from which it is suspended, of a rocking arm adapted to vibrate to opposite sides of the horizontal and constructed with a rigid longitudinal bar or strut, a trussed tie-rod above said strut, and a tie-rod below said strut strained taut and on which said carriage travels.

11. The combination, with a supporting structure and a rocking arm adapted to vibrate to opposite sides of the horizontal, of a bracket to which said arm is fulcrumed, consisting of an upper tie-rod, two lower struts arranged side by side and spread to admit the rocking arm between them, and a fork to which the outer ends of said tie-rod and truss are fastened, and between the legs of which the fulcrum-pivot passes.

385,494. CUT-OUT. CHARLES D. WESNER, Petersburg, Ill. Filed Jan. 31, 1888. Serial No. 262,460. (No model.)



Claim.—1. In a cut-out for electric-light circuits, the combination of an electro-magnet arranged in the circuit, a pivoted and spring-actuated cut-out lever connected with the magnet and with one of the electric-light-circuit wires, a counterbalanced armature-lever engaging and holding the cut-out lever during the normal working of the circuit, a contact for the cut-out lever when disengaged by the armature-lever, and a resistance having one terminal connected with the main circuit and the other with the contact of the cut-out lever, substantially as described.

2. In a cut-out for electric-light circuits, the combination of the electro-magnet B, arranged in the circuit, the pivoted and spring-actuated cut-out lever D, the counterbalanced armature-lever C, provided with the catch d, with which the cut-out lever D engages, the wire q, connecting the cut-out lever D with the magnet, the wire p', connecting the said lever with one of the electric-light wires, the wires o p, the spring E, and the resistance F, having one terminal connected to wire p and its other to the spring E, substantially as described.

385,495. COMMODE. WILLIAM R. WYTHE, Santa Barbara, Cal., assignor to himself and J. D. Axtell, same place. Filed Oct. 18, 1887. Serial No. 252,656. (No model.)

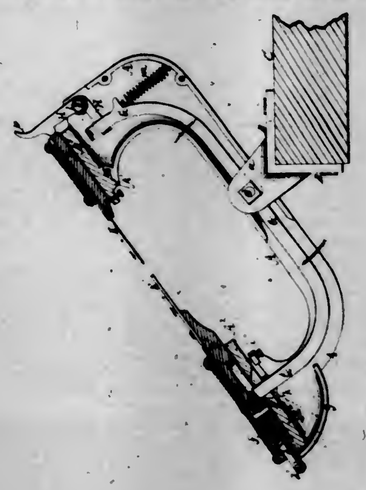
385,495.

Claim.—1. The combination, with a vessel provided with a surrounding pan provided with an extended receptacle in communication therewith, of a flanged closing-cover adapted to rest on said pan, substantially as and for the purpose described.

2. The combination, with the vessel A, having exterior jacketed chamber provided with a filling of non-conducting material, and a surrounding water-pan, D, having an extended receptacle in communication therewith, of a removable seat-ring and flanged closing-cover adapted to rest on said pan, substantially as and for the purpose described.

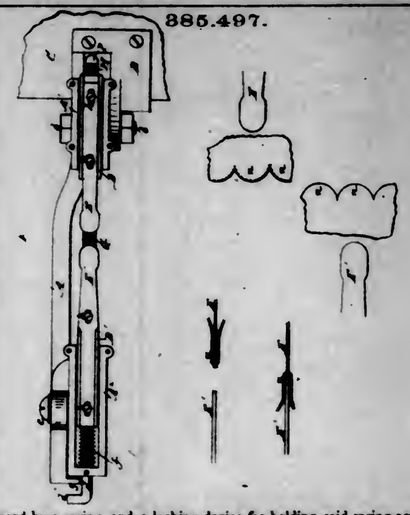
3. The combination, with the vessel A, having an exterior jacketed chamber provided with a filling of non-conducting material and a surrounding water-pan, D, having an extended receptacle, G, of a flanged cover, E, adapted to rest on said pan, having removably attached to or suspending downwardly from its top a receptacle for containing disinfectant matter, substantially as and for the purpose described.

4. The combination, with the vessel A, having the surrounding water-pan D, having an extended receptacle, G, in communication therewith, a flanged cover, E, adapted to rest on said pan, and provided with sockets m m^2, of a receptacle, H, for containing disinfectant matter, having lugs n n^2, adapted to enter the sockets m m^2, substantially as and for the purpose specified.



5. The combination, with the vessel A, having exterior jacketed chamber provided with a filling of non-conducting material and having a surrounding water-pan, D, provided with an extended receptacle, G, in communication therewith, of a removable seat-ring and flanged cover, E, adapted to rest on said pan, having attached to or suspended downwardly from its top a receptacle for containing disinfectant matter, all substantially as and for the purpose described.

385,496. COMPOSITION FOR ROADWAYS. LOUIS H. BRADENBURG, Hancock, Mich. Filed Nov. 22, 1887. Serial No. 256,908. (No specimens.)



Claim.—The composition for facing roadways or road-beds, consisting of the following substances in the proportions specified, namely: black pitch, two barrels; coal-tar, one barrel; rosin, one-half barrel; copper molding, four quarts; stamp-sand, one quart; yellow sand, six quarts; ashes, two quarts.

385,497. LEATHER-TURNING MACHINE. QUINTIN W. ROOTS, Rochester, N. Y. Filed Sept. 8, 1887. Serial No. 249,107. (No model.)

Claim.—1. In a leather-turning machine, the combination of a supporting-frame, two turning-irons resting therein, one pressed forward by a spring, and a locking device for holding said spring-actuated iron in the retracted position, whereby the leather can be inserted upon one iron and then be clamped by operating the locking device to release the spring-actuated iron, as set forth.

385,497.

2. In a leather-turning machine, the combination of a supporting-frame, two turning-irons resting therein, each movable toward and from the other, one pressed forward by a spring, and a locking device extending from one iron to the other and holding the spring-actuated iron in the retracted position, whereby when the leather is inserted on one iron and pressure is applied thereto it releases the other iron, which then springs forward to clamp the leather, in the manner and for the purpose specified.

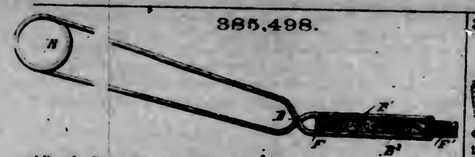
3. In a leather-turning machine, the combination of the supporting-frame, two turning-irons, each movable toward and from the other, slides to which the turning-irons are attached, one pressed forward by a spring, and a locking device extending from one iron to the other, and by which the spring-actuated slide is held in the retracted position, as herein shown and described.

4. In a leather-turning machine, the combination of two opposing turning-irons in the same plane, means for operating them, the frame in which they rest, and the pivot around which the frame turns, substantially as described.

5. In a leather-turning machine, the combination of two turning-irons, each movable toward and from the other, slides to which the turning-irons are attached, a pivoted arm which locks one of the slides in place, and a rock-lever with which the other end of the pivoted arm engages, as set forth.

6. In a leather-turning machine, the combination of the two turning-irons E E′, each movable toward and from the other, the slides D D′, to which the turning-irons are attached, the spring f on the slide D′, the pivoted arm G, engaging with slide D′, the spring m, connected with the arm, and the rock-lever H, connecting at one end with arm G and resting at the other end against slide D, as shown and described, and for the purpose specified.

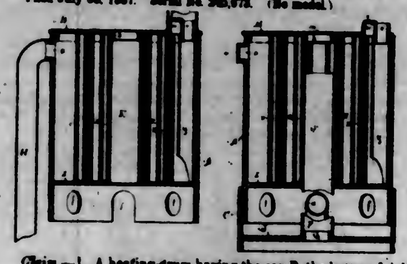
7. In a leather-turning machine, the combination of a supporting-frame, a pair of opposing turning-irons resting therein, and a pivot, around which one of them may be turned to stand at an angle with the other, as shown and described, and for the purpose specified.



8. In a leather-turning machine, the combination, with the frame A, provided with the concentric flange g, of the head-block A^3, pivoted to the frame, the slide D^3, resting in the head-block, the said slide being provided with the stem d, having lug d', the spring f on the stem, and the turning-iron E′, attached to the slide, as set forth.

9. In a leather-turning machine, the combination of the fixed turning-iron E, the sliding turning-iron E′, provided with a spring that presses it forward, and means for locking and unlocking the same, as set forth.

385,498. CULINARY SPRING-TONGS. GEORGE BRITTON, Harrisburg, Pa. Filed Oct. 17, 1887. Serial No. 252,690. (No model.)

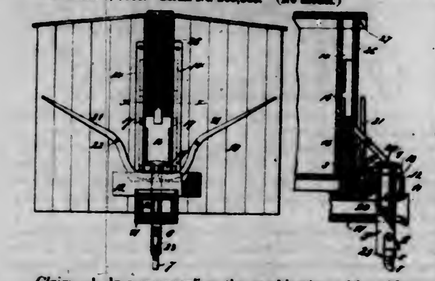


Claim.—As an improved article, the culinary spring-tongs shown and described, the same being formed of a continuous wire or rod coiled at its middle, having its limbs extended crossed, and having spoon-formed palms bearing on each other by spring-tension and bent

385,498.

obliquely directed to the middle line between said limbs, substantially as and for the purposes set forth.

385,499. HEATING-DRUM. WILLIAM H. BURNS, Mittenvale, Kans. Filed July 30, 1887. Serial No. 245,673. (No model.)



Claim.—1. A heating-drum having the cap B, the bottom I, inlets below the bottom, and the openings o k, in combination with the cap n, the lid m, and a suitable smoke-flue, as set forth.

2. The combination, with the heating-drum having internal vertical tubes and an air-chamber below the same, of the central vertically-sliding pipe or tube F and the smoke-flue y, arranged at one side and having an opening at its lower end for the admission of the smoke, as set forth.

3. The combination, with the heating-drum having the series of internal vertical heating-tubes, and an air-supply chamber below the same, of the smoke-flue y, arranged at one side of the drum, and having an opening at its lower end for the admission of the smoke, and provided at its upper end with the divisions w x, and the damper v, pivoted between said divisions, and adapted to close either of them, substantially as described.

4. The combination, with a heating-drum, of the cover J, having rim c and smoke-hole k, substantially as and for the purpose set forth.

385,500. CAR-COUPLING. SAMUEL BYERS, Brown's Valley, Cal. Filed Mar. 1, 1888. Serial No. 265,865. (No model.)

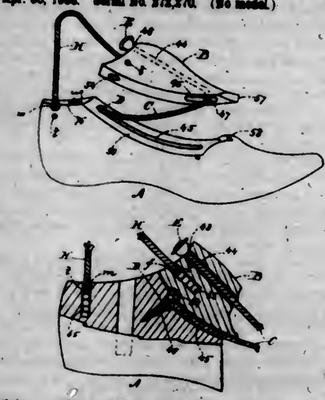
Claim.—1. In a car-coupling, the combination, with guideways on the end of a car, provided with recesses, of a slide provided with lugs fitting in the grooves of the said ways, and an outwardly-extending plate, 19, having a slot, 9, to receive the shank of a coupling-pin, and means for operating the said slide, substantially as herein shown and described.

2. In a car-coupling, the combination, with ways 14, formed with recesses 15, of a slide, 16, formed with upper projections, 17, having rounded corners, and lower projections, 18, adapted to enter the grooves 15, a plate carried by the slide, said plate being formed with a groove, 3, and a recess or slot, 9, levers pivotally connected to the car-end, and arranged so that their inner ends will enter the grooves 3, and a coupling-pin, the shank of which passes through the slot 9, substantially as described.

385,501. CLAMP FOR HOOPS OR BANDS. JAMES W. CALLAHAN, New Iberia, La. Filed Apr. 13, 1888. Serial No. 270,570. (No model.)

Claim.—1. The herein-described clamp for uniting the ends of hoops or bands, the same consisting of a pair of heads, A, having slots substantially parallel with the base thereof for the passage of the ends

385,501.



of a hoop or band, and holes for a bolt, a screw-threaded bolt adapted to the holes, and means co-operating with the bolt for drawing the heads together, substantially as described.

2. The herein-described clamp for uniting the ends of hoops or bands, the same consisting of a pair of heads, A, having slots substantially parallel with the base thereof for the passage of the ends of a hoop or band, projecting tongues 14, and holes for a bolt, a screw-threaded bolt adapted to the holes, and means co-operating with the bolt for drawing the heads together, substantially as described.

3. The combination of a pair of heads, A, each having a slot, 10, substantially parallel with the base thereof, a projecting tongue, 14, and a hole, 15, for a bolt, a hoop or band the meeting ends of which are passed through slots in the heads and turned back in the form of loops embracing the tongues, a screw-threaded bolt adapted to the holes, and means co-operating with the bolt for drawing the heads and the ends of the hoop or band together, substantially as described.

385,502. LAST FOR BOOTS OR SHOES. WILLIAM R. CRANE, Lynn, assignor to himself and Charles A. Shaw, Boston, Mass. Filed Apr. 30, 1888. Serial No. 272,270. (No model.)

Claim.—1. In a last for boots or shoes, a body, as A, provided with the hole or socket m in the upper edge or corner of its heel portion, a block, as B, provided with the hole or socket f in its rear end, the cord H, having its ends respectively inserted in said sockets, and the screws t, for securing the ends of the cord in said sockets, all being combined and arranged to operate substantially as described.

2. In a last for boots or shoes, a body, as A, provided with the hole or socket m in the upper edge or corner of its heel portion, a block, as B, provided with the hole or socket f in its rear end, the cord H, provided with the metallic clips or casings 65 and having its ends respectively inserted in said sockets, and the screws t, for securing the ends of the cord in said sockets, all being combined and arranged to operate substantially as set forth.

3. In a last for boots or shoes, a body, as A, provided with a hole or socket, m, in the upper edge or corner of its heel portion, a block, as B, provided with the hole or socket f in its rear end, the cord H, having its ends respectively inserted in said sockets, the screws t, for securing the ends of the cord in said sockets, and a lock for said block, all being combined and arranged to operate substantially as described.

4. In the last herein described, the combination of a body, a block, a cord, and a lock for the block, one end of said cord being attached to the block in such position as to lead from its rear end and the other secured to the body in such position as to lead from or approximately from the upper edge or corner of the heel portion of said body, substantially as set forth.

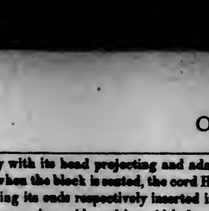
5. In a last for boots or shoes, the combination of the block B, having the hole 44 and socket 54, the body A, provided with the groove 45 and hole 49, and the cord C and screw D, said cord being inserted in the hole 44 and having its outer end provided with a knot or pull and its inner end secured to the hole 49 by said screw, substantially as described.

6. In a last for boots or shoes, the block B, provided with the hole f and socket 54, the body A, provided with the hole m, the screw D,

inserted in said body with its head projecting and adapted to register with the socket 54 when the block is seated, the cord H, provided with the clips 65 and having its ends respectively inserted in the holes *m f*, and the screws *t*, for securing said cord in said holes, substantially as set forth.

7. In a last for boots or shoes, the body A, provided with the groove 45, having its rear end terminating in the hole 49, in combination with the cord C, connected with the block of the last and having one of its ends inserted in said hole, and the screw D, for securing the end of the cord in said hole, substantially as described.

8. In a last for boots or shoes, the body A, provided with the groove 45, hole 49, and socket *m*, the block B, provided with the sockets 54 and *f* and the hole 44, the cord H, having its ends respectively inserted in the sockets *m* and *f*, the screws *t*, for securing said ends in said sockets, and the cord C, inserted in the hole 44 and having one of its ends secured in the hole 49 by the screw D and the other provided with a knot or pull, all being combined and arranged to operate substantially as described.



9. In the last herein described, the combination of a body, a block, a cord connecting said body and block, and a lock for said block, one end of said cord being secured to the block and the other secured to the body by the block-lock or a portion thereof, and said last provided with an opening in its interior, in which the main portion of said cord is disposed or housed when the block is seated, substantially as set forth.

10. In the last herein described, the combination of the following instrumentalities, to wit: a body, a block adapted to be seated on said body, a lock for said block, and a cord connecting said block and body, the body or main portion of said cord when the block is seated being disposed or housed partially in a hole extending lengthwise through said block and partially in a groove in the interior of the last, one end of said cord being secured to the rear portion of said body by the block-lock or a portion thereof and the other protruding through the rear or outer end of the hole in the block and provided with a knot or pull, substantially as described.

11. In a last for boots or shoes, the cord C, provided with the metallic pull E, in combination with the block B, provided with the hole 44, body A, provided with the hole 49 and groove 45, and a lock for the block, said cord being inserted in the hole 44 and having one of its ends secured in the hole 49 by the block-lock or a portion thereof, substantially as set forth.

12. In a last for boots or shoes having a longitudinal groove in its interior for the block-cord, the combination, with the last-body provided with a block-seat, and with a V-shaped socket at the lower end of said seat, of a block having a V-shaped end for fitting said socket and provided with a longitudinal cord-hole, a cord disposed in said hole and groove and connecting said block and body, and a block-lock, said cord being secured to said body by the block-lock or a portion thereof, substantially as described.

385,503. JOURNAL-BOX. WILLIAM K. CHRISTIE, Ionia, Mich. Filed Mar. 19, 1888. Serial No. 267,737. (No model.)

Claim.—1. In combination with a journal box or bearing having a recess, a cellar, and a wedge adapted to fit into the recess, and a screw carried by the collar and arranged to bear upon the wedge.

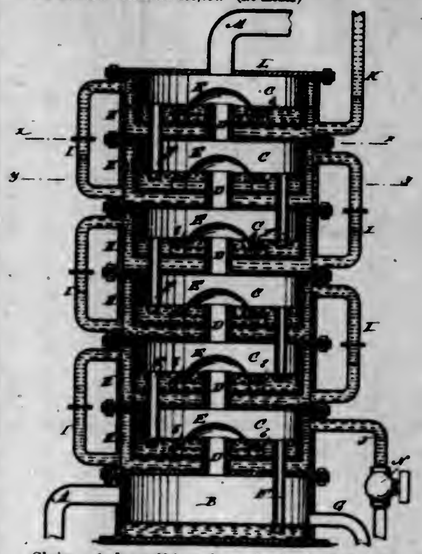
2. In combination with a journal box or bearing having a recess, a cellar, and a wedge fitting into said recess, and a screw carried by the cellar and adapted to bear upon the wedge, the screw being so arranged as to permit a slight movement of the cellar independently of the wedge when subjected to abnormal strains.

3. In combination with a box or bearing having a recess and a groove formed in one wall of said recess, a wedge, a cellar provided with a tongue to fit into the groove, and a screw carried by the cellar.

4. In combination with a box or bearing having a recess, one of the walls of which is inclined, a wedge, a cellar, and a screw carried by the cellar.

5. In combination with a box or bearing having a recess, one of the walls of which is inclined and one of which is provided with a groove, a wedge, a cellar provided with a rib or tongue to fit the groove, and a screw carried by the cellar.

6. In combination with a box or bearing having a recess, a cellar provided with a threaded lug, a screw passing through said lug, and a wedge provided with a seat for the head of the screw.



7. In combination with a box or bearing having a recess, a cellar provided with a threaded lug, a screw passing through the lug, and a wedge provided with a seat or socket for the head of the screw, the height of the socket being greater than the vertical measurement of the screw-head.

8. In combination with a box or bearing having a recess, a cellar provided with a threaded lug, a screw passing through said lug, and a wedge provided with a seat for the head of the screw and with a cross-bar cut away to receive the stem of the screw.

9. In combination with a box or bearing having a recess, a cellar provided with a threaded lug, a screw passing through said lug, and a wedge provided with a seat for the head of the screw and adapted to straddle the lug.

10. In combination with a box or bearing having a recess, a cellar provided with a lug, a screw passing through the lug, a wedge, and a jam-nut.

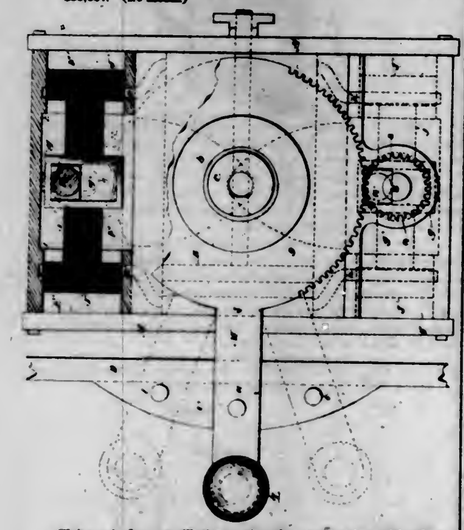
385,504. RECTIFYING-COLUMN FOR THE DISTILLATION OF LIQUIDS AND GASES. WALTER R. CALWELL, Cincinnati, Ohio. Filed Oct. 20, 1887. Serial No. 253,717. (No model.)

Claim.—1. In rectifying-columns for the distillation of liquids and gases, the combination, with a receiving-chamber, of a series of communicating condensing-chambers, C, having jackets surrounding the sides and bottom, and arranged one above the other, and the pipes I, extending from the upper part of each jacketed chamber to the lower part of the one next below, substantially as herein shown and described.

2. In rectifying-columns for the distillation of liquids and gases, the combination, with the receiving-chamber B, of the series of condensing-chambers C, having central ducts or passages, and provided with jackets surrounding the sides and bottom, the pipes I, extending from the upper part of each jacketed chamber to the lower part of the one next below, and the pipes F, leading from each condensing-chamber to the one below it, substantially as herein shown and described.

385,505. CAR-COUPLING. CONOVER R. COOK, Yorkville, Ill. Filed Jan. 14, 1888. Serial No. 260,774. (No model.)

385,505.



Claim.—1. In a car-coupling, the combination of the draw-head having the openings C C' in its upper and lower sides, the upper opening being corrugated, the pin engaging at its lower end in the upper opening when in its elevated position, and the link adapted to trip the pin when it enters the draw-head to cause it to fall, substantially as specified.

2. In a car-coupling, the combination of the draw-head having the elongated and roughened opening C in its upper side and the opening C' in its lower side, and the pin to engage in the said openings, substantially as specified.

3. In a car-coupling, the combination of the draw-head having the lateral apertured ears D, the removable pins engaged in the apertures, and the coupling-link adapted to be engaged by one of the said pins when not in use, substantially as and for the purpose specified.

4. In a car-coupling, the combination of the draw-head having the tapered or funnel-shaped recess B therein, and the aligned openings C C' in its upper and lower sides, the curved coupling-pin adapted when in the elevated position to be engaged in the upper opening, C, and project slightly below the upper side of the recess B, and the coupling-link having the tapered heads I I on its opposite ends, all constructed and arranged substantially as and for the purpose specified.

385,506. VALVE MECHANISM FOR OSCILLATING ENGINES. WILLIAM B. CONLEYER, Bristol, Conn. Filed Oct. 22, 1887. Serial No. 253,087. (No model.)

Claim.—1. In an oscillating engine, the combination, with a frame and a cylinder having trunnions, of a steam-chest, a sliding valve having two piston-heads, and a lever having a toothed edge, the latter adapted to engage a toothed wheel for moving the valve endwise when the cylinder is rocked, substantially as set forth.

2. In an oscillating steam-engine, the combination, with a steam-chest, and a valve provided with a cylindrical head on each of its ends, and a yoke or slotted connecting-body, of a sliding box, a crank-shaft that engages the box with its crank-pin, a toothed pinion, and a meshing gear-wheel adapted to partially rotate the pinion and move the valve longitudinally when the cylinder is rocked, substantially as set forth.

3. In an oscillating engine, the combination, with the frame, a toothed wheel, a handle or bar affixed to the wheel, and a means for securing the wheel to the frame in changed positions of adjustment, of a pinion, a crank-shaft that supports the pinion, and a sliding piston-valve placed in a steam-chest and connected loosely to the pin of the crank-shaft, substantially as set forth.

4. In an oscillating steam-engine, the combination, with a steam-chest and a piston-valve adapted to slide endwise and uncover a port in the chest, of a yoke formed in the body of the valve, a sliding box, a crank-shaft, and a perforated sleeve or box which gives support to the crank-shaft and is adapted to make a steam-tight joint with a shoulder formed thereon, substantially as set forth.

5. In an oscillating steam-engine, the combination, with a frame, a cylinder, two trunnions, and a piston with its rod, of two valve-chests, two piston-valves, steam and exhaust ports leading from the chests into the cylinder, and valve mechanism that will actuate the valves endwise and in opposite directions when the cylinder is rocked and its piston reciprocated, substantially as set forth.

6. In an oscillating steam-engine, the combination, with a frame, a cylinder, two hollow trunnions that are in connection with live-steam and exhaust passages formed in the cylinder, and a piston and rod, of two valve-chests affixed to the cylinder at opposite points and connected to the steam-exhaust passages of the cylinder, two piston-valves, and a means to move the valves in opposite directions when the cylinder is oscillated, substantially as set forth.

7. In an oscillating steam-engine, the combination, with a frame, a cylinder supported in bosses on the frame to oscillate thereon, a piston, two cylindrical valve-chests attached to the cylinder at opposite points, and passages formed in the cylinder and steam-chests, of two balanced piston-valves having cylindrical heads on their ends, a yoke formed in each valve-body, a sliding box for each yoke, a crank-shaft to engage each sliding box, a toothed pinion affixed to each crank-shaft, and an adjustable gear-wheel that moves the pinions when the cylinder oscillates to reverse the motion of the engine, substantially as set forth.

8. The combination, with two valve-chests attached to an oscillating cylinder, and a valve located in each chest, of pinions connected to the valves to actuate them, and a larger adjustably-secured gear-wheel supported concentric with the engine-trunnions and meshing with two pinions to move the valves when the cylinder is rocked, substantially as set forth.

9. The combination, with a cylinder supported upon trunnions, valve-chests attached to the cylinder, and valves located in these chests, of a pinion connected to each valve to communicate motion to it, an engine-frame, and a gear-wheel supported in this frame concentric with the engine-trunnions and meshing with the valve-pinions to rotate them and move the attached valves when the cylinder is rocked on its trunnions, substantially as set forth.

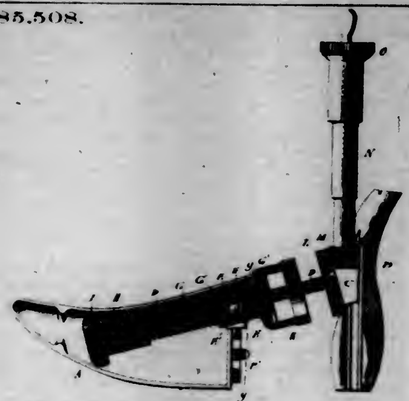
385,507. SURGEON'S SPLINT. WILLIAM H. DE CAMP, Grand Rapids, Mich. Filed Jan. 24, 1887. Serial No. 225,269. (No model.)

Claim.—1. In combination with surgeons' splints, and forming the sole connection between the same, a series of strips attached to one of said splints by loop-hinges and adjustably attached to the other of said splints, substantially as described.

2. In combination with surgeons' splints, flexible strips connecting said splints having hinge-joints and having separate longitudinal adjustment, substantially as described.

3. In combination with surgeons' splints having flexible strips connecting the same, loops through which said strips pass, and fixed pins engaging with holes in said strips, substantially as described.

4. In combination with surgeons' splints, and forming the sole connection between the same, a series of strips attached to one of said splints by loop-hinges, and to the other of said splints by loops encircling said strips, and pins engaging with holes in the same, substantially as described.

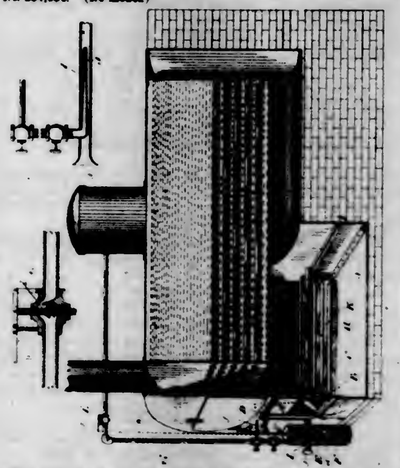


385,508. BOOT OR SHOE STRETCHER. JOHN DONOVAN, Boston, Mass. Filed Dec. 20, 1887. Serial No. 258,441. (No model.)

Claim.—1. In a boot or shoe stretcher, the combination of separable toe-pieces, a rocking bearing mounted in the toe-pieces, an adjusting-screw swiveled in the said bearing, with its inner end projecting between the toe-pieces, and a nut on the inner end of the screw and adapted to be moved back and forth thereon by turning the said screw, substantially as described.

2. In a boot or shoe stretcher, the combination of separable toe-pieces, a rocking bearing, a hollow toe-piece-adjusting screw swiveled in said bearing and internally screw-threaded at one end, a spreader on the end of the adjusting-screw, and a heel-piece-adjusting screw working in and engaging the internal screw-threads of the said toe-piece-adjusting screw, substantially as described.

3. In a boot or shoe stretcher, the combination of toe-pieces, a nut held thereon, an adjusting-screw working lengthwise in said nut, a step in which the adjusting-screw is journaled, a heel-piece carried by the step, a gear on the adjusting-screw, an upright spindle having its bearing in the step, a gear on the spindle engaging that on the adjusting-screw, and a hand-burr on the spindle, substantially as described.



385,508.

4. In a boot or shoe stretcher, the combination, with a pair of detachable toe-pieces, of a hinge having one leaf secured permanently to one toe-piece, and holes in its other leaf, studs on the other toe-piece adapted to said holes, and a catch for holding the studs in the holes, substantially as described.

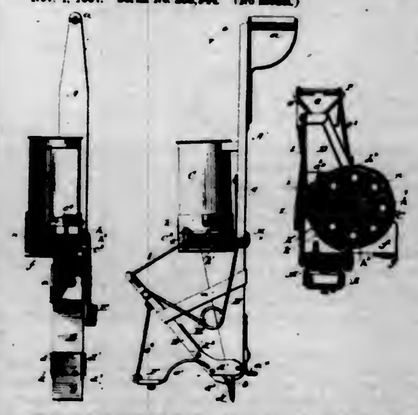
5. In a boot or shoe stretcher, the combination of a pair of toe-pieces, a hinge having one leaf attached to one toe-piece, and a catch on the other toe-piece for securing the other leaf detachably thereto, substantially as described.

385,509. FURNACE FOR STEAM-BOILERS. JOHN T. ELLIS and JAMES H. ELLIS, Toronto, Ontario, Canada. Filed Dec. 15, 1887. Serial No. 257,956. (No model.)

Claim.—1. A hollow vessel located within a tank containing water and having an aperture in or near its bottom provided with a suitable valve, through which water may enter the vessel but not escape, and a smaller aperture or hole through which the water may escape slowly from the vessel, in combination with a door arranged in connection with a doorway leading to the furnace and so weighted and connected to the hollow vessel that it will be held open when the vessel has been sunk by the admission of water into its interior and will close when the water has escaped from the said vessel, and the supplemental door arranged to close slowly after the furnace-door is closed, and a steam-valve connected to said vessel and working in conjunction with the supplemental door, substantially as and for the purpose specified.

2. A hollow vessel located within a tank containing water and having an aperture in or near its bottom provided with a suitable valve, through which water may enter the vessel but not escape, and a smaller aperture or hole through which the water may escape slowly from the vessel, in combination with a valve located in the steam-pipe leading to the furnace, and with a door arranged in connection with a doorway leading to the furnace, the door and valve being so connected to the hollow vessel that said door will be held open when the vessel has been sunk by the admission of water into its interior and will close when the water has escaped from the said vessel, substantially as and for the purpose specified.

3. A furnace-door, A, having an aperture in it protected by a supplemental door, B, and protected by a perforated plate, C, in combination with mechanism, as the tank F, the hollow vessel in said tank, and the cord connecting said vessel with the door B, by which the supplemental door B is held open for a limited period immediately after the closing of the furnace-door, substantially as and for the purpose specified.



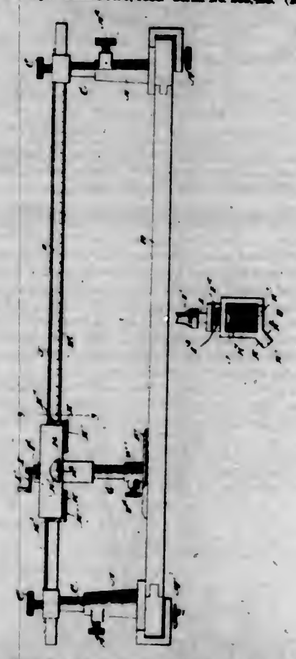
385,510. STEAM-BOILER. JOSEPH A. ROE, Newark, N. J. Filed Dec. 28, 1887. Serial No. 258,627. (No model.)

Claim.—1. The improved steam-generator herein described, combining therein a boiler having the water-leg *b*, forming a pocket at the sides of the fire-box, a mud-drum arranged at the side of said boiler, as shown, heating-pipes arranged within the said fire-box, pipes connecting said drum with the water-leg and with the said heating-pipes, and a pipe connecting said heating-pipes with the upper part of the boiler, substantially as set forth.

2. In combination with a vertical boiler having a water-leg, a mud-drum arranged on the outside thereof, a collection of heating or circulating pipes disposed within the fire-box at the upper part thereof, and pipes leading from the heating-pipes through the water-leg to the outside of said boiler and connecting with the mud-drum and pipes leading from said heating-pipes to the upper part of the boiler, substantially as and for the purpose set forth.

385,511. HAND-PLANTER. SETH HACKETT, Bronson, Mich. Filed Nov. 1, 1887. Serial No. 253,944. (No model.)

Claim.—1. In a hand-planter, the combination, with a handle and a spring-pressed jaw pivoted thereto and provided with a rest, of a hopper, a seed-dropping disk having teeth on its periphery, a sliding block on the hopper carrying a pawl engaging the teeth of the seed-disk, and a link connecting the block to the movable jaw, substantially as described.



2. In a hand-planter, the combination, with a handle and a spring-pressed jaw, of a hopper provided with guideways on its outer surface, a seed-dropping disk having teeth on its periphery, a block sliding in said ways and carrying a pawl engaging the teeth of the seed-disk, a link connecting the block to the movable jaw, and a pawl for preventing backward movement of the said disk, substantially as herein shown and described.

3. In a hand-planter, the combination, with a handle and a spring-pressed jaw, of a hopper, a seed-disk having teeth on its periphery, a block sliding in ways on the hopper and carrying a pawl engaging the teeth of the said disk, a link connecting the block to the pivoted jaw, a pawl for engaging the teeth of the seed-disk to prevent backward movement of the same, and a cut-curve for limiting the movement of the cross-head, substantially as herein shown and described.

4. In a hand-planter, the combination, with a seed-hopper and a seed-disk having teeth on its periphery, of guideways formed as described, a grooved block sliding on said ways and carrying a pawl engaging the teeth of the said disk, and means for reciprocating the said block, substantially as described.

5. In a hand-planter, the combination, with a handle provided with a seed-spout and a spring-pressed and pivoted jaw, the said handle and jaw being provided with penetrating-points, of the plate d^3, having its lower portion provided with side flanges, d^4, and secured at its upper end to the pivoted jaw and forming an extension of the spout, substantially as described.

385,512. PARALLEL-RULER. BENJAMIN F. HARRAWAY, Fort D. A. Russell, Wyo. Filed Feb. 9, 1888. Serial No. 263,420. (No model.)

Claim.—1. In a drawing-instrument, clamping-posts adapted to be secured to a drawing-board and a horizontal graduated bar held adjustably on the said clamping-posts, in combination with a sleeve mounted to slide on the said bar and a ruler held to turn on the said sleeve, substantially as shown and described.

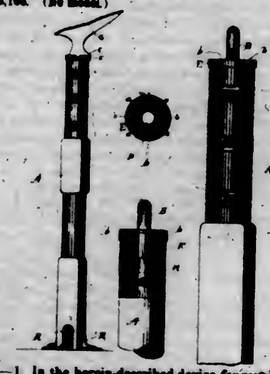
2. In a drawing-instrument, clamping-posts adapted to be secured to a drawing-board and a horizontal graduated bar held adjustably on the said clamping-posts, in combination with a sleeve adapted to slide on the said graduated bar, a rod extending from the said sleeve, and a ruler held adjustably on the said rod, substantially as shown and described.

3. In a drawing-instrument, clamping-posts adapted to be secured to a drawing-board and a horizontal graduated bar held adjustably on the said clamping-posts, in combination with a sleeve adapted to slide on the said graduated bar, a rod extending from the said sleeve, a ruler held adjustably on the said rod, and means, substantially as described, for moving the said sleeve forward and backward on the said arm, as set forth.

4. In a drawing-instrument, the combination, with a horizontal graduated bar provided with a rack, of a sleeve held to slide on the said graduated bar, a ruler carried by the said sleeve, and a worm meshing into the said rack and mounted to turn on the said sleeve, substantially as shown and described.

5. In a drawing-instrument, the combination, with a horizontal graduated bar provided with a rack, of a sleeve held to slide on the said graduated bar, a ruler carried by the said sleeve, a vertical shaft mounted to rotate on the said sleeve and provided with a crank-arm, a bevel gear-wheel secured on the said shaft, a second bevel gear-wheel meshing into the first-named bevel gear-wheel, a horizontal shaft carrying the said bevel gear-wheel and mounted to rotate on the said sleeve, and a worm formed on the said horizontal shaft and meshing into the said rack secured to the said graduated bar, substantially as shown and described.

385,513. FINDER FOR PHOTOGRAPHIC CAMERAS. WILLIAM HARRISON, Friskil, assignor to The Scovill Manufacturing Company, New York, N. Y. Filed Dec. 10, 1887. Serial No. 257,532. (No model.)



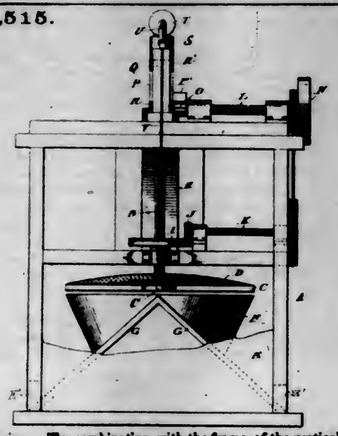
Claim.—1. A finder for photographic cameras, made of glass or like material and comprising a body portion, a lens at one end, and an inclined reflecting-surface at the other end, substantially as specified.

2. A finder for photographic cameras, composed of a single piece of glass or like material and comprising a body portion, a lens, and an inclined reflecting-surface, substantially as specified.

3. A finder for photographic cameras, composed of glass or like material which is rectangular in the cross-section, a lens of corresponding rectangular outline, and an inclined reflecting-surface, substantially as specified.

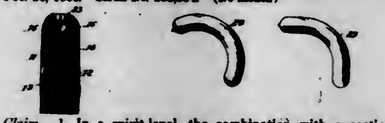
4. A finder for photographic cameras, composed of glass or like material and comprising a body portion, a lens at one end, an inclined reflecting-surface at the other end, and a ground surface above the reflecting-surface, substantially as specified.

385,514. LAST-STANDARD. BENJAMIN C. HASKELL, Boston, assignor to S. H. Tremain, Rockport, Mass. Filed Oct. 24, 1887. Serial No. 253,168. (No model.)



Claim.—1. In the herein-described device for repairing boots and shoes, the standard A, provided with the iron cap E, and pin B, extending through the cap into the standard, in combination with the slotted last G, substantially as and for the purpose hereinbefore set forth.

2. A device for manufacturing and repairing boots and shoes, consisting of the standard A, in combination with the iron cap E, provided with the slots *b b*, the raised flanges *a a*, the opening D, and the last G, provided with the slot D' and the protuberance C, substantially as herein shown and described, and for the purposes herein set forth.

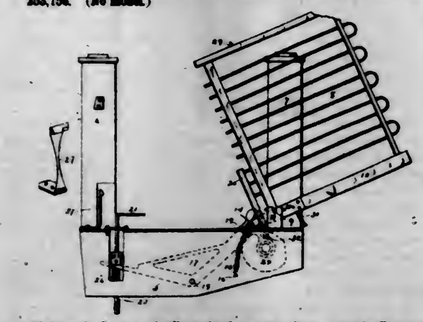


385,515. CAB-INDICATOR. WILLIAM H. HOUSEN and THOMAS C. SAYMAN, Lyon Mountain, N. Y. Filed June 11, 1887. Serial No. 241,089. (No model.)

385,515.

Claim.—The combination, with the frame, of the vertical rotary shaft journaled therein, the screen D, and the collars R R' S on the upper part of the shaft above the frame, the bracket Q, and the slide P, through which said shaft freely passes between its collars R R' within the bracket, the foot P' at one side of said slide, the shaft having a stepped cam engaging said foot, and the horizontal spring-bar U, having a collar, T, resting on the collar S, and means for adjusting its downward pressure on the shaft, substantially as set forth.

385,516. SPIRIT-LEVEL. JAMES C. HUTTON, Corvallis, Oreg., assignor of one-half to Patrick J. Mullivey, East Cambridge, Mass. Filed Feb. 28, 1883. Serial No. 266,564. (No model.)

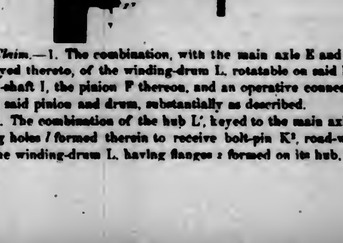


Claim.—1. In a spirit-level, the combination with a sectional frame having recesses in the contiguous faces and a cement bed laid in said recesses, of a vial-case provided with a vial cemented therein, held between the said frame-sections in contact with the cement bed, substantially as shown and described.

2. In a spirit-level, the combination with a sectional frame having recesses in the contiguous faces and a cement bed laid in said recesses, of a sectional vial-case having aligning depressed surfaces provided with a cement bed, a segmental vial held in said bed, and means for retaining the vial-case in contact with the cement bed of the frame-sections, substantially as shown and described.

3. In a spirit-level, the combination, with a sectional frame, of a vial-case, a segmental vial cemented in said case, and means, substantially as described, for cementing the vial-case between the frame-sections, as and for the purpose set forth.

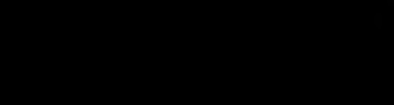
385,517. GATE. HUGH A. KNOWLES, New York, N. Y., administrator of Lewis B. Knowles, deceased. Filed Oct. 22, 1887. Serial No. 253,156. (No model.)



Claim.—1. In a vertically-swinging gate, a base, a vertically-moving foot-rest, a lever pivoted to the base and also to the rear rail of the gate, a weight and a spring co-operating with said lever, the front end of said lever also co-operating with the foot-rest, substantially as set forth.

2. In combination with the gate pivoted at its rear end, a pivoted lever provided with a weight and spring, and a vertically-moving foot-rest provided with a projection, 26, which co-operates with catch 27, secured to the base, substantially as set forth.

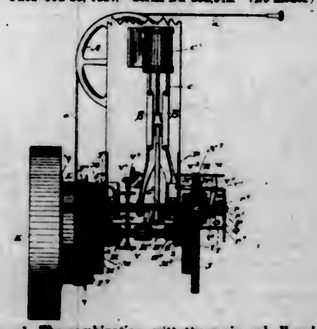
3. In combination with the gate pivoted at its rear end, a lever provided with a weight at one end and having a projecting free end, and a vertically-moving foot-rest provided with a roller, 24, with which the free end of said lever co-operates, substantially as set forth.



4. A vertically-swinging gate pivoted at its rear end upon axle 9, a platform, posts 6 and 7, supported upon said platform, a lever pivoted within the base and provided with a weight, a spring, 15, and a vertically-moving foot-rest co-operating with the free end of said lever, and a spring, 26, coacting with said foot-rest, the whole combined and operating substantially as set forth.

385,518. CONGRESS GAITER. LEWIS J. LOUD, Rockland, Mass. Filed Mar. 1, 1887. Serial No. 229,304. (No model.)

Claim.—In the herein-described boot or shoe, the combination, with the elastic front provided with the elastic lacing, of the elastic side gores, the two front pieces, 6 and 7, and the two heel-pieces 2 and 3, all substantially as and for the purpose described.



385,519. RELIEF-DIE AND PROCESS OF MAKING THE SAME. GEORGE F. MCINTOSH and JAMES W. MCINTOSH, Boston, Mass. Filed Jan. 31, 1887. Serial No. 226,032. (No model.)

Claim.—1. The process of making molds or dies, consisting in the electro-deposition upon a plastic mold or die having the design required formed thereon of a metal plate having the design or designs in relief and integral therewith; second, in filling or backing the hollow dies with metal by filling the cavities only thereof from the back of the plate; third, in depositing upon the back of the plate thus prepared another coat of metal, whereby the metal backing or filling is held or confined in the die spaces or recesses and the die or dies made solid, as and for the purposes described.

2. A multiple die-plate having a series of relief-dies integral with the plate, which are backed or filled with metal which is entirely inclosed by the said die-plate, substantially as described.

385,520. MACHINERY FOR OPERATING STEAM-PLOWS. GEO. W. MORRIS, Brantford, Ontario, Canada, assignor to Alfred Watts, same place. Filed Oct. 20, 1887. Serial No. 252,912. (No model.)

Claim.—1. The combination, with the main axle E and the hub L', keyed thereto, of the winding-drum L, rotatable on said hub, the crank-shaft I, the pinion F thereon, and an operative connection between said pinion and drum, substantially as described.

2. The combination of the hub L', keyed to the main axle E and having holes *l* formed therein to receive bolt-pin K^3, road-wheel K, and the winding-drum L, having flanges *z* formed on its hub, and the driving-gear-wheel L^2, driven by gearing actuated by the pinion-wheel F, keyed to the crank-axle I, substantially as specified.

3. The combination of the hub L', keyed to the main axle E, having bearings E', holes *l*, formed in hub L', bolt-pin K^3, road-wheel K, and the winding-drum L, the driving-gear-wheel L^2, the pinion-wheel M^2, formed on spur-wheel M, the divided counter-shaft H, the pinion-wheel F, and crank-axle I, substantially as described and specified.

4. The combination of the hub L', keyed to the main axle E, the winding-drum L, driving gear-wheel L^2, pinion-wheel M^2, formed on spur-wheel M, the divided counter-shaft H, and the pinion-wheel F, secured to the crank-axle I and adapted to be thrown into and out of gear with the spur-wheel M on divided counter-shaft by the shifting-lever F^2, substantially as specified.

5. The combination of the pinion-wheel N^2, adapted to be clutched so as to partake of the motion of the crank-axle I, the spur-wheel M^2 on the divided counter-shaft, the pinion I, driving gear-wheel J, road-wheel K^2 on the main axle E, and the pin K^3, passing through a hole in the hub of the driving gear-wheel J, substantially as specified.

6. The combination of the pinion-wheel N^2, the clutch N N', crank-axle I, the actuating-gear, the road-wheel K^2, pin K^3, main axle E, the drum L, keyed to the main axle and having holes *l*, and the pin K^3, which passes through the hub K' of the wheel K, substantially as specified.

7. The combination of the main bearing-piece C, formed on the head of the cylinder and rigidly attached to the fire-box, having guide-bars for the cross-head of piston-shaft and bearing for crank-axle I, formed thereon, the saddle-bracket D, affording bearings for the divided counter-shaft H, the gusset-piece G, and the bearing E', main axle E, and bracket E^2, substantially as specified.

8. The combination, with the female clutch-piece N and the pinion N^2, which actuates driving-gear for road-wheels, of the male clutch-piece N', pivotally attached to the lever V^4, which is pivoted on the standard R, suitably supported on machine, the pivoted nut W, screw-shaft V^3, adapted to be actuated by mitered gearing V' and V^2, and rod *v*, which is also adapted to revolve in suitable bearings formed in the fire-box, substantially as specified.

9. The combination, with the rod T, pivotally connected to the handle end, of positive-clutch lever Q, lock-bolts O, the collars p^3 and p^4 formed on said rod, the spring *s* and spring *s'*, having suitable bearings, and the hinged latch S, having half-collar s^4 formed thereon and adapted to engage with the collar p^3 formed on rod when the lock-bolts are disengaged from the female clutch-piece N, substantially as specified.

10. The combination, with the rod T, pivotally connected to the handle end, of the positive-clutch lever Q, lock-bolts O, clutch-piece N, with holes formed therein, and the spring *s*, having suitable bearings on the end of said rod and body of the machine, and adapted to throw the lock-bolts O into the holes *n*, formed in the base of the female clutch-piece N, when the hinged latch S is raised from the collar p^3, so as to release said spring *s* while the male clutch-piece N' is revolving on the crank-shaft I, to which it is rigidly attached, substantially as specified.

11. A steam-plow in which the winding-drum which operates the plow is adapted to revolve on a hub formed on the main axle for road-wheels and contiguous to one of said wheels and operated independently of said road-wheels by suitable gearing driven by the crank-axle, in combination with a grooved pulley placed near to and in front of the fire-box and immediately under the boiler of the engine, and over which grooved pulley the rope to the plow from the winding-drum passes, substantially as described, and for the purpose specified.

385,521. VALVE. HARVEY S. PAGE, Chicago, Ill. Filed Nov. 26, 1887. Serial No. 256,261. (No model.)

Claim.—1. The combination, in a valve, of a cylinder, a chamber in said cylinder, a solid piston traveling in said chamber and having a vent-passage, a normally-seated valve connected to said piston and controlling a discharge-port from the chamber, a chamber for the valve, a supply-port for the chamber between the valve and the piston, and a supply-passage for the chamber below the piston for canceling the piston and opening the valve by the pressure in the chamber, substantially as specified.

2. The combination, in a valve, of a cylinder, a chamber in said cylinder, a solid piston traveling in said chamber and having a vent-passage, a normally-seated valve connected to said piston and controlling a discharge-port from the chamber, a chamber for the valve, a supply-port for the chamber between the piston and valve, a passage leading from the supply to the chamber below the piston, and an auxiliary valve controlling said passage and electrically operated for admission of pressure below the piston to cancel the piston, substantially as specified.

3. The combination, in a valve, of a cylinder, a chamber in said cylinder, a solid piston traveling in said chamber and having a vent-passage, a normally-seated valve connected to said piston and controlling a discharge-port from the chamber, a supply-port for the chamber between the valve and piston, a supply-passage for the chamber below the piston, a valve normally closed for said passage, a moving armature connected to said valve, a stationary armature, and an electric coil inclosing both armatures for electrically controlling the valve for the passage below the piston, substantially as and for the purposes specified.

4. The cylinder A, having the chamber B, piston C, having the passage *d*, controlled by a valve, *d'*, and dividing the chamber into two compartments, the piston, stem D, and the valve E, controlling the port *g* from the chamber B, in combination with inlet ports or passages leading to the chamber B on opposite sides of the piston for canceling the piston to unseat the valve E, substantially as specified.

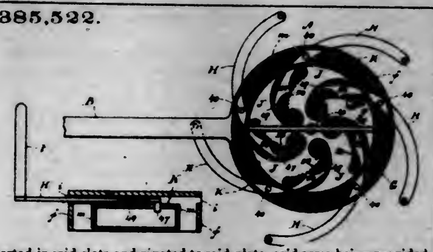
5. The cylinder A, having the chamber B, piston C, having the passage *d*, controlled by the valve *d'*, the stem D, the valve E, and the port *g*, leading from the chamber B, in combination with the inlet-port K, between the piston C and valve E, the passage *m*, the chamber M, the passage *n*, leading from the port K to the chamber M, the passage *s*, leading from the chamber M to the chamber B below the piston, and a valve for the passage *s*, electrically controlled for supplying pressure to the chamber B below the piston to cancel the piston, substantially as and for the purpose specified.

6. The cylinder A, having the chamber B, the piston C, having the passage *d* and valve *d'*, the stem D, the valve E, and the port *g*, in combination with the supply-port K, the chamber M, the passage *m*, leading from the port K to the chamber M, the core or stem N, having the longitudinal passage *o*, the chamber *r* at the inner end of the core, the ports *p*, leading from the passage *o* to the chamber *r*, the passage *s*, communicating with the chamber B below the piston C, and a valve, *n*, electrically controlled for admitting a pressure from the supply-port to the chamber below the piston, substantially as specified.

7. The chamber M and passage *m*, communicating with the supply-port K, in combination with a valve, *n*, controlling a passage, *s*, leading from the chamber M, a valve-stem, *n'*, a core, N, having a passage, *o*, a stationary armature, P, through which the stem of the valve N passes, a movable armature to which the stem of the valve *n* is attached, and a coil inclosing the armatures for electrically operating the valve *n*, substantially as and for the purpose specified.

8. The chamber M, having communication with the supply-port of a valve and with a chamber below a piston in said chamber, in combination with a valve, *n*, a valve-stem, *n'*, a core, N, having the longitudinal passage *o* for the valve-stem *n'*, ports *p* in the core, chamber *r*, communicating with the passage *o* by ports *p*, stationary armature P, movable armature P', having the stem *n'* connected thereto, and a coil around the armatures for supplying pressure to cancel the piston, substantially as specified.

9. The coil O, stationary armature P, and movable armature P', in combination with the core N, valve-stem *n'*, attached to the armature P', passage *o* in the core N, and valve *n*, for operating the valve to open and close communication with a supply, substantially as and for the purposes specified.



10. The coil O, stationary armature P, movable armature N, valve-stem *n'*, and valve *n*, in combination with the core M, passage *o*, passages *p*, and chambers *r* for controlling the supply to the chamber B, substantially as and for the purposes specified.

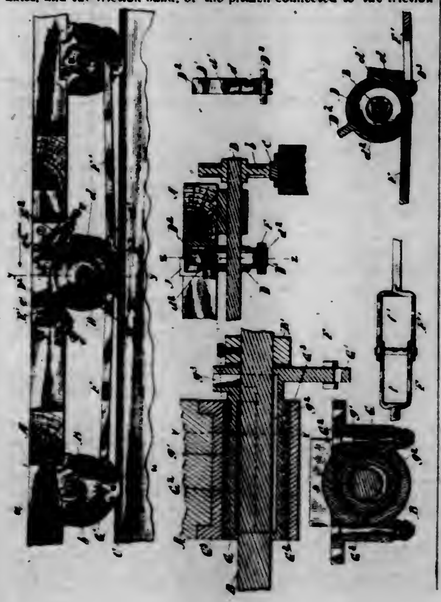
385,522. LAMP-HOLDER. BENJAMIN F. PIERCE, Boston, Mass., assignor to himself and FREEMAN W. FISK, Wilton, Me. Filed Apr. 19, 1882. Serial No. 371,233. (No model.)

Claim.—1. In a lamp-holder, the plate G, provided with the downwardly-projecting annular flange *f*, having the lateral slots *i*, the arms H, inserted in said slots and pivoted to said plate, said arms being provided at their outer ends with upwardly-projecting standards *t* and at their inner ends with studs 47 and teeth 54, and the plate K, pivoted to the plate G, and provided with the curved or evolute spokes J, having teeth 50 on their outwardly-curved edges, all being combined and arranged to operate substantially as set forth.

2. In a lamp-holder, the plate G, provided with the downwardly-projecting annular flange *f*, having the lateral slots *i*, the arms H, in-

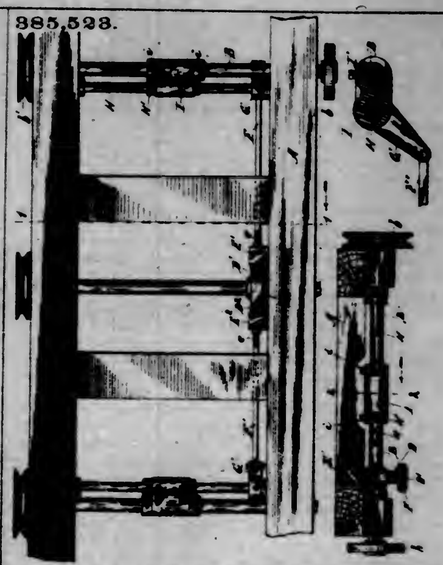
385,522.

serted in said slots and pivoted to said plate, said arms being provided at their outer ends with upwardly-projecting standards *t* and at their inner ends with studs 47 and teeth 54, the plate K, pivoted to the plate G, and provided with the curved or evolute spokes J, having teeth 50 on their outwardly-curved edges, and the arm B, for supporting the plate G, all combined and arranged to operate substantially as described.



3. In a lamp-holder, the plate G, provided with the downwardly-projecting annular flange *f*, having the lateral slots *i*, the arms H, inserted in said slots and pivoted to said plate, said arms being provided at their outer ends with upwardly-projecting standards *t* and at their inner ends with studs 47 and teeth 54, the plate K, pivoted to the plate G, and provided with the curved or evolute spokes J, having teeth 50 on their outwardly-curved edges, and the arm B, for supporting the plate G, said arm being pivoted to the plate E, substantially as set forth.

4. In a lamp-holder of the character described, the arm B, pivoted to the plate E by the rod D and lugs *k*, the plate G, mounted on said arm and provided with the annular flange *f*, having the slots *i*, the arms H, inserted in said slots and pivoted to the plate G, said arms being provided with standards *t*, teeth 54, and studs 47, and the plate K, provided with the curved serrated spokes J, all being constructed, combined, and arranged to operate substantially as specified.



385,523. SAW-MILL CARRIAGE. DE WITT C. PRESCOTT, Marinette, Wis. Filed Aug. 2, 1886. Serial No. 209,780. (No model.)

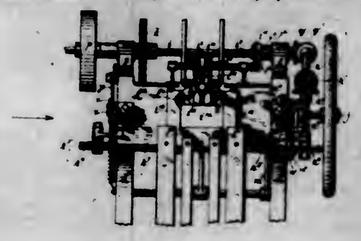
Claim.—1. The combination, with the truck-axles, of a carriage arranged to move laterally on said axles, a screw or screws to cause the said lateral movement, a friction-wheel secured to one of the axles and provided with a friction-band connected to the said screws to actuate the same, and adjustable stops arranged to limit the motion of the friction-band in each direction, substantially as specified.

2. The combination, with the truck-axles, the laterally-movable carriage, the shifting-screws, the friction-wheel secured to one of the axles, and the friction-band, of the pitmen connected to the friction-

385,523.

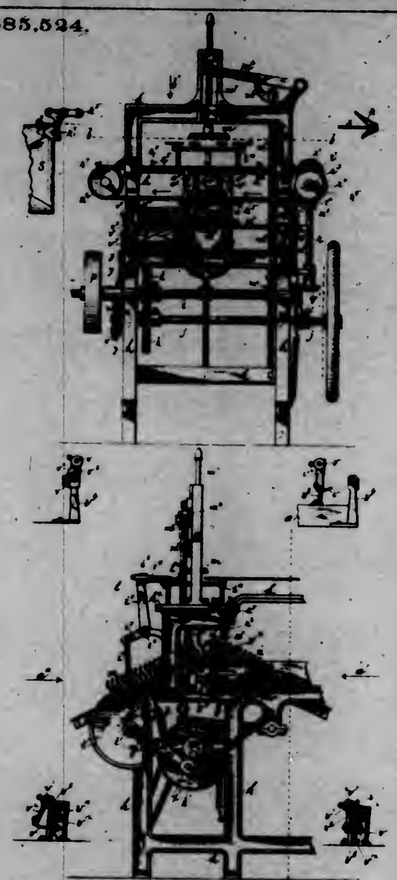
band at one end and having their other ends adjustably connected to the crank-arms of the shifting-screws, substantially as specified.

3. The combination, with the truck-axles, the laterally-movable carriage, the shifting-screws, and the friction-wheel secured to one of the axles, of the friction-band connected to the screws and provided with a lug, D^3, and the rubber blocks d' d^3, mounted in the boxes E' E^3 and provided with adjusting-screws *e*, substantially as specified.



4. The combination, with the truck-axles, the laterally-movable carriage, and the shifting-screws, of the friction-wheel secured to one of the axles, the friction-band connected to the screws, and a holding device to prevent the rotation of the friction-band, substantially as specified.

5. The combination, with the truck-axles, the laterally-movable carriage, and the shifting-screws, of the friction-wheel secured to one of the axles, the friction-band provided with a projecting lug, and the pivoted dog J, capable of engagement with the said lug to prevent the movement of the band, substantially as and for the purposes set forth.



6. In a saw-mill carriage, the combination, with the laterally-movable carriage, of the axles B, the hollow screws G, mounted thereon and each provided with an oil-chamber, g^2, feed-passage g^3, and bearing-block g', the fixed nuts G^3, attached to the carriage and adapted to receive the said screws, and actuating mechanism connecting the screws and axles, substantially as and for the purposes specified.

385,524. ENVELOPE-MACHINE. ABRAM A. RENSTAM, Worcester, Mass., assignor to Wade H. Hill, same place. Filed May 11, 1887. Serial No. 237,393. (No model.)

Claim.—1. A device for stopping and holding the envelope-blanks in position under the plunger of an envelope-machine preparatory to forcing the same through the creasing-plate opening to be folded, consisting of the hinged shear-shaped arms *l l*, having the stops l^2 l^3 adjustably fastened to their inner ends and provided with a suitable spring for closing their outer ends, a wedge, l^5, adapted to enter between said outer ends to open the same, and means connected with said wedge for imparting horizontal reciprocating movements thereto, substantially as shown and specified, for the purpose stated.

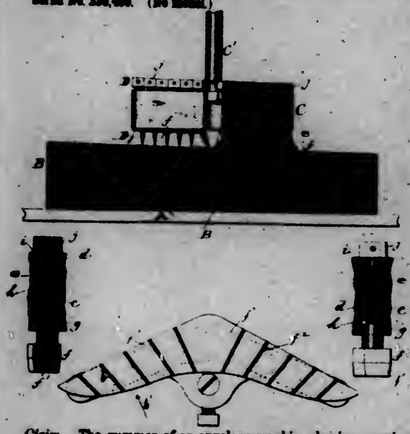
385,524.

2. In an envelope-machine, the main bed A^2, hinged folding-bed *e*, and bearing e^{10}, adapted to receive and hold the shank or base end of the stationary adjustable forked arms e^9, in combination with said arms e^9, fitted in vertical openings in the folding-bed and provided with inclined or beveled ends upon which to receive the envelopes when they are carried down on said folding-bed, substantially as shown and specified.

3. In an envelope-machine, the combination of the main bed A^2 and hinged folding-bed *e* with the stationary-adjustable arms e^9, fitted in suitable openings in said folding-bed and provided with inclined or beveled ends upon which to receive the envelopes when they are carried down on the folding-bed, rocking arms e^9 e^{12}, arranged on shaft e^8 and extending respectively above and below the surface of said folding-bed and operated by the latter through a crank-arm and a suitable spring, substantially as and for the purposes set forth.

4. The combination of the driving sprocket-wheel r^4 and carrying-pulley r^5 with the drying-chain *n*, the endless chain r^6, arranged to travel horizontally and laterally through the machine just above said drying-chain, and having hooks r^7 projecting out therefrom at intervals around its length adapted to push the envelopes from the drying-chain onto a suitable receiver as the chain r^6 is moved forward, substantially as set forth.

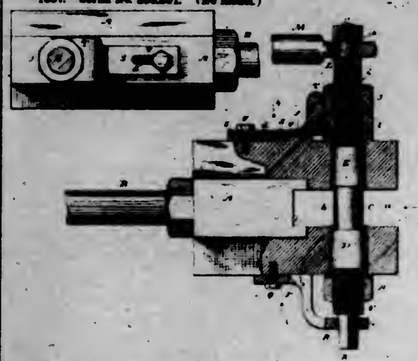
5. The endless chain r^6, provided with the projecting hooks r^7 at intervals around its length and arranged to travel across the path traversed by the drying-chain just above said drying-chain, in combination with means for imparting an intermittent rotary motion to said chain r^6 and its hooks, consisting of the pulley r^5 and sprocket or toothed wheel r^4, over which said chain is fitted, shaft r^3, bevel-gears r^2 r', shaft *r*, having a locking and unlocking device at its upper end, combined with the hub of said gear r' and with cam f^5, as described, bevel-gears *q* q', shaft *i*, and means for supporting the various parts in position, substantially as and for the purposes set forth.



6. The combination, with the hub of gear r' and continuously-rotating shaft *r*, of spring-bolt *t* and cam f^5, said spring-bolt being fitted in a transverse opening in said shaft and having the friction-roll t' and key t^2 at the ends thereof, arranged, respectively, to act against said cam f^5 and to engage with the teeth t^3, formed on the hub of said gear r', substantially as and for the purpose set forth.

7. The swinging plate *v*, in combination with the stationary upright plate v^2 and endless chain r^6, said plate v^2 having a slot therein to admit of the passage of said plate *v* in its oscillating movements forward and back to receive and discharge the envelopes as they are delivered from said chain r^6, substantially as set forth.

8. The combination of the carriage v^7, provided with standard v^8 and stud v^9, with the crank-arm v^4, shaft v^5, turning in suitable stationary bearings, hangers v^6 v^6, plate *v*, its spring v^{10}, and stationary plate v^3, provided with a horizontal slot to receive plate *v*, substantially as and for the purpose set forth.



9. The combination of the carriage v^7, provided with standard v^8 and stud v^9, with the crank-arm v^4, shaft v^5, turning in suitable stationary bearings, hangers v^6 v^6, plate *v*, its spring v^{10}, stationary plate v^3, provided with a horizontal slot to receive plate *v*, and guide-plates v^{10} v^{11}, substantially as and for the purpose set forth.

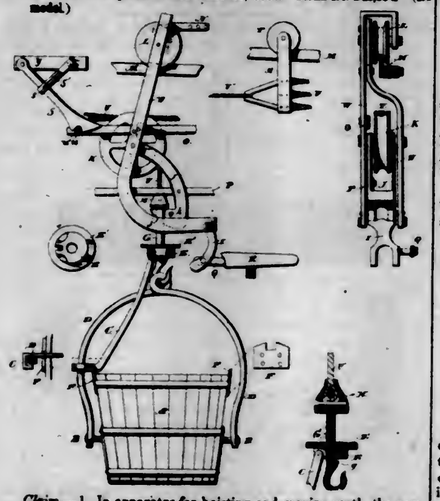
385,525. ENVELOPE-MACHINE. ABRAM A. RENSTAM, Worcester, Mass., assignor to Wade H. Hill, same place. Filed May 26, 1887. Serial No. 239,469. (No model.)

Claim.—The gummer of an envelope-machine, having a series of yielding spring devices, constructed substantially as described and arranged side by side vertically therein, to produce a continuous flat yielding surface at the bottom adapted to bear upon the top of the pile of envelope-blanks and conform to any unevenness that may exist therein, substantially as set forth.

385,526. ADJUSTABLE TAPERED WRIST-PIN FOR CROSS HEADS. THEODORE L. RUSSELL, near Rolleston, Pa. Filed Dec. 30 1887. Serial No. 259,201. (No model.)

Claim.—1. A cross-head for locomotives and other engines having conical apertures extending laterally therethrough, and an adjustable wrist-pin shaft having conical sections which fit in said apertures

said shaft being extended on either side of the cross-head and screw-threaded, in combination with tightening and loosening nuts fitting on said shaft and seating against opposite sides of the cross-head, substantially as set forth.



2. A cross-head for locomotives and other engines and an adjustable wrist-pin shaft mounted therein, having a polygonal end, in combination with a stay removably secured to the cross-head, having a polygonal aperture which fits over said polygonal end, substantially as set forth.

3. A cross-head for locomotives and other engines, an adjustable wrist-pin shaft mounted therein, and a tightening nut or nuts for said shaft, in combination with a nut-locking bar secured to said cross-head, which abuts against said nut or nuts, substantially as set forth.

4. A cross-head for locomotives and other engines, an adjustable wrist-pin shaft mounted therein, and a tightening nut or nuts for said shaft, in combination with a nut-locking bar having a recessed face which abuts against said nut or nuts, substantially as set forth.

385,527. APPARATUS FOR HOISTING AND MOVING EARTH.

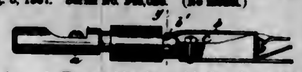
JOHN RYAN, Toronto, Ontario, Canada, assignor of one-half to Maurice J. Sheehan, same place. Filed June 25, 1887. Serial No. 242,554. (No model.)

Claim.—1. In apparatus for hoisting and moving earth, the combination, with a suitable frame or trestle and a track therein, of carriers mounted on the track, each of said carriers having a pulley thereon and a drop-hook loosely mounted on the shaft or axle carrying the pulley and straddling the pulley, elevator-buckets, and ropes or cables strung over the pulleys, whereby the buckets attached thereto are elevated until automatically caught by the drop-hooks, substantially as set forth.

2. In apparatus for hoisting and moving earth, the combination, with a frame or trestle, an inclined track thereon, and a set of carriers mounted on the track, of elevator-buckets, ropes for elevating these buckets, said carriers being provided with hooks for automatically locking the buckets in an elevated position, triggers pivoted to the carriers in close proximity to the buckets, and a rod pivotally connecting these triggers to render their movement simultaneous in dumping the buckets, substantially as set forth.

3. In apparatus for raising and moving earth, the combination, with a frame or trestle and a track thereon, of a set of carriers, buckets adapted to be raised, lowered, or held on said carriers, the latter having pivoted triggers thereon, a rod connecting these triggers, and a stop pivoted in position to be abutted by the trigger-rod for dumping the buckets, substantially as set forth.

4. The combination, with a frame or trestle, a track mounted therein, carriers adapted to travel on the track, a set of buckets, ropes attached to the buckets and strung over pulleys in the carriers, and a suitable motor for elevating the buckets to the carriers, of bars for connecting the carriers, drop-hooks pivoted to the carriers and adapted to hold the buckets when elevated thereto, triggers pivoted to the carriers, a rod connecting these triggers, and a stop so located that when struck by the trigger-rod the triggers by their engagement with the buckets dump them, substantially as set forth.



5. The combination, with a carrier, a rope or cable strung over a pulley therein, and a hook on one end of the rope, of a bucket suspended on the hook, said hook having a flanged collar loosely mounted thereon, a link pivoted to the collar and mounted on the bail of the bucket for locking the bail and bucket, a trigger adapted to elevate the collar and thereby dump the bucket, a rod pivotally connected to this trigger, and a pivoted stop in position to be impinged by the trigger-rod, whereby the latter is operated, substantially as set forth.

6. In a carrier, the combination, with a pair of plates secured together to form an overhanging bracket, and a flanged wheel mounted in this bracket, of a pulley mounted between the plates, and a drop-hook straddling the pulley, said hook having an inclining lower face, and a pin transversely located in its lower portion, this pin acting as a stop to prevent the hook from dropping too far beneath the part which it is designed to hold, substantially as set forth.

7. In a carrier, the combination, with a pair of plates secured together to form an overhanging bracket, and a flanged wheel mounted in this bracket, of a pulley mounted between the plates, and a drop-hook straddling the pulley and loosely mounted on the axle or shaft supporting the pulley, substantially as set forth.

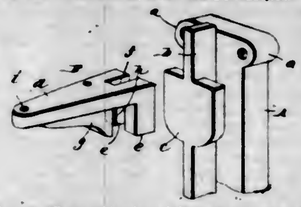
385,528. SPRING-JACK SWITCH.

CHARLES R. SHEPHERD, Chicago, Ill., assignor to the Western Electric Company, same place. Filed Aug. 3, 1887. Serial No. 246,026. (No model.)

Claim.—1. The combination, with the plug and its point, of a spring with its free end placed in the path of the plug and provided with a concave bent surface conforming to the shape of the tip of the plug, as described, whereby the tip of the plug on being inserted is guided over the concave surface, lifting the spring and being held thereby, substantially as and for the purpose specified.

2. In a spring-jack switch, a spring or lever with its free end provided with a concave and bent or crimped surface conforming to the shape of the plug-point inserted therein.

385,529. PLOW-POINT.

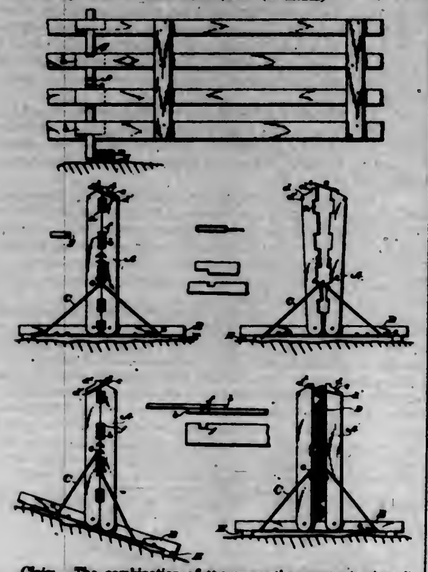


WILLIAM H. SEXTON, Canton, Ohio. Filed Apr. 26, 1888. Serial No. 271,803. (No model.)

Claim.—The combination of a plowshare provided with the recesses *a* and *b*, adapted to receive the projections *a'* and *b'* of the detachable point B, rounded upon one edge and having a continuation of the same curvature as that of the share A of the recess *c*, embracing a corresponding-shaped projection located upon the side of the share, and the clamping-bolt *d*, substantially as shown and described.

385,530. SUPPORT FOR SHELVES, &c.

JOSHUA SETSER, Concordia, Kans. Filed Feb. 21, 1888. Serial No. 264,726. (No model.)

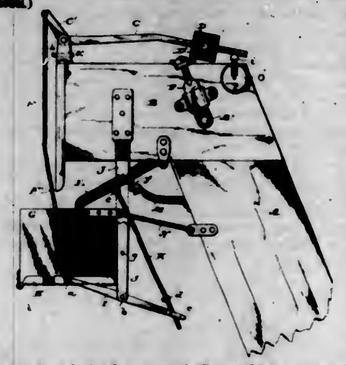


Claim.—1. The combination of the strip A, having the outstanding vertical rib *b* and the plates *c*, formed integral with said rib, and the bracket having its rear end slotted to engage said rib and provided with depending lugs to engage behind said plates, as set forth.

2. The combination of the strips A, having the vertical rib *b* and the plates *c*, formed integral with said rib, and the brackets having their rear ends slotted to engage the rib and provided with the depending lugs to engage behind the plates *c*, and having the rib *g* on their under sides adapted to bear against the front sides of the said plates, as set forth.

3. The combination of the strips A, having the vertical ribs *b* and the plates *c*, formed integral with said rib, and the brackets having the slots *f* at their rear ends to engage the ribs, the lugs *e e* on opposite sides of the slots to engage behind the plates, and the ribs *g* on their under sides having rear vertical ends terminating at the ends of the slots *f*, as specified.

385,531. PORTABLE FENCE.

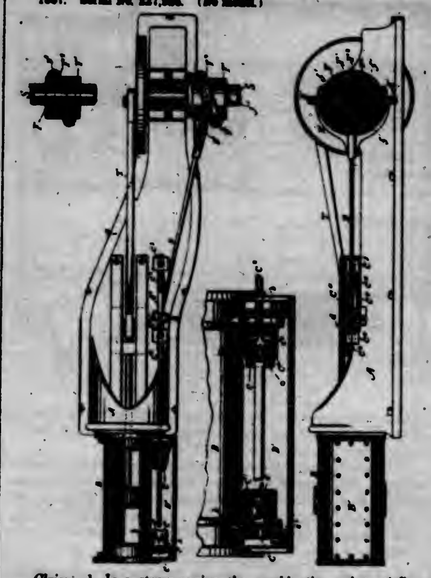


ADAM SHRADER, Junction, Ohio. Filed Apr. 6, 1888. Serial No. 269,727. (No model.)

Claim.—The combination of the supporting-posts A, pivotally attached to the sill B, and provided at their top or upper ends with the inclined shoulders *d*, notches *d'*, and projections *d²*, the link *c*, adapted to engage the notches *d'* and the projections *d²*, the wires C and notches *e*, and the key *g*, adapted to engage the notches *f*, substantially as and for the purpose specified.

385,532. MACHINE FOR WEIGHING GRAIN.

LOUIS H. BOLOW and JOHN HOLLAND, Mendota, Ill. Filed Mar. 6, 1888. Serial No. 266,397. (No model.)



Claim.—1. In a device for automatically weighing or measuring grain, the combination of an elevator and measure with a cut-off and a rod directly pivoted thereto, and a bail pivoted on a fixed support and connecting said rod and the hinged bottom of the measure, whereby said cut-off is closed by the downward weight of the measure and opened by the weight of grain accumulating thereon while the measure is dumping.

2. In a device for automatically weighing or measuring grain, the combination of an elevator and a cut-off hinged to the head thereof, a weighted scale-beam pivoted to said head, a measure connected by links to the elevator and having a pivoted bottom attached by a bail to the said scale-beam and by another bail to straps depending from the elevator-head, said straps being connected by a cross-rod below the line of the said links, and a rod hinged to the bottom of the cut-off and having a nut or collar bearing upon the end of the last-named bail, all combined and adapted to operate as hereinbefore set forth.

385,533. VALVE AND VALVE-GEAR.

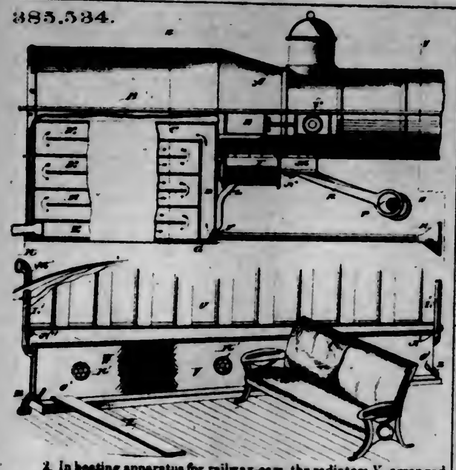
ELIJAH F. SPANGLER, Oil City, assignor of one-third to John K. Hallock, Erie, Pa. Filed Feb. 17, 1887. Serial No. 227,893. (No model.)

Claim.—1. In a steam-engine, the combination, substantially as set forth, of a valve having transverse and longitudinal ports *c* and *c²*, and a valve-gear which reciprocates and at the same time rocks the said valve.

2. In a steam-engine, the combination, substantially as set forth, of a piston-valve having longitudinal ports *c* and transverse ports *c²*, a valve seat or chamber having longitudinal ports *c'* and transverse ports *b*, and a valve-gear which reciprocates and at the same time rocks said valve.

3. In a steam-engine, the combination, substantially as set forth, of a valve having at each end a chamber with longitudinal ports *c* leading into it and transverse ports *c²* leading from it, a cylinder having thereon a valve seat or chamber at each end, having longitudinal ports *c'* leading from the steam-chest into said chamber, and transverse ports *b* leading from said chamber to the cylinder, said ports coinciding in form and position, respectively, with the ports *c* and *c²* in the valve, and a valve-gear for moving said valve which imparts to it both a reciprocating and a rocking movement.

4. In a steam-engine, the combination, with a reciprocating valve which turns upon its seat to effect a cut-off, of a valve-gear for imparting an invariable reciprocating movement to said valve, and also a rolling movement which is invariable in degree, but variable as to the point in the longitudinal traverse of the valve at which said rolling movement begins and ends, which gear consists of an invariable eccentric on the engine-shaft, a sleeve upon said eccentric which can be rolled thereon, an eccentric-strap holder or path which is invariably fixed upon said sleeve at an angle to the shaft, an eccentric-strap loose within said path, and an eccentric-rod connected at one end with said strap by trunnions and at the other end with the valve-rod or stem by a proper joint.

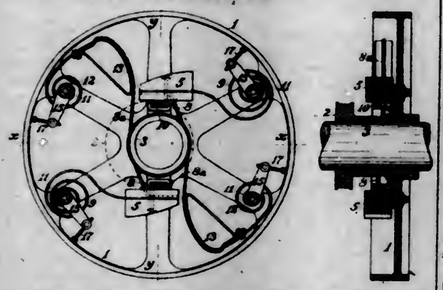


5. In a steam-engine valve-gear, the combination, substantially as set forth, of an invariable eccentric, a sleeve variable by rolling on said eccentric, a diagonal eccentric-strap path invariable upon said sleeve, an eccentric-strap loose within said path, and an eccentric-rod connected with said strap by trunnions in the manner shown, whereby the said eccentric-rod will have imparted to it an invariable reciprocating movement and a rocking movement which is invariable in degree, but variable as to the point in its longitudinal traverse at which said rocking movement begins and ends.

385,534. RAILWAY-CAR HEATER.

ALBERT R. THOMPSON, Stone Church, Pa. Filed July 7, 1887. Serial No. 243,682. (No model.)

Claim.—1. In a car-heater, the combination, with the heating-chambers and the conveying-pipes leading therefrom, of the radiators connected to the said conveying-pipes, the pipes Z, provided with the valves O', and the vertical pipes L', having valves N', and cones or funnels M', as set forth.



385,534.

2. In heating apparatus for railway-cars, the radiators V, arranged in the sides of the cars and having communicating horizontal arms X, extending under the seats, substantially as described.

3. In heating apparatus for railway-cars, the heating-chambers C, arranged in the locomotive-furnace and having the tortuous communicating flues or channels D E, and means to supply the same with air, in combination with the radiators arranged in the sides of the cars, coupled together in series and connected to and communicating with the heating-chambers, substantially as described.

385,535. GOVERNOR. JOSEPH W. TROSTRUP, Columbiana, assignor of one-half to the Buckeye Engine Company, Salem, Ohio. Filed Mar. 1, 1888. Serial No. 265,857. (No model.)

Claim.—1. In a centrifugal governor, the combination of a supporting-case, a movable eccentric, a spring connected to the case, and a weight secured to the spring and coupled by a flexible connection to the eccentric, substantially as set forth.

2. In a centrifugal governor, the combination of a supporting-case, a movable eccentric, a primary and a supplemental spring, each connected to the case and adapted to exert tension in the same direction, and a weight secured to the primary spring and coupled by a flexible connection to the eccentric and to the supplemental spring, substantially as set forth.

3. In a centrifugal governor, the combination of a supporting-case, a movable eccentric, a coiled spring secured to the case, a weight rigidly secured to a prolongation of said spring, and a flexible connection secured at one end to the weight and passing around the hub of the eccentric to a point at which it is rigidly secured thereto, substantially as set forth.

4. In a centrifugal governor, the combination of a supporting-case, a movable eccentric, a primary and a supplemental spring, each secured to the case and coiled in the same direction, and a flexible connection which encircles the hub of the eccentric, and is secured thereto at one point in its length, and is secured at one end to the weight and at the other to the supplemental spring, substantially as set forth.

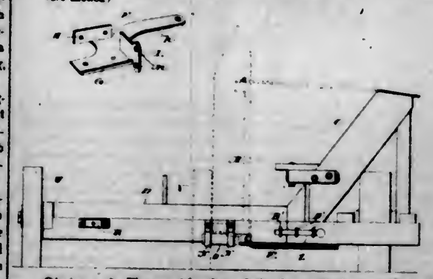
5. In a centrifugal governor, the combination of a supporting-case, a movable eccentric, a pair of primary and a pair of supplemental springs secured to the case, the springs of each pair exerting tension in opposite directions, respectively, a pair of weights, each rigidly secured to one of the primary springs, and a pair of flexible connections, each of which is secured at one end to one of the weights and at the other to the supplemental spring, whose tension acts in the same direction as that of the primary spring to which the weight is secured, each of said flexible connections encircling and being secured to the hub of the movable eccentric and passing alternately through two adjacent circumferential guide-grooves formed therein, substantially as set forth.

6. In a centrifugal governor, the combination of a supporting-case, a movable eccentric, a spring fixed to the case, a weight connected to the spring and coupled by a flexible connection to the eccentric, and an adjusting device for varying the tension of the spring, substantially as set forth.

7. In a centrifugal governor, the combination of a supporting-case, a movable eccentric, a spring-stud fitted to be moved about its axis in a socket in the case, an adjusting-arm connected to the spring-stud, a nut pivoted to said arm, an adjusting-screw engaging said nut and bearing on the supporting-case, and a coiled spring connected to the spring-stud and to a weight which is coupled to the movable eccentric, substantially as set forth.

8. In a centrifugal governor, the combination of a supporting-case, a movable eccentric, a spring-stud fitted to be moved about its axis in a socket in the case and having a squared portion at one of its ends, an adjusting-arm which is similarly formed on both its sides and is provided with a squared hole the diagonal of which diverges at substantially one-quarter of a right angle from the center line of the arm and which is adapted to fit the squared portion of the spring-stud, a nut pivoted to the adjusting-arm, an adjusting-screw engaging said nut and bearing on the supporting-case, and a coiled spring connected to the spring-stud and to a weight which is coupled to the movable eccentric, substantially as and for the purpose set forth.

385,536. EASEL. WILLIAM H. VAN WART, Stonington, Conn. Filed Sept. 14, 1887. Serial No. 249,635. (No model.)



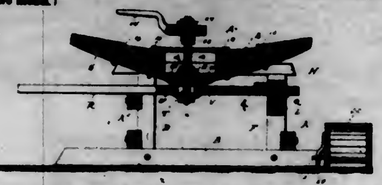
Claim.—1. The combination, with an easel, of a shelf adjustably secured to the several members between the same below the working-table, substantially as shown and described, whereby the said shelf serves as a brace uniting and spacing the members, as set forth.

2. The combination, with an easel, of a detachable shelf adjustably secured to the several members between the same below the working-table, whereby the said members are braced and united when the easel is in position of use, substantially as shown and described.

3. The combination, with an easel, of a detachable folding shelf attached thereto between the members, substantially as shown and described.

4. The combination, with an easel, of a detachable adjustable and folding shelf attached thereto between the members and below the table or support for the picture, substantially as shown and described.

385,537. FOLDING PLATFORM FOR HARVESTERS. SIMEON F. VOORHEES, Adrian, Mich. Filed Oct. 17, 1887. Serial No. 252,611. (No model.)

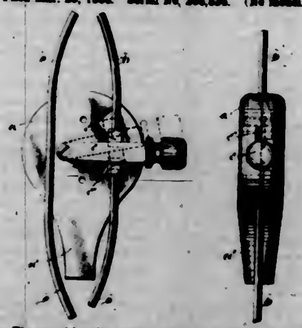


Claim.—1. The combination of the frame C, the arm E on the under rear side thereof and projecting from the grain side of said frame, the platform-frame D, having suitable keepers, N, on its rear side at the stubble corner of the platform, and the hinged swiveled rod O, journaled in the said keepers and pivoted at one end to the outer end of the arm E, whereby the platform-frame may be turned up backward to a vertical position on the hinge-arm O and then have its grain end swung forward, so that the bottom of the platform shall stand up to the grain side of the frame C, substantially as described.

2. The combination of the frame C, having the projecting arm E on its grain side and provided at its front grain corner with the plate F, having the flange-plate H and the horizontal arm K, and the platform-frame having the hinge swivel-rod O journaled to its rear side and pivoted at one end to the outer end of arm E, whereby the platform-frame may be turned up backward to a vertical position on the hinge-arm O and then have its grain end swung forward, so that the bottom of the platform shall stand up to the grain side of the frame C, the inner front corner of the said platform-frame being adapted to bear against the flange-plate H and upon the arm K, and means, substantially as set forth, to secure the said inner corner of the platform-frame to the said flange-plate and arm, substantially as described.

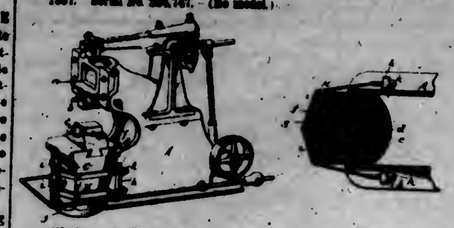
3. The combination of the frame C, having the projecting arm E on its rear grain corner and the projecting arm K at its front grain corner, the platform-frame having the hinge-rod O on its rear side near its inner end, the keepers N, securing said hinge-rod in place, the pivotal bolt connecting the inner ends of the said rod to the outer end of arm E, and the loop R on the rear side of the platform-frame, near the outer end thereof, the said loop R being adapted to receive the outer end of arm K when the platform-frame is swung to a vertical position on the grain side of frame C, substantially as described.

385,538. MACHINE FOR SETTING AND COOLING TIRES. JOHN H. WILLIAMS, Pleasant Hill, Ohio. Filed Sept. 17, 1887. Serial No. 249,942. (No model.)



Claim.—1. The combination, with a trestle-frame provided with the rock-shaft having the central opening, of the removable lever provided with the transverse stop-bar and seated in said central opening, and provided also with the longitudinally-disposed slot intermediate of its ends, the wheel S, the sliding plate, and the securing bolt and nut, the headed rod, the threaded sleeve thereon, and the adjusting-pin, the bridge connecting said rod to the hub of the wheel S, and the wrench on said threaded sleeve, substantially as specified.

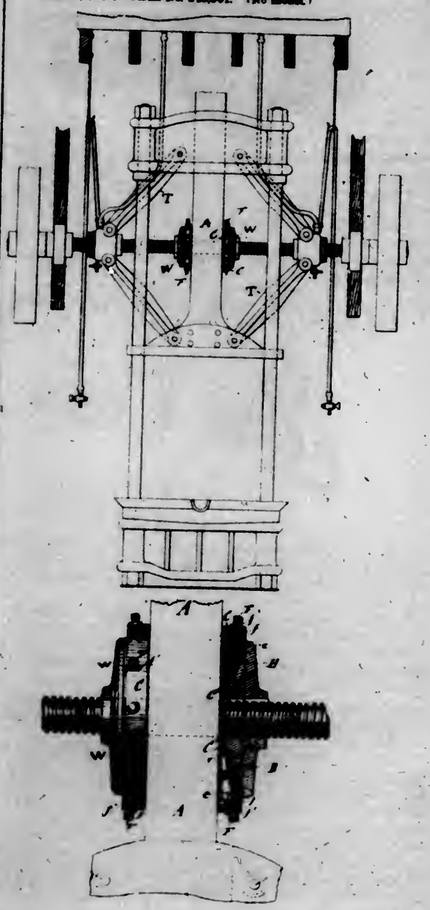
2. The combination, with the trestle and the rock-shaft having the central opening, of the wheel S, pivoted to the lever R, the lever R, having the cross-bar near its end, the bridge spanning the hub B and having the opening for the rod 12, the rod 12, having the adjustable sleeve thereon, and the wrench, substantially as specified.



3. The combination, with the trestle provided with the rock-shaft having a central opening, of the removable slotted lever provided with a cross-bar, the dished wheel having the concentric rings, the bridge connecting the headed rod to the hub of the wheel, the headed rod, the sleeve on said rod, the wrench, and the trough provided with arms seated in staples of the trestle, substantially as specified.

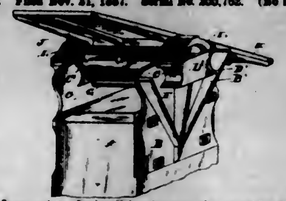
385,539. ELECTRIC SWITCH. EDWARD F. BERGMAN, Frankfort, N. Y. Filed Mar. 29, 1888. Serial No. 268,836. (No model.)

Claim.—The combination, with the switch-block formed in two parts removably secured together, of the circuit-wires *b b*, one of which is broken within the block, and the pivoted switch-lever *c*, provided with lateral wings *c'*, substantially as and for the purpose set forth.



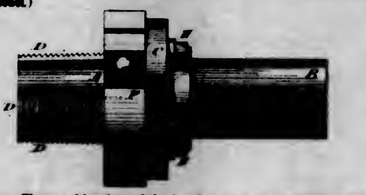
385,540. POWER-HAMMER. HERMAN J. BERNHART, Syracuse, N. Y., assignor to Christopher C. Bradley, same place. Filed Jan. 19, 1887. Serial No. 224,747. (No model.)

Claim.—1. The combination, with the hammer-frame provided with a cylindrical socket, *d*, of an anvil-block having a round back, *e*, fitted in said socket and having an angular front, and tie-rods H, provided with angular front portions, *i*, fitted against the front of the anvil-block and secured adjustably with their rear ends to the hammer-frame, substantially as set forth.



2. The combination, with the hammer-frame provided with a cylindrical socket, *d*, of an anvil-block provided with a round back fitted in said socket, an angular bearing-piece, *g*, fitted against the front side of the anvil-block, and tie-rods H, provided with angular front portions, *i*, substantially as set forth.

385,541. PRESS. GEORGE R. BOOKER, Mount Pleasant, N. Y. Filed June 7, 1887. Serial No. 240,801. (No model.)



Claim.—In a knuckle-joint press, the combination, with the screw S, the guiding-standard A, and the washers W, of the frames C, provided with the conical rollers R, constructed and arranged so as to travel on the face of the standard, substantially as described, as and for the purposes set forth.

385,542. SADDLE FOR WALKING-BEAMS. DELOS H. DEMPSH, Knox, Pa. Filed Nov. 21, 1887. Serial No. 255,762. (No model.)

Claim.—In a saddle for walking-beams, the combination of the ribbed supporting-plates having the openings in their upper ends, the removable oil-trough having the rib on its lower side, and the ribbed flat saddle-plate having the hollow roller extending across its lower side, substantially as and for the purpose set forth.

385,543. TAP WITH DETACHABLE CUTTERS. ALBERT M. BURRITT, Waterbury, Conn. Filed Apr. 16, 1888. Serial No. 270,845. (No model.)

Claim.—The combination of the head A, constructed with longitudinal grooves in its surface and with the stationary annular collar C, the threaded cutter-bars D, arranged in said longitudinal grooves, the divided ring E F, threaded upon its inner surface corresponding to the thread of the said cutter-bars, the two parts of the ring secured together, and with bolts through said collar and the parts of said ring, substantially as described, and whereby the said ring is firmly held against said collar.

385,544. HALTER. CHARLES C. COOK, Baltimore, Md. Filed May 1, 1888. Serial No. 272,440. (No model.)

Claim.—1. A halter provided with a blind, C, adapted to be folded in a bundle or stretched across the animal's eyes, and having one end attached to a head-strap, and slip-loops on the strap to which the blind is attached for confining the folded blind, as set forth.

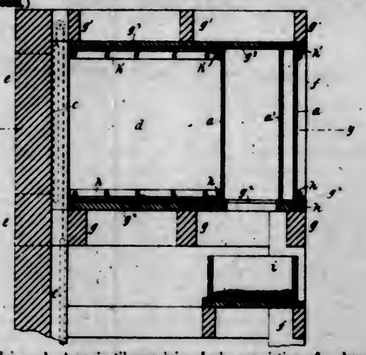
2. A halter provided with a blind, C, adapted to be folded in a bundle or stretched across the animal's eyes, and having one end attached to a jaw-strap, *e*, a slip-loop, *g*, on the said jaw-strap, and a fastening device, *f*, on the other jaw-strap to secure the free end of the blind, as set forth.

385,545. SURGEON'S COMBINED OPERATING-TABLE AND DESK. FRANK L. COWLES, Delavan, Wis. Filed Dec. 1, 1887. Serial No. 256,632. (No model.)

Claim.—1. The combined operating-table and desk consisting in the combination, with stand A, of adjustable table B, a ball-and-socket joint connecting the two, head-rest F, adjustable pivoted arm H, and a ball-and-socket joint connecting said head-rest and arm, said arm H being removably connected to the table, so that the same may be removed when the table is to be used for a desk, substantially as specified.

2. The combination, with stand A, of adjustable table B, a ball-and-socket joint between the two, a clamp-screw and crank, and a head-rest mounted upon an adjustable pivotal arm, H, substantially as specified.

385,545.



3. The combination, with stand A, of adjustable table B, a ball-and-socket joint between the two, an adjustable head-rest, F, an adjustable arm, H, pivoted to said table, and a ball-and-socket joint between said head-rest and arm, substantially as specified.

4. The combination, with an operating-table, of an adjustable head-rest mounted by a ball-and-socket joint upon an adjustable arm, H, pivoted to said table, adjustable pivotal brace-arm K, bracket K', having notch or recess k^2 and slot k^3, and pin k', substantially as specified.

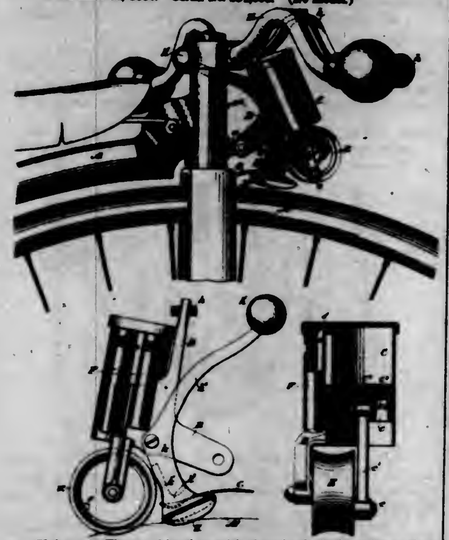
5. The combination, with an operating-table, of an adjustable head-rest mounted by a ball-and-socket joint upon an adjustable arm, H, pivoted to said table, adjustable pivotal brace-arm K, bracket K', having notch or recess k^2, slot k^3, and pins k', said head-rest F, pivotal arm H, and brace-arm K being bodily removable from said table, substantially as specified.

385,546. PROJECTILE-RECEIVER FOR TARGETS. OLIVER H. DECKMAN, Newark, N. J. Filed May 2, 1888. Serial No. 272,561. (No model.)

Claim.—1. A projectile-receiving device consisting of a chamber the cross-section of which is a closed curve and the wall of which is provided with a longitudinal opening, and a deflecting-plate extending from the wall at the opening therein and inclined at an acute angle to the path of the projectiles, substantially as shown and described.

2. A projectile-receiving device consisting of a chamber the cross-section of which is a closed curve and the wall of which is provided with a longitudinal opening, an extension from the wall of the chamber overlapping said opening, and a deflecting-plate extending from the wall at the opening therein and inclined at an acute angle to the path of the projectiles, substantially as shown and described.

3. A projectile-receiving device consisting of a chamber the cross-section of which is a closed curve and the wall of which is provided with a longitudinal opening, a deflecting-plate extending from the wall at one side of the opening therein and inclined at an acute angle to the path of the projectiles, and a second deflecting-plate extending from the other side of the opening in the wall and also inclined at an acute angle to the path of the projectiles, substantially as shown and described.



4. A projectile-receiving device consisting of a chamber the cross-section of which is a closed curve and the wall of which is provided with a longitudinal opening, an extension from the wall of the chamber overlapping said opening, a deflecting-plate extending from the wall at one side of the opening therein and inclined at an acute angle to the path of the projectiles, and a second deflecting-plate extending from the other side of the opening in the wall and also inclined at an acute angle to the path of the projectiles, substantially as shown and described.

5. A projectile-receiving device consisting of a chamber rectangular in vertical section and a closed curve in cross-section vertically

arranged and provided with a longitudinal opening in its wall, a deflecting-plate also vertically arranged extending from the wall at the opening therein and inclined at an acute angle to the path of the projectiles, and an opening in the bottom of the chamber for the discharge of the projectiles, substantially as shown and described.

6. The combination, with guarding devices having a rectangular opening therein and a target exposed by said opening, of the projectile-receiving device consisting of a chamber the cross-section of which is a closed curve and the wall of which is provided with a longitudinal opening, and a deflecting-plate extending from the wall at the opening therein, inclined at an acute angle to the path of the projectiles, and placed so as to receive upon its surface all projectiles that have passed through the target, substantially as shown and described.

385,547. ALARM FOR BICYCLES AND OTHER VEHICLES. FRANCIS H. DEMAREST, Brooklyn, assignor of three-fourths to Thomas Gerhart, Allen S. Gerrie, and E. F. J. Gayner, all of New York, N. Y. Filed Mar. 16, 1887. Serial No. 231,003. (No model.)

Claim.—1. The combination, with the wheel of a bicycle or other vehicle and its head, of a whistle carried thereby, a piston, a piston-cylinder opening near one end into the whistle and opening directly to the air at the other end, a friction-wheel applied to the said wheel, a piston-rod pivoted to said piston and leading loosely through the open end of the cylinder to said friction-wheel for forcing air directly through the whistle by the revolution of the friction-wheel.

2. The combination, with a revolving wheel and a frame supported thereby, of a support pivoted to said frame, a piston, a rigidly-mounted piston-cylinder upon said support, a pneumatic signaling device opening into said cylinder, a friction-wheel connected with said piston for driving the same within the cylinder, and means for applying the friction-wheel to the first-named wheel at will.

3. The combination, with a bicycle-wheel and its frame, of a support pivoted thereto, a pneumatic signaling device rigidly secured to said support, a friction-wheel for operating said device, means for applying the same to the bicycle-wheel at will, and a brake for the wheel, also carried upon said pivoted support.

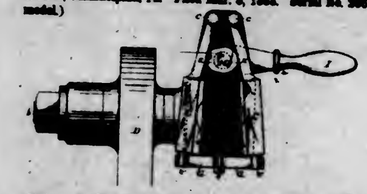
4. The combination, with a bicycle, of a support pivoted to the frame thereof, a piston and cylinder carried upon said support, a whistle or equivalent device operated by the movement of the piston within the cylinder, a friction-wheel coupled with the piston, means for applying it to a wheel of the bicycle, a brake for the bicycle, pivoted to the support carrying the cylinder, a brake for the friction-wheel, and means for applying the first-named brake to the main wheel of the bicycle and simultaneously applying the other brake to the friction-wheel.

5. A signaling attachment for bicycles, tricycles, and similar vehicles, consisting of a piston, a piston-cylinder entirely open to the air at one end, a piston-rod extending freely through said open end, a friction-wheel with which said rod is coupled for operating said piston from a wheel of the bicycle, and a whistle attached to the side of the cylinder and opening directly into the cylinder.

6. A signaling attachment for vehicles, consisting of a whistle or other pneumatic device, a piston attached thereto for forcing air into the whistle, a brake carried by the support of the whistle for normally preventing the operation of said piston, a lever for operating said brake, a brake connected therewith for the vehicle, and a lever for applying the last-named brake to a wheel of the vehicle.

7. The combination, with a bicycle or other vehicle, of the pivoted support, the pneumatic device consisting of the cylinder and the piston driven to and fro therein, the signaling device operated thereby, the wheel E, attached to and driving the piston, a lever for placing the wheel E against a wheel of the vehicle, a brake, K, for the wheel, a lever for controlling the position of the brake K with reference to the wheel E, and means for retaining said brake in one or the other of two positions with reference to said wheel.

385,548. SASH-FASTENER. ASHER B. DICKINSON, Syracuse, N. Y. Filed Sept. 24, 1887. Serial No. 250,577. (No model.)



Claim.—1. The combination, with an inclined arm hinged to a plate on the lower sash to fold down transversely of the window and formed with a bearing-shoulder at one side of its hinge, but in line with its point, of an engaging-plate upon the side rail of the upper sash, formed with an open-sided recess to receive the point of the arm as it is turned up, substantially as and for the purpose set forth.

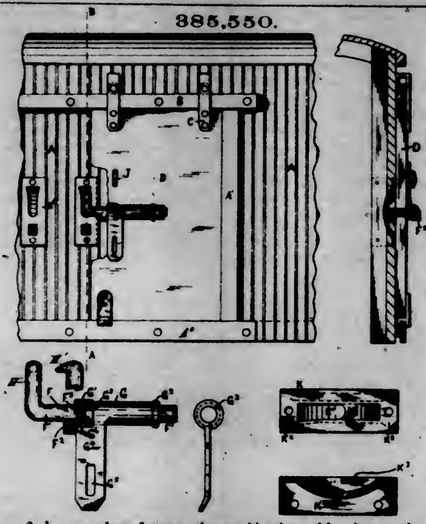
2. The combination, with a fastening-arm hinged at one side of its center line to fold sidewise upon the sash and formed with an abutting-shoulder to take the strain when fastened, of a look upon said arm for securing it in its operative position, substantially as and for the purpose set forth.

3. The combination, with a fastening-arm hinged to its support at one side of its center line, of a hook-catch for securing it in position and an engaging-plate upon the opposite sash, substantially as and for the purpose set forth.

385,549. DISCONNECTING DEVICE FOR VALVE-RODS. THOMAS C. DELL, Philadelphia, Pa. Filed Mar. 3, 1888. Serial No. 266,019. (No model.)

Claim.—1. The slotted eccentric-rod with a sleeve, B, and a key or keys adapted to lock the sleeve to the rod, and operating devices therefor, all substantially as set forth.

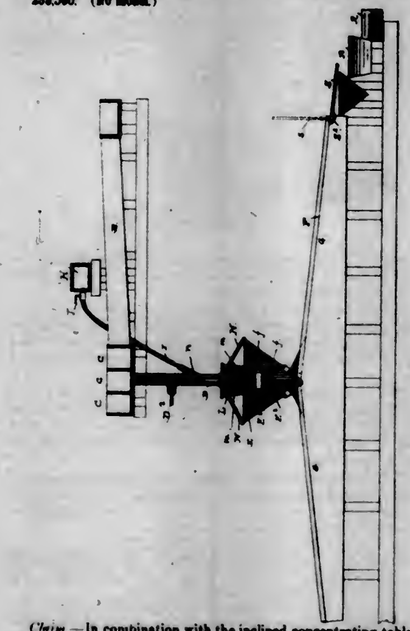
2. The combination of the slotted eccentric-rod, the sleeve B, secured to the valve-operating devices of a steam-engine, the pivoted keys C C, and a handled cam for operating upon these keys to force them out of the grooves in the eccentric-rod, all substantially as set forth.



3. The combination of the eccentric-rod, the slots therein, the sleeve B, connected to the valve-operating mechanism, the pivoted keys C C, the handled eccentric H for forcing the keys apart, and a spring, G, tending to force the keys against the eccentric-rod, substantially as set forth.

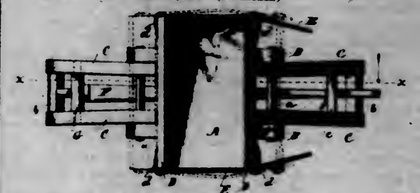
4. The combination of the two-part eccentric-rod, the portion A, having a screw-threaded reduced portion, A', and an external screw-threaded portion, A^2, with a sleeve, *a'*, grooved to receive the keys of the locking device, substantially as set forth.

385,550. SLIDING-DOOR FASTENER. HENRY A. GUILEY, Reading, Pa., assignor of one-half to William F. Marks, same place. Filed Sept. 16, 1887. Serial No. 249,994. (No model.)



Claim.—1. The combination, with a locking-bar formed with a right-angled arm having a heel-piece, of a keeper-plate having a recess, K', of a greater width at the top than in the middle, with a cross-bar, K^2, and adapted to be engaged by said arm with heel-piece, substantially as set forth.

385,550.



2. In a car-door fastener, the combination, with a keeper-plate formed with a recess, K', of a locking device composed of a locking-bar body having lugs F^2 and F^3 and a locking-arm, H, and adapted to be supported in bearings at F', and of a sleeve, G, adapted to turn on said locking-bar body between said bearings, having integral therewith a hasp, G^4, with staple-slot G^5, and formed with peripheral faces G^2 and G^3, adapted to operate said locking-bar by means of the lug F^3, substantially as set forth.

385,551. ORE-CONCENTRATING APPARATUS. GEORGE F. GOULD, Grass Valley, Cal., assignor of two-thirds to William H. M. Cobb and Daniel F. Norton, both of Dayton, Nev. Filed May 17, 1887. Serial No. 238,560. (No model.)

Claim.—In combination with the inclined concentrating tables or surfaces G, the distributing-trough E, having the shelves or ledges E' E^2, arranged one above another with outlets, the conductor D and water-supply pipe I, and the sluices B C, substantially as described.

385,552. BRICK-MOLD. JAMES GRAFF, Goshen, Ind. Filed Dec. 31, 1887. Serial No. 259,517. (No model.)

Claim.—1. The combination, with the mold having movable side plates and the levers for moving said plates, of the end plates attached at one end to one of said side plates and at the other slotted, as described, to engage projections on the other side plate, as set forth.

2. The combination, with the stationary top plate, the transverse bars secured to the top thereof, and the levers fulcrumed on said bars, of the side plates carried by said levers, the end plates secured at one end to one of said side plates and at their other ends bent inward and slotted, as described, and the wedges carried by the last-named side plate and engaging the slots of the end plates, as shown and set forth.

385,553. MACHINE FOR FORMING PAPER VESSELS. ALBERT J. GREENELL, Geneva, N. Y. Filed Sept. 1, 1887. Serial No. 248,446. (No model.)

Claim.—1. The combination, with the feed-spout C, of a perforated annular pulp-carrier, B, a coucher, I, bearing against the carrier B, and a forming-roller, J, running in contact with the coucher, substantially as set forth.

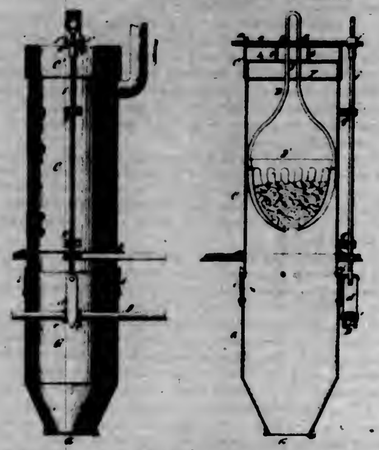
2. In a machine for forming paper vessels from pulp, a pulp-carrier composed of a circular frame provided with an annular series of supporting-bars, a perforated annular plate resting on said bars, and a wire-gauze covering resting on the perforated plate, substantially as set forth.

3. In a machine for forming vessels from pulp, a forming-roller, J, made in two sections, a a', between which the bottom of the vessel is arranged, substantially as set forth.

4. In a machine for forming vessels from pulp, the combination, with the pulp-carrier and coucher, of a forming-roller provided with a clamping device, whereby the bottom of the vessel to be formed is attached to the forming-roller preparatory to winding the pulp upon the same, substantially as set forth.

5. In a machine for forming vessels from pulp, the combination, with the annular pulp-carrier, the coucher, and the forming-roller, of a frame in which the forming-roller is journaled, arms projecting from said frame on opposite sides of the forming-roller, bearings and springs mounted on said arms, and pressure-rollers journaled in said bearings, substantially as set forth.

385,554. CARPET-FASTENER. THOMAS D. HAMBURG, Syracuse, N. Y., assignor of one-half to Ellen J. Keller, same place. Filed Apr. 4, 1888. Serial No. 269,563. (Model.)



Claim.—1. The stair-carpet fastener composed of the pivoted plate *a* on the riser and formed with the wedging-slot *c*, and the jaws *b b'*, pivoted in the wide portion of said slot, substantially as described and shown.

2. The stair-carpet fastener composed of the plate *a*, pivoted to the riser, a stamp on said plate adapted to engage the edge of the carpet, and the tongue *f*, projecting from the plate and adapted to bear on the riser, substantially as and for the purpose set forth.

3. The stair-carpet fastener composed of the plate *a*, pivoted to the riser, a stamp on said plate adapted to engage the edge of the carpet, and the arm *d*, and tongue *f*, projecting radially from the arm in different directions, substantially as described and shown.

4. The improved stair-carpet fastener composed of the plate *a*, pivoted to the riser and formed with the wedging-slot *c*, the jaws *b b'*, pivoted in the wide portion of said slot, the arm *d*, extended radially from the plate and provided with the spur *e*, and the tongue *f*, projecting from the plate at right angles to the arm, substantially as described and shown.

385,555. CAR-STOVE. BENJAMIN F. KELLER, Mechanicsville, Iowa. Filed Oct. 4, 1887. Serial No. 251,203. (No model.)

Claim.—1. In a car-stove, the combination of a bottomless combustion-chamber mounted over a corresponding hole in the floor of the car, an ash-receptacle detachably connected with the bottom of the combustion-chamber, a fire-pot detachably connected to the combustion-chamber, and releasing mechanism, substantially as described, whereby said fire-pot is adapted to drop with its contents into said ash-receptacle and thence to the ground in case of collision, substantially as specified.

2. In a car-stove, the combination of a bottomless combustion-chamber mounted over a hole in the floor of the car, an ash-receptacle detachably connected with said combustion-chamber, a fire-pot detachably suspended from the top of the combustion-chamber, a disk above and connected with said fire-pot of practically the same diameter, and releasing mechanism, substantially as described, whereby the fire-pot is adapted to fall into the ash-receptacle in case of collision, the disk to close the top of said ash-receptacle, and the said receptacle to drop with its contents to the ground, substantially as described.

3. In combination with a bottomless car-stove having an ash-pit removably attached to the lower end and a fire-pot detachably suspended from the upper end thereof by a stirrup or bail, means, substantially as described, for holding the fire-pot in position normally, consisting of locking bars or rods *o o*, permanently held from spreading at one end and engaging with notches in the sides of the stirrup, and a fork, *f' f'*, adapted to retain the opposite ends of the bars *o o* and to release them as it slips off, substantially as set forth.

4. In combination with a car-stove, substantially as described, means for normally suspending the fire-pot in position inside the stove and for automatically releasing the same in case of collision, consisting of the notched stirrup D, transverse bars *o o*, resting on the top of the stove and engaging with the notches in the stirrup, said bars being held permanently at one end, a fork, *f' f'*, adapted to retain the opposite end of the bars *o o*, a vertical rod, *f*, extending from the top of the stove through the floor of the car, a toggle or lever, *d*, and a rod, B, extending the length of the car and engaging with said lever *d*, substantially as and for the purpose set forth.

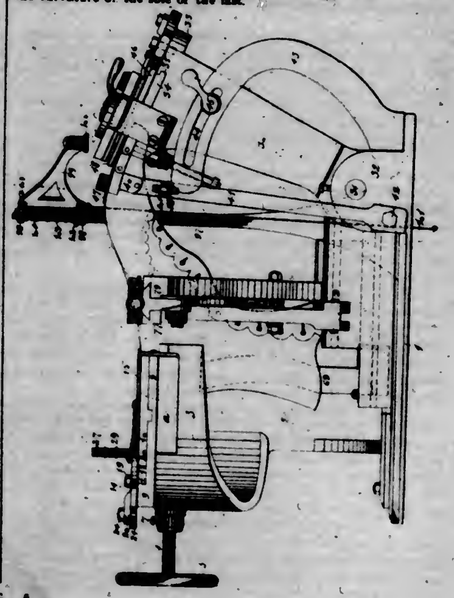
5. In combination with a car-stove having a bottomless combustion-chamber and detachably-suspended fire-pot having the stirrup D and ash-pit, substantially as described, the locking-bars *o o*, engaging with notches in the stirrup D, the vertically-movable rod *f*, having the fork *f' f'* at its upper end and the toggle lever or arm *d* at the lower end, the rod B, having collars *e e*, and the spring-lock *e e'* engaging with notches in the sides of the rod B, whereby the rod is held normally in a fixed position, but in case of extraordinary shock is disengaged and thrown endwise, substantially as and for the purpose set forth.

6. In a car-stove, the combination of the fire-pot D', the combustion-chamber C, having the crown-piece C', and the stirrup D, detachably suspended from the crown-piece, substantially as and for the purpose set forth.

7. In a car-stove, the combination of the combustion-chamber C C', the ash-pit G, having the dogs *l l*, engaging with the open lower end of the combustion-chamber and below the floor of the car, the fire-pot D', having the stirrup D, detachably suspended from the top of the stove and supporting the fire-pot D', the disk F, adapted to disengage the dogs *l l* in its descent and to close the top of the ash-pit, and means, substantially as described, for automatically releasing the suspended fire-pot in case of extraordinary shock to the car.

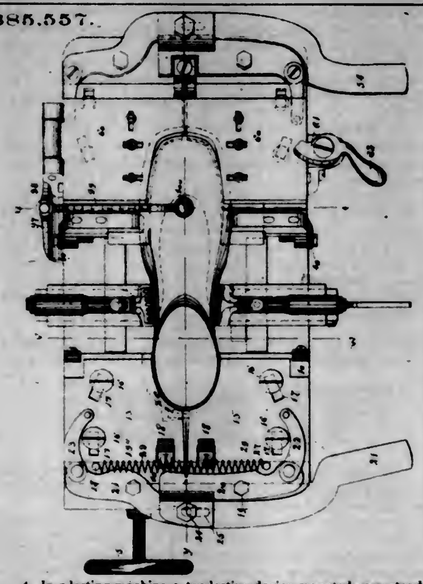
385,556. MEDICATED ELECTRIC BELT. CYRUS U. HOKE, Reading, Pa. Filed Mar. 26, 1888. Serial No. 268,491. (No model.)

Claim.—1. A medicated voltaic belt consisting of a series of pockets containing alternately suitable medicinal substances, and voltaic batteries connected by a conductor, B, substantially as set forth.



2. A medicated voltaic belt consisting of a series of voltaic batteries suitably connected by a conductor, B, and secured in a belt of porous material provided with pockets containing suitable medicinal substances adapted to come between said batteries, substantially as and for the purpose set forth.

385,557. LASTING-MACHINE. JOHN G. & A. HOUGHTON, Baltimore, Md. Filed July 30, 1887. Serial No. 245,069. (No model.)



Claim.—1. In a lasting-machine, a form-plate, as 34, provided with a recess conforming in shape to the heel or toe of the last and vertically flexible to conform to the curvature of the sole of the last.

2. In a lasting-machine, a form-plate, as 34, provided with a recess conforming in shape to the heel or toe of the last and constructed in sections which are hinged together, whereby it is vertically flexible to conform to the curvature of the sole of the last.

3. In a lasting-machine, a toe-lasting device provided with the herein-described recessed form-plate vertically flexible, in combination with means for adjusting the vertical curvature of said form-plate to the curvature of the sole of the last.

385,557.

4. In a lasting-machine, a toe-lasting device mounted upon standards pivoted to the bed of the machine, said toe-lasting device provided with a vertically-flexible form-plate recessed to receive the toe of the last mounted upon said standards, in combination with means, substantially as described, for adjusting the vertical curvature of said form-plate to the curvature of the sole of a last.

5. In a lasting-machine, the combination of a toe-lasting device provided with a recessed form-plate fixed rigidly upon said toe-lasting device with a heel-lasting device provided with a recessed form-plate adjustable transversely of the machine upon said heel-lasting device and operated transversely by the heel of the last when the toe is forced into the recess of the rigid toe-form plate, substantially as described.

6. In a lasting-machine, a flexible wiper-plate provided with a support attached to each end thereof, in combination with means for adjusting said plate vertically and holding it positively in such adjusted position.

7. In a toe-lasting device of a shoe-lasting machine, the combination of a vertically-flexible form-plate, substantially such as described, with a vertically-flexible wiper-plate and means for adjusting said wiper-plate to conform to the curvature of said form-plate.

8. In a toe-lasting device of a shoe-lasting machine, the combination of a vertically-flexible form-plate, substantially such as described, with a vertically-flexible wiper-plate and means for adjusting said form-plate and wiper-plate vertically simultaneously to conform to the varying curvature of the soles of different lasts.

9. In a lasting-machine, a clamp consisting of two plates or jaws provided with a curved recess in each jaw and suitably located upon the heel or toe lasting device of a shoe-lasting machine in position to receive within its recess the heel or toe of a shoe and grasp the upper by its edge when laid in an opposite direction from that it is to occupy when turned over the last.

10. In a lasting-machine, a yielding clamp, substantially as described, constructed of two plates, each of which is provided with a curved recess, and one of which is provided with means to permit the clamp to yield to pressure applied to the upper to draw it from the clamp, and suitably located upon the heel or toe lasting devices in position to grasp the upper by its edge when laid in an opposite direction from that it is to occupy when turned over the last.

11. In a lasting-machine, a yielding clamp constructed of two plates, each of which is provided with a curved recess and one of which is provided with supplemental plates set into its interior surface to permit the clamp to yield to pressure applied to the upper to draw it from the clamp, and suitably located upon the heel or toe lasting devices in position to grasp the upper by its edge when laid in an opposite direction from that it is to occupy when turned over the last.

12. In a lasting-machine, a yielding clamp constructed of two plates, each of which is provided with a curved recess, and one of which is supplied with supplemental plates set into its interior surface in positions radial from the center of the recess to permit the clamp to yield to pressure applied to the upper to draw it from the clamp, and suitably located upon the heel or toe lasting devices in position to grasp the upper by its edge when laid in an opposite direction from that it is to occupy when turned over the last.

13. In a lasting-machine, a yielding clamp constructed of two plates, each of which is provided with a curved recess, and one of which is provided with supplemental plates set into its interior surface, which are provided with friction devices upon their faces to hold the upper and permit the clamp to yield to pressure applied to the upper to draw it from the clamp, and suitably located upon the heel or toe lasting devices in position to grasp the upper by its edge when laid in an opposite direction from that it is to occupy when turned over the last.

14. In a lasting-machine, a clamping device constructed of two plates, each of which is provided with a curved recess located at the toe of the apparatus to hold the upper by its edge, a stationary heel-post located at the heel and sufficiently distant to allow the upper to be inserted, and means for applying pressure upon the sole of the last near the toe, whereby the upper will be stretched around the toe of the last and be held between the heel of the last and the stationary heel-post, substantially as described.

15. In a lasting-machine, a yielding clamping device constructed of two plates, each of which is provided with a curved recess and means to permit the clamp to yield to pressure applied to the upper to draw it from the clamp, a stationary heel-post located at the heel and sufficiently distant to allow the upper to be inserted, and means for applying pressure upon the sole of the last near the toe, whereby the upper will be drawn from the yielding clamp and crimped at its edge, substantially as described.

16. In a toe-lasting device of a shoe-lasting machine, the combination, substantially as described, of a form-plate, wiper-plate, and a clamp-plate arranged together with the wiper-plate located between the form-plate and clamp-plate and all provided with coincident recesses, which conform in shape to the toe or heel of a shoe, substantially as described.

17. In a toe-lasting device of a shoe-lasting machine, a clamping device consisting of a segmental wiper-plate recessed as described and a similarly-recessed clamp-plate, said clamp-plate and wiper-plate forming the two jaws of the clamp, as and for the purpose specified.

18. In a toe-lasting device of a shoe-lasting machine, a clamping device consisting of a segmental wiper-plate recessed as described and similarly-recessed clamp-plate, said clamp-plate and wiper-plate forming the two jaws of the clamp, as and for the purpose specified, with a hold-down suitably located to apply pressure to the sole of the last.

19. In a toe-lasting device for a shoe-lasting machine, the combination of a form-plate, a wiper-plate, and a clamp-plate arranged together, the wiper-plate between the form-plate and clamp-plate, and all provided with coincident recesses which conform in shape to the toe or heel of a shoe, and a hold-down suitably located to apply pressure to the sole of the last.

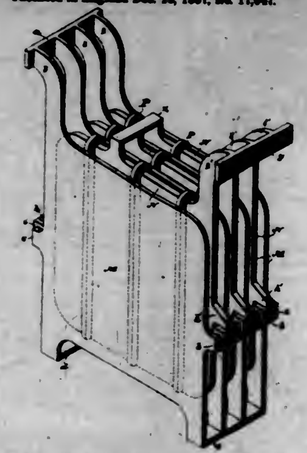
20. In a toe-lasting device of a shoe-lasting machine, a yielding clamping device consisting of a segmental wiper-plate recessed as described and a similarly-recessed clamp-plate, said clamp-plate and wiper-plate forming the two jaws of the clamp, the clamp-plate provided with means to permit the clamp to yield to pressure applied to the upper to draw it from the clamp, and a hold-down suitably located to apply pressure to the sole of the last.

21. In a lasting-machine, a hold-down having a standard-rod and an arm working thereon, said standard being provided with a spiral groove in which works a stud set in the hold-down arm, and means for raising said arm automatically after it has been depressed, substantially as described.

22. In a toe-lasting device of a shoe-lasting machine, the combination of a recessed form-plate vertically flexible with two rods, one secured rigidly to one end of said plate and the other pivoted loosely to the other end, and each of said rods pivoted at its other end to a suitable part of the machine, substantially as described.

23. In a shoe-lasting machine, the combination of a non-extensible last-jack with a last disconnected therefrom, but adapted to rest upon said jack, said last provided with a pin or screw inserted in its top, as and for the purpose specified.

24. In a shank-lasting device of a shoe-lasting machine, the combination of one or more forks suitably mounted to engage the shank of the shoe, the levers 79 and 80, mounted upon pivots fixed upon a suitable part of the machine, and a pair of toggle-links, as 83 83, hinged to said levers at one end and pivoted together at the other, with means for operating said toggle-links.



25. In a shank-lasting device of a shoe-lasting machine, the combination of one or more forks mounted upon carriages in position to engage and operate upon the edge of the upper on either side of its shank, and the levers 83 83, fulcrumed to the standard 73 and pivoted at one end to said carriages and at the other end loosely connected to the toggle-links, which are connected at one end to the levers 83 83 and to one another at the other end and loosely connected to said lever at one end and to the toggle-links 85 85 at the other, substantially as described, as and for the purpose specified.

26. In a shoe-lasting machine, a clamp for holding an upper upon the last in a stretched condition, which consists of the combination of a flexible sole and an instep-strap embracing both last and sole, and a yoke located within the strap and between it and the sole, said yoke being provided with means for applying pressure to the sole of the last to cause it to conform to the curvature of the sole of the last.

27. In a shank-lasting device for a shoe-lasting machine, a fork mounted upon a carriage in a ball-and-socket joint in such position as to engage and operate upon the edge of the upper, substantially as described.

28. In a shoe-lasting machine, a segmental form-plate, substantially such as described, in combination with a tongue, as 36, secured to one segment of said plate overlapping the space between that segment and the adjacent one and resting upon said adjacent segment.

385,558. SECONDARY BATTERY. FRANK KIDD, Feltham, County of Middlesex, England. Filed Apr. 4, 1888. Serial No. 269,693. (No model.) Patented in England Dec. 10, 1887, No. 17,047.

Claim.—1. In a secondary battery, an element consisting of two or more plates mechanically united at two or more points, combined with a second element consisting of plates interleaved or alternating with the plates of the first element, both elements being located in an inclosing-cell containing an electrolytic liquid.

2. In a secondary battery, the combination of two series of vertically-disposed plates forming the two elements, one series having feet or projections at the lower edge thereof to provide free circulation for the electrolyte, the second series of plates having projections resting upon the first series, but insulated therefrom, substantially as described.

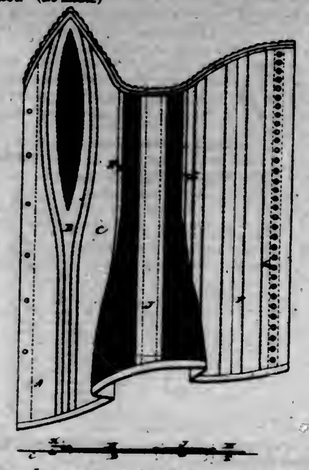
3. In a secondary battery, two or more plates or elements having feet or projections at the lower corners thereof, combined with strips of conducting material uniting such projections and securing them at a uniform distance, substantially as described.

4. In a secondary battery, two or more plates or elements united at one or more points intermediate the upper and lower edges by bars or strips of conducting material, whereby they are united and secured at a uniform distance apart.

5. In a secondary battery, two or more plates mechanically secured together at two or more points below the upper edge thereof, whereby they are maintained at a uniform distance with respect to each other.

6. In a secondary battery, two or more plates mechanically and electrically united at two or more points upon or in proximity to the upper edge, in combination with two or more plates alternating therewith and electrically united at two or more points below the upper edge, substantially as described.

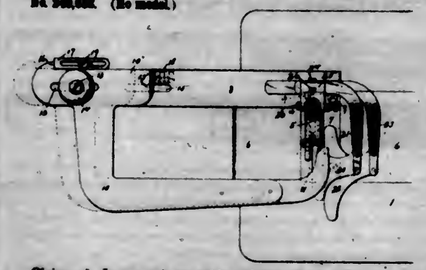
7. In a secondary battery, the combination of two series of plates forming the two elements of the battery interleaved or alternating with each other, one series being mechanically and electrically united at two or more points between the upper and lower edges, the other series being mechanically and electrically united at or about their upper edge and having projections resting upon the first-named series, whereby they are supported in a movable position, substantially as described.



8. In a secondary battery, the combination of two series of plates alternating with each other and forming, respectively, the two elements, one series being mechanically and electrically united at two or more points below their upper edge, the other series being similarly united at two or more points above the points of union in the first plates and having projections resting upon the first plates, but insulated therefrom.

9. In a secondary battery, the combination of two series of vertically-disposed interleaved plates forming the two elements, one series being supported by the other, but insulated therefrom, substantially as described.

10. In a secondary battery, two or more plates or elements and one or more separators therefor, each consisting of a separate and independent pair of strips of insulating material, located, respectively, upon opposite sides of a plate and united at the upper ends, whereby said separator may be removed and replaced without disturbing the elements.



11. In a secondary battery, the combination of a plate or element and one or more separators therefor, each consisting of a separate and independent pair of strips of insulating material united at one end, and one or more notches or seats formed in said plates to receive said separators and prevent displacement thereof, substantially as described.

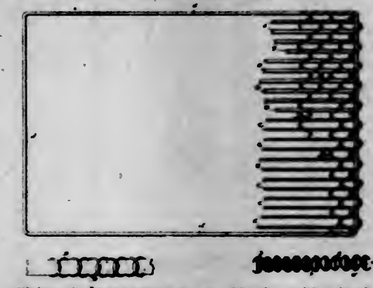
385,559. CORSET. JOSEPH HOYT, New Haven, Conn., assignor to Lewis Bahnle & Co., New York, N. Y. Filed Apr. 20, 1888. Serial No. 271,591. (No model.)

Claim.—In a corset substantially such as described, the inner thickness composed of several sections cut to shape and stitched together independent of the outer thickness, combined with an outer thickness composed of several sections cut to shape, the several sections of the outer thickness laid upon the stitched inner thickness, alternate sections of the outer thickness overlapping the adjacent edges of intermediate sections of the outer thickness, and the said sections of the outer thickness stitched together through and to the inner thickness, substantially as described.

385,560. TUCKING-GUIDE FOR SEWING-MACHINES. ALEXANDER LAWRENCE, Bridgeport, Conn., assignor to The Wheeler & Wilson Manufacturing Company, same place. Filed June 8, 1887. Serial No. 240,682. (No model.)

Claim.—1. In a sewing-machine plaiter, the combination, with the base-plate 8, having the slot 15, of the folding-gage 11, the shank 10, by which said gage is carried and which is provided with the part 10', sliding on said base-plate and having the guide-pin 13' and the slot 12, the guide-screw 13, passing through said slot 12, and provided with

a spring-washer and a set-nut, and stitching and spacing gages to co-operate with said folding-gage.



2. In a sewing-machine plaiter, the combination, with the base-plate 8, having the slot 15, of the folding-gage 11, the shank 10, by which said gage is carried and which is provided with the part 10', sliding on said base-plate and having the guide-pin 13', the slot 12, and the stopping-shoulder 16, the stop 17, adjustably secured to said base-plate in line with said shoulder, the guide-screw 13, passing through the said slot 12 and provided with a spring-washer and a set-nut, and stitching and spacing gages to co-operate with said folding-gage.

3. In a sewing-machine plaiter, the combination, with the base-plate 8, having the slot 15, of the folding-gage 11, the shank 10, by which said gage is carried and which is provided with the part 10', sliding on said base-plate and having the guide-pin 13' and slot 12, the guide-screw 13, passing through said slot 12 and having a spring-washer and set-nut, the block 25, having means for attachment to the presser foot or bar, and the stitching and spacing gages 21 and 23, secured to said block.

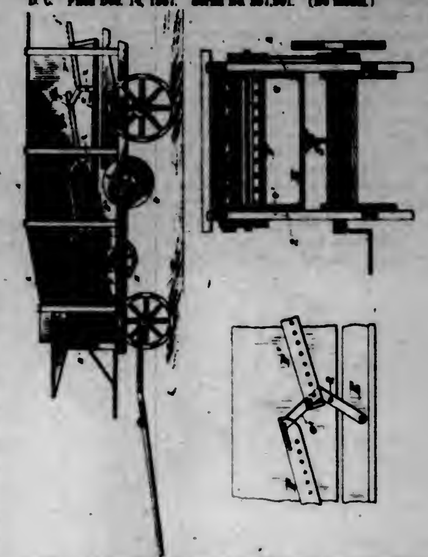
4. The combination, with the presser-foot 5, provided with the depression or recess 31, of the block 25, attached to the presser foot or bar, the stitching-gage 20, extending beneath the recess of said presser-foot and having a shank attached to said block, the adjustable spacing-gage 22, also having a shank attached to said block, a plaiter base-plate, as 8, and a sliding folding-gage supported by said base-plate to co-operate with the said stitching and spacing gages.

5. The combination, with block 25, having means for attachment to a sewing-machine presser-foot and the stitching and spacing gages carried thereby, of a plate, 8, having a graduated scale, 18, a sliding folding-gage carried by said plate, and a spring-washer bearing upon the surface of said gage.

385,561. DOOR-MAT. EDWARD R. LAUGHLIN, Cleveland, Ohio. Filed Feb. 4, 1887. Serial No. 226,516. (No model.)

Claim.—1. In door-mat, the combination, with a border and a wire fabric made up of a series of spirally-coiled interlocked wires secured to said border, of rigid filling-strips arranged at right angles to the coiled wires and adapted to hold them distended and support the coils against collapsing, substantially as set forth.

2. In a door-mat, the combination, with a wire fabric made up of a series of spirally-coiled interlocked wires and rigid filling-strips, substantially as indicated, of a binder arranged about the edges of the mat, the same being inserted in the two outer coils of the mat, and secured across the other sides by the ends of the respective coils, substantially as set forth.



385,562. PYROTECHNIC SIGNAL. GEORGE A. MARVIN, Petersburg, Va. Filed May 10, 1888. Serial No. 273,402. (No model.)

Claim.—1. An article of fire-works comprising a hollow core having a small bore packed with a composition capable of emitting a large volume of smoke and flame with a loud and shrill whistling sound, an igniting-fuse in one end of said hollow core, a bomb or similar device at the other end of said hollow core, and a tube inclosing said core and bomb, substantially as described.

2. In an article of fire-works, the combination of a handle, 1, a tube, 2, attached to said handle, a hollow core, 6, inclosed in said tube and packed with a composition capable of emitting smoke and flame with a loud and shrill whistling sound, a fuse in one end of said core, and a bomb or explosive at the other end of said core, substantially as described

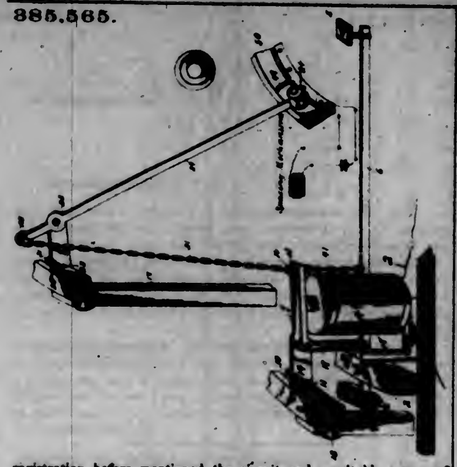
385,563. GRAIN-SEPARATOR. EDWIN C. MANSON, Washington, D. C. Filed Dec. 14, 1887. Serial No. 257,991. (No model.)

Claim.—1. In a straw-shaker, the combination of the main frame, the angle-levers pivoted thereto through their lower arms, a series of shaking frames or sections each supported pivotally at the apices of one pair of levers and connected pivotally to the upper ends of the upper arms of the succeeding pair of angle-levers, similarly pivoted to the sides of the casing, and a reciprocating pan connected pivotally to the angle-levers and serving as a counter-balance for the shaking frames, substantially as specified.

2. The combination, with the main frame, the shaking-frames, the pivoted angle-levers, each pair connected to the adjacent ends of two frames, as described, and the counterbalancing-pan pivoted to the lower arms of said angle-levers, of the crank-shaft, and rod connecting said crank-shaft to the counterbalancing-pan, substantially as described.

3. The combination, in a threshing-machine, of a series of inclined straw-shakers, a series of pairs of obtuse angular levers pivoted to the sides of the main frame, the upper arms of said levers pivoted to the highest ends of straw-shakers, with a pan, E, pivoted to the lower arms of the said levers, the fulcra of the said levers located below the pivotal points of the shakers, substantially as described.

385,564. VEHICLE-SHAFT. GEORGE F. MCGILL, Camden, N. J. Filed Mar. 1, 1888. Serial No. 265,815. (No model.)



Claim.—1. The combination of the laterally-bent outer portion of a vehicle-shaft with the stiffening-plate secured thereto and having the same contour as the bent portion of the shaft, said plate being placed horizontally, whereby it opposes an edgewise resistance to the straightening of the shaft, all substantially as specified.

2. The combination of the shaft having a laterally-bent outer portion with horizontal slot therein, a stiffening-plate fitted to said slot, and bolts or like fastenings for securing said plate, all substantially as specified.

385,565. ELECTRO-MECHANICAL TYPE-WRITER. JAMES P MCLAUGHLIN, Philadelphia, Pa. Filed Mar. 30, 1887. Serial No. 233,046. (No model.)

Claim.—1. The combination, with the circuit-closing key-levers of intermediate mechanism connecting each key-lever with its respective type-lever, whereby the imprint of the said type-lever is mechanically effected by the depression of its respective key-lever, the electro-mechanical devices at a distant extremity of a line operated by each depression of the said key-levers for effecting an imprint of a corresponding type-lever at said distant extremity simultaneously with the

385,565.

registration before mentioned, the circuit, and a suitable source of electricity, the whole being arranged to operate in a manner and for the purpose set forth.

2. The combination, with the circuit-closing key-levers, of a suitable connection between said levers and the series of type-levers, the type-levers, the line-circuit, and a suitable source of electricity, the whole being arranged to close an electrical circuit simultaneously with the depression of a key-lever and the consequent imprint of a type-lever, as specified.

3. In combination, a series of electro-magnets, each provided with a pivoted armature connected with one of a series of type-levers, a series of pivoted type-levers carrying upon their free ends the insertible letter-type, the circuit-closing levers each attached by a suitable connection with one of the series of pivoted armatures, the line-circuit connecting each of said key-levers with a corresponding electro-magnet at a distant extremity of the said line, the second series of electro-magnets at said distant extremity respectively in circuit with their corresponding key-levers at the first-mentioned extremity, and a suitable source of electricity, all arranged to operate substantially as specified.

4. The combination of the current-conducting circuit-closing key levers pivotally secured at their inner ends to a pivot-rod, the retracting-springs, the insulated boxing supporting said pivot-rod and having the transverse recesses 36 36 for the ends of the key-levers, the circuit, and a suitable source of electricity.

5. The circuit-closing key-levers, the intermediate mechanism connecting the said key-levers with their respective pivoted type-levers and adapted to mechanically effect an imprint of a type-lever by the depression of any one key-lever, the series of pivoted type-levers provided each with a ball or weight at its forward free end for the purpose of closing a local circuit upon the descent of its respective type-lever, the spring contact-fingers and ring, and the local circuit, in combination with the primary circuit, as specified.

6. The combination, with the pivoted type-levers carrying the weight-balls provided with insertible adjustable letter-type, of the pivoted key-levers having removable letter-plates, as shown, and the link-connection between the said key and type levers, as set forth.

7. The pivoted type-levers provided each with removable insertible type and suitable perforated balls or weights at their free ends for the dual purpose of closing, by virtue of their weight, the local circuit and supporting the adjustable intertible type, and means for operating said pivoted type-levers and the local circuit, as set forth.

8. The combination of the series of pivoted type-levers provided with balls or weights on their free ends, the balls or weights having a perpendicular aperture therethrough, and the adjustable interchangeable letter-type, as set forth.

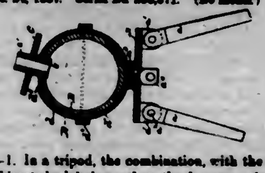
9. The combination of the weight-balls affixed to the free ends of the type-levers, the insertible adjustable letter-type having shoulders on their upper ends and screw-threaded at their lower extremities, and means for securing said letter-type in the weight-balls, as described.

10. The combination of the type-levers, consisting each of a straight metallic rod formed bifurcated at its upper end and provided at its lower extremity with a weight-ball having a perpendicular aperture therethrough, the whole being formed in one single piece, with the letter-type having the letter or character upon its face, the stem, and shoulder, also all cast in one single piece, and the securing-nut, as specified.

11. The combination, with the key-levers, of the pivoted type-levers carrying the weight-balls provided with insertible adjustable letter-type, and a suitable connection between said key and type levers, as shown.

12. As a new article of manufacture, a type-lever provided with weight-balls provided with insertible adjustable letter-type, substantially as specified.

13. The combination, with the type-levers, of the weight-balls provided with insertible adjustable letter-type, the key-levers having removable letter-plates, and a suitable connection between said key and type levers, as specified.



385,566. DOOR. ESTHER V. HERRESHAW, Syracuse, N. Y. Filed Aug. 27, 1887. Serial No. 248,093. (No model.)

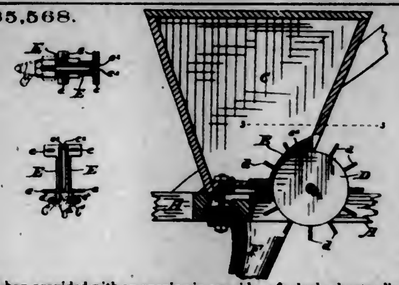
Claim.—1. In a door, the combination of three separate wooden frames secured together side by side, the middle section being dovetailed together and made of narrower parts than the outer ones, to form a groove to receive the panels, substantially as shown and described.

2. In a door, the combination of three separate frames of the same outside dimensions, secured together side by side, the middle section being made of narrower parts than the outer ones, whereby a groove is formed to receive the panels, substantially as shown and described.

385,567. TRIPOD-HEAD. CHARLES D. GUTMAN, Brooklyn, N. Y. Filed Dec. 24, 1887. Serial No. 258,671. (No model.)

Claim.—1. In a tripod, the combination, with the standard, of a horizontally-bisected globular socket, the lower section of which is fixed on the standard and the upper section screw-jointed to and movable upon said fixed section, a ball adapted to fit within the socket and be clamped between the said sections thereof, and a disk rigidly connected to said ball and adapted to receive and sustain firmly an instrument of the character stated, as and for the purpose specified.

2. In a tripod, the combination, with the standard A, of the horizontally-bisected socket D, the lower section, *d'*, of which is fixed on the standard and is screw-threaded at its rim, and the upper section, *d*, of which is provided with the internally-threaded annular flange *d''*, and seated thereby upon the said fixed section, the ball B, adapted to fit within and be clamped between the sections of the socket, together with the disk C, provided with the connection *c*, extending through an aperture, as described, in the upper socket-section, to and fixed in said ball, and having upon its top a device, *c'*, for rigidly attaching thereto an instrument of the character stated, all constructed and arranged to operate substantially as and for the purpose specified.

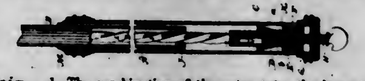


3. In a tripod, the combination, with the standard and the ball, to which is rigidly attached the disk, adapted for the mounting thereon of an instrument of the character stated, of a horizontally-bisected socket adapted to receive the ball, and the lower section of which is fixed to said standard, while the upper section is screw-jointed to said fixed section and adapted to clamp the contained ball between it and said lower section, as and for the purpose set forth.

385,568. PLASTER. DAVID M. PARRY, Indianapolis, Ind. Filed July 26, 1887. Serial No. 245,267. (No model.)

Claim.—1. In a plaster, the combination, with the frame-work, of a seed-box provided with an opening to receive the feed-wheel, said feed-wheel mounted with a portion of itself extending into said seed-box through said opening, and a shield or cover secured over the part of the feed-wheel within the hopper, and extending to the bottom of said hopper, and provided with a slot or opening through which the fingers of said feed-wheel extend, substantially as set forth.

2. In a plaster, the combination, with the frame thereof, of a



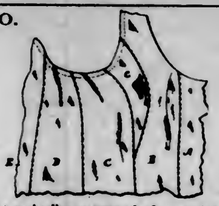
385,568.

seed-box provided with an opening in one side, a feed-wheel extending through said opening, and plates arranged to serve as a shield for said wheel, and secured to be adjusted toward or from each other, whereby the width of the slot through which the teeth of said wheel pass may be varied as desired, substantially as set forth.

3. The combination, in a planter, of the hopper, feed-wheel extending into said hopper, and the plates E, secured within said hopper to form a shield for said feed-wheel, and provided with slotted downwardly-projecting portions e^4, which support one end of the feeding devices, substantially as shown and specified.

385,569. LAMP-STANDARD. WILLIAM A. PENFIELD, Meriden, Conn., assignor to The Bradley & Hubbard Manufacturing Company, same place. Filed Oct. 17, 1887. Serial No. 252,583. (No model.)

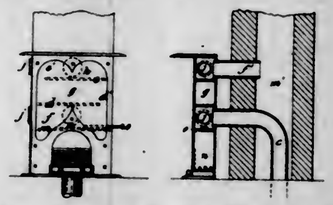
Claim.—1. The combination of the outer tube, the inner tube longitudinally but not revolubly movable in said outer tube, and provided at its lower end with a fixed nut, a sleeve mounted revolubly between friction-bearings held by said outer tube, and a screw-spindle movable in said nut and having a collar at its lower end adapted to engage the said sleeve, and provided with a head to retain said collar within a limited distance from said sleeve, substantially as described.



2. The combination of the outer tube, A, the inner tube, B, of other than cylindrical shape, adapted to engage a corresponding non-cylindrical surface in the outer tube, and provided with a nut, J, at its lower end, the screw-spindle I, movable in said nut and having the collar L at its lower end, the shoulder *a*, fixed within said tube A, tubular sleeve D, revolubly held against said shoulder, and the block E, adjustable toward the said shoulder *a*, for increasing the frictional resistance between the same and the sleeve D, the said spindle I being provided with a head to retain its collar within a limited distance from said sleeve, and the adjacent faces of said sleeve and collar being adapted to engage each other, substantially as described.

385,570. UNDERWAIST. REBECCA W. PHILBROOK, Boston, Mass. Filed Nov. 9, 1887. Serial No. 254,704. (Model.)

Claim.—1. A waist or bodice composed of a number of outside pieces or sections and corresponding inside pieces or sections, the second front or bust piece being continued over the shoulder to form a shoulder-strap, and being separate or detached from the corresponding inner piece at the upper part of the garment, substantially as described.



385,570.

2. A waist or bodice composed of a number of outer and inner sections, the outer bust-section being separate from the inner bust-section at the upper portion of the garment and continued over the shoulder, and being curved outward in both directions from the line of separation and provided with additional fullness under the arm-size, the inner bust-section being cut away on both sides above the line of separation and additional width given to the adjacent inner sections, substantially as described.

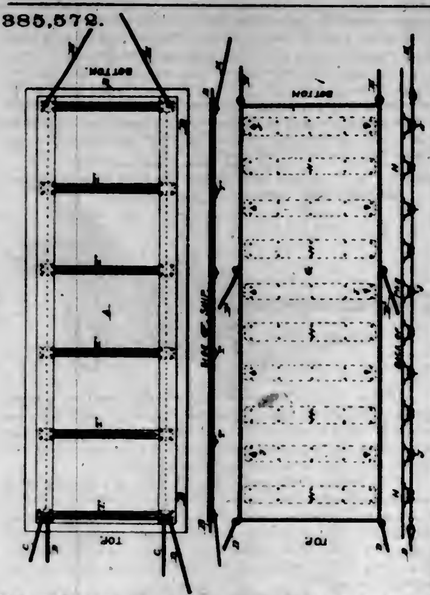
3. In a waist or bodice composed of a number of inner and outer sections, the combination, with the outer bust-section independent of the corresponding inner sections at the upper portion and having a shoulder-strap, of a curved gore inserted under the arm-size between the bust-section and the adjacent side or arm section, substantially as described.

385,571. APPARATUS FOR COLLECTING AND DIFFUSING HEAT. THOMAS PERRY, Burnley, County of Lancaster, England. Filed Nov. 2, 1887. Serial No. 254,103. (No model.) Patented in England Jan. 14, 1885, No. 513.

Claim.—1. The combination, with the drum-casing, of the alternating surface-plates *m*, *d*, and *e*, the bottom plate, *m*, having the draft-orifice *n'*, the damper *o*, for opening and closing the said orifice, and the fire-grate *n*, located in the drum-casing beneath said bottom plate, substantially as described.

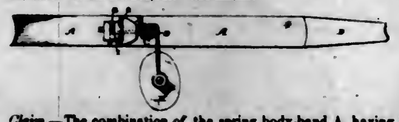
2. The combination, with the drum-casing, the alternating surface-plates *m*, *d*, and *e*, the bottom plate, *m*, having the draft-orifice *n'*, the damper *o*, for opening and closing said orifice, the fire-grate *n*, located in the drum-casing below said bottom plate, the fire-place *b*, the gas-collecting chamber *a*, the passages *b'*, receiving the gases from the fire-place and leading such gases into the chamber and the gas-conducting flue *c*, leading from the chamber into the drum directly above the bottom plate therein, substantially as described.

3. The combination of a fire-place, *b*, a chamber, *a*, arranged adjacent thereto and receiving therefrom the gases arising from combustion, and a gas-conducting flue, *c*, leading from the gas-collecting chamber to an apartment to be heated, with a heat receiver and diffuser located in said apartment and connected with the gas-conducting flue, substantially as described.



4. The combination of a fire-place, *b*, a gas-collecting chamber having its forward portion provided with vertical passages *b'*, for receiving the gases from the rear of the fire-place and leading them into the chamber, and a gas-conducting flue, *c*, leading from the chamber to an apartment to be heated with a heat receiver and diffuser located in said apartment and connected with the flue, substantially as described.

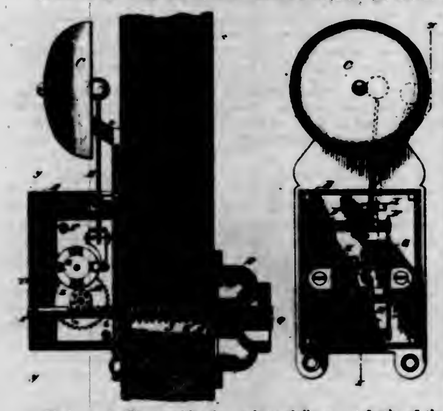
385,572. LEAK-STOPPER FOR SHIPS, &c. JOSEPH RICHARDSON, North Shields, County of Northumberland, England. Filed Oct. 10, 1887. Serial No. 251,984. (No model.) Patented in England Sept. 24, 1883, No. 4,949.



Claim.—1. In appliances for stopping leaks in ships or similar vessels, a sheet-pad of one or more plies of canvas or other strong and flexible material, with a border-piece of "moleskin" cloth or similar soft and durable material, with strengthening transverse bars, and furnished with ropes to guide the pad into position and secure it, substantially as set forth.

2. In combination with a sheet-pad, as above described, a protecting-shield of one or more plies of canvas or other woven material bound round sides and ends with rope, strengthened by transverse bars, and furnished with ropes to guide the shield over the back of pad and secure it, substantially as set forth.

385,572.



385,573. TRUSS. ORVILLE H. ROBINSON, Bath, N. Y. Filed Apr. 16, 1888. Serial No. 270,947. (No model.)

Claim.—The combination of the spring body-band A, having its end formed to receive the spring C upon it, and provided with the perforated projection, with the set-screw and the coiled spring C, having the pad or button secured to one end, and having its inner bent end extend into the recess in the projection, substantially as shown.

385,574. DOOR OR ALARM BELL. FREDERICK SANDERSON, Prospect Park, Ill. Filed Jan. 27, 1888. Serial No. 262,159. (No model.)

Claim.—1. The combination, substantially as set forth, of the bell, its hammer, the hammer-stem, a cam to vibrate the hammer and stem, and the leg I, against which the hammer-stem impinges just before the hammer strikes the bell.

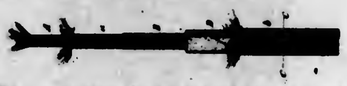
2. The combination, substantially as set forth, of the bell, its hammer, the hammer-stem, and cam to vibrate the hammer and stem, and the legs I and J, between which the hammer-stem vibrates.

3. The combination, substantially as set forth, of the bell, its hammer, the hammer-stem, the disk-cam with a corrugated edge, and the arm H, pivoted to the hammer-stem and carrying the friction-rollers to embrace the cam-edge.

4. The round push-bar N, having round bearings to guide it, the rack-teeth on it to drive the train mechanism, the recesses *q* at each end of the toothed portion, and the flat head on one end of bar, in combination with the push-button and the rod R, the rod located between the button and the head on the push-bar, substantially as shown and described, and for the purpose set forth.

5. The combination, in a door-bell, of the push-button Q, hollow its entire length except the head, the rod R, loosely located in the hollow of the push-button, and the round push-bar N, having rack-teeth and flat head, the rod R, having bearings against the head of the push-bar and the inner surface of the head of the push-button, whereby friction is avoided and side draft prevented, substantially as shown and described.

385,575. VENDING APPARATUS. DANIEL W. SHIRK, Ottumwa, Iowa, assignor of one-half to John W. Rubel, same place. Filed Jan. 17, 1888. Serial No. 260,973. (No model.)



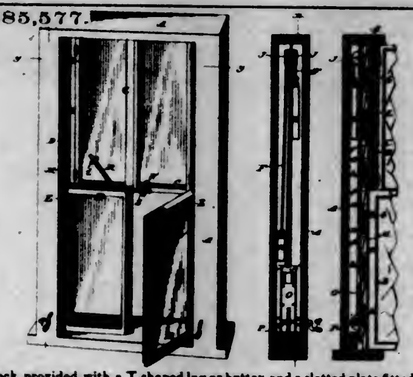
Claim.—1. The combination, with the slide having hinged portion forming a pawl or dog, the fixed rack-bar, and the pivoted lever on said rack-bar, of a slide independent of said lever, a laterally-projecting pin on the lever, and a plate on the slide having an inclined portion engaging said pin, substantially as and for the purpose specified.

2. The combination, with the case having coin-slit and the slide having coin-slit and hinged portion forming a pawl or dog, as described, of the fixed rack-bar, the lever pivoted thereto, a slide constructed to actuate said lever to release the dog or pawl, a coin-retaining spring carried by said slide, and a push-button for actuating the slide, as set forth.

3. The combination, with the case and the slide having an opening, as described, of the plate *n*, secured to the bottom of said slide, a strip, *o*, carried by said slide in a groove therein, and a spring, *p*, having a bent portion, *q*, and working through an opening in the plate *n*, substantially as and for the purpose specified.

4. The combination, with the case having coin-slit, the fixed rack-bar, and the slide F, having a hinged portion forming a pawl or dog engaging said rack-bar, of a bifurcated slide carrying a coin-retaining spring and provided with central longitudinal slot, and the push-button constructed to actuate said bifurcated slide, substantially as described.

385,576. INSULATED CONDUCTOR. CLARENCE G. SIBLEY, New York, N. Y., assignor to the Splitdorf Wire Company, same place. Filed Jan. 26, 1888. Serial No. 262,319. (No model.)



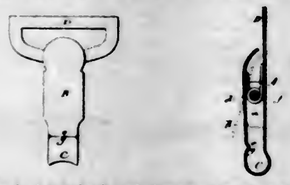
Claim.—A conductor for electrical and other purposes having a covering of threads, *c*, rubber B, asbestus fibers D, and threads *b*, all arranged substantially as herein specified.

385,577. HINGED WINDOW-SASH. WILLIAM L. SILBERBERG, Brooklyn, N. Y. Filed Aug. 3, 1887. Serial No. 246,012. (No model.)

Claim.—1. The combination, with a window-sash and its casing, a vertical rod secured in the casing, and upon which the window-sash is pivoted and left free both to swing and to slide longitudinally, and a counterbalancing sash weight and cord mounted in the casing, of a

385,577.

block provided with a T-shaped lug or button and a slotted plate fitted over a recess in the inner edge of the pivoted sash, through which the shank of the lug or button is free to play in a direction transversely to the pivot-rod as the sash turns thereon, substantially in the manner and for the purpose herein set forth.



2. The combination, with the casing of a window and with a sash sliding and turning upon a vertical rod secured in said casing, of a strip fitted in a recess in the casing independently of the sash, to move laterally in and out against the proximate pivoted bar of the sash, a second strip moving longitudinally in said recess against the inner face of the outer strip, and a device, substantially as described, for moving said inner strip, the opposite faces of the two strips being formed with a series of contacting oppositely-inclined surfaces, whereby the longitudinal movement of the inner strip will produce a movement of the outer strip at right angles thereto, substantially in the manner and for the purpose herein set forth.

385,578. BUCKLE. DWIGHT L. SMITH, Waterbury, Conn., assignor of one-half to Earl A. Smith, same place. Filed May 21, 1883. Serial No. 274,477. (No model.)

Claim.—The herein-described buckle, consisting of the frame or plate A, constructed with ears *a a* at its ends, the said ears turned inward to form trunnions *b b*, combined with the jaw-plate C, of substantially L shape in transverse section, the ends E E of the plate turned inward at substantially right angles to the plate, and the said ends constructed with elongated slots F, the inner edge of the said slots of cam shape, the said jaw-plate arranged upon the plate A, with the trunnions *b b* of the said plate extending into said elongated slots F in the ends of the jaw-plate, substantially as described, and whereby the said jaw-plate is permitted a vertical movement on said trunnions, the said cam-shaped sides of the slots F operating, in connection with said trunnions, to force the jaw toward the plate A, or permit it to swing therefrom, according to the movement of said plate on said trunnions.

385,579. SNAP-HOOK. EARL A. SMITH and DWIGHT L. SMITH, Waterbury, Conn. Filed May 7, 1888. Serial No. 273,053. (No model.)

Claim.—1. A snap-hook made from sheet metal, consisting of the body part A and the tongue part B, the body part constructed with wings *a a*, turned at right angles to the plane of the body, and the body terminating in a hook, G, at one end, the tongue constructed with wings *b b* upon its opposite edges corresponding to the wings *a a*, but the wings on the one part distant from each other upon their inner surface corresponding to the distance between the exterior surface of the wings on the other part, the tongue set upon the body, and so as to bring the wings of one part outside the wings of the other part, with a pintle, *d*, through the wings at their rear ends, combined with a spring around the pintle, the tendency of which is to force the tongue to the closed position, the said wings of the one part forming stops upon which the tongue will rest when in its closed position.

2. A snap-hook, substantially such as described, in which the tongue turns outward from the point of the hook in opening, the outer surface of both the hook and the tongue at their meeting ends turned inward, and so as to form a depression transversely across the outer surface at the junction of the tongue with the point of the hook, substantially as and for the purpose described.

385,580. STEAM BELL-RINGER. GEORGE B. SNOW, Buffalo, N. Y. Filed Sept. 1, 1884. Serial No. 141,887. (No model.)

Claim.—1. In a steam bell-ringer, the combination of a single-acting steam-cylinder having steam and exhaust ports, a piston having a central cavity, a valve having a perforation therethrough, transverse pins in said cavity and perforation, and a link loosely connecting the piston and valve, substantially as described.

2. In a steam bell-ringer, the combination of a connecting-rod consisting of a crank-box, a sleeve sliding upon a guide-pin and abutting against a shoulder on the guide-pin, a double-tapered opening through the lower end of the guide-pin, and a pin connecting said guide-pin with the piston, with a valve having a central perforation and a loose link-connection between said valve and the piston, substantially as described.

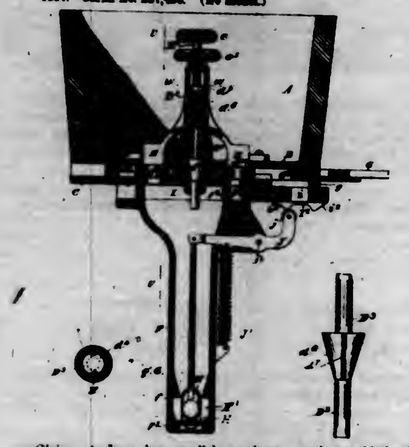
385,581. VENTILATING-GRATE FOR OPEN-AIR KILNS. CHARLES M. SNYDER, Mount Pleasant, Iowa. Filed Nov. 19, 1887. Serial No. 255,570. (No model.)

Claim.—1. The inclined grate mounted on rollers, for the purpose set forth, substantially as described.

2. The inclined grate having the brackets B at its outer side and the roller C journaled in said brackets, substantially as described.

3. The inclined grates arranged opposite each other and diverging upwardly, said grates having the supporting-rollers journaled in brackets on their outer sides, substantially as described.

4. The grate-sections comprising the horizontal longitudinal bars A, the incline grate-bars *c*, connecting said bars, the brackets B, secured to the outer sides of the bars A, and the rollers C, journaled in said brackets, substantially as and for the purpose set forth.



385,582. MILK-STRAINER. ALEXANDER THOMSON, Colstoun, Ontario, Canada, assignor of one-half to Joseph Northrup, Redwood, N. Y. Filed May 24, 1888. Serial No. 274,909. (No model.) Patented in Canada Feb. 13, 1888. No. 28,508.

Claim.—1. In a device for aerating milk, the combination of a funnel provided with strainers *h h*, attached over openings formed in the sides of a conical portion, a band, C, having a conical plate, D, with perforations *d* therein, a perforated band, E, and a supporting-band, F, with perforations *f*, the parts being organized substantially as shown, and for the purpose set forth.

2. The combination, in a strainer and cooler for the purpose set forth, of a flanged rim, A, having upwardly-projecting standards secured thereto, said standards supporting at their upper ends a band, C, of less diameter than the rim A, a conical plate, D, with perforations *d*, perforated bands E and F, projecting upwardly therefrom, and a funnel, G, having a strainer and depending portion, *g*, adapted to fit within the band, substantially as and for the purpose set forth.

385,588. PLANTER. BELL TYSON, Chicago, Ill. Filed Dec. 9, 1887. Serial No. 257,496. (No model.)

Claim.—1. In a dropper-disk, seed-cups, each provided with a movable wall, in combination with a cone or cam common to all, by which the blocks may be adjusted inwardly or outwardly, as specified.

2. In a dropper-disk, a seed-cup having one or more of its walls movable, in combination with means of adjustment extending to a point above or without the body of seed within the hopper, whereby the capacity of the cup may be varied without removing the grain from the hopper.

3. In a dropper-disk, seed-cups, each provided with a movable wall, in combination with means of adjustment extending to a point above or without the body of seed within the hopper, whereby the capacity of the cup may be varied without removing the grain from the hopper.

4. A dropper-disk having seed-cups, each provided with a movable block which forms the inner end wall thereof, in combination with means of adjustment extending to a point above or without the body of grain within the hopper, whereby the capacity of the cup may be varied without removing the grain therefrom, as specified.

5. A dropper-disk having seed-cups, each cup provided with a movable block which forms one of the walls thereof, and means for the retraction of the blocks toward a common center, in combination with a cone capable of longitudinal axial motion, whereby the blocks may be adjusted inwardly or outwardly, for the purpose specified.

6. In a dropper-disk having seed-cups, the movable blocks forming each respectively one of the walls of a cup, in combination with a cam about or within which the dropper-disk revolves, the cam being adapted to withdraw the block and enlarge the seed-cup, thereby freeing the grain therein, as specified.

7. A dropper-disk having enlarged seed-cups, each cup being provided with an adjustment-block, which forms the inner end wall thereof, each of the said blocks having downwardly-projecting lugs, in combination with a retracting-spring or other resilient element embracing all of the said lugs, whereby the adjustment-blocks are drawn toward the common center, substantially as shown.

8. A dropper-disk having the cups *d d*, a chamber, d^3, and the lowered division-wall d', and the cover-plate D^4, rigidly secured to the disk and provided with splineways, in combination with the adjusting-blocks D' D', having a downwardly-projecting lug, d^5, in which lies the retracting-spring D^5, all in combination, substantially as specified.

9. A dropper-disk having the seed-cups *d d*, the adjustment-blocks D' D', and the retracting-spring D^5, in combination with the cone d^3, whereby the blocks D' D' may be adjusted outwardly and inwardly, substantially as specified.

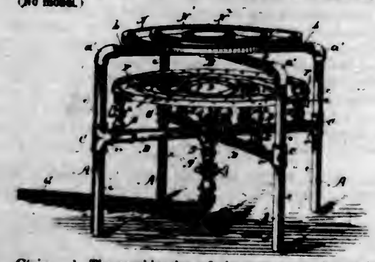
10. A dropper-disk having the seed-cups *d d d*, the adjustment-blocks D' D', the spring D^5, all substantially as described, in combination with the spindle D^3, carrying the cone d^3, the spring d^6, by which the cone is maintained in its highest position, and the adjusting-screw E', by which the position of the cone-spindle is regulated, and thereby the position of the adjustment-blocks in the seed-cups, substantially as specified.

11. A dropper-disk having seed-cups, each provided with an adjustment-block, which forms the inner wall thereof, the said blocks being retracted toward the common center against a cam, so that upon rotation of the dropper-disk about the cam the adjustment-blocks of the seed-cups which register with the dropping-ports are withdrawn, enlarging the said cup, and thereby freeing the grain therein, substantially as shown.

12. In a dropper-disk, the cups *d d d*, the adjustment-blocks D' D' D', the retracting-spring D^5, in combination with a conical cam, d^3, upon a spindle, D^3, having a longitudinal motion but non-rotary, whereby the adjustment-blocks D' D' D' may be accurately adjusted inwardly and outwardly, and thus the capacity of the seed-cups determined, and whereby the adjustment-blocks of the seed-cups registering with the dropping-port may be slightly withdrawn and the grain therein freed, substantially as described.

13. An intermittingly-rotating dropper-disk actuated by a pawl having the lugs D^5, with face of semi-cylindrical contour, to prevent slippage of the pawl, substantially as described.

14. An intermittingly-rotating dropper-disk actuated by a pawl and having the lugs D^5, with face of semi-cylindrical contour, to prevent slippage of the pawl, substantially as described, the opposite face of the lug being of similar semi-cylindrical contour, inclined, however, so that the pawl may ascend it upon the return reciprocation of the frame G', the contour of the lug being such that the pawl will maintain its proper path with accuracy and be guided into position for further action, substantially as specified.

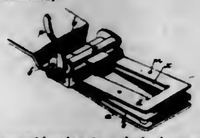


15. An intermittingly-rotating dropper-disk actuated by a pawl carried on a reciprocating frame or bar, which acts at every alternate stroke to produce a partial rotation of the disk D, the said disk being at rest during the return reciprocation of the frame, in combination with a cut-off valve, I, having an aperture, i^2, having a fixed surface, the return reciprocation of the frame acting to carry the cut-off valve I forward, and with it the charge of grain in the aperture I^2, off from the fixed bottom and drop it to the seed-tube below, substantially as specified.

16. An intermittingly-rotating dropper-disk actuated by a pawl carried on a reciprocating bar, which acts at every alternate stroke to produce a partial rotation of the disk, the said disk being at rest during the return reciprocation of the frame, the said frame having a downwardly-projecting lug, *g*, in combination with a cut-off valve, I, having an aperture, i^2, bottomed on a fixed surface, and a slot, *i*, in which the lug *g* engages, the slot *i* being of such length that the valve I does not come into operation until the close of the reciprocation of the frame G', when it is carried forward, and with it the charge of grain in the aperture i^2, and the grain upon being carried off from the fixed bottom drops to the bottom of the seed-tube, substantially as described.

17. A dropper-disk, D, an actuating-frame, G', a pawl, G^3, and a cut-off valve, I, carrying the cam I', and actuated by the reciprocating frame G' or bar G, in combination with the lever J, the drop-valve H, and the seed-tube F, provided with the valve-seat projections *f* and *f'* and the chamber F', all for the purpose and substantially as described.

18. In a corn-planter, the combination of suitable mechanism, which drops charges of grain at regular intervals into the seed-tube, with the valve H, operated at proper intervals, and the valve-seat projections *f* and *f'* and the chamber F', substantially as shown and described.



385,584. APPARATUS FOR HEATING WAGON-TIRES. JOHN F. WALKER, Greenfield, Ind. Filed May 7, 1888. Serial No. 273,012 (No model.)

Claim.—1. The combination of the supports and rests with the circles, the arms, the nipples, and the supply-pipe, as set forth.

2. The combination of the supports A, the rests *b*, the circles F F' F^3, having the holes *f*, the arms D, the nipples E, having the cocks *e*, and the supply G, having the cock *g*, as set forth.

385,585. CLAMP FOR BUTTON-HOLE SEWING-MACHINES. WASHINGTON WALLICK, Philadelphia, Pa. Filed Apr. 30, 1888. Serial No. 272,696. (No model.)

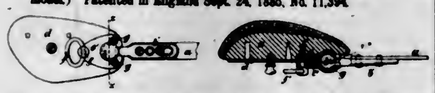
Claim.—1. The combination, in a cloth-clamp, of the slotted base-plate serving as a support for the cloth, the intermediate slotted clamping-plate confining the cloth to said base-plate, the upper flanged and slotted stretching-plate, and a depressor for forcing said upper and intermediate plates downward, all substantially as specified.

2. The combination of the base-plate, two upper plates secured thereto, a spring whereby said upper plates are forced away from the lower plate, and a device for forcing said upper plates into contact with the cloth against the action of said spring, all substantially as specified.

3. The combination of the lower plate, two upper plates, and the cam having faces which bear against both of said upper plates, whereby they may be separately brought into contact with the cloth, substantially as specified.

385,586. SURGEON'S SUTURE-CARRIER. JOSEPH T. WOODS, Toledo, Ohio. Filed Mar. 23, 1887. Serial No. 232,187. (No model.)

Claim.—1. The combination, in a suture appliance, of a handle provided with a covered chamber, a bobbin therein, a needle-stock hinged to said handle and adapted to receive a needle, and thread-guides on said handle and stock to lead the thread to the needle, substantially as set forth.



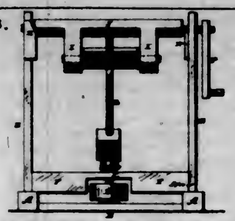
2. The combination, in a suture appliance, of a handle having openings on its sides, a bobbin within said handle having a milled end extending through the openings, and a needle-stock adapted to receive a needle, substantially as set forth.

3. The combination, in a suture appliance, of a handle having a longitudinal protecting-rib and a stock pivotally attached to the handle, substantially as set forth.

4. The combination, in a suture appliance, of a handle having a pivoted panel and securing means therefor, substantially as set forth.

5. The combination, in a suture appliance, of a handle having a pivoted panel and a bar on the under side of the same, substantially as set forth.

385,587. TRUSS. BENJAMIN F. ATKINSON, Hanover Square, County of Middlesex, England. Filed Aug. 29, 1887. Serial No. 248,191. (No model.) Patented in England Sept. 24, 1885, No. 11,394.

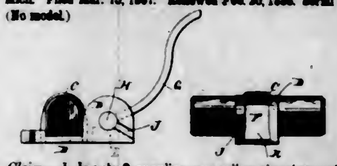


Claim.—The combination, with a truss having at one or both ends a ball, *b*, extending longitudinally therefrom, of a pad having a backing, *d*, an adjustable socket part on one side of the backing having a hemispherical concavity, a fixed socket part on the opposite side of the backing also having a hemispherical concavity, said socket parts having a flaring opening extending longitudinally from the socket formed by said hemispherical concavities in which the ball is received, said flaring opening permitting lateral movement of the stem of the ball, screws *g g*, connecting said socket parts together, and a power-screw, *f*, passing through said parts for securing the ball *b* tightly within said socket, substantially as and for the purpose set forth.

385,588. MOTOR. GEORGE W. BAILEY and GEORGE B. LEISENRING, Saegertown, Pa. Filed Feb. 24, 1888. Serial No. 265,121. (Model.)

Claim.—1. The combination of the driving-shaft provided with a weight or arm, a rocking bearing for the upper end of the shaft, a rocking support for the bearing, and a shaft provided with a pulley connected to and operated by the weighted shaft, substantially as shown.

2. The combination of a suitable frame-work provided with an incline at each end, the rocking support provided with hangers, the rocking bearing journaled therein, the shaft provided with a weight

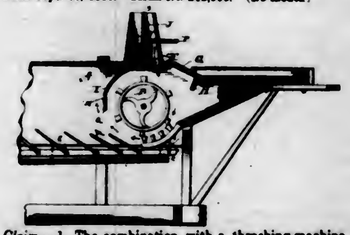


385,588.

or arm, and the driving-shaft provided with a pulley, substantially as set forth.

3. The combination of the shaft C, provided with a pulley, D, and having a socket in its upper end, the weighted shaft G, the rocking bearing H, through which the upper end of the weighted shaft passes, and a rocking bearing, J, provided with a crank, substantially as set forth.

385,589. THILL-COUPLING. GEORGE C. BOSWORTH, Three Oaks, Mich. Filed Mar. 10, 1887. Renewed Feb. 20, 1888. Serial No. 264,651. (No model.)



Claim.—1. In a shaft-coupling, a coupling-piece internally recessed, its recess having a greater width within than at its mouth, in combination with a cushion which, when pressure is applied, fills the back of the recess, and is then held securely in place.

2. In a shaft-coupling, a coupling-piece having an internal recess wider at the bottom than at the top, in combination with a cushion having beveled sides, so that the same is held when in the recess from upward motion.

3. In a coupling for shafts, a coupling-piece having an internal cushion-receiving recess, transverse aperture, and a downwardly-inclined slot therefrom through one side, with a shaft-iron having a transverse bolt, so that when the shaft is greatly depressed its iron can be introduced through the slot into the transverse aperture, so as to be hinged into position.

385,590. DUST-CONVEYER. NICHOLAS A. BROSKA, Bloom, Kans. Filed Sept. 20, 1886. Serial No. 213,909. (No model.)

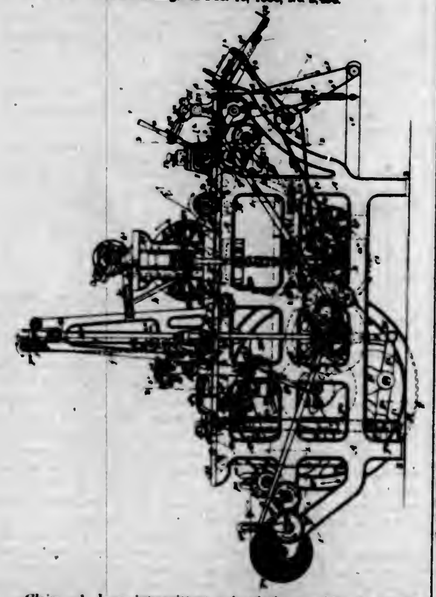
Claim.—1. The combination, with a thrashing-machine, the casing of which has a hole in its top directly above the cylinder, of a flue secured at its lower end around the hole, a curved shield over and above the rear portion of the cylinder, the front edge of which extends to the middle of the hole, and a partition in the flue, the lower end of which is secured to the front edge of said shield.

2. The combination, with a thrashing-machine, the casing of which has a hole in its top directly above the cylinder, of a flue secured at its lower end around the hole, a curved shield over and above the rear portion of the cylinder, the front edge of which extends to the middle of the hole, a partition in the flue, and a damper in one portion of the flue.

3. The combination, with a thrashing-machine, the casing of which has a hole in its top directly above the cylinder, of a flue secured at its lower end around the hole, a curved shield over and above the rear portion of the cylinder, the front edge of which extends to the middle of the flue, a partition in the flue, and a deflector secured at its upper edge below the lower edge of the shield.

4. The combination, with a thrashing-machine, the casing of which has a hole in its top directly above the cylinder, of a flue secured at its lower end around the hole, a curved shield over and above the rear portion of the cylinder, a shaft below the lower edge of the shield, a crank at one end of said shaft, and a board secured to the shaft.

385,591. BUCKLE. JAMES CAIN, Spencer, Iowa. Filed Mar. 24, 1888. Serial No. 268,412. (No model.)



Claim.—1. In a trace-buckle, the combination herein described of the base-plate adapted to be arranged on one side of the trace and having a stud or pin to engage a perforation therein, and the movable plate bearing on the opposite side of the trace and having depending loops engaging a transverse bar on the base-plate, substantially as specified.

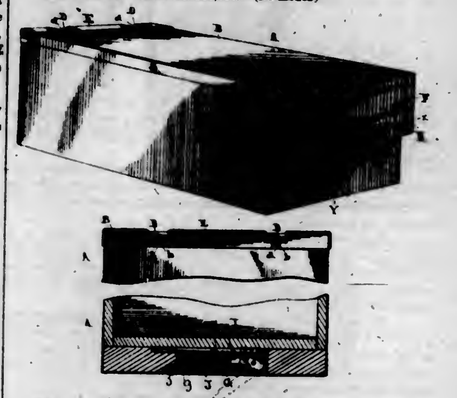
2. In a trace-buckle, the combination of the base-plate having the transverse bar D and provided with the stud or pin F, engaging a perforation in the trace, and a movable plate bearing on the opposite side of the trace and having the depending loops N N passing under the bar D and connected at their lower ends by the rounded guard-bar O, substantially as specified.

3. In a trace-buckle, the combination of the base having the front bar, D, the rear bar, C, and the intermediate bar, E, provided with a stud or pin, F, and the movable plate having the end bars, M M, the side bars, L L, provided with loops N N, mounted on the rear bar, C, and the guard O, connecting the loops and covering the inner side of the rear bar, all constructed, arranged, and operated substantially as and for the purpose specified.

385,592. PRINTING-MACHINE. DAVID CARLAW, Glasgow, County of Lanark, Scotland. Filed Mar. 28, 1887. Serial No. 232,175. (No model.) Patented in England Feb. 19, 1886, No. 2,433.

Claim.—1. In an intermittent web-printing machine for printing sheets or tickets in sequence, the printing-bowl E', for printing letter-press, the shaft C', and side rod, D, for raising and lowering the same, the frame E', carrying the inking-rollers, the driving-chain E', compensating motive eccentric, and spring take-up fitting, all substantially as and for the purpose set forth.

2. In a web-printing machine, the combination of two reciprocating frames, each carrying a series of numeral-printing chains and arranged one above and one below the web, with the reciprocating letter-press printing mechanism and the intermediate adjustable spindles registering the several impressions, substantially as described.



3. In a web-printing machine, the frames F, carrying numeral-printing chains and arranged one above and one below the web, and the letter-press printing mechanism, substantially as described, combined with the crank-shafts C' C', geared together, the pitmen D' D', and the lever S', substantially as described.

4. In a web-printing machine, the numeral-printing frames arranged above and below the web, and the letter-press printing mechanism, as described, reciprocated by crank-shafts, pitmen, and levers, as set forth, in combination with the intermittingly-rotated cutting-disks and perforating-wheels, and the cutting-knife, the crank-disk G, the pawl-and-ratchet feed geared to said disks and wheels, and the brake securing positive stop to the feed.

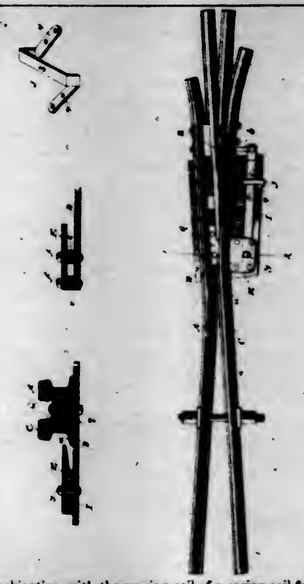
5. In a web-printing machine, the numeral-printing frames, the letter-press printing mechanism, as described, the cutting-disks, perforating-wheels, and transverse cutting-knife, all intermittingly operated, as set forth, in combination with the series of folding-frames mounted over the slotted table receiving the sheets, and the folding-blades working through the table.

6. In an intermittent web-printing machine for printing and cutting sheets or tickets, the endless driving-cord i^3, its grooved driving and guide pulley i^2 i^4, for actuating the feed-delivery rollers i i', the cross-cutting knife mechanism, and the compensating and tension-regulating spring mechanism i^5 i^6, substantially as and for the purpose set forth.

385,593. EGG-CASE FASTENER. WILLIAM M. CASTLIO, Mechanicsville, Md., assignor of three-fourths to Leo D. Stewart and Childs F. Stewart, same place, and Francis H. Kreusing, Jr., St. Louis, Mo. Filed Mar. 10, 1888. Serial No. 266,797. (No model.)

Claim.—1. The combination, with the box or crate and the cover having notches in its end, of the nails having heads, which heads are adapted to overlap the edges of the notches, substantially as and for the purpose described.

2. The combination, with the box or crate having nails extending therefrom, of the cover having notches and having the portion surrounding the notches reduced, and the metal strip secured to the end of the cover and depressed to fit the reduced portion of the cover around the notches to re-enforce the same, substantially as set forth.



3. The combination, with the box or crate, the nails at one end of the box, the batten at the other end thereof, having a vertical opening and a horizontal mortise, the mortise being widened at one end, the catch pivoted at one end and having its other end flattened, and the spring, of the cover or lid having notches at one end to receive the nails, the batten at the other end of the cover, and the shank having a beveled and notched end depending from the said batten, substantially as and for the purpose specified.

385,594. SPRING-RAIL FROG. WILLIAM A. CHAPMAN, Hilburn, N. Y., assignor to the Ramapo Iron Works, same place. Filed Feb. 1, 1888. Serial No. 262,611. (No model.)

Claim.—1. The combination, with a frog-plate and the moving rail of a spring-rail frog, of a guard consisting of a separate plate secured to the frog-plate entirely outside of the moving rail, and having an overhanging flange adjacent to and arranged to receive beneath it the flange of the moving rail, substantially as described.

2. In a spring-rail frog, the combination, with the fixed wing-rail, the frog-point, the moving rail, and the frog-plate, of a separate guard-plate supported by the frog-plate entirely outside of and extending longitudinally of the moving rail toward and above the outer flange thereof, substantially as set forth.

385,594.

3. The combination, with the moving rail of a spring-rail frog, of a lever, l, pivoted at one end adjacent to the frog-point to a fixed support and connected at the other end to an arm projecting from the moving rail, substantially as set forth.

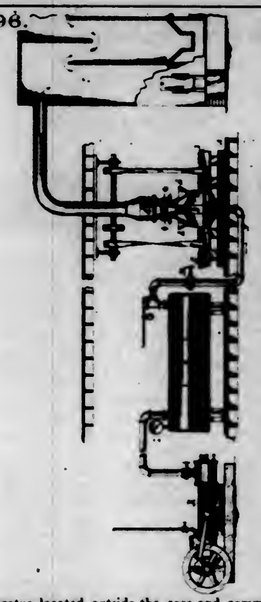
4. The combination of the moving rail of a spring-rail frog and a lever, l, pivoted to an arm thereof at one end and at the other to a stationary pivot, the two pivots at equal distances from the rail, substantially as described.

5. The combination, with the moving rail of a spring-rail frog, of a lever, l, pivoted at one end adjacent to the frog-point to a fixed support and connected at the other end to an arm projecting from the moving rail, and a bridge or yoke extending over the lever near said arm, substantially as set forth.

6. The combination, with the moving rail of a spring-rail frog and lever l, connected to the lever at one end and to a fixed support a, the other, of a bridge, J, consisting of a plate bent to form the overhanging portion 3, and feet 4 4, extending at an angle from each side of the overhanging portion, substantially as set forth.

385,595. PIPE-WRENCH. BENJAMIN F. CHAPPELL, South Windham, Conn. Filed Oct. 14, 1886. Serial No. 216,213. (Model.)

Claim.—1. The improved pipe-wrench herein described, consisting of a handle having two jaws formed on it, the upper jaw having a recess presenting a long curved bearing, *f*, and a throat, *g*, the serrated curved wedge *d*, grooved and fitted loosely in said recess, and the pin *e*, for the purpose described, in combination with the flat-faced jaw *c*, all constructed and adapted to operate substantially as described.

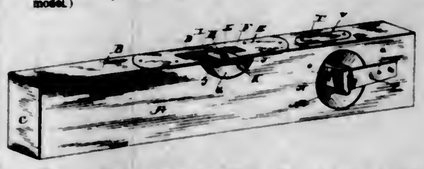


2. A pipe-wrench having a recessed upper jaw throated as described, in combination with a curved wedge portion having teeth pitched toward the handle and loosely held in the recess of said upper jaw.

3. The combination, with a bill-mouth wrench, of a slip-jaw having teeth backwardly pitched and grooved, as described, and a pin connecting this jaw to the upper integral bill of the wrench.

385,596. MACHINE FOR REDUCING ORES AND OTHER MATERIALS. GORDON COMLINE, Glens Falls, N. Y. Filed Feb. 23, 1888. Serial No. 264,960. (No model.)

Claim.—1. The combination, with the case B, having a feed-hopper, *d*, an air-inlet, *k*, and an outlet, *b*, and the rotary arms *f*, for setting on the ore and inducing an air-current through the inlet, of an air-conducting tube, N, opening into the case, and an independent air-



385,596.

forcing apparatus located outside the case and communicating with said tube for forcing air therethrough and through the case in addition to the induced current, substantially as described.

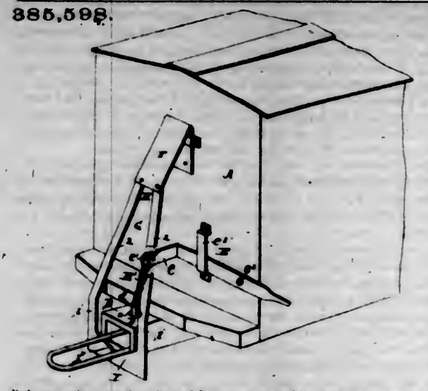
2. The combination, with the case B, having an outlet, *b*, the hopper *d*, and the rotating blades *f*, of an air-storing apparatus made to hold air under pressure and to communicate with said case, substantially as set forth.

385,597. REFLECTOR FOR SPIRIT-LEVELS. LEWIS CROSBY, Three Mile Bay, N. Y. Filed Sept. 9, 1887. Serial No. 249,214. (No model.)

Claim.—1. A reflector for spirit-levels, consisting of a flanged frame, the mirror secured in said frame, and the bent upper portion forming the clasp adapted to be clamped to the slotted edge plate of an ordinary spirit-level.

2. The combination, with the leveling-bar having the main spirit-level secured in its edge and having the centrally-slotted plate secured over the said spirit-level, of the reflector constructed with the flanged frame, the mirror secured in the said frame, and the bent upper portion forming the clasp, substantially as and for the purpose set forth.

3. The combination, with the leveling-bar having the transverse opening in one of its ends and the spirit-level secured in the recessed bottom part of the said opening, of the reflector consisting of the flanged frame having the two arms, and the mirror secured in the said frame, substantially as and for the purpose set forth.



4. The combination, with the leveling-bar having the transverse opening in one of its ends, the recess or opening communicating with the bottom of the said opening, the spirit-level fitting in the said recess, and the end plate, arranged as described, of the reflector consisting of the flanged frame having the two arms and the mirror secured in the said frame, substantially as set forth.

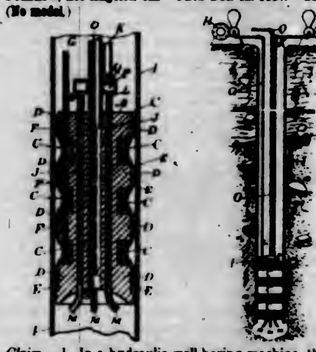
385,598. CAR-COUPLING. SARAH E. DAVIDSON, Glasgow, Ky. Filed Mar. 30, 1888. Serial No. 268,972. (No model.)

Claim.—1. In a car-coupler, the combination, with the draw-head, the link, and the pin, of the reversed-U-shaped spring secured to the car end a suitable distance vertically above the draw-head, and the stirrup secured to the free arm of said spring and consisting of the yoke and the metallic seat-plate, substantially as specified.

2. In a car-coupler, the combination, with the draw-head, the

385,598.

link, the pin, and the pivoted lever connected by a chain to said pin, of the reversed-U-shaped spring and the stirrup secured to the end of the free arm of the spring, substantially as specified.



3. The herein-described car-coupling, consisting of the draw-head, the pin C, having the cap-piece D, the link J, the pivoted lever E, having the outstanding arm *e*, the chain F, connecting said arm and the cap-piece D, the reversed-U-shaped spring, and the stirrup G, consisting of the yoke H and the seat-plate I, substantially as specified.

385,599. DOOR-CHECK. WILLIAM D. DUNLAP, Selma, Ala. Filed Apr. 10, 1888. Serial No. 270,166. (No model.)

Claim.—The spring-actuated bolt having a stop end or nose applied or formed rigidly upon it, and also having a bowed spring-pawl attached to its shank, in combination with the case in which the bolt moves, and with the rack attached to one of the inner surfaces of the case for the spring-pawl to bear against and engage with, whereby by a force sufficient to bring the bolt to a vertical position the said bolt is automatically released and caused to rise out of engagement with the floor, substantially as described.

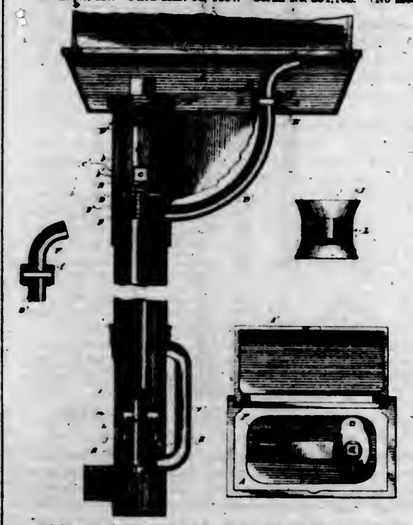
385,600. HYDRAULIC WELL-BORING MACHINE. GEORGE W. DURHOW, Los Angeles, Cal. Filed Dec. 12, 1887. Serial No. 257,660. (No model.)

Claim.—1. In a hydraulic well-boring machine, the combination of the plug for the casing-pipe, comprising the core A, provided with the induction and eduction passages therethrough, extending from end to end thereof, and with one or more annular chambers, B, having flexible outer walls, C, and means for producing expansive pressure within such chambers, whereby the flexible outer walls thereof may be caused to bulge out beyond the face of the plug, as and for the purpose set forth.

2. In a hydraulic well-boring machine, the combination of the casing of the well, the plug comprising the core A, provided with induction and discharge passages extending therethrough from end to end thereof, and with annular chambers B, having the flexible outer walls, C, a discharge-pipe extending from the discharge-passage in the core to the top of the well, induction-pipes connecting the induction-passages of the core with a machine for producing hydraulic pressure, a conduit connecting the chambers B with machinery for producing expansive pressure within the chambers, a machine for producing such pressure, and hydraulic machinery connected with the induction-passages of the core.

3. The combination of the casing-pipe of the well, the plug comprising the combination of the case C and the core A, provided with induction-passages J, discharge-passage N, one or more annular chambers, B, passages F, and pipes M, the pipe G, discharge-pipe O, induction-pipes K L, chamber P, hydraulic machinery connected with the pipe K, and machinery for producing expansive pressure connected with the pipe G, substantially as and for the purpose set forth.

4. The combination of the casing-pipe of the well, the plug comprising the combination of the case C and the core A, provided with induction-passages J, discharge-passage N, one or more annular chambers, B, passages F, and pipes M, the pipe G, discharge-pipe O, induction-pipes K L, chamber P, valve Q, hydraulic machinery connected with the pipe K, and machinery for producing expansive pressure connected with the pipe G, substantially as and for the purpose set forth.



5. The combination of the casing-pipe of the well, the plug comprising the combination of the case C and the core A, provided with induction-passages J, discharge-passage N, one or more annular chambers, B, passages F, dome S, and pipes M, the pipe G, discharge-pipe O, induction-pipes K L, chamber P, hydraulic machinery connected with the pipe K, and machinery for producing expansive pressure connected with the pipe G, substantially as and for the purpose set forth.

385,601. MOP-WRINGER. HOMER L. RUMM, Sandusky, Ohio. Filed Dec. 27, 1887. Serial No. 259,094. (No model.)

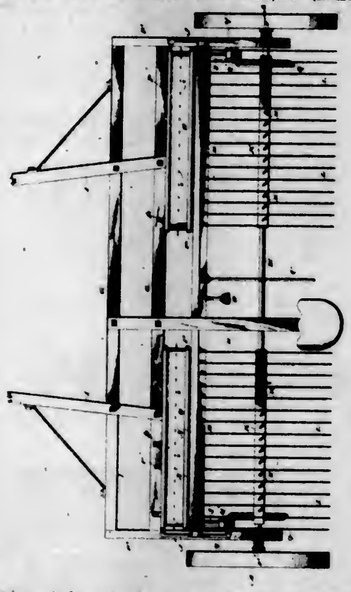
Claim.—A mop-wringer consisting of a perforate or open cone and a holder attached to the apex or bottom of the cone and having upwardly-extending hooks for engaging the side of a vessel, as shown, and for the purpose specified.

385,602. NON-FREEZING STREET-WASHER. CHARLES G. RITE, St. Louis, Mo. Filed Mar. 16, 1887. Serial No. 231,102. (No model.)

Claim.—1. In a street-washer, the combination of a box having a cover with a swiveled hose-coupling and the upper end of the valve-stem, both extending up into the box and permanently located entirely within the box, where the swiveled hose-coupling is free to turn in any direction with the hose without liability of injury to hose or coupling, substantially as described.

2. In a street-washer, the combination of the upper portion of

the main valve-casing and the branch or arm forming a water-outlet, all cast in a single piece, said water-outlet being provided with a bent swiveled coupling, a perforated cap through which said curved swiveled coupling extends and which is secured to the main water-outlet, with a box entirely within which is located the swiveled coupling and the upper end of the valve-stem, substantially as and for the purpose specified.



3. In a street-washer of the character described, the combination of the main valve-stem casing provided with an ordinary flat seat at its lower portion and side water-way in direct alignment with said valve-seat, with a T-washer which extends down into the main opening through the bottom of the valve-stem casing, and a waste-opening in the casing, and a second washer secured to the piston-rod above the T-washer, all constructed and combined to operate substantially as described, whereby all deposit in the valve-seat is avoided and the raising of the valve-rod and valves effectually closes the escape or waste opening in the lower portion of the casing before the water is allowed to escape from the main up through the water-way in the main casing, substantially as and for the purposes specified.

385,603. ACCELERATING-CARTRIDGE. JAMES S. EVERARD and ALFRED R. EVERDELL, New York, N. Y. Filed Sept. 3, 1887. Serial No. 248,709. (No model.)

Claim.—In an accelerating-cartridge, the combination of a central flash-tube, D, tapering in an outward direction, a wad, I, fitted into the cartridge-shell upon said tube, a charge, F, of slow-burning powder in front of said wad, and a charge, G, of quick-burning powder in rear of the wad, substantially as and for the purpose described.

385,604. HORSE HAY-RAKE. ALSON P. FAIRCHILD, Mechanicsville, Iowa. Filed Feb. 16, 1888. Serial No. 264,258. (No model.)

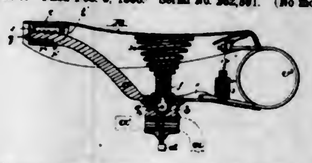
Claim.—1. In a horse hay-rake, the combination, substantially as set forth, of the draft-frame having a rotatable axle with ground-wheels thereon, the rake-head having gangs of rake-teeth with an intervening middle space between the same, the revoluble frames carrying spring-yielding rake-teeth secured to said axle, the conveying-aprons arranged at right angles to the line of draft and inclined downward toward the middle intervening space between the gangs of rake-teeth, to convey the hay thereto to form a windrow, and means for revolving said axle and aprons.

2. In a horse hay-rake, the combination, substantially as set forth, of the draft-frame carrying a rotatable axle with suitable ground-wheels on the ends thereof, the rake-head supported by suitable brackets above the draft-frame and having gangs of rake-teeth secured thereto and arranged with an intervening middle space between the same, the rake-frame secured to the axle in front of the aforesaid gangs of rake-teeth, carrying spring-yielding rake-teeth, the inwardly-projecting downwardly-inclined aprons adapted to deposit the hay to form a windrow in the middle space between the gangs of rake-teeth, the clearer wires or rods secured to the rear sides of the frames of the conveying-aprons and encircling the revolving rakes between their teeth, and means for revolving said axle and the aprons.

3. In a horse hay-rake, the combination, substantially as set forth, of the gangs of rake-teeth having an intervening middle space between them, revoluble rakes in front of said gangs, and conveying-aprons in front of the revoluble rakes arranged at right angles to the line of draft.

4. In a horse hay-rake, the combination, substantially as set forth, of the draft-frame, the rotatable axle carrying ground-wheels, the rake-head carrying gangs of rake-teeth with an intervening middle space between them and adapted to be raised and lowered by a lever adjacent to the driver's seat, the revolving rakes having spring-yielding teeth, conveying-aprons acting to deposit the hay in the middle space between the gangs of teeth, the clutches on the axle adapted to engage the ground-wheels, and a cord secured at its lower end to the said clutches passing over a sheath or pulley and secured at its upper end to the rake-head.

5. In a horse hay-rake, the combination, substantially as set forth, of the draft-frame, the gangs of rake-teeth with an intervening middle space between the same, the rotating axle, the revolving rakes mounted thereon, the bevel or miter gear mounted upon the said axle, a counter-shaft journaled in the draft-frame and carrying at its rear end a similar miter-gear meshing with the bevel or miter gear upon the axle and at its front end extending through the conveyer-frames and carrying a roller therein, the conveyer-frames arranged at right angles to the line of draft having rollers in their inner ends, the front shields for said frames, and the conveying-aprons traversing said frames.



385,605. LUBRICATOR. WILLIAM H. FARRELL, South Bethlehem, Pa. Filed Mar. 19, 1888. Serial No. 267,742. (No model.)

Claim.—1. The combination of the lubricating vessel or cup having a discharge-stem at the bottom, a plunger pressing upon said lubricant, and a spring-actuated valve carried by said plunger and controlling the admission of air to the space beneath the plunger, all substantially as specified.

2. The combination of the lubricating vessel or cup having a discharge-stem at the bottom, the plunger having a hollow stem, the valve adapted to a seat upon the bottom of the plunger and having a stem contained within said plunger, a cap or button at the upper end of said stem, and a spring tending to raise the stem and close the valve, all substantially as specified.

385,606. SADDLE FOR VELOCIPEDES. WARREN I. FISH, Newark, N. J. Filed Feb. 3, 1888. Serial No. 262,891. (No model.)

Claim.—1. In combination with a stretcher-bar, *o*, spring and seat of a base having a segmental bearing, a casting having a corresponding bearing and lugs, *n*, and a bolt, substantially as and for the purposes set forth.

2. In a saddle, the spring having a base, coils, and ends e', which latter are bent toward one another, as at e^4, substantially as and for the purposes set forth.

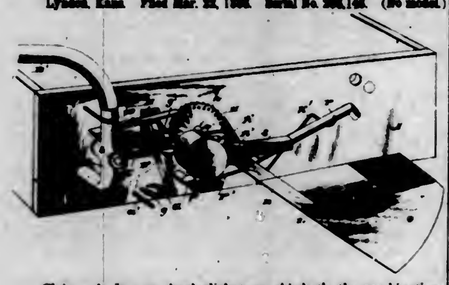
3. In a saddle, the spring having a base, coils or spirals e^3, beads e^4, and threaded ends, substantially as and for the purposes set forth.

4. In a saddle, the combination, with a rear plate having perforated lugs, of a spring having threaded ends and nuts for holding and adjusting said ends with said lugs, substantially as and for the purposes set forth.

5. In combination with the front plate, *f*, plate or rods *o*, an interposed vertical spring, 20, having bearings on both of said plates, substantially as and for the purposes set forth.

6. In combination with a forward saddle-plate, *f*, and a stretcher-bar or rod, as *o*, a spring, *r*, allowing horizontal movement of the front plate, and a spring, 20, arranged under the rear edge or part of said forward plate, substantially as and for the purposes set forth.

7. The combination of the front plate, *f*, a suspension-saddle and a rear plate, *o*, and a flexible seat disposed upon said plates, a stretcher-bar, *o*, and a rear spring, *r*, and a spring, 20, arranged beneath the flexible seat A, substantially as set forth.



8. In combination, the flexible seat A, stretcher-bar *o*, having a lug, 22, and a forward plate, *f*, having a lug, 21, adapted to co-operate with the lug 22 to hold a vertical spring, 20, substantially as and for the purposes set forth.

9. The combination of the flexible saddle-seat had bar *o*, a forward plate joined to said flexible seat and supported by said bar *o*, and a vertical spiral, 20, arranged to support the rear end of said forward plate, substantially as and for the purposes set forth.

10. In combination, a rear plate for a flexible seat, and a suitable support, *o*, for the rear spring, and said rear spring having a base, coils or spirals e^3, and where it engages or near where it engages said rear plate having lateral bends or turns and terminating in forward projections adapted to pass directly through perforations or recesses in the lugs of said rear plate, substantially as and for the purposes set forth.

11. In combination with a stretcher-bar, *o*, rear spring, and seat A, a base adapted to be secured upon a suitable support of the vehicle-frame, a bolt, *f*, pivoted on said base, a casting, *j*, having segmental bearings adapted to engage co-operating bearings on the base and provided with a slot, *m*, adapted to allow the passage of the bolt *f* and the pivotal movement of the latter therein, and suitable nuts for fastening the said segmental casting in place on said base, substantially as set forth.

385,607. MECHANICAL PHOTOGRAPHIC BATH. HARRY FORD, Lyndon, Kans. Filed Mar. 22, 1886. Serial No. 296,146. (No model.)

Claim.—1. In a mechanical photographic bath, the combination, substantially as set forth, of a water-receptacle having a valved supply-pipe attached thereto, a tank pivoted to the water-receptacle having a weighted arm, and a slotted arm in connection with the valve of the supply-pipe and operated by the weighted arm of the pivoted tank to alternately open and close the supply-valve, substantially as described.

2. In combination with a receptacle or tank having inlet and discharge openings, the inlet-opening provided with a valve, a slotted arm attached to said valve, a counterpoise-tank having a weighted arm with a projection which engages with a slotted valve-operating arm, the discharge-pipe having a movable section, and means for automatically and successively supplying the receptacle and discharging the contents thereof.

3. In combination with a receptacle, an inlet-pipe provided with a turning-valve, the slotted arm for operating the same, the counterpoise-tank having a projection which engages with a valve-operating arm, the discharge-pipe connecting the receptacle to the tank, and means for holding the discharge-pipe elevated when the tank is depressed and the supply-pipe closed, substantially as described.

4. In a mechanical photographic bath, a receptacle for the prints provided with a valved inlet-pipe and a movable discharge-pipe, the tank pivotally attached to the receptacle and provided with a weighted arm which engages with the valve-operating mechanism, the parts being so organized that the valve is successively opened and closed and the water in the receptacle changed, for the purpose set forth.

5. The combination of a receptacle, A, having a tank with a discharge-opening, a discharge-pipe communicating with the receptacle and tank, and a weight with a projecting pin secured to said tank to engage with a slotted arm secured to the valve-stem, substantially as described.

6. The combination of the receptacle A, having the valved supply-pipe, an arm carried by the valve, a discharge-pipe having a flexible section, and a pivoted tank with a small discharge-opening having a projecting arm which carries an adjustable weighted arm, whereby the water is automatically let in and out of the receptacle and different levels maintained within the receptacle, substantially as described.

7. In combination with the receptacle A, a supply-pipe having a valve with a slotted operating-arm, a movable discharge-pipe, a pivoted tank having a weighted arm with a projecting pin which engages with the valve-operating bar, and a latch-bar, F, with a pawl, the parts being so organized that the latch-bar and pawl will hold the valve closed after the tank has been filled, substantially as described.

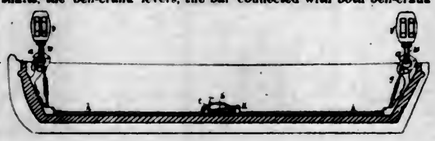
8. In combination with a receptacle, A, and valved inlet-pipe B, the valve thereof having a slotted arm, C, and a projecting pin upon which a pawl, D, is pivoted, a ratchet-disk, H, carrying a pawl, I, a sector, K, with ratchet-teeth with which the pawl I is adapted to engage, said sector having an arm, K', rigidly attached thereto, a discharge-pipe carried by said arm, and a pivoted tank, O, having a weight-carrying arm, said weight engaging with a slot in the arm C, whereby the valve is operated and the ratchet-disk advanced automatically by the counter-balance of the tank O, substantially as described.

9. In an apparatus for washing photographic prints, the combination of a valved supply-pipe having a slotted operating-arm and a pawl which is alternately advanced and retracted, the rotary disk carrying a gravity-pawl and an operating-pin, *i*, a sector with ratchet-teeth having a pipe-supporting bar, K', a weighted tank which automatically operates the valve, and a latch-bar with a pivoted pawl for holding the valve closed, with which said pin *i* engages, substantially as described.

10. The combination of the valved inlet-pipe B, the valve of which is provided with a slotted arm, a bar in rear of said slotted arm, rigidly attached thereto and to the opposite end of the valve-stem, a pivoted pawl, D, carried by the inwardly-projecting end of the bar C, a ratchet-disk, H, carrying a bolt, J, and projecting pin *i*, a sector having ratchet-teeth with which the pawl J engages, and the arm K', with an outwardly-projecting end forming a support for the discharge-pipe, a pivoted latch-bar having a pawl, G, notch *f*, and projecting catch f', the pivoted tank having a discharge-opening, and an arm with a socket for adjustably securing thereto a weighted bar, said weighted bar having a projecting pin for engagement with the slot of the arm C, the parts being organized substantially as described.

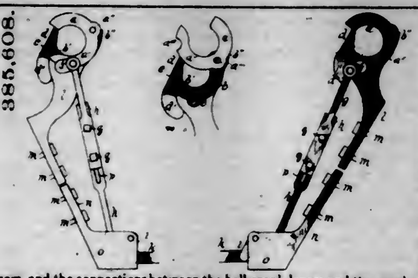
11. In combination with the pipe B, having a valve, *b*, with a slotted arm for operating said valve, pins *a* and *a'* for limiting the movement of said arm, a pivoted latch, F, having a swinging pawl, G, the downward movement of which is limited by a staple, *g*, and a notch or catch, *f*, with which the member C of the slotted arm engages to swing said latch-bar outwardly, substantially as and for the purpose set forth.

12. In a mechanical photographic bath, the combination, with a ratchet-disk, H, having a pawl, I, with limiting stop-pins *k*, of a pivoted sector having ratchet-teeth adapted to be engaged by said pawl, and having rigidly attached thereto a pipe-carrying arm which also engages with the upper edge of the pivoted water-tank, substantially as described.



13. In a mechanical photographic bath, the combination, substantially as set forth, of a water-receptacle having a valved supply-pipe, a tank pivoted thereto having an adjustable counterpoise-weight, a slotted arm connected to the supply-valve and operated by the counterpoise-weight, the serrated sector operated by the pivoted tank, the ratchet-wheel having the pawl on its inner side, and the arm and stops for controlling the movement of said ratchet-wheel.

14. In a mechanical photographic bath, the combination, with a water-receptacle having a valved supply-pipe and a pivoted counterpoise-tank in connection with the supply-valve, of a serrated sector and a ratchet-wheel carrying a pawl and having suitable stops for limiting the movement thereof, substantially as described.



15. In a mechanical photographic bath, the combination, with a water-receptacle having a valved supply-pipe and a pivoted counterpoise-tank in connection with the supply-valve, of a ratchet-wheel operated by the movement of said counterpoise-tank and having a controlling-arm and stops, substantially as described.

385,608. BOAT-DETACHING APPARATUS. HEZEKIAH R. FOSTER, Decatur, Ill. Filed Nov. 7, 1887. Serial No. 254,482. (No model.)

Claim.—1. In boat appliance, in combination, the hook-brackets, the swinging hooks pivoted thereon and provided with the peripheral notches, the rock-shafts having the cut-away portions, the cranks on the shafts, the bell-crank levers, the bar connected with both bell-crank

385,608.

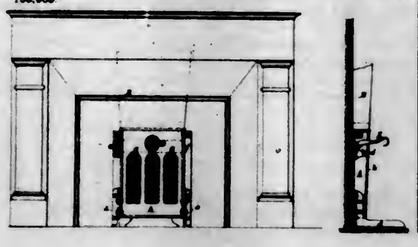
levers, and the connections between the bell-crank levers and the cranks of the rock-shafts, as and for the purpose set forth.

2. In boat appliance, in combination, the hook-brackets, the swinging hooks pivoted thereon and provided with the peripheral notches, the rock-shafts having the cut-away portions, the cranks on the shafts, the bell-crank levers, the bar connected with both bell-crank levers, and the longitudinally-adjustable connections between the bell-crank levers and the cranks of the rock-shafts, as and for the purpose set forth.

3. In boat appliance, in combination, the arc-formed permanent portions, the swinging hooks pivoted thereon and provided with peripheral notches, the rock-shafts in the permanent portions having the cut-away recesses, and the gravity-pawls pivoted to such portions and resting normally across the openings of the hooks, as and for the purpose set forth.

4. In boat appliance, in combination, the arc-formed permanent portions, the swinging hooks pivoted thereon and provided with peripheral notches, the rock-shafts in the permanent portions having the cut-away recesses, and the pawls pivoted to such portions and resting normally across the openings of the hooks, as and for the purpose set forth.

385,609. **HAND-BARROW.** JOHN P. FRIEND, Louisa, Ky., assignor of one-half to Benjamin F. Thomas, same place. Filed Mar. 24, 1888. Serial No. 268,388. (No model.)

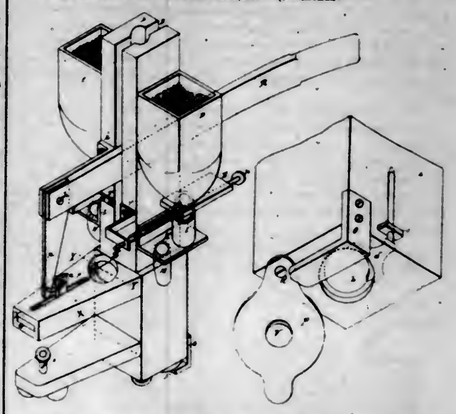


Claim.—1. In a hand-barrow, the combination of a pair of parallel bars and chains connecting said bars at corresponding points, said bars projecting beyond said chains to serve as handles, and each bar being independently revoluble on its own axis.

2. In a hand-barrow, the combination of a pair of parallel bars provided with spurs, and chains connecting said bars at corresponding points and adapted to grasp a barrel, box, or similar article, each bar being capable of independent axial rotation.

3. In a hand-barrow, the combination of a pair of parallel bars having casters in two ends thereof, and chains connecting said bars at corresponding points, each bar independently capable of complete axial rotation.

4. The combination of a pair of parallel bars provided with spurs projecting from their surfaces, said bars having casters in two ends thereof, and capable of a complete revolution independent of each other, and chains connecting said bars at corresponding points, all substantially as set forth.



385,610. **APPARATUS FOR PREVENTING SMOKING IN FIRE-PLACES.** ARMAND GAMER, Châteaulin, France. Filed Feb. 21, 1888. Serial No. 264,867. (No model.) Patented in France Sept. 3, 1887, No. 186,608.

Claim.—1. An apparatus for improving the draft in fire-places and preventing smoking, said apparatus comprising a chamber or casing, an upper casing or chamber forming a prolongation of the first and adapted to extend into the flue of the chimney, the lower chamber or casing being provided with openings for the admission of gases from the fire-place and with a damper for regulating the draft therein, substantially as described.

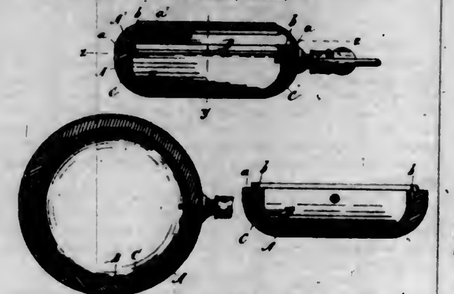
2. The combination of the lower casing having a face or front inclined outward toward the top and openings therein for admission of part of the smoke and gases from the fire-place, and the upper casing forming a prolongation of the first and having its front similarly inclined, said casings filling part of the flue-space, whereby the smoke and gases passing through them and becoming heated assist in creating a draft in the portion of the flue outside of the same, substantially as described.

385,611. **CARTRIDGE-LOADER.** ALFRED S. GIBSON, Alma, Mich. Filed Jan. 20, 1888. Serial No. 261,346. (No model.)

Claim.—1. The combination of the body A, having a cartridge-receiving bore, the laterally-projecting bracket X, having the longitudinal slot *p* and wad-receiving orifice *g*, the slide *f'*, arranged within the bracket, and having the lug *e* projecting upward through the slot in the bracket, the rammer Q, and the lever R, having a pendent arm, *n*, pivotally connected with the lug on the slide, substantially as described.

2. The combination of the body A, having a cartridge-receiving bore, the lateral plates K and L, having orifices, the tubes M and N, leading from said orifices into the bore, the shot and powder vessels C and D, the horizontally-sliding plates E and F, located under the shot and powder vessels, and having orifices provided with pendent tubular chargers I and J, moving above the lateral plates, a wad-slide, *f'*, a rammer, Q, and the pivoted lever, R, having an arm, *n*, connected with the wad-slide, substantially as described.

3. The combination of the body A, having a cartridge-receiving bore and lateral powder and shot entrances T and U, the lateral plates K and L, having orifices, and tubes M and N, connecting their orifices with said powder and shot entrances, the shot and powder vessels C D on the body, the spring slide-plates E and F under said vessels, having chargers I J, movable above the lateral plates, the lateral bracket X, having the slot *p* and wad-receiving orifice *g*, the wad-slide *f'*, located within the bracket, and having the lug *e* projecting up through the slot, the rammer Q, and the pivoted lever R, having the arm *n*, to act on the lug of the wad-slide, substantially as described.



4. The combination, with the body A of a cartridge-loader, having a central bore and a cartridge-receiving chamber, W, at its lower end, of the swinging plate P, pivoted directly to the lower end of the said body at the lower end of the cartridge-chamber, and having the orifice V, and the angle-iron O, secured to the body A, and serving as a guide and brace to the swinging plate P, substantially as described.

5. The combination, with the body A of a cartridge-loader, having a bore and a cartridge-receiving chamber, W, at its lower end, of a cartridge-extractor, *d*, carried by the body and movable outward from the lower end thereof to remove the charged cartridge, substantially as described.

6. The combination, with the body A, having a central bore and lateral powder and shot inlet orifices, of the horizontal bracket X, containing the slot *g*, communicating with the bore of the body and provided in its top side with the slot *p* and wad-receiving orifice *g*, the wad-slide *f'*, located within the bracket, and having a lug, *e*, projecting outward through the top slot of the bracket, the rammer Q, and the pivoted lever R, having a pendent arm, *n*, acting upon the lug of the wad-slide, to advance the latter and move the wad into the central bore of the body, substantially as described.

7. The combination, with the body A of a cartridge-loader, having a bore and a cartridge-receiving chamber, W, at the lower end thereof, of the plate P, pivoted directly to the lower end of the body and having the orifice V, and the angle-iron O, secured to the body and extending under the same beneath the pivoted plate to sustain the latter, substantially as described.

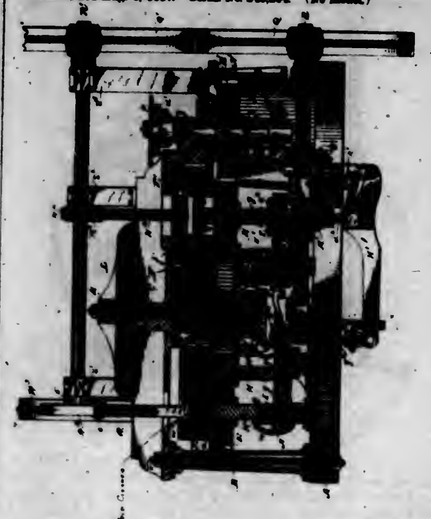
385,612. **WATCH-CASE.** CHARLES K. GILES, Chicago, Ill. Filed Jan. 29, 1887. Serial No. 226,015. (Model.)

Claim.—1. In a watch-case, the combination, with the case proper, consisting of a back and center formed in a single piece, and provided with an integral flange projecting inward from its margin, of the internal strengthening-cup formed in a single piece, bearing against the back of the case, and having its continuous upper portion expanded to catch under the flange, substantially as and for the purposes specified.

2. In a watch-case, the combination, with the case proper, consisting of a center and back formed in a single piece, and provided with an integral inwardly-projecting flange on its margin, of the strengthening-cup having its continuous upper portion expanded to catch under the flange, and provided with a seat to receive the movement, substantially as and for the purposes specified.

3. In a watch-case, the combination, with the case proper, consisting of a center and back formed in a single piece, of the strengthening-cup secured within the same and a sectional filling occupying the space between the cup and case, substantially as and for the purposes specified.

4. In a watch-case, the combination, with the case proper, A, consisting of a back and center formed in a single piece, and provided with the integral inwardly-projecting flange *a*, of the internal strengthening-cup, B, bearing against the back of the case and having its upper portion expanded to catch under the flange, and the sectional filling C, occupying the space between the cup and the case, substantially as and for the purposes specified.



385,613. **BELTING.** TIMOTHY GINGRAS, Buffalo, N. Y. Filed Oct. 27, 1887. Serial No. 253,488. (No model.)

Claim.—1. The combination, with the body of the belt, composed of cotton or other textile fabric, of marginal strips extending along the longitudinal edges of the belt, and one or more longitudinal leather strips arranged between said marginal strips, substantially as set forth.

2. The combination, with the body of the belt, composed of cotton or other textile fabric, of a series of leather re-enforcing strips extending lengthwise of the belt, and filling-strips of cotton or other textile fabric arranged in the spaces between said re-enforcing strips, substantially as set forth.

385,614. **BRICK-MACHINE.** WILLIAM L. GIBBS, Philadelphia, Pa. Filed Aug. 6, 1887. Serial No. 246,594. (No model.)

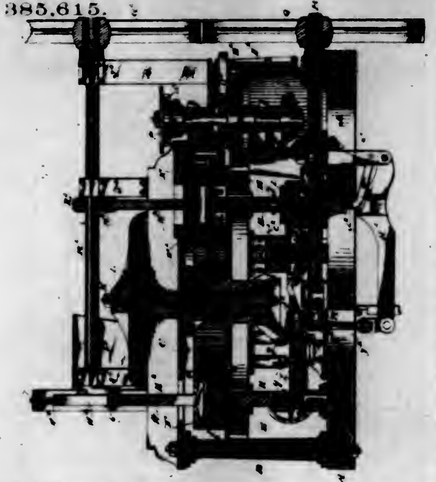
Claim.—1. In a brick-machine, the combination of the series of upward-pressure followers and the intermediate upward and downward pressure followers, whereby successive upward pressures and an intermediate upward and downward pressure are given to the brick, substantially as described.

2. The combination, in a brick-machine, of an intermittently-revolving mold-table and mold-boxes, the downward-pressure followers, the bottom pressure-followers, the connected top and bottom shafting, and the cleaning device mounted on said top shafting, whereby clay in different sets of mold-boxes are pressed and one set of mold-boxes is cleaned at a simultaneous operation, substantially as described.

3. The combination, in a brick-machine, of the revolving mold-table and mold-boxes, the shafting carrying one set of followers, and the cleaning device W, operated by said shaft and provided with a yoke, W^1, stem 7, and the crank, crank-pin, and arched standard W^3, substantially as described.

4. The combination, in a brick-machine, with an intermittently-revolving mold-table and mold-boxes, the lower and upper shafts, R R', the connecting-gear Q Q', the top plunger, H^2, the eccentric and eccentric-strap, and the bottom pressure-followers carried by said mold-table, substantially as and for the purpose described.

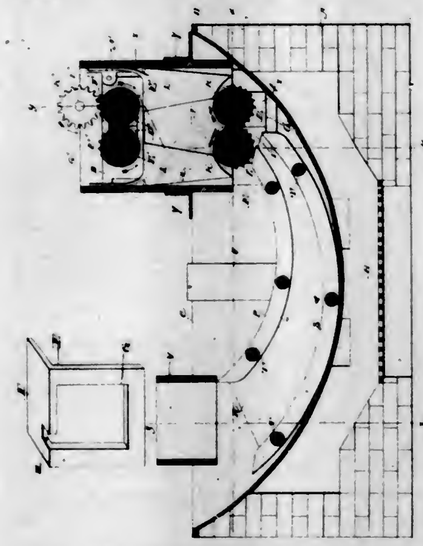
5. In a brick-machine, in combination with the rotating table and molds, the top follower, the upper and lower shafts, and the connected gearing, the bottom follower, H, the pressure-lever H', crank *f''*, and pitman *g'*, whereby the simultaneous top and bottom pressure is effected, substantially as described.



6. In a brick-machine, in combination with the rotating table and molds, the upper shaft and lower shafts, and the connecting-gearing, the swab secured to said upper shaft, the follower provided with a head, *c*, and the supporting-track, whereby said swab is pressed down against the head of said follower, substantially as described.

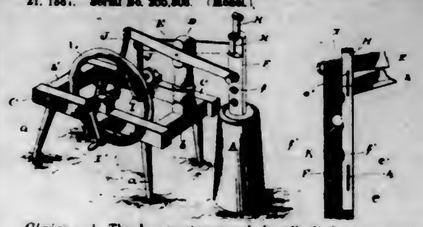
7. The combination, in a brick-machine, of the downward-pressure follower H^3, provided with a convex pressure-plate, as shown, and bottom pressure-followers provided with pressure-plates having flat upper surfaces, and a counter-pressure plate, whereby in giving the top and bottom pressure a thin upwardly-projecting fin of clay will be formed on the edges of the brick, which, upon the final upward pressure, will be compressed and form the solid sharp edge of the brick, substantially as described.

385,615. **PROCESS OF MANUFACTURING BRICK.** WILLIAM L. GIBBS, Philadelphia, Pa. Filed Apr. 9, 1888. Serial No. 270,044. (No model.)



Claim.—1. The process of manufacturing brick, consisting, first, in supplying the clay to the mold; second, giving the clay a single plunger-pressure from one side of the mold, whereby the brick is developed; third, giving the clay a simultaneous double plunger-pressure from both sides of the mold, and, fourth, giving the clay a final single plunger-pressure to complete, solidify, and finish the brick, substantially as described.

385,615.



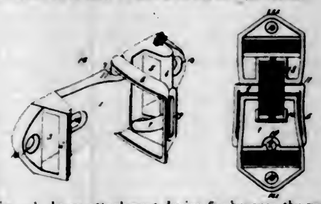
2. The mode of manufacturing brick, consisting, first, in supplying the clay to the mold; second, giving the clay an upward pressure, whereby the brick is developed and air and surplus clay expelled; third, giving the clay a simultaneous top and bottom pressure, and, fourth, giving the clay a final upward pressure to complete, solidify, and finish the brick, substantially as described.

385,616. APPARATUS FOR GALVANIZING METALS. ROBERT GEST, Struther's, Ohio. Filed June 23, 1887. Serial No. 242,367. (No model.)

Claim.—The combination, with the regularly-curved melting-pot, the flux-receptacle at one end of said pot V, open at top and bottom, and the grease-box at the opposite end of the melting-pot, provided with the rollers and operating mechanism whereby the plates are drawn out of the machine, of the regularly-curved guide-frame P within the melting-pot, composed of the regularly-curved upper and lower bars S, the side walls, R, and the transverse bolts T, the said frame P having its larger end under the receptacle V and its smaller end under the grease-box, the upper and lower bars S converging toward said box, substantially as specified.

385,617. CHURN. WILLIAM B. GRIMM, Enfield, Ohio. Filed Nov. 21, 1887. Serial No. 255,808. (Model.)

Claim.—1. The herein shown and described churn-operating mechanism, composed of the frame, the compound crank-shaft having a balance-wheel and provided with a crank, the standard, the operating-levers, the pitmen connecting one end of the levers with the crank-shaft, the lateral projections at the other ends of the said levers, the two dashers, each having a series of openings to receive the said projections and each having a kerf in its edge, and the locking-plates fitted in the said kerfs, substantially as and for the purpose described.



2. The combination, with the dasher-shaft having a series of openings, of the operating-lever having a projection extending laterally therefrom to fit in one of the said openings, and adapted to yield laterally to disengage the projection from the opening, substantially as and for the purpose described.

3. The combination, with the dasher-shaft having a series of openings and the operating-lever having a lateral projection provided with an annular groove, of the locking-plate, substantially as set forth.

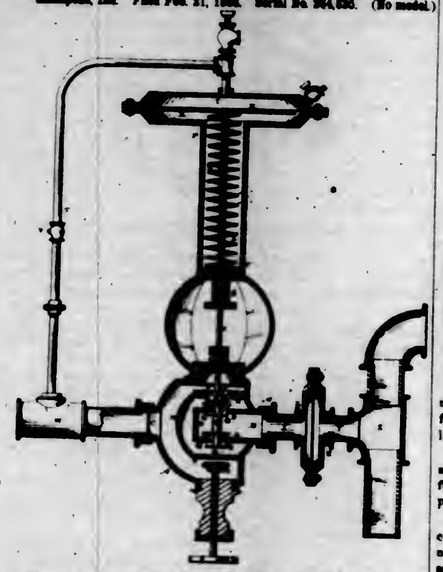
4. The combination, with the dasher-shaft, having a series of openings and a kerf or groove in its edge, and the operating-lever having a lateral projection provided with an annular groove, of the locking-plate having slots and notches in its lower edge and the pins extending through the slots, substantially as and for the purpose described.

5. The combination, with the two operating-levers and the dasher-shafts having each a series of openings, of the locking-plates and the short rod or locking-pin having an annular groove near each end, substantially as and for the purpose specified.

385,618. DOUBLE-LOOP BUCKLE. JOHN C. HACKETT, Belleville, Ill. Filed Mar. 3, 1888. Serial No. 266,571. (No model.)

Claim.—1. In an attachment device for harness, the metal strap, a loop at each end of said strap, and the intermediate buckle between said loops, substantially as and for the purpose set forth.

2. In an attachment device for harness, the metal strap, a loop at each end of said strap, the swinging bail hinged between said loops, and the buckle-tongue on said bail, substantially as and for the purpose set forth.



3. In an attachment device for harness, the combination of the metal double-loop strap, the hinged bail with its pivot-arm that is provided with its bearing in the corrugation of said strap between its loops, the buckle-tongue in the front arm of said bail, which engages in the perforated seat provided for it in said strap, and the retention-strap that holds said pivot-arm of the bail in its bearings in said corrugation of the strap, substantially as and for the purpose set forth.

4. In an attachment device for harness, the combination of the metal double-loop strap, the hinged bail with its pivot-arm, that has bearing in the corrugation between the loops of said strap, the buckle-tongue on the front arm of said hinged bail, the retention-strap that holds the pivot-arm in its bearing, the projected lugs that clinch down on and hold the retention-strap, and the flattened face of the pivot-arm that fits to the retention-strap when the buckle is closed, and so locks it in its operative position, substantially as and for the purpose set forth.

5. In an attachment device for harness, the combination of the double-loop metal strap, the buckle-bail hinged in its corrugated seat to said strap between said loops, the retention-strap that holds the pivot-arm of said bail in its seat, the flattened face of said pivot-arm that engages with the flat face of the retention-strap to lock the buckle,

the perforated side legs to said metal loop-strap, the rivets that pass through said legs and secure said metal strap to the harness, and the metal side loop integral with the metal strap for the attachment of the breeching when used in double harness, substantially as and for the purpose set forth.

385,619. REGULATING-VALVE. MELVILLE O. HALDEMAN, Indianapolis, Ind. Filed Feb. 21, 1888. Serial No. 264,636. (No model.)

Claim.—1. The combination of the shell, provided with the two separate partitions and the three valve-seats G J, and the two valves attached to a single stem, one of the said valves being made double-seated, a diaphragm, and a spring or weight, substantially as described.

2. The combination of the shell, provided with two partitions having the valve-seats G J Q, with the valves H, which are operated by a diaphragm, and the independent valve O, substantially as specified.

3. The combination of the shell, provided with the partition D, which extends inward from the inlet B, and is provided with two valve-seats, and a separate partition, N, which entirely inclosses the one D, and is provided with the valve-seat J, with the valve-rod, valves secured thereto, the spring, and diaphragm, there being a passage between the two partitions for the passage of the gas, substantially as specified.

385,620. VELOCIPEDE. HARRIE B. HART, Philadelphia, Pa., assignor to the Hart Cycle Company, same place. Filed Apr. 6, 1888. Serial No. 269,890. (No model.)

Claim.—1. The combination, in a velocipede, of a vertically-adjustable handle-bar, a saddle carried by a vertically-swinging support, and a pivotal connection between the saddle and its support, substantially as described.

2. The combination, in a velocipede, of a vertically-adjustable handle-bar, a saddle-support pivoted at its forward end, a saddle pivotally connected to said support at its opposite end, and means for adjusting the saddle lengthwise upon the support, substantially as described.

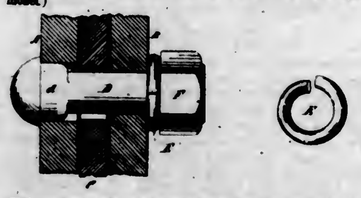
3. The combination, in a velocipede, of a vertically-adjustable handle-bar, a saddle-support pivoted at its forward end, a saddle pivotally connected to the free end of said support and adjustable lengthwise thereon, and means for locking the saddle-support in its adjusted position, substantially as described.

4. The combination, in a velocipede, of a saddle-support pivoted at its forward end to the backbone of the machine, a saddle carried thereby at its free end, and means for positively adjusting said support upon its pivot, substantially as described.

5. The combination, in a velocipede, of a saddle-support pivotally connected at one end to the backbone, a saddle carried by and adjustable on said support at its free end, the adjacent faces of said pivotal connection having interlocking notches or corrugations, and a bolt for clamping said faces together, substantially as described.

385,620.

6. The combination, in a velocipede, of a saddle-bar pivotally connected at one end to the backbone, a saddle carried by said bar at its free end, and a vertically-adjustable supplemental support for said bar in rear of its pivot-point, substantially as described.



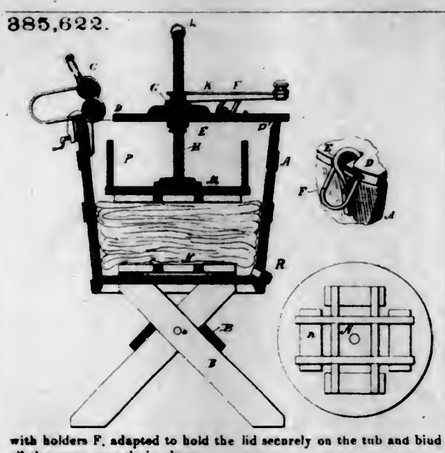
7. The combination, in a velocipede, of a saddle-bar pivotally connected at one end to the backbone, a saddle carried by said bar at its free end, and a screw having a bearing upon the backbone and supporting said bar in rear of its pivot-point, substantially as described.

8. The combination, in a velocipede, of a saddle-bar pivotally connected at one end to the backbone, the adjacent faces of said connection having interlocking notches or corrugations, a bolt for clamping said faces together, a saddle pivoted to and adjustable longitudinally upon said bar at its free end, and an adjustable support for said bar in rear of its pivot-point, substantially as described.

9. The combination, in a velocipede, of a front fork composed of substantially parallel side bars connected at their upper ends, and a yoke-shaped bracket adjustable upon said fork and carrying the handle-bar, substantially as described.

10. The combination, in a velocipede, of a front fork composed of substantially parallel side bars connected at their upper ends, of a yoke-shaped bracket carrying the handle-bar and fitted to said side bars, and clamps for securing the bracket adjustably to the fork, substantially as described.

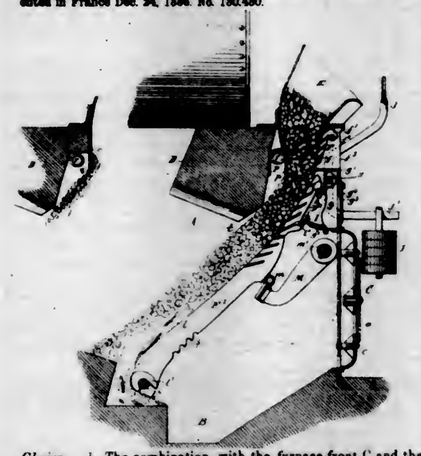
385,621. WIDE-RANGE YIELDING WASHER. HAYWARD A. HARVEY, Orange, N. J. Filed Feb. 20, 1888. Serial No. 265,552. (No model.)



Claim.—1. A soft-metal unresilient washer having the form of a single convolution of a spiral, the pitch of which is approximately equal to the inside diameter of the spiral, as and for the purpose set forth.

2. An oval-necked bolt and the structure through which the said bolt is inserted, in combination with a nut and a soft-metal washer having the form of a single convolution of a spiral of coarse pitch, and adapted to embrace the bolt and to bear in one direction against the structure through which the bolt is inserted and in the other direction against the nut, as and for the purpose set forth.

385,622. WASHING-MACHINE. HENRY T. HENDERSON, Keokuk, Iowa. Filed Mar. 14, 1887. Serial No. 230,795. (No model.)



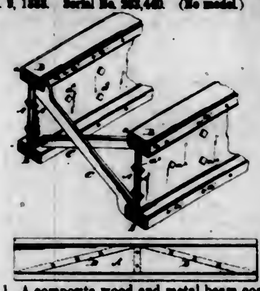
Claim.—The washing-machine having a tub, A, provided with ribs in its bottom and loop-ears E above, in combination with its lid D, provided with a rubbing apparatus mounted thereon having an operative crank and having slots in its edges to fit over loop-ears E, and

385,622.

with holders F, adapted to hold the lid securely on the tub and bind all the parts securely in place.

385,623. FURNACE. ROBERT HERRMANN and LOUIS P. COHEN, Paris, France. Filed Sept. 10, 1887. Serial No. 249,299. (No model.) Patented in France Dec. 24, 1886. No. 180,480.

Claim.—1. The combination, with the furnace-front C and the fuel-hopper E, mounted thereon, of the transverse plates g' g^2, secured to the front C, one above the other, the upper grate-section, F, arranged between the fuel-hopper and the plate g', the intermediate grate-section, F', arranged between the plates g' and g^2, the lower grate-section F^2, arranged below the plate g^2, the arch D, arranged opposite the intermediate grate-section, F', and the air-inlet P, arranged below the fuel-hopper and above the throat of the arch, substantially as set forth.



2. The combination, with the fuel-hopper E, the upper grate-section, F, and the lower grate-section, F^2, of the grate-section F', composed of bars *h*, and an open frame, I, a rock-shaft, *j*, supporting said frame, and a hand-lever, J, attached to said rock-shaft, substantially as set forth.

3. The combination, with the fuel-hopper E, the upper grate-section, F, and the grate-section F', of the lower grate-section, F^2, composed of bars *l*, a fixed cross-bar, l^2, supporting the lower ends of said bars, and a movable cross-bar, *m*, supporting the upper ends of said bars, substantially as set forth.

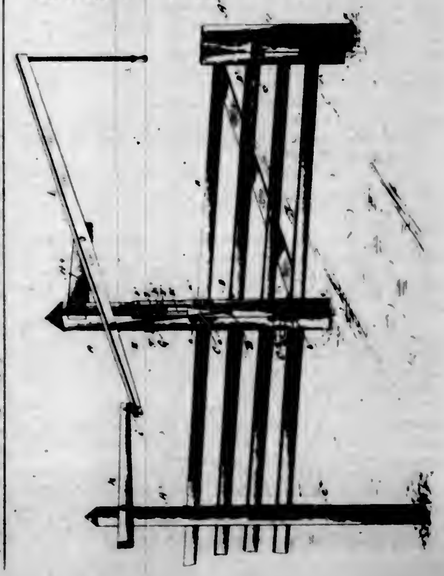
4. The combination, with the grate-sections F F' and the bars *l* of the lower grate-section, of the fixed cross-bar l^2, supporting the lower ends of said bars, the movable cross-bar *m*, supporting the upper ends of said bars, arms M, carrying the cross-bar *m*, a rock-shaft, *m'*, to which the arms M are secured, and gears whereby said rock-shaft can be turned, thereby changing the inclination of the grate-bars *l*, substantially as set forth.

5. The combination, with the furnace-front C, provided with a chamber, *g*, open at its front and rear sides, of the upper grate-section, F, the grate-section F', attached to a frame, I, in the chamber *g*, a curved plate, g^3, forming the bottom of said chamber and fitting against the lower side of the frame I, and the lower grate-section, F^2, arranged below the chamber *g*, substantially as set forth.

385,624. COMPOSITE BEAM. HENRY C. HOSKIN, Detroit, Mich. Filed Feb. 9, 1888. Serial No. 263,440. (No model.)

Claim.—1. A composite wood and metal beam consisting of two sheets of metal bent to form, when placed side by side, a web, and in connection therewith wood elements embraced between their edges, said metal sheets being united along their web portions by bolts or rivets passing therethrough and through intermediate metallic separating parts, substantially as and for the purposes described.

2. The combination, with a composite wood and metal beam, of diagonal braces upon or embodied between the web and bolted or riveted thereto, substantially as described.



385,625. ALCOHOLIC DISTILLATION. WILLIAM L. HORSE, Marblehead, assignor to the Horse Vacuum Company, Hartford, Conn. Filed May 14, 1887. Serial No. 238,240. (No specimens.)

Claim.—1. The process of extracting alcohol from the fermented juices of fruits and obtaining valuable residual products, which consists in extracting the alcohol therefrom and then fermenting the residual liquor, substantially as described.

2. The process of obtaining alcoholic products from the fermented juices of fruits, which consists in extracting the alcohol therefrom and then subjecting the residual liquor to refermentation and like redistillation, substantially as described.

3. The process of obtaining alcoholic products from the fermented juices of fruits, which consists in extracting the alcohol therefrom and adding saccharine matter to the residual liquor, and then subjecting the same to fermentation and then to redistillation, substantially as described.

385,626. FARM-GATE. CHARLES P. HOWE, Chicago, Ill. Filed Feb. 6, 1888. Serial No. 263,102. (No model.)

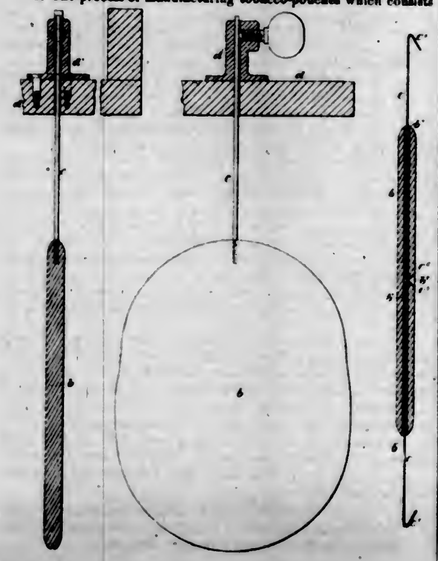
Claim.—1. The combination, with a swinging gate adapted to be moved vertically, of a double inclined segmental cam-rail secured to a gate-post, and rollers applied to upper extensions of the gate-bar above and below said rail, substantially as described.

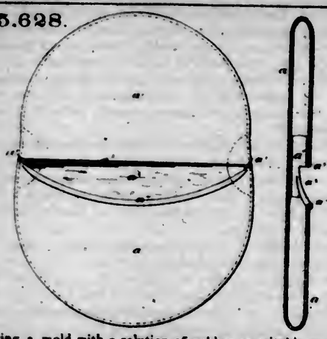
2. The combination, with a gate which is adapted to be swung horizontally and to be bodily moved vertically, of elongated hinges, a double inclined segmental track secured to the gate-post, the rollers F F', adapted to operate on opposite sides of this track, the levers I K, and a rod connecting the lever I to the vertical hinged bar of the gate, substantially as described.

3. The combination of a swinging gate which is adapted to be moved vertically and which is connected to a gate-post, A, by elongated hinges C C, and provided with a latch, *c*, the posts A' A^2, provided with catches and located with respect to the roadway as described, levers fulcrumed on said posts, linked together and connected to the gate by a rod, N, a double inclined segmental cam-rail secured to said gate-post A, and rollers journaled in extensions of the gate-bar D and receiving between them said cam-rail, substantially as described.

4. The combination, with the gate-posts A A' and the gate hinged to the former, so as to be movable vertically thereon, of the stationary segmental rail G, composed of the oppositely-inclined portions g' g^2, united by a ridge, g^3, the said rail being attached to the hinge-post A, and the rollers F F', journaled upon the inner post, D, of the gate and adapted to bear, respectively, above and below the said segmental rail G in the operation of opening and closing the gate, substantially as set forth.

385,627. COMBINED THRASHER AND STEAM-ENGINE. EPHRAIM HOWLAND, Pontiac, Mich. Filed Dec. 1, 1887. Serial No. 256,674. (No model.)





Claim.—The combination, with a movable thrashing-machine and two steam-engines, one upon each side of the thrashing-machine and geared with its driving mechanism, of a portable steam-boiler and a flexible steam hose or conduit connecting said boiler and engines, substantially as described.

385,628. MANUFACTURE OF TOBACCO-POUCHES. JAMES G. ISHAM, London, England. Filed Oct. 12, 1887. Serial No. 252,172. (No model.)

Claim.—1. The process of manufacturing tobacco-pouches which consists in dipping a mold into a solution of the pouch-forming material, forming the opening in said pouch, re-enforcing the corners of said opening, and subsequently removing the mold therefrom, as set forth.

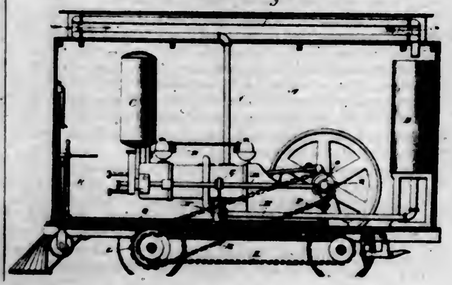
2. The process of manufacturing tobacco-pouches which consists

in coating a mold with a solution of rubber or suitable composition, incorporating re-enforcing strips at desired locations during the process of coating the mold, and subsequently cutting the mouth of the pouch between said re-enforce and removing the mold therefrom, as set forth.

3. The process of manufacturing tobacco-pouches which consists in coating a mold of desired shape with a solution of rubber, incorporating re-enforcing strips therein at suitable locations, forming the mouth of the pouch between said re-enforcing strips, vulcanizing or curing the pouch thus formed, and subsequently removing the mold, as set forth.

385,629. NECKTIE-FASTENING. DAVID MARKOVITS, New York, N. Y. Filed May 18, 1888. Serial No. 274,234. (No model.)

Claim.—In neck ties and similar articles, the combination, with the part or end E of the band, of the cross-bar G, spiral springs H H, and hooks I I, all three being made of the same piece of wire, the cross-bar J and swinging link K, and the part or end D of the band, substantially as described.

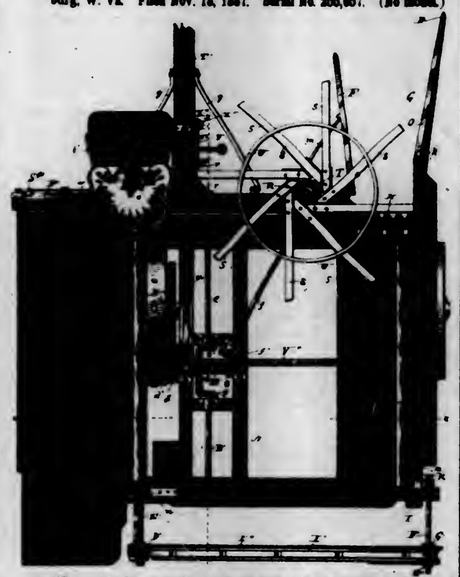


385,630. BOLSTER-SPRING FOR VEHICLES. GARRETT H. JAMESON and JOHN HARVEY, Cleveland, Ohio. Filed Sept. 21, 1887. Serial No. 250,266. (No model.)

Claim.—1. The combination, with a bolster, a yoke, cap, and springs yieldingly connecting the yoke and cap, said yoke and cap having slots therein, of tie-rods and bolts passing through the tie-rods and slots in the yoke and cap, whereby the latter are adjustable lengthwise of the bolster, substantially as set forth.

2. The combination, with cap and tie-bar adjustably secured to the cap, of strap I, for supporting such tie-bar, substantially as set forth.

385,631. STREET-CAR MOTOR. JACOB KARR, Cleveland, Ohio. Filed Apr. 30, 1888. Serial No. 272,382. (No model.)



Claim.—1. The combination, with the car, of the motor B and fuel-reservoir C, the said motor being connected by suitable gearing to the axles of the car, the liquid-tank D, connected to the cylinder-jacket of the motor by a pipe, E, a pump, F, interposed in this pipe E and operated continuously by the said motor B, and the overhead cooling-coil J, also connected to the cylinder-jacket of the motor, the outlet end of this overhead coil emptying into the said tank D, substantially as described.

2. The combination, with a car, of the replacing device, consisting, essentially, of a vertically-movable vertical shaft, S, provided with a wheel, T, at its lower end, the said shaft being screw-threaded at its upper end, and a nut, V, supported in a bracket, W, bolted to the car, the said shaft S passing through the nut V, as described, whereby it may be raised or lowered.

3. The combination, with a car mounted upon suitable wheels and axles, one of the said axles being provided with an eccentric, G', of a pushing device consisting of a depending pivoted arm, B', provided with a forwardly-extending thumb, D', which impinges against the eccentric G' on the axle, and a rearwardly-extending weighted projection, E', a rearwardly-extending pawl, F', pivoted to the lower end of the said arm B', and means for suspending the arm B' and its attachments when not in use, all arranged as and for the purpose set forth.

385,632. **CORN-HARVESTER.** WILLIAM H. KARCHER, Martinsburg, W. Va. Filed Nov. 18, 1887. Serial No. 255,657. (No model.)

Claim.—1. In a corn-harvester, the combination of the frame of the machine suitably mounted, the cutter, the vertical reel-shaft, the hub upon this reel-shaft, and the reel-arms secured tangentially upon this hub, the said vertical reel-shaft being journaled in the frame of the machine at one end of the cutter and forward of the same a distance equal to the radius of the hub, whereby when the reel-shaft is revolved the reel-arms on the hub will assume a position parallel to to the cutter when over it, substantially as described.

2. In a corn-harvester, the combination of the frame suitably mounted, the cutter, the reel, the board I on the grainward side of the machine, the strips K and M, located one above the other vertically over the grainboard I and adjustably supported thereon, the guide G, comprising the horizontal timber H', extending forward from the front end of the grainward side of the frame, and the strips O, secured to the forward end of the timber H' and inclined upwardly and rearwardly therefrom, and connected, respectively, to the forward ends of the said strips K and M, substantially as described.

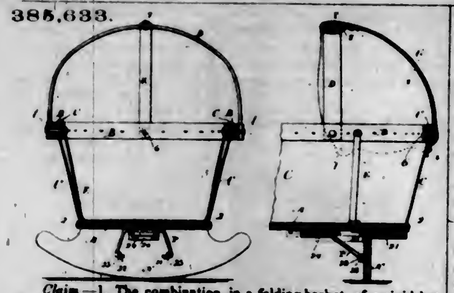
3. In a corn-harvester, the combination, with the frame suitably mounted, of the cutter, the reel, an upwardly-inclined elevating-apron to the rear of the reel, and the upwardly-inclined auxiliary belt I' to the rear of the elevating-apron and adapted to carry the heads of the cut corn, the lower end of this auxiliary belt being raised above the lower end of the elevating-apron, whereby the stubble is prevented from engaging the heads of the cut corn, substantially as described.

4. The combination, in a corn-harvester, of the frame suitably mounted, the cutter, the reel, the upwardly-inclined elevating-apron to the rear of the reel, and the upwardly-inclined auxiliary belt I', located to the rear of the elevating-apron and adapted to carry the heads of the cut corn, the said auxiliary belt being adjustable toward and from the rear edge of the elevating-apron, substantially as described.

5. In a corn-harvester, the combination of the frame, the cutter, the reel, the upwardly-inclined elevating-apron located to the rear of the reel, the shaft W and rod F', projecting from the rear end of the frame, the shaft W being approximately in line with the upper end of the elevating-apron, the pulleys D' and G' upon this shaft and rod, respectively, and the upwardly-inclined auxiliary belt I', traveling upon the pulleys G' and D', and the removable washers upon the shaft W, interposed between the pulley D' thereon and the end of the machine, whereby the auxiliary belt may be adjusted to or from the elevating-apron, substantially as described.

6. In a corn-harvester, the combination of the frame, the cutter, the board I, located on the grainward side of the machine, the vertical reel-shaft located at one end of the cutter and a distance forward of the same equal to the radius of the hub upon the reel-shaft, the hub upon the reel-shaft, the reel-arms secured tangentially upon this hub, whereby they assume a position parallel to the cutter when over it, and the arm M', secured upon the frame under the reel and extending rearwardly therefrom and curving toward the said board I, then away from it, and then abruptly downward toward the apron, and the elevating-apron, substantially as described.

7. In a corn-harvester, the combination of the frame, the inclined elevating-apron, an inclined receiver adjacent to the upper end of the apron, a gate, O', secured upon a rock-shaft journaled at the lower end of the receiver, a rigid arm, *s'*, upon the forward end of this rock-shaft, a pivoted lever, P', connected to arm *s'* by means of a link, whereby the cut corn may be released from the inclined receiver by throwing down the gate, a catch for holding the lever P' in its normal position, and a wind-guard at one side of the inclined receiver and over the free edge of the gate, substantially as described.

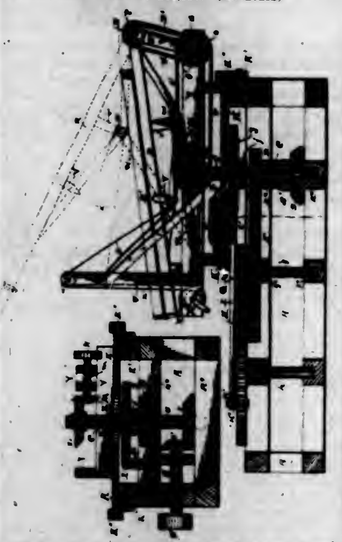


8. In a corn-harvester, the combination of the frame, the cutter, the vertical reel-shaft located at one end of the cutter, the hub secured upon the reel-shaft, the reel-arms secured tangentially upon the said hub, the arm M', secured to the frame beneath the reel and extending rearwardly therefrom and convex toward the grainward side of the machine and terminating with an abrupt downward extension, the grain-board I, the upwardly-inclined elevating-apron, the strips K and M, located one above the other vertically over the grain-board I and adjustably supported thereon, the guide G, comprising the timber H', projecting forward from the front end of the machine, the stripe O O, attached to the forward end of the timber H', extending upwardly and rearwardly therefrom and connected to the forward ends of the stripe K and M, the metallic strap P, connecting the forward ends of the timber H' and stripe O O, the arms of the said reel extending between the said stripe K and M, as and for the purpose described.

9. In a corn-harvester, the combination of the frame, the cutter, the reel adjacent thereto, the elevating-apron, the grain-board I, the strips K and M, located one above the other vertically over the grain-board I, vertical strips L, adjustably secured to board I, for adjustably supporting the strips K and M, the guide F and the guide G, comprising the timber H', projecting from the front end of the grainward side of the machine, the upwardly-inclined strips O O, connecting the forward end of the timber H' to the forward ends of the adjustable strips K and M, and the metallic strap P, connecting the forward ends of the timber H' and strips O O, substantially as described.

10. In a corn-harvester, the combination of the frame, the cutter, the reel adjacent thereto, the elevating-apron, the grain-board I, the strips K and M, located one above the other vertically over the grain-board and adjustably supported thereon, the guard-extension N, secured upon the upper edge of the strip M and inclined upwardly and outwardly toward the grainward side of the machine, and the forwardly-projecting guides F and G, the latter comprising the timber H', projecting from the grainward side of the front end of the machine, and the inclined strips O O, connecting the forward end of the timber H' with the forward ends of the strips K and M, substantially as described.

11. In a corn-harvester, the combination of the frame, the reel, the cutter, the apron-roller W', the upper apron-roller, W², the shaft W, extended out rearwardly from the frame, the inclined apron traveling upon the said rollers, the rod F', secured rigidly to the frame of the machine and extending rearwardly therefrom, the pulleys upon the extension of the shaft W and rod F', the auxiliary belt I', traveling upon the said pulleys and moving in unison with the apron, and the frame I'', supporting the auxiliary belt, this frame being loosely supported upon the extension of the shaft W and the rod F', substantially as described.



385,633. **FOLDING BASKET.** ALEXANDER C. KELLY and ADDISON M. FREEMAN, Hoboken, N. J., assignors to said Alexander C. Kelly. Filed Feb. 29, 1887. Serial No. 229,402. (No model.)

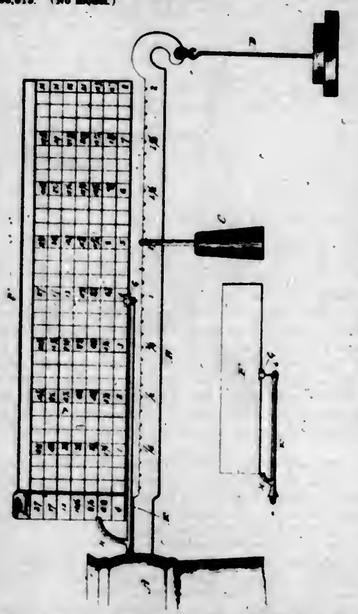
Claim.—1. The combination, in a folding basket, of a rigid bottom, sides of flexible material, swinging handles, and a brace connected at one end to the rim of the basket and having a hook at the other end to connect with a stud upon the handle for holding the same up vertically, substantially as set forth.

2. The combination, with the rigid wooden bottom, the flexible sides, rim, and handles in a folding basket, of a cover of flexible material having button holes or loops at the sides and ends for holding the same in place, the length of the cover being greater than the length of one of the handles, so that the cover may be used to close the basket, or it may be passed over one of the handles to form a hood for transforming the basket into a cradle or child's carriage-body, substantially as set forth.

385,634. **STRAW-STACKER.** ANDREW LARSENDER, South Bend, Ind. Filed Jan. 26, 1888. Serial No. 261,907. (No model.)

Claim.—1. In a straw-stacker, the combination of the main frame, a vertical shaft, and a loose gear-wheel on said shaft with the carrier mounted on said main frame, the arm secured to said gear-wheel provided with a detent adapted to adjustably engage with an annulus supporting said carrier, the pitman engaging said gear-wheel and adapted to impart alternate rotary movements thereto, and the gearing for actuating said pitman from said shaft, all constructed and arranged substantially in the manner and for the purpose described.

2. The combination of the main frame, its vertical shaft carrying a loose gear-wheel, and the carrier adjustably mounted on said frame with the toothed pitman-rod engaging said loose gear-wheel, the gear-wheel actuating said rod and driven by intermediate gearing from said shaft, and the mechanism, substantially as described, for driving the carrier-belts from said shaft, all constructed and arranged substantially in the manner and for the purpose described.



3. The main frame A, having vertical shaft C, the carrier-frame Y, having an annulus, K, and adjustably mounted in frame A, and the mechanism consisting of pitman I, driven from shaft C, driving-pinion J, and arm *z*, having detent *z'*, arranged substantially as described, for transmitting vibratory movements to frame Y from shaft C, in combination with the carrier-section R on frame Y, adjustably secured thereon by bars T and W, the ropes for elevating said section, and the mechanism, substantially as described, for driving the carrier-belts on said section from shaft C simultaneously with but independently of the movement of frame Y, substantially as described.

4. The combination of the main frame A, the vertical shaft C, loose gear J thereon, and gear-wheel H, driven by said intermediate gearing therefrom, with the carrier-frame Y, its annulus K, the arm *z*, fixed to gear J, provided with a detent adapted to be adjustably engaged with said annulus, and the toothed pitman driven by gear H and driving the gear J, all constructed and arranged substantially in the manner and for the purpose described.

5. The combination of the main frame A, shaft C, gears E and L, and loose gear J, having an arm, *z*, provided with a detent, *z'*, and the gears F G H, the supporting-shafts and pitman I, with the carrier-frame Y, having annulus K, provided with openings *k*, and the carrier-sections adjustably mounted on said frame Y, all constructed and arranged substantially in the manner and for the purpose described.

6. The combination of the frame A, its shafts *h*, *f*, and C, and the intermediate gearings on said shafts, the loose gear J on shaft C, driven by a pitman connected to a gear on shaft *h*, and having an arm, *z*, provided with a detent, *z'*, with the frame Y, having annulus K, mounted on rollers on frame A, the carrier-sections R R', bars T and W, hinging section R to frame Y, the uprights U, drum X, and rope *x*, all constructed and arranged substantially in the manner and for the purpose described.

385,635. **PRICE-INDICATOR FOR WEIGHING-SCALES.** CHARLES P. LANGASTER, Fairmount, Ind., assignor of two-thirds to Levi Scott and John H. Winslow, both of same place. Filed Mar. 3, 1888. Serial No. 266,619. (No model.)

Claim.—1. The combination, with the scale-standard, the scale-beam and its movable weight, of the supporting-rod E, attached to the standard and provided with the upwardly-extending arm H, bifurcated at its upper end, so as to embrace and steady the indicator-plate, the indicator-plate supported by the rod E, and means for holding the indicator-plate on the said rod E, substantially as described.

2. In a scale-beam indicator, the combination of the supporting rod E, provided with the upwardly-extending arm H, bifurcated at its upper end, so as to embrace the edge of the indicator-plate, an indicator-plate marked off and figured, and means for holding the indicator-plate on the said rod E, substantially as described.

385,636. **SAFETY-RAZOR.** HENRY B. LEACH, Boston, Mass. Filed Feb. 16, 1888. Serial No. 264,250. (Model.)

Claim.—1. In a safety-razor, the combination of the razor-blade its frame or holder, the clamping-screw K *k*, bearing directly on the

385,636.

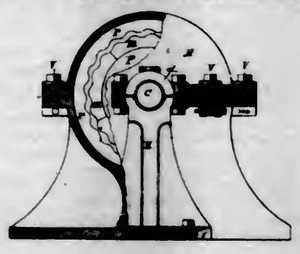
back of the razor-blade, and the gage-screw H, through which the clamping-screw passes, said gage-screw being screwed through a portion of the holder or frame, as set forth.

2. The combination, with the razor-blade and its frame or holder of the adjustable screw-holders E E, whose heads or flanges bear on the outer face of the blade and press it to the holder, as described.

3. In a handle adapted to receive a safety-razor blade for honing, the combination of the blade-holding tube T^2 with the lip adapted to operate as a screw-driver, substantially as described, and for the purpose set forth.

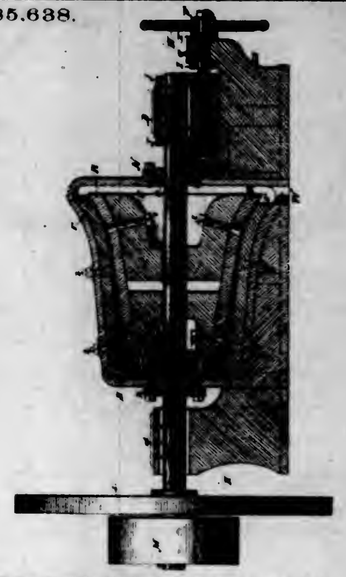
4. In a safety-razor, the combination of a handle and a frame with the clamping-screw K *k*, bearing directly on the back of the blade, and the gage-screw H, through which the clamping-screw passes, together with holding devices bearing on the outer face of the blade and pressing it to its holder, substantially as described.

385,637. METHOD OF MAKING PATTERNS FOR GARMENTS. FRANCIS X. LEDOUX, New York, N. Y. Filed Oct. 7, 1887. Serial No. 251,747. (No model.)



Claim.—1. The method of making patterns, which consists in fitting the form with an elastic material, stiffening said material, and indicating on said stiffened material the lines for the seams, from which the pattern may be made.

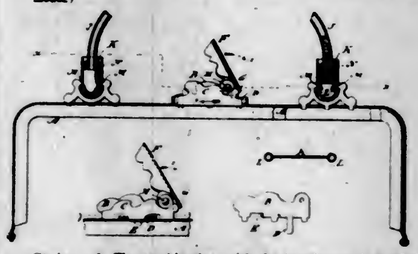
2. The method of making patterns, which consists in fitting the form with a single piece of elastic material, reducing the elasticity of such material while on the form, indicating by lines on said material the location of the seams, cutting said material in the places indicated, and forming a pattern from the cut pieces, substantially as set forth.



3. The method hereinbefore described of tailoring, which consists in fitting the elastic cloth to the person, then waxing said cloth to give it a permanent shape, and marking upon said cloth the lines the seams are to take, and, finally, in marking a pattern to conform to the waxed cloth after it has been removed.

385,638. STONE AND ORE CRUSHING AND PULVERIZING MACHINE. FRANK B. MERCH and ALFRED H. MERCH, Cleveland, Ohio. Filed Jan. 5, 1888. Serial No. 260,220. (No model.)

Claim.—In a stone and ore pulverizing machine, an outer shell provided with plates having corrugations throughout a portion of their



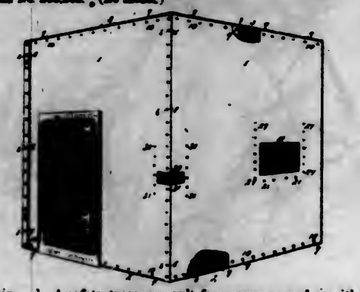
385,638.

length, the remaining portion being plain, an inner shell provided with like plates adapted to rotate in the outer shell, whereby one portion of the plates is utilized for crushing the material and the other portion for pulverizing, as set forth.

385,639. FRAME FOR POCKET-BOOKS, SATCHELS, &c. LOUIS MERRIS, New York, N. Y. Filed Apr. 5, 1888. Serial No. 269,703. (No model.)

Claim.—1. The combination, with the bag-frames A A, of the base B, stationary on one frame and provided with a locking-catch, and a base, C, stationary on the other frame, and having a shoulder with which the locking-catches engage by the inherent elasticity of the two frames, and from which shoulder the catch is released by bodily moving the base-pieces with the two bag-frames lengthwise in opposite directions, substantially as described.

2. The combination, with the bag-frames A A, movable lengthwise in opposite directions, of the base-piece B, stationary on one frame, and having a locking-catch, a base-piece, C, stationary on the other frame, and having a locking-shoulder, and means, substantially as described, for bodily moving the base-pieces, with the two bag-frames, lengthwise in opposite directions to release the catch from the shoulder, as set forth.



3. The combination, with the bag-frames A A, movable lengthwise in opposite directions, of the base-piece B, stationary on one frame, and having a locking-catch, a base-piece, C, stationary on the other frame, and having a locking-shoulder, and lever devices, substantially as described, for acting upon both base-pieces to bodily move them, with the two bag-frames, lengthwise in opposite directions to release the catch, substantially as described.

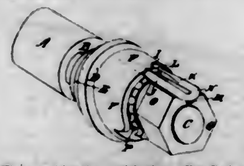
4. The combination, with the bag-frames A A, of the base-piece B on one frame, having the locking-shoulder E and laterally-projecting catch D, and the base-piece C on the other frame, having a similar locking-shoulder and lateral catch, the said catches respectively engaging the opposite locking-shoulders of the two base-pieces, substantially as described.

5. The combination, with a bag-frame having the lugs M M, of a handle, J, and an elastic thank, K, secured to the handle, and having two eyes, L, respectively engaging the lugs, substantially as described.

6. The combination, with a bag-frame having the lugs M M, of the handle J, the loop K, having eyes L, engaging the lugs, and the cap N, surrounding the loop, substantially as described.

385,640. TREASURE-VAULT FOR RAILWAY-CARS. JOSEPH CLOUGH and JULIUS W. STUART, Cotton Gin, Tex. Filed Jan. 9, 1888. Serial No. 260,502. (No model.)

Claim.—1. A safety treasure-vault for express-cars, &c., with the combination of the walls 1, floor 2, and roof 3 of the vault constructed of bullet-proof steel plate riveted together at their corners, and the angle-irons 9, to which the walls, floor, and roof are riveted, the bullet-proof steel-plate door 11, the parcel-delivery window 18, the combined desk-shelf and bullet-proof shutter 19, the said vault provided with a port-hole, 30, and the bullet-proof plug 31, that stops the port-hole, substantially as described, and for the purpose set forth.



2. A safety treasure-vault for express-cars, &c., with the combination of the walls, floor, and roof of the vault constructed of bullet-proof steel plate, the flanged coupling-edges of the side plates provided with perforations in said flanged edges and the edges of adjoining plates and the rivets that connect said plates, perforated angle-irons and the bottom and top plates provided with corresponding perforated edges and rivets that secure said plates to the angle-irons, the vault provided with a port-hole and angle-plug that stops the port-hole, and the drop-bolt 34, that fastens the plug in its seat, and the catch-hook 42, that holds said bolt in suspension when inoperative, substantially as and for the purpose set forth.

3. A safety treasure-vault for express-cars, &c., with the combination of the bullet-proof steel-plate walls, floor, and roof of the vault, and means for attachment of said plates, the parcel-delivery window, the combined desk-shelf and bullet-proof shutter for fortifying the window, the brace-bracket 22, that supports the same when a desk, and the arched drop shutter-bar 24, that fortifies the shutter from the attack of train-robbers, substantially as and for the purpose set forth.

4. A safety treasure-vault for express-cars, &c., with the combination of the bullet-proof steel-plate walls, floor, and roof of the vault, with means for securing their sections together, the ventilator-flues 44, having oppositely-presented openings that communicate with the interior of the vault and the open air, and the damper 50, that regulates or closes the draft, substantially as and for the purpose set forth.

5. A safety treasure-vault for express-cars, &c., with the combination of the bullet-proof steel-plate walls, floor, and roof of the vault, the bullet-proof door secured by a combination-lock, the parcel-delivery window, combined shutter and desk-shelf in connection therewith, and the arched bar that works in the channel-grooves 25 and when dropped behind the shutter fortifies the same against the attack of train-robbers, and the catch-hook 29, that holds said bar, when inoperative, in suspension, substantially as and for the purpose set forth.

385,641. HUB-ATTACHING DEVICE. BENJAMIN PARTRIDGE, Birmingham, County of Warwick, England. Filed Feb. 27, 1888. Serial No. 265,269. (No model.)

Claim.—1. The combination, with the collet D, having the hood F, provided with the longitudinal orifice H and the recess I, having an enlarged inner end, of the notched nut Q and the staple comprising two substantially parallel legs, J K, of different length, the longer leg entering the longitudinal orifice, and the shorter leg having a bulb, L, engaging the recess of the hood, substantially as described.

2. The combination, with the axle A, having the smooth portion B and screw-thread C, of the collet D, having the cone E, and the hood F, provided with the longitudinal orifice H and the recess I, the notched nut Q, and the staple having two substantially parallel legs, J K, of different length, the longer leg entering the longitudinal orifice, and the shorter leg having the bulb L, engaging the recess, substantially as described.

3. The combination of the collet D, having the longitudinal orifice H and recess I, the notched nut Q, and the staple comprising a loop, N, provided with a lip, M, and two substantially parallel legs, J K, the longer leg entering the longitudinal orifice, and the shorter leg having a bulb, L, engaging the recess, substantially as described.

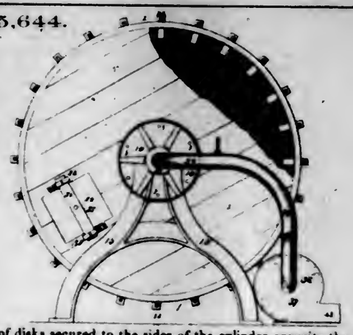
385,642. COMBINED MUSIC-CLIP AND BOW-GUIDE. WILLIAM H. PIKE, Liverpool, County of Lancaster, England. Filed Apr. 27, 1888. Serial No. 272,050. (No model.)

Claim.—1. The herein-described music-clip and bow-guide, consisting of two parts, F G, bent at right angles to each other and provided, respectively, with means for attachment to the finger-board and for holding the music.

2. The herein-described music-clip and bow-guide, consisting of two parts, F G, bent at right angles to each other and provided with a plurality of cuts to form a series of longitudinal strips, said strips being alternately turned at right angles and then bent upward to form spaces, substantially as and for the purposes hereinbefore set forth.

385,643. LADY'S HEAD-WEAR. ANNA SCHULTZ, Milwaukee, Wis. Filed Mar. 12, 1888. Serial No. 266,981. (No model.)

Claim.—The described article of ladies' head-wear, consisting of the crown A, in combination with the rear and side extensions, C D C, for protecting the neck, ears, and throat, and the front brow-protecting flap, B, extending triangularly from the crown, the ends of the side extensions being provided with fastening devices, as shown at *a b*, whereby they may be joined together either under the chin of the wearer or on top of the crown, and the brow-flap B being flexibly connected to the crown to enable it to be either extended forward therefrom or turned back thereover at will.



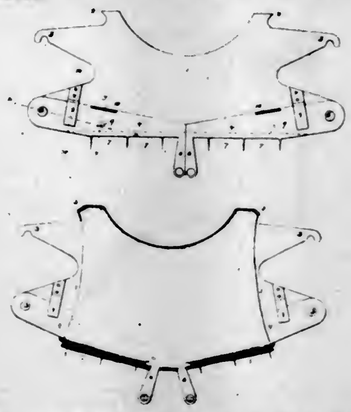
385,644. APPARATUS FOR THE MANUFACTURE OF LEATHER. WILLIAM SCHWINGHARDT, St. Louis, Mo. Filed Jan. 26, 1888. Serial No. 262,008. (No model.)

Claim.—1. The combination, with the supports and driving-belt, of a rotary cylinder provided with inwardly-projecting lugs, tubular trunnions on which said cylinder works, and a fan having communication with the interior of the cylinder through one of said trunnions, substantially as described.

2. The combination, with the supports, of a rotary cylinder, tubular trunnions on which the cylinder works, a hot-air chamber having a steam-coil located therein, and a fan, said hot-air chamber and fan having direct communication with the interior of the cylinder through the said tubular trunnions, substantially as described.

3. The combination, with a rotary cylinder and the tubular trun-

385,644.



nions, of disks secured to the sides of the cylinder opposite the inner ends of the trunnions, said disks having perforations in their peripheries, substantially as described.

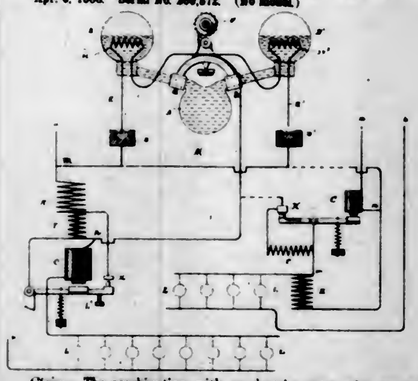
4. The combination, with the supports, of a rotary cylinder, the kneading-studs secured thereto, the tubular trunnions, the disks having perforations in their peripheries, the exhaust-pipe, the fan connected therewith, and the hot-air chamber having a steam-coil therein, substantially as described.

5. The combination of the rotating cylinder, the tubular trunnions on which it works, the hot-air chamber and its steam-heating coil, the thermometer 29, the perforated flanged disks, the kneading-studs, the suction exhaust-pipe, the thermometer 44, the rotary fan, and the driving-belt working on the periphery of the cylinder, whereby the said cylinder and fan are rotated, substantially as described.

385,645. DRESS-SHIELD FORMER. FRIEND W. SMITH, Jr., and SAMUEL S. WILLIAMSON, Bridgeport, Conn., assignors to the Canfield Rubber Company, same place. Filed Sept. 26, 1887. Serial No. 250,676. (No model.)

Claim.—1. A machine for making seamless dress-shields, consisting of a sheet-metal former crescent-shaped along its top and having grasping-points at the extremities of said crescent, in combination with a pair of levers pivoted each to opposite extremities of said former, said levers having fastening devices—such as pin-points—at their outer edges and adapted to have a throw greatest at their inner ends, whereby the fabric of the shield is stretched the greatest at the center of the crescent and the least at the extreme ends thereof, substantially as set forth.

2. The stationary former having a concave top edge, in combination with the stretching-levers pivoted to said former on each side of a line projected at right angles to a tangent to the curve of said concave, substantially as shown.



385,646. CULTIVATOR. WILLIAM S. TEMPLIN, Romeville, Kans. Filed Oct. 22, 1887. Serial No. 253,085. (No model.)

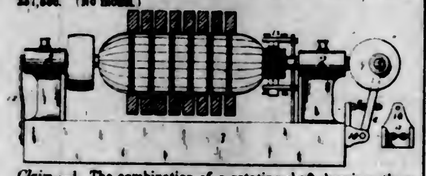
Claim.—The plows D E, having horizontal shares to run parallel with the surface of the ground, and the standards extended to form landsides rising above said shares and at right angles thereto, as shown, in combination with the beams and perforated braces, substantially as specified.

385,646.

385,647. ELECTRIC METER. ELIHU THOMSON, Lynn, Mass. Filed Apr. 6, 1888. Serial No. 269,872. (No model.)

Claim.—The combination, with an electric meter, of a current-controller governing the flow of current to the same and a controller-magnet or other electro-responsive device adjusted, as described, to permit an increase in the flow of current to the meter when the current to be measured falls below that to which the meter responds normally, as and for the purpose described.

385,648. BANK ACCOUNT-BOOK. WALTER THOMSON, Fargo, Dak. Filed Dec. 31, 1886. Serial No. 223,131. (No model.)



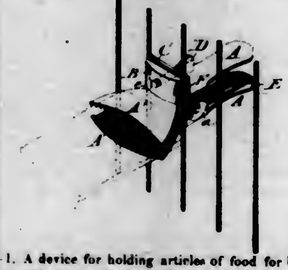
Claim.—1. The bank account-book A, having a suitable number

of full leaves, C, and alternate series of short leaves, B, each of said short leaves having margin *b* creased or perforated at *b'*, substantially as and for the purposes set forth.

2. The bank account-book herein described, composed of alternate long and series of short leaves, the several long leaves prepared to receive the depositors' names on the left-hand side, and both also prepared to receive the accounts for several successive days, the right-hand end of each of said short leaves having a margin to receive the last day's balance, which margin is adapted by folding to form the beginning of the next day's account on the next page.

385,649. DEVICE FOR IMPARTING END MOTION TO SHAFTS. STONEWALL TOMPKINS, Crozet, Va. Filed May 11, 1887. Serial No. 237,896. (No model.)

Claim.—1. The combination of a rotating shaft, bearings therefor, and an eccentric disk bearing against the end of the shaft, so as to impart an end motion thereto in rotating.



2. The combination of the rotary shaft, the bearings therefor, and a rotating eccentric disk rigidly supported, bearing against the end of the shaft and driven by frictional contact therewith.

3. The combination of the shaft, the bearings therefor, the eccentric disk bearing against the end of the shaft and driven thereby, and an adjustable arm supporting the disk.

4. The combination of the shaft, the bearings therefor, the eccentric disk bearing against the end of the shaft and rotated thereby, and the spring pressing against the other end of the shaft, so as to hold it in contact with the disk.

5. The combination of the shaft, the bearings therefor, the disk bearing against the end of the shaft, and the support therefor, the disk having an orifice eccentric with its periphery and fitted over a hub eccentric with the supporting-pivot, and a clamp for holding the disk in any position on the hub.

385,650. CUTTLE-BONE AND FOOD HOLDER FOR BIRD-CAGES. JOHN V. WEMPLE, Schenectady, N. Y., assignor of one-half to Henry B. Salisbury, same place. Filed Mar. 16, 1888. Serial No. 267,906. (No model.)

Claim.—1. A device for holding articles of food for birds, consisting in the combination, with the bird-cage, of the convexed interpivoted clamping-jaws having curved and serrated biting edges and means for attaching them to the cage, comprising plate B, secured to one of the jaws, loose plate C, and screw D, substantially as described.

2. In combination with a bird-cage, a cuttle-bone, and food-holding device, consisting of the interpivoted clamping-jaws, the spring arranged between said jaws, and means for attaching them to the cage, consisting of a plate, B, secured to one of the jaws, a loose plate, C, and a clamping-screw, D, all arranged to operate substantially in the manner and for the purpose described.

3. The combination of the jaws A A, having the curved and serrated biting-edges A' A', the spring E, arranged between said jaws, the part B, secured at right angles to one of the jaws and grooved at F, the plate C, and screw D, all arranged substantially as described.

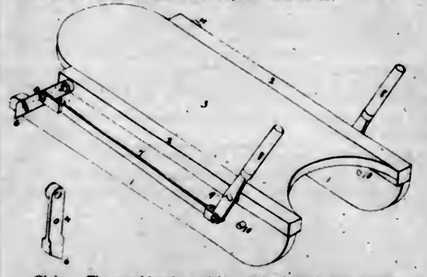
385,651. BUCKLE. EDWARD H. WHEELER, Waterbury, Conn. Filed Apr. 7, 1888. Serial No. 269,947. (No model.)

Claim.—1. The combination, with the hook, of the sliding plates connected together, the end of one plate being bent approximately at right angles and the end of the other plate closing against the end of the hook, substantially as described.

2. The combination, with the hook, of the two sliding plates, the end of one plate closing the hook and the end of the other plate

385,651.

being bent substantially at right angles and adapted to fit in a recess or opening in the end of the hook, so as not to receive the wear, substantially as specified.



3. The combination, with the hook, of the two sliding plates and the link connecting the outer plate with the hook, substantially as described.

4. The combination, with the hook and the two sliding plates held separated by spring-pressure, of the link connecting one of the plates with the hook, substantially as specified.

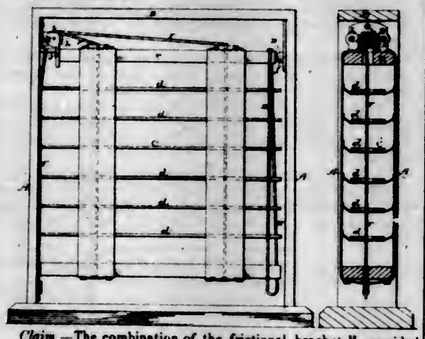
5. The combination, with the hook and the sliding plate having its end bent substantially at right angles for the purpose described, of the link-connection between the said plate and the hook, substantially as specified.

6. The combination, with the hook and the sliding plate adapted to close against the end of the hook, of the connection interposed between the plate and the hook, whereby the said plate is reciprocated at the same time it is pressed toward the hook, substantially as described.

385,652. COASTING-SLED. JOHN D. WILSON, Jennings Station, Mo. Filed Feb. 3, 1888. Serial No. 263,394. (No model.)

Claim.—The combination, with a sled, of the independently-movable dogs 4, depending from the fulcrum-pins 5 on each side of the sled, rods 7, connecting the dogs directly with the independently-movable hand-levers 8, and stops limiting the forward movement of the dogs, substantially as shown and described.

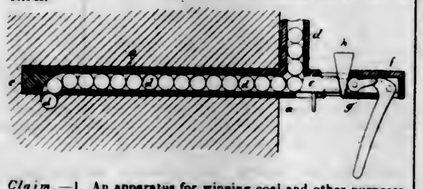
385,653. NOZZLE. BENJAMIN WRIGHT, Los Gatos, Cal. Filed Nov. 3, 1887. Serial No. 254,175. (No model.)



Claim.—1. The combination, with the nozzle-body provided with a longitudinal liquid-passage through it, the said passage at its exit end being flattened or formed straight on one side, as at *b*, of the turning plug intersecting the said passage near its exit end and provided with a transverse passage through it which registers with the passage through the nozzle-body, the exit end of this passage through the plug being flattened or formed straight on one side, as at *b'*, whereby the issuing liquid may be made to vary from a full stream to a thin broad fan-shaped spray by turning the plug and bringing the straight edges *b b'* adjacent to each other, substantially as described.

2. The combination, with the nozzle-body provided with the usual longitudinal liquid-passage through it, of the turning plug intersecting the said passage through the body near its exit end and provided with a transverse passage through it which registers with said body-passage, the said passage through the plug at its exit end being formed into a small channel or groove, as at *c*, whereby the issuing liquid may be made to vary from a full stream to a very small concentrated and far-reaching stream by turning the plug, substantially as herein set forth.

3. The combination of the nozzle-body provided with the usual longitudinal passage through it, this passage at its exit end being formed flat or straight, as at *b*, on one side and curved on the oppo-



site side, as at *c*, and the turning plug intersecting the passage through the body of the nozzle and provided with a transverse passage which registers with the body-passage, the exit end of the said plug-passage on one side being provided with a straight flat edge, as at *b'*, and on the opposite side with a small channel or groove, as at *c*, whereby the issuing liquid may be made to assume a full stream or a small concentrated stream or a broad thin fan-shaped spray by turning the plug, substantially as described.

385,654. **HANGING AND OPERATING VENETIAN BLINDS.** FRANK W. WRIGHT, Burlington, Vt. Filed Oct. 24, 1887. Serial No. 253,239. (No model.)

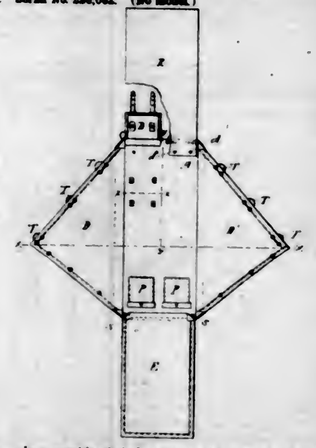
Claim.—The combination of the frictional bracket E, provided with the supports *h*, and a suitable bearing for the gudgeon, and having its lower vertical surface roughened, with the double-grooved pulley journaled between the lateral supports, the upper slat, which has its end to bear against the roughened surface, and the gudgeon, substantially as described.

385,655. **APPARATUS FOR WINNING COAL, &c.** THOMAS ARCHER, Jr., Newcastle-upon-Tyne, England. Filed May 9, 1888. Serial No. 273,273. (No model.) Patented in England Oct. 3, 1887, No. 13,846.

Claim.—1. An apparatus for winning coal and other purposes, consisting of a tubular rod having on one side near its inner end an aperture, a series of balls, blocks, or rollers of approximately the inner diameter of said rod, and means for imparting pressure through the series of balls, blocks, or rollers from one to the other, so as to force them one by one through said aperture into the mass of the coal or other mineral, substantially as described.

2. The combination of the hollow rod having a lateral aperture near one end, the series of balls, blocks, or rollers therein, and means for applying pressure to said balls, blocks, or rollers, so as to force them one by one through said aperture, substantially as described.

385,656. **SHIP FOR SUBMARINE OBSERVATIONS.** ROBERT F. S. BELISLE, Philadelphia, Pa., assignor of one-half to Frederick Bourquin, Camden, N. J. Filed Feb. 27, 1888. Serial No. 265,353. (No model.)



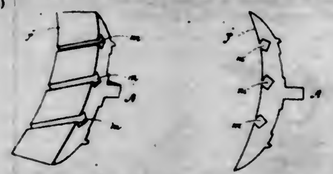
Claim.—A ship or vessel, substantially as described, having several decks and port-lights arranged in the sides of the hull thereof for the purpose of observation when the vessel is submerged to any desired depth, an inlet-valve near the bottom for the admission of water

to the lower hold of said vessel, and discharge mechanism for relieving the vessel of the same.

385,657. **KNAPSACK.** HORACE BLANCHARD, Boston, Mass., assignor of one-third to Edward H. Studley, same place. Filed Jan. 31, 1887. Serial No. 226,082. (No model.)

Claim.—In a combined shelter-tent and knapsack, the combination of a ground blanket, R, having attached to its end a roof-piece, A, provided at its side edges with side wall-pieces, D D, with the attached end piece, E, all adapted to be made into a tent or to be folded for a knapsack, substantially as described, and for the purpose set forth.

385,658. **CAR-COUPLING.** MILES W. BROWN, Gainesville, Ga. Filed Feb. 25, 1888. Serial No. 265,331. (No model.)

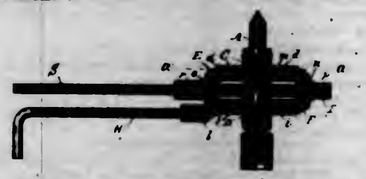


Claim.—1. In a car-coupling, as a means of suspending the pin,

the bracket E, the lever F, pivoted to the draw-head, and the spring *f*, substantially as shown and described.

2. In a car-coupling, the deflector C, the spring *c*, and the guide D, substantially as shown and described, and for the purpose specified.

385,659. **BRAKE-SHOE.** PATRICK BROWNLEY, St. John, New Brunswick, Canada. Filed Dec. 22, 1887. Serial No. 258,057. (No model.)



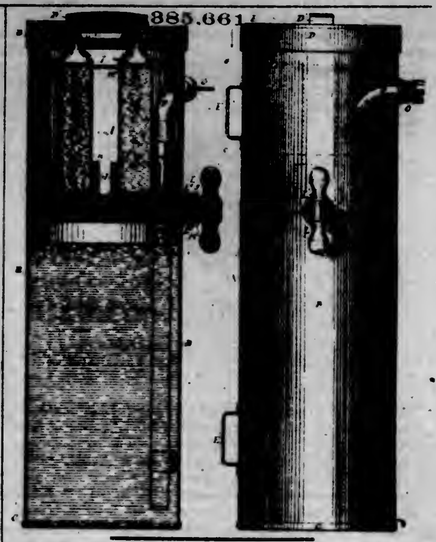
Claim.—1. A brake-shoe provided with a groove in its face, as *m*, the rear wall of said groove being inclined to the face of the shoe, substantially as and for the purpose described.

2. A brake-shoe having a groove or recess in its face, the bottom of said groove being lower than its outer edge to form a gutter, as *w*, for receiving the substances removed from the wheel, substantially as set forth.

3. A brake-shoe provided with a diagonally-arranged groove in its face, as *m*, said groove having rear walls, as *c d*, inclined to said face, substantially as described.

4. The brake-shoe A, provided with the groove *m*, having the walls *b d c z*, inclined to the face *f* of said shoe, substantially as set forth.

385,660. **RATCHET-DRILL STOCK.** WILLIAM COPPAGE, Terre Haute, Ind., assignor of one-half to William H. Larimer and Peter Crackenberger, both of same place. Filed Mar. 12, 1888. Serial No. 267,023. (No model.)



Claim.—In a ratchet-drill stock, the spindle, the flanged collars, each carrying a pawl pivoted thereto, and both rigidly secured to the spindle, the pair of bevel gear-wheels mounted so as to turn on the spindle against said collars, and each having a recess, *j*, and interior notches, *k*, arranged to receive and engage said pawls, the operating-lever secured to one of said bevel gear-wheels, the pinion-frame forming a bearing for the spindle, arranged between the bevel gear-wheels, and carrying one or more bevel-pinions, which intermesh with both of the bevel gear-wheels, and the handle secured to the pinion-frame, all combined and arranged to co-operate substantially as and for the purpose specified.

385,661. **CHEMICAL FIRE-EXTINGUISHER.** WILLIAM H. CUSHMAN, Charlton Depot, Mass. Filed Feb. 17, 1888. Serial No. 264,414. (No model.)

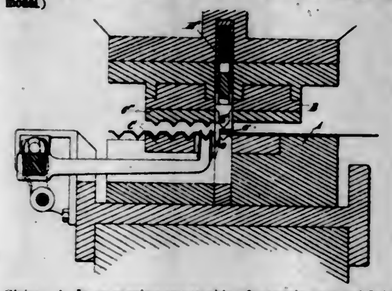
Claim.—1. In a chemical fire-extinguisher, the combination, with case B, for holding the liquid and chemicals, of turning spindle K, of less length than the diameter of case B, cups J, securely fastened to the upper side of spindle K, the latter being arranged in a horizontal position in the upper part of case B and supported at one end by an internal cup-bearing and at the other by a supplemental journal inserted through the side of case B, and plate I, provided with holes or openings H to receive and support the upper ends of the glass bottles of chemicals, while their lower ends rest in and are supported by cups J, said parts being arranged relatively, as shown and described, for supporting, breaking, and discharging the bottles of chemicals by a partial rotation of spindle K at the desired time, substantially as described and set forth.

2. The combination, with case B, provided with a cup-bearing on its inner side, and turning spindle K, of less length than the inner diameter of case B, and provided at its inner end with bearing K', to fit said cup-bearing, and with a central hole in its outer end, K^3, provided with a screw-thread, as set forth, of thumb-spindle L, provided with thumb-piece L' on its outer end, and a screw-thread on the inner end of its stem L^2, to fit the screw-thread in the hole in end K^3 of spindle K, said parts being constructed and relatively arranged for operation, substantially as and for the purposes set forth.

385,661.

385,662. **SHEARING AND PUNCHING MACHINE.** CHRISTOPHER C. BENGE, Granger, Tex. Filed Apr. 13, 1888. Serial No. 270,536. (No model.)

Claim.—1. The combination of the base-blocks, the standards B B, rising from opposite edges of one end thereof, the standard C, rising from the opposite end of said block, the blade resting in a groove in the upper side of the bed-block and having its outer end rendered vertically adjustable by means of long wedges inserted in the groove under the same, the head-block pivoted at one end between the legs of the standard C and with the other end between the standards B B, the spring secured at one end to the standard C and having its other end attached to the upper edge of the head-block by a link and staple, and the cam-disk pivoted between the standards B and provided with an arm socketed at its end for the attachment of an operating-lever, substantially as specified.



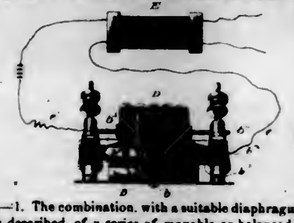
2. The combination, with the base-block A, the standards B B and C, the adjustable blade E, the head-block *f*, having the blade F attached, the spring G, lifting the head-block, and the cam-disk H, moving the head-block downward, of the resting-block I, secured to the base-block A, and the bar *i*, moved by mechanism, substantially as described, between guide-pieces attached to the standard for the purpose of clasping the metal plate to be operated on between itself and the resting-block, as specified.

3. The combination, with the pivoted head-block, the spring lifting the same, the cam-disk depressing said block, the blade attached to the bed-block, and the blade attached to the head-block, of the resting-block I, the bar *i*, having its ends turned up at right angles, the guide-pieces *i'*, secured to the standards, the curved cams J, having the flat edge portions j^2 and the arms *j'*, the bar j^3, connecting the ends of said arms, and the links *j*, connecting said curved cams and the bar *i*, substantially as specified.

4. The combination, with the bed-block having the groove D, and the opening *d* in said groove, and the standard C, rising from said block, of the guide-blocks K, having the guide-grooves *k*, the die-block L, having the guide-ribs *l* and stem or stud *l'*, for attachment of the die, the cam-disk M, provided with the arm *m*, socketed at its

end for the attachment of an operating-lever, the link-bar N, and the bed-block O, resting in the groove D and provided with the openings *e*, substantially as specified.

385,663. MACHINE FOR MAKING METALLIC LATHING. ANTON EBERSON, Detroit, Mich., assignor to Henry C. Hodges and Charles C. Hodges, same place. Filed Feb. 17, 1888. Serial No. 264,330. (No model.)



Claim.—1. In an opening-out machine for opening out and finishing metallic lathing, &c., the combination, with the folding-dies, of lining-fingers *e*, said fingers connected with a traveling platen and adapted upon its descent to enter between the last-folded strip and the strip next to be folded, and adjust and hold the sheet in proper position for the folding-dies, substantially as and for the purposes described.

2. In an opening-out machine for opening out and finishing metallic lathing, &c., the combination, with the folding-dies, of lining-fingers *e*, connected with the traveling platen, and in connection with said liners springs for projecting the liner beneath the platen and serving as cushions against which the liners may react as the dies come together, substantially as described.

3. In an opening-out machine for opening out metallic lathing, the combination, with the folding-dies, of a finger adapted to grasp and fix in exact particular position the metal for the dies, said fingers provided with a projecting ledge adapted to extend across the strip to be folded, thereby holding the same against displacement as the dies come together, substantially as described.

385,664. TELEPHONE-TRANSMITTER. JULIUS EBERLE, Jr., Washington, D. C. Filed Mar. 22, 1887. Serial No. 232,046. (No model.)

Claim.—1. The combination, with a suitable diaphragm-electrode arranged as described, of a series of movable or balanced electrodes mounted on the diaphragm, but insulated therefrom and swung on a rod having devices for adjusting the balanced electrodes laterally, for the purpose set forth.

2. The combination, with the diaphragm-electrode having the oblique face and movable or balanced electrodes mounted on the diaphragm, having pointed or reduced ends, of a rubber cushion, the pointed ends of said electrodes lying between the cushion and the oblique face of the diaphragm-electrode.

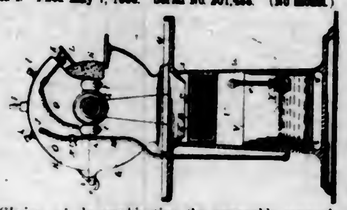
3. The combination, with a diaphragm-electrode and movable or balanced electrodes mounted on the diaphragm, but insulated therefrom and swung on a rod or bar having means for adjusting said movable electrodes laterally, of a rubber cushion against which lie or rest the lower ends of the movable electrodes, for the purpose set forth.

4. The combination, with the movable or balanced electrodes having reduced ends and swung on a rod or bar having means for moving said electrodes laterally, of the rubber cushion against which the reduced ends of the movable electrodes rest, said cushion having devices for adjusting the ends of the movable electrodes with relation to the cushion and diaphragm-electrode, for the purpose set forth.

5. The combination, with a diaphragm-electrode, of posts mounted upon the diaphragm, movable balanced electrodes mounted upon said posts, and an adjustable cushion, also mounted upon said posts, the cushion to regulate the adjustment of the balanced electrodes, substantially as and for the purpose set forth.

6. The combination, with a diaphragm-electrode, of posts mounted upon the diaphragm, said posts carrying an adjustable cushion, springs for increasing the distance between the cushion and diaphragm-electrode, and screws for depressing the spring and decreasing said distance, substantially as specified.

385,665. CASE-DELIVERY DEVICE. SIDELL B. FISH, Greenport, assignor of one-half to Eugene Pearl, New York, N. Y. Filed Apr. 16, 1888. Serial No. 270,726. (No model.)



Claim.—1. The change-delivering device constructed, substantially as described, of an extended inclined chute having a cash-receiving opening at its upper end, in combination with a spring-actuated door closing its lower end, substantially in the manner and for the purpose herein set forth.

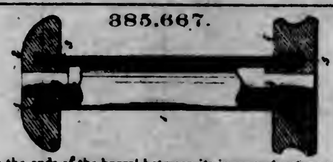
2. In a change-delivering device, the combination, substantially as set forth, of the inclined chute having a cash-receiving opening at its upper end, the spring-actuated door closing its lower end, and the actuating-cord extending from the door to a point at or near the receiving end of the chute.

3. The combination, in a portable change-delivery device, substantially as set forth, of the hopper A, the inclined chute B, projecting beyond its supports at its lower end, D, the door E, closing an opening in said lower end, the spring F, actuating the door to close it automatically, the hand-piece H, projecting from the door, and the tray G beneath the door.

385,666. GRINDING-MACHINE. GEORGE A. HADLEY, Providence, R. I. Filed May 7, 1886. Serial No. 201,453. (No model.)

Claim.—1. In combination, the removable reservoir-pan, the pump, and the filter pivoted to the suction-pipe of the pump and adapted to draw the water from the said reservoir-pan and to be turned upward upon its pivot in order to effect the desired removal of the said pan, substantially as described.

2. In combination, the lower section of the wheel-case provided with the slot, the groove, and the perforation extending from the groove, and the upper section of the wheel-case provided with the curved tongue or hook, and the downwardly-extending lip which enters the said groove, substantially as and for the purpose specified.



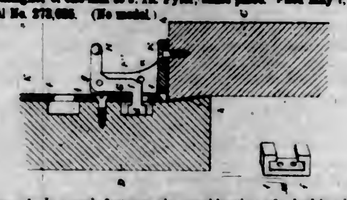
3. In combination, the rotary arbor, the grinding-wheel, the case provided with a circular rib, and the removable segment provided with a groove adapted to fit over the corresponding rib of the case, substantially as and for the purpose specified.

385,667. BOBBIN. CHARLES HARDY, Nashua, N. H. Filed Jan. 23, 1888. Serial No. 262,256. (No model.)

Brief.—The object of the invention is to provide a simple and inexpensive construction of bobbins, whereby the head and barrel may be united in such manner that exposure to wet or blows shall not remove the head or rupture the joint between it and the barrel.

Claim.—1. A bobbin consisting of the heads and barrel separately formed, and each of the former provided with an inwardly-expanding annular chamber extending partially through it, and a wedge arranged upon and supported by the base of each chamber and

385,667.



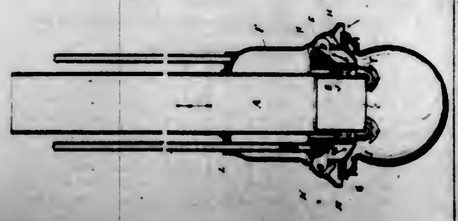
entering the ends of the barrel between its inner and outer surfaces to spread and wedge the said ends in the chambers of the heads, substantially as described.

2. A bobbin having in its head an annular recess expanding outwardly or radially and provided with an annular wedge integral with the head, the converging walls of said wedge being substantially parallel with the walls of the recess, substantially as described.

3. The combination, with a bobbin-head having a recess, 3, concentric with the neck 4, the width of said recess increasing toward the outer end of the head and provided with an annular integral wedge, 5, of the barrel 1, lying in said recess and receiving the wedge in an annular split, whereby the end is spread to fill the recess, substantially as described.

4. A bobbin having in its heads annular recesses cut from the inner or adjacent faces toward, but not to, the outer faces, and expanding in width as they enter the heads, annular wedges lying in said recesses and having an expansion corresponding with that of the recesses, and a barrel, the ends of which enter said recesses and are spread by said wedges, substantially as described.

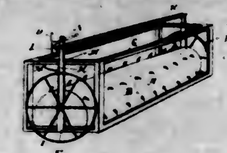
385,668. SASH-FASTENER. FREDERICK A. HEMMINGER, Columbia, Mo., assignor of one-half to J. Th. Fyfer, same place. Filed May 7, 1888. Serial No. 273,026. (No model.)



Claim.—1. In a sash-fastener, the combination of a locking-lever journaled in uprights secured to the meeting-rail of the lower sash and swinging in a vertical plane at right angles to the path of the sashes, and furnished with a T-shaped locking toe or end, with a keeper or catch having recesses *f f* extending above and below the entrance-opening, substantially as described.

2. In a sash-fastener, the combination of a locking-lever journaled in uprights secured to a sash-rail and swinging in a vertical plane at right angles to the path of the sashes, with locking-pin openings in the rear of the bend or elbow of said locking-lever and extending through said uprights, whereby the said lever may be securely held in a locked or unlocked position at will, substantially as and for the purpose described.

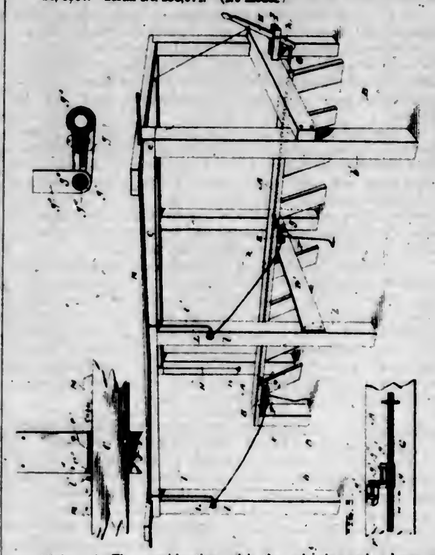
3. In a sash-fastener to be secured to the meeting-rail of a lower sash, the combination of the base-plate with a sheet of rubber secured directly underneath the same, with its free end extending against the upper sash to prevent rattling, all as and for the purpose described.



4. In a sash-fastener, the combination of a locking-lever journaled in uprights secured to the meeting-rail of the lower sash and swinging in a vertical plane at right angles to the path of the sash and furnished with the locking end or toe, as described, with a recessed catch or keeper bar with rectangular recesses beveled only on their lower sides to permit the upper sash to be pushed up and the lower sash pushed down without manipulating the lever, substantially as and for the purpose described.

385,669. GAS-BURNER. ERNST HENRY, Chicago, Ill., assignor to the United States Arc Gas Company, of New Jersey. Filed Dec. 8, 1887. Serial No. 257,348. (No model.)

Claim.—In a regenerative gas-burner, the combination, with the central draft-tube, the gas-supply pipe, and an annular chamber surrounding said tube and having connection with said gas-supply pipe at its top, and having a burner around its bottom, of an annular filling of a porous fibrous non-combustible substance in said chamber, and a perforated plate resting upon said substance and forming a supplemental chamber for the distribution of the gas before passing through the filling, essentially as shown and described.



385,670. WHEAT AND CORN CULTIVATOR. WILLIAM H. HOSS, near Bellefontaine, Ohio. Filed July 17, 1886. Serial No. 172,571. (No model.)

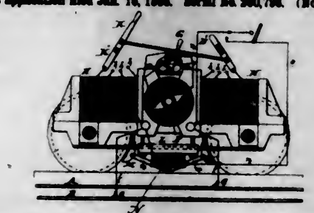
Claim.—1. An implement for working young growing wheat and corn, composed of a frame, a tongue, and a roller, A, which has the curved double wedge-shaped teeth B, that enter the ground backward, as described, so as not to injure the young plants while loosening the ground, as and for the purpose set forth.

2. The combination, with the roller A, having the double wedge-shaped curved teeth B, which enter the ground backward, of wheels I and hoisting apparatus K M N O, as and for the purpose set forth.

385,671. ANIMAL-RELEASING DEVICE. WILLIAM H. HOWDEN, Lawrence, Kans., assignor of one-third to John McNaughton. Filed Dec. 21, 1887. Serial No. 258,611. (No model.)

Claim.—1. The combination, with the releasing-rod, a lever at one end of the stable to operate the rod, and a connection leading from the handle of the lever to the opposite end of the stable for operating the lever, of the hitching-rings, a cable permanently supported along a passage at the rear end of the stalls, the said cable terminating at each end of the stable in a free end and having a free longitudinal movement in either of two opposite directions, and connections leading from the cable to the several hitching-rings, whereby the animals may be released and led out from either end of the stable, substantially as set forth.

2. The combination, with the releasing-rod, a plate provided with a removable half-section, whereby it may be adjusted on the rod in any desired position, a bolt secured to the plate, a pin having its head loosely mounted on the bolt, and a spring on the bolt between the head of the pin and a portion of the plate, of a pair of perforated lugs secured in position to receive the pin, substantially as set forth.



3. The combination, with the hitching-rings, means for releasing them, a cable permanently supported along a passage-way, and connections between the cable and the hitching-rings, of cable-bearings

provided with open slots along their under faces, whereby the connections are allowed a free passage as the cable is moved lengthwise, substantially as set forth.

4. The combination, with the hitching-rings, means for releasing them, a cable permanently supported along the passage-way, and connections between the cable and the hitching-rings, of cable-bearings provided with flaring-mouthed slots along their under faces for receiving and guiding the connections, substantially as set forth.

385,672. ELECTRIC RAILWAY. RUDOLPH M. HUNTER, Philadelphia, Pa., assignor to the Electric Car Company of America, same place.

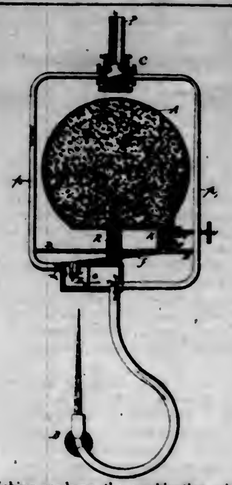
Original application filed Mar. 12, 1886, Serial No. 195,742. Divided and this application filed Jan. 16, 1888. Serial No. 260,798. (No model.)

Claim.—1. The method of braking an electrically-propelled vehicle, which consists in first slowing down the vehicle by increasing the counter electro-motive force of the motor until it increases above the initial electro-motive force of the source of electric supply, and simultaneously therewith establishing a closed circuit from the source of electric supply for the motor, energizing a friction-brake to quickly stop the vehicle at the desired position.

2. The method of braking an electrically-propelled vehicle, which consists in first increasing the strength of the field-magnets of the motor until the counter electro-motive force of the motor increases above the initial electro-motive force of the electric supply, and simultaneously therewith establishing a closed circuit from the source of electric supply for the motor, energizing a friction-brake to quickly stop the vehicle.

3. The method of braking an electrically-propelled vehicle, which consists in increasing the counter electro-motive force of the motor above the initial electro-motive force of the source of electric supply for the motor, and simultaneously therewith increasing the magnetism of an electro-magnetic friction-brake by means of the current from the same source as the motor until it is energized sufficiently to be automatically applied simultaneously with and in conjunction with the counter electro-motive force to quickly stop the train.

4. The method of braking an electrically-propelled vehicle, which consists in increasing the counter electro-motive force of the motor above the initial electro-motive force of the source of electric supply, and as the speed of the motor decreases increasing the strength of the field-magnets of the motor to maintain the counter electro-motive force above the initial electro-motive force of the source of electric supply, and simultaneously therewith establishing a closed circuit from the source of electric supply for the motor, energizing a friction-brake to quickly stop the vehicle at the desired position.



385,673. CARBURETING GAS-LAMP. ARTHUR KITSON, Philadelphia, Pa. Filed Nov. 22, 1887. Serial No. 255,878. (No model.)

Claim.—1. In an enriching gas-lamp for enriching gas or air with the vapors of solid hydrocarbons, the combination, with a gas-supply pipe, a hydrocarbon-reservoir, and a gas-burner placed beneath said reservoir, of a vaporizing and carbureting chamber communicating with the burner-pipe and situated immediately above the gas-burner and beneath the hydrocarbon-reservoir, and separate passage-ways connecting respectively said chamber to the bottom of the hydrocarbon-reservoir and gas-supply pipe, by which the gas and hydrocarbon are conveyed to the chamber independently, substantially as and for the purpose described.

2. In an enriching gas-lamp, the combination of a hydrocarbon-reservoir, a gas-burner placed beneath said vessel, a vaporizing and carbureting chamber placed between the gas-burner and hydrocarbon-reservoir, a passage-way leading from the bottom of the reservoir to the chamber, by which the hydrocarbon is conducted to the chamber in a liquid state, and a valve for controlling the flow of hydrocarbon into said chamber, with a gas-supply pipe and gas-burner pipe, both connected to said chamber, substantially as described.

3. In an enriching gas-lamp, the combination, with a hydrocarbon-reservoir, gas-burner, and supply-pipe, of a vaporizing and carbureting chamber connected with the lower part of the hydrocarbon-reservoir and with gas-burner pipe, and containing a porous partition placed diametrically across its bore to regulate the supply of hydrocarbon vapor to the burner, and a gas-inlet pipe connecting with such chamber, substantially as described.

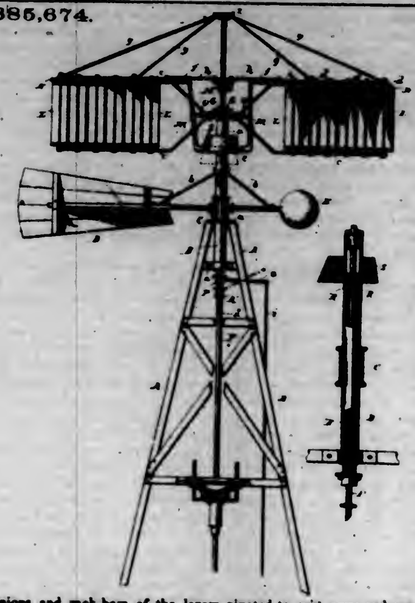
385,673.

4. In an enriching gas-lamp, the combination, with a hydrocarbon-reservoir, a gas-burner and its supply-pipe, of a vaporizing and carbureting chamber placed immediately over the burner and beneath the hydrocarbon-reservoir, and containing a gauze partition placed sectionally across said chamber, and communicating with the bottom of the hydrocarbon-reservoir by a tube or passage-way, and a gas-inlet pipe connecting with the vaporizing-chamber, substantially as and for the purpose herein described.

5. In a carbureting gas-lamp for enriching gas with the vapors of a solid hydrocarbon, the combination, with a hydrocarbon-reservoir, a gas-burner and its supply-pipe, of a vaporizing and carbureting tube or chamber having a connected gas-inlet pipe and connecting with the reservoir by a hydrocarbon-supply tube, and an absorbent or porous substance placed in the vaporizing and carbureting tube or chamber, whereby pulsation or jumping of the gas-flame is prevented and a steady light is secured.

6. In an enriching gas-lamp, the combination, with a hydrocarbon-reservoir, a gas-burner placed below said reservoir, a vaporizing and carbureting chamber for volatilizing the hydrocarbon and mixing the gas with the vapor, a gas-supply pipe communicating with said chamber, a passage-way leading from the hydrocarbon-reservoir to the chamber, and a valve for controlling the admission of hydrocarbon from the reservoir to the chamber, of a metallic rod connecting the chamber with the reservoir for conducting the heat of the flames to the hydrocarbon in reservoir, and a disk-partition placed between the reservoir and chamber for dispersing the heated products of combustion, substantially as described.

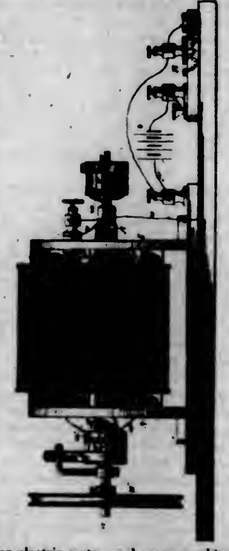
7. In an enriching gas-lamp, the combination of a hydrocarbon-reservoir, a gas-burner placed beneath said reservoir, a vaporizing and carbureting chamber situated immediately over the burner and beneath the reservoir, a passage-way having a controlling-valve leading from said reservoir to the heating-chamber, with a gas-valve and suitable pipes connecting the said valve to the heating-chamber and burner-pipe, respectively, by which the supply of enriched and unenriched gas to the burner is proportioned and regulated, substantially as described.



385,674. WIND-WHEEL. WILLIAM W. LOMWOOD, Freeport, assignor of one-half to Ferris O. Mott, Anthony, Kans. Filed Jan. 10, 1888. Serial No. 260,269. (No model.)

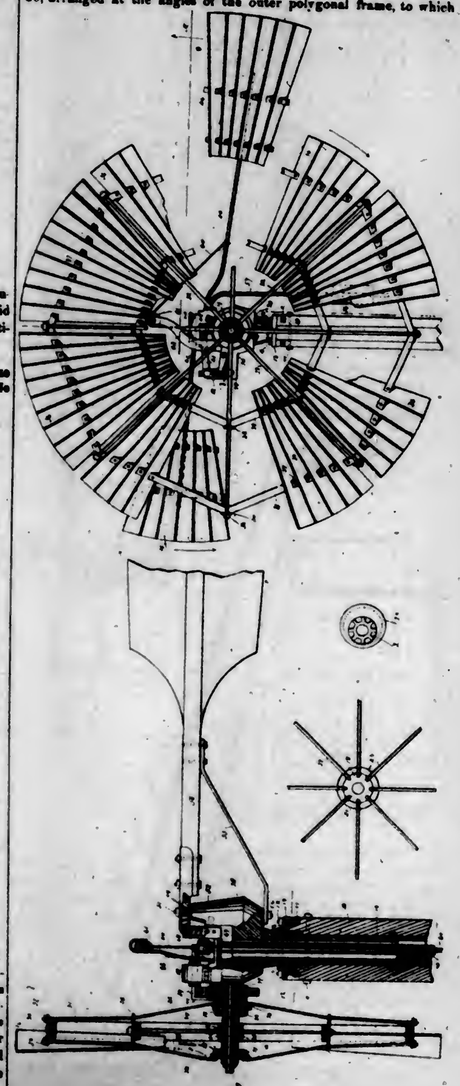
Claim.—1. The combination, with the arms and the sails pivoted therein, of pinions on the pintles of said sails and a rack movable on said arms and engaging said pinions, substantially as and for the purpose described.

2. The combination, with the main shaft, the arms, pivoted sails,

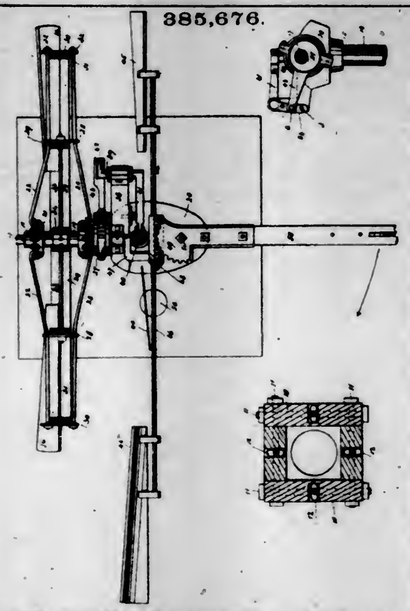


385,674.

pinions, and rack-bars, of the levers pivoted to said arms and connected with the rack-bars, the springs attached at one end to said shaft and at the other to the levers, the drum S, and means for vertically adjusting said drum, substantially as described.



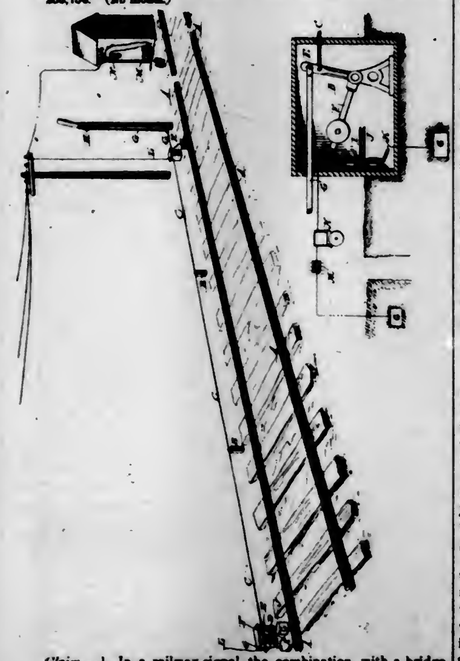
385,675. ELECTRIC MOTOR AND DYNAMO-MACHINE. CHARLES LOSH, New York, N. Y. Filed May 1, 1888. Serial No. 272,998. (No model.)



Claim.—In an electric motor or dynamo-machine, a series of stationary electro-magnets, a series of revolving electro-magnets, one having an uneven number and the other an even number, the two series being arranged concentrically and parallel with each other, a stationary commutator to the segments of which the coils of the fixed series are connected at one end, a common or multiple-arc connection for the other ends of the coils of said series, a revolving brush for said commutator, a revolving commutator to the segments of which the coils of the revolving series are connected at one end, a common connection for the other ends of the coils of said revolving series, and a stationary brush for said revolving commutator, whereby the current is directed through the coils of one stationary and one revolving electro-magnet and the said electro-magnets form a closed magnetic circuit, this action taking place in proper sequence, so that each stationary electro-magnet makes a close magnetic circuit with each revolving electro-magnet once during each revolution.

385,676. WINDMILL. JOSEPH S. MARSHALL, Clear Water, Kans., assignor of one-half to Cassar W. Loudon, same place. Filed Oct. 29, 1887. Serial No. 253,603. (No model.)

Claim.—In a windmill, the combination, with a central sectional hub, of inner and outer polygonal frames, brackets 28, mounted at the angles of the inner polygonal frame, a collar which overlaps the hub-sections, spokes passing through said collar and through the bracket 28, spokes 22 and 25, connected to the hub-sections and arranged to pass through apertures formed in the brackets 28, and outer brackets, 30, arranged at the angles of the outer polygonal frame, to which



385,676.

brackets the spokes 22 and 25 are connected, as and for the purpose stated.

385,677. RAILWAY-SIGNAL. ADELARD F. MARTEL, Montreal, Quebec, Canada, assignor of three-fourths to Jean Baptiste Amede Mongenais, Rigaud, and Toussaint Brousseau and Marie M. Philomène Craig, both of Montreal, Quebec, Canada. Filed Oct. 29, 1887. Serial No. 253,756. (No model.)

Claim.—1. In a railway-signal, the combination, with a bridge, track, or like structure, of a combustible cord located in proximity thereto, a circuit-closer connected with the cord, an automatic mechanically-operated semaphoric signal, a non-electric connection between the circuit-closer and the semaphoric signal, a normally-open electric circuit, and an audible signal included in the circuit, all substantially as shown, whereby when the cord is severed the circuit-closer is caused to complete the circuit and sound an alarm, and at the same time cause or permit the semaphoric signal to be displayed.

2. In a railway-signal, the combination, with a track, bridge, or like structure, of a combustible cord or connection located in proximity thereto, an elbow-lever to which said cord is connected, an electric circuit, contact-arms in the path of the elbow-lever, a bell or signal included in the circuit, a semaphoric signal located on that side of the elbow-lever opposite the combustible cord, and a connection extending from the elbow-lever to the semaphoric signal, all substantially as shown.

3. In a railway-signal, the combination, with a bridge, track, or like structure, of a combustible cord located in proximity thereto, an elbow-lever connected with the combustible cord, a semaphoric signal, a connection between the semaphoric signal and the elbow-lever, an electric circuit, contacts in the path of the elbow-lever, and an alarm or signal included in the circuit, all substantially as shown, whereby when the cord is severed the elbow-lever will rock and complete the circuit and also cause or permit the semaphoric signal to be displayed.

4. In combination with a track, bridge, or like structure, a severable cord or connection, C, located in proximity thereto, a post or standard provided with a signal-arm, H, controlled by the cord or connection C, a locomotive provided with stopping mechanism, and an arm carried by the locomotive and adapted to actuate the stopping mechanism when struck by the signal-arm, all substantially as shown, whereby the said signal-arm H is adapted to serve the twofold purpose of a visual signal and as a means for stopping the train in case the said signal should not be observed in time by the engineer.

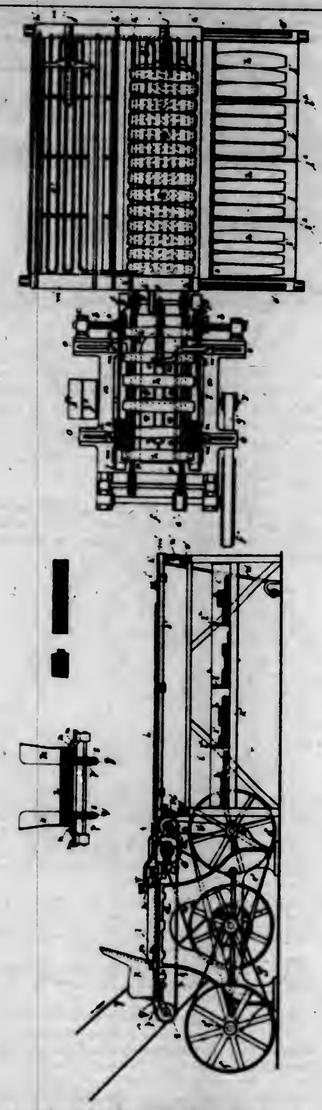
5. The herein-described railway-signal, consisting in the combination, with a track, bridge, or like structure, of a severable cord or connection, C, located in proximity thereto, an elbow-lever, D, provided with a weighted arm and connected with the cord C, a semaphoric signal provided with an arm, H, a connection, G, between the elbow-lever and the semaphoric signal, an electric circuit provided with an audible alarm, N, and contact-fingers I and J, arranged in the path of the elbow-lever, substantially as shown, to be brought into contact by the elbow-lever when the cord C is severed.

6. In combination with a bridge, a cord or connection, as C, mounted thereupon, an elbow-lever at each end of the cord or connection, pivoted to the piers or abutments of the bridge, an electric circuit containing an alarm, and contact-fingers, the contact-fingers being arranged in the path of the elbow-lever and thereby adapted to be brought into contact with each other by the elbow-lever when the cord or connection C is severed.

7. In combination with a track, bridge, or like structure, a fusible cord or connection located in proximity thereto and connected with a signaling device, and a board, as T, grooved on its lower edge to receive the cord or connections C, substantially as shown and described.

8. In combination with a railway-track, bridge, or like structure a visual signal, a normally-open electric circuit, an audible alarm included in the circuit, a circuit-closer, a connection between the circuit-closer and the semaphoric signal, and a combustible cord or connection located in proximity to the track, connected with the circuit closer, and adapted to prevent the completion of the circuit and the display of the semaphoric signal until the said cord is burned or severed.

385,678. STAVE SHAPING AND GAGING MACHINE. FREDERICK MYERS, Liverpool, County of Lancaster, England. Filed Jan. 26, 1885. Serial No. 154,070. (No model.)



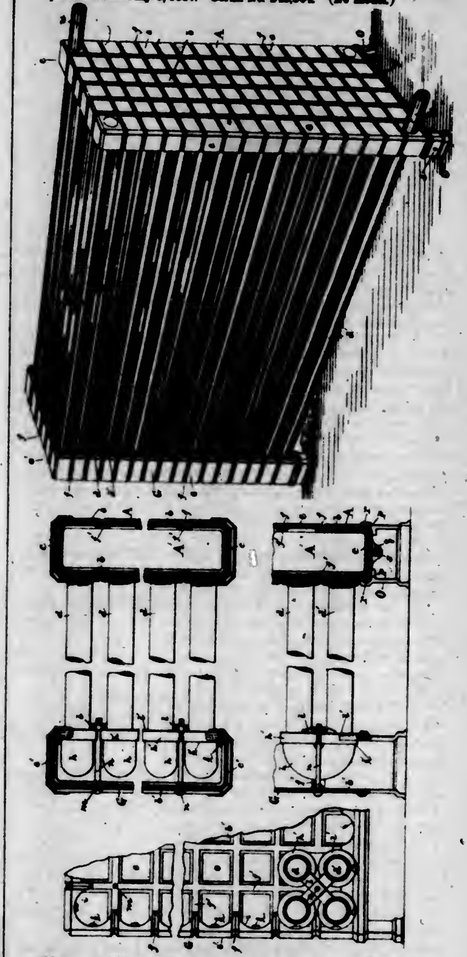
Claim.—1. The combination, in a stave trimming, chamfering, and crozing machine, of the laterally-adjustable hopper consisting of the inclined angle-plates *k*, adjustable angle-guides *l*, the endless feeders *p q*, and the duplicate trimming-saws *e*, chamfering-cutters *f*, and chine-cutters *g*, said saws and cutters being laterally adjustable on the mandrel *b*, substantially as described.

2. The combination of the spring-presser *t*, mounted over the middle of the guideway in advance of the cutters, and laterally adjustable on the supporting-arm *u*, with the trimming-saws *e*, chamfering-cutters *f*, chine-cutters *g*, endless feeders *p q*, hopper *k*, and angle-guides *l*, substantially as described.

3. The combination, with the chamfering and crozing cutters and the feeder of a stave chamfering and crozing machine, of a complement-gager consisting of a receiving-table and a stop-gage arranged with relation to the place of delivery of the staves from said machine, whereby said feeder delivers the staves from the chamfering and crozing machine onto said gager and along the same successively, substantially as described.

4. The combination, with the chamfering and crozing cutters and the feeder of a chamfering and crozing machine, of a complement-gager consisting of a receiving-table and stops arranged with relation to the place of delivery of the staves from said machine, whereby said feeder delivers the staves from the chamfering and crozing machine onto said gager and along the same successively, also a heating-coil located under the gage-table and having the usual pipe-connections with a boiler or other heater, for heating and shrinking the staves while being gaged, substantially as described.

385,678.



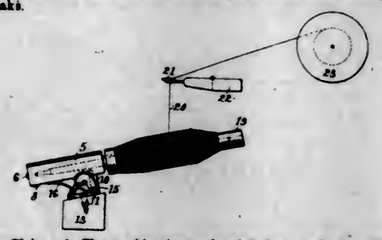
the feeder of a stave chamfering and crozing machine, of a complement-gager consisting of duplicate receiving-tables and stops arranged with relation to the place of delivery of the staves from said machine, whereby said feeder delivers the staves from the chamfering and crozing machine onto said gager and along one or the other of the said duplicate tables successively, which are transferable laterally to said place of delivery to receive on one while the completed complement is removed from the other, substantially as described.

5. The combination, with the chamfering and crozing cutters and the feeder of a chamfering and crozing machine, of a complement-gager consisting of a receiving-table and stops arranged with relation to the place of delivery of the staves from said machine, whereby said feeder delivers the staves from the chamfering and crozing machine onto said gager and along the same successively, also a bench having a series of divisions for assorted sizes of staves formed in and between part of the structure of the gage-table, substantially as described.

6. The combination, with the chamfering and crozing cutters and

385,679. HOT-WATER AND STEAM RADIATOR. CHARLES W. NEWTON, Baltimore, Md., assignor to Bartlett, Hayward & Co., same place. Filed July 5, 1887. Serial No. 243,304. (No model.)

Claim.—1. The combination, in a radiator, of the horizontal circulating-pipes *d d'*, the return-couplings *h*, uniting the ends of said pipes, the supporting case or shell inclosing the return-couplings, the cross-shaped spider having its ends fitted against and in contact with the couplings, and the bolt *n*, connecting the case-wall and spider, substantially as specified.



2. The combination, in a radiator, of the horizontal circulating-pipes *d d'*, the return-couplings having rim-flanges *h'* at their ends, the supporting case or shell having its wall provided with rounded notches *i*, each having an inner lug, *k*, a cross-shaped spider, *l*, having its ends fitted against the pipes and in contact with the return-couplings, and the bolt *n*, connecting the case-wall and spider, substantially as specified.

3. The combination, in a radiator, of a chest, A, formed of panel-sections *c*, and having a swell edge, *p*, on two opposite sides and bottom, and provided with a downward-projecting lug, *q*, having a suit-

able bolt-hole, a leg, O, provided at its top with a slide-groove, *r*, to engage the swell edges, and a bolt, *s*, passed through the leg and into the said downward-projecting lug, substantially as specified.

385,680. BOBBIN-SUPPORTING SPINDLE FOR SPOOLING-MACHINES, &c. JOHN F. EDDOWS, Fall River, Mass., assignor of one-half to John D. Warden, same place. Filed Oct. 12, 1887. Serial No. 252,127. (No model.)

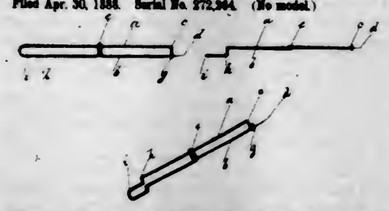
Brief.—The objects of the invention are to provide an improved tension device for imparting the necessary tension to the yarn and an efficient and simple brake for stopping the spindle when the yarn breaks.

Claim.—1. The combination, as hereinbefore set forth, with the spindle and the pivoted tilting bearing therefor, of the brake-pin loosely mounted in the bearing and engaging the spindle, and a stop for checking the brake-pin and causing the pin to bind the spindle when the load on the spindle tilts the bearing downwardly, as and for the purpose herein described.

2. The combination, as hereinbefore set forth, with the spindle and the pivoted tilting bearing therefor, provided with a perforation for the brake-pin, of the gravity brake-pin for binding upon the spindle, and the stop for checking and holding the brake-pin, so as to bind on the spindle and stop the same from rotating when the bearing is tilted downwardly, as and for the purpose herein described.

3. The combination, as hereinbefore set forth, with the spindle and the pivoted tilting bearing therefor disposed in the horizontal, or nearly so, of a spring for engaging the bearing and normally holding the bearing tilted downwardly, and acting in connection with a brake-pin mounted in the bearing and engaging the spindle to impart a tension to the yarn, as and for the purpose herein described.

4. The combination, as hereinbefore set forth, with the spindle and the spring-acted tilting bearing therefor, of the brake-pin loosely mounted in the bearing for binding upon the spindle, and the stop for checking the pin, as and for the purpose herein described.

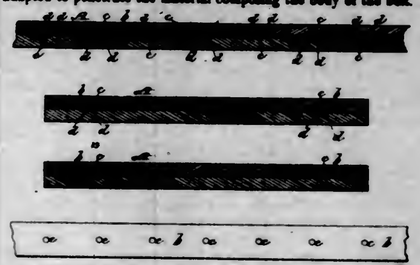


5. The combination, as hereinbefore set forth, with the spindle rail or beam and a stand adjustable along and about the rail or beam, of the spring-acted tilting bearing provided with the spindle, the brake-pin, and perforation for guiding the pin, and pivoted to the stand and tilting from approximately the horizontal into the inclined position, as and for the purpose herein described.

6. The combination, as hereinbefore set forth, with the spindle 4, of the tilting spring-acted bearing 5, formed with the oil-holes 7 and the small end 9, and provided with the removable step 6, as and for the purpose herein described.

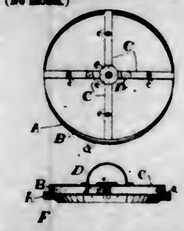
7. The combination, as hereinbefore set forth, with the spindle 4, of the tilting bearing 5 and the stand 12, to which the bearing is pivoted, the bearing formed with the perforation 14 having the brake-pin 15 working therein, as and for the purpose herein described.

8. The combination, as hereinbefore set forth, with the spindle-rail 13 and the stand 12, mounted on the rail and capable of adjustment thereon, of the bearing 5, provided with the spindle 4, the brake-pin 15, and the perforation 14, and pivoted to and tilting on the stand and provided with the spring 16, substantially as and for the purpose herein described.



385,681. CUFF-SUPPORTER. MARTIN N. NIXON, Richmond, Ind. Filed Apr. 30, 1888. Serial No. 272,264. (No model.)

Claim.—The improved cuff-supporter described, composed of a single piece of material formed with offset loop *i*, catch *g*, point *d*, and loop *e* between the offset loop and the catch, and embracing the bar *a* of the supporter, substantially as and for the purpose specified.

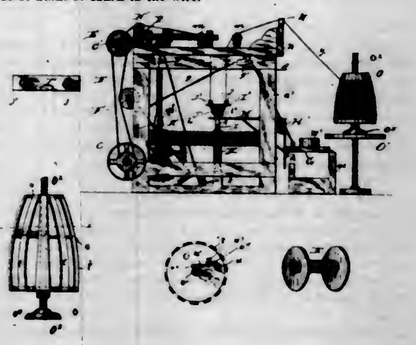


385,682. MACHINE-BELTING. GEORGE F. PAGE, Concord, N. H. Filed Nov. 14, 1887. Serial No. 256,177. (No model.)

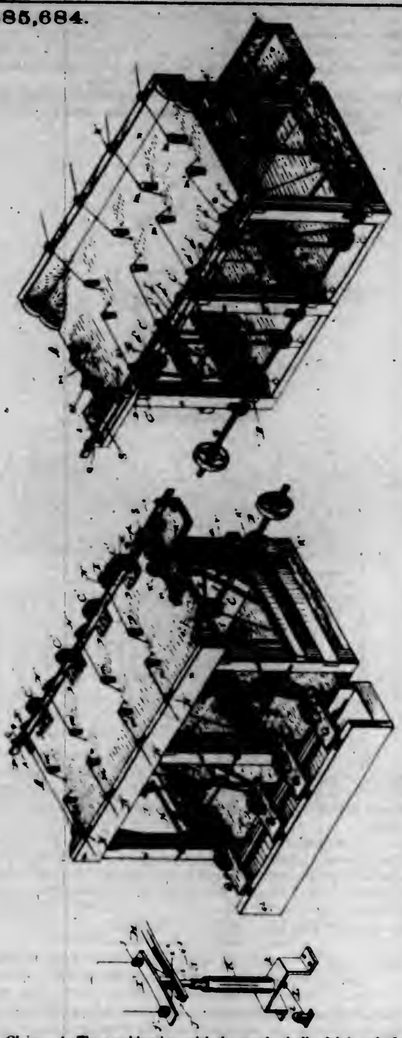
Brief.—The metallic strips are provided with teeth or burrs adapted to penetrate the material composing the body of the belt.

Claim.—A driving-belt composed of one or more thicknesses of leather or other suitable material, combined with one or more strips of steel extending lengthwise of the belt, and provided with holes having burrs or ragged edges adapted to enter the leather or other material of which the belt is composed, whereby the steel strip is held securely in place, substantially as set forth.

385,683. PASTRY-PIE GUARD. LAMIRA PHELPS, (divorced, and now LAMIRA LUCAS,) Lowell, Mich.; said Lamira Lucas assignor of one-half to Hvander W. Dodge, same place. Filed Jan. 16, 1888. Serial No. 260,955. (No model.)



Claim.—1. A pastry-pie guard constructed with an annular rim, A B, provided with an offset, *a*, and with arms C, attached to the upper edges of the rim and extending across from side to side, a handle, D, attached to the center of the arms, a center piece, E, attached to the center of the arms, and a tube, *c'*, depending from the arm, substantially as and for the purpose set forth.



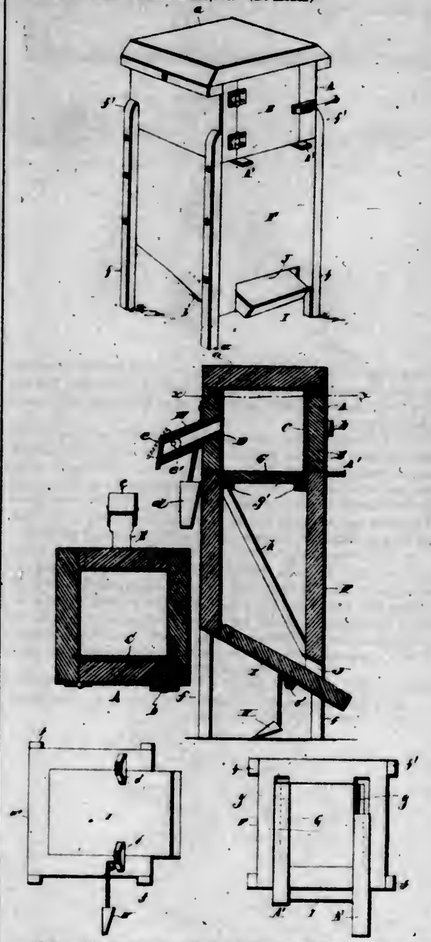
2. The combination, in a pie-guard, of the rim A B, connected by or provided with an offset, *a*, arms C, and tube or tubes *c'*, supported by the arms C, substantially as and for the purpose set forth.

385,684. MACHINE FOR SPOOLING WIRE. WILLIAM H. SAWYER, Providence, R. I. Filed Nov. 26, 1884. Serial No. 149,131. (No model.)

Brief.—The object of the invention is to produce an improved machine for winding wire from hanks or skeins onto spools. Provision is made for stopping the machine automatically upon the occurrence of kinks or snarls in the wire.

385,684.

Claim.—1. The combination, with the spool-spindle, driving-shaft, belt for transmitting motion from the driving-shaft to the spool-spindle, the delivery-reel, the traverse-bar provided with a wire-guide, and mechanism for operating said traverse-bar, of the belt-tightening pulley, the hinged arm, the platform G, the cord *g*, the pivoted angle-piece H, having on its depending arm a shoulder for supporting the platform G, the loop wire-guide connected with the horizontal arm of said angle-piece, and the guide-pulleys for directing the wire to and from the loop-guide, the whole being arranged for operation substantially in the manner as and for the purpose specified.



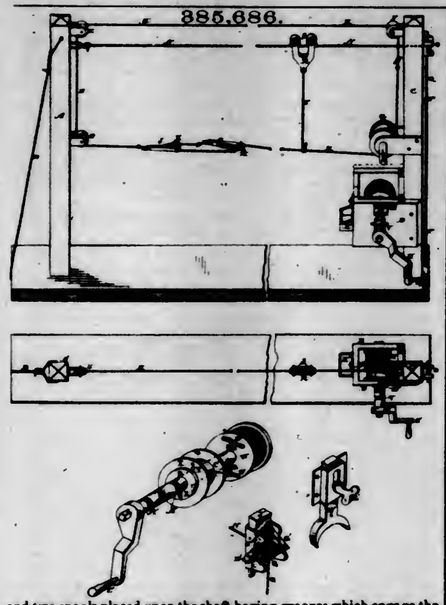
2. The rod I, a surrounding vertical tube, K, base *k*, a weighted cord connected with the lower end of said rod, a cross-head, I', mounted upon the upper end of said rod, having cups *j j'*, and a guide-pulley, J', in combination with the angle-piece H, having shoulder *h*, and the platform G, substantially as and for the purpose specified.

3. In a wire-spooling machine, the combination, with the frame and a movable loop-guide, of a bent lever having one end forked and its opposite end provided with a step, a weighted platform having a hinged connection at one end and its other end adapted to rest on said step, a swinging belt-tightening pulley, a flexible connection between said platform and pulley, and the shafts and belts for spooling the wire, substantially as described.

4. The combination, with supporting-rod O^2, of the reel O, formed of the disks *e* and slats *t*, and provided with an elastic bar arranged on one of said disks between the slats, which bears against said supporting-rod O^2, and a thumb-screw for adjusting the bar, substantially in the manner and for the purpose specified.

5. In a wire-spooling machine, the combination, with the spooling-spindle, driving-shaft pulley, and belt, of a belt-tightener having a weight attached thereto and a lever for retaining said weight in an elevated position, and having guides connected therewith through which the wire may pass, whereby it is adapted to release the weight on the occurrence of snarls or knots in the wire, substantially as described.

385,685. BEE-HIVE. ROBERT C. SMITH, Newburn, Tenn. Filed Mar. 24, 1888. Serial No. 268,276. (No model.)

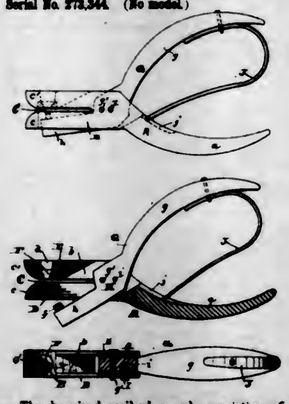


Claim.—The herein-described bee-hive, consisting of upper and lower separable sections, the upper section being provided with a removable hollow plug, E, having at its end a swinging cap, *e*, pivoted on the outer sides of the plug, the lower section having in its upper end a removable slotted partition and at its lower inclined end a pivoted bottom board, I, arranged between the sides of the section, the bottoms of said sides having buttons *i* and a wedge, by means of which buttons and wedge said bottom can be made to close the bee-entrance, as set forth.

385,686. CLOTHES-LINE. JOSIAH S. WARLEN, Florence, Kans. Filed Dec. 19, 1887. Serial No. 258,231. (Model.)

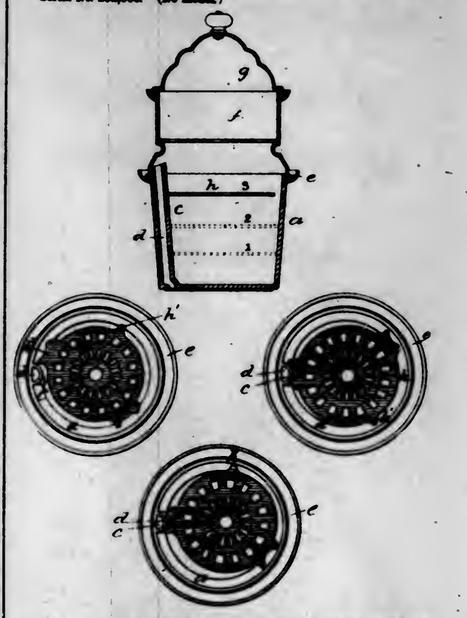
Claim.—1. The combination, with a clothes-line capable of being moved back and forth, of a box provided with a shaft having a pin,

385,686.



and two spools placed upon the shaft having grooves which engage the pin upon the shaft, the shaft having an endwise movement through the box and spools, whereby the pin is made to engage either spool, substantially as shown.

2. The combination, with a clothes-line capable of being moved back and forth, of a box provided with a shaft having two annular grooves and a pin, two spools placed upon the shaft inside of the box, and provided with grooves for engaging the pin upon the shaft, the shaft having an endwise movement through the box and spools, and a slide secured to the box for engaging the grooves in the shaft, and thereby locking it in either position, substantially as set forth.

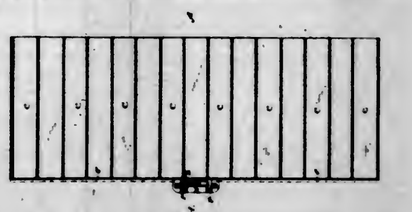


3. The combination, with a clothes-line capable of being moved back and forth, of a box having a shaft provided with a pin, two spools placed upon the shaft, and having grooves with which the pin engages, the ends of the line being secured, respectively, to the two spools, and one of the spools having springs to cause friction for the purpose described, and the shaft having an endwise movement through the box and spools for the purpose set forth, substantially as specified.

385,687. PUNCH. JOSEPH J. WALTON, Newark, N. J., assignor to the Walton Manufacturing Company, New York, N. Y. Filed May 8, 1888. Serial No. 273,344. (No model.)

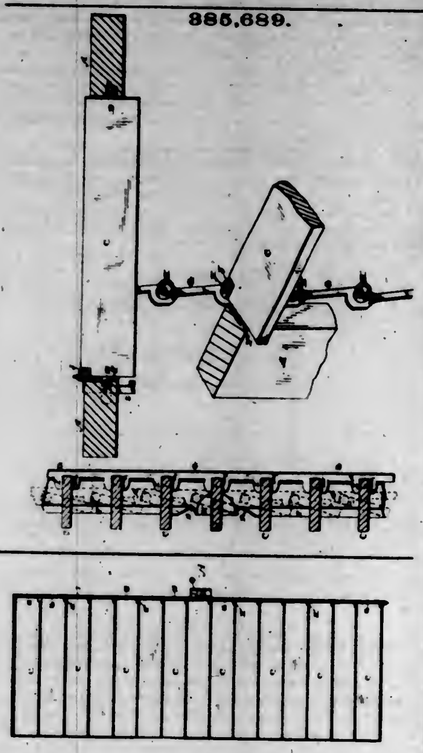
Claim.—The herein-described punch, consisting of the piece A, having a slotted head, B, divided into two parts, *c c'*, and a handle, *a*, grooved at *j*, the part *c* having an opening, *d*, and an enlarged recess E, at the inner end of said opening, and the die-blocks seated in said recess, in combination with the piece G, having angular head H and handle *g*, recess *i*, stud I, die-punch *f*, pin *g'*, and spring J, all constructed and arranged substantially as and for the purpose described.

385,688. CULINARY UTENSIL. CHESTERFIELD P. WHITNEY, Newton, assignor to Hill, Whitney & Co., Boston, Mass. Filed Oct. 11, 1887. Serial No. 252,093. (No model.)



Claim.—1. In combination with the kettle *a*, having within it the upright projecting flange *c*, the adjustable disk A, having a plural number of peripheral projections with sockets of different depths adapted to rest against the inner edge of the flange *c*, all substantially as described.

2. In combination with the kettle *a*, or like cooking utensil, having the inward-projecting flange, an adjustable disk having a plural number of peripheral bearing-points and a peripheral socket adapted to receive the said flange that projects within it and forms one point of rest or support for the disk in one of its positions of vertical adjustment in the kettle, all substantially as described.



385,689. BLIND-SLAT AND OPERATING-ROD. FRANK W. WEBBY, Burlington, Vt. Filed Dec. 6, 1887. Serial No. 257,439. (No model.)

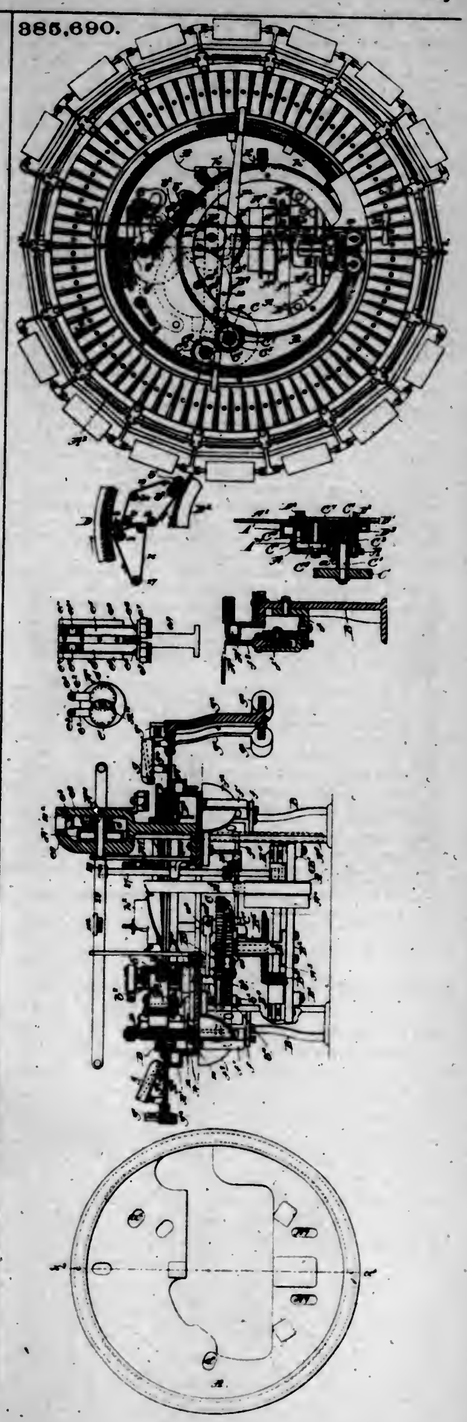
Claim.—1. The combination of the frame A, having the vertical flange F formed along one of its inside edges, the slats which are pivoted in the frame and provided with pivots B and the lugs J, the operating-rod which is connected to each of the slats by means of the lugs J, and which is placed between the ends of the slats and one side of the frame A, whereby when the blinds are closed the operating-rod is moved into the frame in the rear of the flange F, so as to be hidden from view from the inner side of the blind, substantially as described.

2. The combination of the frame, the slats provided with tenons upon each of their ends and with lugs upon one end, the operating-

385,689.

rod, and the eyelets which catch over the lugs and connect the slats to the rods, substantially as set forth.

3. The combination of the slats provided with both tenons and lugs, the eyelets which catch over the lugs, and the operating-rod which is slightly bent between the eyelets, so as to cause frictional contact against them, substantially as specified.



4. The combination of the frame A, provided with a recess, O, in one of its edges, the metallic frame N, placed in the recess and provided with recesses P at each end, the operating-lever L, the rod G, the eyelets, and the slats provided with both tenons and lugs, substantially as specified.

385,690. WOOL-COMBING MACHINE. HORACE WYMAN, Worcester, Mass., assignor to the Crompton Loom Works, same place. Filed Nov. 1, 1887. Serial No. 253,253. (No model.)

Brief.—The diameter of the noil-comb circle exceeds one-half that of the wool-comb circle, and the former is driven at a slower speed than the latter, so as to provide for drawing the wool from the two ends more nearly in radial lines. Each circle has co-operating with it a single pair of vertically-arranged drawing-off rolls. An opening is made through both circles and the bed-plate, the gearing of the machine being so located as to provide an uninterrupted passage for the driving-belt from above through the circles and bed-plate to the driving-pulley located below the machine.

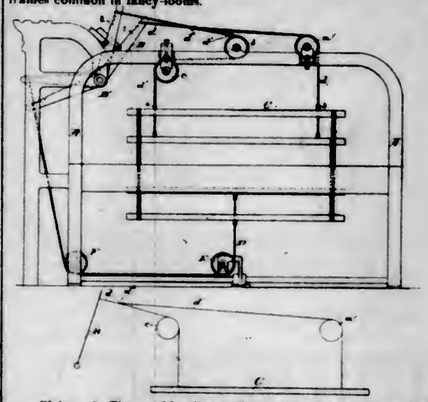
Claim.—1. In a wool-combing machine, the following instrumentalities, viz: the bed-plate, the wool-comb circle, the noil-comb circle within it, of a diameter greater than one-half the diameter of the wool-comb circle, and having an opening through it suitable to receive a driving-belt from above to a pulley below the said noil-comb circle, a main shaft supported upon the frame-work below the said wool and noil comb circles, its driving-pulley located perpendicularly below the opening in the said noil-comb circle, a pair of vertically-arranged drawing-off rolls for each of the said comb-circles, gearing between the said main shaft and the said drawing-off rolls and comb-circles to rotate them, an endless revolving series of wool-boxes, and means to lift the boxes and feed the wool therefrom, the combination being and operating substantially as described.

385,690.

2. The wool-comb circle, the noil-comb circle within it, of a diameter greater than one-half of the diameter of the wool-comb circle, a pair of vertically-arranged drawing-off rolls for each of the comb-circles, the main shaft A^5, supported on the frame-work below the bed-plate and comb-circles, the vertical shaft C, gearing whereby said shaft C is driven by the main shaft, and spur-gearing from the vertical shaft to the combs and the two sets of drawing-off rolls, to operate substantially as described.

3. The wool-comb circle, the noil-comb circle within it, of a diameter greater than one-half of the diameter of the wool-comb circle, the endless series of wool-boxes moved in unison with the wool-comb circle, means to lift the said wool-boxes in succession to feed wool to the pins of the circles, a pair of vertically-arranged drawing-off rolls for each of the comb-circles, the main shaft A^5, supported on the frame-work below the bed-plate and comb-circles, the vertical shaft C, and gearing whereby the said shaft C is driven by the main shaft and spur-gearing intermediate the vertical shaft and the two sets of drawing-off rolls and the wool and noil comb circles, to operate substantially as described.

4. In a wool-combing machine, the following instrumentalities, viz: the bed-plate, the wool-comb circle, the noil-comb circle within it, having an opening through it suitable to receive a driving-belt from above to a pulley below the said noil-comb circle, a main shaft supported upon the frame-work below the said wool and noil comb circle, its driving-pulley located perpendicularly below the opening in the said noil-comb circle, a pair of vertically-arranged drawing-off rolls for each of the said comb-circles, gearing between the said main shaft and the said drawing-off rolls and comb-circles to rotate them, an endless revolving series of wool-boxes, means to lift the boxes and feed the wool therefrom, a shaft located above said main shaft, means to rotate it, a dabbing-brush, its carriage, and means between the shaft located above the main shaft and the said carriage to actuate the latter, substantially as described.



5. The wool-comb circle and the smaller noil-comb circle arranged within it, combined with the vertically-arranged drawing-off rolls for the wool-comb circle and the drawing-off rolls for the noil-comb circle, an endless revolving series of wool-boxes, and with means, substantially as described, to rotate the wool-comb circle and its wool-boxes and the inner noil-comb circle at different speeds, for the purpose set forth.

6. In a wool-combing machine, the open bed-plate A, the wool-comb circle, the noil-comb circle within it, of a diameter greater than one-half of the diameter of the wool-comb circle, the main shaft A^5, located below the said bed-plate, means for driving said comb-circles from said main shaft, a pulley fast on the said main shaft vertically below the opening in the noil-comb circle, the driving-belt A^3, extended from above the said bed-plate through it and the said noil-comb circle and about the said fast pulley, the endless revolving series of wool-boxes, means to lift them to feed the wool to the pins of the said circles, a dabbing-brush, its carriage, the shaft A^{10}, provided with means to operatively connect it with and to reciprocate the said carriage, pulleys A^6 and A^8 on the shafts referred to, and a belt, A^7, to connect the said pulleys, the pulleys A^6 and A^8 being of different diameters, whereby the shaft A^{10} is rotated at a faster speed than the shaft A^5, to operate substantially as described.

7. The wool-comb circle and the smaller single noil-comb circle arranged within it, combined with the vertically-arranged drawing-off rolls for the wool-comb circle and the drawing-off rolls for the noil-comb circle, and with gearing to rotate the said comb-circles at different speeds, as and for the purposes set forth.

385,691. **SHEDDING MECHANISM FOR LOOMS.** HORACE WYMAN, Worcester, Mass., assignor to the Crompton Loom Works, same place. Filed Feb. 2, 1883. Serial No. 362,805. (No model.)

Brief.—The arrangement of cording and sheaves shown is designed to obviate the unequal draft upon opposite ends of the heddle-frames common in fancy-looms.

Claim.—1. The combination, with a series of harness-levers having their fulcra at the top of the loom-frame above the harness-frames, and a series of harness-frames, of three sets of sheaves, as *a b c*, located at the top of the loom-frame, and of strap or cord connections *d d'*, extended, as described, over the said sheaves and joined to the opposite ends of the harness-frames at their upper sides, substantially as described.

2. The combination, with a series of harness-levers having their fulcra at the top of the loom-frame above the harness-frames, a series of harness-frames, cording D, and a set of sheaves around which the cording runs, of three sets of sheaves, as *a b c*, located at the top of the loom-frame, and strap or cord connections *d d'*, extended, as described, over the sheaves *a b c* and joined to the opposite ends of the harness-frames at their upper sides, substantially as described.

JOYCE *v.* THE CHILLICOTHE FOUNDRY AND MACHINE WORKS COMPANY *et al.*

Decided May 14, 1883.

JOYCE—LIFTING-JACKS—INFRINGEMENT.—WHAT IS NOT.

The first claim in the patent in suit, being limited to a pawl moving by gravity alone in inclined slots, grooves, or guides formed in the frame, is not infringed by a pawl mounted upon an incline, with a spring to press the pawl down the incline, assisted by gravity, and having no slots, grooves, or guides formed in the frame.

APPEAL from the Circuit Court of the United States for the Southern District of Ohio.

Mr. E. E. Wood and *Mr. Edward Boyd* for the appellant.

Mr. JUSTICE BLATCHFORD delivered the opinion of the Court.

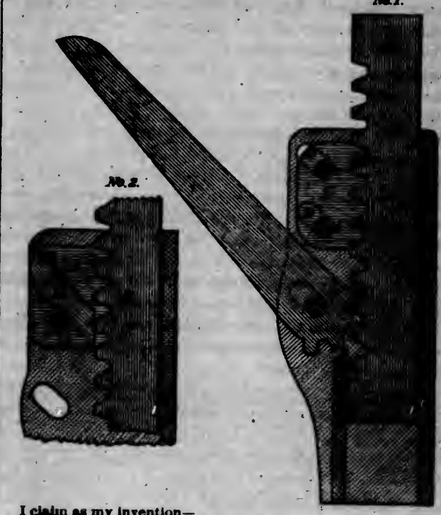
This is a suit in equity brought in the Circuit Court of the United States for the Southern District of Ohio by Jacob O. Joyce against the Chillicothe Foundry and Machine Works Company and F. M. De Weese to recover for the infringement of Letters Patent of the United States No. 154,989, granted to Jacob O. Joyce, September 15, 1874, for an improvement in lifting-jacks, on an application filed March 16, 1874.

The specification, claims, and drawings of the patent are as follows:

Be it known that I, JACOB O. JOYCE, of Carlisle Station, Warren county, Ohio, have invented certain Improvements in Lever-Jacks, of which the following is a specification:

My invention relates to the pawl of such jacks; and its objects are, first, to substitute the weight of the pawl, sliding in inclined slots, grooves, or guides, for the elastic spring usually employed to press it against the teeth of the ratchet-bar; and, second, to obtain greater strength by dividing the load among several teeth of the pawl and ratchet-bar, instead of supporting it all on one tooth, as is commonly done.

Figure 1 of the accompanying drawings is a vertical section of so much of a jack as is necessary to show my improvements; and Fig. 2 is a modification of the same, in which the pins and slots of Fig. 1 are exchanged for the tongue and groove in Fig. 2.



Referring to Fig. 1, A is the pawl, having teeth that engage with the teeth of the ratchet-bar B. D D' are slots in the frame of the jack, inclined to the axis of the ratchet-bar at the angle of about forty-five degrees, in which slots move the pins C C' of the pawl A.

The operation is seen at a glance. When the ratchet-bar is raised, its teeth crowd or slide the pawl up the inclined slots out of the way, so as to allow it to pass, until it has traveled the length of a tooth, when the weight of the pawl causes it to fall back into the next tooth below, ready to hold the ratchet-bar at the point gained, ready for another lift, and so on.

In Fig. 2, instead of slots D D', there is a tongue, D, on each side of the pawl, with corresponding grooves in the frame of the jack, in which the said tongues move; or the tongues may be on the frame, with the grooves in the pawl, the tongues and grooves performing the same office that the pins and slots do in the form of construction shown in Fig. 1.

Other modifications, involving the same principle of operation, may be possible; but I prefer the construction represented in Fig. 1, at the same time not limiting myself strictly to that, but claiming any equivalent arrangement by which the same objects are accomplished in substantially the same manner.

No. 1.

No. 2.

I claim as my invention—

1. A pawl for lever-jack with two or more teeth, and adapted to move in inclined slots, grooves, or guides formed in the frame, substantially as described.

2. The combination of the pawl A with its pins C C', slots D D', and ratchet-bar B, substantially as described.

Each defendant put in a separate answer, alleging want of novelty, and setting forth sundry prior patents in which, it was averred, the invention was contained, and also giving the names of sundry prior inventors. Each answer denied infringement. The answer of the company averred that it had made for its co-defendant parts of lifting-jacks in accordance with Letters Patent of the United States granted to Samuel Mosler, No. 168,663, dated October 11, 1875; No. 172,471, dated January 18, 1876, and No. 194,711, dated August 28, 1877. Issue was joined and proofs were taken on both sides, and the circuit court dismissed the bill, with costs. Its decision is reported in 15 Fed. Rep., 260.

In the opinion of the circuit court it is said:

The specification describes, and the drawings show, a frame with parallel sides, between which a pawl moves in parallel slots in the frame, forming guideways inclined toward the vertically-moving ratchet-bar. The pawl is provided with a series of teeth on the face adjacent to the ratchet-bar, and at opposite sides with projections or lugs engaging in the inclined slots of the frame. The guide-slots are inclined at an angle of forty-five degrees, or thereabout, and the pawl is actuated solely by gravity to move down the inclines and engage its teeth with those of the ratchet-

bar; and the patentee states in his specification, as one of the objects of the invention, his purpose to utilize the gravity of the pawl itself, thus arranged, as a substitute for a spring.

The clear statement of the specification in this respect is that the first object of the invention is—

to substitute the weight of the pawl, sliding in inclined slots, grooves, or guides, for the elastic spring usually employed to press it against the teeth of the ratchet-bar.

The specification also says that—

when the ratchet-bar is raised, its teeth crowd or slide the pawl up the inclined slots out of the way, so as to allow it to pass, until it has traveled the length of a tooth, when the weight of the pawl causes it to fall back into the next tooth below, ready to hold the ratchet-bar at the point gained, ready for another lift, and so on.

These are plain statements that the weight of the pawl, unaided by any spring, is to be used to cause the pawl to fall back into the next tooth below, after the ratchet-bar has traveled the length of a tooth, such weight of the pawl being employed to press it against the teeth of the ratchet-bar in place of the use of an elastic spring for that purpose. The inclined slots, grooves, or guides formed in the frame in which the pawl moves are the slots D D', made in the frame of the jack, and "inclined to the axis of the ratchet-bar at the angle of about forty-five degrees," in which slots the pins C C' of the pawl move. The specification states that, instead of such slots in the frame of the jack, there may be grooves in such frame, one on each side of the pawl, in which a tongue on each side of the pawl moves; or there may be tongues on the frame and grooves in the pawl, the tongues and grooves performing the same office that the pins and slots do in the first form of construction.

In the opinion of the circuit court the following statement is made as to the defendants' jack, which we deem to be correct:

The defendants manufacture a jack having a many-toothed pawl resting at its bottom upon a seat slightly inclined toward the rack-bar and actuated by a spring placed behind it within the frame. The inclination of the seat is not sufficient to actuate the pawl by gravity, nor are there any slots or other means of guiding the pawl in the sides of the frame, the function of the inclined seat being rather to assist the spring in preventing a backward slip of the pawl when under pressure than to facilitate the forward movement of the pawl, although to the latter result it may contribute in a slight degree.

The plaintiff claims that the defendants use their spring to start the movement of the pawl upon an incline having a less angle than that mentioned in the specification of the patent and employ an inclined seat for the pawl to effect the holding of the load, and that they thus infringe the first claim of the patent. But we are of opinion, upon the whole evidence, that in the defendants' jack the spring is used to press the pawl against the teeth of the ratchet-bar, within the meaning of the specification of the patent; that the jack made by the defendants would not be and is not, as constructed by them and put upon the market, a practically operative instrument without the use of the spring; that the pawl in it will not operate by gravity alone so as to make it an efficient or safe machine, and that there are no slots, grooves, or guides formed in the frame to guide the pawl in the sense of the first claim of the plaintiff's patent.

We concur with the court below in holding that the first claim of the patent must be limited to a pawl moving by gravity alone in inclined slots, grooves, or guides formed in the frame, and that therefore there has been no infringement of the first claim. It is not alleged that the second claim has been infringed.

The decree of the circuit court is affirmed.

U. S. Circuit Court—Eastern District of Pennsylvania.

GEIS *v.* KIMBER.

Decided May —, 1888.

1. GEIS—GRIST FOR BREWING PURPOSES.
   The claim of Letters Patent No. 249,382, to F. J. Geis, dated November 8, 1881, "for a new and improved mixture or grist for brewing purposes" *Held* to be for a "composition of matter," and not infringed by anything done in the process of brewing, and not infringed by defendant.
2. INFRINGEMENT.
   The claim being for a composition of matter or dry mixture, *Held* not infringed by the sale of one of the materials forming part of the mixture, the use of both materials forming the mixture being old in the art.
3. WANT OF INVENTION.
   It is difficult to find invention in mixing or putting together in a dry state two materials, it being old to mix the same materials during the process of manufacturing or brewing.

IN THE Circuit Court of the United States in and for the Eastern District of Pennsylvania.

Mr. George E. Buckley and *Mr. Edwin M. Hunt* for the complainant.

Mr. Rowland Cox for the defendant.

BUTLER, *J.*:

The suit is for infringment of Letters Patent No. 249,382, issued to Francis J. Geis for a new and improved mixture or grist for brewing purposes, dated November 8, 1881. The patent contains a single claim, which reads as follows:

A mixture or grist for brewing malt liquors, composed of malt and cereals or grain having the cellohuse or integument and germ or heart removed, the cereals or grain constituting from about twenty-five to fifty per centum, by weight, of the said mixture or grist, substantially as herein specified.

To determine the scope of this claim, it is necessary to understand and consider the circumstances under which the patent was granted.

The original application, presented in December, 1880, was for "new and useful improvements in the *process of brewing malt liquors*." The alleged invention and its advantages were described, substantially, in most respects, as are set forth in the specifications accompanying the patent. The claim sought to be secured read as follows:

The process of manufacturing malt liquors consisting in substituting for from twenty-five to fifty per centum of the weight of the malt usually employed, a corresponding weight of cereals or grain having the cellolose or integument and germ or heart removed, but containing gluten and albuminoids, substantially as and for the purpose specified.

After consideration by the examiner the application was rejected. Making slight amendment, the applicant renewed it. It was again considered and rejected in the following words:

The use of cereals deprived of hull, kernel, and all nitrogenous and unfermentable matters in conjunction with malt to form beer is shown in the English patents to Johnson, 2,033 of 1871, and Newton, 2,320 of 1868, and the use of corn deprived of hull and kernel for the same purpose is pointed out in the United States patent to Hartshorn, September 30, 1879, No. 220,083, and that to Furbish already cited.

After further amendment the application was again renewed, and was again rejected in the following terms:

It is old in the processes of manufacturing malt liquors to substitute for malt, in varying proportions, a corresponding weight of corn. (See, for instance, English Patent 94 of 1837, (mashing,) and Distillation, Brewing, and Malting, San Francisco, 1887, p. 30.) The purpose of Hartshorn's invention is to improve this old process by first removing from such grain the integument and germ. This seems to be the whole gist of applicant's invention, and, such being the case, it is deemed to be fully anticipated.

Further amending, the applicant again renewed and pressed his claim. It was again rejected in the following terms:

This application has been reconsidered as amended. The references of record show that it is old in the processes of manufacturing malt liquor to substitute, in varying proportions, cereals for the malt usually employed. It is also shown to be old to use for the same purpose cereals having the "cellulose, hearts and germs" removed. Instead of treating cereals thus prepared, in the way preferred by Hartshorn, applicant merely adopts the older method followed in treating ordinary grain. To treat the grain as prepared by Hartshorn, in the old way is not seen to require the exercise of invention. In other words, applicant has neither discovered that grain can be substituted for a portion of the malt in the ordinary brewing process nor that such grain with hulls and "heart" removed will better answer as such a substitute. The applicant is again and finally rejected.

These several decisions of the examiner were, we believe, clearly right, not only for the reasons stated by him, but for others as well deducible from the proofs in this case. A brief review of the state of the art will show this and afford additional aid in construing the claim. Cereals—rice, wheat, and corn—had been used in combination with malt in manufacturing malt liquors for many years. These grains contain qualities adapted to such use, and, being cheaper than malt, had long been thus used. The hulls and germs contain objectionable matter which render it important to exclude them. This was universally understood by the trade. "Commercial" rice is virtually, if not absolutely, free of them. Wheat and cornmeal are measurably so. The subject of using these grains and the importance of removing the hulls and germs are referred to in various publications, and also in numerous Letters Patent introduced into the case. The preparation of corn known as "hominy" contains less of these objectionable parts, probably, than any other preparation of that grain. It is not absolutely free. Necessarily a small part remains, even with the greatest care in preparation. Notwithstanding some reference is made to hominy in this connection in one or two publications, the importance of adopting it instead of cornmeal seems very generally to have been overlooked. There is evidence of its use, however, at St. Louis as early as 1876. The complainant, (a practical and experienced brewer,) believing "hominy" to be the cleanest and therefore the best preparation of corn for brewing purposes, commenced its use shortly before his application for a patent. He had discovered nothing new in the art of manufacturing malt liquors He admits this virtually in the following statement taken from his application:

I am aware that a grist composed of malt and grain in its natural state is not new, and I am also aware that it has been proposed to remove from corn the hulls and germs—

before applying it to this purpose. This statement, however, falls far short of the entire truth relating to the subject, as we have seen. He doubtless believed himself the first to discover the especial adaptability of "hominy" to brewing purposes. Others, however, knew as well as he that "hominy" is simply corn with the hulls and germs removed, and, knowing this, would necessarily as well understand its adaptability to this purpose. But he was mistaken even in the belief that he was the first to suggest and apply this preparation. As we have seen, it was previously suggested by others and previously applied at St. Louis. He was using it in certain proportions to the malt, as stated in his specifications; but this also was unimportant, first, because of indefiniteness in the statement, and secondly, because no invention was necessary to determine the proper proportions. The complainant ascertained them by experiment. He could do it in no other way. Any brewer could and would do it in the same way and as readily. Besides, the proportions depend on the quality of the malt, of the grain, and of the liquor desired. While the supposed discovery went no further, as the proofs show, than seeing and utilizing the special applicability of "hominy" to brewing purposes, the applicant claimed the use of *all grains* freed from hulls and germs.

The conclusions of the examiner, we repeat, were clearly right. After the final rejection by this officer, the complainant appealed to the Board of Examiners-in-Chief. They agreed with the examiner in rejecting the claim. They, however, made the important discovery that the applicant (an expert in the art to which his supposed invention relates) did not know what he had invented; that it was something quite different from what he supposed—not a "process of brewing malt liquors," as he claimed, but a "composition of matter." After thus classifying it they say:

Now, the applicant has conceived the idea of preparing a suitable wort-making stock, which will keep any length of time, and which may be sent to any distance, by compounding a dry mixture of unmaltable grain, decorticated and freed from the heart or germ, and of malt, in such proportions that the starch of the one and the diastase of the other will be relatively just sufficient, (twenty-five to fifty per cent. of the unmalted grain.) And he should, therefore, claim a mixture for purposes which should be named, consisting of malted and unmalted dry grain, describing the kind and naming the proportions.

It is difficult to find any justification for this conclusion. It is not difficult, however, to understand the reasons which led to it. The formation of a mixture of corn, (partially if not wholly cleansed,) and malt, in the mash-tub or otherwise, in the act or process of manufacturing liquor was old, and therefore the applicant's claim for a "process of manufacturing" could not be allowed. These terms ("process of manufacturing") embrace all the acts or steps involved in the manufacture, including of course that of preparing or mixing the ingredients. The complainant so understood them. For although he contemplated from the beginning (and subsequently bound himself to) the preparation of his mixture "before brewing," (another step simply of the process,) he called his invention a "process of manufacturing." The formation, however, of the mixture in a *dry* state, not in the act or process of manufacturing liquor, as an article of merchandise, suited to keeping and to transportation, was supposed to be a new article of commerce, and believing this to be what the complainant had actually invented, he was advised to alter his claim and specifications and take a patent for it. The applicant adopted the advice, altered his specifications and claim, and took letters accordingly.

While it may be difficult to see patentable invention in thus putting together in a dry condition the ingredients in common use for brewing purposes, instead of mixing them in the mash-tub, as was usually practiced in the process of manufacturing malt liquors, we need not concern ourselves with this question. In view of the facts stated, the claim must be construed as for a "composition of matter," a "wort-making stock" prepared "by compounding a dry mixture of grain, free from hulls and germs, and of malt," in the proportions stated. Thus construed, nothing done in the act or process of manufacturing liquor will in-

fringe the claim. The preparation of a "dry wort-making stock," compounded of the ingredients in the proportions claimed, alone will constitute such infringement. If it be said this is a narrow construction and that it will render the patent virtually useless, a sufficient answer may be found in the fact that the Patent Office contemplated this construction, and would not otherwise have granted the Letters Patent. A broader construction, such as the complainant now seeks, would give him precisely what the Office refused.

Has the respondent infringed? He sells an article called "Cerealine," prepared in the manner described by the evidence. We need not trouble ourselves with the question whether this preparation is similar to "hominy" or other cereals cleansed of hulls and germs. Granted that it is, the respondent may sell it to whom he will. Hominy, rice, corn, and wheat-flour are among the most common articles of merchandise, and are principally consumed as food. The complaint urged against the respondent, however, is that he sold this preparation to brewers, accompanied by a recommendation of its use for brewing purposes. He did so recommend it. He issued circulars calling attention to it as the "best known material, combined with malt, for manufacturing pale, pure beer," superior to "malt-meal," &c., and suggesting that it be used "in the mash-tub with malt" in the "proportions of twenty-five to thirty-three per centum of the mash." If he had recommended its use in the preparation of a "dry wort-making stock" for malt liquors, as an article of merchandize, the sale and recommendation would have rendered him responsible for the use subsequently made, if his advice was followed. He, however, did not so recommend. His language just quoted would seem to leave no doubt of this. It was to be mixed with the malt in the mash-tub in the act or process of manufacturing. As the proofs show, practical brewers would so understand the recommendation. It is difficult to see how it could be understood otherwise.

A decree may be prepared dismissing the bill, with costs.

U. S. Circuit Court—Western District of Pennsylvania.

CONSOLIDATED ELECTRIC LIGHT COMPANY *v.* THE MCKEESPORT LIGHT COMPANY.

Decided March 17, 1887.

1. SEVERAL ASSIGNMENTS BEFORE ISSUE.
Pending an application for Letters Patent, the invention was assigned to corporation A, by it to corporation B, and by the latter to the complainant, all the assignments being recorded in the Patent Office before the issuance of the patent. The patent issued to corporation A. *Held* on demurrer to bill setting out this title the patent was not void for want of interest of record in the patentee.

2. SAME—REVISED STATUTES 4895.
The purpose of section 4895 of the Revised Statutes is to permit a patent to issue to the person who has the record title to the invention, and is attained when the patent runs to the ultimate assignee, and therefore a patent may issue to the person who by the records of the Office is assignee of the invention, although not technically the assignee of the inventor. (*Selden v. Stockwell Gas Burner Co.*, 19 Blatchf., 544; S. C., 9 Fed. Rep., 390.)

3. SAME—LEGAL TITLE VESTS—WHEN.
The legal title to a patent vests at once on its issuance to the person who by the record is entitled to it; but it is not mandatory under the language of the statute that the patent run in form to such record owner. (*Gaylor v. Wilder*, 10 How., 477.)

4. SAME—TO WHAT ASSIGNEE ISSUED.
A patent is properly issued to any assignee whose assignment is duly recorded when it can be done without impairing the rights of any other person having a paramount title to the invention, and is therefore valid when issued to any such assignee of record. (*Consolidated Electric Light Company v. Edison Electric Light Company et al.*, 33 O. G., 1597.)

SUR demurrer to bill of complainant.

Messrs. Broadnax & Bull, Mr. W. Bakewell, and *Mr. T. B. Kerr* for the complainant.

Mr. John C. Tomlinson and *Mr. Magnus Pflanon* for the defendant.

ACHESON, *J.*:

The precise question here presented was raised in the case of *The Consolidated Electric Light Company v. Edison Electric Light Company*, (33 O. G., 1597; 25 Fed. Rep., 719,) and was decided favorably to the plaintiff. I have carefully read the opinion of Judge Wallace and perceive no reason for doubting the correctness of his conclusion. How can it be said the patent was issued without authority of law, and therefore is void, when in fact it was issued to the very person designated by section 4895 Revised Statutes—viz: "the assignee of the inventor?" There was, indeed, a literal compliance with the provisions of the statute; but as by operation of law the legal title to the patent upon the issuance thereof, *eo instanti*, vested in the plaintiff as the ultimate assignee, the substantial result was the same as if it had formally issued to the plaintiff. (*Gaylor* v. *Wilder*, 10 How., 477.) While this view saves the patent and subserves the justice of this case, it neither runs counter to sound public policy nor tends to any evil consequences, so far as I can see.

And now, March 17, 1888, the demurrer is overruled, with leave to the defendant to answer the bill within thirty days.

The Official Gazette.

THE OFFICIAL GAZETTE is published every Tuesday, simultaneously with the weekly issue of patents. From January 1, 1872, (the commencement of its publication,) to June 30, 1883, it was published and bound in semi-annual volumes; since July 1, 1883, in quarterly volumes. All subscriptions must commence with the beginning of a volume; none taken for less than three months. Terms: To all subscribers within the United States and Canada, $5 per annum; to foreign subscribers, $7; single copies, 10 cents; bound semi-annual volumes, (prior to June 30, 1883,) full sheep, $4 per volume; bound quarterly volumes, (subsequent to July 1, 1883,) full sheep, $2.75 per volume. No club rates. *Payment in advance.* All orders should be addressed to "The Commissioner of Patents, Washington, D. C."

Fraudulent Practices by Attorneys.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., April 18, 1888.

The attention of this Office having frequently been called to circulars and communications of persons pretending to have access to the records of this Bureau, and claiming to possess information of the pendency of applications for patents, notice is hereby given the public that all such persons in so advertising themselves are acting under false representations and are guilty of unprofessional conduct, and should not be entitled to credit.

The Office has also received information that certain attorneys disbarred from practice under section 487 of the Revised Statutes are continuing to prosecute applications for patents under the names of other persons.

Hereafter a list will be published in the OFFICIAL GAZETTE containing the names and addresses of all such persons, and the public warned against employing them or intrusting applications or interests to their charge.

BENTON J. HALL, *Commissioner.*

The Office has information that *Isaac S. McGiehan, No. 155 Broadway, New York*, a disbarred attorney, has been practicing under the name of *Alexander Melhado.*

Notice.

UNITED STATES PATENT OFFICE,
Washington, D. C., April 13, 1888.

To expedite the distribution of the mail in this Office, and to insure the prompt and certain delivery of communications to the divisions and officials having charge of the matters to which they relate, attorneys and correspondents are respectfully requested to enter upon the upper left-hand corner of amendments and other communications, if known to them, the number of the room and the name of the examiner or designation of the division to which the communication should be sent.

BENTON J. HALL,
Commissioner of Patents.

18,450.—BUTTON.—*Rudolph Liebmann*, New York, N. Y. Application filed June 14, 1888. Serial No. 277,152. Term of patent 3½ years.

18,451 and 18,452.—OPEN-WORK PANEL.—*Frederick Mankey*, Williamsport, Pa. Applications filed February 28, 1887. Serial Nos. 229,266 and 229,267. Term of patents 7 years.

18,453.—SPOON.—*Henry A. Pistorius*, Newburyport, Mass., assignor to *The Towle Manufacturing Company*, same place. Application filed June 7, 1888. Serial No. 276,413. Term of patent 7 years.

18,454.—SCARF.—*Henry Rawak*, New York, N. Y. Application filed May 16, 1888. Serial No. 274,081. Term of patent 7 years.

18,455.—KNIFE AND FORK.—*Mary Richmond*, Lockport, N. Y. Application filed June 5, 1888. Serial No. 276,154. Term of patent 7 years.

18,456.—BADGE.—*Jean Steiner*, New York, N. Y. Application filed May 23, 1888. Serial No. 274,840. Term of patent 3½ years.

TRADE-MARKS.

[Certificates of registration of Trade-Marks numbered 8,191 and upward are registered under the act of March 3, 1881.]

15,646.—POMADES FOR TOILET USE.—*John E. Brearey*, London, county of Middlesex, England. Application filed May 5, 1888. Used since January 1, 1887.

"A full-face portrait of the head of Diana of Poitiers, the words 'POMMADE DE DIANE DE POITIERS,' and the words 'MARIE DU BOYER.'"

15,647.—FLOUR.—*E. Nelson Gardner*, Baltimore, Md. Application filed June 1, 1881. Used since 1866.

"The words 'SNOW DROP.'"

15,648.—REMEDY FOR DYSPEPSIA.—*Geo. Groder & Co.*, Waterville, Me. Application filed June 1, 1888. Used since January 1, 1888.

"The representation of a beaver crouched upon a log above a waterfall building a dam, with herbs and flowers growing upon each shore, and inclosed by a circle."

15,649.—ROASTED COFFEE.—*Haysorth & Deuhurst, (Limited,)* Pittsburg, Pa. Application filed April 17, 1888. Used since 1882.

"The representation of a bird over a nest of eggs."

15,670.—VETERINARY OINTMENT.—*Samuel Heiser*, Sioux City, Iowa. Application filed May 21, 1888. Used since May 10, 1888.

"A representation of the corn-palace of 1887, erected at Sioux City, Iowa, with the words: 'DR. HEISER'S MAGIC VETERINARY HEALING OINTMENT.'"

15,671.—WASHING-POWDER.—*Hodyson & Co.*, Binghamton, N. Y. Application filed May 9, 1888. Used since March 15, 1888.

"The word 'HERBY.'"

15,672.—COMPOUNDS FOR CLEANSING, WASHING, AND SCOURING.—*The Keystone Chemical Company*, Philadelphia, Pa. Application filed February 10, 1888. Used since June, 1886.

"The word 'PHOSPHO.'"

15,673.—LIQUEURS OR CORDIALS.—*Rocher Frères*, La Côte St. André, Isère, France. Application filed April 9, 1888. Used since November, 1887.

"The representation of three rocks."

15,674.—PACKING CONSTRUCTED WHOLLY OF FLAX FIBER WITH A RED-CORD CENTER.—*William T. Y. Schenck*, San Francisco, Cal. Application filed March 24, 1888. Used since October 22, 1887.

"The words 'THE RED CORD.'"

15,675.—ENGRAVERS' PLATES, DIES, AND TOOLS.—*John Sellers & Sons*, New York, N. Y., and Sheffield, England. Application filed June 4, 1888. Used since 1838.

"The letter 'S' pierced vertically and centrally by a sword."

15,676.—KNIVES, RAZORS, SHEARS, AND SCISSORS.—*John Sellers & Sons*, New York, N. Y., and Sheffield, England. Application filed June 4, 1888. Used since 1838.

"The letter 'S' pierced vertically and centrally by a sword."

15,677.—BICYCLES AND TRICYCLES.—*St. George's Engineering Co.*, Birmingham, county of Warwick, England. Application filed March 26, 1888. Used since December 1, 1886.

"A representation or figure of Mercury treading on a wheel and carrying another wheel."

15,678.—LINEN AND HEMP GOODS OF ALL DESCRIPTIONS.—*Richard Thomas Webb*, Greenisland, Belfast, Ireland. Application filed May 25, 1888. Used since September, 1886.

"An outline map of Ireland."

15,679.—MEDICINAL TINCTURES AND FLUID EXTRACTS.—*Weeks & Potter*, Boston, Mass. Application filed March 8, 1888. Used since 1873.

"The representation of a phenix."

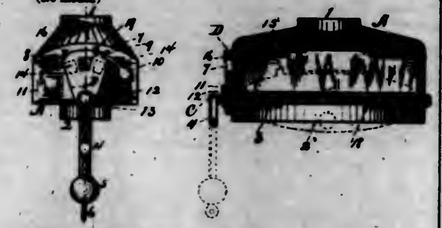
15,680.—CERTAIN PREPARATIONS OF MEDICINAL HERBS.—*George W. Wright*, Akron, Ohio. Application filed June 1, 1888. Used since May 29, 1888.

"The compound word 'ROOT-TEA-NA.'"

LABELS.

5,648.—Title: "COCA TOBACCO AND CIGARETTES."—*Gotthard Schwenzner*, New York, N. Y. Application filed June 16, 1888.

5,649.—Title: "ROCHESTER GAS BURNER."—*Charles Stanford Upton*, New York, N. Y. Application filed June 14, 1888.



5,650.—Title: "ORANGE PHOSPHATE."—*Wolf-Wilson Drug Company*, St. Louis, Mo. Application filed April 5, 1888.

5,651.—Title: "ROOT-TEA-NA," (FOR A VEGETABLE MEDICAL COMPOUND.)—*George W. Wright*, Akron, Ohio. Application filed June 1, 1888. (Trade-Mark Registered.)

PATENTS

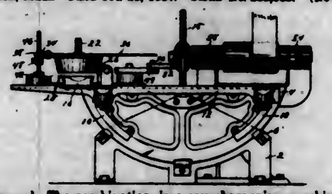
GRANTED JULY 10, 1888.

385,692. AUTOMATIC DAMPER. ROBERT H. ARNOLD and ELISHA S. STAPLIN, Seneca Falls, N. Y. Filed Mar. 26, 1888. Serial No. 268,473. (No model.)

Claim.—1. In a damper, a cold-air slide mounted upon a main-damper arbor and operated by the rotation of the arbor and in combination therewith, substantially as described.

2. A cold-air slide mounted upon the draft-shut-off arbor and operated by the rotation thereof, and provided with a weight on one side and in combination with said arbor, substantially as described.

3. The combination, with the damper-shell provided with openings in one end, of a cold-draft slide mounted upon the shut-off arbor, and stop-hooks upon the shell and stop-lugs upon the slide and a weight thereon, substantially as described.



4. The combination, with the arbor C, provided with a stud, 13, of the slide D, mounted upon said arbor and provided with a stud, 11, substantially as described.

5. The combination, with the arbor C, provided with the weighted arm 4 and stud 13, of the slide D, upon said arbor and provided with a stud, 11, and side weight, 10, substantially as described.

6. The combination, with the damper-shell, of a rotating arbor mounted therein and provided with a weighted arm and stud 13, and a cut-off damper mounted thereon, and a slide mounted upon said arbor and provided with a stud, 11, substantially as described.

7. The combination, with a damper-shell, of a rotating arbor mounted therein and provided with a weighted arm, and a damper loosely mounted thereon, and a stud upon the arbor engaging with the damper, substantially as described.

385,693. SAW-SHARPENING MACHINE. ABEL BLACKNER, Minneapolis, Minn. Filed Oct. 26, 1887. Serial No. 253,503. (No model.)

Claim.—1. The combination, in a saw-sharpening machine, with a grinding-wheel whose arbor is mounted in stationary bearings, of a segmental bed-plate arranged to turn about an axis that is substantially coincident with the center of the grinding-wheel, and a movable saw-support carried by said bed-plate, substantially as described.

2. The combination, in a saw-sharpening machine, with a grinding-wheel whose arbor is mounted in stationary bearings, of a segmental bed-plate arranged to turn about an axis that is substantially coincident with the center of the grinding-wheel, a cross-head sliding at right angles to the axis of said bed-plate upon guides supported on said bed-plate, and a saw-support sliding upon said cross-head parallel with the axis of said bed-plate, substantially as described.

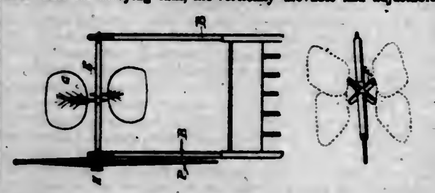
3. The combination, in a saw-sharpening machine, with a suitable grinding-wheel, of the bed-plate 4, arranged to turn about an axis that is substantially coincident with the center of the grinding-wheel, and a movable saw-support carried by said bed-plate and arranged to support a saw in a plane that intersects substantially the center of the grinding-wheel, substantially as and for the purpose set forth.

4. The combination, in a saw-sharpening machine, with the grinding-wheel 18, of the bed-plate 4, mounted in ways and turning upon an axis that is substantially coincident with the center of the grinding-wheel, the brackets 10, secured to said bed-plate and projecting at right angles therefrom, the guides 12 and 14, secured above said brackets at right angles to the axis of the bed-plate, the cross-head 16, mounted upon said guides and adapted to move thereon, and the saw-support 20, mounted upon said cross-head and adapted to slide thereon in a line parallel with the axis of said bed-plate.

5. The combination, in a saw-sharpening machine, with the grinding-wheel, of the transversely-movable cross-head 16, provided with the rod 24, the saw-support 20, mounted and adapted to slide longitudinally on said cross-head and provided with the collar 26, engaging said rod 24, a set-screw, 28, and the collar 30, provided with the set-screw 32, substantially as described.

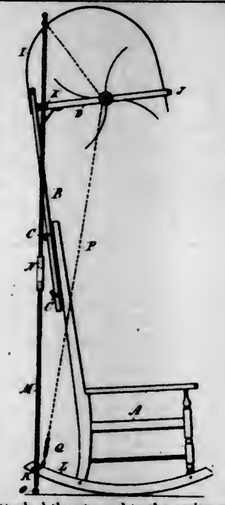
6. The combination, in a saw-sharpening machine, with the grinding-wheel, of the transversely-movable cross-head 16, the adjustable arm 42, secured upon said cross-head; the rod 46, secured to said arm 42, the rod 24, pivotally supported upon the rod 46, the sliding saw-support 20, and the adjusting-lever 36, adjustably pivoted upon the said rod 34, substantially as described.

7. The combination, in a saw-sharpening machine, with a grinding-wheel, 18, of the transversely-movable cross-head 16, the longitudinally-sliding saw-support mounted upon said cross-head, the slotted arm 49, pivoted on said cross-head, and the arm 50, pivotally supported upon said arm 49 and provided with an adjustable rest, 52, substantially as described.



385,694. FIRE-PROOF COMPOSITION. JOHN BLAKEMAN, Cleveland, Ohio. Filed Apr. 23, 1887. Serial No. 236,240. (Specimens.)

Claim.—The herein-described composition of matter in a dried state, consisting of mineral wool, clay, salt, water-lime, and gum-arabic, in the proportions and for the purpose substantially as set forth.



385,695. AUTOMATIC FAN FOR FURNITURE. HERMAN M. REIS, Vicksburg, Miss. Filed Dec. 16, 1887. Serial No. 258,123. (No model.)

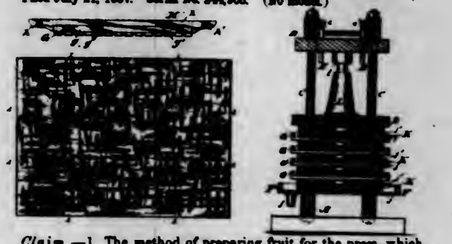
Claim.—1. In combination with the rocker A, the uprights B, adjustably secured thereto, the wire I at their upper ends, and the arms D, forwardly projecting from said uprights, the fan-shaft E, journaled therein, the rod M, attached to the arms D and chair-rocker by eyes K, in which it is vertically movable, and having a caster, O, on its lower end, and the cord P, secured at its upper end to the rod M and at its lower end to the spring Q, attached to the rocker, substantially as set forth.

2. A portable knockdown frame for furniture attachment, consisting of two vertical uprights, each provided with clamps and having forwardly-projecting right-angled bars, in combination with a rotatable shaft for carrying fans, the vertically-movable and adjustable

385,695.

rod having cord attached thereto and to the spring connecting with the rocker and wrapped around said fan-shaft, substantially as herein set forth.

385,696. CHURN. JOHN C. COLE, Brents, Wash. Filed Sept. 21, 1887. Serial No. 250,230. (No model.)



Claim.—1. In a churn, the combination, with the body A, having a lid, of the standard D, secured to the said lid, the rod E, secured in the said standard and having the independently-moving gear-wheels F and F' loosely mounted on the upper and lower ends thereof, respectively, the bevel gear-wheels *f* and *f'*, secured rigidly to the lower and upper sides of the gear-wheels F and F', respectively, shaft G, journaled in the side of the standard, and having the gear-wheel G' on its inner end engaging with the gear-wheels *f* and *f'* at opposite sides, the vertical shaft H, journaled at its upper end in the upper side of the standard and at its lower end in a bearing in the lid, and having a gear-wheel rigidly secured to its upper end, and meshing with the gear-wheel F and the dasher on its lower end, the sleeve supported by the churn-lid and surrounding the lower end of the said vertical shaft, and having a gear-wheel on its upper end meshing with the gear-wheel E', and a dasher connected to said sleeve and revolving around the dasher secured to the shaft H, all arranged and operated substantially as and for the purpose specified.

2. In a churn, the combination, with the body having a lid, C, of the vertical shaft H, having a gear-wheel on its upper end adapted to be operated in one direction, the sleeve J around the said shaft and journaled in a bearing in the said lid, the sleeve being provided at its upper end above the lid with a gear-wheel adapted to be operated in the opposite direction to the wheel on the shaft H, the loop *j* on the side of the sleeve J below the lid forming a groove communicating with the sleeve, the outer dasher, K, having its upper cross-bar provided at the center with a barrel, and a sleeve, L, to embrace the shaft H and pass within the sleeve J, the said sleeve L being provided on the side with a rib, *l*, to fit in the groove formed by the loop *j*, and the inner dasher, N, having a barrel fitted loosely in the barrel on the upper bar of the dasher K and connected to the shaft H, all constructed and arranged substantially as and for the purpose specified.

3. The combination, in a churn, of the vertical shaft H, having a gear-wheel on its upper end and squared at its lower end, the sleeve J, operating on the said shaft a short distance from the lower end, said sleeve having a gear-wheel on its upper end and grooved at its lower end, which groove communicates with the interior of the sleeve, the outer dasher, K, having a cross-bar, K', provided on its upper side with a vertical sleeve, L, adapted to surround the shaft H and pass within the sleeve J, and having the rib *l* on its side fitting in the groove in the sleeve J, the barrel M on the lower side of the cross-bar K' having an opening, *m*, in its side, the inner dasher, N, connected to the lower end of the shaft H, and having a cross-bar, N', provided on its upper side with a barrel, O, adapted to fit in the barrel M, the lower ends of the dashers being detachably pivoted together, substantially as and for the purpose specified.

4. In a churn, the combination of the outer dasher, K, comprising the upper cross-bar, K', provided on its upper side with a sleeve, L, adapted to be rotated by means substantially as described, and on its lower side with the barrel M, provided with an opening, *m*, in its side, the lower bar, K², having a socket in its upper side and a pintle on its lower side, the blades K³, attached to the said cross-bars, the shaft H, operating loosely in the sleeve L and having its lower end squared, the dasher N, comprising the upper cross-bar, N', provided at the center with a squared opening fitting on the lower squared end of the shaft H, and the barrel O, arranged around the said opening, embracing the shaft H and entering the barrel M, the lower cross-bar, N², having a pintle on its lower side operating in the socket in the cross-bar K², and the blades N³, connecting the ends of the cross-bars N' and N², all constructed and arranged substantially as and for the purpose specified.

385,697. FRUIT-PRESS. GUSTAVE L. CUDNER, Bronxville, N. Y. Filed July 21, 1887. Serial No. 244,903. (No model.)

Claim.—1. The method of preparing fruit for the press, which consists in crushing the same and then mixing it with straw and enveloping the mixture in a cloth, substantially as shown and described.

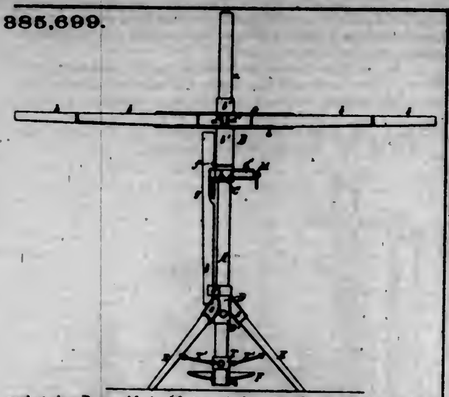
2. The method of preparing the fruit for the press, which consists in first crushing the same, then mixing the same with straw and enveloping it in a cloth with the use of a suitable mold, and arranging the envelopes and contents in tiers, substantially as set forth.

385,698. CHURN-DASHER. JOHN DAVIS, Allegheny, Pa. Filed Nov. 30, 1887. Serial No. 256,540. (No model.)

Claim.—A churn-dasher provided with a disk having numerous perforations and imperforate portions separating the perforations into groups, in combination with a series of angular blades covering each group of perforations and secured to the imperforate portions of the disk, whereby the cream is divided into numerous small streams, deflected from one blade against another, violently agitated, and the globules broken in passing through the perforations and striking against the blades, substantially as described.

385,699. REVOLVING ADJUSTABLE PAPER-FILE OR OTHER RACK. CHARLES H. DEXTER, Annapolis, Md. Filed Mar. 26, 1888. Serial No. 268,602. (No model.)

Claim.—1. The combination, with the central staff, A, having latching-notches *a*, of a revolving hub, B, comprising a collar, *b'*, disk *c*, vertical circular flange *d*, radial arm socket-plates *d'*, extending forward beyond the disk *c*, supporting-ring *e*, and detachable arms *b*, formed with notches *f*, substantially as and for the purpose described.



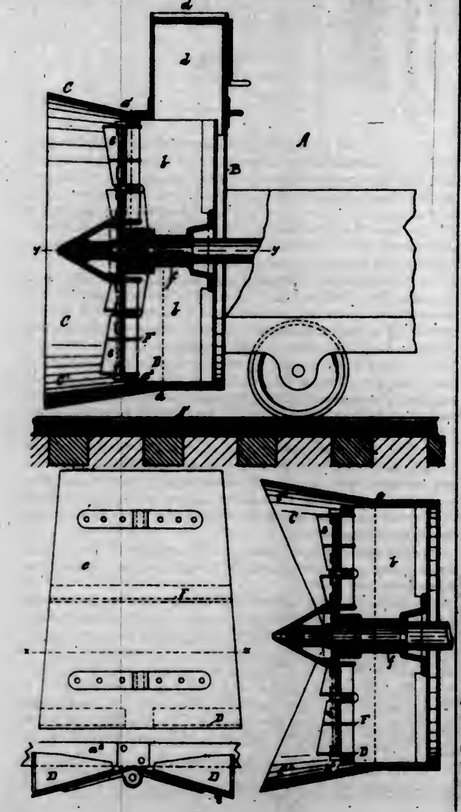
2. The detachable rack-arms *b*, formed with notches *f* and hooking-slots *g*, in combination with the hub B, and the latching-collar C, provided with the loop A, substantially as described.

3. The combination of the staff A, having notches *a*, the rack-arm hub B, and the latching-collar C, provided with a spring-latch, M, having a beveled nose, and arranged to slide and rotate, substantially as described.

4. The detachable rack-arms *b*, provided with the notches *f*, hole or holes *m m'*, slots m^2 m^3, and clamps G, in combination with hub B, latching-collar C, and staff A, substantially as and for the purpose described.

5. The combination, with the staff A, revolving hub B, having detachable arms *b*, and collar C, having supporting-loop A, of the

385,699.



socket-ring D, provided with two circles of sockets, *s s'*, those of one set being in different vertical planes from those of the other set, substantially as and for the purpose described.

6. The combination, with the staff A, revolving hub B, and supporting-collar C, of the detachable arms *b*, formed with notches *f*, hole or holes *m m'*, and one or more stands, G' G², substantially as and for the purpose described.

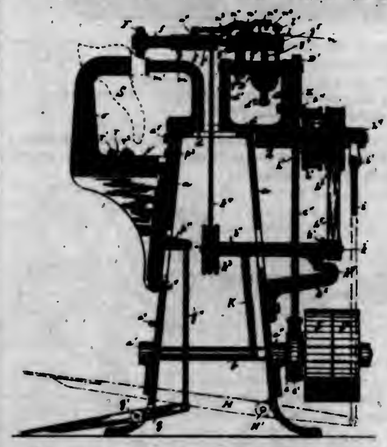
7. The leg-socket ring formed with two circles of sockets, *s s'*, in combination with the staff A and legs E, substantially as and for the purpose described.

385,700. ROTARY SNOW-EXCAVATOR. SAMUEL H. DUNNING, Paterson, N. J. Filed May 21, 1888. Serial No. 274,393. (No model.)

Claim.—1. The combination, with the cylindrical casing B and hood C, of the lengthened sloping corners C' C², whereby less obstruction is offered to the passage of the snow into the hood to the knife, and the snow left by the knife caused to pass through under the rim of the knife-wheel to the fan, substantially as described.

2. The combination of the knife *e* with the flange-cutters D, whereby the snow is cut from the bottom and carried to the fan, substantially as described.

3. The combination, with the knife *e* and flange D, fixed to said knife, of one or more plates, F, secured to said knife, whereby the snow cut by the several portions of the knife is retained within its own circumference and carried to the fan to be expelled by the fan in common with that carried by the flange-cutter D, and fan for throwing the snow out of the spout, substantially as described.



385,701. RAILWAY-RAIL. FREDERIC BOURNAT, San Francisco, Cal. Filed Apr. 20, 1888. Serial No. 271,298. (No model.)

Claim.—1. A railway-rail made in two or more parts or pieces and having a longitudinal conduit or tube extending its entire length, and a slot or passage through the inner portion of the rail connecting with said conduit or tube, substantially as described.

2. A railway-rail having its upper portion or tread made separate from the other portions of the rail and adapted to be secured upon or over a conduit or tube in the lower part of the rail, and having a horizontal slot or open passage leading from its inner face to and connecting with the conduit or slot, substantially as specified.

385,702. REEL-BURNISHING MACHINE. WARREN C. EVANS, Exeter, N. H., assignor to the Remington Machine Company, of New Hampshire. Filed Dec. 28, 1887. Serial No. 258,690. (No model.)

Claim.—1. In a burnishing-machine, the jacking mechanism, as described, consisting of the stationary arm *m* and its top-lift rest *m'*, combined with the vertically-adjustable jack-supporting bracket *p*, having guides *p' p'* for the reception of the base *o'* of the jack *o*, and the lever *r*, connected to the jack-plate or base *o'*, pivoted in one end to the guide *p'*, and having spring-pressed pawl r^4, adapted to lock in the ratchet-bar p^2 on the jack-support, as and for the purpose set forth.

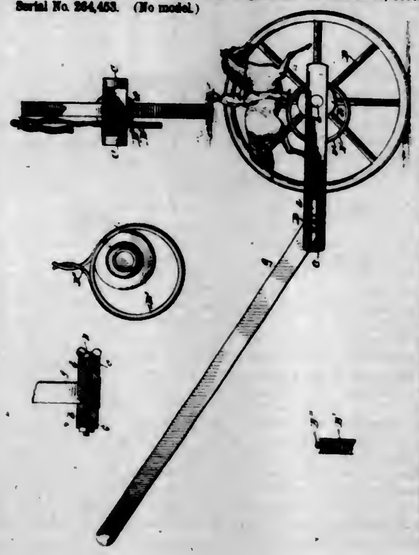
2. In a burnishing-machine, the rotary burnisher-tool F, secured to the sleeve *f*, and adapted to rotate and reciprocate on the spindle *g*, as described, and the mechanism for imparting a rotary motion to said sleeve *f*, consisting of the friction-clutch pulleys *k' k''*, the tubular bearing k^5, adapted to swing on the fulcrum k^6, and having the tension-spring K, the spindle *k*, journaled in the bearing k^5, and having pulleys k^7 and k^8, secured to its ends, with belts or cords k^9 k^{10}, leading, respectively, from said pulleys to the friction-pulley *k'* and sleeve *f*, as and for the purpose set forth.

3. In a burnishing-machine, the mechanism for imparting an oscillating motion to the burnisher-tool, consisting of the rock-shaft or head D, journaled in the stationary bearings d' d'', and having pivoted to an extension or projection, g^3, the lever g', upon a spindle, g, of which is loosely journaled the burnisher-sleeve f, and the adjustable spring-pressure device d^5 g^4 for holding the burnisher-tool F in contact with the heel and to allow it to yield relative to the curvature of such heel, as and for the purpose set forth.

4. In a burnishing-machine, the automatic mechanism for reciprocating the burnisher-tool from top to bottom of the heel, consisting of the burnisher-tool sleeve f, journaled on the spindle g, and having one or more cam-grooves, f' f'', as described, combined with the lever or arm g', the adjustable block n, secured to said lever g', and having pivoted to it the spring-pressed lever n'', provided with a pin or projection, n^3, adapted to fit in any one of the cam-grooves on the sleeve f, and means for locking it in position to the said lever g', as and for the purpose set forth.

5. In a burnishing-machine, the rocking shaft or head D, and the lever g', pivoted to an arm or extension of said head, the spindle g, secured to or made in one piece with said lever g', the burnisher-sleeve f, mounted loosely on said spindle g, and having one or more cam-grooves, f' f'', combined with the block n, adjustable on the arm g', and having pivoted to it the spring-pressed lever n'', having a projection, n^3, adapted to enter any one of the cam-grooves f'', and means for locking said levers n'' g' together, as and for the purpose set forth.

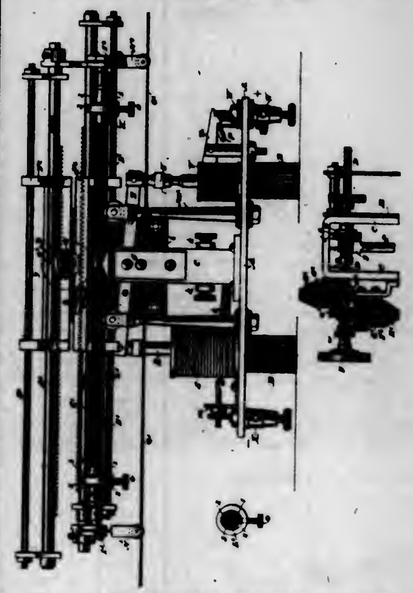
6. In the herein-described burnishing-machine, the friction-clutch pulleys h' h'', loosely journaled on the stationary shaft or spindle h, and having spring h^3, interposed between them, and the inclined block h^4, secured to the shaft h, in combination with the treadle H, pivoted at H', and having connecting-rod i, with forked or slotted wedge part i', interposed between the inclined block h^4 and the pulley h'', as and for the purpose set forth.



7. In a burnishing-machine, the rock-lever D, and the lever g', pivoted to an arm or extension, combined with the adjustable spring-pressure device d^4 g^4, interposed between the said levers, and the pin or bolt l, secured to one of said levers and provided with regulating stop-nuts or collars l', as and for the purpose set forth.

385,703. BELTING. JAMES B. FORSYTH, Boston, Mass. Filed Mar. 28, 1888. Serial No. 268,256. (No model.)

Claim.—The improved belting above described, in which there are two or more strips, a a', each coated with rubber or its equivalent and folded into a distinct belt with a vulcanizable coating, these distinct belts being united and vulcanized together and forming a multiply belt, substantially such as described.



385,704. TOY HOOP. HENRY D. GARDY, Northeast, Md., assignor of one-half to Charles A. Cooper, Philadelphia, Pa. Filed Feb. 18, 1888. Serial No. 264,453. (No model.)

Claim.—1. In a toy hoop, the arms forming a platform for the figure and having a handle adjustably connected thereto, substantially as shown and described.

2. In a toy, the combination, with the platform-arms having slots therein, of the handle, and the netted bolt for adjustably securing said handle between said arms, substantially as shown and described.

385,705. ARC LAMP. JAMES B. GARTON, Fort Worth, Tex. Filed Sept. 14, 1887. Serial No. 249,619. (No model.)

Claim.—1. The combination, substantially as hereinbefore set forth, of the carbon-carrier racks G' and G^2, supported in frames F' and F^2, suitably insulated from each other, hangers I' and I^2, depending therefrom, supporting carbon-holders by ball-and-socket joints, the horizontally-arranged carbons L' and L^2, guide-pulleys supporting the same near the arc to keep said carbons in alignment, a track suitably supported, and pulleys adapted for the same to support the carbons and carbon-carrier racks at their outer ends.

2. The combination, as hereinbefore set forth, of the carbon-carrier racks G' G^2, frames F' and F^2, carrying the same and suitably insulated from each other, hangers I' and I^2, carbons carried thereby horizontally arranged, guide and supporting pulleys for the same near the arc to keep the carbons in alignment, guide and supporting pulleys connected to the hangers remote from the arc and running on a suitably-supported wire or track, a shaft, D, with spur-wheels thereon, adapted to engage and move said carbon-carriers, a clock-train for positively actuating said shaft, and electro-magnets for modifying the rotation of said shaft to keep the arc practically constant.

3. The combination, as hereinbefore set forth, of a shaft adapted to effect the feeding of an arc lamp through the instrumentality of a suitable motor, main and derived circuit magnets, and a rocker-arm controlled thereby, with a cross-arm adapted to engage a toothed wheel on said shaft and modify the rotation of the same, so as to keep the arc practically constant.

4. The combination, with the wheel b, carried by the shaft D, also carrying pawl and ratchet therefor, of the spring-actuated tooth g, substantially as described.

5. The combination of the shaft D, adapted to feed the carbons by rack and pinion through the instrumentality of a clock-train, loosely-mounted wheel b thereon having ratchet integral therewith, a pawl rigidly mounted upon said shaft engaging said ratchet, and a tooth interposed by the action of the main and derived circuit magnets between the teeth of said wheel to arrest the feed of the carbon or to advance the same by being impelled against said wheel to separate the carbons, or to be freed from said wheel by the differential action of said magnets to allow the clock-train to feed, substantially as described.

6. The combination of the shaft D, adapted to feed the carbon by means of racks and pinions through the instrumentality of the clock-train, the wheel b and ratchet f integral therewith, loosely mounted upon said shaft, with pawl carried by the same engaging said ratchet, the main and derived circuits S V, and the rocker-arm Q, connecting the two together, with cross-arm P, having spring-actuated tooth g, for the purpose described.

7. The combination of the shaft D, adapted to feed the carbons of an arc lamp by means of racks and pinions through the instrumentality of a clock-train, wheel b, carried by said shaft and coupled thereto by pawl and ratchet, main and derived circuit magnets S and V, rocker Q, connecting the same, cross-arm P, with spring-actuated tooth g, adapted to co-operate with said wheel b, and tension-regulating spring and limiting-stops for the above.

8. The combination of a shaft, such as D, adapted to feed an arc lamp by means of a clock-train, a main and derived circuit magnet controlling the same through the agency of a rocker, Q, and tooth g engaging a pinion on said shaft, and the pivoted vibrating piece T, mounted on said rocker and coupling the yoke of either magnet thereto, whereby the cores of the magnet may move in a vertical line and rubbing against the interior side of said magnet be prevented, for the purpose set forth.

9. The combination, as hereinbefore set forth, with the rocker Q, of the pivoted vibrating piece T, held by a spring to the same, the cross-arm P and limiting-stops, the pin Y, depending from the yoke U, sustained by said vibrating piece, and an automatic cut-out operated, substantially as described, by said pin.

10. A clock-train adapted to impart motion to one or more carbon-carriers by means of a shaft, as D, a pawl and ratchet between the escapement of the clock-train and said shaft, so that the carbon-carriers may be retrograded without actuating the escapement, and a second pawl and ratchet, for holding said shaft in any desired position, operated at will.

11. A clock-train adapted to impart a positive motion to one or more carbon-carriers by means of a shaft, as D, to feed the carbons, a pawl and ratchet between the escapement of the clock-train and said shaft, so that the same may be freely retrograded, electro-magnets, and intermediate connections controlling the feed of said shaft by means of a loosely-mounted wheel coupled to the same by pawl and ratchet, so as to permit the aforesaid retrograde movement, substantially as described.

12. A clock-train adapted to impart positive motion to one or more carbon-carriers by means of a shaft, as D, to feed the carbons, a pawl and ratchet between the escapement of the clock-train and said shaft, electro-magnets controlling the action of said feed by means of a tooth engaging a loosely-mounted wheel coupled by a second pawl and ratchet to said shaft, whereby said shaft may be retrograded to separate the carbon-carriers and carbons, a milled head, y, for effecting such retrograde movement of said shaft, and a third pawl and ratchet brought into operation at will for holding said shaft in opposition to the clock-train.

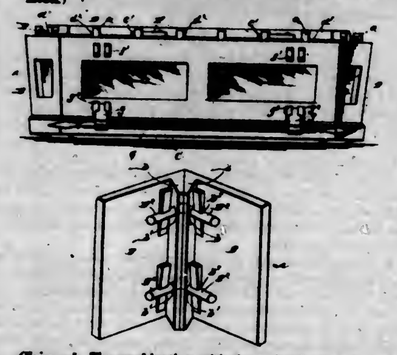
13. The combination, with the two carbon-carrier racks G' and G^2, hangers I' and I^2 adjustable thereon, each carrying its own carbon, and carbon-holders supported by ball-and-socket joint in said hangers, between the same and the carbons, substantially as described, whereby the carbons may be adjusted in position and aligned, as set forth.

14. The combination of the carbon-carrier racks G' G^2, the hangers and carbon-carriers supported from the same, holding the carbons in position, the shaft D, having pinions d' and d^3, engaging said carbon-carrier racks, a clock-train adapted to rotate said shaft in one direction and feed the carbons, a toothed wheel, b, loosely mounted upon said shaft and coupled thereto by pawl and ratchet, rocker Q, pivoted to the frame of the lamp, with cross-arm P adapted to engage said toothed wheel, and main and derived circuit magnets S and V, substantially as described.

15. The combination of the carbon-carrier racks G' and G^2, carrying the carbons, supporting-pulleys for the same at and remote from the arc to keep them in alignment, a shaft, D, having pinions d' and d^3 of different diameter engaging said carbon-carrier racks, a clock-train adapted to rotate said shaft to feed the carbons, main and derived circuit magnets controlling a rocker, Q, and cross-arm P, adapted to control the rotation of the shaft, limiting-stops and tension-regulating devices for the latter mechanism, a spring-held vibrating piece pivoted to said rocker, and a pin, substantially as Y, and a cut-out operated by the same.

385,706. KNIFE-SHARPENER. WILLIAM H. GEE, Woodberry, Md., assignor of one-half to James G. Hoare, same place. Filed Mar. 9, 1883. Serial No. 266,662. (No model.)

Claim.—1. In a knife-sharpener, a base or stand provided with a knife-slot and a socket or receptacle for the stone, in combination with the centrally-arranged spring, operating substantially as described.



2. The knife-sharpener stand provided with the horizontal knife-slot and the socket for the stone located above said knife-slot, substantially as described.

3. The knife-sharpener stand provided with the socket for the stone, and the knife-slot crossing the lower end of said socket, in combination with the centrally-arranged spring for upholding the edge of the knife in contact with the stone, substantially as described.

4. The knife-sharpener stand provided with the knife-slot and the socket for the stone, in combination with the spring D, and means, substantially as described, for uniting said stand to a support, substantially as specified.

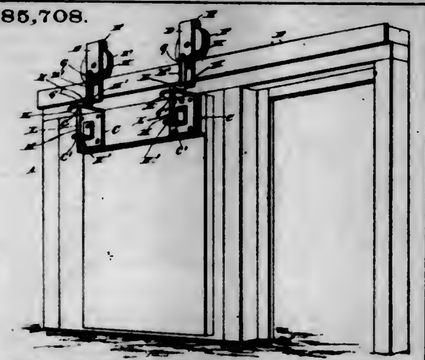
5. The combination, with the perforated base or stand A, having the knife-slot C c and the cylindrical socket a^3 a^2, of the stone E and the spring D, arranged and operating substantially as described.

385,707. GASKET. DUDLEY R. GOULD and PHILANDER BALDWIN, Chestertown, N. Y. Filed July 5, 1887. Serial No. 243,493. (No model.)

Claim.—1. The combination, with the gasket having the ears g', of the handles having the recessed blocks g engaging between the said ears, and the buttons securing said blocks between said ears, as set forth.

2. The combination, with the side sections and the end section of the gasket, of the angular flanges or projections b, extending inwardly therefrom at the meeting edges, the angular recessed dowel-pins B^3, passing through apertures in said projections, and the wedges adapted to be inserted through the recesses of said dowel-pins, substantially as described.

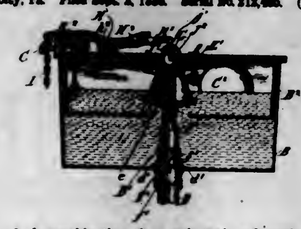
3. In a gasket, the combination of the sections having the inwardly-projecting flanges at their meeting edges, angular dowel-pins inserted through said meeting flanges, and means, substantially as described, for preventing the withdrawal of the dowel-pins, substantially as specified.



385,708. DOOR-HANGER. GEORGE F. GRAMES, Vernon Centre, Minn. Filed Jan. 7, 1888. Serial No. 260,661. (Model.)

Claim.—1. In a door-hanger, the combination, with a track, of the carrier to operate on the track, the bracket secured to the door, and the crank-rod mounted in bearings on the said carrier and bracket, substantially as specified.

2. In a door-hanger, the combination of the carrier having the yoke at its upper end and the bearings G G' on its outer side, the sheave mounted in the said yoke and running on a suitable track, the bracket adapted to be secured to the door and having bearings on its outer side, and the crank-rod having an offset at its center, the upper and lower arms thereof being mounted in the bearings on the carrier and the bracket and provided at their ends with nuts, substantially as and for the purpose specified.



3. In a door-hanger, the combination, with the track having an upper and lower edge, of the carrier having a sheave operating on the

385,708.

upper edge of the track and the hook engaging the lower edge, the bracket secured to the door, and the crank-rod mounted in the bracket and the carrier, substantially as and for the purpose hereinbefore specified.

385,709. WATER-CLOSET TANK. ADOLPH HAARLANDER, Allegheny City, Pa. Filed Sept. 3, 1886. Serial No. 212,465. (No model.)

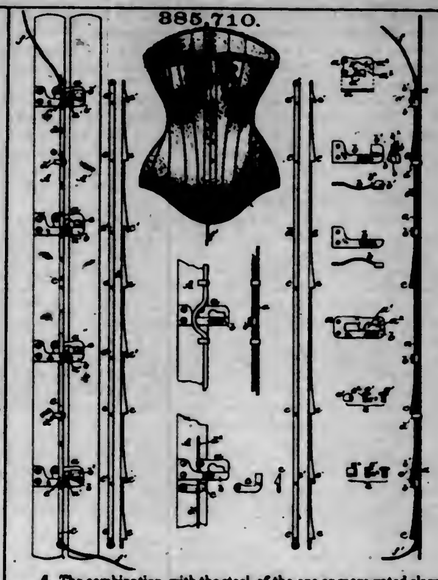
Claim.—1. In combination, the supply-tank and service-box, the former being wholly within the latter and fixedly stopped against the wall thereof on all sides, and a rigid stem carrying two valves seated in the bottoms of the tank and box, respectively, substantially as and for the purpose set forth.

2. In combination with the supply-tank, the valve controlling the flow of water therefrom, the tubular stem of said valve serving as an overflow-pipe to prevent the entrance of air into the pipe during overflow from the tank, the weighted lever which depresses said valve, the floating valve G, and the cage J, suspended from said lever about the valve F to retain it near the tubular stem, substantially as set forth.

3. In combination, substantially as set forth, the supply-tank, its overflow-pipe, and the floating valve G, suitably retained near the entrance of the overflow-pipe, the said pipe being contracted at its upper part to prevent the overflow-current seating the floating valve.

385,710. CORSET-CLASP. MAX W. HERTER, Bridgeport, Conn. Filed July 26, 1884. Serial No. 138,751. (No model.)

Claim.—1. The combination, with the steel, of the open-gated clasp-plate having a gate movable from the gateway of said plate, in a plane at right angles to the plane of the steel, substantially as described.



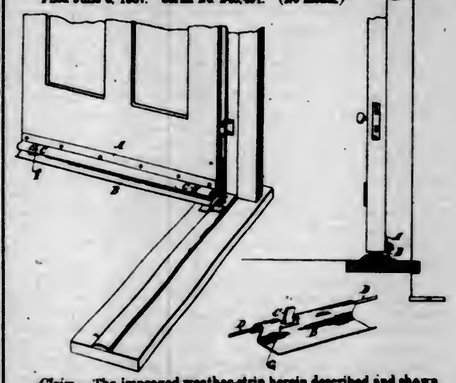
2. The combination, with the steel, of the open-gated clasp-plate having a spring-gate which is movable in opening and closing the gateway of said plate, in a plane at right angles to the plane of the steel, substantially as described.

3. The combination, with the steel, of the several open-gated clasp-plates and their gates movable in planes at right angles to said steel, and wedges or inclined planes coupled together for simultaneous movement in controlling said gates and causing or permitting them to open or close the gateways of their respective clasp-plates, substantially as described.

4. The combination, substantially as hereinbefore described, of the two steels, the gated clasp-plates, their gates, and their controlling wedges mounted, substantially as described, on one of said steels, and studs having heads which are flush with one side of their shanks, for enabling said gates to move in a plane parallel with the sides of said shanks, and thereby permitting the heads of the studs to pass beneath said gates and away from the clasp-plate.

5. The combination, with a gated clasp-plate, of a gate movable in a plane at right angles to the plane of the clasp and provided with a shoulder, by which a stud is locked within the retaining slot or eye of the clasp-plate, substantially as described.

385,710.

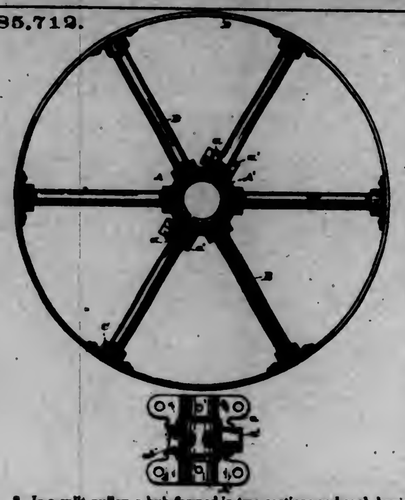


6. The combination, with the steel, of the one or more gated clasp-plates, the spring-gates for each clasp, and the sliding rod embodying a wedge for lifting each spring-gate, substantially as described.

7. The combination, with the steel, of the gated clasp-plate, its gate, and the sliding rod provided with an inclined surface which overrides the gate and confines it in position, substantially as described.

8. A clasp-plate having an open gateway for the outward passage of the shank of a stud from a retaining-slot, and a gate in said gateway movable at right angles to the plane of the plate, and adapted to permit the head of a stud to pass beneath said gate in its outward passage from the clasp-plate, substantially as described.

385,711. WEATHER-STRIP. THOMAS HUBBERT, Cochran, Ind. Filed June 6, 1887. Serial No. 240,491. (No model.)

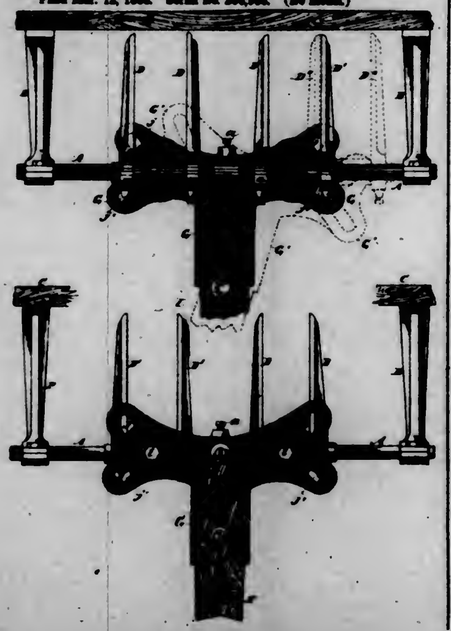


Claim.—The improved weather-strip herein described and shown, comprising the overhanging ledge A, permanently attached to a door and provided with openings F, the curved metal strip B, having its upper edge doubled on itself and provided with the notches G, the rod D, passing through said upper doubled edge of the strip B, and the loops C, fitted on the rod D and passed through the notches G and openings F, and having their upper ends bent over on the ledge A, substantially as specified.

385,712. SPLIT PULLEY. JOHN B. HUNT and FREDERICK C. BROCKBANK, Cleveland, Ohio. Filed Mar. 3, 1888. Serial No. 266,073. (No model.)

Claim.—1. In a split pulley, a hub divided into two separate sections in the line of its axis, and having arm-sockets on the line of division between said sections, substantially as set forth.

385,712.



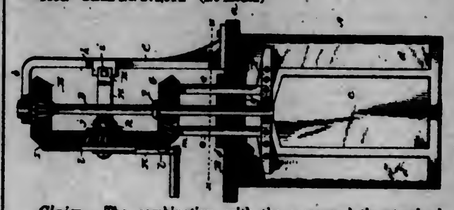
2. In a split pulley, a hub formed in two sections and each having an arm-socket on the line upon which the sections meet, and cavities at one edge to accommodate the said sockets, substantially as set forth.

3. In a split pulley, a hub split longitudinally in sections and provided with screw-threaded sockets on the line of the split, in combination with screw-threaded arms and a band, substantially as set forth.

4. In a split pulley, a hub formed in two equal sections split in the line of its axis and having arm-sockets on the line dividing the sections, formed wholly in one section, whereby each socket is made complete in itself, in combination with a metal band and right and left hand screw-threaded hollow arms uniting the band and hub, substantially as set forth.

5. In a split pulley, a hub formed in duplicate sections A A', having projecting sockets a^2 on the meeting faces of the sections and curved cavities a^3 in said meeting faces, in combination with metallic band D, T-shaped sockets C, and hollow arms B, screw-threaded and set in the sockets on the band and in the hub, for the purpose set forth.

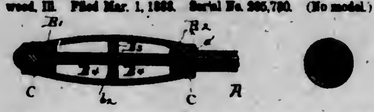
385,713. BELT-SHIPPER. RUFUS H. HOLBERT, Sudbury, Mass. Filed Mar. 12, 1888. Serial No. 266,988. (No model.)



Claim.—1. The combination of independently-moving plates H H', provided with bars D D D' D', with the oscillating plate G, having double cam-grooves, one of which at each end of the plate is circumferential with the pivot about which said plate oscillates, arranged and to operate substantially as described.

2. The sliding plates H H', provided with studs *i i*, in combination with plate G, having cam-grooves *j j j j*, and movable about a pivot, F, whereby either of said plates H H' can be shifted independently of the other, substantially as set forth.

3. The bar A, sliding plates H H', provided with bars D D D' D', and studs *i i*, in combination with the plate G, pivoted at F, and having cam-grooves, as described, to receive the studs *i i*, as and for the purpose set forth.



4. The bar A, sliding plates H H', provided with studs *i i*, in combination with the plate E, rigidly attached to bar A, and the oscillating plate G, pivoted to plate E at F, and having cam-grooves, as described, adapted to receive the studs, as set forth, whereby the plate H H' may be moved independently of each other, substantially as specified.

385,714. CHURN. JAMES ISBELLA, Alba, Mich. Filed Apr. 26, 1888. Serial No. 271,914. (No model.)

Claim.—The combination, with the cover and the standard thereon having the horizontal extension *b* at its upper end, of the shaft D, having the blade *c* at its lower end and the pinion E at its upper end, the cross-bar F, the beaters carried thereby, said cross-bar being perforated for the free passage of the shaft D, the rods rising from said cross-bar, the disks sleeved to and moving with said rods, one upon each side of the shaft, the pinion G, carried by said rods, and the pinion I, meshing with the pinion E and G and provided with a suitable operating-handle, substantially as described.

385,715. VELOCIPEDE-HANDLE. THOMAS R. JEFFERY, Ravenswood, Ill. Filed Mar. 1, 1888. Serial No. 265,780. (No model.)

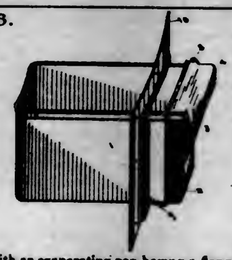
Claim.—1. In a velocipede, an integral rubber handle having two interior cavities and a diaphragm separating them, substantially as set forth.

2. In a velocipede, an integral rubber handle having closed ends and its interior space subdivided by a diaphragm.

3. In a velocipede, an integral rubber handle swelled at the middle and tapering at both ends, and having near the middle a transverse diaphragm integral with the shell and dividing its interior space into two cavities, substantially as set forth.

4. In a velocipede, in combination with the handle-bar, an integral hollow rubber handle having an interior boss at each end and a transverse diaphragm near the middle, separating its interior space into two cavities, substantially as set forth.

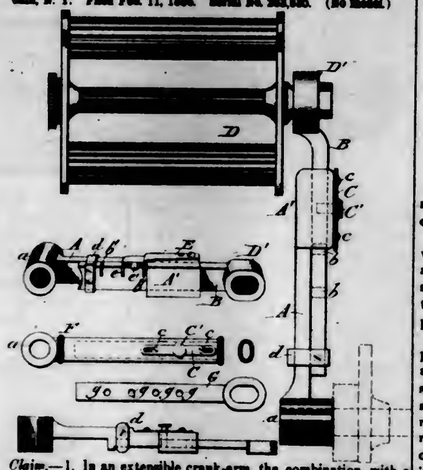
5. In a velocipede, an integral rubber handle having three transverse walls and two interior cavities between them, and the handle-bar passing longitudinally through the handle and screwed into one of said transverse walls, substantially as set forth.



6. In a velocipede, in combination with the handle-bar, an integral handle having three transverse walls, which form bearings for the handle-bar, said handle-bar being screwed into one of them, substantially as set forth.

7. In a velocipede, in combination with the handle-bar, an integral rubber handle having three transverse walls and two interior cavities between them, said walls being each pierced longitudinally and affording a bearing for the handle-bar, the outer end wall having its aperture threaded to receive the threaded end of the handle-bar, substantially as set forth.

385,716. EVAPORATING-PAN FOR HOT-AIR FURNACES. FRANCIS KINNEAR, Jr., Utica, N. Y., assignor to Russel Wheeler, Son & Co., same place. Filed Nov. 17, 1886. Serial No. 219,131. (No model.)



Claim.—In a hot-air furnace having a casing surrounding the same, forming a hot-air space between the casing and the furnace, in

885,716.

combination with an evaporating-pan having a flange surrounding the pan back from the front of same, the pan opening into the air-space and a portion extending outside of the casing, the inclined catches on the under side of the pan back of the flange, and the pivoted swinging door over the pan outside the casing, as described.

885,717. EXTENSIBLE CRANK-ARM. GERRIT KIEBE, Amsterdam, N. Y. Filed Feb. 11, 1888. Serial No. 263,630. (No model.)

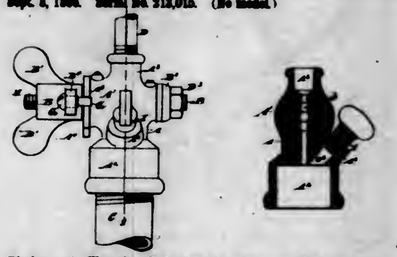
Claim.—1. In an extensible crank-arm, the combination, with a rod having a hollow guide-box, of another rod moving within said guide-box and adjustable with relation to the first bar, and a spring-dog arranged upon said guide-box and having a part that enters notches or apertures in the second bar, substantially as described.

2. In an extensible crank-arm, the combination, with a tubular portion, of an apertured part adapted to enter said portion and be adjustable therein, and a spring clamping-dog arranged to enter the apertures in the rod, and thus hold the rod and tubular portion securely in any desired relative position, substantially as described.

3. The combination, with the rod A, having the hollow enlargement A', of the rod B, having the loop *d*, surrounding rod A, and provided with holes *b b*, and a spring clamping device consisting of the slotted plate C and the pin C', all arranged to operate substantially as described.

4. The combination of the rod A, having hollow enlargement A', the rod B, having apertures *b b*, the loop *d*, and the clamping device consisting of the pin C', the slotted plate C, and the screws *c c*, all arranged substantially as described.

885,718. OPERATIVE DENTISTRY. CHARLES H. LAIRD, Detroit, Mich. Filed Aug. 20, 1887. Serial No. 247,454. (No model.)

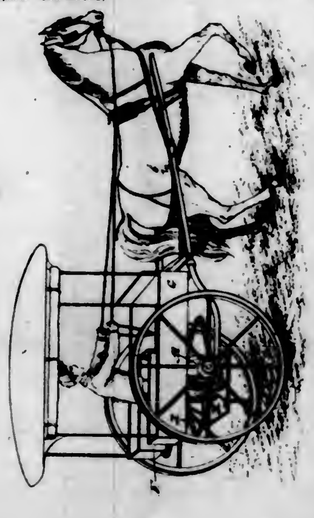


Claim.—1. The herein-described tooth-crown, consisting, essentially, of a metallic cover shaped to conform to the outline of the tooth to be crowned, a previously-prepared porcelain veneer fitted to said cover, and an intermediate stratum of porcelain paste, whereby the veneer may be fused to the said metallic cover, substantially as set forth.

2. The herein-described tooth-crown, consisting, essentially, of a metallic cover having a flange projection at its outer end, forming a depression to support the paste, the said cover shaped to conform to the outline of the tooth to be crowned, a previously-prepared porcelain veneer fitted to said cover, and an intermediate stratum of porcelain paste, whereby the veneer may be fused to the cover, substantially as set forth.

3. The herein-described tooth-crown, consisting, essentially, of a metallic cover shaped to conform to the outline of the tooth to be crowned, the said cover being provided with a flange projection at its outer end and with pins projecting from the said flange projection, a previously-prepared porcelain veneer fitted to the said cover, and an intermediate stratum of porcelain paste located between the veneer and the cover and in contact with the flange projection, whereby the veneer may be fused to the cover and be held firmly in position, substantially as set forth.

885,719. GAS-COCK. THOMAS MAGNER, Port Jervis, N. Y. Filed Sept. 8, 1888. Serial No. 313,915. (No model.)



Claim.—1. The plug B, having the plug-arm B^4, carrying a removable screw, G, in combination therewith, and with a cock body or case, A, having projections A^4 A^5, arranged to serve as herein specified.

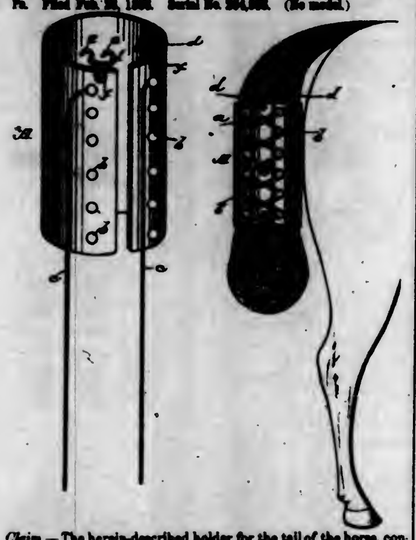
2. The cock-body A, having projections A^4 A^5, in combination with the plug B, having the internally-screw-threaded plug-arm B^4, and the screw G, carried by said plug-arm, the projecting portion of said screw which engages said projections A^4 A^5 being smaller than the threaded portion of said plug-arm and plain, as and for the purpose specified.

3. In a gas-cock, the cock-body A, having projections A^4 A^5, and provided with a longitudinal gas-passage, a tapering lateral aperture, and oil-ducts a' a^3, opening into said lateral passage on either side of said gas-passage, in combination with a tapering plug, B, fitting said aperture in the body and having a lateral gas-passage adapted to register with the gas-passage in said body, and annular grooves b' b^5, registering with said oil-ducts in the body, the washer B^3 and nut B^2 on said plug, and a plug-arm on said plug adapted to strike said projections A^4 A^5, as and for the purpose herein specified.

885,720. TWO-WHEELED VEHICLE. WILLIAM H. MORLOCK and RICHARD A. HASSELER, St. Joseph, Mo. Filed Jan. 23, 1888. Serial No. 261,660. (No model.)

Claim.—1. In a delivery-cart, the combination, with the body, consisting of a plain rectangular frame provided with a rearward opening extending vertically clear through it for the body of the driver, of a driving-platform suspended under the said opening for the driver to stand on.

2. In a delivery-cart, the combination, with the body, consisting of a plain rectangular frame provided with a rearward opening extending vertically clear through it to a point beyond the center of the wheels, of a platform for the driver suspended under the said opening, and an axle provided with a central cranked portion to clear the body of the driver.



3. In a delivery cart, the combination, with the body provided with the rearward opening, of the axle provided with downwardly-bent cranks at each end and a forwardly-cranked portion in the center to clear the body of the driver.

4. In a delivery-cart, the combination, with the body provided with a rearward opening, of a vertically-adjustable platform for the driver suspended under the said opening.

5. In a delivery-cart, the combination, with the body, consisting of a plain rectangular frame provided with a rearward opening extending vertically clear through it, of a platform suspended under the said opening for the driver to stand on, and a movable seat pivoted to the body at the rear of the opening.

6. In a delivery-cart, the combination, with the body provided with a rearward opening, of the brackets secured under the body, the platform for the driver provided with arms sliding vertically in said brackets, and screws for securing the arms in the brackets after the height of the platform has been adjusted.

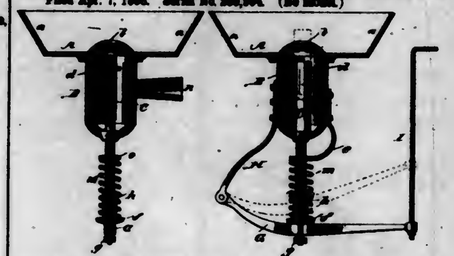
885,721. HORSE-TAIL HOLDER. OLIVER H. MERTZ, Greenville, Pa. Filed Feb. 23, 1888. Serial No. 264,988. (No model.)

Claim.—The herein-described holder for the tail of the horse, consisting of a flexible band, the two ends thereof having lacing studs and cords, and provided with retaining-hooks, all substantially as and for the purpose set forth.

885,722. ELEVATOR. ANDREW C. NEWTON, Crescent, N. Y. Filed Mar. 1, 1888. Serial No. 265,706. (No model.)

Claim.—1. In an elevator, the combination of a three-cornered frame-work, with an elevator-car mounted therein and having bearing in said frame-work at opposite diagonal corners of the car, substantially as specified.

2. In an elevator, the combination of a three-cornered or triangular frame-work, with a pair of elevator-cars mounted therein and taking bearing at diagonally-opposite corners, substantially as specified.



3. In an elevator, the combination, with the frame-work thereof, of a pair of elevator-cars mounted for movement therein, a cable connecting the cars and passing over a drum mounted on the frame-work, and an endless cable or chain passing over the drum, and a windlass for operating the same, substantially as specified.

4. In an elevator, the combination of the frame-work provided with two elevator-cars connected by a cable, a drum arranged upon the frame-work over which said cable passes, an endless belt or cable for operating the drum, and a windlass or pulley having an operating-crank for operating the cable, substantially as specified.

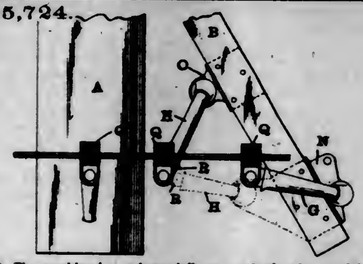
5. The combination, with the base 1, having the uprights 2, arranged in triangular form, arranged as described, and connected by the tie-bars 3, of the drum 22, pulleys 20, all mounted in the cross-pieces 19, the cable 23, the endless belt 29, for operating the drum, and the windlass 27, for operating the belt, substantially as specified.

6. In an elevator, the combination of the frame-work 26, the crank-shaft 36, having the drum 27, operating-cranks 23, ratchet-wheel 41, and pawl 42, mounted on the arm 43, and having the spring 44, with the connecting-rods 37 and 38, the former connected with the lever 38, having seat 39, and the latter connected with the pivoted treadle 40, substantially as specified.

885,723. TUYERE FOR FORGES. HANS T. HIBLER, Chicago, Ill. Filed Apr. 7, 1888. Serial No. 269,994. (No model.)

Claim.—1. The combination, with coal-box A, having wind-opening *b*, and with shell B, secured below such box, of plunger-bar C, guided to move vertically through such box and through the wind-opening *b*, and provided with conical collar *c*, and of suitable means for reciprocating such bar, substantially as and for the purpose set forth.

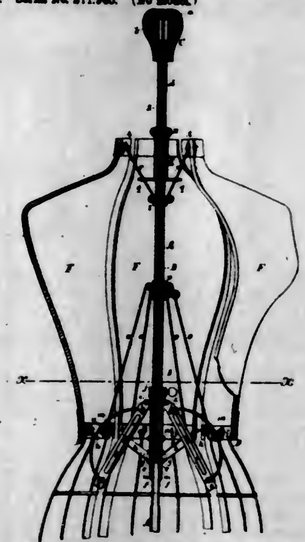
2. The combination, with coal-box A, having wind-opening *b*, with shell B secured below such box A, and having blast-pipe nozzle *n* and a conical bottom opening, of vertically-guided plunger-bar C, provided with conical collar *c*, lever G, and handle-bar I, all substantially as set forth, to operate as specified.



3 The combination, with coal-box A, having wind-opening *b*, with shell B, secured below such box A, and having blast-pipe nozzle *n* and a conical bottom opening, of vertically-guided plunger-bar C, provided with conical collar *c*, washer *f*, tube *h*, and spring *m*, and of lever G, with handle-bar I, all substantially as described, to operate as specified.

885,724. SEEDING-MACHINE. ALBERT H. NORRIS, Rushville, Ind., assignor to the Star Drill Company, same place. Filed Feb. 20, 1888. Serial No. 265,262. (No model.)

Claim.—1. The combination, substantially as set forth, of central frame-piece, A, side pieces, B, articulated thereto, skeleton lever K, pivoted to the under side of the rear of the central frame-piece and projecting downwardly at each side thereof and terminating in axle-studs, wheels J on said studs, hand-lever L, linked to said skeleton lever, and ratchet M, engaged by said hand-lever.

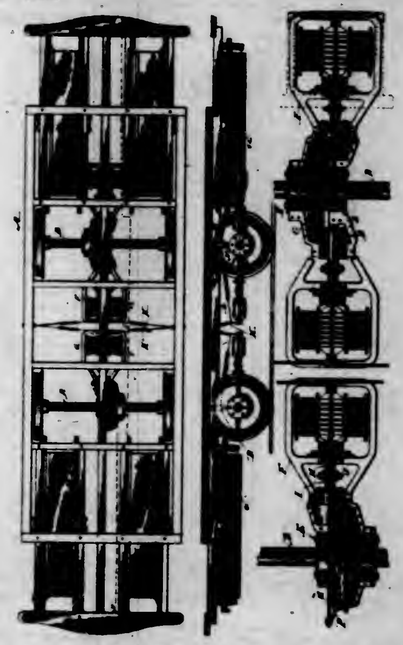


385,724.

2. The combination, substantially as set forth, of central frame-piece, A, central seed-hoe, E, at the rear thereof, expansible wing-pieces B, articulated to the frame-piece and provided with outside seed-hoes, P, in line with said central seed-hoe, shank-plates N, attached to said wing-pieces and projecting to both sides thereof, shank-plates O, projecting inwardly from said wing-pieces forward of the plates N pivoted seed-conductors H, adapted to engage alternately the plates N and O, and intermediate hoes adapted alternately for engagement at plates N and O.

385,725. DRESS-FORM. PATRICK QUINN, Cambridgeport, Mass., assignor of one-half to Frederick W. Brown, same place. Filed Apr. 26, 1888. Serial No. 271,965. (No model.)

Claim.—1. The combination, with the tubular standard and the skirt-frame and waist-form, made in sections connected together, as shown, said sections being sustained in position on the tubular standard, as described, of the tubular head *g*, having the rigid arms *h* and supported on the standard by the rod B, connected to the said head *g*, and arranged within the standard, and sustained in the handle C, which is adjustable in altitude on the standard by means of the screw connecting it therewith, the slotted arms *i*, connected to the rigid arms *h*, as shown, and jointed to the tubular head *j*, clamped to the standard, said arms having the curved rails or bearers *m* to operate the eye *n*, secured to the ring-sections D, in such manner that when the head *g* and its arms *h* are raised on the standard by revolving the dress-form in one direction the sections will be expanded and contracted on the form being revolved in the opposite direction, all substantially as described and represented.



2. The combination of the tubular standard, screw-threaded at its upper part and provided with slots *f f*, as shown, the handle C, having a female screw to connect with the screw *d* of the standard, and provided with a bearing, *b*, the rod B, sustained in said bearing *b*, and having prongs extending through the slots *f f* and connecting it with the head *g*, provided with the rigid arms *h*, the slotted arms *i*, connected to the arms *h* and provided with the curved rails or bearers *m*, and pivoted to the head *j*, said head having means for clamping it to the standard, with the dress-form made in sections connected to the standard, as shown, and provided with eyes *n*, for connecting said sections to the bearers *m*, to admit of said sections being expanded or contracted by revolving the dress-form on its axis, all as described and represented.

385,726. TOBACCO-BOX. CHARLES A. REYNOLDS, Winston, N. C. Filed Feb. 24, 1888. Serial No. 265,162. (No model.)

Claim.—The improved combined wood and metal tobacco-box herein described and shown, comprising the wooden heads A B and the metallic sides C, constructed of a single continuous strip having notches in its opposite sides, thereby providing the integral side flanges, D, equal in length to the length of the sides of the heads, and folded over the heads, with the meeting ends of the flanges overlapping, and secured by fastenings passing through the overlaps to the heads, substantially as specified.

385,727. ELECTRIC MOTOR FOR STREET-CARS. WILBUR S. SALISBURY, Chicago, Ill. Filed Mar. 5, 1888. Serial No. 266,131. (No model.)

Claim.—1. In a motor for street-cars, the car-frame and the box for containing the battery, in combination with a longitudinal support attached to said frame at one end thereof for removably suspending said box below the frame, and a sliding anti-friction connection between said box and support, substantially as described.

2. In a motor for street-cars, the car-frame, a track, and a pivot-connection between said track and frame about the center of length of said track, in combination with a box for containing the battery supported upon and removably suspended below the frame by said track, substantially as described.

3. In a motor for street-cars, the car-frame, a track, and a central pivot-connection between said track and the frame, in combination with a box for containing the battery supported upon and removably suspended below the frame by said track, guide-plates, and a pin-and-slot connection between said plates and the track intermediate the center and ends thereof, substantially as described.

4. In a motor for street-cars, the car-frame, a track, and a central pivot-connection between said track and the frame, in combination with a box for containing the battery, and an anti-friction connection between said box and track, whereby said box is supported upon and removably suspended below the car-frame by said track, substantially as described.

5. In a motor for street-cars, the car-frame, a track, and a central pivot-connection between said track and frame, in combination with a box for containing the battery, a detachable anti-friction connection between said box and the track, and a lock device for securing said box relative to the track, substantially as described.

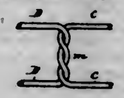
6. In a motor for street-cars, the car-frame, a track, and a central pivot-connection between said track and frame, in combination with a box for containing the battery, a detachable anti-friction connection between said box and the track, and an adjustable lock device for securing said box relative to the tracks, substantially as described.

7. In a motor for street-cars, the car-frame, the axle, and a casing loosely journaled and supported upon said axle, in combination with one or more frames secured to said casing, motors mounted in said frames, a gear-connection between the motors and axles, a pulley secured to the car-frame, and a flexible or yielding guy-rod secured at its ends to said frames and working over said pulley, substantially as described.

8. In a motor for street-cars, the car-frame, the axle, and a casing loosely journaled and supported upon said axle, in combination with one or more frames secured to said casing, motors mounted in said frames, a gear-connection between said motors and axle, a pulley secured to the car-frame, a flexible or yielding guy secured at its ends to said frame and working over said pulley, and the laterally-yielding opposing guys secured at their end, respectively, to said frames and the sides of the car-frame, substantially as described.

9. In a motor for street-cars, the axle and one or more frames loosely journaled and supported upon said axle, in combination with one or more motors mounted on said frames, a gear-connection between said motors and the axle, a pulley secured to the car-frame, and a flexible or yielding guy-rod secured at its ends to said frames and working over said pulley, substantially as described.

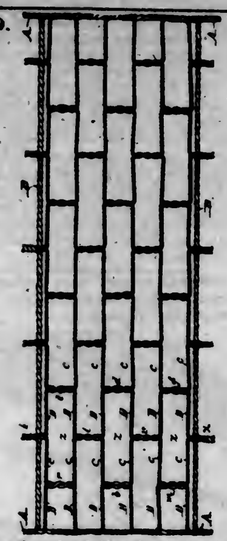
385,728. BALL-CATCHER'S GLOVE. JOSEPH W. SAUER, Milwaukee, Wis. Filed Mar. 1, 1888. Serial No. 265,892. (No model.)



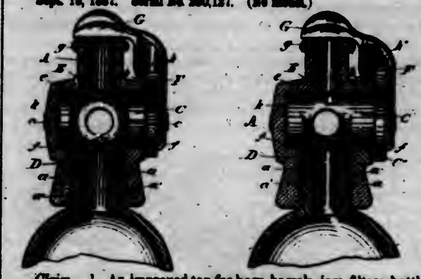
Claim.—1. In a ball-catcher's glove, the combination of the body of the glove C, having an opening, L, in the back of the hand thereof, interior padding, D, and retaining-cover E, one or more exterior layers of padding, F and G, and exterior covering, H, extending from the wrist to the fingers upon the inside of the hand of the glove, and secured thereto by a series of stitches, one or more exterior layers of finger-padding, I and J, and covering K, extending from the joints of the fingers upon the inside of the hand to and over the ends of the fingers, and stitched to the back of the fingers of the glove, all substantially as and for the purpose specified.

2. The combination of the body of the glove C, having opening L upon the back side thereof, and having side seams A around the fingers and side seams B around the hand, turned outward or formed upon the exterior of the glove, in combination with the interior padding, D, and covering E, located upon the inside of the hand of the glove, and exterior padding F and G and covering H, extending from the wrist to the hand of the glove, and exterior padding I and J and covering K, located upon the inside of the fingers of the glove, said finger padding and cover and said hand padding and covering respectively terminating and forming a flexible joint at the roots of the fingers of the glove, said padding I and J and covering K being secured around the inner surface and over the ends of the fingers of the glove, substantially as and for the purpose specified.

385,729. WIRE FENCE. BENJAMIN SPARKES, Clinton, Mass., assignor to the Clinton Wire Cloth Company, same place. Filed May 7, 1888. Serial No. 273,023. (No model.)



Claim.—1. In a fence of the character described, the filling-wires C D, connected with the selvage-wires A, and so joined as to form a series of rectangular openings, *s*, joints composed of said filling-wires



being disposed at the end and sides of each of said openings, substantially as shown and described.

2. In a fence of the character described, the filling-wires C D, selvage-wires A, and braces B, constructed, combined, and arranged substantially as described.

385,729.

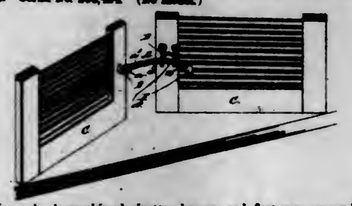
385,730. TAP FOR KEGS, BOTTLES, &c. JAMES A. SUMNER and JOHN BRADLEY, Southport, County of Lancaster, England. Filed Sept. 19, 1887. Serial No. 250,127. (No model.)

Claim.—1. An improved tap for kegs, barrels, jars, filters, bottles, and other vessels, the body of which is provided with an internal screw and recess E, to receive a seating, *o*, in combination with a sleeve, D, and a plug, C, having a central elevation, the tube being recessed at each side of the elevation to receive the end of the tube or sleeve, substantially as described and shown.

2. The combination, in a tap, of a body, A, plug C, lever F, cap G, and side guard, L, substantially as and for the purposes set forth.

3. In combination with the neck of a bottle or spigot, a tap having a body provided with a turning-plug and an internally-threaded annular projection secured upon the neck, and a tubular elastic packing compressed between the neck and the internal thread and bearing at one end against the turning-plug.

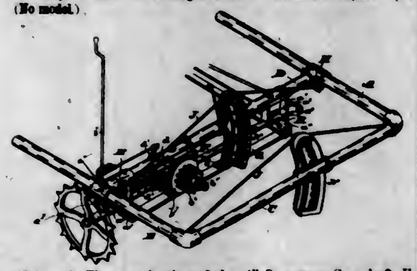
385,731. CAR-COUPLING. JOHN SHULER, West Berne, N. Y. Filed Feb. 20, 1888. Serial No. 265,093. (No model.)



Claim.—1. In a car-coupler, the combination of a draw-head, a coupling-link, a coupling-pin, a hand-lever pivoted to a swivel-joint and flexibly connected to said coupling-pin, a catch-piece fitted to es-

gage with the outer end of said hand-lever when the latter is depressed, and a striker (attached to a conjoining car) which is fitted to strike directly against said hand-lever to dislodge it from said catch-piece, as and for the purpose herein specified.

2. In a car-coupler, the combination of a coupling-link, a hand-lever which is pivoted to the car to vibrate both vertically and sidewise, a draw-head provided with a coupling-pin which is flexibly connected to said hand-lever, so that the latter can raise said pin in said draw-head, a rock-shaft having at its outer end an offset pendent pin that is fitted to engage with said hand-lever and at its inner end an offset limb that is fitted to raise the coupling-link of an incoming car, a catch-piece fitted to engage with and retain the outer end of said hand-lever, and a striker (attached to a conjoining car) that is fitted to strike said hand-lever and dislodge it from said catch-piece and rock-shaft, as and for the purpose herein specified.



385,732. SHUTTER-BOWER. HENRY W. STEBBINS, Boston, Pa., assignor of one-half to Henry W. Merrill, same place. Filed Mar. 24, 1888. Serial No. 268,434. (No model.)

Claim.—1. A combined shutter bower and fastener, comprising a bar capable of being attached to one of a pair of shutters, and consisting of a single piece of wire bent in the middle to form a loop and twisted to form depressions or notches along its entire length, a cap adapted to fit over the end of the bar and prevent the wire from becoming untwisted, and a flexible wire catch designed to be attached to the other shutter and to receive the bar, substantially as described.

2. A shutter-bower comprising a bar adapted to be attached to one of a pair of shutters, and a catch adapted to be attached to the other shutter and engaging the bar, the said catch consisting of a flexible wire bent into a U shape, and having its ends secured to the shutter, as set forth.

385,733. HARVESTER-FRAME. BENJAMIN F. STEWART, New Philadelphia, Ohio. Filed Aug. 24, 1887. Serial No. 247,732. (No model.)

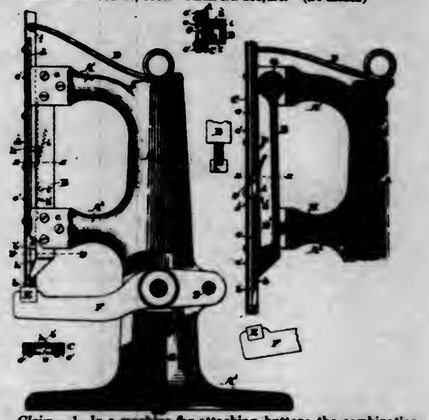
Claim.—1. The combination of the sill D, a truss, G, a shaft, F, a hanger, K, for supporting the front ends of the shaft F and truss G, a coupler, E, having a cylinder portion to embrace the sill B, a body portion, a', adapted to secure the end of the sill D, a downwardly-projected portion, a^3, journal-box a^4, and leg a^5, substantially as set forth.

2. The combination of the sill D, a truss, G, a shaft, F, a coupler, E, for supporting the rear ends of the shaft F and the truss G, and the hanger K, having a portion, a^7, semicircular in cross-section and located horizontally beneath and adapted to the surface of the sill D, arms a^8, projected downwardly from the portion a^7, a journal-box, a^9, supported by the arms and adapted to receive the shaft, and a leg, a^{10}, forming a support for one end of the truss G, substantially as set forth.

3. The combination, in a harvester-frame, of the sill D, sill B, coupler E, hanger K, and truss-chord G, substantially as set forth.

4. The combination, in a harvester-frame, of the sill D, sill B, coupler E, hanger K, truss-chord G, and spindle b^2, forming a support for a gear-pinion, and the spindle-support L, secured to the sill D and truss G, substantially as set forth.

5. In a harvester-frame, the combination of a spindle-support, L, having an upper portion conformed to the sill D and a lower portion conformed to the truss-chord G, a journal-box, b^3, an outwardly-projected spindle, b^2, and a shaft, F, mounted in the journal-box b^3, substantially as set forth.



6. In a harvester-frame, the combination, with a sill, D, and the under truss-rod, G, over truss-rod, J, means for securing the end of the rod J to the sill, couplers for securing the truss G to the sill D at each end of the former, and a central support to the two trusses and the sill, substantially as set forth.

7. The combination, in a harvester-frame, of the sill D, under truss-rod, G, over truss-rod, J, means for securing the end of the rod J to the sill, coupler E, connecting the corresponding ends of the truss-chords and sill, hanger K, connecting the under truss-rod with the sill D, spindle-support L, connecting the truss-chord G with the sill D, spindle b^2, projected laterally from the spindle-support L, and the segment-frame N, forming a central support for the truss-chords G and J, substantially as set forth.

8. The combination, in a harvester, of the sill D, coupler E, spindle-support L, spindle b^2, projected laterally therefrom, pinion b^4, and bevel-wheel b^7, mounted on the spindle, journal-box b^3, shaft F, mounted therein, bevel-wheel d^3, and clutch d^4, mounted on the shaft, rod d, spring d^5, and gear-shipper d' in engagement with the clutch d^4, substantially as set forth.

9. The combination, with the sill D, coupler E, hanger K, and the shaft F, supported in the coupler E, and spindle-support L, of a spindle projected laterally therefrom, gear with clutch-teeth mounted on the shaft F, a gear-clutch mounted on the shaft F to engage the clutch-teeth of the gear on the shaft, a rod suspended between the coupler E and spindle-support L, a spring located on the rod, and a gear-clutch shipper in engagement with the clutch, whereby the shipper is pressed by the spring normally in a direction to keep the clutch on the shaft F in engagement with the gear on said shaft, substantially as set forth.

385,734. MACHINE FOR ATTACHING BUTTONS. BENJAMIN H. TAYLOR, Lynn, assignor to the American Shoe Tip Company, Boston, Mass. Filed Oct. 26, 1887. Serial No. 253,490. (No model.)

Claim.—1. In a machine for attaching buttons, the combination herein described of a movable anvil, a vertically-movable raceway-bar having a slot cut through its back near its lower end, and a pivoted driver-stock provided with a driver projecting obliquely therefrom and constructed and arranged to be vibrated about its pivot by the reciprocations of said raceway, whereby said driver is projected into and retracted from the path of descent of the button-fastener staples.

2. The combination herein described of a vertically-movable raceway, a pair of button-separating spring-stops secured to and movable with said raceway, a pivoted driver and stock provided with pins constructed and arranged to alternately operate said spring-stops, and an anvil mounted upon the free end of a pivoted lever constructed and arranged to be vibrated to force the work upon the button-fastener and clinch said fastener by moving the raceway upward.

3. The combination of the movable anvil E, the vertically-movable raceway C, the pivoted and laterally-movable driver B b, provided with the pins k and k', and the spring-stops i i^2, i' i^2, and m m, all constructed and adapted to operate substantially as and for the purpose described.

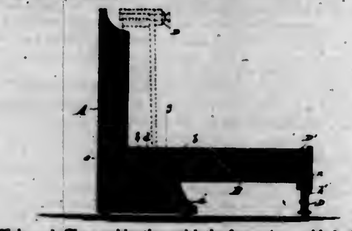
385,735. APPARATUS FOR THE MANUFACTURE OF SHEET-GLASS. ANDREW THOMSON, Pittsburg, Pa., assignor of one-half to Joseph L. Moore, same place. Filed Feb. 11, 1888. Serial No. 263,736. (No model.)

385,735.

Claim.—1. In apparatus for the manufacture of sheet-glass by gravity or flowing method, a slotted holder having a guide-lip which projects downwardly below the holder and is provided with a lining or covering of refractory material, substantially as and for the purpose specified.

2. In apparatus for the manufacture of sheet-glass, a slotted holder having a lining of refractory material and provided with a guide-lip which projects downwardly beyond the holder, substantially as and for the purpose specified.

3. In apparatus for manufacturing sheet-glass, the combination, with a slotted holder, of a free rotating or independent roller-gage adapted to be moved by the flowing glass, substantially as and for the purpose specified.



4. In apparatus for the manufacture of sheet-glass, the combination, with a slotted holder having a guide-lip which projects below the slot, of a journaled or movable roller slot-valve and gage, substantially as and for the purpose specified.

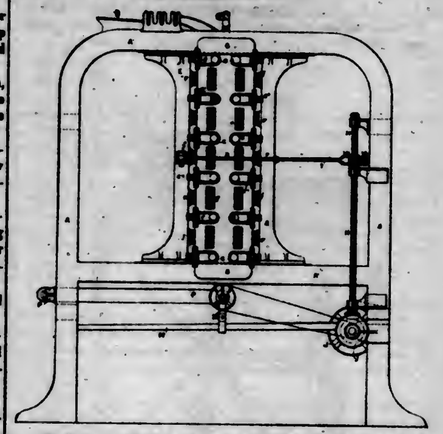
5. In apparatus for the manufacture of sheet-glass, the combination, with a slotted holder provided with a downwardly-projecting guide-lip having a surface of refractory material, of a free rotating or independent roller gage and slot-valve of refractory material, substantially as and for the purpose specified.

6. In apparatus for the manufacture of sheet-glass, the journaled slotted glass-holder, substantially as and for the purpose specified.

7. In apparatus for the manufacture of sheet-glass, the combination, with a journaled slotted holder for the molten glass, of an inclined cooling-table of refractory material, substantially as and for the purpose specified.

385,736. FOLDING BED. FRANCIS H. WALKER, Chicago, Ill., assignor to M. H. Walker, same place. Filed Sept. 10, 1888. Serial No. 285,209. (No model.)

Claim.—1. The combination, with the frame A, provided with pivot-journal bearings, and the swinging and folding bed-supporting frame B, provided with pivot-journals, of the spiral springs C, arranged diagonally beneath the bed-supporting frame B, and connected, respectively, to staples near the head end of said frame and to staples on the inner walls of the outer case, A, said springs standing inclined to a horizontal plane and oblique with respect to the front vertical side of the outer case when the bed-supporting frame is folded, and occupying a nearly-horizontal and diagonal position when the bed-supporting frame is lowered, substantially as and for the purpose described.



2. The combination, with the frame A, provided with pivot-journal bearings, and the swinging and folding bed-supporting frame B, provided with pivot-journals, of the spiral springs C, arranged beneath the bed-supporting frame B, and connected, respectively, to staples near the head end of said frame and to staples on the inner side walls of the outer case, A, said springs standing inclined to a horizontal plane and oblique with respect to the front wall of the case A when the bed-supporting frame is folded, and occupying a nearly horizontal position when said frame is lowered, substantially as and for the purpose described.

3. The folding bedstead having its respective bearings for the pivot-journals d d of its bed-supporting frame B formed of the wheels or rollers b b, pins c c, and capping-pieces c c and the side base portions of the frame A, substantially as and for the purpose described.

4. The combination, with frame A, of the bed-supporting frame B, pivoted to the frame A, and provided with sliding legs D, having dogs k' arranged diagonally in slots of the legs between stops, and pivoted by one of their ends to the legs, and acting to fold or adjust themselves within the legs and to adjust themselves partly outside the legs, accordingly as the bed-supporting frame is folded or unfolded, substantially as and for the purpose described.

385,737. APPARATUS FOR BREAKING, SCUTCHING, AND CLEANING FLAX, &c. JOHN G. WALLACE, Belfast, County of Antrim, Ireland. Filed Apr. 6, 1887. Serial No. 233,982. (No model.) Patented in England Jan. 6, 1887, No. 193; in France Apr. 26, 1887, No. 180,982; in Belgium Apr. 27, 1887, No. 77,986, and in New Zealand May 6, 1887, No. 2,262.

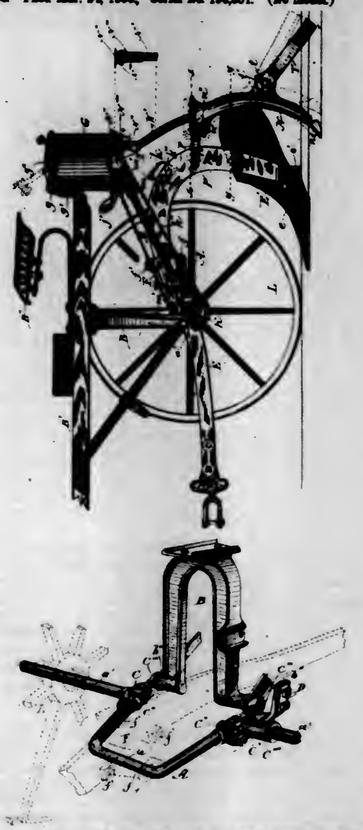
Brief.—The feeding and breaking rollers are simultaneously and intermittently actuated. Between each two sets of breaking-rollers are two horizontally-reciprocating tools carrying pins. Said pins are guided in a perforated plate having a portion extending over the pins to prevent trash from falling in among the pins.

Claim.—1. In an apparatus for treating flax, the combination, with a frame-work, of a series of rollers, D D, arranged in pairs, one pair above another, and each roller provided with a ratchet-wheel, a bar, M, provided with pawls to engage the ratchet-wheels, mechanism for imparting a reciprocating motion to the bar, tools F, provided with pins f, and located between the pairs of rollers, and a mechanism for imparting motion to the tools F, all substantially as shown, the rollers and tools alternating in their movements, as and for the purpose set forth.

2. In combination with a frame-work, a pair of rollers, D D, each provided with a ratchet-wheel, a vertically-reciprocating bar, M, provided with pawls to engage with and rotate the ratchet-wheels and the rollers, a main shaft, J, provided with an eccentric, a bar, N, connected at one end with the eccentric and at the other end with the frame and passing through the lower end of the reciprocating bar M, a set of tools, F, beneath the rollers, shafts H, provided with eccentrics and receiving motion from the main shaft, and pitmen I I, connecting the tools with the eccentrics, the eccentrics on the shafts H and J being so timed, respectively, as to cause the rollers and the tools to alternate in their movements.

3. In a machine for treating flax, the combination, with a suitable frame-work, of the crushing-rollers D D, the tools F F beneath the rollers, the feeding-rollers S S, a main shaft, and intermittently-acting connections, substantially as shown, between the main shaft and the rollers and between the main shaft and the tools, whereby the feeding-rollers and breaking-rollers are actuated positively before each inward movement of the tools.

4. In a machine for treating flax, the combination, with a suitable frame-work, of rollers D D, provided with ratchet-wheels, feeding-rollers S, also provided with ratchet-wheels, a reciprocating bar, M, provided with pawls to engage with the wheels on the rollers D D, means for reciprocating said bar M, a bar, M', provided with pawls to engage the wheels on rollers S, and a connection between the bars M and M'.



5. In a machine for treating flax, the combination, with a suitable frame-work and the uprights B, of a pair of rollers, D D, mounted therein and provided with ratchet-wheels, a series of rollers, S, arranged to one side of the rollers D and provided with ratchet-wheels, an upright reciprocating bar, M, provided with pawls to engage the ratchet-wheels upon the rollers D, means for reciprocating the bar and guiding it in its movement, an approximately-horizontal bar, M', provided with pawls to engage the ratchet-wheels of rollers S and guided in its movement by means of brackets m', and an elbow-lever, N', connecting the bars M and M'.

6. In a machine for treating flax, &c., the combination, with the frame-work, of the rollers D D, tools F F beneath the rollers, endless belt P beneath the tools, driving-shaft J, and connections, substantially such as shown, for imparting necessary motion to the several parts from the driving-shaft.

7. In a machine for treating flax, &c., the combination, with the reciprocating frames E, provided with a series of pins, *f*, of a perforated plate, G, provided with strengthening-strips, as *g*, between the rows of perforations.

8. In a machine for treating flax, &c., the combination, with the reciprocating frames E, provided with pins *f*, of a perforated plate, G, having the protecting-plate *g'*, all arranged for operation substantially in the manner shown.

385,738. SULKY LISTER-PLOW CORN-PLANTER. LEWIS R. WATERMAN, Moline, Ill., assignor to the Deere & Manster Company, same place. Filed Mar. 24, 1886. Serial No. 196,351. (No model.)

Claim.—1. In combination, an axle having a double-crank central part and horizontal end parts, wheels journaled on said end parts, a plow mounted on said crank part of the axles, plates bolted to the axle and extended forward of its horizontal end part, and an arch pivoted to and supported upon the forward ends of said plates and adapted to support the driver's seat and other parts, substantially as and for the purpose specified.

2. In combination, an axle having a double-crank central part and horizontal end parts, *d'*, wheels L, a plow mounted on said crank part of the axle, plates C C, bolted to the axle by staples C" and having extended forward ends, and an arch, B, journaled to and supported upon the extended forward ends of the plates C C, substantially as and for the purpose specified.

3. In combination, an axle having a double-crank central part and horizontal end parts, wheels journaled on said end parts, a plow mounted on said crank part of the axle, plates bolted to the axle and extended forward of its horizontal end parts, an arch pivoted to the extended ends of said plates, a hand-lever fixed to a horizontal end of the axle and provided with a locking-pawl, and a curved rack-bar concentric with the pivot of the arch to the extended plates, substantially as and for the purpose specified.

4. In combination, supporting-wheels, a swinging crank, a plow mounted on said crank, a curved rack-bar, a hand-lever adapted to operate the swinging crank, and a spring locking-pawl operated by a thumb-lever, having a projecting stop, D", adapted to come in contact with the rod *d'* to hold the pawl out of contact or engagement with the rack-bar, substantially as and for the purpose specified.

5. In combination, an axle having a double-crank central part and horizontal parts *d'*, supporting-wheels, an operating hand-lever, plow and beam, and plates F, constructed substantially as described, journaled on the axle, and bolted to the plow-beam, substantially as and for the purpose specified.

6. In combination, supporting-wheels, a swinging crank operated by a hand-lever, a lister-plow mounted on said crank, an arch and a guide-pole mounted thereon, and a seed-box mounted on said guide-pole and connected by a flexible tube with a furrow-opening tube fixed in rear of the lister-plow, substantially as and for the purpose specified.

7. In combination, supporting-wheels, a swinging crank operated by a hand-lever, a lister-plow mounted on said crank, an arch and a guide-pole mounted thereon, and a seed-box mounted on said guide-pole and connected by a flexible tube with a furrow-opening tube adjustably fixed in rear of the lister-plow, substantially as and for the purpose specified.

8. In a sulky lister planting-plow, in combination with a seed-box mounted on the guide-pole or frame and a lister-plow hinged to the swinging crank or axle, a pinion carried on a sliding shaft and gearing with the seed-cup wheel, a lever for sliding said pinion-shaft, adapted to be operated by a cam-plate on the plow-beam, substantially as and for the purpose described.

9. In a sulky lister planting-plow, a seed-box mounted on the frame or guide-pole, a sliding shaft carrying a pinion gearing with the seed-cup wheel, a cam-lever for operating said pinion and shaft, and a spring for moving the cam-lever in one direction, in combination with a cam-plate on the plow-beam, adapted to act on the cam-lever and throw the seeding devices out of gear when the plow is elevated, substantially as and for the purpose specified.

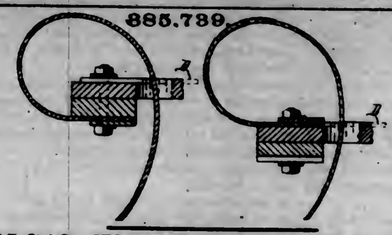
10. In combination, an axle with double-crank part and horizontal arms *d'*, arch B, journaled to the extended forward ends of plates fixed to the axle, wheels L, a lister-plow mounted on the crank part of the axle, a seed-box hinged to the guide-pole or sulky-frame, a sprocket connected with one of the wheels L to turn therewith and geared by a chain belt with a sprocket which drives the seed-wheel, and an arm, M, extending from the arm *d'* of the axle to the seed-box, substantially as and for the purpose specified.

11. In a sulky lister-plow planter, in combination with a sulky which carries the lister-plow, a seed-box hinged to the guide-pole or sulky-frame, substantially as and for the purpose specified.

12. In combination, an axle, a frame or guide-pole supported on an arch pivoted to forward extensions from the axle, a chain belt gearing a sprocket on the axle, with a drive-sprocket at the seed-box, and an arm secured at one end to the axle and at its other end to the seed-box and adapted to prevent slack in the drive-belt, substantially as and for the purpose specified.

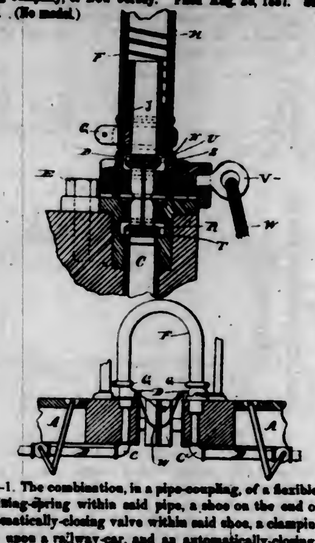
13. In combination, a forwardly-tilting guide-pole mounted on an arch-supporter forward of the wheel-journals, a hinged seed-box, a belt gearing between a sprocket-wheel on the axle and a sprocket on the seed-box, and a belt-tightener bar connecting the axle and the seed-box, substantially as and for the purpose specified.

14. In combination, a forwardly-tilting guide-pole mounted on an arch-shaped supporter forward of the wheel-journals, a hinged seed-box, a belt gearing between a sprocket-wheel on the axle and a sprocket on the seed-box, and an adjustable belt-tightener bar connecting the axle and the seed-box, substantially as and for the purpose specified.



15. In a sulky lister planting-plow, in combination with a seed-box mounted on the frame or guide-pole and having a swinging cam-lever for throwing the seed-plate into and out of gear with its actuating mechanism, a cam adjustably fixed to the plow-beam and adapted to actuate said cam-lever when the plow is elevated, substantially as and for the purpose specified.

385,739. HARROW. LEWIS J. WEIDER, Wilkes-Barre, Pa. Filed Oct. 26, 1887. Serial No. 253,334. (No model.)

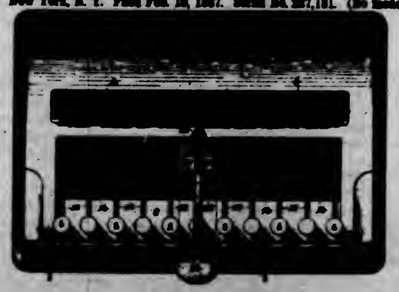


Claim.—1. A harrow-frame provided with a vertical series of tooth-seats, as set forth.

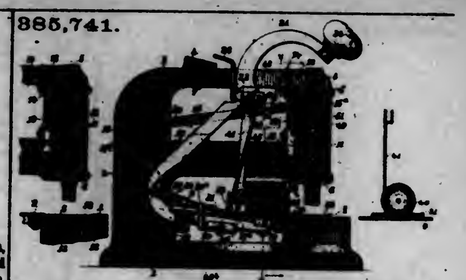
2. The combination, with a harrow-frame provided with a vertical series of tooth-seats, of a harrow-tooth adapted to be secured in any one of said tooth-seats, substantially as set forth.

3. In a harrow, the combination, with a frame provided with tooth-seats arranged in a vertical series, of a harrow-tooth and scraper-blade adapted to be secured in any one of said seats, substantially as set forth.

385,740. PIPE-COUPLING. FRANCIS M. WILSON, Binghamton, N. Y., assignor, by mesne assignments, to the Safety Car Heating and Lighting Company, of New Jersey. Filed Aug. 20, 1887. Serial No. 248,128. (No model.)



Claim.—1. The combination, in a pipe-coupling, of a flexible hose-pipe, a sustaining-spring within said pipe, a shoe on the end of said pipe, an automatically-closing valve within said shoe, a clamping-seat for said shoe upon a railway-car, and an automatically-closing valve within said seat, substantially as described.



2. The combination, in a pipe-coupling, of a flexible hose-pipe, a sustaining-spring within said pipe, a device for attaching one end of said pipe rigidly to a railroad-car, a shoe on the opposite end of said pipe, and a clamping-seat for said shoe upon a railway-car, and from which said shoe is automatically separable, substantially as described.

3. The combination, in a pipe-coupling, of a flexible hose-pipe, a rigid connection for said pipe upon a railway-car, a shoe on the end of said pipe, a clamping-seat for said shoe upon a railway-car, and a rope connecting the fixed end of said coupling with the shoe, whereby the shoe is automatically separated from the clamping-seat when the said rope is subjected to any unusual strain, substantially as described.

4. In combination with two railway-cars, of a flexible pipe-coupling consisting of a single hose connected to one car, a shoe on the end of said hose, a clamping-seat for said shoe on the other car, and an automatically-closing valve in said shoe and in said clamping-seat, substantially as described.

385,741. CHECK-PUNCHING MACHINE. J. NEWTON WILLIAMS, New York, N. Y. Filed Feb. 14, 1887. Serial No. 227,181. (No model.)

Claim.—1. In combination with the bed-plate 1, having straight parallel guides 10, a table, 9, moving on said guides, an arm, 17, fixed to said table and projecting forward over it, a series of vertically-sliding punches, 5, mounted parallel with the movement of the table, a punch-operating lever, 15, mounted in the arm 17, and a hand-lever, 21, also mounted in said arm 17 and adapted to operate the punch-operating lever, substantially as set forth.

2. The combination of the bed-plate 1, having straight parallel guides 10, a table, 9, guided thereon, a spring holding-plate, 31, hinged to said table, a feed-roller, 35, supported on and projecting through a slot in said holding-plate and having ratchet-wheel 40, a punch-operating lever pivotally connected to said table, a pawl carried by said lever for operating said ratchet-wheel, means, substantially as described, for operating said lever, and series of dies and punches, substantially as set forth.

3. The combination of a series of punches mounted in fixed bearings, a fixed indicator-plate having characters corresponding in position with those on the punches, a movable table, a holding-plate pivoted thereto, and an index carried by said table, moving over said indicator-plate, and connected with said holding-plate, as and for the purposes set forth.

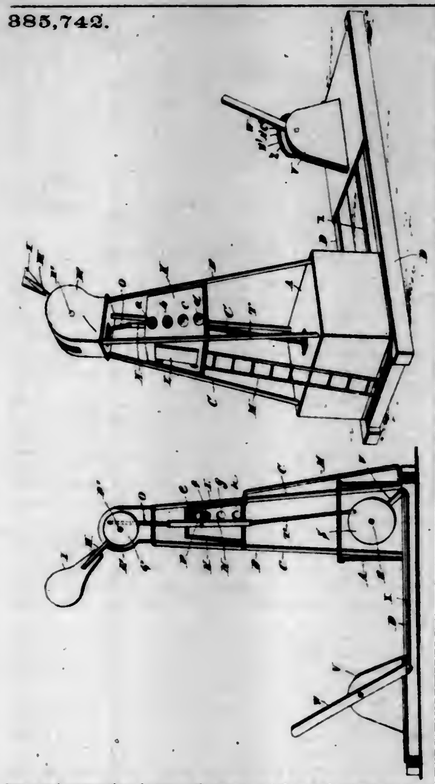
4. The combination of a series of punches, a lever for operating the same, a plate having projections for guiding said lever, and two anti-friction rollers on said lever to bear on said punches and projections, substantially as and for the purpose set forth.

5. The combination of a series of punches, a plate having a series of slots arranged parallel to said punches, and long pins of flexible metal carried by said punches and running in said slots, substantially as and for the purpose set forth.

6. The combination of a table, a clamp or holding plate thereon, and a roller carried by said holding-plate, said table being slotted under said roller in the direction of the feed, substantially as and for the purpose set forth.

7. The combination of a movable table, a holding-plate resting thereon, both table and plate being slotted transversely, a bent arm, 17, fixed under the table and projecting over it, a plate, 30, adjustable by a slot and set-screw on arm 17, and a stop, 30a, on said plate 30, passing through the slots in the table and holding-plate, substantially as and for the purpose set forth.

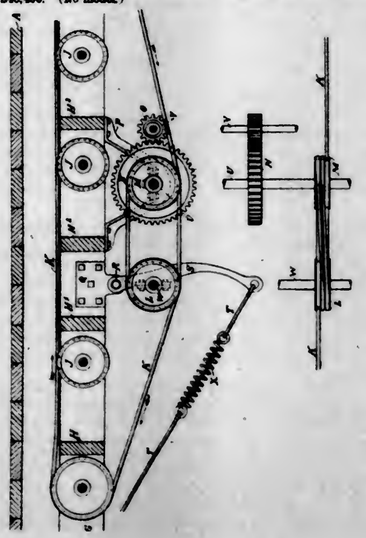
8. The combination of a series of punches and a table for receiving a check to be punched thereby, having a transverse bead or indentation, substantially as and for the purpose set forth.



9. The combination of the series of punches, a table guided in a path parallel therewith, paper-holding plate and feed mechanism carried by said table, a single punch-operating lever mounted on said table, and hand-lever, also mounted on said table and adapted to operate table, punch-operating lever, and feed mechanism, as set forth.

385,742. RAILWAY-STATION SIGNAL. CHARLES J. WOODWARD, Oak Harbor, Ohio. Filed Mar. 5, 1888. Serial No. 266,267. (No model.)

Claim.—1. The combination of the tower having the lantern provided on opposite sides with the series of openings covered with differently-colored glass, the vertically-movable rod N, extending through the lantern and carrying a lamp or other source of light, the rock-shaft F, journaled in a case at the top of the tower, and having the signal-target and the crank-arm projecting radially therefrom, and the rod O, connecting the crank-arm with the rod N, substantially as described.

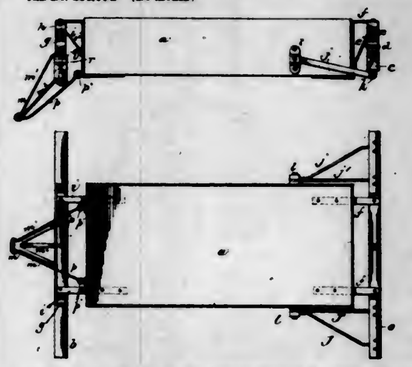


2. The combination of the tower having the lantern provided on opposite sides with its series of rigid openings covered with differently-colored glass, the vertically-movable rod N, extending through the lantern and carrying a lamp or other source of light, the rock-shaft F, journaled in a case at the top of the tower and having the signal-target and the crank-arm projecting radially therefrom, the rod O, connecting the crank-arm with rod N, the case at the base of the tower, the rock-shaft journaled in said case and having the crank-wheel, the rod T, connecting said crank-wheel to the rod N, and the

385,742.

lever and connections between the same and the crank-wheel, substantially as described.

385,743. CABLE SYSTEM FOR DRAW-BRIDGES. JOHN E. BODEEN and CHARLES A. TEPOORTEN, Chicago, Ill. Filed June 6, 1887. Serial No. 240,466. (No model.)



Claim.—1. In a draw or movable part of a draw-bridge, the combination, with the frame-work thereof, of the sheaves G and J, cable K, driving-sheave M, gears O and N, tension-sheave L, shafts U, V, and W, movable arm S, tension-rod T, and spring X.

2. In a draw or movable part of a bridge, an endless cable passing over sheaves at either end of said bridge, the entire cable being upon or within the structure of said bridge and being suitable for the propulsion of railway-cars across said bridge, in the manner specified, in combination with a railway-track upon said bridge, and a motor and gearing, also located upon or within the structure of said bridge, to propel the said cable, as specified.

3. In a draw or movable part of a bridge, having thereon a motor for the purpose of turning the draw, the combination of the bridge, motor, shaft V, and a cable, with gearing to propel said cable, all substantially as and for the purposes above set forth, shown, and described.

385,744. RUNNING-GEAR FOR VEHICLES. WILLIAM H. CRAPET and DEFOREST A. WILLCOX, Lebanon, N. Y. Filed Nov. 23, 1887. Serial No. 256,004. (No model.)

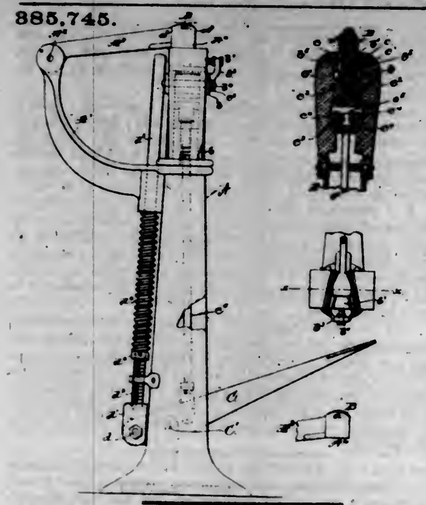
Claim.—1. The rear truck comprising rigidly-connected axle, spring, and head-block, and jacks to connect them to the vehicle-body, combined with angular braces jointed to the axle and to the body, substantially as described.

2. The rear truck comprising rigidly-connected axle, spring, and head-block, and jacks to connect them to the vehicle-body, combined with angular braces jointed to the axle and pivoted in squared sockets attached to the body to take off strain from an overburdened spring, substantially as described.

3. In a front truck, the axle, spring, and head-block, and the rigid jacks to connect them with the vehicle-body, combined with a king-bolt, a fifth-wheel, and braces for preventing undue lateral movement and preserve the parallelism and alignment of parts, substantially as described.

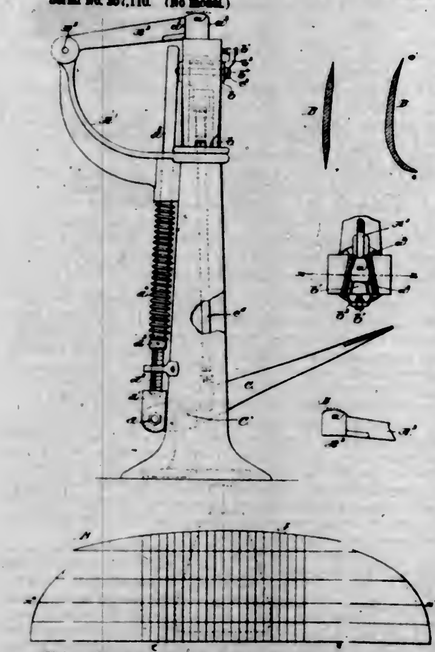
4. The front axle, spring, and head-block rigidly connected together, combined with a platform connected to the body by a sort of fifth-wheel and king-bolt, jacks rigidly connecting the head-block and platform, and couplings connecting the platform and axle, substantially as described.

5. The vehicle-body and rear truck composed of an axle, spring, head-block, and jacks, and pivoted braces connecting the body and axle, combined with the front truck, comprising an axle, spring, head-block, jacks, braces, and king-bolt, substantially as described.



6. The three-fingered brace *m*, combined with the front truck, and braces *p*, substantially as described.

385,745. MECHANISM FOR FORMING COUNTER-STIFFENERS. PATRICK COX, Rochester, N. Y. Filed Oct. 7, 1887. Serial No. 251,713. (No model.)

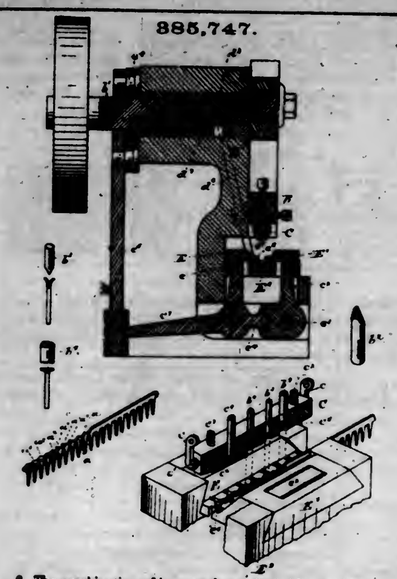


Claim.—1. In a machine for the manufacture of counter-stiffeners, a saddle to support a blank for a portion only of its width at or near its center between its ends, and clamps to grasp the ends of the blank, combined with means to change the relative positions of the saddle and clamps to pull and stretch the blank in its median line in the direction of its length and cause the edges of the blank while being pulled and stretched to conform to the shape of the saddle, substantially as described.

2. The saddle A^4, having a surface, as $a\ a^6\ a^7$, to support the central part of the counter-stiffener blank, and the block b', combined with the jaws $c'\ c'$, to co-operate with the said block b', and constitute clamps to grasp the ends of the said block, and with means, substantially as described, to operate the said jaws and saddle.

385,745.

385,746. MANUFACTURE OF COUNTER-STIFFENERS FOR BOOTS OR SHOES. PATRICK COX, Rochester, N. Y. Filed Dec. 6, 1887. Serial No. 257,110. (No model.)



Claim.—The herein-described improvement in the art or method of manufacturing counter-stiffeners, which consists in pulling and stretching a leather blank in its median line in the direction of its length and causing one edge of the blank during and by such pulling and stretching operation to turn inward along its edge and form a flange, substantially as described.

385,747. MACHINE FOR HEADING TACK-STRIPS. JOSEPH R. CRAIG, Somerville, assignor to George W. Copeland, Malden, Mass. Filed Sept. 1, 1886. Serial No. 212,827. (No model.)

Claim.—1. In a machine for heading tack-strips, the combination of a clamp or holding-jaws with the reciprocating tools $b^3\ b^4\ b^5$, or either of them, all substantially as and for the purposes described.

385,747.

2. The combination of jaws or clamps for holding and supporting the tack-strip, the presser-block C, the reciprocating head B, and the tools $b^3\ b^4\ b^5$, or either of them, all substantially as and for the purposes described.

3. The combination of an intermittent feed, the jaws or clamps E E', the reciprocating head B, the presser-block C, and the tools $b^3\ b^4\ b^5$, or either of them, all substantially as and for the purposes described.

4. The combination of an intermittent feed with the jaws E E', all substantially as and for the purposes described.

5. The clamping-jaws E E', having the lifting projections e^4, as and for the purposes described.

6. The combination of the jaws E E', for supporting and holding the tack-strip, with the straightening block or presser C, all substantially as described.

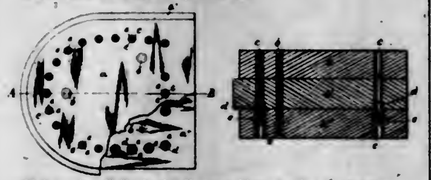
7. The combination of the feedway D and the reciprocating feed pawl or pawls $d'\ d^2$, all substantially as and for the purposes described.

8. The combination of the feedway D and the reciprocating pawls $d'\ d^2$, all substantially as described.

9. The combination of the feedway D, the jaws or clamping device for lifting and holding the tack-strip, the presser, and the heading-tool, all substantially as described.

10. In a machine for heading tack-strips, the combination of the feedway D, the jaws E E', the presser having the groove c^5, and the tools $b^3\ b^4\ b^5$, or either of them, all substantially as described.

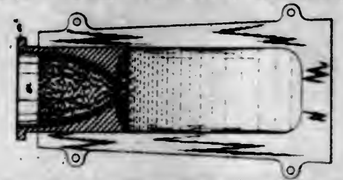
11. In a machine for heading tack-strips, the tack-strip-clamping device having fingers or projections to shut or close under the head-connecting portion of the tack-strip and support the same during the head-forming operation, all substantially as described.



12. The process of making headed tack-strips, consisting of first forming from a metal plate a tack-strip having a head-connecting portion of uniform width and height; second, in displacing the upper portion of said head-connecting strip to form head-forming sections of the strip; third, in forming heads from said head-forming sections, either by first splitting the same and then heading or by upsetting alone, all substantially as and for the purposes described.

13. In a machine for heading tack-strips, the combination of a feedway, an intermittent feed, a tack-strip-holding device, and a reciprocating hammer or header.

14. In a machine for heading tack-strips, the combination of the feedway, an intermittent feeding device, and a tack-strip-clamping device having a bed or anvil on which the head-forming section of the strip is headed, all substantially as and for the purposes described.



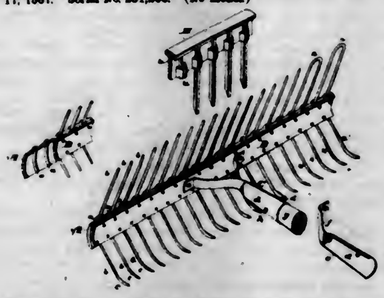
15. In a machine for heading tack-strips, the combination of a support for holding the tack-strip by its head-connecting portion and a clamping device adapted to be closed upon the head-connecting portion of the tack-strip, and which are adapted to automatically operate upon successive sections of the tack-strip in holding and clamping the same, with a reciprocating header, all substantially as and for the purposes described.

385,748. HEEL-NAILING MACHINE. EDWARD CROCKER and CHARLES W. SUMNER, Brockton, and CHARLES D. HASE, Whitman, Mass., administrators de bonis non of the estate of Edward Morrill, assignors to the American Heeling Machine Company, of Maine. Filed May 21, 1888. Serial No. 274,532. (No model.)

Claim.—A nail-die for heeling-machines, having perforations c c, and having the self-centering device consisting of the expansion metal prongs *c* or its equivalent arranged in connection with the perforations c c, as and for the purpose set forth.

385,749. PROCESS OF CASTING INGOTS. CYRUS C. CURRIER, Newark, N. J. Filed Jan. 14, 1888. Serial No. 260,717. (No model.)

Claim.—1. The process of casting steel ingots, which consists in arranging a heated feeder loosely in the mouth of a mold, pouring melted steel into and through said feeder into the mold, and continuing the pouring until the steel lifts the said feeder to a point which is determined by the quantity of metal in the crucible or ladle.



2. The process of casting steel ingots, which consists in pouring melted steel into and through a floating feeder into an ingot-mold.

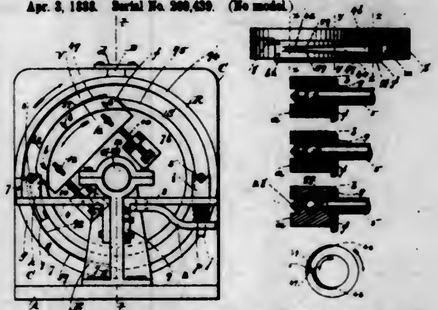
3. The process of casting ingots, which consists in pouring molten metal through a floating feeder into an ingot-mold, continuing the pouring of said metal into and through said feeder until the same is caused to rise within the ingot-mold, retarding or stopping the upward movement of said feeder when the quantity of metal remaining in the reservoir of said feeder and the crucible is sufficient to fill up the spaces made by the shrinkage of the metal within the ingot-mold

385,750. ART OF TREATING CLAY. SAMUEL FRIEDE, Decatur, Ill., assignor of three-fourths to John K. Warren, Bradford K. Durfee, and Daniel H. Hedman, same place. Filed May 25, 1887. Serial No. 239,331. (No specimens.)

Claim.—The method of treating clay, consisting of pulverizing, heating intensely, and subjecting while hot to cold water applied directly and practically simultaneously to all the particles, as and for the purpose set forth.

385,751. LAWN-RAKE. LEWIS GIBBS, Canton, Ohio. Filed Mar. 17, 1887. Serial No. 231,286. (No model.)

Claim.—1. A rake-head formed of two metal plates concavo-convex in cross-section, the concave face of one piece having a series of grooves to receive the teeth, the convex back of the other piece adapted to rest against said teeth, and means for securing said plates in position to secure the teeth in the grooves, substantially as described, and for the purpose set forth.



2. In a lawn-rake, the combination, with a rake-head, of a series of teeth sharp at both ends and inclined transversely from both sides of the head and adapted to form a rake or a hood upon both sides of the rake-head, substantially as shown and described, and for the purpose set forth.

3. In a lawn-rake, the combination, with a rake-head formed of two metal plates concavo-convex in cross-section, of a series of U-shaped teeth extending between the said concavo-convex head-sections, the prongs of said teeth extending on opposite sides of the head, being inclined transversely, and means for securing the head-sections together, and thereby securing the teeth in position, substantially as set forth.

4. A rake-handle socket formed of two duplicate parts made of thin plates of metal, each part having a tapered semicircular socket portion terminating in a shank diverging from the axial line of the socket, the free end of which is adapted for a rivet or bolt connection with the rake-head, and a through-bolt by which the socket portions may be clasped about the conical end of the handle, substantially as shown and described.

5. A rake-handle socket made in two parts, as shown, preferably of cast malleable iron, each part having a tapered socket portion semicircular in cross-section, terminating in a diverging shank, the free end of which is adapted for connection with the head, a rib extending from a point near the outer end of the socket to a point near the free end of the shank, and a through-bolt by which the socket portions may be clasped about the conical end of the handle, substantially as shown and described.

385,752. MACHINE FOR MAKING ROLLED FORGINGS. CHARLES R. GOULD, Leominster, Mass., assignor of five-sixths to Frank H. Cook, William S. Reed, and Charles R. Dresser, all of same place, George D. Burton, New Ipswich, N. H., and George W. Weeks, Clinton, Mass. Filed Apr. 3, 1888. Serial No. 269,639. (No model.)

Claim.—1. In a machine for making rolled forgings, the combination of the following instrumentalities, to wit: a die having a working-face which is convex in longitudinal section, a companion die having a working-face which is concave in longitudinal section, means for supporting said dies, and means for causing one of the dies to move longitudinally past the other through the arc of a circle, their working-faces being adjacent as they pass, substantially as set forth.

2. In a machine for making rolled forgings, the combination of the following instrumentalities, to wit: a die having a working-face which is convex in longitudinal section, a companion die having a working-face which is concave in longitudinal section, means for supporting said dies, and means for causing them to move longitudinally and simultaneously past each other in opposite directions through arcs of different circles, respectively, their working-faces being adjacent as they pass, substantially as described.

3. In a machine for making rolled forgings, the combination of the following instrumentalities, to wit: a die having a working-face which is convex in longitudinal section, a companion die having a working-face which is concave in longitudinal section, means for supporting said dies, means for causing one of said dies to move longitudinally past the other through the arc of a circle, and a rest for the bar or ingot, the working-faces of the dies being adjacent as they pass, substantially as set forth.

4. In a machine for making rolled forgings, the combination of the following instrumentalities, to wit: a die having a working-face which is convex in longitudinal section, a companion die having a working-face which is concave in longitudinal section, means for supporting said dies, means for causing the dies to move longitudinally and simultaneously past each other in opposite directions through arcs of different circles, respectively, and a rest for the rod or ingot, the working-faces of the dies being adjacent as they pass, substantially as described.

5. In a machine for making rolled forgings, the combination of the following instrumentalities, to wit: a disk having a chamber opening outward through one of its sides, and provided within said chamber with an inwardly-facing die having a working-face which is concave in longitudinal section, a disk disposed within said chamber and provided with an outwardly-facing die having a working-face which is convex in longitudinal section, and means for rotating said disks simultaneously in opposite directions to carry the dies longitudinally past each other, said dies standing at right angles to the axis of the rotating disk, and being so arranged that their working-faces will be adjacent as they pass, substantially as set forth.

6. In a machine for making rolled forgings, the combination of the following instrumentalities, to wit: a disk having a chamber opening outward through one of its sides and provided within said chamber with an inwardly-facing die having a working-face which is concave in longitudinal section, a disk disposed within said chamber and provided with an outwardly-facing die having a working-face which is convex in longitudinal section, and means for rotating said disks simultaneously in opposite directions to carry the dies longitudinally past each other, said dies standing at right angles to the axis of the rotating disk, and being so arranged that their working-faces will be adjacent as they pass, substantially as described.

7. In a machine for making rolled forgings, the combination of the following instrumentalities, to wit: a die having a working-face which is convex in longitudinal section, a companion die having a working-face which is concave in longitudinal section, means for supporting said dies, means for causing one of the dies to move longitudinally past the other through the arc of a circle, their working-faces being adjacent as they pass, and means for rotating the rod or ingot, substantially as set forth.

8. In a machine for making rolled forgings, the combination of the following instrumentalities, to wit: a die having a working-face which is convex in longitudinal section, a companion die having a working-face which is concave in longitudinal section, means for supporting said dies, means for causing them to move longitudinally and simultaneously past each other in opposite directions through arcs of different circles respectively, their working-faces being adjacent as they pass, and means for rotating the rod or ingot, substantially as described.

9. In a machine for making rolled forgings, the combination of the following instrumentalities, to wit: a die having a working-face which is convex in longitudinal section, a companion die having a working-face which is concave in longitudinal section, means for supporting said dies, means for causing one of said dies to move longitudinally past the other through the arc of a circle, the working-faces of the dies being adjacent as they pass, a rest for the rod or ingot, and means for rotating the rod or ingot, substantially as set forth.

10. In a machine for making rolled forgings, the combination of the following instrumentalities, to wit: a die having a working-face which is convex in longitudinal section, a companion die having a working-face which is concave in longitudinal section, means for supporting said dies, means for causing the dies to move longitudinally and simultaneously past each other in opposite directions through arcs of different circles respectively, the working-faces of the dies being adjacent as they pass, a rest for the rod or ingot, and means for rotating the rod or ingot, substantially as described.

11. In a machine for making rolled forgings, the combination of the following instrumentalities, to wit: a disk having a chamber opening outward through one of its sides, and provided within said chamber with an inwardly-facing die having a working-face which is concave in longitudinal section, a disk disposed within said chamber and provided with an outwardly-facing die having a working-face which is convex in longitudinal section, means for rotating one of said disks and carrying its die longitudinally past the companion die, said dies standing at right angles to the axis of the rotating disk and being so arranged that their working-faces will be adjacent as they pass, and a rest for the rod or ingot, substantially as set forth.

12. In a machine for making rolled forgings, the combination of the following instrumentalities, to wit: a disk having a chamber opening outward through one of its sides and provided within said chamber with an inwardly-facing die having a working-face which is concave in longitudinal section, a disk disposed within said chamber and provided with an outwardly-facing die having a working-face which is convex in longitudinal section, means for rotating one of said disks and carrying its die longitudinally past the companion die, said dies standing at right angles to the axis of the rotating disk and being so arranged that their working-faces will be adjacent as they pass, a rest for the rod or ingot, and means for rotating the rod or ingot, substantially as described.

13. In a machine for making rolled forgings, the combination of the following instrumentalities, to wit: a disk having a chamber opening outward through one of its sides and provided within said chamber with an inwardly-facing die having a working-face which is concave in longitudinal section, a disk disposed within said chamber and provided with an outwardly-facing die having a working-face which is convex in longitudinal section, means for rotating said disks simultaneously in opposite directions to carry the dies longitudinally past each other, said dies standing at right angles to the axis of the rotating disk and being so arranged that their working-faces will be adjacent as they pass, and a rest for the rod or ingot, substantially as set forth.

14. In a machine for making rolled forgings, the combination of the following instrumentalities, to wit: a disk having a chamber opening outward through one of its sides and provided within said chamber with an inwardly-facing die having a working-face which is concave in longitudinal section, a disk disposed within said chamber and provided with an outwardly-facing die having a working-face which is convex in longitudinal section, means for rotating said disks simultaneously in opposite directions to carry the dies longitudinally past each other, said dies standing at right angles to the axis of the rotating disk and being so arranged that their working-faces will be adjacent as they pass, and means for rotating the rod or ingot, substantially as described.

15. In a machine for making rolled forgings, the combination of the following instrumentalities, to wit: a disk having a chamber opening outward through one of its sides and provided within said chamber with an inwardly-facing die having a working-face which is concave in longitudinal section, a disk disposed within said chamber and provided with an outwardly-facing die having a working-face which is convex in longitudinal section, means for rotating said disks simultaneously in opposite directions to carry the dies longitudinally past each other, said dies standing at right angles to the axis of the rotating disk and being so arranged that their working-faces will be adjacent as they pass, and two rests for the rod or ingot, one of which rests is adapted to yield, substantially as set forth.

16. In a machine for making rolled forgings, the combination of the following instrumentalities, to wit: a disk having a chamber opening outward through one of its sides and provided within said chamber with an inwardly-facing die having a working-face which is concave in longitudinal section, a disk disposed within said chamber and provided with an outwardly-facing die having a working-face which is convex in longitudinal section, means for rotating said disks simultaneously in opposite directions to carry the dies longitudinally past each other, said dies standing at right angles to the axis of the rotating disk and being so arranged that their working-faces will be adjacent as they pass, means for rotating the rod or ingot, and two rests for the rod or ingot, one of which rests is adapted to yield, substantially as described.

17. In a machine for making rolled forgings, the chambered disk R, provided with a concave die, as *b*, and mounted on the sleeve P, the disk S, mounted on the shaft G, within said chamber, and provided with a convex die, as *a*, and means for actuating said sleeve and shaft to rotate said disks in opposite directions, substantially as set forth.

18. In a machine for making rolled forgings, the chambered disk R, provided with a concave die, as *b*, and mounted on the sleeve P, the disk S, mounted on the shaft G, within said chamber, and provided with a convex die, as *a*, means for actuating said sleeve and shaft to rotate said disks in opposite directions, and means for rotating the rod or ingot, substantially as described.

19. In a machine for making rolled forgings, the chambered disk R, provided with a concave die, as *b*, and mounted on the sleeve P, the disk S, mounted on the shaft G, within said chamber, and provided with a convex die, as *a*, means for actuating said sleeve and shaft to rotate said disks in opposite directions, means for rotating the rod or ingot, and a rest for the rod or ingot, substantially as set forth.

20. In a machine for making rolled forgings, the chambered disk R, provided with a concave die, as *b*, and mounted on the sleeve P, the disk S, mounted on the shaft G, within said chamber, and provided with a convex die, as *a*, means for actuating said sleeve and shaft to rotate said disks in opposite directions, means for rotating the rod or ingot, and two rests for the rod or ingot, one of said rests being adapted to yield, substantially as described.

21. In a machine for making rolled forgings, the chambered disk R, provided with a concave die, as *b*, and mounted on the sleeve P, the disk S, mounted on the shaft G, within said chamber, and provided with a convex die, as *a*, means for actuating said sleeve and shaft to rotate said disks in opposite directions, and means for adjusting the die on said disk S, substantially as set forth.

22. In a machine for making rolled forgings, a die, as *c*, having a working-face which is convex in longitudinal section and provided on said face with a longitudinally-arranged groove, as 44, said groove being wider and deeper at one end than at the other, substantially as described.

23. In a machine for making rolled forgings, a die, as *c*, having a working-face which is convex in longitudinal section, said die being provided on said face with a longitudinally-arranged groove which is wider and deeper at one end than at the other, as 44, and with cutting flanges or bosses at the sides of said groove, as 59, the flanges being higher at the wide end of the groove than at their opposite ends, substantially as set forth.

24. In a machine for making rolled forgings, a die, as *b*, having a working-face which is concave in longitudinal section, and provided on said face with a longitudinally-arranged groove, as 44, said groove being wider and deeper at one end than at the other, substantially as described.

25. In a machine for making rolled forgings, a die, as *b*, having a working-face which is concave in longitudinal section, said die being provided on said face with a longitudinally-arranged groove which is wider and deeper at one end than at the other, as 44, and with cutting flanges or bosses at the sides of said groove, as 59, the flanges being higher at the wide end of the groove than at their opposite ends, substantially as described.

26. In a machine for making rolled forgings, the die *a*, having a working-face which is convex in longitudinal section, and provided with the groove 44 and cutting-bosses 59, the die *b*, having a working-face which is concave in longitudinal section and provided with the groove 44 and cutting-bosses 59, and supporting and actuating mechanism for said dies, whereby one may be moved over or past the other longitudinally through the arc of a circle, their working-faces being adjacent as they pass, and their ends 42, respectively, in advance as they approach each other to pass, substantially as set forth.

27. In a machine for making rolled forgings, the block V, provided with a die on its curved edge, in combination with the disk S, mounted on the shaft G, and screws for adjusting and securing said block on said disk, substantially as described.

28. In a machine for making rolled forgings, the disk R, mounted on the sleeve P, and provided with a concave die, as *b*, means for adjustably securing said disk on said sleeve, the disk S, mounted on the shaft G and provided with a convex die, as *a*, means for adjustably securing said disk on said shaft, and actuating mechanism for the sleeve and shaft, whereby the disks may be revolved in opposite directions, substantially as set forth.

29. In a machine for making rolled forgings, a stop, as 8, in combination with the disk R, provided with a concave die, as *b*, and disk S, provided with a convex die, as *a*, substantially as and for the purpose set forth.

30. In a machine for making rolled forgings, the ingot-rest A, in combination with the die-carrying disks S R and actuating mechanism therefor, said rest being arranged substantially as described.

31. In a machine for making rolled forgings, the yielding rest *i*, in combination with the die-carrying disks S R and actuating mechanism therefor, said rest being arranged substantially as described.

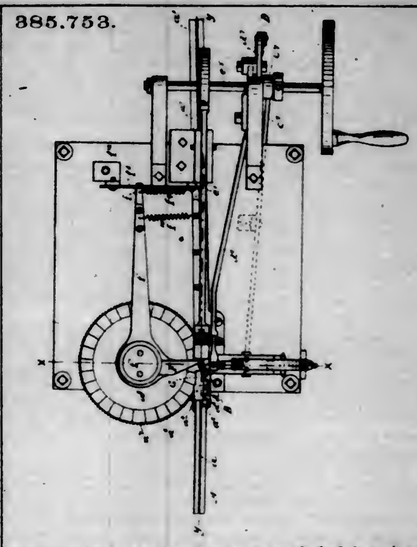
32. In a machine for making rolled forgings, the rest A and yielding rest *i*, in combination with the die-carrying disks S R and actuating mechanism therefor, said rests being arranged at opposite sides of the axis of the disk S, substantially as described.

33. In a machine for making rolled forgings, the plate *f*, having a curved serrated edge, 62, in combination with the disk S, carrying a die, as *a*, substantially as set forth.

34. In a machine for making rolled forgings, the plate *f*, having a curved serrated edge, 62, and secured to the adjustable block V, in combination with the disk S, carrying a die, as *a*, substantially as described.

35. In a machine for making rolled forgings, the plate *g*, secured to the disk R, and provided with a curved serrated edge, 92, substantially as set forth.

36. In a machine for making rolled forgings, the disk S, provided with the plate *f*, having the curved serrated edge 62, in combination with the disk R, provided with the plate *g*, having the curved serrated edge 92, said plates being arranged substantially as described.



37. In a machine for making rolled forgings, the journaled shaft G, provided with the gear M and disk S, the sleeve P, disposed on said shaft and provided with the gear O and disk R, the journaled pinion N, intermeshing with the gear O, the journaled gear K, provided with the pinion L, said pinion intermeshing with the gear M and pinion N, the pulley H, provided with the pinion J, and loosely mounted on the shaft G, said pinion intermeshing with the gear K, the journals a *k*, and suitable supports for said journals and shaft, combined and arranged to operate substantially as set forth.

385,753. MACHINE FOR HEADING TACK-STRIPS. EDWARD F. GRANDY, Boston, and GEORGE W. COPELAND, Malden, Mass., assignors to the Mutual Lasting Machine Company, Portland, Me. Filed June 26, 1884. Serial No. 136,049. (No model.)

Claim.—1. In a machine for heading tack-strips, the combination of the feedway with the four-motion feed-finger B, whereby it is adapted to engage successively with the head-forming portions of the tack-strip and move it to the heading device, all substantially as and the purposes described.

2. The combination of a feedway, the finger F, the hammer E, and intermediate connecting mechanism, substantially as specified, all substantially as and for the purposes described.

3. In a machine for forming heads in succession upon tack and other strips, the finger F, arranged to project over the feedway of the

385,753.

machine and to be moved by the advance or feed of the tack-strip, in combination with the header or hammer, whereby the header or hammer is caused to operate when a head-forming section is in position to be headed, all substantially as and for the purposes described.

4. In a tack-strip-heading machine, the combination of the feedway, a support upon which the tack-strip is headed, and a clamping device for holding the tack-strip rigidly in a perpendicular position, the feed-finger B, and the hammer or header operating or tripping finger F, arranged in relation to each other as set forth, and adapted to operate in feeding the tack-strip, holding and clamping the same during the heading operation, and to cause the automatic movement of the heading device, all substantially as and for the purposes specified.

5. The combination, in a tack-strip-heading machine, of the hammer or header E, its arm e', pivoted at e^3, as described, the lifting-cam e^4, and the drawing-spring e^5, attached to the lever or arm e' between the fulcrum-point and the hammer, all substantially as and for the purposes described.

6. The combination, in a machine for heading tack-strips, of a clamp and support for the tack-strip, the header E, the lifting-cam e^4, the spring e^5, and the latch f^4, all substantially as and for the purposes described.

7. The combination of the finger F, the hammer E, reciprocated substantially as described, the latch f^4, and connecting devices, all substantially as and for the purposes described.

8. In a tack-strip-heading machine, the combination of a disk, having arms or supports for holding or supporting the head-connecting portion of a tack-strip and notches for receiving the shanks thereof, with a reciprocating jaw, C, adapted to be moved against the head-connecting portion of the tack-strip and to clamp the same against the side of the disk, all substantially as and for the purposes described.

9. The combination of the feed-way, one or more of the rolls a^3 a^4 a^4, the disk a^2, adapted to be revolved by the tack-strip, and the jaw C, all substantially as and for the purposes described.

10. The combination of the feedway of the machine, the roll a^3, notched disk a^2, and the jaw C, all substantially as and for the purposes described.

11. The combination of the feedway of the machine and one or more spacing and supporting rolls, a^3 a^4 a^4, substantially as and for the purposes described.

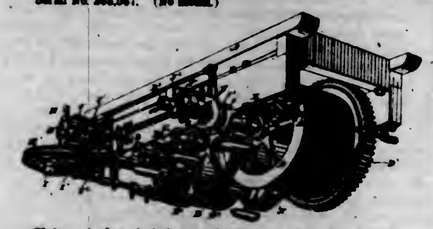
12. The combination of the feedway of the machine with the tack-strip support and the covering-plates G G, or either, all substantially as and for the purposes described.

13. As an anvil or support for the portion of the tack-strip submitted to the heading operation, the arms or fingers projecting from a movable section, a^3, and adapted to support the tack-strip and to form a rest for the head-connecting portion of the tack-strip, and spaces arranged between said arms or projections for the reception of the shank of the tack-strip, with a jaw, C, adapted to be moved against the tack-strip when so supported and to hold it firmly in position upon said fingers or rests, and in connection therewith and their support to form an anvil or bed upon which the tack is headed, all substantially as and for the purposes described.

14. The feed-finger B, arranged in relation to the feedway as specified, and provided with means, substantially as set forth, whereby it is brought in successive contact with the head-forming sections of the strip, and then moved forward to feed the same, all substantially as and for the purposes described.

15. The combination of the feedway of the machine, the supporting roll or rolls a^3 a^4 a^4, and the feed-finger B, all substantially as and for the purposes described.

16. The combination of the jaw C and the toggles c' c^3 c^4, all substantially as and for the purposes described.



17. The combination of the finger B, its supporting-arm D, spring d^3, and the reciprocating connecting-rod d^4, all substantially as and for the purposes described.

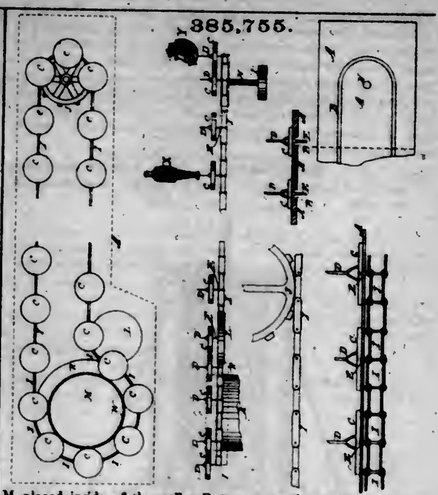
18. The feedway bent beyond the bed or anvil in a direction to straighten the tack-strip after it has been submitted to the heading operation, all substantially as and for the purposes described.

19. In a tack-strip-heading machine, the combination of a support for the tack-strip, consisting of a disk having peripheral teeth to engage the shanks of the strip, a clamping-jaw, and a header.

20. In a nail-strip-heading machine, the bent guideway provided with a covering-plate to retain the strip in place.

385,754. SLACK-CABLE STOP. FRED R. GRAVES, Rochester, N. Y., assignor to L. S. Graves & Son, same place. Filed Mar. 26, 1888. Serial No. 268,567. (No model.)

Claim.—1. In a hoisting-machine, the combination of the starting and stopping mechanism, the winding-drum, the shaft for the same, having the portion extending beyond the bearing, the vibrating frame hung loosely thereon, having the clutch-teeth on one side and connected to the starting and stopping mechanism, the movable clutch-section mounted upon the drum-shaft, the bell-crank lever connected with said clutch-section, the shaft arranged parallel with the drum, the frame mounted on said shaft and held close to the drum, and the connecting-link between the frame-shaft and bell-crank, substantially as described.

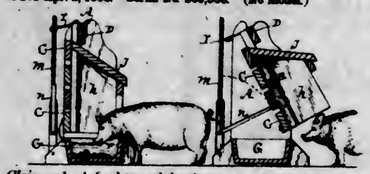


2. The combination of the starting and stopping mechanism, the winding-drum, the shaft for the same, having the threaded portion and extending beyond the bearing, the vibrating frame having a longitudinal slot and clutch-teeth hung loosely on said shaft, the stops secured on the shaft, the movable nut mounted on the threaded portion, arranged to travel between the stops and having a projection entering the slot in the vibrating frame, connections between the frame and the starting and stopping mechanism, a movable clutch-section on the drum-shaft, the bell-crank connected thereto, the shaft extending parallel with the drum, the frame mounted thereon, extending close to the periphery of the drum, and a connecting-rod between the bell-crank and the shaft, whereby a movement imparted to the end of the frame will throw the clutch into engagement, substantially as described.

3. The combination of the starting and stopping mechanism, the winding-drum, the shaft for the same, having the portion extending beyond the bearing, the vibrating frame hung loosely thereon, having the clutch-teeth on one side and connected to the starting and stopping mechanism, the movable clutch-section mounted on the drum-shaft, the bell-crank lever connecting with said clutch-section, the shaft arranged parallel with the drum, having the short arm, the rod connected to said arm and to the bell-crank, having the nut thereon, the projection from the frame and the spring interposed between the projection and nut, and the frame attached to said last-mentioned shaft and projecting in close proximity to the drum-surface, substantially as described.

385,755. TRAVELING DISPLAY-STAND. HERMON B. HAYNES, Chicago, Ill. Filed Nov. 22, 1887. Serial No. 255,841. (No model.)

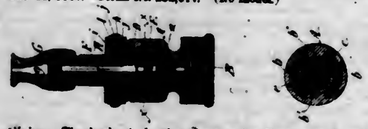
Claim.—1. In traveling display-stands, the platform A, provided with the endless slot B, in combination with the endless chain I, sprocket-wheel J, and pulley R, and stands D, connected with the chain I by the pivots E, and the bases C, which slide on the platform A and hold the stands D upright, as specified.



2. The combination of the platform A, provided with the endless slot B, and the circular bases C, bearing on the platform and supporting the stands and connected with the chain I by the pivots E, the sprocket-wheel J, and the loose pulley R, with the stationary drum

385,755.

M, placed inside of the pulley R, to engage the peripheries of the bases C and rotate them as they are carried around the pulley R, as and for the purpose specified.

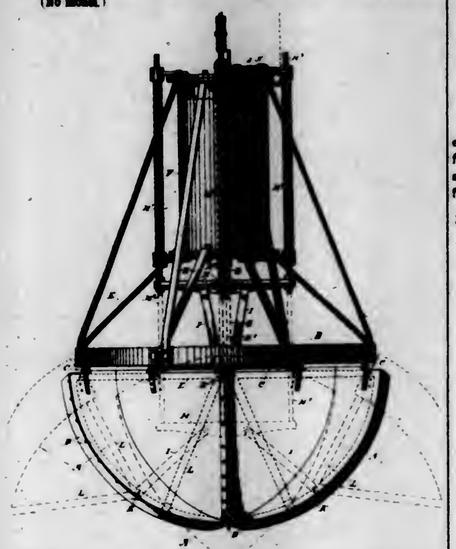


385,756. FEED-TROUGH. COLEMAN HOLLINGSWORTH, Wirt, Iowa. Filed Apr. 2, 1888. Serial No. 269,333. (No model.)

Claim.—1. A feed-trough having posts at its ends, a gate or panel having fixed partitions projecting at right angles, and a roof fixed on top of the partitions, a prop pivoted to the base of the trough and carrying a minor prop, and a fastening device fixed to the top of the panel to engage the top end of the pivoted post, arranged and combined to be adjusted in the manner set forth, for the purposes stated.

2. The gate or panel B C, having journals *f*, the trough G, the partitions *h*, and roof J, fixed to the panel, the props *m* and *n*, and the fastening device *r*, and fixed posts at the ends of the panel, constructed and combined substantially as shown and described, for the purposes stated.

385,757. HOPE-HOECLE. JOHN H. JOHNSON, Chicago, Ill. Filed Oct. 11, 1887. Serial No. 252,017. (No model.)



Claim.—The body A, having the opening B, passage C, and chamber D, provided with the passages *b* and cut-off walls *b'*, in combination with the cut-off or valve E, having the ports *c*, and chamber *d*, for supplying the water for a solid stream or a spray, substantially as specified.

385,758. METHOD OF FILING PAPERS. JOSEPH M. JUNKIN, Red Oak Junction, Iowa. Filed Oct. 3, 1887. Serial No. 251,382. (Model.)

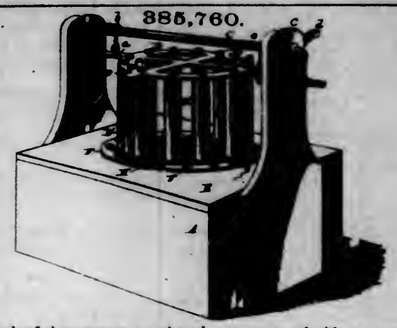
Claim.—The method of filing a set of papers in an orderly sequence, which consists in providing them with a protective cover having across one end a series of parallel flexible tongues folded down upon the cover and attaching the tongues to the papers in pairs, one pair for each paper or sheet, the two tongues composing each pair being located, respectively, near the two longitudinal edges of the paper to which they are attached, substantially as described, and for the purpose set forth.

385,759. DREDGING-MACHINE. SAMUEL H. KNIGHT, Sutter Creek, and ISAAC P. LARNED, Ione, Cal. Filed Nov. 26, 1887. Serial No. 256,163. (No model.)

Claim.—1. The spherical sections having their bases hinged to a circular ring and their points presented downward, so as to close about the hinges and form a hollow hemispherical bucket, in combination with a pressure-cylinder supported vertically above the center of the ring by brace-rods therefrom, a piston and piston-rod operating within said cylinder, and links or rods connecting said piston with the bucket-sections, so that they may be opened and closed by the movement of the piston, substantially as herein described.

2. The circle or ring having the spherical segmental bucket-sections hinged to it, the central vertical cylinder supported above the ring by brace-rods therefrom, the piston-rod actuated by the piston within the cylinder and having a yoke at its lower end, and guides therefor, in combination with the hinged links or connecting-rods I, connecting said yoke with the bucket-sections, substantially as herein described.

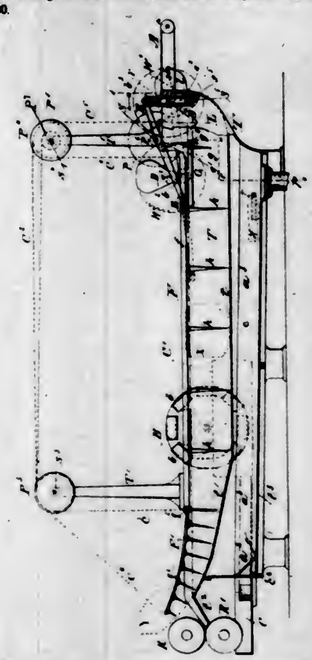
3. The spherical segmental bucket-sections hinged to the ring or circle, the cylinder supported vertically above the center of said ring or circle and having the piston and piston-rod, in combination with the jointed links or rods connecting said piston-rod with the bucket-sections, and brace-rods L, extending from the upper part of the bucket to the joints K of the links, substantially as herein described.



385,760. ELECTRIC BATTERY. WILLIAM P. KOOKOGEY, Brooklyn, N. Y., assignor to the Kookogey Electric Company. Filed June 7, 1887. Renewed June 9, 1888. Serial No. 276,570. (No model.)

Claim.—1. The herein-described battery, consisting of the box or receptacle A, uprights B, grooved on the inner faces, top or cover E, provided with segments F, connected one with another and carrying a carbon element, shaft C, mounted in the standards B, frame D, carrying the zinc element and provided with arms *a c*, and bands extending from the arms *a* to the shaft C and passing about the same, substantially as and for the purpose set forth.

2. In combination with the box or receptacle A, the carbon element *g*, a carrying-plate, F, therefor, composed of segments separated at their ends one from the other, but electrically connected, and frame or plate D, carrying the zinc element D', provided with arms to enter the spaces between the ends of the segments of plate F, substantially as and for the purpose set forth.



3. In combination with box A, cover E, the latter provided with segments F and connecting-pieces G, insulating-blocks between the

385,760.

ends of the segments, a carbon element connected with segments F, frame or plate D, carrying a zinc element and provided with arms *a* and *c*, to enter the spaces between the segments, substantially as set forth.

385,761. MACHINERY FOR SCOURING AND WASHING WOOL. JOHN MCNAUGHT and WILLIAM MCNAUGHT, Jr., Rochdale, County of Lancaster, England. Filed July 27, 1883. Serial No. 102,105. (No model.) Patented in England Oct. 3, 1881, No. 4,372, and Mar. 1, 1882, No. 963; in France Aug. 8, 1882, No. 150,598, and in Belgium Aug. 9, 1882, No. 58,730.

Claim.—1. In a wool-washing machine, the combination, substantially as described, with the washing-trough having the upper edge of its delivery end below the like edge of its feed end and side walls, of a delivery rake or harrow moving outwardly and upwardly along said delivery end of the trough and partly beyond the upper edge thereof, and inwardly, with the point of its teeth in a plane above said upper edge, for the purpose specified.

2. In a wool-washing machine, the combination, substantially as described, with the washing-trough having the upper edge of its delivery end below the like edge of its feed end and side walls, and squeeze-rolls located outside of and below the upper edge of said delivery end, of a delivery rake or harrow moving outwardly and upwardly along said delivery end of the trough and partly beyond the upper edge thereof, and inwardly, with the point of its teeth in a plane above said upper edge, for the purpose specified.

3. In a wool-washing machine, the combination, substantially as

described, with the washing-trough having the upper edge of its delivery end below the like edge of its feed end and side walls, of a delivery rake or harrow moving outwardly and upwardly along said delivery end of the trough and partly beyond the upper edge thereof, and inwardly, with the point of its teeth in a plane above said upper edge, and a propelling rake or harrow pivotally connected with and imparting motion to said delivery rake or harrow.

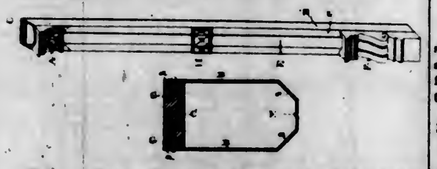
4. In a wool-washing machine, the combination, with the washing-trough, a toothed propelling-harrow, and an immerser rigidly connected with the propelling-harrow and partaking of the movements thereof, of a delivery-harrow pivotally connected with the propelling-harrow and operated by and receiving its forward and backward movements directly from said propelling-harrow, as described.

5. In a wool-washing machine, the combination, with the propelling-harrow, of an immersing-grid connected therewith and provided with the end wall, g^5, substantially as and for the purpose specified.

6. In a wool-washing machine, the combination, with the propelling-harrow, of an immersing toothed grid connected therewith and provided with an end wall, g^5, substantially as and for the purpose specified.

7. In a wool-washing machine, the combination, with the washing-trough and its perforated false bottom arranged to form a sediment-chamber below said false bottom, and passages or ducts in communication with said chamber, of injectors for injecting steam into said passages to induce a circulation of the liquid within said sediment-chamber.

8. In a wool-washing machine, the combination, with the washing-trough and a suspended harrow, of a counter-balance connected with said harrow for holding the same in suspension in the trough.

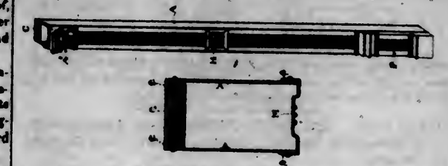


9. In a wool-washing machine, the combination, substantially as described, with the washing-trough and a harrow having its points of suspension above said trough, of a weighted lever connected with the suspensory devices of the harrow and operating to hold said harrow in suspension within or above the trough, for the purpose specified.

10. In a wool-washing machine, the combination, with the washing-trough and a harrow composed of a plurality of sections articulated together and having their points of suspension above said trough, of a weighted lever connected with the suspensory devices of the harrow and operating to hold said harrow in suspension within or above the trough.

11. The combination, with the washing-trough and the toothed frame or harrow, of mechanism for actuating the latter, consisting of the driving-shaft S, the shafts S' S^2, gearing for transmitting rotation of shaft S to said shafts S' S^2, the rock-shaft S^3, carrying slotted arms s^4 s^5, a crank-arm carried by shaft S' and provided with a bearing-block operating within the slot of arm s^4, a rod connected with the toothed frame or harrow and with the arm s^5, a lever pivoted to the trough and operated upon by a cam mounted on shaft S^3, and flexible connections between said lever and the harrow, said parts being constructed and arranged for co-operation as described, for the purpose specified.

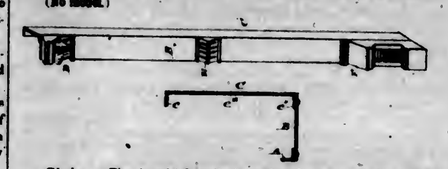
12. The combination, with the washing-trough and the toothed frame or harrow, of mechanism for actuating the latter, consisting of the driving-shaft S, the shafts S' S^2, gearing for transmitting rotation of shaft S to said shafts S' S^2, the rock-shaft S^3, carrying slotted arms s^4 s^5, a crank-arm carried by shaft S' and provided with a bearing-block operating within the slot of arm s^4, a rod connected with the toothed frame or harrow and with the arm s^5, a lever pivoted to the trough and provided with a counterbalancing-weight, *l*, said lever being operated upon by a cam mounted on shaft S^3, and flexible connections between said lever and the harrow, said parts being constructed and arranged for co-operation as described, for the purpose specified.



385,762. PLATE-METAL COLUMN. FRANK MERKER and HENRY F. EDWARDS, St. Louis, Mo. Filed Jan. 28, 1888. Serial No. 262,269. (No model.)

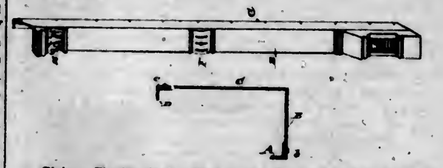
Claim.—1. The combination of the metallic sheet shaped to form the front and sides of the column with the wooden filling-piece and the angle-irons at the back of the column, substantially as described.

2. The combination of the metallic sheet shaped to form the front and sides of the column with the wooden filling-piece at the back of the column, substantially as described.



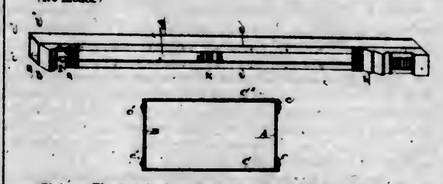
385,763. PLATE-METAL COLUMN. FRANK MERKER and HENRY F. EDWARDS, St. Louis, Mo. Filed Jan. 28, 1888. Serial No. 262,270. (No model.)

Claim.—1. The combination of the face having the described flanges formed in one piece therewith, the cheeks, the angle-irons, and the filling-piece, said face-flanges lapping upon the outer face of the cheeks, respectively, substantially as described.



2. The combination of the face having the described flanges formed in one piece therewith, the cheeks, and the filling-piece, said face-flanges lapping upon the outer face of the cheeks, respectively, substantially as described.

385,764. PLATE-METAL COLUMN. FRANK MERKER and HENRY F. EDWARDS, St. Louis, Mo. Filed Jan. 28, 1888. Serial No. 262,271. (No model.)

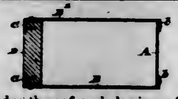


Claim.—The herein-described angle-column, consisting of the angle-iron, the face, and the cheek having a flange at each side edge, combined substantially as described.

385,765. PLATE-METAL COLUMN. FRANK MERKER and HENRY F. EDWARDS, St. Louis, Mo. Filed Jan. 28, 1888. Serial No. 262,272. (No model.)

Claim.—The herein-described angle-column, consisting of a sheet shaped to form the face and cheek of the column, and angle-irons attached, respectively, to the edges of the face and cheek, as described.

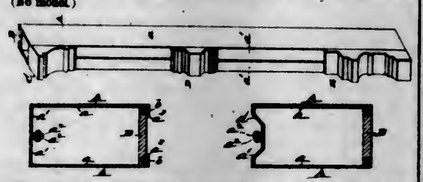
385,766. PLATE-METAL COLUMN. FRANK MERKER and HENRY F. EDWARDS, St. Louis, Mo. Filed Jan. 28, 1888. Serial No. 262,273. (No model.)



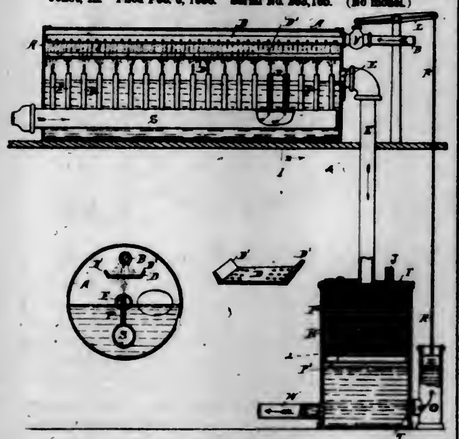
Claim.—The herein-described sheet-metal column, the same consisting of the face, the back, and the two cheeks, said cheeks being similarly provided with flanges, which lap upon the outer side of said face and back plates, respectively, at the front and the rear edge of the cheek, and the parts being combined substantially as described.

385,767. PLATE-METAL COLUMN. FRANK MERKER and HENRY F. EDWARDS, St. Louis, Mo. Filed Jan. 28, 1888. Serial No. 262,274. (No model.)

Claim.—The herein-described column, the same consisting of the face, the two cheeks, the two angle-irons, and the filling-piece, said



385,767.

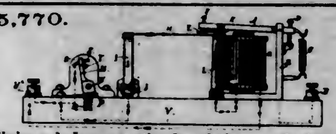


cheeks at the front edge thereof each having a flange riveted to the face, and said angle-irons being secured to the cheeks at the rear edge thereof and also to said filling-piece.

385,768. PLATE-METAL COLUMN. FRANK MERKER and HENRY F. EDWARDS, St. Louis, Mo. Filed Feb. 17, 1888. Serial No. 264,265. (No model.)

Claim.—The combination of the plates A A and B, said plates A A, respectively, being extended to a side and half of the front of the column and being riveted together, as described, and said wooden plate B being fastened between the plates A A at the rear of the column, substantially as described.

385,769. FEED-WATER HEATER AND PURIFIER. JAMES MILLER, Joliet, Ill. Filed Feb. 6, 1883. Serial No. 263,165. (No model.)



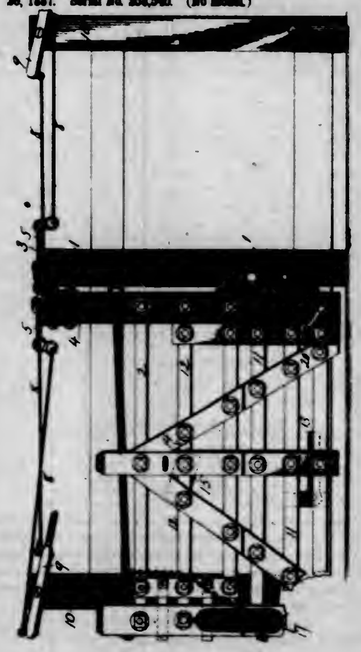
Claim.—1. In the feed-water heating and purifying apparatus described, the heater A, having arranged therein at or near its lower part a pipe connecting the exhaust of a steam-engine and a series of short vertical exhaust-pipes arranged in the upper part of said pipe, a plate arranged longitudinally above said vertical exhausts and perforated, as set forth, and a perforated cold-water-supply pipe arranged longitudinally above said plate in such manner as to discharge a water-spray upon said plate, whereby the steam exhausts against said plate, mingles with and heats the water, said condenses, in the manner substantially as and for the purpose specified.

2. The feed-water heater and purifier described, consisting of a horizontal body, A, having arranged therein the steam-exhausts S P, perforated plate D above said exhausts, and perforated feed-pipe B above said plate, in combination with a filter arranged below said body and connected therewith by means of a pipe and having a deposit of wood shavings through which the water filters, a receiving-reservoir, and a discharge-pipe, substantially as and for the purpose specified.

3. In combination with the heater A, the inlet steam-pipe S, having the vertically-arranged exhaust-pipes P, the perforated plate D, having the sides D', the perforated cold-water-inlet pipe B, the filter H, connected with and below said heater by means of a pipe, F, and having a receptacle for filtering material and for holding filtered water, and the mechanism shown and described for automatically regulating the cold-water supply, substantially as and for the purpose set forth.

385,770. PROTECTOR FOR ELECTRICAL INSTRUMENTS. GEO. W. MIDDLE and WILLIAM MIDDLE, Philadelphia, Pa. Filed Mar. 1, 1887. Serial No. 229,208. (No model.)

385,770.



Claim.—1. In a protection for telephones and other electrical instruments, a ground-connection, in combination with an electro-magnet, its armature having a ground-connection and section of fusible wire with which said armature makes electrical contact when the attraction of the electro-magnet is abnormally increased by lightning or other electrical currents, said magnet and said wire being normally in the circuit, said electro-magnet being adapted to shunt itself from the circuit and evolve extra 1 2 current by actuating said ground-connection to make and break contact with said fusible wire, substantially as described, and for the purpose set forth.

2. In a protector for telephones and other electrical instruments, a lever or arm of dual function, said lever being actuated by a spring to a partly-rotative movement and being provided at its upper end with a binding-screw, which adapts it for electrical connection with aforesaid fusible wire, the primary function of said lever being to give tension to said fusible wire, said lever being in combination with fusible wire, insulated hook K, connecting-post L, electro-magnet, and ground-connected armature, said armature being suitably pivoted to a support and provided with a retractile spring and at its contact end with a spring-tongue vertically adjustable by means of a screw and making contact with the fusible wire, substantially as described and set forth.

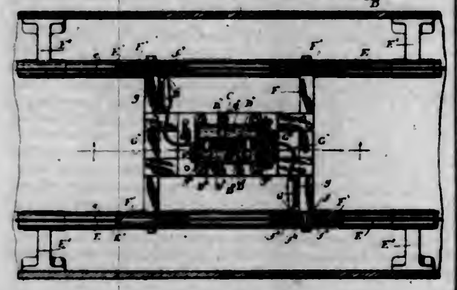
3. In a protector for telephones and other electrical instruments, a safety-switch lever provided with lateral trunnions journaled in insulated bearings, said switch-lever being provided at its lower end with an angular formation and on one of its trunnions with an insulating-handle, for purposes set forth, said switch-lever being in combination with the electrodes or contact-points S and P and with the springs Q and R, said switch-lever being adapted to effect a secondary break in the circuit by being thrown from its contact with electrode S by impact of partly-rotating lever I in the discharge of its secondary function, the aforesaid elements being in combination with lever I, fusible wire, electro-magnet, and ground-connected armature, all the aforesaid elements being in combination and mounted on a base of wood or other insulating material, substantially as described, and for the purpose herein set forth.

385,771. GATE. MICHAEL NOLAN, Bloomington, Ill. Filed Dec. 20, 1887. Serial No. 258,540. (No model.)

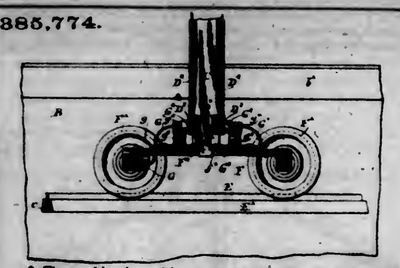
Claim.—In a gate, the combination, with the plate 3, pivoted to post 1 and rigidly secured to the gate-post 4, arms 5 at right angles thereto, links secured to said arms, rods 8, connected with said links, levers pivoted to posts and connected with said rods for operating the gate, a hinged lower section, a gravity-pawl pivoted to said section, and a catch for locking the pawl and securing the section in elevated adjustment, and a hook, 19, and staple 20, for locking the section, substantially as shown and described.

385,772. METHOD OF HEMSTITCHING. CORNELIA H. OWEN, De Land, Fla. Filed Oct. 13, 1887. Serial No. 252,202. (No specimens.)

Claim.—The method of hemstitching herein described, which consists in first drawing out a greater or less number of threads from the fabric; secondly, folding the fabric on the line of the previously-drawn thread-space; thirdly, stitching through the said folded fabric close to the said fold-line, and, fourthly, opening the folded fabric, and thus drawing the stitches back over the fabric-threads, as set forth.



385,773. ATTACHMENT FOR PLOWS. MACDONALD PATE, Snow Hill, N. C. Filed Oct. 31, 1887. Serial No. 253,573. (No model.)



Claim.—An attachment for the landside of a plow, consisting of an elongated arm having a concaved outer face and a base to which said arm is secured, having an inclined front edge, said arm extending out at an acute angle from said base, substantially as described.

385,774. DEVICE FOR LIGHTING AND HEATING CARS BY ELECTRICITY. DE WITT C. ROGERS, Chicago, Ill., assignor of five-sixths to Charles T. Yerkes, same place. Filed Aug. 24, 1886. Serial No. 211,718. (No model.)

Claim.—1. The combination, with a car and slotted conduit, of two conducting-strips located within the said conduit, an arm or bar attached to the said car and extending into the conduit, insulated metallic wheels rolling upon the said conducting-strips within the conduit, a frame or axle detachably connected with the said bar and affording bearings for said wheels, insulated contact-surfaces upon the frame having electrical connection with the said wheels, contact-surfaces upon the said arm or bar and conductors leading from said contact-surfaces along the said arm or bar to the car, translating devices upon the car, and connections between the said translating devices and the conductors upon the arm or bar, substantially as described.

385,774.

2. The combination, with a car provided with a consumption-circuit including heating, lighting, or other translating devices, and a slotted conduit, of two conducting-strips located within the said conduit, an arm or bar attached to the said car and extending into the conduit, insulated wheels rolling upon the said conducting-strips within the conduit, a frame or axle having a vertically-yielding connection with the said bar and affording bearings for said wheels, insulated contact-surfaces upon the frame in electrical connection with the said wheels, contact-surfaces upon the said arm or bar, and conductors extending along the said arm or bar to the consumption-circuit on the car, substantially as described.

3. The combination, with a car provided with a consumption-circuit including heating, lighting, or similar translating devices, and a slotted conduit, of two metallic conducting-strips located within the conduit and arranged to form a continuous track, a frame or axle carrying insulated metallic contact-wheels traveling upon the track, spring-supported contact-surfaces upon the frame or axle, and an arm or bar adjustably secured to and extending downward from the car and provided with contact-surfaces adapted to engage the contact-surfaces upon the traveling contact and to be thereby detachably connected thereto, substantially as described.

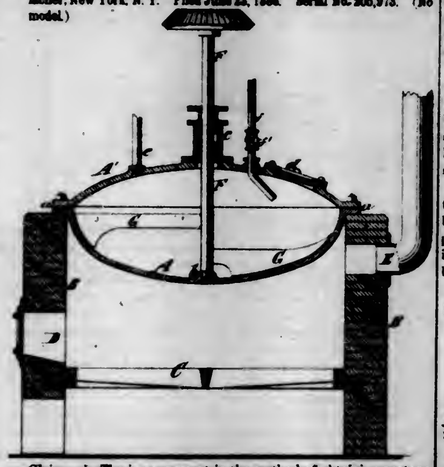
4. The combination, with a car provided with a consumption-circuit including heating, lighting, or similar translating devices, and a slotted conduit, of two conducting-strips located within the conduit and arranged to form a continuous track, traveling contact devices comprising a supporting-frame and insulated grooved contact-wheels traveling upon the track, connections extending from the contact-wheels to contact-surfaces carried upon the frame, and an arm extending downward from the cars and provided with conductors extending upward into the car and with exposed contact-surfaces at its lower portion, the contact-surfaces of the arm being arranged to engage the contact-surfaces of the traveling contact device within the conduit and to propel the same while maintaining electrical connection between the cars and the conductors within the conduit, substantially as described.

385,775. CAR-DELIVERY DEVICE FOR SOLDERING-MACHINES. JOHN W. ROGERS, Cleveland, Ohio, assignor to Edwin Horton, Maywood, and Oliver W. Horton, Chicago, Ill. Filed Apr. 9, 1888. Serial No. 270,009. (No model.)

Claim.—1. The combination, in a soldering-machine, of the soldering-track along which the cans are rolled, a cooling-belt below the same, a delivery-tube, and a laterally-inclined curved track, said laterally-inclined track being twisted from the plane of said soldering-track to nearly vertical, substantially as specified.

2. The combination, with track B, of curved track H and delivery-tube G, substantially as specified.

3. The combination, with track B, of curved track H, having guard *h* and delivery-tube G, the curved portion of said track H extending around said tube, substantially as specified.



4. The combination, with twisted curved track H, of tube G, substantially as specified.

5. The combination, with laterally-inclined spiral track H, of tube G, substantially as specified.

385,776. MANUFACTURE OF PASTE FOR POLISHING AND PROTECTING METALS FROM RUST. SIGMUND ROSENFELD and JOHAN EHLERT, Gablonz, Bohemia, Austria-Hungary. Filed Aug. 1, 1887. Serial No. 245,861. (No specimens.)

Claim.—The herein-described composition of matter, consisting of tripoli, pulverized coaks, Vienna lime, refined petroleum, rape-oil, and mirbane or essence of nitro-benzole, in or about in the proportions specified.

385,777. MANUFACTURE OF ACETONE. GUSTAV REMPF, Frankfort-on-the-Main, Germany, assignor to Franz Rossler and Jacob Hasslacher, New York, N. Y. Filed June 22, 1886. Serial No. 205,973. (No model.)

Claim.—1. The improvement in the method of obtaining acetone from an acetate, consisting in subjecting the acetate in a closed vessel to slow destructive distillation at a low and approximately-uniform temperature, substantially as herein described.

2. The improvement in the method of obtaining acetone from an acetate, consisting in subjecting the acetate in a closed vessel to slow destructive distillation at a low and approximately-uniform temperature and stirring the same during such distillation, substantially as herein described.

3. The improvement in the method of obtaining acetone from an acetate by destructive distillation in a closed vessel, consisting in heating the vessel from the outside thereof and in subjecting the acetate to the action of steam in direct contact therewith during the distillation to prevent too high temperatures, substantially as herein described.

4. The improvement in the method of obtaining acetone from an acetate by destructive distillation in a closed vessel, consisting in heating the vessel from the outside thereof, in stirring the acetate, and in subjecting the acetate to steam in direct contact therewith to prevent too high temperatures and to maintain the temperature approximately uniform, substantially as herein described.

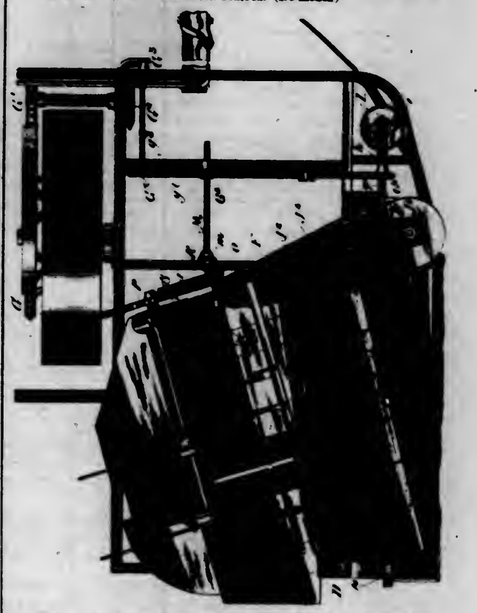
5. The improvement in the method of purifying acetone, consisting in treating the crude acetone in a state of dilution with lime to remove the higher ketones and other compounds, substantially as herein described.

6. The improvement in the method of purifying acetone, consisting in diluting the crude acetone with water to separate the oily matters, and treating with lime to remove the higher ketones and other compounds, and in then subjecting the dilute acetone to rectification until nearly anhydrous, substantially as herein described.

7. The improvement in the method of purifying acetone, consisting in diluting crude acetone with water to separate the oily matters, and treating with lime to remove the higher ketones and other compounds, and in afterward subjecting the dilute acetone to rectification in a column-still, substantially as herein described.

8. The improvement in obtaining acetone from an acetate, consisting in subjecting the acetate in a closed vessel to slow destructive distillation at a low and approximately-uniform temperature, in diluting the resulting crude acetone to separate oily matters and treating it with lime to remove higher ketones and other compounds, and in afterward subjecting the dilute acetone to rectification in a column-still, substantially as herein described.

385,778. MACHINE FOR BENDING HAMES, PIPES, OR RODS. CHARLES P. SPENCER, Salem, Mass. Filed Jan. 5, 1888. Serial No. 259,913. (No model.)



Claim.—1. In a machine for bending hames, pipes, rods, or other articles, two vertically-moving supporting-blocks to receive the article to be bent, guide-blocks, and a locking device, substantially as described, for securing the same in position, combined with a cam or eccentric arranged and located to act upon the article to be bent between the supporting-blocks, as set forth.

2. In a machine for bending hames, pipes, rods, or other articles, two vertically-moving supporting-blocks to receive the article to be bent, and horizontally-moving guide-blocks carrying the supporting-blocks and locking device, substantially as described, for securing the same in position, combined with a cam or eccentric arranged and located, as described, to act upon the article to be bent between the supporting-blocks, as set forth.

3. In a machine for bending hames, pipes, rods, or other articles, two adjustable sliding supporting-blocks to receive the article to be bent, and a cam or eccentric to act upon the article between the supports, combined with a flexible shield, *f*, attached to the stud 10, and interposed between the acting-face of the cam and the article to be bent, substantially as described.

385,779. HARVESTING-MACHINE. ANDREW STARK, Chicago, Ill. Filed Oct. 14, 1887. Serial No. 252,262. (No model.)

Claim.—1. In combination with the sidewise-delivering platform-conveyer and the obliquely-situated upward-sloping binder-deck, the binder-feeder J, having its shafts situated and its surface operating obliquely with respect to the conveyer, and of substantially the full width of the latter, and having its receiving side overhanging the conveyer and its delivery side overhanging the binder-deck, substantially as set forth.

2. In combination with the sidewise-delivering platform-conveyer and the obliquely-situated binder-deck, the packers operating in vertical planes oblique to the vertical plane of the conveyer's movement, and the binder-feeder J, situated obliquely with respect to the conveyer, and operating in vertical planes substantially parallel to those of the packer's movement, said binder-feeder being of substantially the full width of the conveyer, and having its receiving side overhanging the platform-conveyer at the rear and its delivery side overhanging the binder-deck, and having its grain-actuating surface sloping upward from its receiving to its delivery side, substantially as set forth.

3. In combination with the sidewise-delivering platform-conveyer and the obliquely-situated binder-deck, the packers operating from beneath the deck upward through the same in vertical planes oblique to the vertical planes of the conveyer's movement, and the binder-feeder J, having its grain-actuating surface sloping upward from its receiving to its delivery side, and operating in vertical planes substantially parallel to the packer's movement and overhanging the binder-deck, and extending stubbleward to a point beyond the grainward sweep of the packers, and overhanging their points of emergence through the deck, substantially as set forth.

4. In combination with the sidewise-delivering platform-conveyer and the obliquely-situated binder-deck, the packers operating from beneath the deck upward through the same in vertical planes oblique to the planes of the conveyer's movement, and the binder-feeder J, having its receiving side overhanging the conveyer at the rear and its delivery side overhanging the points of emergence of the packers through the deck, said binder-feeder having its rollers oblique to the conveyer-rollers and its grain-feeding surface moving in directions substantially parallel to the vertical planes of the packers, and inclined upward from its receiving to its delivery side, substantially as set forth.

5. In combination with the sidewise-delivery platform-conveyer, the clearing-roller at its delivery side, the binder-deck situated obliquely with respect to the conveyer and clearing-roller, the packers operating in vertical planes oblique to the conveyer's movement, and the binder-feeder J, consisting of an endless belt whose shafts are situated obliquely with respect to the conveyer and clearing-roller and operating in direction substantially parallel to the vertical planes of the packer's movement, overhanging at its receiving side substantially the whole length of the clearing-roller, and at its delivery side overhanging the binder-deck, substantially as set forth.

6. In combination with the sidewise-delivery platform-conveyer and the obliquely-situated binder-deck, the clearing-roller at the delivery side of the conveyer, the packers operating from beneath the binder-deck upward through the same in vertical planes oblique to the vertical planes of the conveyer's movement, and the binder-feeder J, operating in vertical planes substantially parallel to the packer's movement, overhanging at its receiving side substantially the entire length of the clearing-roller, and at its delivery side overhanging the points of emergence of the packers through the binder-deck, substantially as set forth.

7. In combination with the sidewise-delivering platform-conveyer and the deck or platform located stubbleward therefrom, the binder-feeder J, having its rollers oblique to the vertical plane of the conveyer-rollers and its grain-actuating surface inclined upward from its receiving to its delivery side, and having its receiving side overhanging substantially the entire width of the conveyer, substantially as set forth.

8. In combination with the sidewise-delivering platform-conveyer and the deck or platform toward which it moves the grain, the binder-feeder J, having its rollers oblique to the vertical plane of the conveyer-rollers, and pivoted about the axis of the roller at the discharge side, and having the receiving side free to oscillate up and down and overhanging substantially the entire width of the platform-conveyer, substantially as set forth.

9. In combination with the sidewise-delivering platform-conveyer and the binder-deck located obliquely thereto, the packers operating in vertical planes oblique to the movement of the conveyer, and the binder-feeder J, having the vertical plane of its movement substantially parallel to that of the packers, pivotally supported at its discharge side, and having its receiving side free to oscillate up and down and overhanging substantially the entire width of the platform-conveyer.

10. In combination with the sidewise-delivering platform-conveyer and the clearing-roller at its discharge side, the platform or deck toward which it discharges, and the binder-feeder J, having its rollers oblique to the clearing-roller and pivoted near its discharge side, and having its receiving side overhanging substantially the entire length of the clearing-roller and free to oscillate up and down, substantially as set forth.

11. In combination with the sidewise-delivering platform-conveyer and the clearing-roller at the discharge side thereof, the binder-deck located obliquely with respect to the conveyer, the packers operating in vertical planes oblique to the movement of the conveyer, and the binder-feeder J, the vertical plane of whose movement is substantially parallel to that of the packers, pivotally supported near its discharge side and free to oscillate up and down at its receiving side, which overhangs substantially the entire length of the clearing-roller, substantially as set forth.

12. In combination with the conveyer-platform and the clearing-roller at the delivery side thereof, the binder-feeder J, oblique to the conveyer and sloping upward from the receiving to the discharge side and overhanging substantially the whole width of the platform and the whole length of the clearing-roller, said clearing-roller having its upper surface higher than the carrying-surface of the conveyer, whereby the binder-feeder is enabled to hang close down to the roller without striking the platform-conveyer, notwithstanding its oblique position and its slope, substantially as set forth.

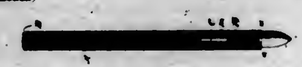
13. In combination with the binder-deck and the packers operating upward from beneath the same, the overhanging binder-feeder J, consisting of an endless belt carried upon parallel rollers extending substantially across the entire width of the deck and free to oscillate up and down at its receiving end, and the guide sheet or lip K, located at the discharge side of the binder-feeder and extending thence stubbleward under the breast-plate, said feeder and lip together overhanging the entire course of the packers, substantially as set forth.

14. In combination with binder-deck and underneath packers, the binder-feeder J, and the guide sheet or lip K at its discharge side, and the stripping-wires J', secured to the feeder-frame and passing around its receiving side and along its under face and lapping under the lip K at the discharge side of the feeder, substantially as set forth.

385,780. INSTRUMENT FOR PLOTTING CONTOURS OF GROUND. MATTHEW STEERS, Seattle, Wash. Filed Mar. 30, 1888. Serial No. 267,868. (No model.)

Claim.—1. The combination, with a semicircular protractor, A, provided with rests *x y z*, of a frame, B, having the indicator I and provided with slot S, the wire W, and the hollow pivot X, provided with cross-wires *w w*, substantially as and for the purposes herein described.

2. The combination, with the protractor A, of the slotted frame B, the wire W, and the cross-wired pivot X, substantially as herein shown.



3. In instruments for plotting contours of ground, the frame B, provided with slot S and indicator I and the wire W, stretched longitudinally through the slot S and held as shown, and the hollow pivot X, provided with cross-wires *w w* and attached to the protractor A, substantially as described.

4. In instruments for plotting contours, the wire W in the slot of a protractor-frame, B, as shown, in combination with the cross-wires *w w* of the hollow pivot X on the protractor A, substantially as set forth.

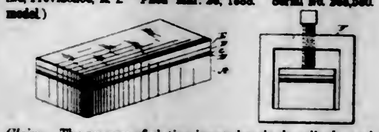
5. In instruments for plotting contours, the hollow pivot X, attached to the protractor A and provided with cross-wires *w w*, and the slotted frame B and its parts, as shown, turning upon said pivot, substantially as herein described and set forth.

6. The frame B, in instruments for plotting contours, said frame provided with indicator I, and slot S, and projection *p*, and carrying the stretched wire W, and turning upon the protractor A around the pivot X, substantially as herein shown.

385,781. LEAD-PENCIL OR CRAYON HOLDER. OMAR A. WHITEHOUSE, Jersey City, N. J. Filed Mar. 26, 1888. Serial No. 268,531. (No model.)

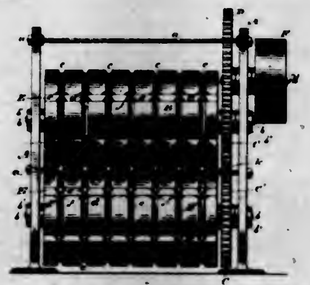
Claim.—1. A pencil or crayon holder consisting of a metallic or elastic tube with a slotted wedge-shaped opening and a wedge-shaped slide, the sides of said wedge opening and slide interlocking into each other, substantially as described.

2. A pencil or crayon holder consisting of the tube A, with the slotted wedge-shaped opening C, having turned-down edges *m m*, and a wedge-shaped slide, E, with the turned-down edges *n n*, substantially as described.



3. A pencil or crayon holder consisting of the tube A, with inclined or turned-in edges *a*, and with the slotted wedge-shaped opening C, having turned-down edges *m m*, and a wedge-shaped slide, E, with the turned-down edges *n n*, substantially as described.

385,782. ELECTRIC SWITCH. SCHUYLER S. WHEELER, New York, N. Y. Filed Mar. 3, 1887. Serial No. 229,561. (No model.)

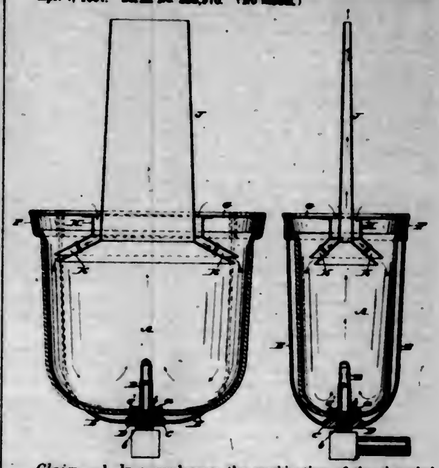


Claim.—In an electric switch, the combination of one or more fixed solid contacts and a moving switch-arm consisting of two plates pivoted at one end and embracing the solid contacts with their free ends, and bearing thereon with spring-pressure, whereby close and reliable electric connection is produced, substantially as described.

385,783. PROCESS OF PLATING INGOTS. WILLIAM F. WHITE, Providence, R. I. Filed Mar. 26, 1888. Serial No. 268,580. (No model.)

Claim.—The process of plating ingots herein described, consisting, in addition to the means heretofore employed, of the introduction of an asbestus or other non-inflammable material for equalizing the pressure, as and for the purposes specified.

385,784. MACHINE FOR ROLLING WIRE NAILS. ALEXANDER G. WILKIN, Meadville, Pa. Filed Jan. 18, 1888. Serial No. 261,140. (No model.)



Claim.—1. In a nail-machine, the combination, with two rollers or disks, each having a series of continuous circumferential grooves and a series of longitudinal slots, of bars located in said slots, each bar having a series of excavations or depressions therein registering with the grooves and constituting point-forming dies, substantially as set forth.

2. In a nail-machine, the combination, with a pair of rolls supported to rotate toward each other, and grooved on their cylindrical surfaces and provided with radial notches to receive pointing-dies, of dies that register with each other in pairs, these dies having conical recesses in their faces adapted to point wire nails, the dies having cutting-edges which sever a nail after its head is compressed in heading-recesses formed in the grooves adjacent to the pointing-dies, substantially as set forth.

3. In a nail-machine, the combination, with a pair of rolls supported to revolve and a means of revolving the rolls toward each other, of grooves formed in the rolls, dies located in the rolls transversely of these grooves, so as to lie opposite each other in pairs, conical depressions formed in the dies and adapted to point wire nails, and heading-recesses made in the grooved surface of the rolls adjacent to the pointing-dies, so as to head a nail that has been previously pointed and drawn from wire thicker than the grooves in which the nail is made, substantially as set forth.

4. A nail-machine having in combination two revolving rolls that are in contact and rotate toward each other, these rolls having grooves in their surface which are adapted to compress wire fed thereto from a continuous coil to produce the body of a nail, and also provided with dies which extend lengthwise of the rolls, so as to register in pairs, the dies being excavated to form a conical point on a wire nail, and also act in conjunction with heading-recesses made in the grooves of the rolls, so as to cut off a nail from the wire coil after a head has been formed on it, substantially as set forth.

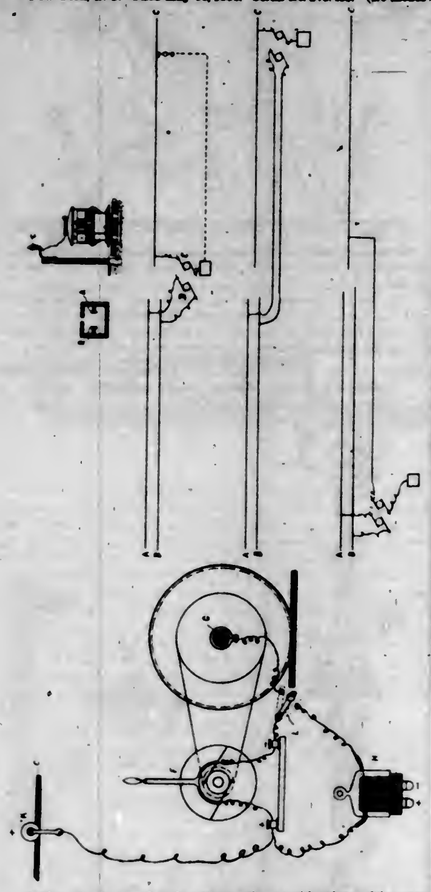
385,785. GAS-LAMP. JOHN W. BAKER, Philadelphia, Pa. Filed Apr. 7, 1887. Serial No. 233,970. (No model.)

Claim.—1. In a gas-burner, the combination of the threaded burner with the threaded collar D, the upwardly-projecting arms E, rising from said collar, the ring F, supported by said arms, the globe A, suspended from said ring, the annular plate G, resting on said ring, the pipe or deflector H, depending from said ring and having a flaring lower rim, and the flue J, passing through said annular plate, and with a flaring lower rim supported by the deflector H and forming the passage K, substantially as and for the purpose set forth.

2. In a gas-burner, the combination of the burner with a collar, the upwardly-extending arms connected with said collar, the ring supported by said arms, and a top closing plate sustained on said ring, the globe suspended from said ring and having in its base an opening of greater diameter than the burner, a washer closing said opening, a central depending deflector secured to said ring, and a flue passing through said deflector having a lower flaring portion, said flaring portion forming together a lateral passage, substantially as described.

385,786. CHAIN-PUMP. CHARLES A. BARTLETT, Memphis, Tenn. Filed Dec. 28, 1887. Serial No. 259,269. (No model.)

Claim.—1. The combination of the buckets, having the projecting loops D at their ends and the bent-over side flanges, and the links pivoted to said loops connecting the buckets together, and having the extensions G at their sides adapted to bear against the inner sides of the buckets, for the purpose set forth, substantially as described.



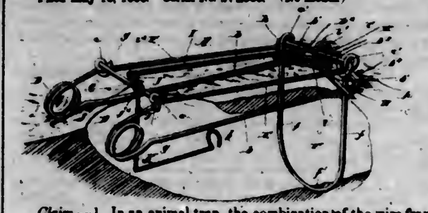
2. The combination of the buckets having the bent-over side flanges, the straps attached to the inner sides of the buckets and having the loops D projecting beyond the ends thereof, and the links having the cross-bars F engaged by the loops, and thereby connecting the buckets together, and being further provided with the extensions or arms G, adapted to bear against the inner sides of the buckets, for the purpose set forth, substantially as described.

3. In an endless-chain pump, the combination of the buckets having the flanges B on their inner sides, the straps C, having the loops D at their ends and engaged by the flanges B, so as to secure said straps to the inner sides of the buckets, and the links having the cross-bars F near their ends, and the projecting arms or extensions G, the said cross-bars F being engaged by the loops D, and the said arms or extensions being adapted to bear against the inner sides of the buckets, for the purpose set forth, substantially as described.

4. The combination, in an endless-chain pump, of the buckets having the loops at opposite ends on their inner sides and the connecting-links pivoted to the said loops, and having the extensions or arms G projecting beyond their pivotal points and adapted to come in contact with the inner sides of the buckets, for the purpose set forth, substantially as described.

5. The buckets having the flanges B on their inner sides, the straps C, forming the inner sides of the buckets, and having their ends doubled and bent to form loops D, the flanges B being bent over the edges of the straps, for the purpose set forth, and the links connecting the buckets and engaging the loops, substantially as described.

385,787. ELECTRIC-RAILWAY SYSTEM. EDWARD M. BENTLEY, New York, N. Y. Filed May 10, 1888. Serial No. 273,465. (No model.)



Claim.—1. In an electric railway, the combination, with a section having two insulated supply-conductors inclosed in a conduit, of a succeeding section having a single exposed supply-conductor with a ground-return, and a common central station for said sections having two independent generators, one with its terminals insulated from the ground, and connected, respectively, to the two inclosed conductors, and the other generator having one of its terminals permanently connected to the ground, the other connected to the single exposed supply-conductor.

2. In an electric railway, the combination, with a section having two insulated supply-conductors inclosed in a conduit, of a succeeding section having a single exposed supply-conductor with a ground-return, a common central station at the extremity of one section having two generators, one generator connected to the conductor or conductors on the adjacent section, and the other generator having an independent line extending along to connect with the conductor or conductors of the remote succeeding section.

3. In an electric railway, the combination, with a section having two insulated supply-conductors inclosed in a conduit, of a succeeding section having a single exposed supply-conductor with a ground-return, of two independent generators for said sections, respectively, a vehicle adapted to travel along both sections, and a propelling-motor for said vehicle having the following connections: first, two conductors leading to a contact device for the inclosed section; second, a conductor leading to the contact device for the overhead section, and, third, a ground-connection provided with a circuit-breaker for interrupting the ground-connection while the vehicle is on the conduit-section of the roadway.

385,788. ANIMAL-TRAP. LOUIS BEVERSDORF, Jr., Luling, Tex. Filed May 18, 1888. Serial No. 274,200. (No model.)

Claim.—1. In an animal-trap, the combination of the wire frame having the parallel base-arms *b*, the coiled springs D, the upwardly-extending arms E, and the downwardly-extending loop F, the loop or ring C on the bend and engaged portions b^2 of said wire, and the trigger-wire I, having the frontwardly-projecting point i', engaging said ring, substantially as specified.

2. In an animal-trap, the combination of the frame A, of a single wire, having the parallel base-arms *b*, with their inwardly-standing arms b', bent at b^2 upon themselves, to form the outwardly-standing end portions, b^3, the coiled-spring portions D, the arms E, provided with the bearing-loops *e e'*, and the long downwardly-standing loop F, the transverse wires G and H, having the hooked ends *g* and *h*, that respectively engage the bearing-loops *e* and *e'*, the rings C on the bends of wire b^2, and the trigger-wire I, provided with the loop *i*, surrounding the wire G, and having the frontwardly-standing point i', that engages the ring C, substantially as specified.

3. The combination of the wire frame A, having the base-arms *b*, the coiled-spring portions D, the upper arms, E, and the downwardly-extending loop F, the ring C, seated on the bends b^2 of said wire, the transverse wires G and H, connecting the arms F, the trigger-wire I, looped on the wire G, and having a point, i', to engage the ring C, and a rear end, i^2, bent transversely, and the wire J, looped on the wire H and provided with a transversely-bent front end to engage the rear end, i^2, of the trigger-wire, and having a circular foot, *k*, at the end of its downwardly-bent rear arm, K, substantially as specified.

385,789. CAR-COUPLING. ARCUS P. BREWSTER, Newnan, Ga. Filed Mar. 29, 1888. Serial No. 268,814. (No model.)

Claim.—1. In a car-coupler, the combination, with a movable draw-bar, of two side bars having their rear ends attached to the rear of the draw-bar and their forward ends connected to and extending above the draw-head, a pin secured to said bars above the draw-head and the lever, substantially as and for the purpose described.

2. In a car-coupler, the combination, with a movable draw-bar, of two side bars parallel therewith having U-shaped connections, the rear connection being permanently secured to the draw-bar and the front connection extended up above and over the draw-head, a link secured to the front connection, latches arranged at the sides of the said bars, and the lever, substantially as described.

3. In a car-coupler, the combination, with a movable draw-bar having a cushion-spring thereon, of two side bars having U-shaped connections, a pin secured to the front connection, supports and guides secured to the frame of the car, and extending down adjacent to said bars, latches mounted in said supports, a cross-bar having its ends secured to and extending beyond said side bars, and the lever, substantially as and for the purpose specified.

4. In a car-coupler, the combination, with the draw-bar, of side bars extending beyond the ends of the same and secured thereto, a link-adjusting bar pivoted to the frame-work, having an inclined plate on its upper end and an arm on its lower end, latches for holding the side bars in an elevated position, and the pin and lever, substantially as and for the purpose specified.

5. In a car-coupler, the combination, with the draw-bar, of a pivoted link-adjusting bar arranged beneath the same, having an inclined

plate on its upper outer end and a bearing-arm on its upper side, a downwardly-extending arm on its lower side, a catch-block secured to the frame, and the lever, substantially as described.

6. In a car-coupler, the combination, with the draw-bar, of a casing having an opening therein pivoted to the frame, a link-adjusting bar having a coiled spring on its outer end inserted in said casing, an inclined plate secured to the front of said adjusting-bar, arms extending from the upper and under side of said adjusting-bar, a catch-block secured to the frame, and the lever, substantially as and for the purpose specified.

7. The combination of the draw-bar B, the rod *b*, the spring B', the side bars, C, having end connections, C' C', the pin D, the supports F, the catches F', and the lever P, substantially as described.

8. The combination of the draw-bar B, the casing H, the link-adjusting bar *k*, having plate I,' thereon, the spring K, the bearing arm *m*, the catch-block R, and the lever P, substantially as described.

385,790. BRICK-MOLD-SANDING MACHINE. JAMES A. BUCK, Crescent, N. Y. Filed Oct. 15, 1887. Serial No. 252,435. (No model.)

Claim.—1. A sanding-cylinder having heads which are composed of substantially triangular sections connected at their inner apices, and longitudinal metallic ribs for connecting said heads, substantially as specified.

2. A sanding-cylinder having sectional heads which are polygonal, and having metallic longitudinal ribs connecting said head-sections and forming mold-receiving openings.

3. A sanding-cylinder the heads of which are composed of substantially triangular sections joined at their inner apices by a metal collar, in combination with longitudinal ribs for connecting the heads, said ribs embracing the corners formed by said sections and provided with stops for the molds, substantially as specified.

4. The cylinder C, the heads of which are formed of the angular sections C', joined at their apices by the flanged metal collar C², in combination with the metal ribs D, connecting said heads and formed with the angular portion D', the securing-rib D², apertured, as at D³, and the stops D⁴, substantially as specified.

385,791. COMBINED BIT, COUNTERSINK, AND SCREW-DRIVER. FREDERICK R. CARPENTER, Manistique, Mich. Filed Mar. 21, 1888. Serial No. 268,021. (No model.)

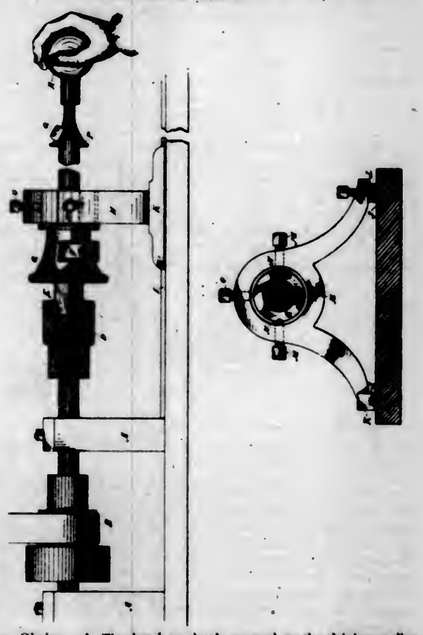
Claim.—1. In combination with the shank provided with the inclined curved channels and the socket-block pivoted thereon and carrying a bit and screw-driver, the detent-spring normally lying close to the shank and the detent near the end of the shank arranged to move in the curved channels and by means of their inclined bottoms to raise the spring until the incline is passed in the sidewise movement of the socket-block around its pivot.

2. In combination, the revolving block made hollow from end to end and provided with a lateral aperture for the introduction of a screw-threaded pivot and having a countersunk recess on the inside for the head of the pivot, said pivot, and the shank whereby the longitudinal opening is left free of obstruction and whereby the pivot may be readily tightened or removed.

3. In combination with the bent shank, the block made hollow from end to end, lying closely against the shank, and provided with inclined curved channels, the countersink, screw-threaded pivot, the spring, and detent, said spring normally lying close to the shank and projecting slightly beyond the end of the same, all substantially as set forth.

385,792. HOBBY-HORSE. WILLIAM R. CRANDALL, New York, N. Y. Filed Sept. 28, 1887. Serial No. 250,890. (No model.)

Claim.—1. The combination of the standards A A and hooks *b b*, secured thereto, with the detachable horse C, having hooks b^2 b^2, and with removable links B B, having perforations for connecting the

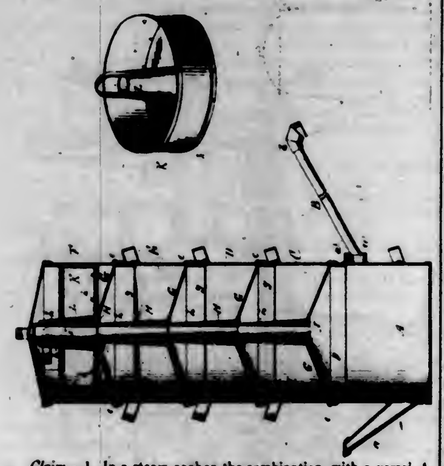


385,792.

hooks *b* and b^2, all arranged substantially as herein shown and described.

2. The hobby-horse C, having rollers *e* and hooks b^2, combined with the posts A, having hooks *b*, and detachable perforated links B, for connection with the hooks *b* b^2, all arranged substantially as herein shown and described.

385,793. LATHE-CHUCK AND ATTACHMENT FOR TURNING TREENAILS. PINDAY CUMMINS, San Francisco, Cal. Filed Sept. 6, 1887. Serial No. 248,961. (No model.)



Claim.—1. The head or chuck secured to the driving-pulley spindle and having the screw-threaded conically-shaped socket for holding the end of the article to be turned, in combination with the sliding tail-stock and the bell-mouthed cutter-head mounted within the tail-stock, so as to adapt itself to the irregularities or curvatures of the article to be turned, substantially as herein described.

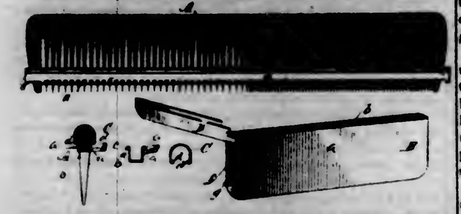
2. The sliding tail-stock having the front channeled guide running upon the raised track I, and the rear foot provided with the flat elastic block L, which travels upon the corresponding flat rail at the rear of the lathe, substantially as herein described.

3. The tail-stock having the sliding channeled guide in front and the elastic block traveling upon a flat rail at the rear, the raised track, and the bell-mouthed cutter-head with trunnions for an automatic adjustment within its support, in combination with the revolving head or holder having the conical screw-threaded socket to receive and

hold the end of the article to be turned, substantially as herein described.

385,794. STEAM-COOKER. JAMES W. DAVIS, El Dorado, Kansas. Filed July 14, 1887. Serial No. 244,332. (No model.)

Claim.—1. In a steam-cooker, the combination, with a vessel, A, of one or more steaming-vessels adapted to fit above the same, said vessels being provided with upwardly-inclined bottoms having permanent centrally-arranged conical tubes H, within which are rigidly secured central tubes, I, the conical tubes being perforated near their upper ends, substantially as shown, and for the purpose set forth.



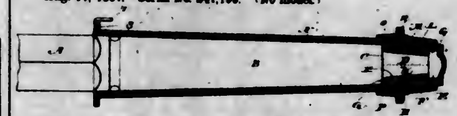
2. The combination, in a food-steamer, of a steam-generating vessel constructed substantially as shown, a steam cooking-vessel having an inclined bottom, an upwardly-projecting conical tube attached to said inclined bottom, and a tube located within said conical tube, a removable vessel, K, having a perforated bottom and an upwardly-projecting center portion to which a pivoted bail is attached, the parts being organized substantially as shown, and for the purpose set forth.

385,795. TRAY FOR TORPEDO-MACHINES. JACOB J. DETWILLER, Greenville, N. J., assignor to the Detwiller and Street Fire Works Manufacturing Company, New York, N. Y. Filed Feb. 24, 1888. Serial No. 265,184. (No model.)

Claim.—A tray for use in a torpedo-machine, made of soft rubber and provided with recesses or depressions for containing fulminate, said tray being of such thickness as to admit of a considerable thickness of rubber below the recesses or depressions, substantially as specified.

385,796. COMBINED COMB-CLEANER AND COMB. WALTER M. DIXON, St. Paul, Minn., assignor of one-half to Charles Venables Deane, same place. Filed May 10, 1887. Serial No. 237,736. (No model.)

Claim.—1. In combination with a comb, a comb-cleaner having slots and cross-bars for embracing the several teeth of the comb, and having sides for embracing both sides of the comb, substantially as and for the purpose herein specified.

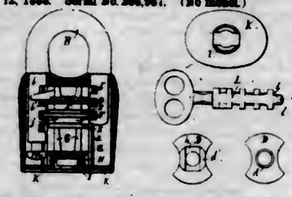


2. The combination of a comb, a comb-cleaner having slots and bars for embracing the teeth of the comb severally, and sides for embracing the sides of the comb, and a removable back surrounding the back of the comb and overlapping the back edges of the comb-cleaner, substantially as and for the purpose herein specified.

3. In combination with a comb, a comb-cleaner having slots and bars for embracing the several teeth of the comb, and formed to serve as a case in which the comb is inclosed and held when not in use, substantially as herein set forth.

385,797. PHOTOGRAPHIC FILM. EDGAR R. ELLIS, Rochester, N. Y., assignor of one-half to August L. Lohnberg, same place. Filed July 1, 1886. Serial No. 208,050. (No specimens.)

Claim.—As a new article of manufacture, a photographic film composed of gun-cotton dissolved in alcohol and ether, resinous gum, gum-camphor, and rubber dissolved in benzole, in proportions substantially as set forth.



385,798. VEHICLE-AXLE. EDWIN FIRTH, Troy, N. Y. Filed Aug. 17, 1887. Serial No. 247,199. (No model.)

Claim.—1. In combination with the axle-spindle, the sleeve or thimble made in separable sections and swiveled on the outer end of the spindle, the axle-box fitted on the spindle and engaging the sleeve or thimble, and the cap-nut secured to the outer ends of the axle-box and also to the sleeve or thimble, substantially as described.

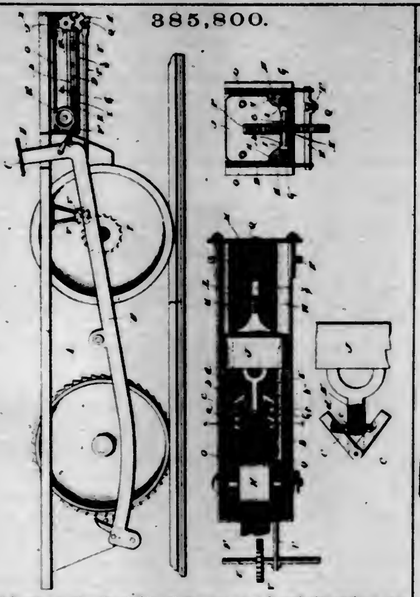
2. An axle having its spindle provided with a swiveled sleeve or thimble made of separable sections and provided with the annular peripheral groove, in combination with the clamping-ring adapted to fit in the said groove and bind the sections together, and the cap-nut R, engaging the sleeve or thimble, for the purpose set forth, substantially as described.

385,799. PADLOCK. MILLER W. FRAIN, Lancaster, Pa. Filed Mar. 12, 1888. Serial No. 266,967. (No model.)

Claim.—The combination, with the top stationary plate provided with a central opening, of the tumbler having a hub on its upper surface, which is received by said opening in the stationary plate, substantially as and for the purpose specified.

385,800. CAR-STARTER. RUDOLF O. GERCKE, Augusta, Ga. Filed Nov. 1, 1887. Serial No. 253,988. (No model.)

Claim.—1. The combination, with the car-starting lever, of the grippers, means for connecting said grippers to the lever, and the cross-head engaged by the grippers and adapted to receive the draft, substantially as set forth.



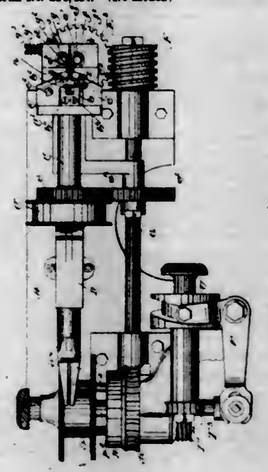
2. The combination, with the car and the car-starting lever, of the box secured to the car, the grippers sliding in ways in said box, means for connecting said grippers to the lever, and the cross-head, also sliding in said ways and engaged by the grippers, as set forth.

3. The combination of the car-starting lever, the band secured thereto, the pulley E, around which said band passes, the grippers secured to the free end of said band, and the cross-head engaged by said grippers and adapted to receive the draft, as set forth.

4. The combination of the car-starting lever, the grippers connected thereto, the cross-head engaged by said grippers and adapted to receive the draft, the springs connected to said cross-head and acting in opposition to the draft, the gear-wheels carried by the cross-head, and gear-wheels connected to the car-wheels and adapted to mesh with the wheels in the cross-head when it is drawn forward to prevent retrograde movement of the cross-head, substantially as described.

5. The combination of the car-starting lever, the grippers connected thereto and having the pivoted arms *b*, the cross-head having the offset K, the plates *c c*, pivoted to said offset and engaged by the gripper-arms *b*, the spring *d*, holding said plates normally apart, the

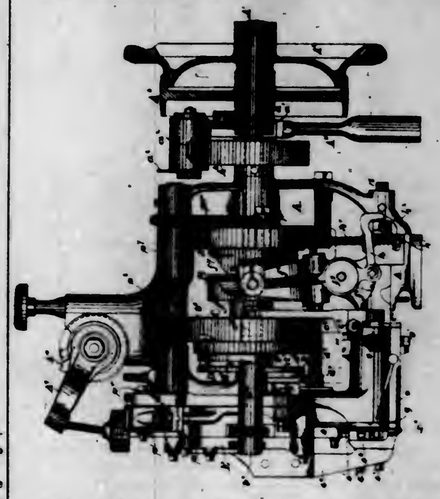
385,800.



draft-hook on the front side of the cross-head, and the springs connected to the rear side of the cross-head and acting in opposition to the draft, substantially as specified.

6. In a car-starter, the combination, with the starting-lever, of the sliding cross-head connected thereto, whereby the draft on the cross-head operates the starting-lever, as set forth.

7. In a car-starter, the combination of the starting-lever, the sliding cross-head to which the draft is applied, connections between the cross-head and the starting-lever, and a spring to return the cross-head to its normal position when the draft is relieved, as set forth.



8. In a car-starter, the combination of the starting-lever, the sliding cross-head to which the draft is applied, the said cross-head being connected to the starting devices and being drawn forward by the draft on the car, a spring for returning the cross-head to its initial position when the draft is relieved, and gearing carried by the cross-head, and gearing connecting with the wheels of the car to mesh with the gearing carried by the cross-head when the latter is drawn forward by the draft.

385,801. MACHINE FOR SCREW-THREADING WIRE. Louis Goddu, Winchester, assignor to James W. Brooks, trustee, Cambridge, and Frank P. Stanley, associate trustee, Swampscott, Mass. Filed Nov. 29, 1887. Serial No. 256,407. (No model.)

Claim.—The feed-rolls, the wire-guide, and the clamping-rolls grooved to fit the thread cut into the wire, combined with the guide B, the rotating sleeve having a head and the two attached diagonally-set cutters arranged at opposite sides of the wire and diametrically opposite each other, to operate substantially as described.

385,802. BOOT AND SHOE NAILING MACHINE. Louis Goddu, Winchester, assignor to James W. Brooks, trustee, Cambridge, and Frank P. Stanley, associate trustee, Swampscott, Mass. Filed Apr. 24, 1886. Serial No. 271,673. (No model.)

Claim.—1. In a nailing-machine, the combination of the following instrumentalities, namely: a point-forming die, clamping-dies to grasp and hold the wire firmly between them, a header to cut into the wire resting in or against the point-forming die to form a head and point, and means to move the said clamping-dies, they clamping the wire with relation to the point-forming die and header, while the header holds the wire between itself and the point-forming die, the movement of the clamping-dies severing the wire at the junction of the head and point of the nail, substantially as described.

2. In a nailing-machine, a nose having a passage for a nail, a driver to drive the nail, a point-forming die, and the header to act upon the wire opposite the point-forming die to simultaneously shape the head and point of the nail, combined with a pair of jaws having reciprocating movements with relation to each other, as described, whereby the said jaws left open for the reception of the wire are clamped upon the wire while the header operates thereon, and are then moved bodily, yet clamping the wire to sever it completely from the main body of the wire and form a nail, the said jaws taking the nail so severed into position substantially in line with the path of movement of the driver and releasing the nail to permit the driver to descend between the jaws to drive the nail, the jaws being then retracted into position to again receive the end of the wire, substantially as described.

3. In a nailing-machine, a die, *f*, and its carrying-bar provided with rack-teeth, and a die, *g*, and its carrying-bar provided with a stud, combined with a lever to actuate the carrying-bar for the die *f*, and with a locking device carried by the said lever to engage the said stud, to operate substantially as described.

4. In a nailing-machine, a die, *f*, and its carrying-bar provided with rack-teeth, and a die, *g*, and its carrying-bar provided with a stud, combined with a lever to actuate the carrying-bar for the die *f*, and with a locking device carried by the said lever to engage the said stud, and with means to actuate the said lever and said locking device at the proper times, substantially as described.

5. In a nailing-machine, the combination, with the point-forming die, of the header, its attached rock-shaft provided with a toothed sector, and a lever, e^4, adjustable with relation to the said rock-shaft and sector, to operate substantially as described.

6. In a nailing-machine having devices for forming headed nails, the swinging head and its attached block e^1, provided with a throat for the passage of the nail, and with openings for guiding the awl and driver, combined with awl and driver bars and their attached awls and drivers, to operate substantially as described.

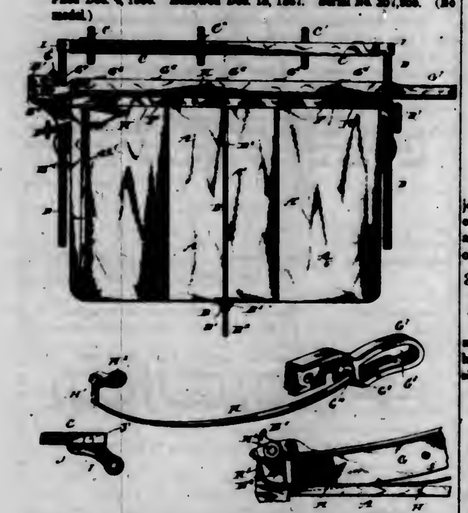
7. In a nailing-machine, the main shaft, the clutch or friction pulleys thereon, and a wedge to operate the said pulleys, combined with a cam on the main shaft to control the operation of the wedge, to operate substantially as described.

8. In a nailing-machine, the jaws *f g* and their carrying-bars, the one provided with a rack and the other with a stud, as b^3, and a lever, f^5, and locking device, combined with a controlling-rod and means to operate it, the said controlling-rod being provided with ball-and-socket-like portions to obviate any lost motion when the locking device is moved, substantially as described.

9. In a nailing-machine, the swinging head, the driver-bar therefor, its driver, and an awl-carrying bar provided at its edge with rack-teeth, and the cam C, combined with a rock-shaft having an arm which is actuated by the said cam, and an arm, *b'*, provided with a segmental series of teeth in engagement with the rack-teeth of the awl-bar, the center of motion of the rock-shaft being in the same plane as said center of motion of the swinging head, whereby the arm *b'* is enabled to actuate the awl-bar positively notwithstanding the swinging of the head, substantially as described.

10. In a nailing-machine, the combination, with the die *g*, having a shoulder, 3, and its carrying-bar, of the die *f* and its carrying-bar, the die *f* moving the die *g* with it in one direction by coming in contact with the shoulder portion 3 of the die *g*, substantially as described.

11. In a nailing-machine, the clamping-die *f* and its carriage and means to operate it, combined with the clamping-die *g*, its carrying-bar *g'*, and the stop 18, to arrest the motion of the carrying-bar *g* before arresting the movement of the die *f* in the same direction, for the purpose set forth.



12. In a nailing-machine, the clamping-die *f* and its carriage and means to operate it, combined with the clamping-die *g*, its carrying-bar *g'*, and the stop 18, to arrest the motion of the carrying-bar *g'* before arresting the movement of the die *f* in the same direction, and with a friction-clamp to clamp the said bar *g'*, substantially as described.

13. In a nailing-machine, the point-forming die, the vibrating header *e*, and its shaft, combined with a series of radial fins or projections between the said rock-shaft and header, substantially as described.

14. In a nailing-machine, the point-forming die, combined with a circularly-moving oscillating plate forming both the cutter and header, substantially as described.

15. In a nailing-machine, the point-forming die, combined with a circularly-moving oscillating plate forming both the cutter and header and grooved at its periphery, substantially as described.

385,803. PAPER-CUTTER. William H. Goldsmith, Boston, Mass. Filed Dec. 4, 1886. Renewed Dec. 15, 1887. Serial No. 257,955. (No model.)

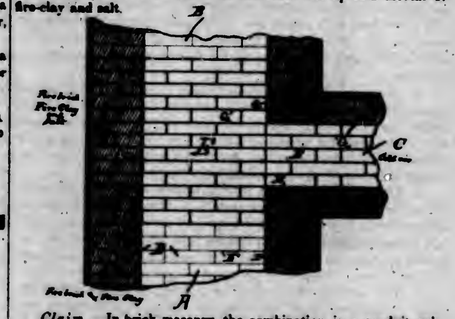
Claim.—1. In a paper-cutter, a bed-plate carrying a fixed knife and having a standard arranged substantially in line with the cutting-edge of said fixed knife, and provided with a lateral lug, in combination with a movable knife, and with a spring-compresser pivoted to said standard, substantially as specified.

2. In a paper-cutter, a bed-plate carrying a fixed knife and a standard provided with a lateral lug, in combination with a movable knife and a bracket pivoted to the standard, and with a spring-compresser secured to the pivoted bracket and having its free end loosely connected with the handle of the movable knife, substantially as specified.

3. The combination, with the movable blade of a paper-cutter, of a bracket loosely mounted on the pivot of the blade, and a spring attached to the free end of the bracket and loosely connected with the free end of the movable blade, substantially as specified.

4. In a paper-cutter, the combination, with a bed-plate carrying a fixed knife and having a standard arranged with the side thereof substantially in line with the cutting-edge of said fixed knife, of a movable blade secured to a handle or lever curved at its pivoted end to bear against the side of the standard, a bracket mounted on the pivot of the movable blade, and a spring secured to the bracket and extending parallel with the movable blade and along over the fixed blade, substantially as specified.

5. A movable blade having a slotted hand-grip and an opening communicating with the slot of the grip, in combination with a spring arranged parallel with the blade and with its free end arranged within the slot of the grip, substantially as specified.

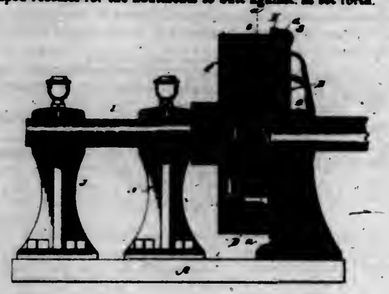


6. In a paper-cutter, a reversible rear gage consisting of a cylindrical rod having a lug, and of a casting provided with a rod-receiving bracket, and an intersecting screw-threaded lug and a set-screw mounted therein, substantially as specified.

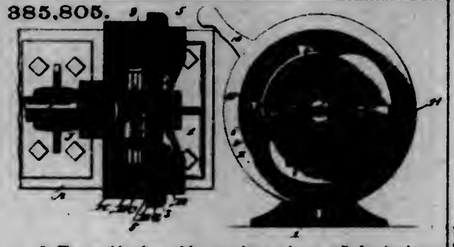
7. The combination, with the grooved table, of the reversible rear gage and devices, substantially as described, for securing the same in an adjusted position, substantially as specified.

8. The combination of the front gage, C, having the inclined page C', with the rack-bars D, table A, and devices for securing the bars in an adjusted position, substantially as specified.

385,804. BRICK MASONRY. Frank W. Gordon, Philadelphia, Pa., assignor to Gordon, Strobel & Laureau, (Limited,) same place. Filed Feb. 27, 1888. Serial No. 265,666. (No model.)



Brief.—The lower portion of the flue being subjected to a much higher degree of heat is built up of fire-brick set in fire-clay. The upper portion being exposed to the influence of a cold-air blast and a less degree of heat is formed of fire-brick laid up in a mortar of fire-clay and salt.



Claim.—In brick masonry, the combination, in a conduit subjected alternately to the action of heated matter and a cutting blast of cold air, of brick masonry formed of fire-brick laid up in fire-clay, and brick masonry formed of fire-brick laid up in a compound mortar of salt and fire-clay, substantially as and for the purpose set forth.

385,805. ROTARY ENGINE. John A. Greenmeyer and Alton G. Graham, Chicago, Ill. Filed Feb. 11, 1888. Serial No. 263,720. (No model.)

Claim.—1. An inner stationary cylinder provided with radially-movable abutments, in combination with a rotating outer cylinder and head journaled upon the inner cylinder and provided with crescent-shaped recesses for the abutments to butt against, as set forth.

385,805.

2. The combination, with a stationary inner cylinder having a flanged head and provided with radially-sliding abutments, of an exterior rotating cylinder and head journaled upon such inner cylinder and having steam-receiving chambers or recesses of unequal number to the number of abutments, as and for the purpose set forth.

3. The head B, having stationary inner cylinder, 2, formed integral therewith, and central steam-inlet, 4, with exhaust-ports 5, said inner cylinder, 2, being slotted, and the radially-sliding abutments C, guided in said slots, in combination with cylinder D, journaled upon such inner cylinder, 2, and having steam-receiving chambers or recesses 7, all substantially as set forth.

4. The head B, having stationary inner cylinder, 2, formed integral therewith and provided with central steam-inlet, 4, and with exhaust-ports 5, in combination with flanged wheel H, cylinder D, secured in wheel H, provided with steam-receiving chambers or recesses 7, and journaled upon cylinder 2, and with abutments C, radially guided in a groove of such cylinder 2 and pushed apart and in contact with cylinder D by a spring, 16, as set forth.

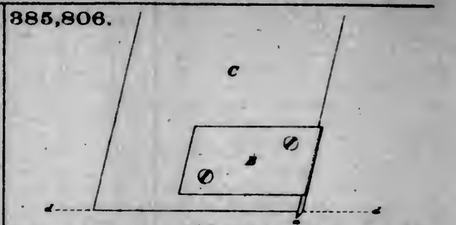
5. The combination, with rotating cylinder D, provided with chambers 7, of stationary cylinder 2, forming the journal for such cylinder D, having a central steam-inlet, 4, and exhaust-ports 5, and being radially slotted for guiding abutments C, pushed outward by spring 16, each such abutment being provided with a valve, 14, vibratable to be flush with either face of the abutment for automatically reversing the inlet of steam from one side of the abutment to the other by changing the position of the exhaust-ports, substantially as set forth.

6. The head B, with stationary inner cylinder, 2, with central steam-inlet, 4, with exhaust-ports 5, and with abutments C, guided in radial slots of cylinder 2 and pushed outward by spring 16, and each abutment C provided with a vibratable valve, 14, in combination with cylinder D, journaled upon cylinder 2 and provided with steam-receiving chambers 7, all substantially as set forth.

7. The combination, with head B, having stationary cylinder 2, slotted radially for guiding abutments C, of flanged wheel H and rotating cylinder D, secured in said wheel and having steam-inlet chambers 7, and provided with gibs inserted into slots of such cylinder to furnish the bearings upon such cylinder, and each gib held in contact with such inner cylinder by a spring, 9, all substantially as set forth.

8. The combination of head B, with inner cylinder, 2, slotted radially for abutments C, of disk F, secured against such abutment, and of cylinder D, journaled upon cylinder 2 between flange 3 and disk F, all substantially as set forth.

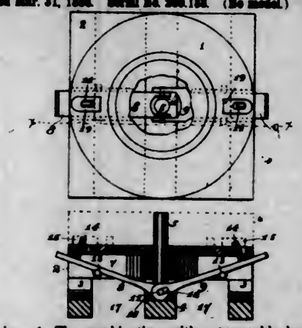
9. The combination of head B, with inner cylinder, 2, flange 3, central steam-inlet, 4, and exhaust-ports 5, and being provided with abutments C, having valves 14, of cylinder D, provided with steam-chambers 7 and journaled upon inner cylinder, 2, and reversing-plate E, provided with exhaust-openings 11 and with devices for swinging and locking such plate to opposite positions for changing the positions of the exhaust-openings from one side of the abutments to the other, and thereby reversing the motion of the engine, substantially as set forth.



10. The combination of head B, with cylinder 2 and flange 3, of disk F, secured to head B, of cylinder D and reversing-plate E, both journaled upon cylinder 2, and of packing-ring G, inserted into an annular groove of flange 3, all substantially as set forth, for the purpose specified.

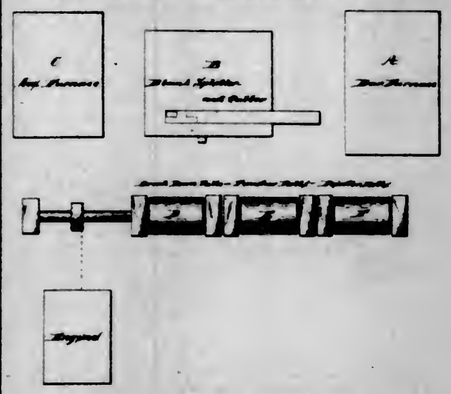
385,806. SHOE FOR LADDERS TO PREVENT ACCIDENTS FROM SLIPPING, &c. WILLIAM B. HARRIS, New York, N. Y. Filed Aug. 11, 1887. Serial No. 246,645. (No model.)

Claim.—A band or strip of metal to be secured to the foot of a ladder, with a side piece bent to conform with and to be fastened to the side of the ladder, and with a sharpened edge beveled to insure



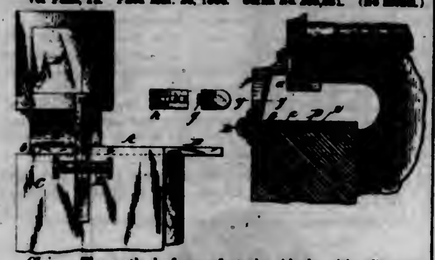
385,806.

penetration in case of the ladder slipping, designed to be adjusted with this sharpened edge protruding beyond the foot of the ladder a sufficient distance only to secure firm contact with the surface upon which the ladder may rest without seriously damaging such surface, substantially as above described.



385,807. TURN-TABLE FOR TRAMWAYS OR STREET-RAILWAYS. HARRISON HINTON and ELWIN J. MARVIN, Idaho Springs, Colo. Filed Mar. 31, 1888. Serial No. 269,188. (No model.)

Claim.—1. The combination, with a turn-table having recesses or blots upon its under side, of two levers pivoted in a slot or recess in the base, each carrying a pin or lug passing through a slot in the track or way upon the base and adapted to take in the recesses in the table, and pivoted together at their inner ends, substantially as set forth.

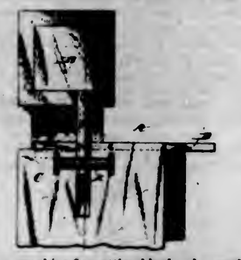


2. The combination of a turn-table having recesses upon its under side, a base carrying a pivot-pin and having a space formed beneath it, two levers pivoted to the base, each carrying a pin or lug adapted to take in the recesses in the table, the levers being overweighted and joined together at their inner ends and forked to pass around the central pivot-pin, substantially as set forth.

385,808. METHOD OF MAKING BLANKS FOR SHOVELS. JAMES J. JOHNSTON, Columbiana, Ohio, assignor to Henry M. Myers, Beaver Falls, Pa. Filed Mar. 24, 1888. Serial No. 268,347. (No model.)

Claim.—The method of manufacturing shovel-blanks herein described, which consists in heating a bar of metal, cutting incisions in the edge, and severing blanks with split tangs therefrom, then breaking down, reducing, and pointing the blanks, substantially as set forth.

385,809. METHOD OF MAKING BLANKS FOR SHOVELS, &c. JAMES J. JOHNSTON, Columbiana, Ohio, assignor to Henry M. Myers, Beaver Falls, Pa. Filed Mar. 26, 1888. Serial No. 268,951. (No model.)



Claim.—The method of manufacturing blanks with split tangs, which consists in heating a bar of metal of a predetermined width and thickness, forming incisions in the edge of the bar, and severing sections from the bar in the form of blanks, substantially as shown and described.

385,810. BLANK FOR SHOVELS. JAMES J. JOHNSTON, Columbiana, Ohio, assignor to Henry M. Myers, Beaver Falls, Pa. Filed Mar. 26, 1888. Serial No. 268,952. (No model.)

Claim.—As a new article of manufacture, a shovel or other blank provided with a body portion and a tang, and having its tang split and a socket formed therein and the edge of the tang left uncut, or integral with the body of the blank, substantially as described.

385,811. MACHINE FOR CUTTING AND SPLITTING SHOVEL-BLANKS. JAMES J. JOHNSTON, Columbiana, Ohio, assignor to Henry M. Myers, Beaver Falls, Pa. Filed Mar. 26, 1888. Serial No. 268,953. (No model.)

Claim.—1. In a machine for cutting blanks, the combination of a movable head, a cutting-off knife, a projection secured to said head, and a knife operated by said projection for making an incision in the edge of a bar, substantially as described.

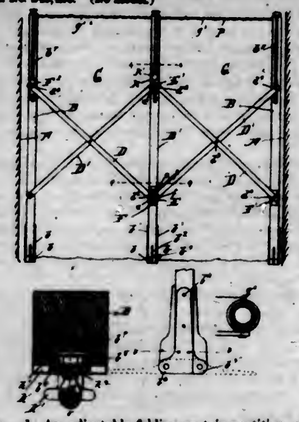
2. In a machine for cutting blanks, the combination of a movable head provided with a vertical arm or projection, a cutting-off knife secured to said head, and a knife for splitting the tang of the blank before it is cut off, operated by said head in unison with the cutting-off knife, substantially as described.

3. In a machine for cutting blanks, a reciprocating head, a projection on said head, and a vertical cutting-off knife secured to the head, in combination with an anvil provided with a groove constructed to receive and guide a bar, and a knife operated by the projection on the head for making an incision in the edge of the bar, substantially as described.

4. In a machine for cutting blanks, an anvil having a groove to support and guide a bar, a reciprocating head carrying a cutting-off knife, and a projecting wedge, in combination with a knife for making an incision in the edge of a bar and reciprocated by said wedge, substantially as described.

5. In a machine for cutting blanks, an anvil having a longitudinal and a transverse slot, a reciprocating head, and a cutting-off knife, in combination with a reciprocating knife for making an incision in a bar, and adapted to move in said transverse slot, a projecting wedge secured to said head, and connected to the latter knife by a sliding joint, substantially as described.

6. In a machine for cutting blanks, a reciprocating head, a knife, and a projecting wedge secured thereto, in combination with an anvil having a longitudinal slot for supporting a bar, a transverse slot, and a vertical angular slot, a horizontally-reciprocating knife operated by the wedge on said reciprocating head, and a roller for holding the wedge to its work, substantially as described.



385,812. DENTAL ENGINE. WILLIAM A. KNOWLES, Alameda, Cal. Filed Aug. 13, 1887. Serial No. 247,304. (No model.)

Claim.—1. In combination with the crane-arm of a dental engine, the gear G, H, I, and K, by means of the sleeve P, slot T, spindle J and J', pin U, screw S, thumb-piece V, cone-bearings R and R', and the bracket N, jaws M, set-screw O, the sleeve-bearing Z, and the head-block L, for the purpose of reversing the gear and adjusting the same, constructed and operated substantially as and for the purposes set forth.

2. In combination with the head-block L, the jaws M, set-screw O, sleeve-bearing Z, and bracket N, for the purpose of adjusting the pinion K at any required point, constructed and operated substantially as and for the purposes set forth.

385,813. ADJUSTABLE FOLDING CURTAIN-PARTITION FOR HOUSES. CHARLES S. LANDWORTHY, Chicago, Ill. Filed Sept. 12, 1887. Serial No. 249,698. (No model.)

Claim.—1. An adjustable folding curtain-partition, consisting of upright posts provided with feet extending forward and back of the partition, connecting cross-bars having pivotal connections at one of their ends to said upright posts and sliding pivotal connections to said posts at their other ends, and a flexible curtain supported on said posts, substantially as specified.

2. In an adjustable folding curtain-partition, the combination, with upright posts B B', furnished with folding feet *b b*, of cross-bars D D', one pair of said cross-bars D D' being hinged to said post B', and a flexible curtain supported by said posts, substantially as specified.

3. The combination, with an adjustable folding curtain-partition, of the upright posts thereof, and folding feet *b b*, extending under the ends of said posts and pivoted on opposite sides thereof, substantially as specified.

4. The combination, in an adjustable folding curtain-partition, of the upright posts thereof furnished with hinge-plates projecting beyond the end of the post, and folding feet *b b*, extending under the end of the post and pivoted to said hinge-plates at opposite sides or edges of the post, said feet folding up lengthwise with the post, substantially as specified.

5. The combination, in an adjustable folding curtain-partition, of the upright posts thereof furnished with hinge-plates projecting below the end of the post, and folding feet *b b*, extending under the end of

the post and pivoted to said hinge-plates at opposite sides or edges of the post, said feet folding up lengthwise with the post, the middle hinge-plate being secured in a central slot in the end of the post and having two ears, *b'*, and the outer hinge-plates having each one ear, *b'*, said ears projecting in opposite directions, substantially as specified.

6. The combination, in an adjustable folding curtain-partition, of the upright posts B B' B, having feet *b b*, with pivoted cross-bars D D', curtain G, cord P, and weights P', said end posts B B, being made hollow or furnished with pockets for said weights, substantially as specified.

7. The combination, with upright posts B B' B, having feet, of cross-bars D D' D D', and hinges E E', having their pivot-pins or barrels pivotally connected to said post B' and furnished with leaves *e e*, to which the adjoining ends of said cross-bars D D' are pivoted, substantially as specified.

8. The combination, with upright posts B B' B, having feet, of cross-bars D D' D D', and hinges E E', having their pivot-pins or barrels pivotally connected to said post B', and furnished with leaves *e e*, to which the adjoining ends of said cross-bars D D' are pivoted, said hinge E' being connected to said post through or by means of a sliding block, K, substantially as specified.

9. The combination, with upright posts B B' B, having feet, of cross-bars D D' D D', and hinges E E', having their pivot-pins or barrels pivotally connected to said post B', and furnished with leaves *e e*, to which the adjoining ends of said cross-bars D D' are pivoted, said hinge E' being connected to said post through or by means of a sliding block, K, and said hinge E being connected to said post by a block, F, substantially as specified.

10. The combination, with upright posts B B' B, having feet, of cross-bars D D' D D', pivotally connected to said posts, the outer parallel pair of said cross-bars D D' having blocks F' F², through which they are connected to said outer posts, B B, and hinges E E', connected to blocks F K, and having leaves *e e*, secured in slots in the ends of the adjoining cross-bars D D', the slots in one pair of said cross-bars being made near their front and in the other pair near their back, substantially as specified.

11. In an adjustable folding curtain-partition, the upright posts B B' B, having feet *b b*, the feet of the middle post, B', being longer than those of the end posts, B B, substantially as specified.

12. In an adjustable folding curtain-partition, the combination of the posts B B' B, having feet, with pivotal cross-bars D D' D D', the upper ends of said cross-bars sliding longitudinally on said posts, said middle post, B', having a sliding block, K, to which the adjoining upper ends of said cross-bars D D' are pivotally connected, said sliding block being provided with a knob, K', for operating the same, substantially as specified.

13. In an adjustable folding curtain-partition, the combination of the posts B B' B, having feet, with pivotal cross-bars D D' D D', the upper ends of said cross-bars sliding longitudinally on said posts, said middle post, B', having a sliding block, K, to which the adjoining upper ends of said cross-bars D D' are pivotally connected, said sliding block being provided with a knob, K', for operating the same, and a guide-spring, *k'*, pivoted dog *k²*, furnished with handle *k³* and arm *k⁴*, substantially as specified.

14. In an adjustable folding curtain-partition, the combination with folding pivotal cross-bars D D', of upright posts B B' B, having feet and provided with slots *b⁵*, and front strips, *b⁴*, having slot *b⁶*, the slots in said posts B B being furnished with sheet-metal stripe *b* to form the weight-pockets, the pivots of said cross-bars D D', which reciprocate in the slots *b⁵* of the posts B B, being furnished with rolling washers *d⁵* smaller in diameter than the width of said slots, substantially as specified.

385,814. KNOB. ABRAHAM T. MATTHEWS, Worcester, Mass., assignor to the Worcester Ferrule Company, same place. Filed Jan. 27, 1888. Serial No. 262,144. (No model.)

Claim.—1. In combination with a case or shell, a nut carried thereby, a cap-plate, a spring bearing at opposite ends against the cap-plate and the nut, and a bolt or stem screwing into the nut, substantially as shown.

2. In a knob for dampers, &c., the combination, with the bolt or stem G, provided with an angular head or nut, C, of a case or shell, A, made angular in cross-section, all substantially as shown.

3. In combination with the slotted plate I, a damper, H, and a knob secured to the damper and provided with a rectangular projecting hub, E, to enter the slot in plate I.

4. In combination with the case or shell A, the perforated cap-plate B, provided with the rectangular projection E, a nut, C, placed within the case or shell, a spring, D, bearing at opposite ends against the nut and the cap-plate, and a headed bolt or its described equivalent screwing into the nut, all substantially as shown.

5. In a knob substantially such as shown, the combination, with a case or shell, of a bolt or stem, a spring, a nut, and a cap-plate inserted into the end of the case or shell and secured thereto, the edges of the latter being bent down upon the cap-plate.

6. In a knob for dampers, &c., the combination, with a shell or case, of a bolt or stem provided within the shell with a head or nut, and a spring located within the shell and bearing at opposite ends against the end of the shell and the nut or head of the bolt.

385,815. ELECTRICAL SWITCH. JAMES R. MAYO, North Manchester, Conn. Filed Apr. 27, 1888. Serial No. 272,013. (No model.)

Claim.—1. In combination with the switch-base, the reciprocating switch-block having a limited sliding play, the lug fixed on the switch-block, the lever pivotally connected to the stud rising from the base and having a short arm engaging the said lug, the springs connecting the opposite ends of the switch-block to the lever, and the several contact-pieces, all substantially as described.

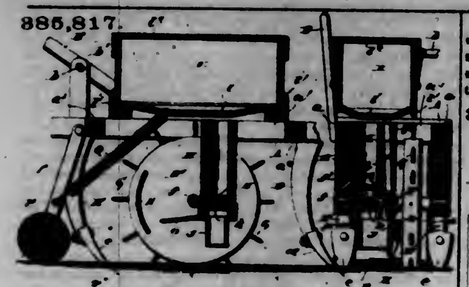
2. In combination with the switch-base, the reciprocating switch-block having a limited sliding play, the lug fixed on the switch-block, the lever pivotally connected to the stud rising from the base, said lever having a short arm engaging the said lug, the springs connecting the opposite ends of the switch-block to the lever, the several contact-pieces borne on the base and on the sides of the switch-block, respectively, and the removable cap or cover having a slot for the passage of the lever, and the catch device, whereby the cover is fastened to the base of the block, all substantially as described.

3. In combination with the switch-base having the cap-bearings, with the several catches *n* having rounded heads, the switch-block having a limited movement on the switch-base, the lever pivotally connected to the base and adapted to operate the switch-block, the several contact-pieces borne on the switch-block and on the base, respectively, the inner cover slotted for the passage of the lever-handle, and the outer cover, the several covers having the catch-sockets adapted to engage the rounded heads of the catches when the covers are sprung over them, all substantially as described.

385,816. BASE-BALL CURVER. JOHN P. MCKENNA and ALFRED M. BAKER, St. Louis, Mo. Filed Jan. 9, 1888. Serial No. 260,201. (No model.)

Claim.—1. A base-ball curver of flexible material having one end flanged and adapted to press upon the ball, and having its opposite end provided with means for attachment to the hand of the player.

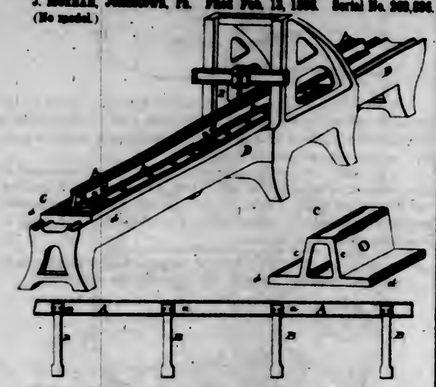
2. The curver A, having at one end the loop or ring by which it may be attached to the finger, and at its opposite end a flange or disk, said loop or ring and flange being united by a flexible body-piece, substantially as described.



3. As an article of manufacture, a ball-curver formed of rubber having at one end a ring or loop by which it may be attached to the finger, and at the opposite end a flange or disk having a serrated or roughened edge or surface, substantially as described.

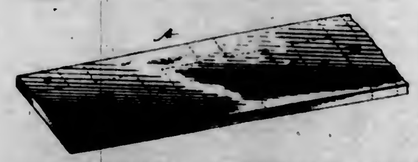
385,817. CORN-PLANTER. HIRAM S. MCMILLION, Falling Springs, W. Va., assignor of one-half to R. M. Harper, same place. Filed Feb. 29, 1888. Serial No. 265,650. (No model.)

Claim.—1. The combination of the main frame, the seed-tube having flanges on its side, the double-armed lever pivoted between said flanges, the slide-plate pivoted to the lower end of said lever, the carrying-wheel, and the cam-wires N O, secured to the inner face of said wheel and adapted to contact with the lever, as set forth.



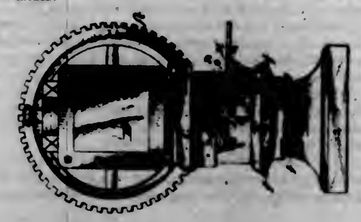
2. In a planter, the combination, with the conveyer-wheel and the cam-wires secured to the inner face thereof, of the dropping-tube, the notched plate at the end thereof, the double-armed lever pivoted

385,817.



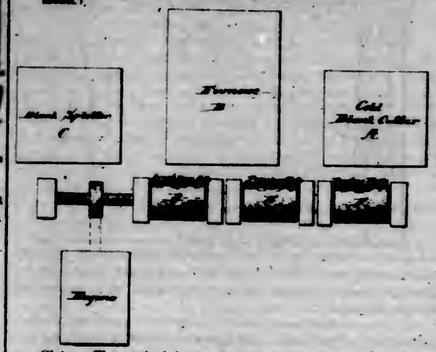
thereto, and the feeding slide-plate attached to the lower part of the said lever, substantially as specified.

385,818. PROCESS OF STRAIGHTENING SLOT-RAILS. ARTHUR J. MORRAH, Johnstown, Pa. Filed Feb. 13, 1888. Serial No. 263,896. (No model.)



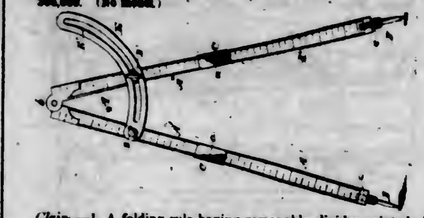
Claim.—The process of securing or providing the slot-rails of cable railways with a parallel or true-sided slot, consisting in clamping said rails upon the bed of a machine at the same points and at the same bevels or angles at which they are to be laid in track, and then cutting or planing said rails while so clamped to form the desired width of slot, substantially as and for the purposes set forth.

385,819. METHOD OF MAKING SHOVEL-BLANKS. HENRY M. MYERS, Beaver Falls, Pa. Filed Mar. 27, 1888. Serial No. 268,606. (No model.)



Claim.—The method of manufacturing shovel-blanks herein described, which consists in severing double blanks from a bar, each alternate blank being joined in the body of the blank, and the intermediate blanks joined in their tangs, then separating the double blanks and forming single blanks.

385,820. MACHINE FOR CUTTING SHOVEL-BLANKS. HENRY M. MYERS, Beaver Falls, Pa. Filed Apr. 3, 1888. Serial No. 268,417. (No model.)



Claim.—A machine for cutting shovel or other blanks, provided with a reciprocating head, a detachable saddle secured to said head and provided with a cutting-die, in combination with a detachable saddle secured to the base of the machine and provided with an anvil, the die, and gages, substantially as described.

385,821. METHOD OF MAKING SHOVEL-BLANKS. HENRY M. MYERS, Beaver Falls, Pa. Filed Apr. 5, 1888. Serial No. 269,645. (No model.)

Claim.—The method herein described of manufacturing shovel-blanks to the shearing-point, which consists in cutting blanks from a cold bar of metal, heating the blank, splitting the tang, and forming the socket, then breaking down, finishing, and pointing the blank, substantially as described.

385,822. COMBINED SQUARE, RULE, CALIPERS, AND DIVIDERS. FREEMAN E. HUTCHIN, Florence, Mass. Filed Mar. 9, 1888. Serial No. 266,660. (No model.)

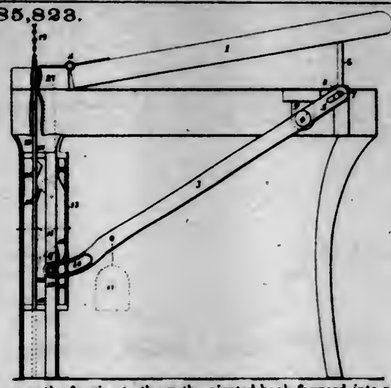
Claim.—1. A folding rule having removable divider-points in its ends and removable joint-clips, substantially as set forth.

2. A clip for a jointed rule, said clip consisting of a piece of metal having two parallel sides, one of which is transversely slotted, substantially as set forth.

3. The combination, with a folding rule, of adjustable points, joint-clips, and quadrant, substantially as set forth.

4. The combination, with a rule that is made of four pieces and jointed to fold at three points, of a quadrant, two set-screws, two joint-clips, and divider-points that are adapted to engage holes in the ends of the rule, substantially as set forth.

5. The combination, with a folding rule that is provided with metal clips that render two of its joints rigid, and two joint-clips, of a slotted quadrant, two set-screws, and divider-points which are adapted to engage tapped holes in the ends of the rule-pieces, substantially as set forth.

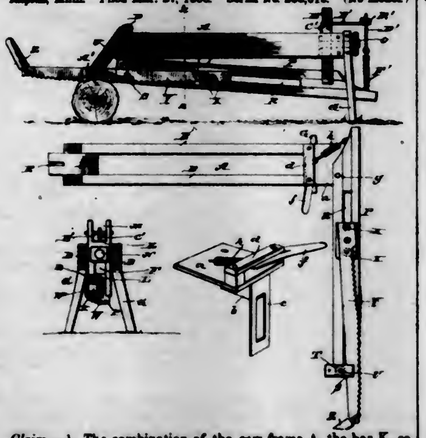


6. The combination, with a folding rule, a slotted quadrant, two set-screws, and two joint-clips that when in place render the rule-pieces rigid at two points, of two caliper-legs which are adapted to engage holes in the ends of the rule-limbs to convert a folding rule into a pair of calipers, substantially as set forth.

385,823. AUTOMATICALLY-OPERATING FLUSHING-TANK FOR CLOSETS. FRANK H. PARADISE, Denver, Colo. Filed Dec. 27, 1887. Serial No. 259,102. (No model.)

Claim.—1. The combination of a pivoted lever having its shorter end connected to an arm taking beneath the seat, a hook-carrier attached to the longer end thereof and carrying a pivoted hook, a slide connected to the pull cord or chain and carrying a fixed hook, and cam-faces, arranged as described, for throwing the pivoted and fixed hooks into and out of engagement, substantially as set forth.

2. The combination, in or with a suitable framing or support, of the slide carrying a fixed hook and a cam-face or projection above such hook, a sliding hook-carrier carrying a pivoted hook, a cam-



385,823.

face upon the framing to throw the pivoted hook forward into position for engagement with the fixed hook, and a lever having one end attached to the hook-carrier and the other attached to an arm beneath the seat, substantially as set forth.

3. The combination of a slide connected to the pull cord or chain and carrying a fixed hook, a hook-carrier connected to the end of a lever and carrying a hook, said hook being pivoted on or in its carrier, and provided with means for limiting its movement, and having its top portion beveled or curved on both front and back edges, camfaces, as described, for throwing the hooks into and out of engagement, and the lever connected to an arm taking beneath the seat, substantially as set forth.

385,824. SAWING-MACHINE. WILLIAM R. PATTERSON, Pelican Rapids, Minn. Filed Mar. 27, 1888. Serial No. 268,616. (No model.)

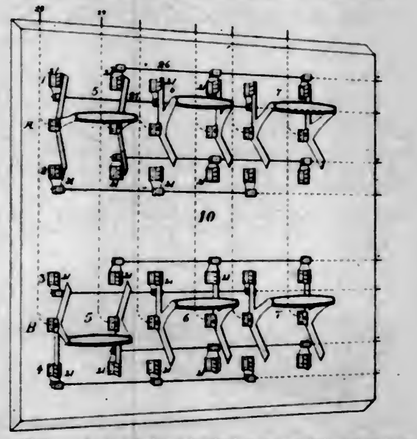
Claim.—1. The combination of the saw-frame A, the bar K, secured thereto at one end and vertically adjustable therein, the saw guide-arm having one end pivoted to the lower end of said bar, the cross-head or block working longitudinally in the saw-guide arm, and the saw having one end secured to said block or cross-head, substantially as described.

2. The combination of the saw-frame A, the standard F, pivoted to one end thereof, whereby said frame may be turned to any desired angle, the bar K, depending from the saw-frame at the pivotal end of the latter, the guide-arm pivoted at the lower end of said bar, the cross-head or block adapted to reciprocate in the said guide-arm, and the saw having its front end pivoted to said cross-head or block, substantially as described.

3. The combination of the supporting-frame, the saw-guide arm pivoted thereto and arranged on the under side thereof, the said saw-guide arm having the slot R, and the block S at the rear end of said slot, provided with the guiding kerf or slit T, the cross-head or block traveling in the slot R, and arranged on the saw-guide arm, and the saw-blade having its front end pivoted to said block or cross-head, having its rear end guided in the slit or kerf T, substantially as described.

4. The combination of the saw-frame A, the bar K, depending from one end thereof, the saw-guide arm having its front end pivoted to said depending bar, the cross-head or block provided in the said saw-guide arm and adapted to reciprocate thereon, the saw pivoted to the said block or cross-head, and the spring connected to the said guide-arm and adapted to force the saw downward in the kerf, substantially as described.

5. The combination of the saw-frame having the block D at one end, the standard F at the opposite extremity, the vertically-movable bar K, arranged at one end of the said saw-frame, the arm B', secured to the upper end of said bar, the saw-guide arm pivoted near one end to the lower end of bar K, the spring attached to the outer end of the saw-guide arm, the adjustable link connecting said spring to the bar B' for the purpose set forth, the block or cross-head guided in the guide-arm and adapted to reciprocate thereon, and the saw-blade having its front end pivoted to said block or cross-head and having its rear end engaged by the kerf T, substantially as described.

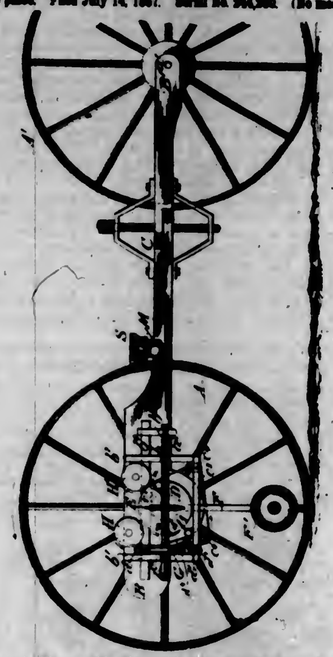


385,825. OVERFLOW-INDICATOR. MARIE L. RUSSELL, Chicago, Ill. Filed May 4, 1888. Serial No. 272,942. (No model.)

Claim.—1. In combination with an overflow-pipe, a pan, 5, supported at one end on a rock-shaft, B, provided with a crank-arm, 6, a hooked-end pitman-rod, C, and a roller, 8, attached to an alarm-hammer, as herein shown and set forth.

2. In combination with an overflow-pipe, a pan, 5, supported at one end on a rock-shaft, B, provided with a crank-arm, 6, a hooked-end pitman-rod, C, and a roller, 8, provided with a pendent adjustable weight, 12, the roller 8 being attached to an alarm mechanism, as herein set forth and described.

385,826. MULTIPLE SWITCH-BOARD. ALBERT SOMERBY, Greeley, Colo. Filed Apr. 25, 1887. Serial No. 236,048. (No model.)



Claim.—1. A switch or circuit-changer consisting of two conducting-bars, two independent and separate standards, one for each bar, and in which each bar is centrally pivoted, the standards being placed parallel to each other and forming the terminals of an electric circuit, an insulating cross-bar or handle extending between and secured to the conducting-bars, and adapted to be grasped by the hands, and sets of contact-springs, one at the limit of motion in either direction of either conducting-bar, substantially as set forth.

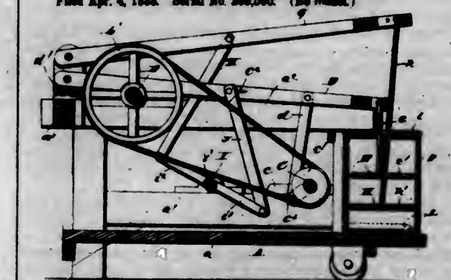
2. A multiple switch-board having a row of switches, each suitably composed of parallel pivoted bars united by an insulating cross-bar or handle, the bars being connected in different branches of the same circuit, and sets of contact anvils or springs, one at each end of the bars, the sets being connected in the circuits of different sources of electricity, and connections between each switch of the row of switches electrically connecting all the corresponding parts of the switches in the row, substantially as set forth.

3. A multiple switch-board having two or more rows of switches, each switch composed of parallel pivoted bars united by an insulating cross-bar or handle, the bars being connected in different branches of the same electrical circuit, and sets of contact anvils or springs, one at each end of the bars, the sets being connected in the circuit of different sources of electricity, connections electrically connecting all the corresponding contacts from the sources of electricity in each row, and connections electrically connecting the corresponding parts of the corresponding switches in the different rows, substantially as set forth.

385,827. MACHINE FOR TAKING AND RECORDING TOPOGRAPHICAL MEASUREMENTS. JAMES W. SHAFF, Jasper, Texas, assignor of one-half to A. Lawrence Spears and William D. Spears, both of same place. Filed July 14, 1887. Serial No. 244,302. (No model.)

Claim.—1. The combination, with a topographometer-frame, of the revolving disk D, the reciprocating revolving shaft a^2, the rotative wheel E, mounted rigidly on the said shaft in position for the periphery of the wheel to bear against the face of the disk, the reciprocating rack-bar b^4, connected with the shaft, and the weighted pivoted lever F, provided with a spur-gear adapted to engage with the rack-bar and to cause the wheel to be automatically reciprocated by gravitation across the face of the disk, substantially as and for the purposes described.

2. In a topographometer, the revolving disk D and the wheel E rotated by frictional contact with and reciprocated across the face of the disk, in combination with a revolving recording-wheel provided with raised figures, an endless ink-ribbon adapted to be run across the face of the raised figures, a tape arranged to run against the face of the ink-ribbon, and the automatically-operating hammer, substantially as and for the purposes set forth.



3. The combination of the section B of the carriage-frame, the axle a, having its bearings in the frame, the ground-wheel A, rigidly fixed on the axle, the disk D, mounted rigidly on an extended end of the axle and provided with one or more trip-pins, the revolving reciprocating shaft a^2, the wheel E, mounted rigidly on the said shaft in position for the peripheral surface of the wheel to bear against the face of the disk, the recording-wheel G, mounted loosely on and revolving with the shaft a^2 and provided with raised figures, the endless ink-ribbon d^3, arranged to run in front of the face of the raised figures, the tape c^3, adapted to be run against the face of the ink-ribbon, the stamping-hammer d^5, adapted to be automatically operated by the trip-pins, the reciprocating rack-bar b^4, provided with the bifurcated arm b^5, connecting with the reciprocating shaft a^2, and the weighted pivoted lever F, provided with spur-gearing adapted to engage with and reciprocate the rack-bar, and thus cause the wheel to be automatically reciprocated by gravitation across the face of the disk, substantially as and for the purposes described.

4. The combination, with a topographometer-frame in two sections, B B', pivotally connected with each other, of the revolving disk D', mounted on an axle having its bearings attached to the section B of the frame, the reciprocating revolving shaft a^2, mounted in bearings attached to said section B and pivotally connected at one end with the section B' of the frame, and the rotative wheel E', mounted on the said shaft in position for the periphery of the wheel to bear against the face of the disk, said devices being all constructed and arranged to enable the rotative wheel to be reciprocated automatically across the face of the disk by the horizontal changes in the direction of the movements of the machine, substantially as and for the purposes described.

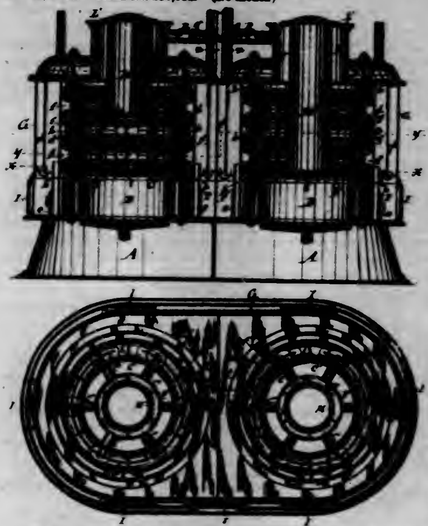
5. The combination, with a topographometer-frame, in two sections, B B', pivotally coupled together, of the revolving disk D', provided with one or more trip-pins, the reciprocating revolving shaft a^2, pivotally connected with section B', of the frame, the wheel E', mounted rigidly on the said shaft in position for the periphery of the wheel to bear against the face of the disk, the recording-wheel G', mounted loosely on the shaft a^2 and provided with raised figures, an endless ink-ribbon arranged to run in front of the face of the raised figures, a tape arranged to run along the face of the ink-ribbon, and the hammer d^5, adapted to be operated automatically by the trip-pins, substantially as and for the purposes set forth.

6. In a topographometer, a revolving disk and a wheel rotated by the frictional contact of its peripheral surface with and reciprocated across the face of the disk, in combination with recording devices consisting of a revolving wheel provided with raised characters, a measuring-tape caused to travel across the raised characters on the recording-wheel, and an automatically-striking hammer, all the devices being constructed and arranged to automatically record the distances, elevations, depressions, and horizontal deflections of ground-surfaces traveled over by the machine, substantially as and for the purposes set forth.

385,828. CHURN. WILLIAM H. H. SPRAGUE, South Fork, Mo. Filed Apr. 4, 1888. Serial No. 269,590. (No model.)

Claim.—1. The combination of the horizontally-vibrating arms, the rock-shaft arranged below said arms and having independent connection therewith, the crank-shaft arranged below the said arms and to one side of the rock-shaft, the link connecting the crank-shaft with one of said arms, and mechanism for rotating the crank-shaft, as set forth.

2. The combination, in a churn, of the barrel, the dashers E H, having the rods e h, the oppositely-vibrating arms D G, the rock-shaft I, having the oppositely-extending arms i^2 i^3, the link-rod J, connecting the end of the arm i^2 with the arm D, and the link-rod K, connecting the end of the arm i^3 with the arm G, substantially as specified.

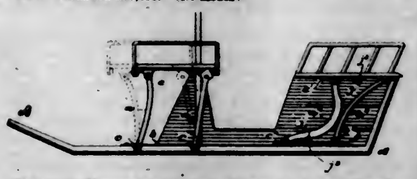


3. In a churn, the combination, with the barrel, the similar upper and lower dashers E H, having the rods e h, the oppositely-vibrating arms D G, the rock-shaft provided with the oppositely-extending arms i^2 i^3 and the link-rods J K, of the crank-shaft C, the pitman d, the pulleys c^2 b^2, the belt c^3, and the crank-handle b^3, substantially as specified.

385,829. CORD-HOLDER FOR HOLDING THE CORDS OF BLINDS, &c. BENJAMIN YOUNG, Birmingham, County of Warwick, England. Filed Jan. 11, 1887. Serial No. 224,057. (No model.) Patented in England Sept. 2, 1886, No. 11,182.

Claim.—A cord-holder for blinds and other purposes, consisting of a strip of metal bent to form a shoulder, d^2, and a projecting bow, d, having its upper side formed with a semicircular guiding-groove, e, and its lower portion formed with a tapering slot, the said shoulder having the orifice b, so that the cord can pass straight through the holder, substantially as described.

385,830. BOILER. CHESTER WEBAT, Geneva, N. Y. Filed Dec. 15, 1887. Serial No. 257,982. (No model.)



Claim.—1. In combination with the boiler and smoke-box surrounding the same, the baffle-plate P', suspended from the top of the smoke-box, baffle-plate P, of cylindrical form, rising from the base of the smoke-box and provided with ports *p p*, and a cylindrical damper, O, sliding on the latter baffle-plate and provided with ports *o o*, adapted to register with the ports *p p*, substantially as described and shown.

2. In a sectional boiler, the water-pipes C C, composed of segments closed at their ends and provided with ports communicating with the segments of the superposed pipe and subjacent pipe, substantially as set forth and shown.

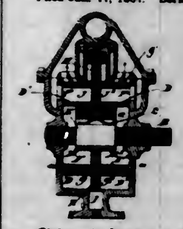
3. In a sectional boiler, the pipes C C, arranged annularly one inside of the other, and each of said pipes composed of segments closed at their ends, and the outer segments provided with ports at the top and bottom communicating with the segments of the superposed pipe and subjacent pipe, and radial pipes C", connecting the outer with the inner segments, substantially as described and shown.

385,831. SHIFTING SEAT. CHARLES C. ADELSPERGER, Springfield, Ohio, assignor to Charles L. Bagle, same place. Filed Nov. 25, 1887. Serial No. 256,155. (No model.)

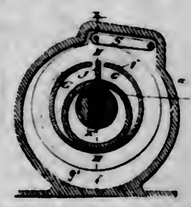
Claim.—1. The combination, in a shifting seat for vehicles, of pivoted rocker arms or legs adapted to support the seat in position for use and permit the same to be turned or folded when not in use, a locking device for holding said seat in its normal position, said locking device being provided with stops adapted to permit a limited movement of said seat and form a positive stop therefor in either direction, disengaging said locking device, substantially as set forth.

2. In a shifting seat for vehicles, the combination of rocker and seat plates having rocker arms or legs pivotally secured thereto at either end, a stop projection on one of said legs, and a locking device provided with stop-faces adapted to come against said stop projection when the seat is turned to a certain extent in either direction, said locking device being adapted to withdraw the stop projection from the line of said stop-faces to permit the seat to be folded in either direction, substantially as set forth.

3. The combination, with the front seat-plate having rocker-arms secured thereto, of a lug on said seat-plate, to which one of the said arms is attached, an elongated opening in said lug, through which a pivotal connection is adapted to pass, stop projection on said rocker-arm, and stop on said seat-plate, said stops being separated from each other by a space larger than the stop projection, which is adapted to come in contact with the respective stops, substantially as and for the purpose set forth.



4. The combination, with the front seat-plate having a concave bearing, and the rocker arm or leg having an enlarged end adapted to fit in said concave bearing, of a stop projection adapted to project upwardly between the stop-faces on said seat-plate and adapted to come in contact with said stop-faces when turned to different positions of adjustment, the said arm or leg secured to the seat-plate by means which will permit the stop projection to be withdrawn from the line of said stop-faces, substantially as set forth.



5. In a shifting seat for vehicles, the combination, with the front seat-plate and the rocker arms or legs pivotally secured thereto, of a concave bearing on said seat-plate, stop-faces above said concave bearing, and a connecting-lug provided with an elongated hole therein, one of the said rocker arms or legs being bifurcated at the upper end and provided with an enlarged portion adapted to fit in said concave bearing, and having a stop projection extending upwardly in a line with said stop-faces, a pin or rivet passing through said bifurcated arms or legs, and an elongated opening in said connecting-lug, substantially as and for the purpose set forth.

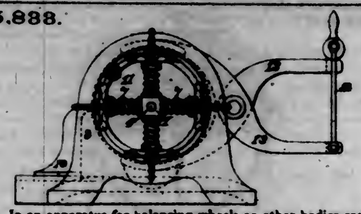
6. In a shifting seat for vehicles, the combination, with the rear seat, of rocker arms or legs pivoted at either end to said seat and to a rocker-plate at the bottom of said vehicle, respectively, one of said legs being curved to bear against said rocker-plate and seat-plate, respectively, when turned to a different position of adjustment, an adjustable screw provided with a concave bearing in said rocker-plate and seat-plate, respectively adapted to form a support for said rocker-arm when turned to either position of adjustment, substantially as set forth.

7. The combination of the rear seat, the seat-plate therefor, the rocker-plate under said seat, pivoted legs connected, respectively, to said rocker-plate and seat-plate, and a set-screw in said rocker-plate and seat-plate, respectively adapted to form a bearing for the rocker-arm when turned to either position of adjustment, said screw being provided with a cup-shaped opening adapted to be spread or expanded to prevent the same from turning, substantially as set forth.

385,832. ROTARY PUMP. WILLIAM R ALLYN, Boston, Mass. Filed Jan. 17, 1887. Serial No. 224,642. (No model.)

Claim.—1. In a pump, the combination, with a casing having the circumferential recess and inwardly-projecting flanges, of the piston having the peripheral flange arranged coincidently with and entering said recess, links connecting the flange with the casing, and abutments, substantially as set forth.

2. In a pump, the combination, with a casing having the circumferential recess and inwardly-projecting flanges, of the piston having the peripheral flange arranged coincidently with and entering said recess, links connecting the flange with the casing, and abutments disposed endwise and closely to the sides of said flange, substantially as set forth.



3. In a pump, the combination, with a casing having the circumferential recess and inwardly-projecting flanges, of the piston having the bearing or flanges and the peripheral flange, the abutments disposed endwise and closely to the sides of said peripheral flange of the piston, the shaft fitted with a spring-cushioned eccentric interposed between the shaft and the said bearing, and the links connecting the piston-flange with the casing, substantially as set forth.

385,838. MACHINE FOR DETERMINING AND ADJUSTING THE BALANCE OF WHEELS OR OTHER BODIES. RALPH BAGALEY, Pittsburg, Pa. Filed Aug. 13, 1887. Serial No. 246,818. (No model.)

Claim.—1. In an apparatus for balancing wheels or other bodies capable of being rotated, the combination of a shaft carrying the wheel or other body and one or more bearings therefor, fitted with a capacity of movement equal in all directions, substantially as set forth.

2. In an apparatus for balancing wheels or other bodies capable of being rotated, the combination of a shaft carrying the wheel or other body to be balanced, journal-boxes for said shaft, and one or more spiral springs supporting said journal-boxes, substantially as set forth.

385,833.

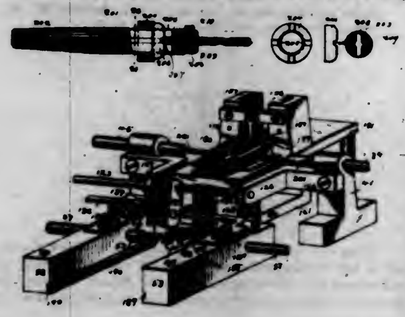
3. In an apparatus for balancing wheels or other bodies capable of being rotated, the combination of standards or housings having openings therein, journal boxes or bearings free to move equally in all directions in said openings, springs for supporting said boxes or bearings centrally or approximately so in said openings, and a shaft carrying the wheel or other body to be balanced mounted in the boxes or bearings, substantially as set forth.

4. In an apparatus for balancing wheels or other bodies capable of being rotated, the combination of a shaft carrying the wheel or body to be balanced, one or more bearings for said shaft having yielding support or supports, and a clamp for holding said wheel or body stationary, substantially as set forth.

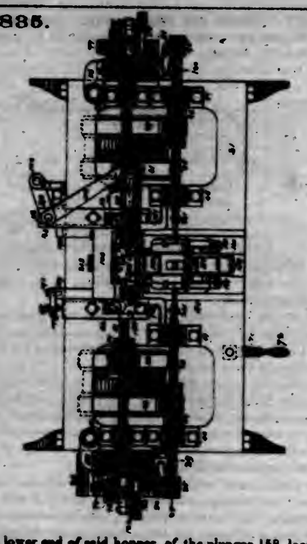
5. In an apparatus for balancing wheels or other bodies capable of being rotated, the combination of a shaft carrying the wheel or body to be balanced, one or more bearings for said shaft having yielding support or supports, and a marker, substantially as set forth.

6. In an apparatus for balancing wheels or other bodies capable of being rotated, the combination of a shaft carrying the wheel or body to be balanced, one or more bearings for said shaft having yielding support or supports, and an adjustable marker, substantially as set forth.

7. In an apparatus for balancing wheels or other bodies capable of being rotated, the combination of a frame having a slotted base, a shaft carrying the wheel or other body, one or more yielding or resilient bearings for said shaft arranged in said frame, and a clamp for grasping the wheel and provided with a rib engaging the slot in the base of the frame, substantially as set forth.



385,834. CORKSCREW. WILLIAM H. BARRETT, Meadville, Pa. Filed Oct. 6, 1888. Serial No. 218,463. (No model.)

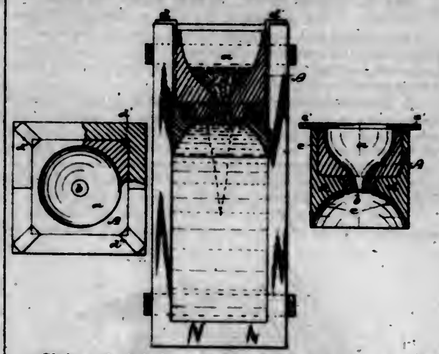


Claim.—In a corkscrew, the combination of a cylinder, B, having the slots *b* H, a traveling nut, G, having the side screw, *g*, the spiral screw F, provided with the end-flanged plunger D, carrying a loose ring, K, and the lever C, fulcrumed at *c* and carrying the bolt K in the slot H of cylinder, as shown and described.

385,835. AUTOMATIC WOOD PLANING AND DRILLING MACHINE. C. ELMER BOSTWICK, Winchendon, Mass. Filed Nov. 8, 1886. Serial No. 218,344. (No model.)

Claim.—1. The combination, with the hopper 155, having vertical ways 156 157, and springs 178, 179, and 180, projecting rearwardly

385,835.

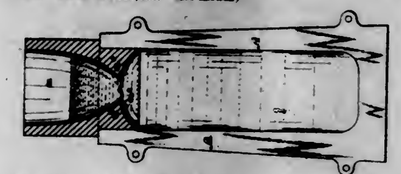


from the lower end of said hopper, of the plunger 158, located below the lower end of said ways and springs, the upper face-piece, 177, and mechanism for reciprocating it beneath said hopper and springs, substantially as described.

2. The adjustable positive stop drill-chuck 201, comprising the screw-threaded end 203, having transverse slot 208 and central bore, 209, the screw-threaded stop 204, provided with slots 205, and the key 206, filling said slots, substantially as described.

3. The supports 53 and 56, having horizontal grooves 189 190, in combination with the gage-cutter carriage 186, sliding in said grooves and provided with the recess 212, the adjustable positive stop 192 191, abutting against support 53 and limiting the inward movement of said carriage, and the lever 190, having spring 200, seated in said recess 212, said spring imparting a yielding inward motion to said carriage when said lever is operated, substantially as described.

385,836. FEEDER FOR INGOT-MOLDS. ERNEST H. BOSSERT, West Bergen, assignor to Cyrus C. Currier, Newark, N. J. Filed July 19, 1887. Serial No. 244,662. (No model.)



Claim.—1. A feeder for ingot-molds, having a reservoir for molten metal, a gate leading therefrom into the mold, and an inclined bottom sloping outwardly and downwardly from said gate, for the purposes set forth.

2. The combination, with an ingot-mold, of a feeder for said mold, having a reservoir for molten metal, a gate leading therefrom into the mold, and an inclined bottom sloping outwardly and downwardly from said gate, for the purposes set forth.

3. A feeder for ingot-molds, made of a refractory material and having a reservoir for molten metal, a gate leading therefrom into the mold, and an inclined bottom sloping outwardly and downwardly from said gate, for the purposes set forth.

385,837. FEEDER FOR INGOT-MOLDS. SIDNEY H. BOSHER, Jersey City, assignor to Cyrus C. Currier, Newark, N. J. Filed Jan. 12, 1888. Serial No. 260,492. (No model.)

Claim.—1. A feeder for ingot-molds, having a reservoir with an opening in its bottom, the opening having a thin edge arranged to oppose its upper and lower surfaces, respectively, to the metal in the reservoir and in the mold.

2. A feeder for ingot-molds, having a reservoir therein provided with an opening in the bottom thereof, the surrounding edge of which is thin, and a bottom inclining downward and outward away from said opening, for the purposes set forth.

3. A feeder for ingot-molds, having a reservoir therein provided with an opening in the bottom thereof, and a bottom inclining downward and outward away from said opening, the sides of said reservoir and the said bottom curving downward and upward, respectively, and meeting in a thin edge around the opening in the bottom of the reservoir, for the purposes set forth.

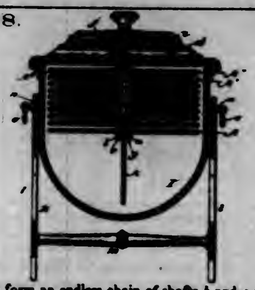
4. The combination, with an ingot-mold, of a feeder inserted in the top thereof and having a reservoir therein provided with an opening in the bottom thereof, the surrounding edge of which is thin and arranged to oppose its upper and lower surfaces, respectively, to the metal in the reservoir and in the mold, for the purposes set forth.

5. The combination, with an ingot-mold, of a feeder inserted in the top thereof and having a reservoir therein provided with an opening in the bottom thereof, the surrounding edge of which is thin, and a bottom inclining downward and outward from said opening, for the purposes set forth.

6. A feeder for ingot-molds, composed of a plastic refractory material and having a reservoir therein and an opening in the bottom thereof, the surrounding edge of which is thin and arranged to oppose its upper and lower surfaces, respectively, to the metal in the reservoir and in the mold, for the purpose set forth.

7. A feeder for ingot-molds, composed of a plastic refractory material and having a reservoir therein provided with an opening in the bottom thereof, the surrounding edge of which is thin, and a bottom inclining downwardly and outwardly away from said opening, for the purpose set forth.

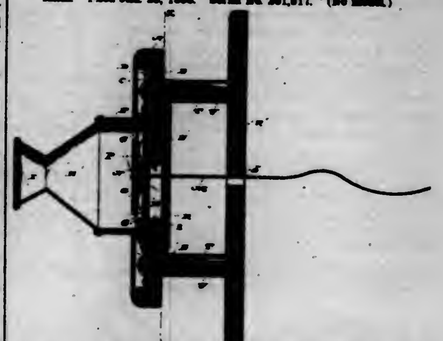
385,838. PHOTOGRAPH-ALBUM. HYPPOLITE BOMMERAIRE, Lake View, Ill. Filed Feb. 21, 1888. Serial No. 264,960. (No model.)



Claim.—1. The combination of a series of photograph-frames, A A' A², provided with hinge-strips *a* to one edge and connected by pivot-rods *b* to form an endless chain, and the ends of rods *b* projecting to form cogs engaging with the teeth of sprocket-wheels *c* of shafts *d* and *e*, substantially as set forth.

2. The combination, with a casing, I, having a semi-cylindrical bottom and a cover, *i*, and being pivotally suspended between standards *l* of base K on screws *n*, of bars *f* and *g*, inserted into grooves in the side of the casing, and providing the pivot-bearings for shafts *d* and *e*, carrying sprocket-wheels for an endless chain formed by hinge-strips *a*, secured to one edge of photograph-frames A A', &c., and by pivot-rods *b*, having projecting ends, all substantially as set forth.

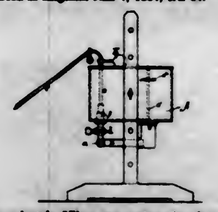
3. The photograph-frames A A' A², &c., each provided with a hinge-strip, *a*, to one edge thereof and all detachably connected by



385,838.

pivot-rods *b* to form an endless chain of shafts *b* and *c*, provided with sprocket-wheels engaging with the projecting ends of the rods *b*, and of bars *f* and *g*, each having a series of pivot-holes for such shafts *d* and *e* to accommodate a longer or shorter chain of frames A, all substantially as set forth.

385,839. MECHANICAL TELEPHONE. SAMUEL D. BEZAR, Winona, Minn. Filed Jan. 26, 1888. Serial No. 261,617. (No model.)



Claim.—1. In an acoustic telephone, the combination, with the diaphragm-tablet, of the wire annulus surrounding the central opening of the same and the drum having a series bearing-points at its rear pressing upon the diaphragm, whereby the same is stretched over the ring and confined at intervals to the face of the tablet, substantially as specified.

2. The combination, with the diaphragm-tablet, of the annulus secured around the opening at the rear thereof, the rear vibratory plate stretched and confined over said annulus or ring, the diaphragm and wire connections, the drum, and a connecting-wire, substantially as specified.

3. The combination, with the diaphragm-tablet and the annulus at the rear thereof, of the vibratory strands strung between said annulus and the tablet, the drum and a connecting-wire, and the diaphragm and wire connections, substantially as specified.

4. The combination, with the diaphragm-tablet, the condensing-drum, front ring, and diaphragm, of the rear ring and vibratory strands, the rear reverberating plate, and the conducting-wire, the whole arranged to operate substantially in the manner specified.

385,840. BOTTLING APPARATUS. STUART DOYLING, Dublin, County of Dublin, Ireland. Filed Dec. 6, 1887. Serial No. 257,130. (No model.) Patented in England Jan. 7, 1887, No. 57.

Claim.—1. In a bottle-filling apparatus, the cistern A, the supply-tube *a*, taps *d*, connected to said tube, and collars *f*, opening within said cistern, in combination with swinging siphons, the inner shorter arms, *e*, of which have ends adapted to form a joint with said collars

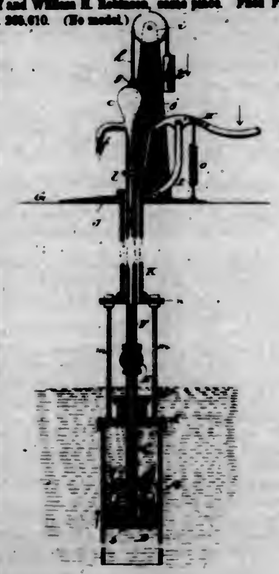
f, and weights E on said siphons, for keeping said joint normally closed, substantially as specified.

2. In a bottle-filling apparatus, the cistern A, having supply-valve *c*, the supply-tube *a*, branch *b*, connecting said tube with said supply-valve, taps *d*, connected to said tube, and collars *f*, opening within said cistern and having beveled upper ends, in combination with swinging siphons *e e'*, the inner shorter arms of which have beveled lower ends adapted to form a joint with said collars *f*, and weights E on said siphons, for keeping said joint normally closed, substantially as specified.

385,841. SIDE-GATE. BEN. L. BENJAMIN, Wahoo, Nebr. Filed Nov. 3, 1887. Serial No. 254,172. (No model.)

Claim.—1. An end-gate supported upon the wagon and having a lever mechanism pivoted to the wagon-body, whereby it may be tilted to dump or release a load or be moved to the top of the wagon-body to be out of the way and serve as a seat, substantially as described.

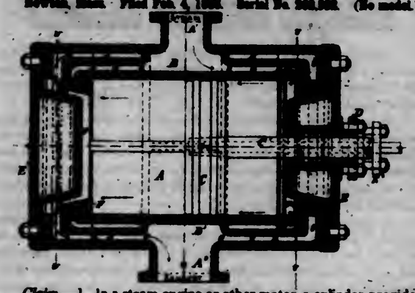
2. An end-gate pivoted at its lower edge to a wagon-body and connected with the latter at its upper end by means of a lever mechanism, whereby it may be closed or inclined outward at the end of the wagon-body, substantially as described.



3. An end-gate connected by a removable hinge at its lower edge to a wagon-body and at its upper part to the wagon-body by means of a lever mechanism pivoted to the latter, substantially as described.

4. The combination, with a wagon-body, of an end-gate pivoted thereto, having extended side portions overlapping the wagon-body, and a lever mechanism pivoted to the wagon-body and connecting the gate therewith, whereby the gate is inclined outwardly or closed against the wagon-body, substantially as described.

5. The combination, with a wagon-body, 4, lever 10 and bar 15, connected therewith, of the end-gate 1, having extensions 2, the removable hinge-rod 5, and the sleeves 6, substantially as described.



6. The combination, with the wagon-body 4, having cross-strip 20', of the end-gate 1, having sides 2, curved at 18 and removably hinged to the wagon-body, the lever 12, fulcrumed to the body, and the connecting-bar 15, substantially as shown and described.

385,842. PUMP. GEORGE H. CASSEDAY, Hoveda, Mo., assignor to himself and William H. Robinson, same place. Filed Feb. 20, 1888. Serial No. 265,610. (No model.)

Claim.—In a submerged pump, the combination of the following elements: the barrel A, having its bottom open, as shown, in contradistinction to pump-barrels which are provided with a foot-valve, the piston B, having the valve *c*, and constructed with open spaces above said valve, which permit water to pass into the space between the piston and head of the cylinder, the hollow piston-rod C and riser F, the check-valve E, arranged in the latter, and a counter-balance connected with said riser, as shown and described.

385,843. VALVE FOR STEAM-ENGINES. FRANKLIN D. GILES, Newton, Mass. Filed Feb. 4, 1888. Serial No. 263,082. (No model.)

Claim.—1. In a steam-engine or other motor, a cylinder provided with inlet and exhaust pipes, inlet and exhaust chambers communicating with said inlet and exhaust pipes, respectively, annular inlet-passages communicating with either end of said inlet-chamber, annular exhaust-passages communicating with either end of said exhaust-chamber, and inlet and exhaust ports communicating, respectively, with said inlet and exhaust-passages at either end of said cylinder and so constructed and arranged as to admit steam or other motive force to and exhaust it from said cylinder on all sides thereof, in combination with ring-valves at each end of said cylinder adapted to alternately open and close said inlet and exhaust ports, and having frusto-conical surfaces on the inside and a cylinder-head at each end of said cylinder, which is provided with an internally-projecting frusto-conical extension, the sides of which are parallel with the inner sides of said valves and are in contact therewith, or nearly so, when said valves have reached the extreme end of their movement toward the cylinder-heads.

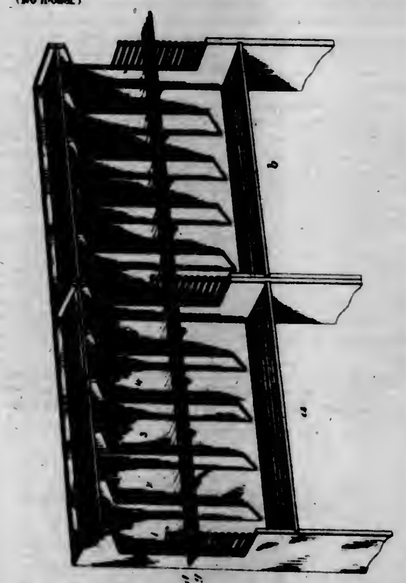
2. In a steam-engine or other motor, a cylinder provided with inlet and exhaust ports at both ends thereof, and ring slide-valves in both ends thereof having seating-surfaces parallel to the axis of the cylinder and adapted to alternately open and close the said inlet and exhaust ports, and also provided with frusto-conical surfaces on the sides farthest from said ports, in combination with cylinder-heads provided with frusto-conical surfaces opposed to and parallel with the frusto-conical surfaces of the valves.

3. In a steam-engine or other motor, a pair of ring slide-valves arranged one in each end of the cylinder, and each having a circular seating-surface parallel to the axis of said cylinder, which valves are adapted to alternately open and close the ports of said cylinder, and are also provided with frusto-conical surfaces on the inside thereof, in combination with cylinder-heads provided with frusto-conical surfaces opposed to and parallel with the frusto-conical surfaces of the valves.

385,844. SAW-HANDLE. GEORGE H. CLEMENS, Middletown, N. Y., assignor to the Wheeler, Madden & Clemens Manufacturing Company, same place. Filed Feb. 13, 1888. Serial No. 263,782. (No model.)

Claim.—The combination, with the saw B, provided with a nick, *f*, in the back thereof, near one end, and a right-angled slot, *g*, extending inward lengthwise of the saw, then downward toward the cutting-edge of the saw, and a straight handle having a longitudinal slot adapted to receive the saw-blade, and provided with a transverse pin, *e*, and bolt *c*, for engaging the nick and slot of the saw, substantially as herein specified.

385,845. TOOL-POST RING. WILLIAM S. CORE, Philadelphia, Pa. Filed Apr. 26, 1888. Serial No. 271,787. (No model.)



Claim.—1. A tool-rest attachment to lathes or shaping-machines, consisting of three apertured and inclined-face plates placed around the tool-post and resting on the tool-block and on each other, substantially as herein set forth.

2. A tool-rest attachment to lathes or shaping-machines, consisting of three apertured and inclined-face plates placed around the tool-post and resting on the tool-block and on each other, and said plates having holes which coincide when the plates are adjusted with a level tool-supporting face and adapted to receive a locking-pin, substantially as herein set forth.

3. A tool-rest attachment to lathes or shaping-machines, consisting of three apertured and inclined-face plates placed around the tool-post and resting on the tool-block and on each other, the upper and lower plates inclined or beveled at one side or face and the center plate inclined or beveled at both sides or faces, substantially as herein set forth.

4. The combination, with a tool-block, A, and its tool-post B, apertured at *b*, of a series of three beveled or inclined-face plates, E F G, placed around the tool-post and on the tool-block and on each other, and a set-screw, C, in the tool-post and adapted to clamp the tool to the upper plate however the series of plates may be relatively adjusted, substantially as shown and described.

385,846. WIRING SWITCH-BOARDS. JAMES A. COOK, Detroit, Mich., and FRANK R. COOK, Toledo, Ohio, assignors to the Western Electric Company, Chicago, Ill. Filed July 25, 1887. Serial No. 245,219. (No model.)

Claim.—1. The combination, with two or more multiple switch-boards having vertical divisions, of spring-jack switches and cables provided with wires connecting with said spring-jacks, said cables being run directly from one board to another at the rear and placed in horizontal layers, the cables in each layer corresponding to the number of said divisions of each switch-board and each cable being connected with a single strip or set of switches on each of the switch-boards.

2. In combination with the uprights of a switch-board and projecting from the rear thereof, the pins *i*, having the screw-cap *j*, the sleeve K, with the cables resting thereon, substantially as described.

3. The combination, with the strips of spring-jack switches arranged upon different multiple switch-boards in the same order, of telephone-lines, each connected with a different switch on each of the boards, the connections being made from the rear of the board, the wires for the connections being made up in cables extending horizontally from one board directly to another board, the cables being placed in layers, the different layers being adapted to be separated or crowded apart, whereby any cable may be removed with its attached strips of spring-jacks, substantially as described.

385,847. VELOCIPEDE. JAMES S. OSWLAND, Hartford, Conn., assignor to the Pope Manufacturing Company, Portland, Me. Filed Dec. 3, 1887. Serial No. 256,845. (No model.)

Claim.—1. In a velocipede-frame, the tubular pillar C, the tubular forks (C^2 C^2 and C^3 C^3, and the connecting-brackets c c' c^3, constructed and combined essentially as set forth.

2. In a velocipede-frame, a combined seat-supporting and handle-supporting bracket, E^3 *e*, constructed to hold a seat-rod and steering-post separately and adjacently.

3. In a velocipede-frame, a connecting-bracket, as *c'*, constructed to connect a fork and a reach and to afford a tubular seat for a handle-bar-supporting rod.

4. In a velocipede-frame, a connecting-bracket, as *c'*, constructed to connect a fork and reach, and a tubular pillar, and to afford a tubular seat for a handle-bar-supporting rod.

5. In a velocipede-frame having a longitudinal reach, as C, and a transverse reach, as D D, an arc-bracket, as C^3, constructed to operate essentially as set forth.

6. In a velocipede-frame, the combination, with a longitudinal reach, as C, of two transverse reaches, as D D, hinged as at K, and an arc-bracket, as C^4, having slots, as c^2 c^2, and bolts, as P P, essentially as set forth.

7. In a velocipede, the combination, with a longitudinal reach, as C, of two transverse reaches, as D D, hinged as at K, and an inclined arc-bracket, as C^4, and bolts, as P P, having a plurality of positions in the bracket, and inclined steering-spindles *d d*, essentially as set forth.

8. In a velocipede-frame, the combination of a longitudinal reach, as C, a transverse reach, as D D, an arc-bracket, as C^4, having arms, as c^4 c^4, and bolt-lugs, as c^5 c^5, and bolts, as P P, securing the bracket and transverse reaches together.

9. The combination, with a reach, as C, in a velocipede, of two wheels, as B B, and their axles, two dwarf heads, as B^2 B^2, and hinged transverse reach, as D D, arms, as c^4 c^4, having slots curved on circular arcs concentric with the hinge of the transverse reach, and devices for securing the longitudinal reach and the two arms of the transverse reach at different angles with each other.

10. The combination, with any suitable frame and driving and steering and seat, handle, and pedal mechanisms in a velocipede, of two parallel guiding-wheels and folding mechanism, substantially as described, constructed to be adjusted and operated with a less or greater width between the guiding-wheels.

11. The combination, with a single rear driving-wheel, as A, with its sprocket, as F^6, and chain, as F^6, and a suitable frame having parts for supporting seat and handle devices adjacent to the driving-wheel, and a forward reaching part, as C, of a driving-sprocket, as F^5, a bell-crank axle, and bearing mechanisms located forward of the seat and handle supports and connected with the forward reach and adjustable sprocket, as F^5, essentially as set forth.

12. The combination, in a velocipede, of a vertical central handle-bar supporting and steering post, as G^2, beneath the seat and forward of the seat-supporting rod and in rear of pedal-driving sprocket mechanism.

13. In the steering mechanism of a velocipede, the combination of a vertical steering-post, as G^2, seats for it, as *e e'*, and adjustable bearing-rings, as G^3 G^4, constructed and combined essentially as set forth.

14. In combination with a vertical steering-post, as G^2, and a longitudinal steering-rod, as G^5, an adjustable steering wrist and joint, as G^6, essentially as set forth.

15. In a velocipede steering mechanism, the combination, with a steering-post, as G^2, of a handle-bar lug, as g' g^2, and a steering wrist and joint, as G^4, adjustable relatively to each other about the axis of the post.

16. In a velocipede steering mechanism, the combination, with a steering-post, as G^2, of steering wrist and joint, adjustable both vertically and about the axis of the post.

17. In a velocipede steering mechanism, the combination, with a steering-post, as G^2, of a combined adjustable bearing-ring and a steering wrist and joint, as G^4 G^6, essentially as set forth.

18. The combination, in a velocipede, of a handle and bar, a vertical steering post and wrist, a guiding-wheel and lever-arm, and a horizontal steering-rod, as G^5, and its joints.

19. In a velocipede, the combination, with a vertical steering post and wrist and a longitudinal steering-rod, of a hinge-bolt, crank-lever, and transverse steering-rod, as G^9, on a lever-arm connected with the guiding-wheel.

20. In a velocipede having two guiding-wheels and a longitudinal steering-rod, two transverse steering-rods, as G^9 G^9, hinged together at their inner ends and each to an arm from one wheel at its outer end, and connected by lever-arms, as G^7 G^8, to operate with the longitudinal steering-rod.

21. In combination with a steering-handle of a velocipede and suitable connections operated by it, a bell-crank lever, as G^7 G^8, two transverse steering-rods, as G^9 G^9, arms, as G^{10} G^{10}, and the axis of two swivel guiding-wheels.

22. The combination, in a velocipede, of two guiding-wheels, a folding secondary frame, and a folding secondary steering mechanism, constructed and combined with a main frame, and a main steering mechanism, essentially as set forth, to permit and secure parallelism of the guiding-wheels in different positions, and at the same time an automatic adjustment of the steering devices to secure equal deflection of the wheels in guiding the machine.

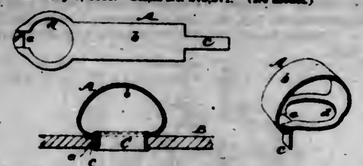
23. The combination, in a velocipede, with a part of the main frame, as C, and a part of the main steering mechanism, as G^2, and with two guiding-wheels, as B B, and their suitable axles and swivel steering-heads, of adjustable hinged reaches, as D D' and D D^2, and securing devices, as d^4 c^4 c^5 P, and adjustable ring steering-rods, as G^5, lever-arms, as G^{10} G^{10} G^8 G^7, and their suitable connections, constructed to operate essentially as set forth.

24. In a velocipede, the combination of bolt K *k'*, lug c^6, nut K', cones k^2 k^2, and lugs *d' d'*, essentially as set forth.

25. In a velocipede, the combination of bolt K *k'*, lug c^6, nut K', cones k^2 k^2 k^2 k^2, nut k^2, and lugs *d' d'* g^6, essentially as set forth.

26. In a velocipede, the combination of bolt L, lever G^8, cones *l l'*, nut L', and rod ends g^6 g^6, essentially as set forth.

27. The combination, in a velocipede, of a brake-lever, as H, connecting-rod, as H^2, bell-crank lever, as H^3, adjustable connecting-rod, as H^4, and lever-brake, as H^5 H^6, constructed to operate from a handle-bar upon the periphery of a wheel.

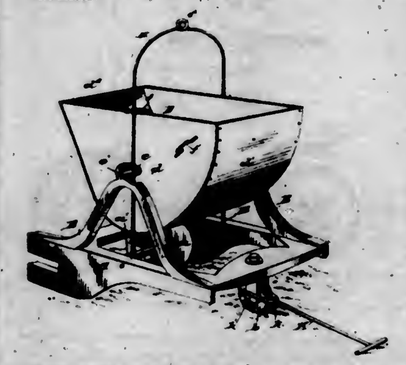


28. An improved velocipede consisting in a single driving-wheel and two guiding-wheels abreast and a suitable main frame, and seat, pedal, driving, and main steering mechanisms, and folding transverse secondary frame and steering devices, constructed to operate with the guiding-wheels at two or more different distances apart, essentially as set forth.

29. An improved velocipede consisting in any suitable driving wheel or wheels and driving mechanism, a main frame, seat, pedal, and handle, and main steering mechanisms, and two guiding-wheels abreast, and a secondary transverse frame and steering devices, constructed to operate both to incline and to deflect the guiding-wheels in parallel planes in steering, essentially as set forth.

30. An improved velocipede consisting in any suitable driving wheel or wheels and driving mechanism, a main frame, seat, pedal, handle, and main steering mechanisms, and two guiding-wheels abreast, a secondary transverse folding frame, and steering devices constructed to operate in two or more positions of breadth between the guiding-wheels, both to incline and to deflect the guiding-wheels in parallel planes in steering, essentially as set forth.

31. An improved velocipede combining in suitable driving and guiding wheels, frame, pedal, and guiding, seat, and handle mechanisms, constructed with an adjustable seat-supporting rod, and adjacent to it an adjustable handle-supporting steering-post, as G^2, located in rear of the crank-sprocket and beneath the seat, essentially as set forth.



385,848. SHOE-FASTENING. GEORGE H. COUDON, Baltimore, Md. Filed May 9, 1888. Serial No. 273,271. (No model.)

Claim.—1. The within-described eye-like fastening for laced boots or shoes or other articles of wear, composed of a metal plate having a body, *b*, a tongue, *c*, at its one end, and an opposite approximately circular open end, *d*, formed with a recess, *e*, and depressed portion *f*, adapted to receive the tongue *c*, upon suitably bending the plate, within or through it, whereby the fastening is closed and capable of being secured by an independent eyelet to the material carrying it, as set forth.

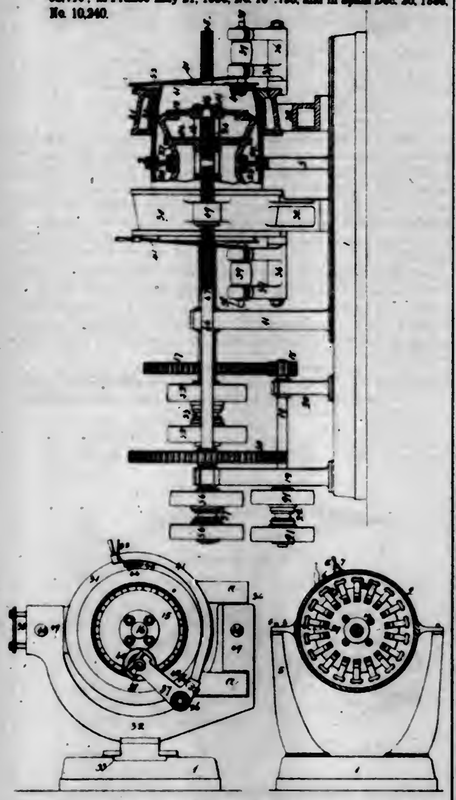
2. The combination, with boots, shoes, or other articles of wear, of the fastening A, composed of a bent strip of sheet-metal having a tongue, *c*, at its one end and an apertured portion, *d*, at its other end, having a recess, *e*, and depression *f*, with which said tongue is made to engage, and the independent eyelet C, essentially as shown and described.

385,849. COMBINED FREIGHT BUCKET AND TRUCK. LOUIS A. DE MAYO, Jersey City, N. J. Filed Sept. 23, 1887. Serial No. 250,904. (No model.)

Claim.—1. The combination, with a truck, of a carrier pivotally mounted thereon and a bail secured to the truck and to the trunnions of the carrier, substantially as described.

2. The combination, with a truck, of a carrier pivotally mounted thereon and a bail having its end secured to the truck and provided with eyes through which the trunnions of the carrier pass, substantially as herein shown and described.

3. The combination, with a truck and vertical aligning standards at each side, of a carrier pivoted in said standards over the truck, a bail attached to the sides of the truck within the standards, encircling the trunnions of the carrier, and projecting over the carrier, having an eye formed integral with its highest point, and means, substantially as described, for tripping the carrier.



4. The combination, with a truck, A, mounted upon wheels *a* and *b*, and vertical standards B, secured to the truck at each side, of a carrier provided with trunnions *c'*, journaled in said standards, a bail, E, attached to the truck centrally inside the standards and projecting upward over the carrier, provided with aligning side eyes, *e*, adapted to encircle the trunnions, and an upper central eye, e^2, adapted for attachment to a hoist, and means, substantially as described, for retaining the carrier in a horizontal position.

5. The combination, with a truck, A, mounted upon wheels *a* and *b*, parallel vertical standards B, secured to the truck at each side, and a detachable handle, K, adapted for attachment to one forward wheel of the truck, of a carrier, D, provided with an inclined spout, d^3, handle *f*, and trunnions *c'*, journaled in the standards, a bail, E, attached to the sides of the truck centrally inside the standards and projecting

upward over the carrier, provided with aligning side eyes, *c*, adapted to encircle the trunnions *c'*, and an upper central eye, *c²*, adapted for attachment to a hoist, and a forked catch, *f*, hinged to the carrier, adapted to engage the bail E, substantially as and for the purpose herein set forth.

385,850. MACHINE FOR MAKING CASKS AND BARRELS

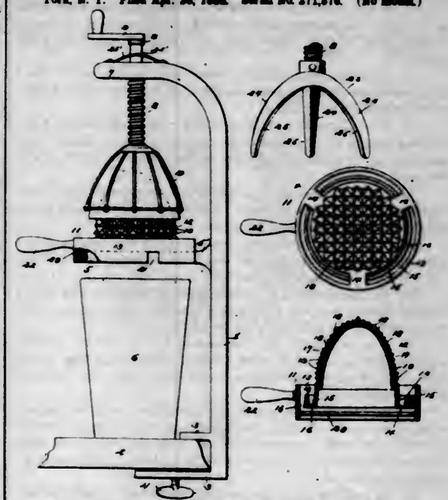
ALEXANDER DUNBAR, Guelph, Ontario, Canada. Filed Aug. 7, 1886. Serial No. 210,271. (No model.) Patented in England June 9, 1884, No. 8,760, and June 30, 1885, No. 7,983; in Germany Apr. 5, 1886, No. 32,716; in France May 21, 1886, No. 167,795, and in Spain Dec. 20, 1886, No. 10,240.

Claim.—1. In a barrel-making machine, the combination of two sliding trussing-heads with a removable guide-ring supported between said heads, substantially as and for the purpose set forth.

2. In a barrel-making machine, the combination of sliding trussing-heads with a removable guide-ring supported between said heads, a segment of said ring being hinged so as to open, substantially as described.

3. In a barrel-making machine, the combination of two trussing-heads sliding in guides, one of said heads being pivotally mounted on its supporting-standard so that it may be swung open to permit the barrel to be withdrawn, with means for advancing or retracting said heads toward and from one another, substantially as described.

4. In a barrel-making machine, a trussing-head having a bracket pivoted to its outer face and a tool-spindle mounted in said bracket, substantially as and for the purpose set forth.



5. In a barrel-machine, the combination of a trussing-head having a bracket pivoted to its outer face and a tool-spindle mounted in said bracket, with means for adjusting and holding said bracket in position on its pivot, substantially as and for the purpose set forth.

6. In a barrel-making machine, the combination of a guide-ring, a series of spring-bearers supported within said ring for holding the staves in position, and means for moving said bearers in or out, substantially as described.

7. In a barrel-making machine, the combination of a central threaded shaft, 10, disks 25 and 26, engaged by said shaft, curved arms 27, passing through holes in said disks, and stave-bearers carried by said arms, substantially as and for the purpose set forth.

8. In a barrel-making machine, the combination of two trussing-heads sliding in suitable guides on the frame of the machine, a guiding-ring supported between said heads, and a revolving collapsible core within said ring, substantially as and for the purpose set forth.

385,851. LEMON-JUICE EXTRACTOR. JOHN L. EASLEY, New York, N. Y. Filed Apr. 26, 1888. Serial No. 271,878. (No model.)

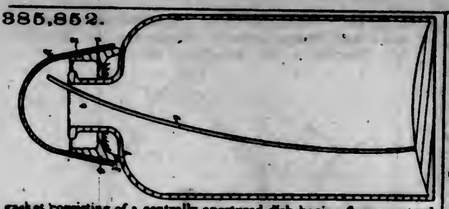
Claim.—1. In a lemon-juice extractor, a clamp for holding a piece of lemon, consisting of a rotary frame having vertical curved arms or ribs, between which a lemon may be wedged, with openings between the arms by means of which the lemon-skin may be dislodged from the frame, substantially as shown and described.

2. In a lemon-juice extractor, a clamp for holding a piece of lemon, consisting of a rotary frame formed with inverted cup 27, with interior vertical ribs, 28, having points 26, and openings 29 between the ribs 28, substantially as shown and described.

3. In a lemon-juice extractor, a pulp-disintegrator and juice-extractor, consisting of an oval-shaped vertical projection having a solid surface with facets and a laterally-extending base portion with slots beneath the grooves formed by the facets, and a supporting-flange, substantially as described.

4. A lemon-juice extractor consisting of a standard having a bracket, a detachable frame mounted on the bracket, and formed with a vertical projection having an abrading-surface consisting of facets, and a laterally-extending base portion with vertical slots and a supporting-flange exterior thereto, and a rotary vertically-movable clamp located above the bracket, with mechanism in the standard for operating the same, substantially as described.

5. In a lemon-juice extractor, a rotary vertically-movable clamp for holding a piece of lemon, provided with an operating screw-rod having a smooth portion and cushioning-spring, thereby permitting the screw-rod to have a yielding vertical rotary movement when released from threaded engagement, substantially as described.



6. In a lemon-juice extractor, a detachable frame, 11, for disintegrating and retaining the pulp and seeds of a lemon and permitting the juice to flow freely, consisting of the oval vertical central portion, 12, having a surface formed with the diamond-shaped projections 18, and intersecting grooves 19, the concentric strips 13, with downwardly-tapering slots 15 adjacent to the base of vertical portion 12, and the supporting-flange 20 and handle 22, substantially as described.

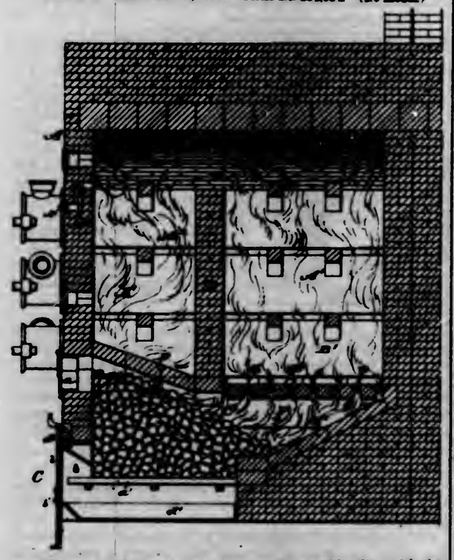
7. A lemon-juice extractor consisting of standard 1, with ring 5 and arm 5', the detachable frame 11, with handle 22, supported on ring 5, and consisting of central vertical portion 12, with abrading-surface 17, and having grooves 19, and adjacent to its base concentric strips 13, and slots 15, and the wire lemon-holding frame 10, having vertical screw 8, mounted in standard 1, and handle 9, with cushioning-spring 25', substantially as described.

385,852. CLOSURE FOR BOTTLES. WILLIAM BROWNSON, Denver, Colo. Filed Nov. 14, 1887. Serial No. 255,136. (No model.)

Claim.—1. A flanged rubber gasket adapted to be seated upon the neck of a bottle and to receive upon its outer periphery a cap, such

385,852.

gasket consisting of a centrally-apertured disk having flanges extending from its periphery, substantially as set forth.

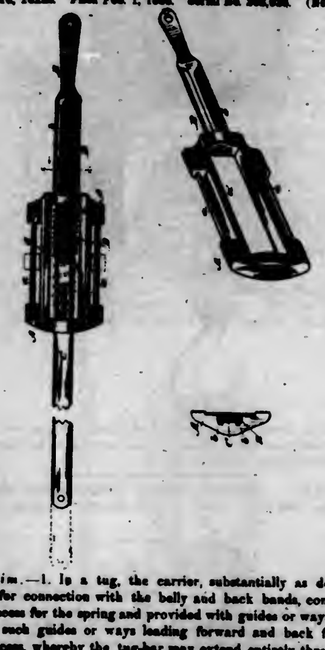


2. The combination of a flanged gasket having a centrally-apertured disk for taking upon the neck of a bottle, a flange for taking upon the shoulder of a bottle, a flange for receiving a cap, and a cap adapted to take and be seated upon the latter flange, substantially as set forth.

385,853. COMPOUND AIR-COMPRESSING PUMP. ERNEST C. EASLEY, Albany, N. Y., assignor of one-half to Ezra W. Smith, same place. Filed Apr. 9, 1888. Serial No. 270,063. (No model.)

Claim.—A compound air-compressing pump consisting of an inner stationary cylinder and an outer movable cylinder that is arranged concentrically to said stationary cylinder, the said stationary cylinder having a piston-head which fits the bore of the movable cylinder and is provided with valved inlet and outlet air-openings, and said movable cylinder being provided with a piston-head which is fitted to the bore of the stationary cylinder, as and for the purpose herein specified.

385,854. RETORT GAS-FURNACE. DESLEY D. FLEMMING, Jersey City, N. J. Filed Mar. 22, 1887. Serial No. 231,964. (No model.)



Claim.—1. In a gas-retort furnace, the combination, with the bench A, divided into a front and rear compartment by a vertical partition, of an arch dividing the front compartment from the fuel mass, substantially as shown and described, whereby a generating-chamber is formed and the first products of combustion compelled to pass around the rear of the retorts, as set forth.

2. In a gas-retort furnace, the combination, with the bench A, divided into a front and rear compartment, A' A², by a vertical partition, B, and an arch or horizontal partition, D, integral with said vertical partition and the front wall of the furnace, whereby a generating-chamber, C, is formed, of a series of channels or openings, G, in the upper rear end of said chamber and flues H H', adapted to supply air above said channels, substantially as shown and described, and for the purpose herein set forth.

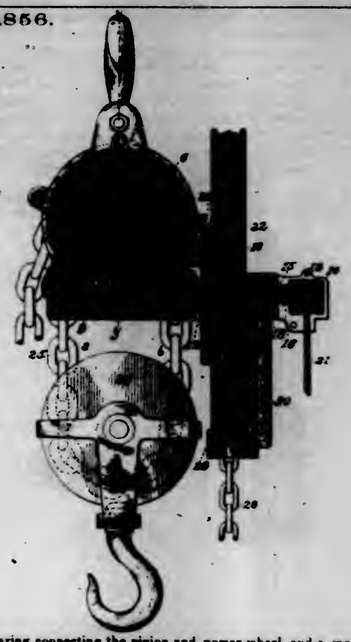
3. In a gas-retort furnace, the combination, with the bench A, divided into a front and rear compartment, A' A², by a partition, B, an arch, D, uniting said partition and the forward wall of the furnace, whereby a generating-chamber, C, is formed, and supplemental air-ducts N² above the retorts, of a series of channels or openings, G, intervening the retorts at the rear, and the generating chamber and flues H H', adapted to supply air above said channels, substantially as shown and described, and for the purpose herein set forth.

385,855. TUG. STEPHEN H. FISHER and WILLIAM J. MALEBY, Baird, Texas. Filed Feb. 1, 1888. Serial No. 262,689. (No model.)

Claim.—1. In a tug, the carrier, substantially as described, adapted for connection with the belly and back bands, constructed with a recess for the spring and provided with guides or ways for the tug-bar, such guides or ways leading forward and back from the spring-recess, whereby the tug-bar may extend entirely through and beyond the opposite ends of the spring-receiving recess, combined with the tug-bar and the spring, substantially as and for the purposes specified.

2. As an improvement in tugs, the herein-described carrier, having a recess for the spring and keepers for the connection of the belly and back bands, and having the bar B extended forward from it and formed with guides *b* for the forward end of the tug-bar, all substantially as and for the purposes specified.

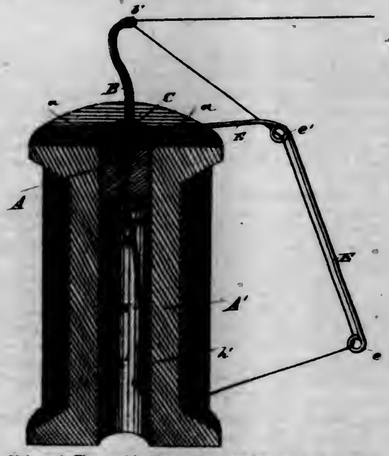
3. The improvement in tugs, substantially as herein described and shown, consisting of the carrier A, having keepers at its upper and lower edges and chambered at *a'*, forming a recess, the connecting-bar B, extended forward from the carrier A and formed with guides *b*, the tug-bar movable through the carrier and having its forward end arranged to be engaged by the guides *b*, and the spring located in recess *a'* and connected substantially as and for the purposes specified.



385,856. HOISTING-TACKLE. JAMES T. HANRAY, Pittsburg, Pa. Filed Aug. 13, 1887. Serial No. 246,827. (No model.)

Claim.—1. In a hoisting-tackle, the combination of the sprocket-wheel, a worm-and-gear mechanism for rotating said wheel, and a chain passing around the sprocket-wheel and having one end connected to the frame of the sprocket-wheel, said worm-and-gear mechanism serving not only to rotate the sprocket-wheel, but also as a stop for holding the load at any desired point, substantially as set forth.

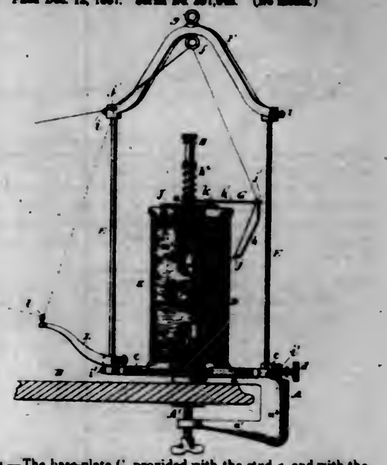
2. In a portable hoisting-tackle, the combination of a sprocket-wheel, a worm-and-gear mechanism for rotating said wheel, a power-wheel mounted on the shaft of the worm and having a speed-connection to said shaft, and a power-connection thereto through interposed gearing, substantially as set forth.



3. In a portable hoisting-tackle, the combination of the sprocket-wheel, a worm-and-gear mechanism for rotating said wheel, a power-wheel and a pinion loosely mounted on the shaft of the worm, suit-

385,856.

able gearing connecting the pinion and power-wheel, and a movable key for locking either the pinion or power-wheel to the shaft of the worm, substantially as set forth.

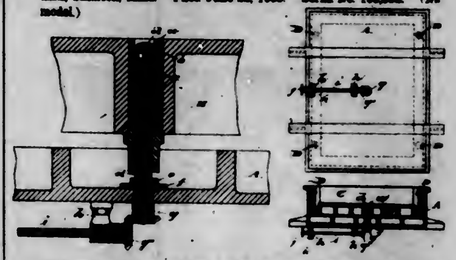


385,857. THREAD-UNWINDER. THOMAS HANDLEY, Willimantic, Conn. Filed Feb. 14, 1888. Serial No. 264,023. (No model.)

Claim.—1. The combination, with a spindle provided with a closed eye at one end and an open eye at the other end, a button held upon the spindle between the eyes, and an angular guide-arm projected from the spindle, of spring-arms detachably suspended from the lower end of the spindle, flexing in opposite directions, substantially as shown and described.

2. The combination, with a spindle provided with a closed eye at one end and an open eye at the other end, a button held upon said spindle, a stop above the button, and an angular outwardly-projecting guide-arm, of spring-arms detachably suspended from the lower end of the spindle, flexing in opposite directions, and sleeves mounted upon said arms, substantially as shown and described, and for the purpose specified.

385,858. THREAD-UNWINDER FOR SEWING-MACHINES. ALBERT J. HART, Brooklyn, assignor to Alexander King & Co., New York, N. Y. Filed Dec. 12, 1887. Serial No. 257,662. (No model.)

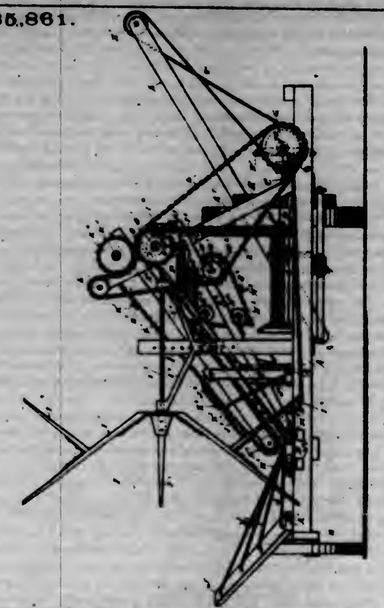


Claim.—The base-plate C, provided with the stud *c*, and with the uprights E and cross-piece F, in combination with the spool placed upon the stud *c*, the plate J, rod H, flier G, placed on said rod, and the ring K, placed upon the thread below the flier, substantially as described.

385,859. CEMENT. ISAAC C. HATCH, Santa Cruz, Cal. Filed Oct. 4, 1887. Serial No. 251,441. (No specimens.)

Claim.—The herein-described composition of matter constituting a cement, consisting of lime, sand, coralline, and sugar, combined substantially in the proportions specified.

385,860. LITHOGRAPHIC PRINTING-MACHINE. JOHN T. HAWKINS, Taunton, Mass. Filed June 22, 1886. Serial No. 205,392. (No model.)



Claim.—In a lithographic printing-machine, in combination with a stone-plate and one or more supporting-bushes, marginal leveling-screws, as D, operated from the top to level said plate, and one or more bush-adjusting screws, as *d*, operated from the under side of the bed or box of said machine and passing up therethrough, whereby each of said bush-adjusting screws is adjusted to support the stone-plate and to prevent its springing under pressure and the consequent fracture of the stone, substantially as set forth.

385,861. CORN HARVESTING AND HUSKING MACHINE. JOHN A. HILBERT, Carroll, Iowa. Filed June 30, 1887. Serial No. 243,031. (No model.)

Claim.—1. In a corn-harvester, the combination, with the frame, the cutting mechanism at the front thereof, and the guide-arms at opposite ends of the cutter, of the vertical reel journaled at the front of the frame and having spokes or arms provided toward their outer ends with prongs or fingers forming, in connection with the ends of the spokes, angle-arms extending below and passing at opposite sides of the guide-arms and so as to remove the stalks therefrom, substantially as set forth.

2. In a corn-harvester, the combination, with the frame, the cutting mechanism, and the guide-bars at the front thereof, of the forwardly-inclined standard I^3, secured at its lower end to the front of the main frame, the vertically-adjustable bracket I^4 on said standard, the vertically-revolving reel journaled in said bracket and having inclined

385,861.

spokes or arms I', and the fingers or prongs I^2, secured to said spokes at right angles thereto, fingers or arms, and the ends of the spokes or arms extending below and outside of the said guides, substantially as set forth.

3. In a corn harvesting and husking mechanism, the combination, with the endless stalk-carrier K, of the toothed stem and husk severing wheel or disk under the same, a stationary plate adjacent to said wheel, a space for the ear being forced between the plate and wheel, and the endless chain having fingers for forcing the ears to the wheel and stationary plate and revolving at a greater speed than the stalk-carrier, substantially as set forth.

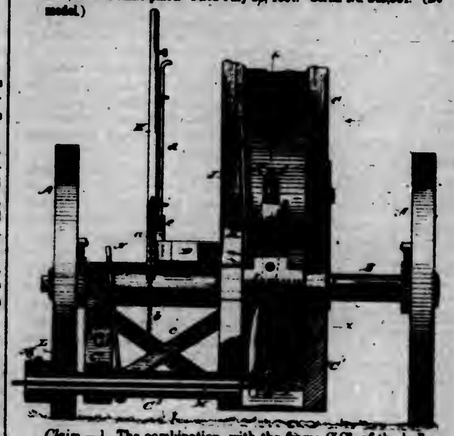
4. In a corn harvesting and husking machine, the combination, with a toothed wheel and a stationary toothed plate, of guide-plates leading to said toothed wheel, and endless chains carrying cross-arms provided with fingers passing between said plates, so as to force the ears along said plates to said toothed wheel and its toothed plate, substantially as shown and described.

5. In a corn harvesting and husking machine, the combination, with the carrier K, provided with the cross-bars K^3, having fingers K^4, of the beams K^1, extending in line with said carrier K and supporting the stalks conveyed upward by said carrier, the plates P^4, each provided with an inclined end extending in line with said carrier, and the endless chains N^2, provided with cross-beams N^4, having prongs or fingers N^3, for pushing the ears between said plates P^4, substantially as shown and described.

6. In a corn harvesting and husking machine, the endless chain K', the cross-bars K^3, held on said endless chains K', the fingers or prongs K^4, extending outward from said bars K^3, and the guide-rods J^2 and the beams K^1, both extending in line with the chain K', in combination with the plates P^4, extending horizontally and each having a downwardly-inclined receiving end extending in line with said chain, the inwardly-extending prongs P^5, secured to said plates P^4, for supporting the stalks while the ears are being removed, the endless chains N^2, the cross beams N^4, secured to said chains N^2, and the prongs or fingers N^3, for pushing the ears between said plates P^4 and along the same, substantially as shown and described.

7. The combination, with the brackets, the plates P^4 on the upper sides thereof, a parallel plate, P^3, secured to each bracket at one side thereof, and the rotary stem and husk severer at the rear end of said plates, of the ends of diverging spring-plates Q' under each plate P^3, their free ends lying adjacent to the rotary severer, substantially as set forth.

8. In a corn harvesting and husking machine, the combination, with the guide-plates and the horizontal toothed plate P^3, of the horizontally-rotating toothed wheel P', between which and the said plate the stems and adhering husks are acted upon, substantially as set forth.



9. In a corn harvesting and husking machine, the stem and husk severing toothed wheel P' and the stationary toothed plate P^3, extending in line with the teeth of said wheel P' and having a downwardly-extending tooth reaching under said wheel P', and the spring-plates Q', each having on its outer end a hook, Q^2, for holding the husk while the latter and the stems are being severed from the ear by said wheel and said toothed plate P^3, substantially as shown and described.

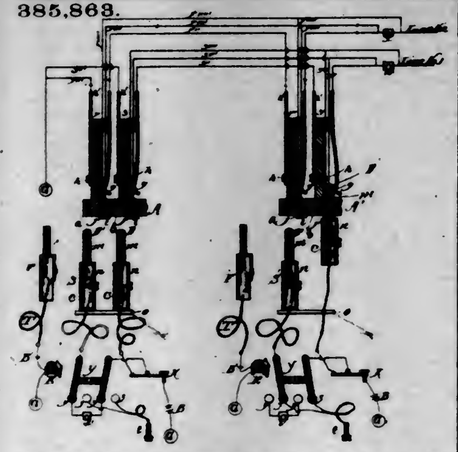
10. In a corn harvesting and husking machine, the combination, with the reel I, having the inclined arms or spokes I', each provided with a prong, I^2, of the guide-arms H^3, diverging at their outer ends, having notches at their front ends, and the guide-arms A', extending from the main frame of the machine, and also provided with notches at their front ends, so as to prevent the stalks from sliding off after being cut, substantially as shown and described.

11. In a corn harvesting and husking machine, the combination, with the reel I and the guide-arms A' and H^3, each provided with notches near its pointed front end, of the inclined supporting-rods J, upon which the stalks are forced by said reel I, the guide-rods J^2, and the carrier K, for conveying the stalks upward at the under side of said carrier, said stalks being prevented from falling upon the carrier by said rods J^2, substantially as shown and described.

12. In a corn harvester and husker, the combination, with the frame, the stalk-cutting mechanism at the front thereof, the reel journaled above the cutter, the transverse supporting-rods J, inclined inward and downward from the side of the frame to a point in rear of the cutter and then upward and downward to the frame, and the supporting-rods J^2, extending upward beyond the lower ends of rods J and at about the same inclination, of the inclined stalk-carrier K over said bars J J^2, and extending at its lower ends to the bends in the former, substantially as set forth.

385,862. HOWER. ROBERT D. HOKE and ISAAC A. HARPER, Washington, Dak., assignors of one-half to Charles H. Curtiss and David T. Hire, both of same place. Filed July 30, 1887. Serial No. 245,281. (No model.)

Claim.—1. The combination, with the frame C C^2, of the hollow tube C^3, journaled loosely in said frame, the supporting-wheel L, loosely journaled on the tube, the knife-pitman extending through said tube, the oscillating lever attached to the pitman and bearing cam-groove, and the driving-disk with radial projections, substantially as shown and described.



2. The combination of the frame C C^2, the hollow tube C^3, loosely journaled therein and having the rigidly-attached inner divider, M, adjusting-lever N, rigidly attached to the tube bearing said inner divider, the pitman extending through the hollow tube, the oscillating lever attached to said pitman and provided with cam-groove, and the driving-disk having radial projections playing in said cam-groove, substantially as and for the purpose described.

3. The combination, with the wheel F, with radial bolts and the lever G with cam-groove, of a housing consisting of lower section, C', having its front end curved as a runner, an upper section, C, hinged to C', the hollow rock-shaft C^3, one end of which is journaled loosely in the casing C and the other end in the wheel L and bar C^2, the pitman H, bar C^2, wheel L, and adjusting-lever N, to rock said shaft C^3, substantially as and for the purpose described.

385,863. MULTIPLE SWITCH-BOARD. MILO G. KELLOGG, Hyde Park, Ill. Filed Apr. 23, 1887. Serial No. 236,205. (No model.)

Claim.—1. In a telephone-exchange system, the combination of lines normally grounded at the central office with switches at the central office, one switch for each line, annunciators, one annunciator in each line placed in the central office between the line-switch and the

385,863.

subscriber's station, branch wires, one wire branching from each line between its annunciator and its subscriber's station to an insulated piece of its switch, a pair of switch-plugs with flexible cords, and a clearing-out annunciator, said clearing-out annunciator being in a circuit which connects the contact-points of the plugs and each of said plugs being adapted when inserted into a switch to disconnect the line which belongs to the switch from the ground and to connect its contact-point to the line both through the calling-annunciator and through the insulated contact-piece of the switch and its branch wire, whereby, by the insertion of the plugs into the switches of any two lines, the lines are disconnected from the ground and are connected together for conversation, their calling-annunciators being shunted or short-circuited by wires of small resistance, and the clearing-out annunciator being in the circuit of the lines so connected.

2. In a telephone-exchange system, two subscribers' lines temporarily disconnected from the ground at the central office and connected together for conversation, with their calling-annunciators shunted by wires of small resistance, in combination with a clearing-out annunciator in the circuit of said lines, substantially as and for the purpose set forth.

3. In a telephone-exchange system, two or more switch-boards at which the same lines are connected, switches, one for each line on each board, and branch wires, one wire branching from each line between its calling-annunciator and its subscriber's station to an insulated piece of its switch on each board, in combination with switch-plugs with flexible cords at each board, each of said plugs being adapted when inserted into a switch to connect its contact-point to the line both through the calling-annunciator and through the insulated contact-piece of the switch and its branch wire, whereby when a plug is inserted into the switch of any line at either board the line is connected to the flexible cord and its calling-annunciator is shunted or short-circuited by a wire of small resistance, substantially as and for the purpose set forth.

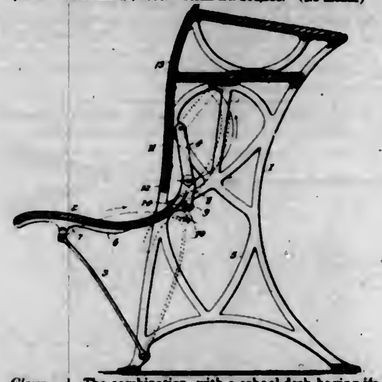
4. In a telephone-exchange system, a telephone-line grounded at the subscriber's station and normally grounded at the central office, and a switching device at the central office in the circuit of said line adapted to disconnect the line from the ground and connect it with another line for conversation, in combination with a test-bolt connected to said line between the subscriber's station and the switching device, (whether the line is switched or not,) a local test wire or circuit, said wire or circuit being grounded at one of its ends and connected at its other end to a switch-testing device adapted at the will of the operator to be brought into connection with said test-bolt, a test-receiving instrument and a battery, said instrument and said battery being connected in said test wire or circuit between its end which is grounded and its end which is connected to said switch-testing device, said battery being so small (or weak) that it will not operate said test-receiving instrument when, on the test being applied and the line being switched for conversation, there is a complete circuit through the test instrument and battery to the ground at the subscribers' stations only, but said battery being so strong as to operate said test-receiving instrument when, on the test being applied and the line being not switched for conversation, there is a complete circuit through the test instrument and battery both to the subscriber's ground and to the office ground of the line, substantially as and for the purpose set forth.

5. In a telephone-exchange system, telephone-lines grounded at the subscribers' stations and normally grounded at the central office, and two or more switch-boards for said lines, each board having a switching device for each line, each switching device being adapted to disconnect its line from the ground and to connect it with another line for conversation, in combination with test-bolts, one for each line on each board, each test-bolt being connected to its line between the subscriber's station and the switching devices of the line, local test wires or circuits, one for each board, each wire or circuit being grounded at one of its ends and connected at its other end to a switch-testing device adapted at the will of the operator to be brought into connection with any test-bolt at her board, a test-receiving instrument and battery for each test wire or circuit, the test instrument and battery being in said wire or circuit between its end which is grounded and the end which is connected to its switch-testing device, and the instrument being at the board to which the test-wire belongs, said battery being so small (or weak) that it will not operate said test-receiving instrument when, on the test being applied and the line being switched for conversation, there is a complete circuit through the test-receiving instrument and battery to the grounds at the subscribers' stations only, but said battery being so strong as to operate said test-receiving instrument when, on the test being applied and the line being not switched for conversation, there is a complete circuit through the test-receiving instrument and the battery both to the subscriber's ground and the office ground of the line, substantially as and for the purpose set forth.

6. In a telephone-exchange system, a telephone-line normally grounded at the central office by a ground-wire of small resistance, and a switching device in the circuit of said line adapted to disconnect the line from said ground-wire and connect it with another line for conversation, in combination with a test-bolt connected to said line between the subscriber's station and the switching device, a local test wire or circuit, said wire or circuit being grounded at one of its ends and connected at its other end to a switch-testing device adapted at the will of the operator to be brought into connection with said test-bolt, a test-receiving instrument, and a battery, said instrument and said battery being connected in said test wire or circuit between its end which is grounded and its end which is connected to said switch-testing device, said battery being so strong as to operate said test-receiving instrument when closed through the switching device and said ground-wire of small resistance, but so small (or weak) as not to operate said instrument when closed through a larger resistance, substantially as and for the purpose set forth.

7. In a telephone-exchange system, a telephone-line normally grounded at the central office by a ground-wire of small resistance, two or more switch-boards for the exchange, each board having a switching device for said line, each switching device being adapted to disconnect the line from said ground-wire and connect it with another line for conversation, in combination with test-bolts, one for said line on each board, each test-bolt being connected to the line between the subscriber's station and the switching devices of the line, local test wires or circuits, one for each board, each test wire or circuit being grounded at one of its ends and connected at its other end to a switch-testing device adapted at the will of the operator to be brought into connection with the test-bolt at her board, a test-receiving instrument and battery for each test wire or circuit, the test-receiving instrument and battery being in its test wire or circuit between its end which is grounded and its end which is connected to its switch-testing device, and each instrument being at the board to which its test wire or circuit belongs, said battery in each test wire or circuit being so strong as to operate its test-receiving instrument when closed through said switching devices and said ground-wire of small resistance, but so weak (or small) as not to operate said instrument when closed through a larger resistance, substantially as and for the purpose set forth.

8. In a telephone-exchange system, a telephone-line normally grounded at the central office, a switching device for said line adapted to disconnect the line from its office ground and connect it with another line for conversation, and a calling-annunciator in the circuit of the line between the subscriber's station and the switching device, in combination with a test-bolt connected to said line between said calling-annunciator and said switching device, said test-bolt being adapted to be connected at the will of the operator with a test wire or circuit grounded at its other end, in which wire or circuit is a test-receiving instrument and battery, substantially as and for the purpose set forth.



9. In a telephone-exchange system, two or more switch-boards at which the same lines are connected, switches, one on each board for each line, calling-annunciators, one for each line and connected in the circuit of its line between the subscriber's station and the switches of the line, test-bolts, one for each line on each board, each test-bolt being connected to its line between the line-switches and the calling-annunciator, each test-bolt being adapted to be connected at the will of an operator to a test wire or circuit at its board, in which is a test-receiving instrument and battery, and branch wires branching from each line between its subscriber's station and its calling-annunciator to an insulated piece of its switch on each board, in combination with switch-plugs with flexible cords at each board, each of said plugs being adapted, when inserted into a switch, to connect its contact-point to the line both through the calling and through the insulated contact-piece of the switch and its branch wire, all substantially as and for the purpose set forth.

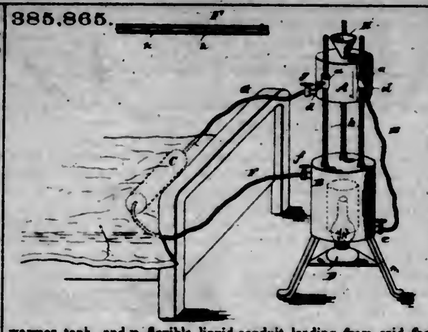
10. In a telephone-exchange system, the combination of the subscribers' lines, the switch-boards, the switches, the annunciators, circuit-connections between the switches and the subscribers' lines through the annunciators, and separate circuit-connections between the subscribers' lines and the switches around or shunting the annunciators, substantially as set forth.

11. In a telephone-exchange system, the combination of a multiple switch-board, the subscribers' lines, the switches, one for each line in each board, their circuit-connections, the test-bolts, one for each switch, connected to the lines between the subscribers' stations and the switches, the test-circuits connected with the lines, but normally in open circuit therewith, a battery and signaling device in the test-circuit, and a test-plug adapted to close the test-circuit at the test-bolt of any line, substantially as set forth.

12. In a telephone-exchange system, the combination of a multiple switch-board, the subscribers' lines, the switches, one for each line in each board, their circuit-connections, the test-bolts, one for each switch, the test-circuit closed through the main line when the line is connected up, but closed through a local circuit when the line is free, said test-circuit including a signaling device and a battery of sufficient strength to operate the signal when a circuit is closed through the unopened switches, but too weak to operate the signal through a circuit including one or more subscribers' lines.

385,864. COMBINED SCHOOL SEAT AND DESK. ALBERT LABOON, Rutland, Vt., assignor to himself and Rockwood Barrett, same place. Filed Jan. 19, 1888. Serial No. 261,262. (No model.)

Claim.—1. The combination, with a school-desk having its front formed with a back for a seat, of a seat extensible in front of the desk and folding within the desk-frame, links for supporting the seat, pivoted at one end to its forward part and at the other end to the lower portion of the desk-frame, links located within the desk-frame, pivoted at their lower end to the rear of the seat and at their upper end to the desk-frame in the rear of the seat-back, and seat-supporting projections within the desk-frame, with which the rear of the seat engages in extended position, substantially as shown and described.



2. The combination, with desk-frame 5, having the supporting-pins 10 and back 11, of the seat 2, extensible in front of the desk-frame beneath back 11 and folding within the desk-frame 5, and having pivoted link-supports 3, connecting the forward part of the seat with the lower portion of the desk-frame, and pivoted links 4, located in the rear of the seat-back 11, within the desk-frame 5, and pivoted thereto at their upper end and at their lower end to curved extensions 8 on the rear of seat 2, and hooks 9 below the pivotal point of extensions 8, engaging supporting-pins 10, substantially as shown and described.

385,865. FOOT-WARMING APPARATUS FOR BEDS. JAMES A LEWIS, St. Clairsville, Ohio. Filed Oct. 31, 1887. Serial No. 253,896. (No model.)

Claim.—1. The combination, with a supply-tank and a heating-tank having a liquid-conduit between them, of an inclosed foot-warmer tank, and a liquid-conduit leading from said heater-tank to said foot-warmer tank, and a liquid-conduit leading from said foot-warmer tank to said supply-tank, substantially as and for the purpose described.

2. The combination, with a supply-tank and a heater-tank having a liquid-conduit between them, of an inclosed foot-warmer tank, and a flexible liquid-conduit leading from said heater-tank to said foot-warmer tank, and a flexible liquid-conduit leading from said foot-warmer tank to said supply-tank, substantially as and for the purpose described.

385,865.

3. The combination, with a supply-tank and a heater-tank having a liquid-conduit, E, between them, of an inclosed foot-warmer tank, and a flexible liquid-conduit, F, leading from said heater-tank to said foot-warmer tank, and a flexible liquid-conduit, G, leading from said foot-warmer tank to said supply-tank, one or more of said liquid-conduits being provided with a regulating-valve, substantially as and for the purpose described.

4. The combination, with a supply-tank and a heater-tank having a liquid-conduit, E, between them, of an inclosed foot-warmer tank and flexible liquid-conduits F G, provided with the rigid tubular sections *k*, leading from said heater to said warmer and from said warmer to said supply-tank, substantially as and for the purpose described.

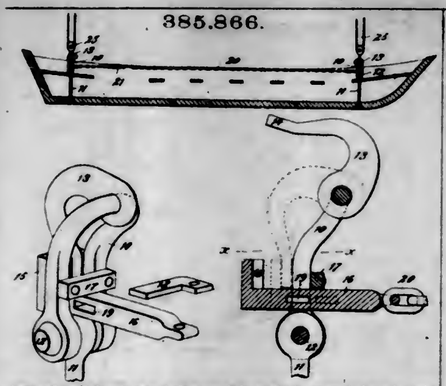
5. The combination, with a heater-tank, B, having vertical supporting-rods *b*, and a supply-tank, A, having guide-clasps *c* and set-screws *d*, and a flexible liquid-conduit, E, between said tanks, of an inclosed foot-warmer tank, C, and liquid-conduits F G, leading from said heater to said warmer and from said warmer to said supply-tank, substantially as and for the purpose described.

6. The combination, with a supply-tank, A, and a heater-tank, B having a recessed bottom, B^2, and a liquid-conduit between said tanks, of an inclosed foot-warmer tank, C, and liquid-conduits F G, leading from said heater to said warmer and from said warmer to said supply-tank, substantially as and for the purpose described.

7. The combination, with a supply-tank, A, having a funnel-shaped inlet, H, the heater-tank B, and a liquid-conduit between said tanks, of an inclosed foot-warmer tank, C, and liquid-conduits F G, leading from said heater to said warmer and from said warmer to said supply-tank, substantially as and for the purpose described.

8. The combination, with a supply-tank, A, having a funnel-shaped inlet, H, and a spherical stopper, *h*, and the heater-tank, and a liquid-conduit between said tanks, of an inclosed foot-warmer tank, C, and liquid-conduits F G, leading from said heater to said warmer and from said warmer to said supply-tank, substantially as and for the purpose described.

9. The combination, with a supply-tank, A, a heater-tank, B, and a foot-warmer tank, C, a liquid-conduit between said supply-tank and heater-tank, a liquid-conduit between said heater and foot-warmer tanks, and a liquid-conduit between said warmer-tank and supply-tank, of a lamp located under said heater-tank, substantially as and for the purpose described.



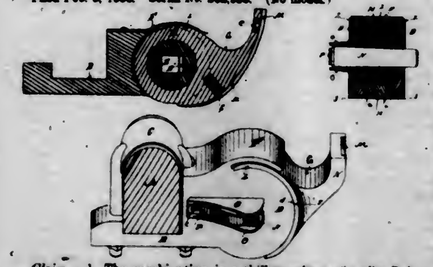
10. The combination, with a supply-tank, A, a heater-tank, B, a foot-warmer tank, C, and a liquid-conduit between said supply and heater tanks, a liquid-conduit between said heater and foot-warmer tanks, and a liquid-conduit between said foot-warmer and supply tanks, of a lamp provided with a non-transparent chimney located under said heater-tank, substantially as and for the purpose described.

11. The combination, with a heater-tank, B, having vertical supporting-rods *b*, a supply-tank, A, having guide-clasps *c*, and set-screws *d*, the funnel-shaped inlet H, and spherical stopper *h*, the foot-warmer tank C, and the flexible conduits E F G, respectively leading from said supply-tank to the heater-tank, from the heater-tank to the foot-warmer tank, and from the foot-warmer tank to the supply-tank, each conduit being provided with a valve, and the said conduits F and G provided with the rigid tubular sections *k k*, of a lamp located under said heater-tank, substantially as and for the purposes described.

385,866. BOAT-DETACHING APPARATUS. ALEXANDER MCCRACKIN, Fairfield, Iowa. Filed June 11, 1887. Serial No. 241,013. (No model.)

Claim.—1. In a boat-detaching apparatus, the combination, with the shackle or its stated equivalent, having a transverse cross-piece and a hook pivoting on upper part of the shackle or its stated equiv-

385,866.



sient, of a sliding bar or bolt passed through the space below the said cross-bar, and having at one end an upward-projecting keeper to receive the free end of the hook when said end is swung down and the keeper moved toward the shackle, substantially as set forth.

2. In a boat-detaching apparatus, the combination, with the shackle 10, or its stated equivalent, having a transverse cross-piece and a hook, 13, pivoting on the upper part of the shackle, of the sliding bar or bolt 16, passed through the space under said cross-piece, and having an upward-extending open keeper, 15, on its end at the outer side of the shackle to receive the free end of the hook 13, and an aperture, 19, to receive the key 18 at the inner side of the shackle, substantially as set forth.

3. A boat-detaching apparatus comprising the two shackles 10, or the stated equivalents thereof, having transverse cross-pieces 17, and oppositely-facing hooks 13, pivoting on the upper parts of the shackles, the two bars or bolts 16, passing through the spaces below the cross-pieces, and having on their outer ends upwardly-projecting keepers 15, open on their sides next to the shackles to receive the free ends of the hooks when the bars or bolts are slid toward each other, and apertures 19, to receive keys 18 at the inner sides of the shackles, a chain connecting the inner ends of said bars or bolts and provided with a slip-hook, and a lanyard, 24, for securing the ring 22 of the slip-hook from longitudinal movement, substantially as set forth.

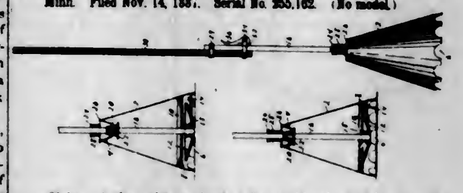
4. The combination, with the boat having the usual eye-bolts, 11, at its ends, of the shackles 10, or their stated equivalents, pivoted to the eyes of said bolts by transverse pivots, and having transverse cross-pieces 17 above the pivots, and the hooks 13 on the upper ends of the shackles and facing the ends of the boat, the sliding bars or bolts 16, extending through the spaces under the cross-pieces 17, and having keepers 15 on their outer ends open on their sides next to the shackles to slide over the free ends 14 of the hooks when the said bars or bolts are drawn toward each other, the locking-keys for the bolts at the inner sides of the shackles, and the connecting-chain having a slip-link, whereby the boat may be suspended by the swinging hooks or directly by the shackles 10, substantially as set forth.

385,867. THILL-COUPLING. MALCOLM F. McINTYRE, Girard, Pa. Filed Feb. 3, 1888. Serial No. 262,953. (No model.)

Claim.—1. The combination, in a thill-coupling, of a chp, B, having the overhanging lip F, and the ears D D thereon, with the thill-iron G, having the bearing H and the flanges J J thereon, and the eccentric bushing I in said bearing H, substantially as and for the purpose set forth.

2. The combination, in a thill-coupling, of the ears D D, having rounded ends *d*, and the square bolt-hole E therein, with the thill-iron G, having a bearing, H, adapted to fit between the ears D D, an eccentric bushing, I, in said bearing, and a tapering key, N, substantially as and for the purpose set forth.

3. A thill-iron consisting of a circular bearing, H, having an eccentrically-pierced bushing, I, therein, concave flanges J J on the front edge of the bearing H, and an arm, K, provided with a groove, M, and bolt-holes *e* and *f*, substantially as and for the purpose set forth.



385,868. CAR-COUPLING. FRANCIS I. McNAB, Sturgeon Bay, Ontario, Canada. Filed Jan. 26, 1888. Serial No. 261,984. (No model.)

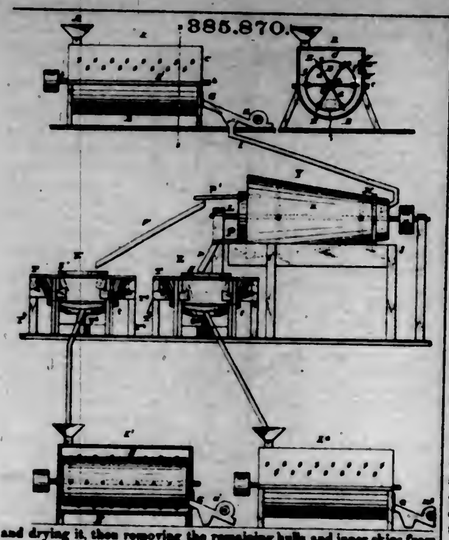
Claim.—1. The combination, with the coupling mechanism, of the vertically-rocking crank-shaft for raising the coupler, an operating lever or arm pivoted to the end of said shaft to swing at right angles thereto, and a support on which the said arm or lever may be swung to hold the coupler raised, substantially as set forth.

2. The combination, in a car-coupling, with the vertically-swinging arm M, to which the coupling-pin is pivoted, of the crank-shaft R, having levers S S pivoted to its opposite ends at the sides of the car, the supports T T for said levers, and the chain P, connecting the crank-shaft and arm M, substantially as set forth.

385,869. CISTERN-CLEANER. FRANK R. McNALL, Minneapolis, Minn. Filed Nov. 14, 1887. Serial No. 255,162. (No model.)

Claim.—1. In a cistern-cleaner, the combination, with a suitable handle, of a movable receiver arranged to slide vertically on said handle, a bottom plate secured to said handle and adapted to close the opening in the bottom of said receiver, and a collar also secured to the handle and arranged to close an opening in the top of the said receiver, substantially as described.

2. In a cistern-cleaner, the combination, with the handle 16, of the outer case, 2, the movable bottom plate, 12, the gasket 10, secured to the case, the projecting fingers or stops 14, secured to said bottom plate and resting against the inner surface of said case, and the collar 20, provided with the gasket 22, arranged to fit an aperture in the top of said case and operate with the said bottom plate, substantially as described.

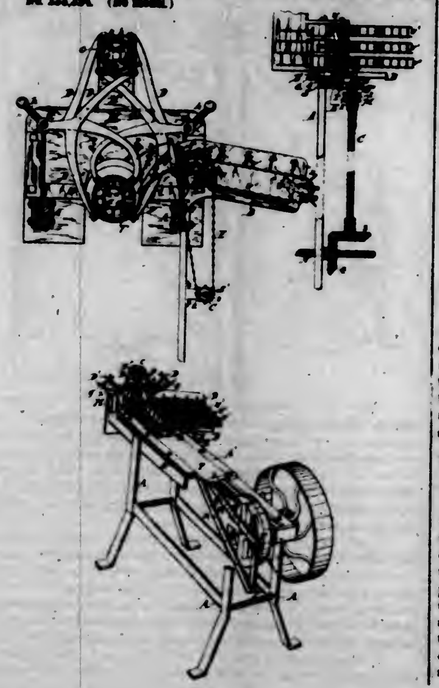


3. In a cistern-cleaner, the combination, with the case 2, open at the bottom and provided with an air-exit opening at the top, of the bottom plate, 12, and collar 20, and the operating-handle 16, secured thereto and arranged to open or close the openings in the said receiver, and the spring 28, secured to the handle and acting upon the top of said receiver to hold it in position, substantially as described.

4. In a cistern-cleaner, the combination, with the case or receiver 2, the plate 12, opening or closing the space at the bottom of said receiver, the collar 20, opening or closing the air-escape at the top of said receiver, of the handle, the lower section, 16, of which is attached to the plate 12 and collar 20, and the upper section arranged to slide on said lower section, and the eccentric 34, for clamping the two sections together, substantially as described.

385,870. PROCESS OF HULLING, CLEANING, AND SEPARATING GRAIN. FREDERICK MELKERSMAN, St. Charles, Mo. Filed July 16, 1887. Serial No. 244,352. (No model.)

Claim.—1. The hereinbefore-described process of hulling, cleaning, and separating grain, which consists in first removing a large proportion of the hulls from all the grain, then separating the disconnected hulls, then washing and moistening the grain, then straining



385,870.

and drying it, then removing the remaining hulls and inner skins from the grain, and finally separating the disconnected hulls and skins, substantially as herein set forth.

2. The herein-before-described process of hulling, cleaning, and separating grain, which consists in first removing a large proportion of the hulls from all the grain, then separating the disconnected hulls, then washing and moistening all the grain, then separating the good grain from the imperfect grain during the process of washing, and then drying the grain and removing and separating the remaining hulls therefrom, substantially as herein set forth.

385,871. MACHINE FOR CUTTING GREEN CORN FROM THE COB. G. LEWIS MERRELL, Syracuse, N. Y. Filed May 16, 1887. Serial No. 238,294. (No model.)

Claim.—1. In combination with the main supporting-frame and the two plungers P P, arranged one within the other, the crank-wheel V, arranged with its axis below the plane of the plungers, and having affixed to it the crank P and the crank-arm P', extended from said crank and both in approximately the same vertical plane with the two plungers, and pitmen connecting said crank and crank-arm directly with the plungers, substantially as described and shown.

2. In combination with the head H, the cutter-carrying arms D D D D, disconnected from each other to operate independently and by one and the same spring, and handles A A, attached to the arms which carry the lowermost cutters, substantially as described and shown.

3. In combination with the stationary head H, the cutter-carrying arms D D D D and scraper-carrying arms D' D' D' D', all extending upward from the cutters and scrapers and pivoted to the upper portion of the aforesaid head, substantially as described, whereby the said arms are held completely out of the passage of the corn and moisture in the process of cutting and scraping the same from the cob, as set forth.

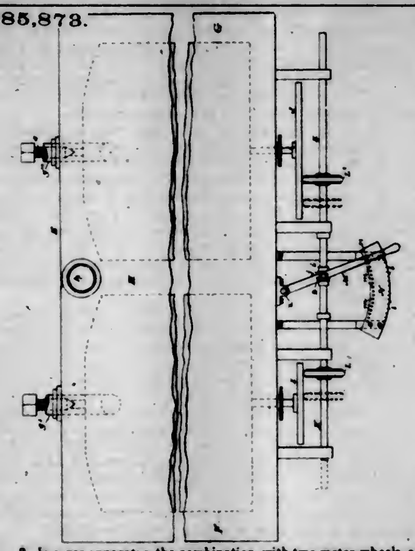
4. In combination with the head H, the cutter-carrying arms D D D D, pivoted to said head and all actuated by one and the same spring, and each arm acting independently of the others, thereby adapting the cutters to operate with equal efficiency on crooked cobs and on cobs having corn only on one side as on straight and perfect ears of corn, substantially as set forth.

5. In combination with the head H, provided with the upper extension, H', and cutters *a a a a*, the cutter-carrying arms D D D D, extending upward from the cutters and pivoted to the upper part of said head, and terminating at points around a segmental coster on the extension H', lugs *b b*, projecting from said extension, set-screws *c c*, connected to said lugs and bearing on the aforesaid arms, and the elastic band *c*, connected with said ends of the arms to normally hold the same on the aforesaid set-screws, substantially as set forth.

6. In combination with the head H, arms D D, pivoted to the front of said head, and cutters connected to said arms, the bearings *l l*, projecting from the head H back of the arms D D, substantially as and for the purpose set forth.

7. In combination with the frame, cutters, feed-trough, plungers, and driving-shaft for operating said plungers, shafts arranged parallel with the feed-trough, chain-wheels on said shafts, endless feed-chains on said wheels, a movable gate between the feed-chains and feed-trough, a sprocket-wheel on one of the chain-wheel shafts, same on the sprocket-wheel adapted to engage and raise the gate, a counter-shaft, a sprocket-wheel on one end of said counter-shaft, a drive-chain connecting the two sprocket-wheels and engaging gears respectively on the opposite end of the counter-shaft and on the aforesaid driving-shaft, substantially as shown.

385,872. CISTERN. JAMES MILLER and CONRAD HEISSNER, Syracuse, N. Y. Filed Mar. 31, 1888. Serial No. 269,148. (No model.)



Claim.—The combination, with the cistern, of the inlet-pipe *a*, extended to the bottom of the cistern at one side thereof and terminating with horizontal branches *a' a'*, extending toward the corners of the opposite side of the cistern, and the overflow-pipe *b*, extending to the bottom of the cistern diametrically opposite inlet-pipe and terminating with horizontal branches *b' b'* across the bottom of the cistern, substantially as described and shown.

385,873. APPARATUS FOR MIXING ARRIFORM FLUIDS. THOS. F. MORRIS and WILLIAM F. OSBORNE, Jersey City, N. J. Filed Oct. 15, 1887. Serial No. 252,497. (No model.)

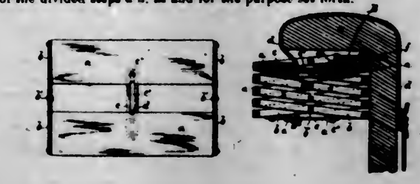
Claim.—1. In a gas apparatus, the combination of two meter-wheels, one of which is connected with the gas conduit or pipe from the generator and the other provided with an air-supply, of adjustable differential gearing connecting said meter-wheels, whereby their relative velocities may be changed at will, said gearing consisting of two plane-faced disks mounted, respectively, on the journals or shafts of the two meter-wheels, a shaft extending across the faces of said disks, and two friction-wheels on said shaft, with their peripheries in contact, respectively, with the faces of said disks, whereby the shifting of either or both of said wheels over the face of the disk will vary the relative velocities of the meter-wheels, as set forth.

385,873.

2. In a gas apparatus, the combination, with two meter-wheels, as F and G, in the mixer E, of the disks, as I and J, on the respective shafts of the said meter-wheels, the shaft, as K, extending diametrically across and in front of said disks, the friction-wheels, as L and L', on shaft K and in contact peripherally with the respective faces of the disks, and a shifter for shifting said gearing, substantially as set forth.

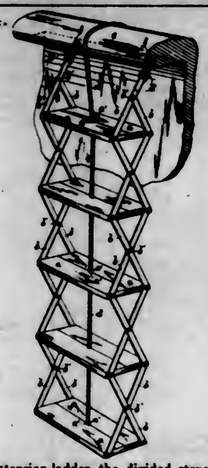
3. In a gas apparatus, the combination, with the two meter-wheels, of the mixer, the two disks on the respective shafts of said meter-wheels, the shaft K, and the friction-wheels on said shaft in contact peripherally with the faces of the respective disks, of the shifter whereby the gearing is shifted, and the holder whereby the shifter is held in the position set.

4. In a gas apparatus, the combination, with the two meter-wheels, of the mixing apparatus and the plane-faced disks on their respective journals, of a shaft, as K, a friction-wheel, as L, on said shaft and in peripheral contact with one of said disks, a friction-wheel, as L', on said shaft and in contact peripherally with the other disk, said wheel being movable in a plane parallel with its axis, and a shifter for said wheel, comprising a lever, M, the collar *u* on the boss of the wheel L', the rod *v*, connecting the said collar and lever, the slotted plate N, the clamp-screw *n'* in said lever and plate, and its nut, the said screw and nut forming a holder for the lever, as set forth.



5. In a gas apparatus, the combination, with the two meter-wheels, of the mixing apparatus, the differential friction-gearing connecting said meter-wheels, and the shifting lever, as M, of the curved rack on said lever, the upright shaft *d'*, and the pinion *e'* on said shaft and meshing with said rack, as set forth.

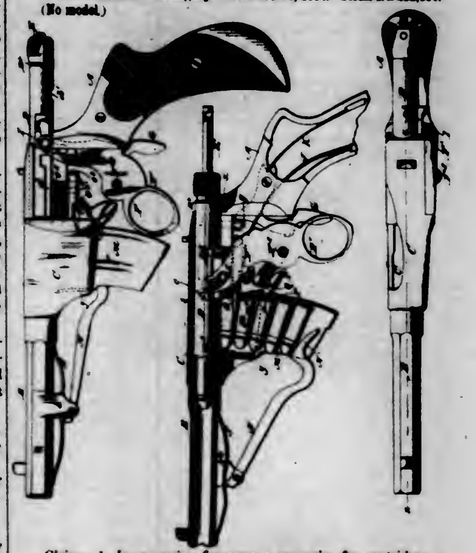
385,874. FLEXIBLE EXTENSION-LADDER. DANA PARIS, Boston, Mass., assignor to the Land and Sea Safety Ladder Company, of Maine. Filed Nov. 5, 1887. Serial No. 254,379. (No model.)



Claim.—1. The herein-described extension-ladder, consisting of the divided steps *a a a a*, connected together by means of the lazy-tong levers *b b*, as and for the purpose set forth.

2. The divided steps *a a a a* and the slotted guides *c c'*, as described, in combination with the lazy-tong levers *b b*, pivoted to the ends of the said divided steps *a a*, substantially as and for the purpose set forth.

3. In an extension-ladder, the divided steps *a a*, having recesses *a' a'* at their meeting edges, and the hoisting-rope *d*, passing through such recesses and secured to the lowest plate in the series or its connections, combined with the lazy-tong levers *b b*, pivoted to the ends of the divided steps *a a*, as and for the purpose set forth.



385,874.

4. In an extension-ladder, the divided steps *a a*, having recesses *a' a'* at their meeting edges, as described, and slotted guides *c c'*, in combination with the hoisting-rope *d*, arranged as described, and the lazy-tong levers *b b*, pivoted to the ends of the divided steps *a a*, as and for the purpose set forth.

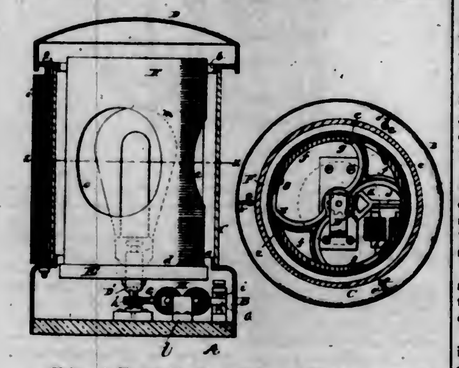
385,875. MAGAZINE FIRE-ARM. FRANZ FAMBLER, Ottakring, near Vienna, Austria-Hungary. Filed Oct. 20, 1887. Serial No. 252,999. (No model.)

Claim.—1. In magazine fire-arms, a magazine for cartridges, a breech-bolt and a firing-pin reciprocating in the space above said magazine, a cartridge-bar arranged opposite an opening in the side of the magazine just below the upper cartridge, a spring arranged to move the end of said cartridge-bar through said opening to lift said cartridge, and a trigger connected with said breech-bolt and arranged to strike against said cartridge-bar for withdrawing the latter, substantially as set forth.

2. A breech-bolt having a pin and a shoulder on its side, a firing-pin within said breech-bolt, and a spring bearing at one end against the firing-pin and at the other against the breech-bolt, a trigger which has a curved slot in its upper extension engaging the pin on said breech-bolt, a sear-trigger having an attachment arranged to engage a lug or shoulder on the firing-pin, and the casing provided with a shoulder for engaging the shoulder on the breech-block, all substantially as set forth.

3. In magazine fire-arms, the combination of a casing having a magazine-chamber and an opening on one side above said chamber with a magazine fitting in said chamber, a cartridge-lifter, a cartridge-bar having reciprocation into the magazine beneath the upper cartridge, springs actuating said lifter and bar, a breech-bolt, and a trigger connected thereto and provided with a lug arranged to strike said cartridge-bar, substantially as set forth.

4. A longitudinally-slotted breech-bolt, a firing-pin within it, a spring in contact with said breech-bolt at one end and with said firing-pin at the other, a trigger having a pin-and-slot connection with said breech-bolt for reciprocating and turning it, a pin in contact with a shoulder on said firing-pin, and a sear-trigger connected with said pin that is contact, the sear-trigger being immediately behind the main trigger in order that the pressure on the latter may operate both triggers, substantially as set forth.

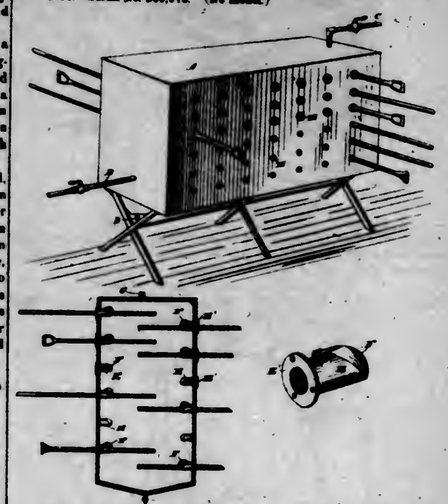


5. A cartridge-magazine having a shoulder presented downward, in combination with a magazine holder or catch having reciprocation below said shoulder, a spring arranged to move said magazine-holder into engagement with said shoulder, a handle for withdrawing it from such engagement, a cartridge-bar having reciprocation through an opening in the side of said magazine just below the upper cartridge, a spring arranged to force said cartridge-bar under said cartridge to lift the same, a breech-bolt and firing-pin reciprocating in the space above said magazine, and the casing having a chamber which receives said magazine, the cartridge-bar being provided with a lug or shoulder arranged to be struck by said magazine-holder for withdrawing said cartridge-bar, as set forth.

385,876. BUTTON. CHARLES A. PIERCE, Dover, N. J. Filed Feb 18, 1888. Serial No. 264,462. (No model.)

Claim.—The combination, with the back *d* and tubular shank *c*, of the head *b*, having a cylindrical extension adapted to enter the said shank, and the tie-receiving pin *e*, which is hinged directly to the outer side of the head, as shown and described.

385,877. RAILWAY SIGNAL-LANTERN. CHRISTIAN H. PFUNDS, Danville, Ill. Filed Feb. 25, 1888. Serial No. 265,602. (No model.)



Claim.—1. The combination, with the signal-lamp carrying a gear-wheel, of a lever having a segment engaging said gear and an armature, an electro-magnet for throwing the lever, and means for returning the lever to its normal position.

2. The combination, with the bottom casing, B, a cylinder resting thereon, the cap D on top of the said cylinder, and the bolts connecting the cap and casing outside of the cylinder and provided with longitudinally-extending plates on their outer sides, of the rotary signal-lantern within the cylinder and an operating mechanism in the bottom casing, substantially as set forth.

3. In a railway-signal, the combination of the casing B, the glass cylinder C, the cap D, the wheel E, and hollow metallic cylinder F, provided with the windows *f*, the sector-wheel G, carrying the armature *j*, the retractile spring *k*, and the electro-magnet H, substantially as described.

385,878. APPARATUS FOR STEAMING WOOD TO BE AFTERWARD BENT. ROBERT T. PETTIGREW, Wyoming, Pa. Filed Apr. 7, 1888. Serial No. 269,976. (No model.)

Claim.—1. An apparatus for steaming handles, &c., consisting of a steam-chamber having an inlet and outlet for steam and provided with openings in its walls, through which the ends of the articles to be steamed may be thrust, substantially as described.

2. An apparatus for steaming handles, &c., consisting of a steam-chamber having openings in its walls for the introduction of the ends of the articles to be steamed, said openings being shaped to correspond to the contour of the article to be inserted, so as to prevent the escape of steam, substantially as described.

3. An apparatus for steaming handles, &c., consisting of a steam-chamber having openings in its walls for the introduction of the ends of the articles to be steamed, and valves for keeping said openings normally closed, substantially as described.

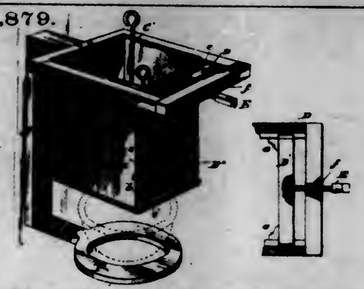
4. An apparatus for steaming handles, &c., consisting of a steam-chamber having openings in its walls for the introduction of the ends of the articles to be steamed, and automatically-closing valves for said openings, whereby upon the withdrawal of the articles from the openings, the latter will be closed, substantially as described.

5. An apparatus for steaming handles, consisting of a steam-chamber having openings in its walls for the introduction of the ends of the articles to be steamed, said openings being shaped to correspond to the contour of the articles to be introduced, and automatically-closing valves for said openings, substantially as described.

6. In the herein-described steaming apparatus, the combination with the steam-chamber, of the holders secured in the walls thereof, each of said walls consisting of a tubular portion through which the article to be steamed is introduced into the chamber, and an automatic valve closing said tubular portion upon the withdrawal of the article, substantially as described.

7. The holder consisting of the tubular portion through which the article to be steamed is passed, and an automatic valve for closing said tubular portion upon the withdrawal of said article, substantially as described.

8. The holder consisting of the tubular portion having the inclined inner end or valve-seat, and a gravitating valve for co-operating with said seat, substantially as described.



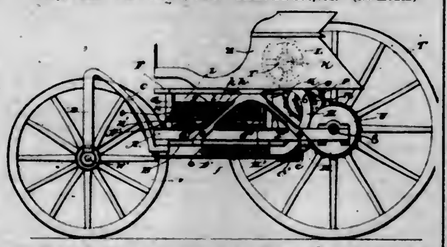
9. The holder having the tubular portion, the flange for securing it in position, and the automatic valve, substantially as described.

385,879. GRATER. FLORA POLLARD, Baltimore, Md. Filed Apr. 24, 1888. Serial No. 271,787. (No model.)

Claim.—1. In a grater, the combination, with the can or hopper containing the grater proper, of the frame holding said can or hopper and having depending therefrom a ring or circular frame supporting a bowl or vessel to receive the grated substance falling from the hopper or can, substantially as specified.

2. The combination of the can or hopper having an open lower end, the grater proper or cylinder, the cylinder-shaft supported in said can or hopper and provided with a handle or crank, and the can or hopper door provided with an eye, with the movable or sliding rod passing through said eye and eyes upon the can or hopper, the screw-

385,879.

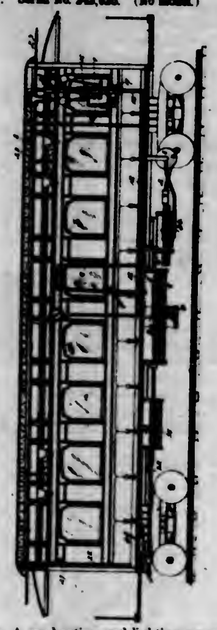


actuated follower provided with holding-cleats, the supporting-frame arm having the circular frame, and the semicircular follower or feeler provided with a rod or handle, substantially as set forth.

385,880. COFFEE-POT. WILLIAM RAGER, Harrison, Ark. Filed Jan. 16, 1888. Serial No. 260,879. (No model.)

Claim.—In a coffee-pot, the funnel B, having a supporting-flange at its upper end and a cylindrical lower end, *d*, having a strainer, *e*, forming its bottom, in combination with the bottomless cylinder C, of greater length than the cylinder *d*, fitting therein, and having perforations *g* in its top and side walls above the upper end of said cylinder, the inverted imperforate compressing-cone *f*, depending from the top of cylinder C, and the handle A on top of said cylinder, substantially as set forth.

385,881. SELF-PROPELLING CARRIAGE. JAMES P. SEWELL, Troy, Tenn. Filed Mar. 9, 1888. Serial No. 266,708. (No model.)



Claim.—1. The combination, in a self-propelling carriage, of the driving-shaft journaled to the rear end of the carriage and having the driving-wheels, the pilot-wheel journaled on a shaft adapted to be turned in a horizontal plane and supported in advance of the carriage, connections to direct the pilot-wheel in any direction, the shaft O, sprocket-wheels and sprocket-chain connecting the same to the driving-shaft, the shaft K, sprocket-wheels and sprocket-chain connecting the latter to the shaft O, said shaft K having the balance-wheels L and the spring-actuated mechanism connected to the shaft K to rotate the latter, substantially as described.

2. The combination, in a self-propelling carriage, of the driving-shaft journaled thereto and having the driving-wheels, the spring motor or mechanism and connections between the same and the driving-shaft to rotate the latter, the forward-extending arms C, having the standards D, the horizontal shaft or axle having one end swiveled to the lower end of one of said standards and provided at the opposite end with a curved arm or rod engaging the lower end of the other standard D, the pilot-wheel journaled loosely on said shaft or axle, the shaft A', the hand-wheel to rotate the same, and connections between said shaft and the axle on which the pilot-wheel is mounted, substantially as described.

3. The combination of the spring-shafts *g* F, having the loose spur-wheels and the pawls and ratchets connecting the said spur-wheels to their shafts, with the driving mechanism having the gears engaging the said spur-wheels, the sprocket-wheels loose on said shaft and connected thereto by pawls and ratchets and adapted to rotate in opposite directions independently of the shafts, the shaft *a*, having the wheel *c* and chain connecting the same to the sprocket-wheel on shaft F, the pinion *d*, rigid on shaft *a*, the gear *p*, meshing with pinion *d*, the wheel *r*, rigid with said gear, and the endless chain *e*, connecting the said wheel *r* and the sprocket-wheel on the shaft *g*, substantially as described.

385,882. SYSTEM AND APPARATUS FOR HEATING AND LIGHTING CARS. GEORGE SMITH, Rochester, N. Y., assignor of one-half to Max Brickner and Abraham Stettheimer, both of same place. Filed July 7, 1887. Serial No. 243,035. (No model.)

Claim.—1. A car heating and lighting apparatus comprising a compressed-air reservoir, a naphtha-tank connected therewith, a pipe leading from the said tank to the heater and lamp for supplying them with the carbureted air, and an automatic cut-off between the said naphtha-tank and the heater and lamp, substantially as set forth.

2. In a device for heating and lighting cars, a safety attachment comprising a tube having a spring-actuated stop-cock, a glass pipe fitting in said tube, a spring surrounding said glass adapted to engage the stem of the said stop-cock and hold the same in an open position, and spring-arms carrying weighted balls attached to said metal tubes, adapted to strike the glass pipe and break the same, substantially in the manner and for the purposes herein set forth.

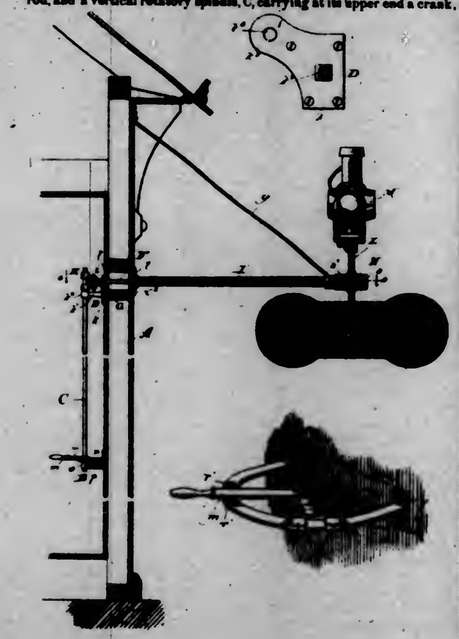
3. In a device for heating and lighting cars, a safety attachment consisting of a metal tube carrying a spring-actuated stop-cock, a glass pipe fitted in said tube, a wire coil surrounding said pipe, provided with an eye adapted to engage the stem of the valve and hold the same in an open position, and an arm adapted to engage a cord passing through the car, substantially as shown and described, whereby, when said cord is pulled, the stop-cock will close, substantially as set forth.

4. In a car-heater, a safety device for automatically shutting off the gas, consisting of a metal tube, 16, provided with a spring-actuated stop-cock, 17, having a crank-arm, 19, spring-arms 25, attached to said tube, carrying weighty balls 26, a glass tube, 14, held in said metal tube, and a wire coil, 15, on said tube provided with an eye, 20, engaging the crank-arm 19 to hold the cock closed, and an integral

vertical operating-arm, 21, substantially as shown and described, whereby, when the balls come in contact with the glass, the said crank-arm will be released, and also when the vertical arm 21 is drawn upward, as herein set forth.

5. The combination, with the burners and pipe supplying them with fuel, of an interposed section of glass forming a continuation of said tube and spring-arms provided at their free ends with weights or balls to break the glass section, substantially as set forth.

6. The combination, with the burners and pipe supplying them with fuel, and provided with a glass section between the source of supply and burners, of an automatically-closing valve, connections between the same and the tube for holding the valve open, and spring-arms provided with balls at their free ends to break the glass and release the valve, substantially as set forth.



7. The combination, with a car provided with air-brake, compressed-air supply, heaters, and burners, of a pipe connecting said heaters and burners, a carburetor from which said pipe receives its air, a compressed-air reservoir connected with said carburetor, and an auxiliary reservoir connected with the first-named reservoir and with the pipe of the compressed-air-brake pipe, substantially as set forth.

385,883. TRAIN-ORDER SIGNAL. AXEL A. STRÖM, Austin, Ill. Filed Feb. 17, 1888. Serial No. 264,412. (No model.)

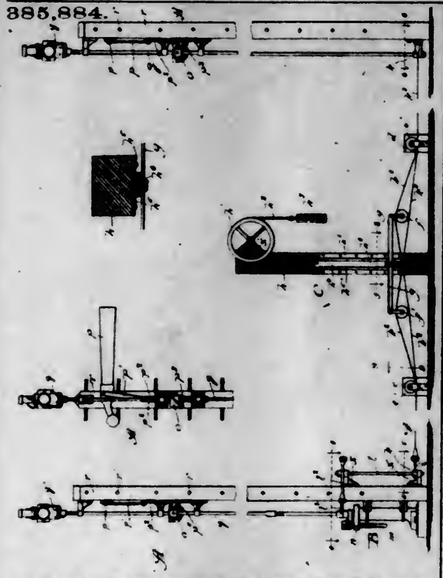
Claim.—1. In a train-order-signaling apparatus, the combination of a non-rotating rod, F, supported in horizontal position and longitudinally reciprocating, a signaling device connected with one end of the rod and turned from its normal position by actuating the rod in one direction, and a stationary bracket, D, having an extension, L^4, provided with an aperture, L^4, forming the bearing for the opposite end of the rod, substantially as described.

2. In a train-order-signaling apparatus, the combination of a vertically-supported rotatory spindle, L, carrying a signaling device to rotate with it, a yoke, G', on the said spindle, a horizontal reciprocating non-rotating rod, F, connected at one end with the said yoke and supported in rigid bearings, a yoke, G, connected with the opposite end of the rod, a crank, E, engaging with the yoke G, and a vertical rotatory spindle, C, carrying the crank E, whereby turning the spindle C moves the rod in a straight line and turns the signaling device, substantially as described.

3. In a train-order-signaling device, the combination of a non-rotating rod, F, supported in horizontal position and longitudinally reciprocating in rigid bearings, a vertical rotatory spindle, L, supported near one end of the rod and carrying a yoke, G', engaged by the rod, and a signaling device, a spring, K, compressed by moving the rod in one direction and operating by its resilience to return the rod to the position from which it is moved, a yoke, G, on the opposite end of the rod, and a vertical rotatory spindle, C, carrying at its upper end a crank,

E, engaging with the yoke G, and operating, when rotated in one direction, to move the rod F in a straight line against the resistance of the spring K, and thereby turn the signaling device, substantially as described.

4. In a train-order-signaling device, the combination of a non-rotating rod, F, supported in horizontal position and longitudinally reciprocating, a vertical rotatory spindle, L, supported near one end of the rod and carrying a yoke, G', engaged by the rod, and a signaling device, a spring, K, compressed by moving the rod in one direction and operating by its resilience to return the rod to the position from which it is moved, a yoke, G, adjustable on the opposite end of the rod, and a vertical rotatory spindle, C, carrying at its upper end a crank, E, engaging with the yoke G, and operating, when rotated in one direction, to move the rod F in a straight line against the resistance of the spring K, and thereby turn the signaling device, substantially as described.



5. In a train-order-signaling apparatus, the combination of a vertically-supported rotatory spindle, L, carrying a signaling device to rotate with it, a yoke, G', on the said spindle, a housing, H, for the yoke, a horizontal non-rotating longitudinally-reciprocating rod, F, extending at one end into the housing H, and connected therein with the said yoke and supported in rigid bearings, a spring, K, upon the rod, a sleeve, I, inclosing the rod and spring, a yoke, G, connected with the opposite end of the rod, a crank, E, engaging with the yoke G, and a vertical rotatory spindle, C, carrying the crank E, whereby turning the spindle C moves the rod in a straight line to turn the signaling device and compresses the spring, the resilient force of which when released returns the said rod and signaling device to the positions from which they were moved, substantially as described.

6. A train-order-signaling apparatus comprising, in combination with a wall, A, having a hole, *l*, formed through it, a horizontal non-rotating rod, F, extending at opposite ends beyond the opposite sides of the wall through the hole *l*, a housing, H, supported from the wall A, and into which the outer end of the rod extends, and carrying a vertical rotatory spindle, L, having upon it to rotate with it a signaling device, a yoke, G', on the spindle L in the housing and engaging with the rod F, a spring, K, on the rod, a sleeve, I, inclosing the rod and spring between the housing and wall and containing rigid bearings *x* and *x'*, a bracket, D, having a bearing, L^4, for the rod near its inner end carrying a yoke, G, a vertical rotatory spindle, C, on the inner side of the wall, a bracket, B, supporting the said spindle, a crank, E, on the spindle C, engaging with the yoke G, and a pivotal lever, *m*, on the said spindle, substantially as described.

385,884. COMPENSATOR FOR SIGNAL-LINES. AXEL A. STRÖM, Austin, Ill. Filed Mar. 19, 1888. Serial No. 267,825. (No model.)

Claim.—1. The combination of a long-distance semaphore, A', having a double crank, F', on its rotatory spindle, a home operating

385,884.

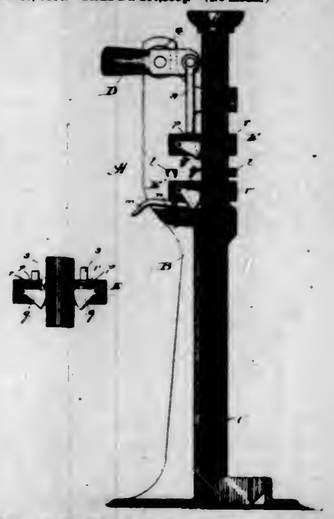
device having a standard provided with a rotatory spindle, *l*, carrying a double crank, *k*, cables L^2 and L^3, connecting corresponding arms of the said double cranks, and a compensator, C, for the cables, located between the long-distance semaphore and home operating device, substantially as described.

2. The combination of a long-distance semaphore, A', provided on its rotatory spindle with a double crank, *K'*, having its arms bent toward each other away from the semaphore-post, a home operating device having a standard provided with a rotatory spindle, *l*, carrying a double crank, *k*, having its arms bent toward each other away from the standard, cables L^2 and L^3, connecting corresponding arms of the said double cranks, and a compensator, C, for the cables, located between the long-distance semaphore and home operating device, substantially as described.

3. The combination of a long-distance semaphore, A', having a double-crank, *K'*, on its rotatory spindle, a home operating device having a standard provided with a rotatory spindle, *l*, carrying a double crank, *k*, a peripherally-recessed table, *n*, and a drop-lever, *m*, connected with the spindle *l*, cables L^2 and L^3, connecting corresponding arms of the said double cranks, and a compensator, C, for the cables, located between the long-distance semaphore and home operating device, substantially as described.

4. The combination of a long-distance semaphore, A', having a double crank, *K'*, on its rotatory spindle, a home semaphore, A, having a rotatory spindle, *l*, carrying a double crank, *k*, and connected with the rotatory spindle of the semaphore A by a link, *P*, joining crank-arms *l'* and *P*, respectively on the spindle *l* and the spindle of the semaphore A, cables L^2 and L^3, connecting corresponding arms of the said double cranks, and a compensator, C, for the cables, located between the semaphores A and A', substantially as described.

5. In combination with a long-distance semaphore, A', and a home operating device, connected together by cables L^2 and L^3, a compensator, C, having a standard, *h*, and a cable, h^3, supported on the standard and carrying a weight at one end, and connected at its opposite end with suitable sheaves, over which the said cables pass, substantially as described.



6. In combination with a long-distance semaphore, A', and a home operating device, connected together by cables L^2 and L^3, a compensator, C, having a standard, *h*, a reciprocating bar, h^4, on the standard, controlled by a weight, h^3, a pivotal equalizing-bar, *g*, on the lower end of the said reciprocating bar, and sheaves *f* and *f'* on the bar *g*, over which sheaves, respectively, the cables L^2 and L^3 pass, substantially as described.

7. In combination with a long-distance semaphore, A', and a home operating device, connected together by cables L^2 and L^3, a compensator, C, comprising a standard, *h*, a sheave, *h'*, on the standard, a reciprocating bar, h^4, guided on the standard, a cable, h^3, passing over the sheave *h'* and carrying at one end a weight, h^3, and connected at its opposite end with the bar h^4, and an equalizing-bar, *g*, pivoted toward the lower end of the said reciprocating bar and carrying at opposite sides toward the extremities sheaves *f* and *f'*, over which, respectively, the cables L^2 and L^3 pass, substantially as described.

8. In combination with a long-distance semaphore, A', and a home operating device, connected together by cables L^2 and L^3, an intermediate compensator, C, comprising a standard, *h*, a sheave, *h'*, on the standard, a reciprocating bar, h^4, guided on the standard, a cable, h^3, passing over the sheave *h'* and carrying at one end a weight, h^3, and connected at its opposite end with the bar h^4, and an equalizing-bar, *g*, pivoted toward the lower end of the said reciprocating bar and carrying at opposite sides, near the extremities, sheaves *f* and *f'*, over which, respectively, the cables L^2 and L^3 pass, and posts *e* and *d*, respectively adjacent to the sheaves *f* and *f'*, and provided each with tension-pulleys *e'* and *e²* for the said cables, substantially as described.

9. The combination of a long-distance semaphore, A', having a double crank, *K'*, on its rotatory spindle, a home semaphore, A, and a rotatory spindle, *l*, carrying a double crank, *k*, and connected with the rotatory spindle of the semaphore A by a link, *P*, joining crank-arms *l'* and *P*, respectively on the spindle *l* and the spindle of the semaphore A, cables L^2 and L^3, connecting corresponding arms of the said double cranks, a compensator, C, located between the semaphores, and comprising a standard, *h*, a sheave, *h'*, on the standard, a reciprocating bar, h^4, guided on the standard, a cable, h^3, passing over the sheave *h'* and carrying at one end a weight, h^3, and connected at its opposite end with the bar h^4, and an equalizing-bar, *g*, pivoted toward the lower end of the said reciprocating bar and carrying at opposite sides, near the extremities, sheaves *f* and *f'*, over which, respectively, the cables L^2 and L^3 pass, and posts *e* and *d*, respectively adjacent to the sheaves *f* and *f'*, and provided each with tension-pulleys *e'* and *e²* for the said cables, substantially as described.

385,885. LIFTING-JACK. AXEL A. STROM, Austin, Ill. Filed Mar. 16, 1888. Serial No. 267,360. (No model.)

Claim.—1. In a lifting-jack, the combination, with the lifting-bar, of a collar, *r*, a wedge, *q*, pivoted to one side of the collar and extending into contact with the lifting-bar and releasable by downward pressure upon the pivot from its wedging engagement with the lifting-bar, a lever, D, fulcrumed upon the standard and linked to the wedge between its pivot and end in contact with the bar, and a retaining-clutch on the lifting-bar and supported on the standard, substantially as described.

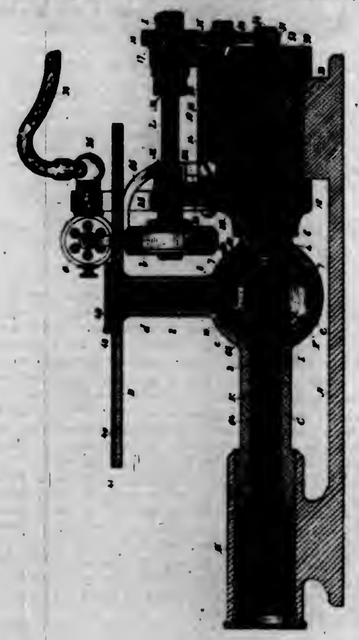
2. In a lifting-jack, the combination, with the lifting-bar and a lifting-clutch having an operating-lever connected with it, of a retaining-clutch, E', comprising a collar and a wedge pivoted to one side of the collar and extending into contact with the lifting-bar, and with a stationary support, substantially as described.

3. In a lifting-jack, the combination, with the lifting-bar, of a lifting-clutch, E, comprising a collar, and a wedge pivoted to one side of the collar and extending into contact with the lifting-bar, a lever, D, connected with the pivotal wedge toward its free end, and a retaining-clutch, E', comprising a collar and a wedge pivoted to one side of the collar and extending into contact with the lifting-bar and with a stationary support, substantially as described.

4. In a lifting-jack, the combination, with the lifting-bar, of a lifting-clutch, E, comprising a collar and a wedge pivoted to one side of the collar and extending into contact with the lifting-bar, a lever, D, connected with the pivotal wedge toward its free end, a retaining-clutch, E', comprising a collar and a wedge pivoted to one side of the collar and extending into contact with the lifting-bar and with the base of the expanded upper portion of the standard, and a releasing-lever, F, substantially as described.

5. A lifting-jack comprising, in combination, a standard, B, a lifting-bar, C, a lifting-clutch, E, comprising a collar and a wedge pivoted to one side of the collar and extending into contact with the lifting-bar, a lever, D, links *s*, connecting the lever with the pivotal wedge toward its free end, a retaining-clutch, E', comprising a collar and a wedge pivoted to one side of the collar and extending into contact with the lifting-bar and with the base of the expanded upper portion of the standard, and a lever, F, fulcrumed on the standard and extending into engagement with the collar of the retaining-clutch to permit the said collar to be raised when desired, substantially as described.

385,886. GRAPHOPHONE. CHARLES S. TAINTER, Washington, D. C. Filed Dec. 24, 1887. Serial No. 258,170. (No model.)



Claim.—1. In a graphophone, the combination, with the tablet-holder and means for rotating and advancing the same longitudinally, of the recorder and reproducer, each pivoted on suitable supports and adapted to be turned into and out of operative position, substantially as described.

2. The combination of the slide, the tablet-holder mounted on a shaft having bearings in said slide, means for rotating said shaft and advancing said slide, a recorder pivoted on one side of the tablet-holder, and a reproducer pivoted on the opposite side thereof, their relative positions being such that the recording and reproducing styles touch the tablet at the same point, substantially as described.

3. In a graphophone, the combination, with the rotatory tablet-holder, the friction-wheel for driving the same, and means for advancing said tablet-holder longitudinally, of a recorder pivoted to the frame and a reproducer also pivoted to the frame, said recorder and reproducer being so disposed that when either is in operative position its style will rest on the tablet just above said friction-wheel, substantially as described.

4. In a graphophone, the combination, with the rotatory tablet-holder, of the friction-wheel for driving the same, and a tilting-frame in which the arbor of said friction-wheel is journaled, substantially as and for the purpose described.

5. In a graphophone, the combination, with the tablet-holder and means for rotating the same, of the feed-nut, the feed-screw, and

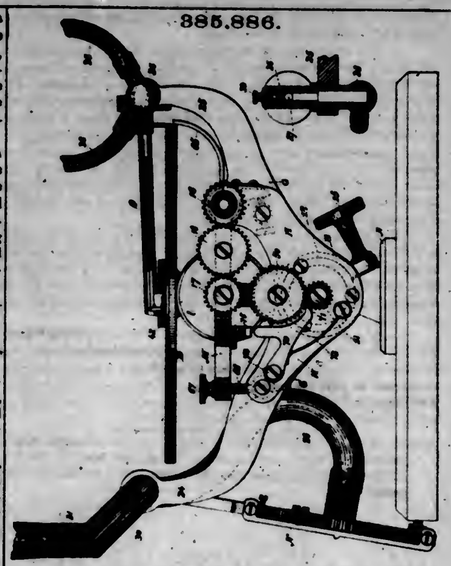
means for disconnecting said nut from the driving-shaft and simultaneously connecting said screw therewith, substantially as described.

6. In a graphophone, the combination of the slide, the rotatory tablet-holder carried thereby, the feed-screw normally stationary, the feed-nut connected to be advanced lengthwise of said screw by the rotation of said holder, and means for disconnecting said tablet-holder from the driving-shaft and connecting the feed-screw therewith so as to reverse the movement of said nut, substantially as described.

7. The combination of the slide, the tablet-holder, the friction-wheel for rotating the same, the tilting frame in which the arbor of said friction-wheel is journaled, gearing for driving the latter from the main shaft, the feed-screw normally stationary, the feed-nut carried by said slide and connected by gearing with said tablet-holder, and gearing for connecting said feed-screw with said main shaft when said frame is moved to disengage the tablet-holder and friction-wheel, substantially as described.

8. In a graphophone, the combination of the slide, the tablet-holder carried thereby, the feed-nut and feed-screw, the driving mechanism, and stop-pins on said feed nut and screw, whereby the slide is automatically arrested at the limits of its travel, substantially as described.

9. The combination of the slide, the rotatory tablet-holder, the reproducer, the feed nut and screw, mechanism for reversing the movement of said slide, the tilting frame for operating said reversing mechanism, and an arm carried by said slide and adapted to lift the reproducer from the tablet when said frame is tilted, substantially as described.



10. The combination of the slide, the tablet-holder, the feed-screw, the feed-nut connected by gearing with said tablet-holder, a pinion loosely mounted on said feed-screw, a spring-washer for effecting a frictional connection between said screw and pinion, and stop-pins on said nut and screw by engagement of which the screw and nut are connected together, substantially as described.

11. The combination of the slide, the tablet-holder, the feed-screw supported in bearings in the frame, the feed-nut connected by gearing with said tablet-holder, and the locking device for holding said feed-screw stationary, substantially as described.

12. The combination of the slide, the tablet-holder, the feed-screw supported in bearings, the feed-nut rotated from said tablet-holder, the locking device for holding said screw stationary, the tilting frame for disengaging said tablet-holder from the main shaft and connecting the feed-screw therewith, and an arm or projection adapted on the depression of said frame to disengage said locking device, substantially as described.

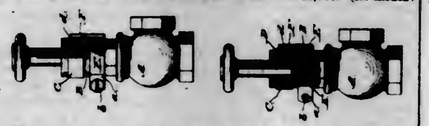
13. The combination of the rotatory tablet-holder, the feed screw and nut for moving said tablet-holder longitudinally, a tilting frame, a friction-wheel on an arbor having bearings in said frame for rotating said tablet-holder, and reversing-gears adapted to be connected with the main shaft by said frame, all constructed and arranged as set forth, so that the frame can be tilted to disconnect said friction-

385,886.

wheel and tablet-holder without connecting said reversing-gear and main shaft, substantially as described.

14. The combination of the tablet-holder, the feed-nut connected by gearing with said tablet-holder, the feed-screw normally stationary, the tilting frame, the friction-gear for rotating said tablet-holder, carried on an arbor having bearings in said frame, reversing-gears adapted to connect said screw and the main shaft when said frame is tilted, a button on said frame for tilting the same, and a second button on a shank passing loosely through said frame and having its end in close proximity to a fixed part of the apparatus, so that on pressing the latter button the frame will move only far enough to disengage the tablet-holder and friction-gear without connecting in the reversing mechanism, substantially as described.

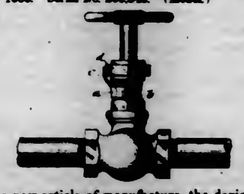
15. The combination, with the frame and recorder, of the rigid sound-conveying tube having several bent or angular sections jointed together, constituting in effect a universal joint, whereby the position of a mouth-piece attached to said tube can be shifted vertically or laterally without disturbing the position of the style, substantially as described.



16. In a graphophone, the combination, with a supporting-frame, and the tablet-holder, recorder, and operative mechanism carried by said frame, of the base or bed plate to which said frame is pivotally connected, so that the entire apparatus can be tipped to any angle, and means, as specified, for holding the apparatus at the angle to which it may be adjusted, substantially as described.

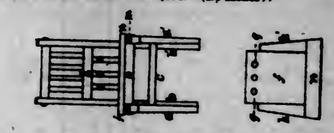
385,887. GRAPHOPHONIC TABLET. CHARLES S. TAINTER, Washington, D. C. Original application filed Dec. 24, 1887, Serial No. 258,674. Divided and this application filed Apr. 3, 1888. Serial No. 269,495. (No model.)

Claim.—As an article of manufacture, a graphophonic tablet composed of a flat plate or disk of metal having a turned-up edge, and a layer of wax or a waxy composition thereon, substantially as described.



385,888. NUT-LOCK FOR VALVES. WILLIAM H. VAN WART, Stonington, Conn. Filed Oct. 21, 1887. Serial No. 252,906. (No model.)

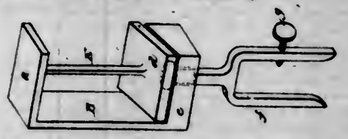
Claim.—1. A device for locking the packing-nuts of valves, the same consisting of a strap or ring which is divided transversely, a screw for clamping the divided ends together, and a rigid lug which is permanently and rigidly attached to the body of said ring and extends therefrom at right angles to the plane of the latter, as shown and described, whereby the device is adapted to be clamped to the neck of a valve and adjusted around it to bring the rigid lug into parallelism with one of the lateral faces of the packing-nut, and thereby lock it, as specified.



2. The improved device for the purpose specified, consisting of the ring E, formed of two hinged parts having parallel ends *a a*, one of which is provided with an open slot, *b*, and the screw-fastening *b*^{2}, pivoted to the other end, and the rigid lug F, permanently and rigidly attached to the body of the ring, as shown and described

385,889. NUT-LOCK. WILLIAM H. VAN WART, Stonington, Conn. Filed Mar. 5, 1888. Serial No. 266,548. (Model.)

Claim.—As a new article of manufacture, the device for locking valve-nuts, the same consisting of the spring band or ring *a*, divided transversely, as shown, and the rigid arm *c*, extending vertically, or nearly so, from one side of said band, substantially as specified.

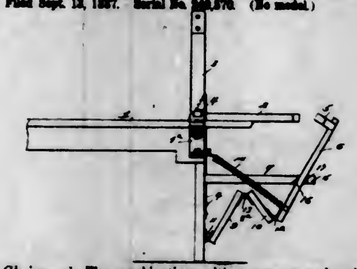


385,890. CHAIR. WILLIAM H. WALKER, Greenwich, Mass. Filed Apr. 28, 1888. Serial No. 271,662. (No model.)

Claim.—1. In combination with the chair-frame, the rung-rods *m m'*, bars *i i'*, rods *l l'*, loops *k k'*, and seat *f*, all arranged, connected, and operating as above pointed out and specified.

2. In combination with the chair-frame, the rung-rods *m m'*, folding bars *i i'*, joint-rods *l l'*, arms *k k'*, seat *f*, loops *k k'*, and foot-board *n*, all arranged, connected, and operating as above pointed out and specified.

385,891. REIN-HOLDER. CARL WESSELS, Omaha, Nebr. Filed Dec. 31, 1887. Serial No. 259,261. (No model.)

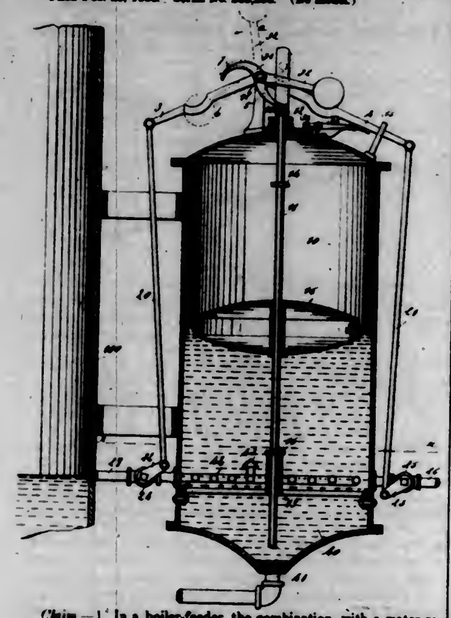


Claim.—1. The combination, with a frame having upper and lower projections, of a block having an elastic or spring connection with the upper projection and placed in proximity to the lower projection, substantially as described.

2. A rein-holder consisting of a frame having an upper projection, and a lower projection having an inclined upper face, a block having an inclined lower face, and a spring for normally holding said faces in proximity to each other, substantially as described.

3. A rein-holder consisting of a frame having an upper projection and an inclined lower projection, a spring secured to said upper projection and extending down, an inclined block secured on the lower end of said spring, and a pivoted clasp on the lower projection, substantially as described.

385,892. IRONING-TABLE. SAMUEL H. WEST, New Orleans, La. Filed Sept. 13, 1887. Serial No. 249,570. (No model.)



Claim.—1. The combination, with a support and an ironing-board projecting therefrom, of a swinging clamp for engaging the outer end of the ironing-board, a jointed brace hinged to the lower end of the clamp and to the support, and a spring for holding the brace in either a closed or open position, substantially as described.

2. The combination, with a support and an ironing-board projecting therefrom, of a lever pivoted to a bracket projecting from the support, a clamp on the upper end of the lever for engaging the end of the ironing-board, and a sectional and hinged brace having its ends hinged to the support and to the lower end of the clamp-carrying lever, substantially as herein shown and described.

3. An attachment for ironing-tables, consisting of the following parts in combination, viz: a rest or ironing-board, 2, secured to the table, a pivoted clamp, 3, at one end, held in locked position by a spring-catch, 4, a clamp, 5, mounted on the upright 6, pivoted to the projection 7, having a beveled cut-away portion, 16, and a projection, 15, the removable pin 17, the brace 8^b, consisting of the parts 9 and 10, hinged to the support 8 and upright 6, and support 8, and the spring 14, connected to the upright 6, to hold it in open or closed position, substantially as described.

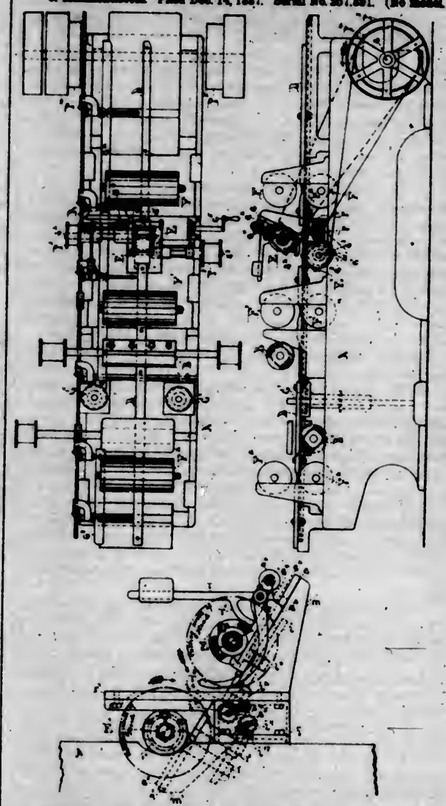
385,893. BOILER-FEEDER. JOHN B. WHEELER, Cincinnati, Ohio. Filed Feb. 29, 1888. Serial No. 265,966. (No model.)

Claim.—1. In a boiler-feeder, the combination, with a water-receptacle, of a discharge-pipe leading therefrom and arranged for connection with the boiler, a coil-pipe arranged within the receptacle and connected to the discharge-pipe, and a housing or cap arranged above the inner end of the coil-pipe, substantially as described.

2. In a boiler-feeder, the combination, with a cylinder, of a supply-pipe connected thereto, a pipe leading from the cylinder to the boiler, said pipe entering the boiler at the required water-level, valves arranged in connection with the pipes, a rod mounted within the cylinder and provided with upper and lower collars, a float loosely mounted upon the rod between the collars, a double-armed lever mounted above the cylinder, rods connected to the lever and to crank-arms carried by the stems of the valves in the supply and delivery pipes, a weighted lever, an S-shaped arm rigidly connected thereto, and a stud carried by the rod, substantially as described.

3. In a boiler-feeder, the combination, with a cylinder, of a vent-plug, a spring-pressed lever by which the plug is carried, a valve-shifting lever mounted to bear upon the plug-lever, and spring-catches arranged in connection with the valve-shifting lever, as and for the purpose stated.

385,894. ELECTRICAL annunciator. MONTRAVILLE M. WOOD, Erie, Pa. Filed Mar. 1, 1888. Serial No. 265,888. (No model.)



Claim.—1. The combination, in an electrical annunciator, of a magnet consisting of a soft-iron core having coils wound thereon, with an armature pivoted on its center, so that both of its arms will oscillate in close proximity to the poles of said magnet, substantially as and for the purpose set forth.

2. The combination, in an electrical annunciator, of a magnet consisting of a soft-iron core and coils of wire, with a centrally-pivoted armature oscillating on an axis at right angles to and passing through an opening in the magnet-core between the coils in a plane parallel to and in close proximity to the poles of the magnet, stops for limiting the movement of the armature, and an indicator secured to the axis of the armature, substantially as and for the purpose set forth.

3. The combination, in an electrical annunciator, of a magnet, A, consisting of a soft-iron core, B, poles C and D, at right angles thereto and to the coils E, wound on the core B, with an oscillating armature, H, mounted on an axis, I, passing through said core B at right angles therewith, and a hand or pointer, J, secured to said axis, substantially as and for the purpose set forth.

4. The combination, in an electrical annunciator, of a magnet consisting of a straight-bar core, B, poles C D, and coils of wire E E, wound around the bar B, with an armature, H, having an adjustable weight, *b*, thereon, and centrally mounted on a wire, I, rotating in the tube G, passing through the core B between the coils E E and at right angles therewith, a hand or pointer, J, secured to said wire I, and a stop, *f*, substantially as and for the purpose set forth.

385,895. PLANING-MACHINE. SOLOMON A. WOODS and JOHN B. THOMAS, Boston, Mass., assignors to the S. A. Woods Machine Company, of Massachusetts. Filed Dec. 14, 1887. Serial No. 257,891. (No model.)

Claim.—1. The combination, in a wood-planing machine, of the single long planing-cylinder B, the feed-rolls in advance thereof, the horizontal planer-bed, over which the lumber passes, the horizontal shafts x^2 x^3, placed transversely above and below said bed, having pulleys P^2 P^3 attached to their outer ends, respectively on opposite sides of the machine-frame, and having their inner ends lapping past each other over and under said bed, and the tonguing cutter-heads E E', attached to the inner ends of said shafts respectively opposite to each other, and in position to simultaneously form the opposite sides of the same tongue on the same board, substantially as described.

2. The combination, in a wood-planing machine, of the single long planing-cylinder B, feed-rolls, central guide, D, and the tonguing cutter-heads E E', mounted upon shafts held and projecting inward from opposite sides of the machine, and bearing against said guide-frame above and below the path of the lumber passing through the machine, and adapted to operate thereon one above the other, substantially as described.

3. The combination of the wood-planing-machine bed F, the central longitudinal guide, D, the tonguing cutter-heads E E', and presser plates or fingers r^2 r^2, formed and arranged to bear upon the lumber over said bed and upon opposite sides of the guide D, substantially as described.

4. The combination of the wood-planing-machine bed F, the tonguing cutter-heads E E', arranged to operate one above the other upon opposite sides of the lumber, and the presser finger or plate r^2, extending underneath the spindle of cutter-head E, and arranged and adapted to press the lumber upon the bed alongside the path of the knives of one cutter-head, and on the opposite side from the path of the knives of the other, and against the lifting action of both heads, substantially as described.

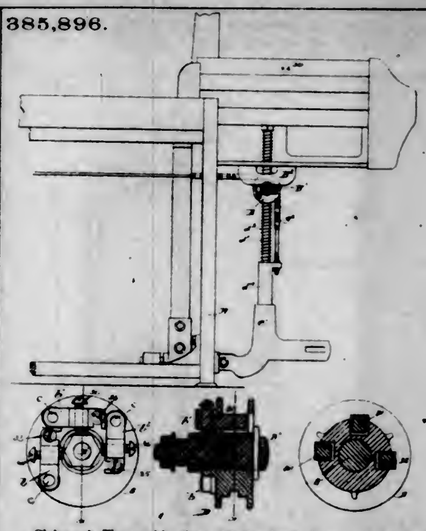
5. The combination of the wood-planing-machine bed F, the central longitudinal guide, D, the side guide, c^3, the side cutter-head, C, and the tonguing cutter-heads E E', mounted upon shafts projecting in opposite directions from the sides of the machine above and below the bed, and the presser plate or finger r^2, extending underneath cutter-head E, and arranged and adapted to press the lumber upon the bed between said guides and against the lifting action of both cutter-heads, substantially as described.

6. The combination, in a wood-planing machine, of the single long planing-cylinder B, feed-rolls upon the feed-in side thereof, the tonguing cutter-heads E E', mounted upon shafts respectively held and projecting inward from the side of the machine-frame on the feed-in side of said cylinder, supported and adjustable vertically upon inclined guideways c c, and provided with pulleys P^3 P^3, and the driving-pulleys P^4 P^4 of said shafts, mounted at the feed-in end of said machine-frame, substantially as described.

7. The combination of the planing-machine frame and its bed F, the tonguing cutter-heads E E', mounted upon shafts held and projecting inward from opposite sides of the machine-frame above and below said bed, the guideways c c, projecting upward and downward from said machine-bed, the slides c^3 c^3, mounted upon said guideways and supporting said cutter-head shafts, the screws i i', mounted upon the frame and adapted to adjust said slides, and the shafts s^4 s^3, extending across the machine beneath the surface of said bed to the same side thereof, and connected, respectively, at one end by gearing to said screws, and having the other end projecting beyond the same side of the machine, whereby said slides may be adjusted from that side, substantially as described.

8. The combination of the planing-machine frame and its bed F, the tonguing cutter-heads E E', mounted upon shafts held and projecting inward from opposite sides of the machine-frame above and below said bed, the guideways c c, projecting upward and downward from said machine-bed, the slides c^3 c^3, mounted upon said guideways and supporting said cutter-head shafts, the screws i i', mounted upon the frame-work and adapted to adjust said slides, and the shafts s^4 s^3, extending transversely across the machine beneath the surface of said bed, and connected together and to said screws respectively by gearing, and having the end of one of said shafts s^4 s^3 projecting beyond the side of the machine, whereby said slides may be simultaneously adjusted from that side by turning said projecting shaft, substantially as described.

9. The combination of the single long planing-cylinder B, the bed F, the tonguing cutter-heads E E', mounted upon shafts projecting from the side of the machine above and below the bed, the vertically-adjustable slides c^3 c^3, supporting said shafts, and the presser finger or fingers r^2 r^2, carried upon said slide c^3 and adjustable therewith, and adapted to press the lumber upon said bed adjacent to said cutter-heads, substantially as described.

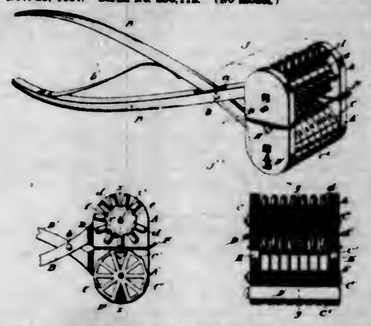


10. The combination of the single long planing-cylinder B, feed-rolls, the bed F, the tonguing cutter-heads E E', mounted upon shafts projecting from the side of the machine above and below the bed, the vertically-adjustable slides c^3 c^3, supporting said shafts, the horizontally-adjustable slide c^4, mounted upon slide c^3, and the presser finger or fingers r^2 r^2, carried upon said slide c^3 and adjustable therewith, and arranged and adapted to press the lumber upon the bed adjacent to said cutter-heads, substantially as described.

11. The combination of the single long planing-cylinder B, the feed-rolls, the bed F, the tonguing cutter-heads E E', mounted upon shafts s^3 s^3, projecting from the side of the machine, the slide c^3, carrying the shaft s^3, the rock-shaft R, mounted upon said slide and provided with the weighted arm r, and the adjustable presser-fingers r^2 r^2, attached to said rock-shaft, substantially as described.

385,896. EXPANDING PULLEY OF SHUTTLE-BOX MOTIONS FOR LOOMS. HORACE WYMAN, Worcester, Mass., assignor to the Crompton Loom Works, same place. Filed July 5, 1887. Serial No. 243,400. (No model.)

Brief.—The pulley over which the box-motion chain passes to its connection with the box-rod is provided with pivoted arms rendered adjustable by set-screws, so that thereby the effective size of the pulley may be altered and the wear of the chain so taken up.

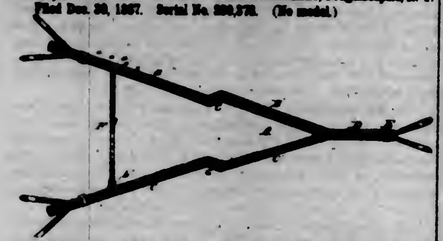


385,896.

Claim.—1. The combination, with the shuttle-boxes and the chain connected therewith, of the double-flanged slotted pulley, the blocks arranged and supported at the outer side of the said pulley and having arms extended through the slots across the face of the said pulley, and means to adjust the said blocks and arms to increase or decrease the effective diameter of the said pulley, substantially as described.

2. The combination, with a shuttle-box, its rod and sleeve, and shuttle-box chain or connector, of the double-flanged slotted pulley B, provided with blocks having arms adapted to enter the slots and cross the pulley, and with set and adjusting screws, substantially as described, to adjust the said blocks and arms toward or from the center of the pulley to adjust the said shuttle-box, substantially as described.

385,897. HAND-PUNCH. WILLIAM YATES, New York, N. Y. Filed Nov. 26, 1887. Serial No. 256,112. (No model.)



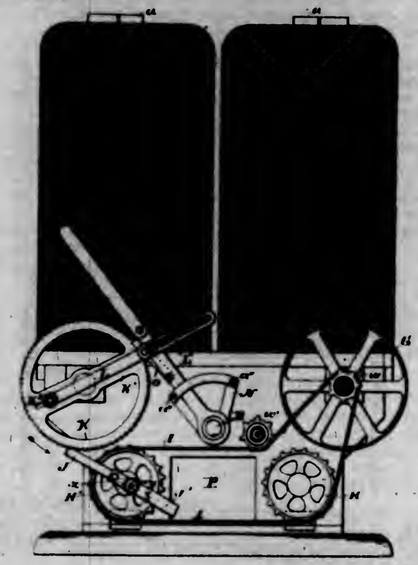
Claim.—1. A hand-punch consisting of two opposing pivoted members, transverse spindles in said members, the one carrying revoluble disks provided on their periphery with radial arms having male dies thereon, and the other carrying revoluble disks having series of triangular openings in their sides and female dies in their periphery, and pins entering said members and engaging said disks, substantially as shown and described.

2. A hand-punch consisting of two opposing pivoted members, partitions integral therewith intervening the sides of said members, spindles passing through said sides and partitions, series of disks revoluble on said spindles, having male and female dies, respectively, thereon, said series of disks being unequally divided by said partitions, and pins passing through the sides of said members and engaging said disks and partitions, substantially as shown and described.

3. In a hand-punch, the combination, with two opposing pivoted members, each having a partition intervening their sides and detachable spindles passing through said sides and partitions, of series of disks revoluble on said spindles, unequally divided by said partitions, and having male and female dies, respectively, on their periphery, and means for locking said disks upon their spindles, substantially as shown and described.

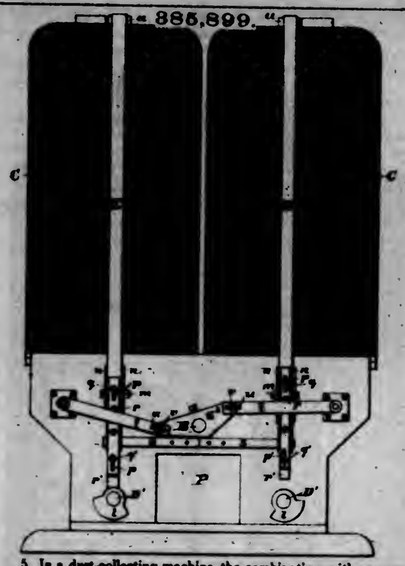
385,898. SUSPENDERS. FRANK I. ASHLEY, Poughkeepsie, N. Y. Filed Dec. 30, 1887. Serial No. 259,378. (No model.)

Claim.—A suspender or pair of suspenders having the shoulder-straps formed of webbing or any suitable material bisected diagonally over the shoulders and united edge to edge, substantially as and for the purpose described.



385,899. DUST-COLLECTING MACHINE. JAMES R. ALLFREE, Indianapolis, Ind., assignor of one-half to Robert Shriver and Harrison Swartzwelder, Cumberland, Md. Filed Sept. 1, 1887. Serial No. 248,554. (No model.)

Claim.—1. In a dust-collecting machine, the combination of two air-compartments, a series of screens for each, a lever or hammer pivotally supported at one end of each series of screens, slides working on the hammers, vibrating links alternately raising the slides, and cams operating upon the same, whereby the hammers are operated to alternately tap against their respective series of screen-frames, substantially as described.



2. In a dust-collecting machine, the combination, with the casing of a series of transverse strips arranged across the top, grooved in their sides and having spaces between them, of the screens fitting said spaces between the strips, and the longitudinal notched strips resting upon and secured to the screens at the top, substantially as described.

3. In a dust-collecting machine, a screen constituted of a frame arched at the top and having a cloth envelope, the said cloth being secured in place by means of strips connecting the lower ends of the frame, substantially as described.

4. In a dust-collecting machine, the combination of the casing, the central longitudinal shaft having sector N, the lever working in said sector, the ratchet-wheel supported at the end of the casing, the connecting-rod L, having a slot in its end and forming a movable connection with the lever, and means for rotating the wheel, substantially as described.

385,899.

5. In a dust-collecting machine, the combination, with conveyor-shafts and the ratchet-wheel, of the sprocket-wheel H', carried by one of the conveyor-shafts, the pallet carried by said wheel eccentric to its axis and adjustable thereon, and means for rotating said wheel, substantially as described.

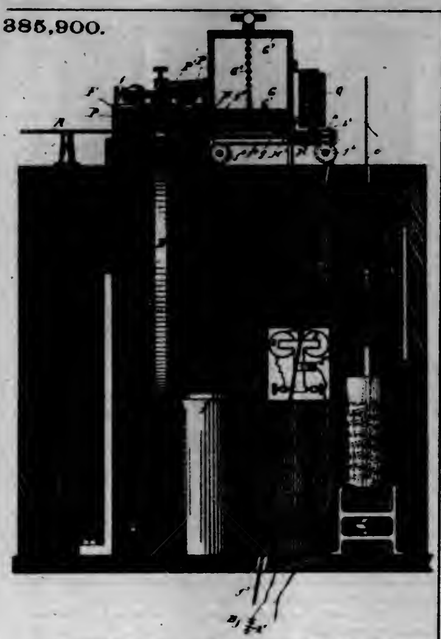
6. In a dust-collecting machine, the combination, with the ratchet-wheel, of the sprocket-wheel H', having a transverse slot in its hub, a pin fitting said slot having a set-screw, a pallet loosely supported by the pin eccentric to the axis of the sprocket-wheel, and means for operating the latter, substantially as described.

7. In a dust-collecting machine, the hammers or levers having their fulcra at one end of the machine, a vertically-moving slide for each hammer, means for simultaneously and oppositely operating said slides, and cams on the conveyor-shafts for rocking the levers on their fulcra, substantially as described.

8. In a dust-collecting machine, the hammers or levers having their fulcra at one end of the machine, a vertically-moving slide for each hammer, means for simultaneously and oppositely operating said slides, cams on the conveyor-shafts for rocking the levers on their fulcra, and springs tending to force the upper ends of said levers inwardly, substantially as described.

9. In a dust-collecting machine, the combination, with the shaft B, sector N, and lever M, of the ratchet-wheel having a slot, the arm L, slotted to form a movable connection with the lever and having its pivot in the slot of the wheel, and means for operating said wheel, substantially as described.

10. In a dust-collecting machine, the combination, with the two air-compartments, a separate valve and series of cloth screens for each compartment, the rock-shaft B, connected to the valves and bearing the sector N, the lever M, working in the sector, the arm L, the ratchet-wheel, and means for operating the latter, substantially as described.



11. In a dust-collecting machine, the combination, with the hammers or levers, and the shaft B, bearing the arm G^2, of the slides o o, slotted and working on pins, the links l l, movably connected to the arms G^2 and engaging pins on the slides, the cams l on the conveyor-shafts, and means for rocking the shaft B, substantially as described.

385,900. AUTOMATIC WEIGHING AND RECORDING APPARATUS. EDWARD H. AMET, Chicago, Ill., assignor to Herbert A. Streeter, same place. Filed Oct. 13, 1887. Serial No. 252,155. (No model.)

Claim.—1. The combination, with a scale having a variable counterpoise and a printing-wheel connected with and operated by one of the beams or levers of the scale, of a card-holder adjacent to said printing-wheel and card-feed slide for feeding the cards one by one from said card-holder to said printing-wheel, substantially as specified.

2. The combination, in a weighing and recording scale, of its variable counterpoise, a printing-wheel and impression-block, with a card-holder adjacent to said printing-wheel, and a card-feed slide for feeding the cards one by one from said card-holder to and between said printing-wheel and impression-block, substantially as specified.

385,900.

3. The combination, in a weighing and recording scale, of its variable counterpoise, printing-wheel, and inker, with an impression-block having a receptacle to receive and hold a single card, a card-holder, and a card-feed slide for delivering the cards one by one from said card-holder into the impression-block, substantially as specified.

4. The combination, in a weighing and recording scale, of its platform, variable counterpoise, type-wheel, and impression-block, with a card-holder, a card-feed slide, and a movable step in front of the scale-platform for operating or retracting said card-feed slide, substantially as specified.

5. The combination, in a weighing and recording scale, of its platform, variable counterpoise, type-wheel, and impression-block, with a card-holder, a card-feed slide, and a movable step in front of the scale-platform for operating or retracting said card-feed slide, a weight, and a cord and pulleys, substantially as specified.

6. The combination of a recording and weighing scale with card-holder G, having slotted bottom *g* and opening g^3, card-feed slide H, having upwardly-projecting feed-lugs *h*, weight J, movable step J', and a cord and pulleys connecting said weight and movable step, substantially as specified.

7. The combination of a recording and weighing scale with card-holder G, having slotted bottom *g* and opening g^3, card-feed slide H, having upwardly-projecting feed-lugs *h*, weight J, movable step J', bent lever j, cord j^2, and pulleys j^3, substantially as specified.

8. The combination of a recording and weighing scale with card-holder G, having slotted bottom *g* and opening g^3, card-feed slide H, having upwardly-projecting feed-lugs *h*, weight J, movable step J', bent lever j, cord j^2, pulleys j^4, catch-lever *k'*, and catch projection h^3 on said slide H, substantially as specified.

9. The combination of a recording and weighing scale with card-holder G, having slotted bottom *g* and opening g^3, card-feed slide H, having upwardly-projecting feed-lugs *h*, weight J, movable step J', bent lever j, cord j^2, pulleys j^4, catch-lever *k'*, catch projection h^3 on said slide H, and an electro-magnet for closing said catch-lever *k'*, substantially as specified.

10. The combination, with a scale-platform, levers, and counterpoise, of a movable type or printing device connected with and operated by one of the scale-levers, an impression-block, a card-holder adjacent to said impression-block, and a device for feeding the cards one by one into position for printing between said movable type or printing device and said impression-block, substantially as specified.

11. The combination, with a recording and weighing scale having a variable counterpoise and printing-wheel, of a vibrating hammer to tap the shaft of the printing-wheel and prevent sticking, substantially as specified.

12. The combination, with a recording and weighing scale having a variable counterpoise and printing-wheel, of a vibrating hammer to tap the shaft of the printing-wheel and prevent sticking, and an electro-magnet for operating said hammer, substantially as specified.

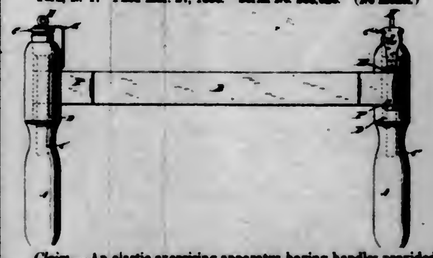
13. The combination, with a recording and weighing scale having a variable counterpoise and a printing-wheel, of a vibrating hammer to tap the shaft of the printing-wheel and prevent sticking, and an electro-magnet for operating said hammer, said electro-magnet being included in a normally-open circuit having a movable contact-piece connected with and operated by the platform of the scale, substantially as specified.

14. The combination, with a recording and weighing scale, its variable counterpoise, a printing-wheel, an inker, and an impression block or lever, of a card-holder, a card-feed slide, a weight and step-lever for operating said feed-slide, a catch-lever for holding said feed-slide retracted, an electro-magnet, N, for operating the inker, an electro-magnet, P, for operating the printing-lever, and an electro-magnet, Q, for operating said catch-lever, substantially as specified.

15. The combination, with a recording and weighing scale, its variable counterpoise, a printing-wheel, an inker, and an impression block or lever, of a card-holder, a card-feed slide, a weight and step-lever for operating said feed-slide, a catch-lever for holding said feed-slide retracted, an electro-magnet, N, for operating the inker, an electro-magnet, P, for operating the printing-lever, and an electro-magnet, Q, for operating said catch-lever, a printing-wheel-shaft tapper, K, and an electro-magnet for operating the same, substantially as specified.

16. The combination, with a recording and weighing scale, its variable counterpoise, a printing-wheel, an inker, and an impression block or lever, of a card-holder, a card-feed slide, a weight and step-lever for operating said feed-slide, a catch-lever for holding said feed-slide retracted, an electro-magnet, N, for operating the inker, an electro-magnet, P, for operating the printing-lever, and an electro-magnet, Q, for operating said catch-lever, said electro-magnet N being included in a normally-open circuit having a movable contact connected with and operated by the scale-platform, substantially as specified.

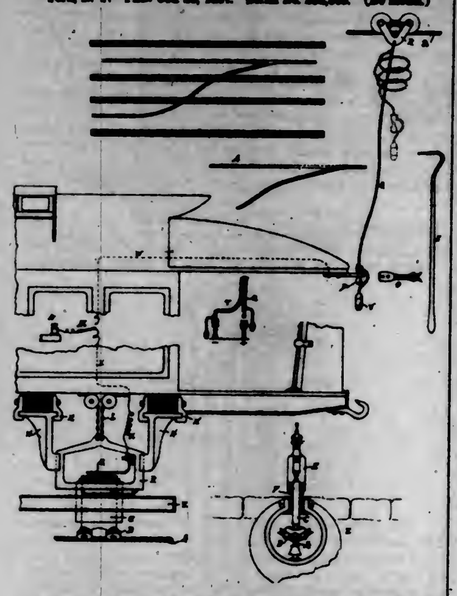
17. The combination, in a recording and weighing scale, of its movable platform, with an electric circuit having an operating-magnet included therein, a fixed contact and movable contact connected with and operated by said platform for closing said circuit, a device for retarding the motion of said movable contact, and mechanism provided with a spring or yielding connection for communicating motion from said movable platform to said movable contact, substantially as specified.



18. The combination, in a weighing and recording scale, of the scale-platform and printing mechanism, with a movable step or platform in front of the scale-platform for operating the printing mechanism of the scale by the weight of the person stepping onto the scale-platform to be weighed, substantially as specified.

19. The combination of scale-platform P, variable counterpoise C, printing-wheel D, inker E, printing-lever F, with an operating-magnet, N, its circuit *n*, contact n^2, movable contact *n'*, shaft n^3, escapement-wheel n^4, escapement n^5, pinion n^6, gear n^7, lever n^8, and spring n^9, substantially as specified.

20. The combination of scale-platform B, variable counterpoise C, printing-wheel D, inker E, printing-lever F, with an operating-magnet, N, its circuit *n*, contact n^2, movable contact *n'*, shaft n^3, escapement-wheel n^4, escapement n^5, pinion n^6, gear n^7, lever n^8, spring n^9, insulating-disk n^{11}, pawl n^{12}, and ratchet n^{13}, substantially as specified.



21. The combination, in a printing and recording scale, of the scale-levers, a variable counterpoise, a type-wheel connected with and operated by one of the scale-levers, an inking-roller, and a vibratory arm or lever swinging transversely across the periphery of said type-wheel, upon which said inking-roller is mounted, substantially as specified.

385,901. EXERCISING-MACHINE. SAMUEL M. BARNETT, New York, N. Y. Filed Mar. 27, 1888. Serial No. 268,624. (No model.)

Claim.—An elastic exercising apparatus having handles provided with cylindrical chambers D and fitted with pins C, in combination with band B and retaining spring-catches G, substantially as and for the purposes described.

385,902. ELECTRIC RAILWAY. EDWARD H. BENJAMIN, New York, N. Y. Filed Oct. 20, 1887. Serial No. 252,955. (No model.)

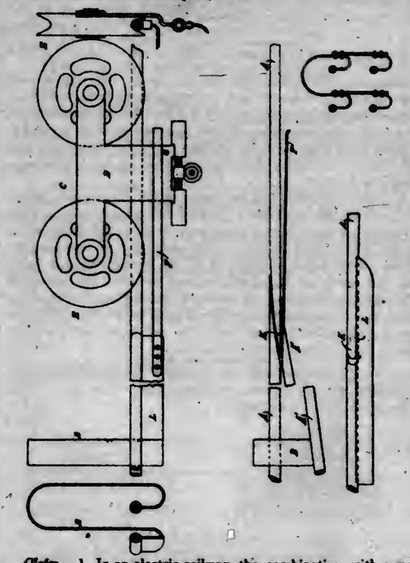
Claim.—1. In an electric railway, the combination of a section of elevated supply-conductor, a section of inclosed supply-conductor, an electrically-propelled vehicle, a permanent conductor on the vehicle leading to a contact device for the said elevated section, a corresponding conductor leading to a contact device for the said inclosed section, and the contact device for the elevated conductor having a spring-jack or similar detachable connection with the vehicle and with the corresponding permanent conductor.

2. In an electric railway, the combination of a section of elevated supply-conductor, a section of inclosed supply-conductor, an electrically-propelled vehicle, a permanent conductor on the vehicle leading to a contact device for the said elevated section, a corresponding conductor leading to a contact device for the said inclosed section, and the said contact device for the inclosed section having a detachable connection with the vehicle, and having a spring-jack or similar detachable connection with the said corresponding permanent conductor.

3. The combination, in an electric railway, with a supply-conductor, one section being inclosed in a slotted conduit and a second section elevated above the surface of the roadway, of a vehicle provided with a permanent conductor leading to a contact device for the elevated section, and also provided with a contact device leading into the conduit detachable from the vehicle at a point outside the conduit, and having a spring-jack or similar detachable connection with a permanent conductor on the vehicle.

4. In an electric railway having a section of inclosed and a section of elevated conductor, the combination, with an electric locomotive, of two conductors leading from the two contact devices, respectively, the said two contact devices, and a switch on the car for connecting the motor-terminals with the two conductors alternately.

5. In an electric railway having both an inclosed and an elevated section of conductor, the combination, with an electric locomotive, of a contact device for the conduit-section, removable so as not to impede the progress of the vehicle along the elevated section, and a holder adapted to receive the conductor of a detachable contact device for the elevated section.



6. In a double-track electric railway, the combination of an electric supply-conductor, a conduit on each track inclosing a section of said conductor, an extension of said railway having a conductor elevated above the surface of the roadway, a cross-conduit joining the conduits of the two tracks at the end, an electrically-propelled vehicle, a removable contact device for connecting said vehicle with the inclosed conductor, with means for connecting it to the elevated conductor when that section is reached.

7. The combination, in an electric railway, with positive and negative supply-conductors, of an electrically-propelled vehicle and two pairs of contact devices, one pair of which is provided with connectors of different form for positive and negative wires, respectively, whereby only the right connection can be made.

8. The combination, with the contact-trolley, of a conductor provided with a take-up device and a ring or eye by which it may be reached from below and brought into an operative position.

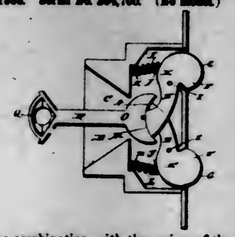
9. In an electric railway, the combination, with an electrically-propelled vehicle, of a supply-conductor inclosed in a conduit, a contact device beneath the car connecting with the conductor, but detachable at a point outside the conduit both electrically and mechanically, and a common actuating device for the electrical and mechanical detachment.

385,903. SWITCH OR OVERHEAD LINES IN ELECTRIC RAILWAYS. EDWARD H. BENJAMIN, New York, N. Y. Filed Jan. 20, 1888. Serial No. 261,264. (No model.)

Claim.—1. In an electric railway, the combination, with a main conductor, of a branch conductor held in a definite position relative thereto, a contact device adapted to ride on either main or branch conductor, a projection from said contact device extending downward beside the conductor, a flexible guide for directing the contact device at the branch, the two conductors being held in such a relative position as to allow the passage of the said projections between them, and the main conductor having a frog at the meeting-point shaped to form a prolongation of the branch conductor, so as to permit the passage of the contact device from the branch to the main.

2. In an electric railway, the combination, with main and branch conductors, of a contact device connected to an electrically-propelled vehicle, the main and branch conductors being situated with an intervening space permitting the passage of the propelling device between them, a stationary flexible guide, and a projection from said contact device adapted to engage with said guide and thereby direct the contact device.

3. In an electric railway, the combination, with main and branch conductors, of a contact device having a propelling extension adapted to pass between main and branch conductors, and a stationary flexible guide for directing the contact device.

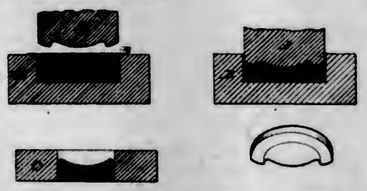


4. In an electric railway, the combination, with main and branch conductors, of a contact device adapted to both conductors and provided with a propelling extension, and a stationary flexible guide having its free end extending along the main conductor away from the point of junction and adapted to engage with a projection on the contact device for directing the same.

5. In an electric railway, the combination, with a main conductor, A, of a branch conductor, A', flexible guide F, a bracket, B, holding the two conductors in a fixed relative position, with an intervening space at the meeting-point, and a contact device adapted to pass through the bracket B, and provided with an extension adapted to pass through the said space between the conductors.

6. In an electric railway, the combination of a main conductor, A, and a branch conductor, A', the latter having guide F and the former having a frog at the branching point, forming, substantially, an

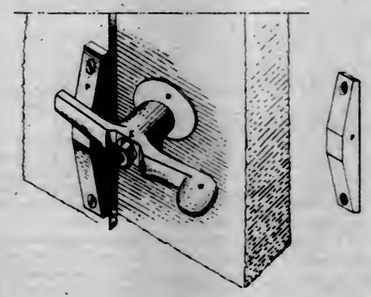
extension of the branch conductor, with a contact device having a grooved wheel to which the said frog is adapted.



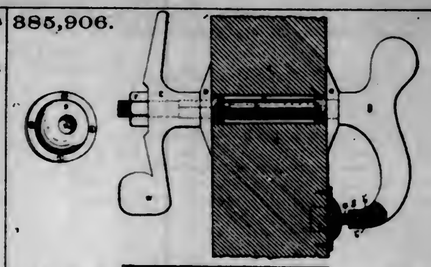
385,904. SASH-HOLDER. ROBERT C. BOEHLER, Mankato, Minn. Filed Feb. 20, 1888. Serial No. 264,760. (No model.)

Claim.—1. The combination, with the casing, of the dogs pivoted therein and having the cam-heads projecting through the casing and the arms extending from the cam-heads beyond the pivotal points and having their inner ends arranged near together, the lever pivoted in the casing and having a yoke on its inner end acting on the inner ends of the arms of the dogs, and the springs acting on the cam-heads of the dogs, as set forth.

2. The combination, with the casing, of the dogs pivoted therein and comprising the cam-heads projecting through the casing, and the arms extending from the said heads beyond the pivotal points of the dogs, the inner ends of said arms being close together and provided with the curved bearing-surfaces M N, the springs arranged in the casing and acting on the cam-heads, and the lever comprising the shaft pivoted in the casing and having a yoke bearing on the curved surfaces M N of the inner ends of the arms of the dogs, and a handle projecting from said shaft, the said yoke and handle being at right angles to the said shaft, as set forth.

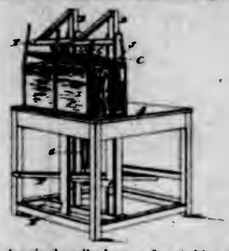


385,905. CUSHIONED DIE FOR SWAGING SHEET-METAL ARTICLES. FRED. C. CARSON, New Haven, Conn. Filed Apr. 16, 1888. Serial No. 270,811. (No model.)



Claim.—In dies for swaging sheet metal, the combination of the die or follower A, having its face of a shape corresponding to the reverse side of the article to be swaged, and the other die, B, having a cavity corresponding to said follower, but of greater depth than the required entrance of the said follower into the said die, with an india-rubber cushion, C, in said cavity to yieldingly resist the entrance of the follower into the die, substantially as and for the purpose described.

385,906. DOOR-SECURER. ANDREW J. CHASE, Boston, Mass., assignor to Warren A. Chase, same place. Filed Apr. 16, 1887. Serial No. 235,167. (No model.)



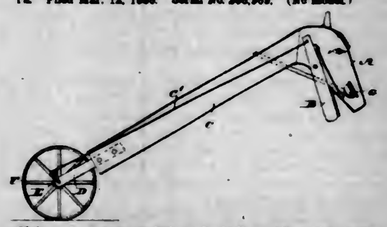
Claim.—A door-fastening consisting of the handle B, having a shank, *b*, the locking-bolt E, secured thereto, and the double-wedge-shaped bearing-plate P, substantially as set forth.

385,906.

385,907. FRUIT-PACKING PRESS. EDWARD A. CHATFIELD, New Haven, Conn. Filed Mar. 26, 1888. Serial No. 268,508. (No model.)

Claim.—The herein-described press for packing fruit, consisting of the combination of the frame with bed A thereon to support the box or case, vertical guides C, vertical slide B, arranged in said guides and free for vertical movement only, the said slide carrying two arms, E E, projecting from the slide over the bed and parallel therewith, a pedal, P, below the bed and in connection with said slide, the frame provided with a shoulder or notch, H, in the path of and adapted to engage said pedal when in the depressed position, and a counter-balance, G, in connection with said slide, and so as to yieldingly hold the slide with its arms in the raised position, substantially as described.

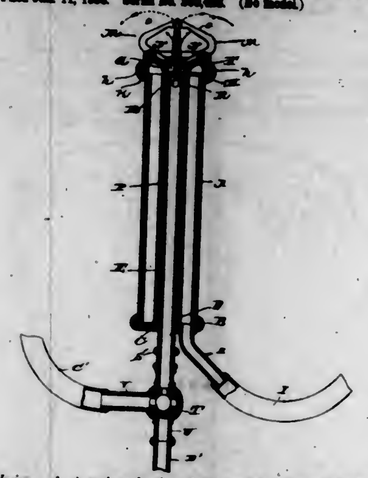
385,908. WATCH-MAINSPRING. DUANE H. CHURCH, Waltham, Mass. Filed June 17, 1884. Serial No. 135,127. (Model.)



Claim.—The combination, with the barrel C, of the mainspring A and the supplemental spring B, secured to the outer end of spring A, and having its free end wound within the coils of the mainspring, substantially as described.

385,909. ALLOY OF COPPER, NICKEL, AND GOLD. DUANE H. CHURCH, Newton, Mass. Filed Sept. 23, 1887. Serial No. 250,980. (No specimens.)

Claim.—An alloy or compound metal composed of copper, nickel, and gold, in the proportions of fifty to seventy-five parts of copper, fifteen to forty parts of nickel, and ten to thirty-five parts of gold, as hereinbefore set forth.



385,910. TOY RIDING-STICK. SAMUEL R. CLARK, Philadelphia, Pa. Filed Mar. 12, 1888. Serial No. 266,969. (No model.)

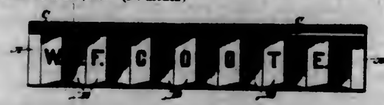
Claim.—1. A toy consisting of a hollow riding-stick having connected therewith the representation of the head of an animal, and provided with a pivoted lower jaw, a crank-axle with wheels thereon, arms connecting said hollow stick with said axle, and a rod within said hollow stick connecting the crank portion of said axle with the inner end of said lower jaw, said parts being combined substantially as described.

2. A toy consisting of a hollow riding-stick having connected therewith the representation of the head of an animal, and provided with a pivoted lower jaw, a crank-axle with wheels thereon, arms connecting said hollow stick with said axle, a rod within said hollow stick connecting the crank portion of said axle with the inner end of said lower jaw, a gong secured to the fixed portion of said jaw, and a hammer or striker secured to the pivoted jaw, said parts being combined substantially as described.

385,911. VAGINAL SYRINGE. JOHN M. COOPER, Hicksville, Ohio. Filed Jan. 11, 1888. Serial No. 260,422. (No model.)

Claim.—1. A syringe having the outer tube, A, provided with the perforated head or cap, and the central tube, P, extending through the said outer tube and through the cap or head, substantially as described.

2. The syringe having the head or cap provided with the concavo-convex radially-perforated diaphragm, substantially as described.



3. The combination, in a syringe, of the pivoted dilators having the outer arms, O, and inner arms, N, and the longitudinally-movable tube P, adapted to engage the arm N, for the purpose set forth, substantially as described.

4. The syringe having the head or cap and the interchangeable rings of different external diameters adapted to be secured to said head or cap, substantially as specified.

5. The combination of the outer tube, A, having the heads B and F at opposite ends, the latter being perforated, the tube E, arranged in the tube A and screwed to the heads, and the tube P, extending through the tube E and through the heads, substantially as described.

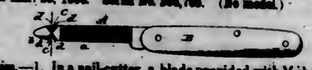
6. In a syringe, the combination of the cylinder, the dilators pivoted at one end thereof, the tube movable longitudinally through the cylinder and acting on the dilators to operate the same, and the adjustable nut on the outer end of said tube, as and for the purpose set forth.

385,912. SIGN. WILLIAM H. COOPER, Marion, assignor of one-half to John W. Guerrant, Crittenden County, Ark. Filed Oct. 3, 1887. Serial No. 251,363. (No model.)

Claim.—A sign provided with angular blocks B, attached to a base-board and arranged in alignment thereon, each block being inclined on two opposite vertical sides and upwardly inclined on the bottom face, whereby said blocks may be lettered, as and for the purpose described.

385,913. FISH-HOOK. JOSEPH H. HUNTER, Washington, D. C. Filed May 10, 1888. Serial No. 273,444. (No model.)

Claim.—1. A fish-hook having one or more short rigidly-secured inclined projections thereon for retaining the bait in its adjusted position relative to the point of the hook, substantially as described.

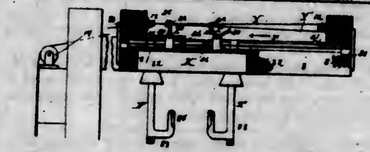


2. A fish-hook having one or more outwardly-projecting prongs rigidly secured to the shank thereof at a point on a plane with the point of the hook, substantially as described.

3. A fish-hook having a short downwardly-inclined projection thereon at a point in proximity to the point of the hook, for the purposes specified, substantially as described.

4. A fish-hook having a short rigid projection thereon in proximity to the point of the hook for preventing the bait from working up the shank of the hook, substantially as described.

385,914. NAIL-CUTTER. THEODORE F. CORLEY, Brooklyn, N. Y. Filed Mar. 20, 1888. Serial No. 268,705. (No model.)



Claim.—1. In a nail-cutter, a blade provided with V-shaped transverse notches, with cutting-edges formed on the blade along opposite sides of the notches, substantially as specified.

2. In a nail-cutter, a blade, A, provided with a rounded burnishing end, *b*, and having cutting-notches *d* formed in the edges thereof, substantially as specified.

3. In a nail-cutter, a blade, A, provided with a file-cut surface, *a*, with a rounded burnishing end, *b*, having cutting-notches *d* formed in opposite edges thereof, substantially as specified.

385,915. ELECTRIC CONDUCTOR. LEO DAFT, Plainfield, N. J. Filed Dec. 20, 1886. Serial No. 282,883. (No model.)

Claim.—1. The combination, with the main and branch and switch rails, of a slide supporting the movable ends of the switch-rails, provided with catches for engaging with stationary shoulders, a slide-actuating device adjacent to the surface road, and connections between the latter and the catches, substantially as set forth.

2. The combination, with the slide carrying the movable switch-rails, of two catch-levers, stationary catches upon the overhead support adapted to engage with said levers, and a cord passing through openings in arms of the said levers and provided with stops, substantially as set forth.

3. The combination, with the main, branch, and switch rails of an overhead conductor, of a slide provided with pivoted hangers supporting the ends of the switch-rails, substantially as described.

4. The combination of the slide, switch-rails, and pivoted hangers, provided with arms having sockets for the reception of the switch-rails, substantially as set forth.

5. The combination of the slide supporting the switch-rails, locking devices, slide-actuating mechanism, and buffers, substantially as described.

385,916. BLACKING-BOX. WILLIAM K. DAVIS, Chicago, Ill. Filed Sept. 5, 1887. Serial No. 248,917. (No model.)

Claim.—1. In a blacking-box, the main body, in combination with a perforated diaphragm secured permanently to the body immediately above the blacking, the cover B, and a follower fitted into the bottom of the box, substantially as and for the purposes specified.

2. The blacking-box body A, in combination with the perforated diaphragm C, secured permanently within the body over the blacking, the follower E, fitted into the body at the bottom thereof, and the packing *e*, substantially as and for the purposes specified.

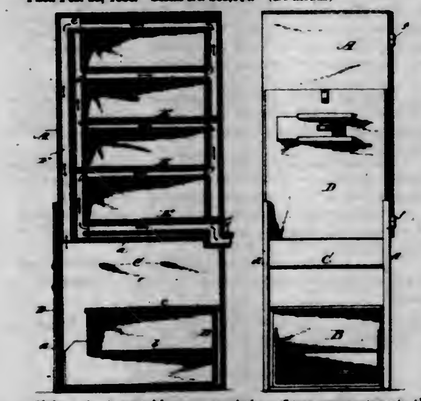
385,917. CAR-SPRING. MATHIAS H. DAVIS, Philadelphia, Pa. Filed Aug. 13, 1887. Serial No. 246,736. (No model.)

Claim.—1. A spring-plate constructed of sheet or wrought metal of convex form, as a new article of manufacture.

2. A car-spring consisting of spring-plates and a connecting-bolt, said plates being of convex form, substantially as described.

3. A car-spring, having spring-plates provided with removable dowels which project through said plates, substantially as described.

385,918. CAR-SPRING. THOMAS C. DAVIS, Philadelphia, Pa. Filed Aug. 4, 1887. Serial No. 246,113. (No model.)



Claim.—1. The connecting device for the plates of a car-spring, consisting of a bar having a head at each end and a neck, and a link with a head at one end and a slotted cross-bar at the other end, substantially as described.

2. The plates A A, in combination with the bar D, having the head G and neck H, and the link E, having the head J at one end, and the slotted cross-bar K, with the opening *a* at the side, leading into said slot at the other, substantially as described.

3. A car-spring having its lower plate provided with a raised portion, in combination with a seat having a bolt therein, the head of which corresponds to and fits in said raised portion of the plate of the spring, substantially as and for the purpose set forth.

385,919. PORTABLE OVEN. ABRAHAM DAY, Moorefield, W. Va. Filed Feb. 20, 1888. Serial No. 265,010. (No model.)

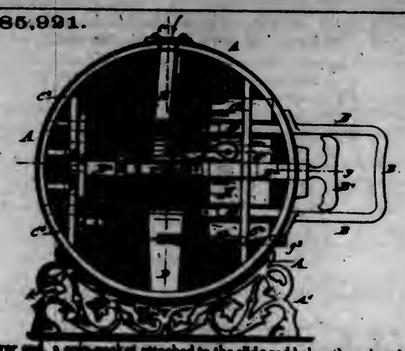
Claim.—1. A portable oven consisting of two compartments, the lower one provided with a heater and with transverse slats C above said heater, and the upper one subdivided by hollow shelves communicating with the lower compartment and with each other, substantially as described.

2. In a portable oven, hollow shelves arranged within the same above the heater, communicating with each other, and a flue, F, between one end of the shelves and the outer wall of the oven, and affording communication between the heater-compartment and the uppermost of the shelves, substantially as shown and described.

3. The portable oven described, consisting of the shell or case, the partition *a*, dividing the same into an upper and lower compartment, a plurality of hollow shelves arranged within the upper compartment, the flue F upon one side of the upper compartment, and communicating with the lower compartment and with the space *e* at the top of the upper compartment, and the pipe G at the lower end of the upper compartment, the said shelves communicating with each other and with the flue F and pipe G, and having a space for hot air on all sides thereof, substantially as shown and described.

385,920. RAILWAY-SIGNAL. CONSTANT F. DE REDON, New York, N. Y. Filed Apr. 2, 1888. Serial No. 269,255. (No model.)

Claim.—1. The combination, with the railroad-rail and the plate B, bolted thereto, of the tube A, fastened permanently at one end to the plate B, and the other end of the tube being free to spring under the action of the passing wheels, the bar H within the tube A, and the block K, to which such bar H is permanently attached, the pivot P at the distant end of such bar H, the lever Q upon the pivot P, the short end of which lever is acted upon by the moving end of the tube A, and the contact-block M and circuit-wire L, connected to the same, and with which contact-block the long end of the lever Q comes in contact when the loose end of the tube A is depressed, substantially as set forth.



2. The spring-tube A, permanently connected at one end to the track-rail, and the shoe D at the other end, in combination with the stationary bar within the tube and the lever pivoted upon the bar, the short end of which lever receives its motion from the moving end of the tube, and the contact-plate adjacent to the long end of the lever, and circuit-connections whereby the electric circuit is closed by the movement of the tube and lever, substantially as set forth.

385,921. COIN-CONTROLLED STRENGTH-TESTING MACHINE. JOSEPH DEVAFFERY, Brooklyn, assignor to the Hand Power Test Machine Company, New York, N. Y. Filed Feb. 17, 1888. Serial No. 264,416. (No model.)

Claim.—1. The combination of a fixed handle, a movable handle, a spring-actuated slide-rod attached to said handle, a stop or abutment on said slide-rod, a pivoted latch engaging said abutment, an eccentrically pivoted and adjustable anti-friction roller on said latch, a coin-tube having an open end terminating near the roller, and a coin-pocket attached to the slide-rod and located below the coin-tube and the roller, substantially as set forth.

2. The combination of a fixed handle, a movable handle, a slide-rod applied to said movable handle, a cross-head at the inner end of the slide-rod, springs acting on said cross-head, a stop or abutment on the slide-rod, a pivoted latch engaging said abutment, an eccentrically-adjustable anti-friction roller on said latch, a coin-tube open at the

385,921.

lower end, a coin-pocket attached to the slide-rod below the coin-tube, and a conducting-chute below the coin-tube, substantially as set forth.

385,922. NECKSCARF. LOUIS BOSSERT, Philadelphia, Pa. Filed May 21, 1888. Serial No. 274,512. (No model.)

Claim.—A scarf, tie, or other article of neck-wear having a neck-band with a stiffener at the free end, and having said stiffener covered or inclosed by bringing the backing or lining material to the face, so as to permit the discontinuance of the facing-fabric some distance from the end of the band, all substantially as specified.

385,923. STOVE-PIPE DAMPER. JAMES B. FERGUS, Delphi, Ind. Ter., assignor of one-half to Henry G. Bliss, same place. Filed Feb. 17, 1888. Serial No. 264,494. (No model.)

Claim.—The combination, with the stove-pipe section A, of the plates *p p*, secured lengthwise and respectively at opposite sides of the interior of said pipe-section, disconnected from each other to leave a single passage in the pipe-section, a series of diaphragms *a a*, pivoted independently of each other to the said plates at intervals of their lengths, couplings *c c*, connecting the alternate diaphragms at one side of the axis thereof and connecting the intermediate diaphragm at the opposite side of the axis thereof, and the adjusting-rod A, attached to one of said diaphragms, substantially as described and shown.

385,924. BOX. JAMES B. GREENLEE, Brooklyn, N. Y., assignor to Robert H. Thompson and Henry B. Hurtt, both of same place. Filed Feb. 11, 1888. Serial No. 263,661. (No model.)

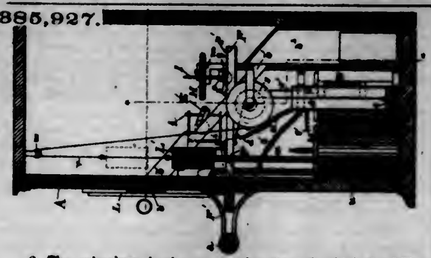
Claim.—1. The combination, with a rectangular box having an opening in one end thereof and at a corner, of a case or shell for containing said box, and through which the box may be moved sidewise, said case or shell operating to close said opening when the box is in position in the case or shell, substantially as specified.

2. The combination, with a rectangular box having an opening in each of the ends thereof and at the corners, of a case or shell for containing said box, and through which the box may be moved sidewise, said case or shell operating to close both said openings when the box is in position in the case or shell, substantially as specified.

385,925. FURNACE FOR HEATING WHEEL-TIRES. JAMES B. HANNAY, Glasgow, County of Lanark, Scotland. Filed Feb. 7, 1888. Serial No. 263,264. (No model.)

Claim.—In combination, as a furnace for heating tires and the like articles, a furnace-chamber made with a concave inner side or surface of fire-brick of a shape corresponding to that of the article to be heated, and an oil-spray burner worked with compressed air and placed to project the ignited spray-jet in a direction nearly tangential to the said concave surface, substantially as herein set forth.

385,926. METHOD OF ORNAMENTING LEATHER. PAIN HAMMA, Gloversville, N. Y. Filed Dec. 22, 1887. Serial No. 258,706. (Model.)



Claim.—1. The method of ornamenting leather and other materials which are changed in appearance by smoke, consisting in covering the article with a pattern of metal, paper, or other similar impervious material having the desired figure cut therein and exposing the same to the action of smoke, substantially as specified.

2. As an article of manufacture, the glove having its surface ornamented by the action of smoke, substantially as specified.

385,927. COIN-OPERATED INDUCTION-COIL. JAMES W. HASELL, Baltimore, Md. Filed Jan. 23, 1888. Serial No. 261,282. (No model.)

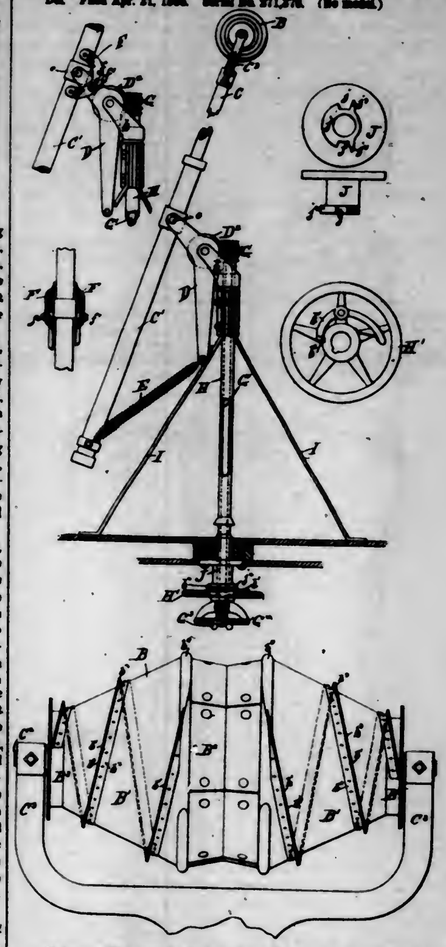
Claim.—1. The combination, substantially as described and shown, of a coin-chute provided with an opening through which the falling coin is exposed and a circuit-closing device located adjacent to said opening in position to be acted upon by the descending coin and free to move under the influence of the coin beyond the path of the latter, as described, whereby the coin is enabled to effect the closing of the circuit without having its movement arrested for that purpose.

385,927.

2. The coin-chute having an opening through which the falling coin is exposed, in combination with a circuit-closing lever, E, arranged, as described, to be acted upon and moved by the coin out of its path, and a magnet to hold the lever after being thus moved, whereby the coin is enabled without stopping to close the circuit and the circuit retained in closed condition by the magnet without assistance from the coin.

3. In an apparatus for administering electricity, an induction-coil, two electrodes connected with the secondary wire of the induction-coil, a battery and conductors connecting the same with the primary wire of the induction-coil, a normally-open circuit-closing device, E, in the battery-circuit, a coin-chute provided with an opening through which the falling coin may act upon said circuit-closing device without being arrested thereby, a second and normally-open circuit-closing device also mounted in the battery-circuit, and a manual device, F, adjacent to one of the electrodes, for operating the last-named circuit-closer, whereby the battery-circuit is closed at one point by the moving coin and thereafter completed at another point by the manual device.

4. In an apparatus for administering electricity, the induction-coil, the battery and conductors connecting the same with the primary wire of an induction-coil, the electrodes connecting with the secondary wire of the induction-coil, the lever E, for closing the battery-circuit at one point, the coin-chute provided with an opening through which the coin without stopping acts upon said lever, circuit-closing devices *i j*, also in the battery-circuit, the manual operating-bar F, for closing the circuit at *i j*, the trip I, actuated by the bar F and acting in turn upon the lever E, and the means for automatically retracting the bar F when released, whereby the coin is enabled to close the battery-circuit at one point and the manual bar enabled to complete said circuit at a different point and thereby bring the induction-coil into action, and, finally, the bar F caused to reopen the battery-circuit at both points when released.



5. The induction-coil and its movable core *t*, the battery connected to the primary wire of said coil, the electrodes connected with the secondary wire of the coil, the transparent indicator-tube, the flexible tube connected thereto, the vertically-movable reservoir *b'*, connected with the flexible tube, and the fluid therein, in combination with the manual bar F and connections, substantially as shown, from said bar to the reservoir and the core *t*, respectively, whereby said bar is enabled in moving endwise to vary the intensity of the secondary current and to indicate said variation by raising and lowering the fluid in the indicator-tube.

6. The combination, in an apparatus for administering electric shocks, of an electric generator and circuit-wires therefrom, a circuit-closing bar, F, a circuit-closer, E, a coin-chute provided with an opening through which the moving coin may act upon the circuit-closer E, a magnet to hold the circuit-closer E, and a trip, I, actuated by the circuit-closing bar to release the circuit-closer E from the magnet.

7. The combination, substantially as described, of an electric generator, an induction-coil whose primary wire is connected with said generator, two stationary electrodes connected with the secondary wire of said coil, a normally-open circuit-closing device, E, controlling the generator-circuit, the coin-chute provided with an opening and located in suitable relation to the circuit-closer to admit of the falling coin moving the circuit-closer without being stopped thereby, a second and normally-open circuit-closer, F, also located in the generator-circuit, and a manual device for operating the last-named circuit-closer, located adjacent to one of the electrodes and movable independently thereof, whereby the coin pursuing an uninterrupted course to its receptacle is enabled to close the circuit at one point and the attendant enabled to close it at a second point without movement of the electrodes.

8. The combination, in an apparatus for administering electricity, of an electric generator, an induction-coil whose primary wire is in circuit with the battery, an endwise-moving bar, F, controlling said battery-circuit, a glass indicator-tube, a liquid-reservoir, a flexible tube connecting the glass tube and reservoir, and a cord, *d*, suspending said reservoir and connected with the movable bar, for the purpose set forth.

385,928. ELECTRIC RAILWAY. EDWIN W. ELLIS, Wilmington, Del. Filed Apr. 21, 1888. Serial No. 271,370. (No model.)

Claim.—1. The combination, with a trolley bearing upward against a conducting-wire and its supporting and carrying connection on top of the car, of a shifting or reversing operating mechanism therefor fitted within the car-roof, substantially as described.

2. The combination, with a trolley adapted to bear upward against a conducting-wire and its supporting and carrying connection on top of the car, of a sleeve to shift said connection from the inside of the car and fitted with an operating-handle and locking device, substantially as described.

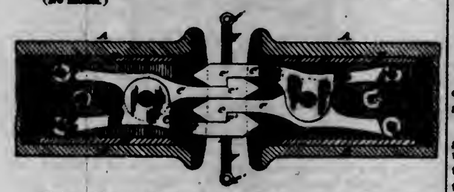
3. The combination of the trolley-rod, its pivoted supporting-lever, a dipping-shaft, and gearing between said shaft and lever, whereby the trolley-rod may be dipped or inclined, as desired.

4. The combination of the trolley-rod, the bell-crank lever to which it is pivoted, the returning-spring between said rod and lever, a dipping-shaft geared with said lever, and a handle to operate said shaft, whereby the rotation of said rod to the conducting-wire may be determined by said dipping-shaft, while the spring maintains yielding contact.

5. The combination of the trolley-rod, its pivoted supporting-lever, the turning sleeve upon which said lever is pivoted so as to be adjusted thereon, the handle to turn said sleeve, a dipping-shaft passing through said sleeve, gearing between said shaft and said pivoted lever, and a handle for said shaft, whereby the trolley-rod may be dipped or inclined by the dipping-shaft and the apparatus reversed by the said turning sleeve, substantially as described.

6. The combination of the conducting-wire, the trolley, and the turning sleeve which supports and carries the trolley-rod and its connections, with a fixed notched locking-plate, and a locking device between said sleeve and plate, substantially as described.

7. The combination, with the supporting-lever and the trolley rod or standard pivoted thereon, of side guides fixed to said trolley-rod and preventing lateral motion of said rod upon said lever, substantially as described.



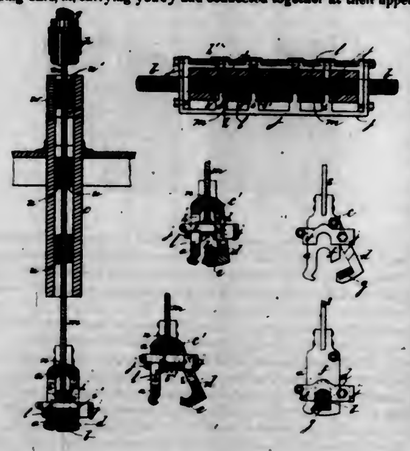
8. The trolley fitted with a spiral flange upon its cone end leading to the center of the trolley and with a portion thereof substantially parallel with the surface of the trolley to take the wear of the wire, substantially as described.

9. The trolley made up of three main sections, to wit: two cone end sections and a central section having a depression or groove for the wire, substantially as described.

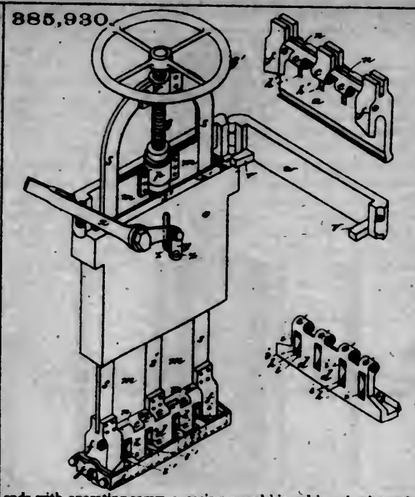
10. The trolley having a central V-shaped or depressed section fitted with corresponding detachable wearing-plates, substantially as described.

11. The trolley having a depression or groove for the conducting-wire to run in, and at each side thereof a curved or rounded annular bead cut away to shed or shift a leaving wire, substantially as described.

385,929. CAR-COUPLING. JOHN HELM, Omaha, Neb., assignor to Louis Helm, St. Louis, Mo. Filed Feb. 6, 1888. Serial No. 263,117. (No model.)



Claim.—The combination, in a car-coupler, of the pin F, gripping-jaws C C, and lever J^3, operating the same, in conjunction with the pin b^3, box B, and draw-head A, substantially as shown and described, and for the purpose specified.



385,930. GRIP-GEAR FOR CABLE STREET-RAILROADS. JOHN HELM, Omaha, Neb., assignor to Louis Helm, St. Louis, Mo. Filed Mar. 15, 1888. Serial No. 267,214. (No model.)

Claim.—1. In a cable-road grip-gear, the combination of a fixed jaw, *c*, carried by grip-frame on car, swing-jaw *d*, hinged to fixed jaw *c*, slots *h h'*, formed through said jaws and having recesses *i*, yoke *j*, surrounding said jaws and formed with cross-bars *k*, having shoulders *i'*, with lower ends, *l*, of sliding bars *m*, and springs *b'*, substantially as shown, and for the purpose described.

2. The combination of vertical side bars, *s*, carrying fixed jaw *c* and connected together at their upper ends above the floor of car, and intermediate upright sliding bars, *m*, carrying yoke *j*, and connected together at their upper ends with operating-screw *q* and hinged jaw *d*, substantially as shown, and for the purpose described.

3. The combination of vertical side bars, *s*, carrying fixed jaw *c* and connected together at their upper ends, and intermediate upright sliding bars, *m*, carrying yoke *j* and connected together at their upper

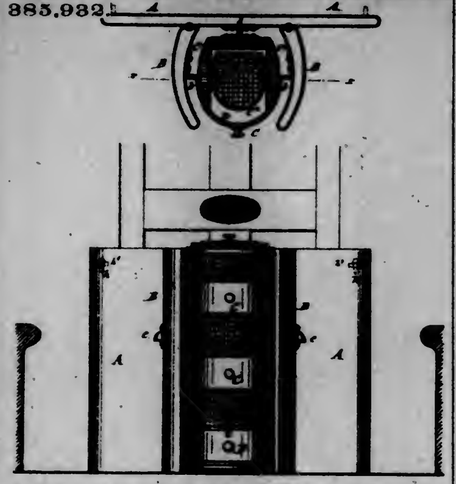
ends with operating-screw *q*, casing *o*, and hinged jaw *d*, substantially as shown, and for the purpose described.

4. The combination of vertical side bars, *s*, carrying fixed jaw *c* and connected together at their upper ends by cross-bars *u u'*, central upright bar, *s'*, secured to said cross-bars and to fixed jaw *c*, and intermediate upright sliding bars, *m*, carrying yoke *j* and connected together at their upper ends with operating-screw *q*, hinged jaw *d*, lugs or brackets *v*, projecting from door *w* of casing *o*, lever *x*, links *y*, and bar *z*, secured to grip-frame, substantially as shown, and for the purpose described.

385,931. FISHING-REEL. ANDREW R. HEBERTZ, New Haven, Conn. Filed May 21, 1888. Serial No. 274,482. (No model.)

Claim.—1. A spool for fishing-reels, consisting of the axle A, constructed with the gudgeon at each end and so as to form a corresponding shoulder, *a*, at each end, combined with the heads B C, struck from sheet metal, each with an inwardly-projecting hub, D, and so as to form a concentric shoulder, *c*, upon the outside of the heads, the heads centrally pierced to set on over the gudgeon against the shoulder of the axle, with a collar, E, set onto the gudgeon outside the head and into the shoulder of the head, substantially as described.

2. The combination of the axle A, constructed with a gudgeon at each end to form shoulders *a*, the heads B C, made from sheet metal, constructed with a hub, D, upon their inner surface to set against the respective shoulders *a* of the axle, with a collar, E, set on over the gudgeon and against the outer face of the head and there secured, substantially as described.



385,932. CAR-HEATER. EDUARD HEHN, Jersey City, N. J. Filed Apr. 6, 1887. Serial No. 233,962. (No model.)

Claim.—1. The combination, with the casing of a car-door, said casing having fixed eyes, of a panel extending across said door and having hooks for engaging said eyes and a heater supported by said panel, substantially as set forth.

2. The combination, with the casing of a car-door, said casing having fixed eyes, of a panel extending across said door and having

385,932.

hooks for engaging said eyes, hollow guard walls or wings attached to said panel, and a heater supported by said panel and guard-walls, substantially as set forth.

3. The combination of a hollow panel, hollow guard walls or wings attached to said panel, and a heater supported by brackets on said panel and guard-walls, substantially as set forth.

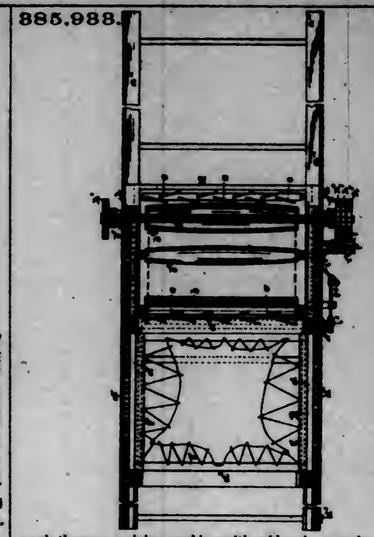
4. The combination of a hollow supporting-panel, hollow guard-walls attached to said panel, a heater supported on said panel and guard-walls and composed of a perforated exterior shell, an interior perforated fire-pot, and an ash-pan below said pot at the lower part of the shell, substantially as set forth.

5. The combination of a movable panel provided with hooks for suspending it from a fixed structure and a heater attached to said panel, substantially as described.

6. The combination of a movable panel provided with hooks for suspending it from a fixed structure, a heater attached to said panel, and guard-walls, also attached to said panel and extending outward therefrom on opposite sides of the heater, substantially as described.

7. The combination of a movable panel provided with hooks for suspending it from a fixed structure, a heater attached to said panel, and hollow guard-walls, also attached to said panel and extending outward therefrom on opposite sides of the heater, substantially as described.

385,933. JAPANNING-MACHINE. IRVIN G. HOOPES, Newark, N. J. Filed May 17, 1887. Serial No. 238,451. (No model.)

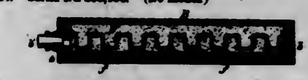


Claim.—1. The combination, with a leather-stretching frame and the stretched leather thereon, of a daub receptacle or tank, a traveling carriage constructed to hold said frame and to move reciprocally across said tank, a daub-conveying apron arranged in said tank and operating to transfer the daub from the tank to the under side of said stretched leather, and actuating devices for causing the movements of said carriage and apron, for the purposes set forth.

2. The combination, with a leather-stretching frame and the stretched leather thereon, of a daub receptacle or tank, a traveling carriage constructed to hold said frame and to move reciprocally across said tank, a daub-conveying apron arranged in said tank and operating to transfer the daub from the tank to the under side of the stretched leather, flexible or yielding scrapers arranged to distribute the daub over the surface of the leather, devices operating to cause the said apron to lift the daub from the tank to the leather, and means whereby said carriage and frame are moved reciprocally across the tank and scrapers, for the purposes set forth.

3. The combination of a leather-stretching frame, a daub receptacle or tank, a reciprocating carriage constructed to receive said frame and to move reciprocally across said tank, a daub-conveying apron arranged in said tank and operating to transfer the daub in the tank to the under side of the leather when in the stretching-frame, a daub agitator or mixer arranged and moving in said daub-tank, and actuating devices for operating said mixer, for the purposes set forth.

4. In a japanning-machine, the combination of a daub-holding tank of the form herein specified, rolls b b^1, arranged in said tank at different levels, a daub-conveying apron arranged around said rolls, ways extending on and in opposite directions from said tank, a frame-holding carriage arranged and moving on said ways and provided with



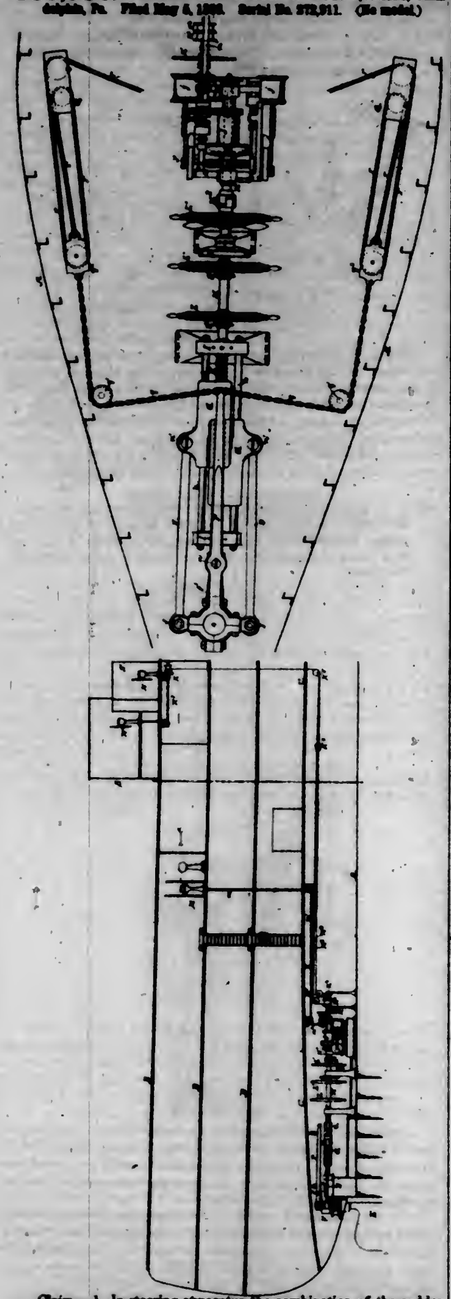
385,933.

a rack thereon, a pinion meshing with said rack or racks, and means for actuating said pinions, for the purposes set forth.

5. In a japanning-machine, the combination of a tank, A, rolls b b^1, journaled in said tank, said roll b^1 being provided with pulleys h^2, h^3, and h^4 thereon and a gear, h^5, as herein set forth, ways a^{10}, extending on and oppositely from said tank, a frame-holding carriage moving on said ways and provided with racks d' on the upper side thereof, a shaft, k', extending above said tank, having pinions k thereon, meshing with said racks d', and a gear meshing with the gear on the roll b^1, for the purposes set forth.

385,934. SATURATOR FOR THE PRODUCTION OF VAPOR BLOW-PIPE FLAMES. FERDINAND R. IVES, Philadelphia, Pa. Filed Oct. 24, 1887. Serial No. 253,150. (No model.)

Claim.—A saturator consisting of a tube having inlet and outlet near its opposite ends, and a porous filling with a zigzag or other circuitous channel along the upper portion of said porous filling, all substantially as set forth.



385,935. SASH-LOCK. JOHN JACKSON, Clinton, Iowa. Filed Apr. 9, 1888. Serial No. 270,103. (No model.)

Claim.—1. The combination, with the upper and lower meeting-rails of a sash, of a sash-lock mounted on the former, the same consisting of a lock-case having a pivoted swinging lock adapted to take over the lower meeting-rail and a projecting lug arranged to be struck thereby and formed with a shoulder at its opposite end, and a pawl adapted to take against the shoulder when the sash is closed and to be operated thereby when opened, substantially as specified.

2. The combination, with the meeting-rail 1, the casing 4, provided with the securing-flanges 4° and 5, the lock 6, mounted on the shaft 7 in said casing and formed with the locking-face 9, and shoulders 10, 12, and 16, and the pawl 13, mounted in rear of the lock and formed with the opposite shoulders, 15 and 17, of the recessed rail 2, having the trip 3, all combined and arranged to operate as specified.

385,936. STEERING APPARATUS. J. HENRY KNIGHT, Philadelphia, Pa. Filed May 4, 1888. Serial No. 272,911. (No model.)

Claim.—1. In steering apparatus, the combination of the rudder having a cross-head, and a screw-shaft having traveling nuts connected to the opposite ends of said cross-head, with a steering-engine the shaft of which is in line with and forms a continuation of said screw-shaft, substantially as described.

2. The combination of the rudder having a cross-head and arm, a screw-shaft having traveling nuts detachably connected to said cross-head, and a tiller detachably connected to the arm of the rudder, all substantially as specified.

3. In steering apparatus, the combination of the rudder and its cross-head, the screw-shaft, the traveling nuts thereon, detachably connected to the cross-head, a steering-engine for driving the screw, a tiller detachably secured to the rudder, and connections between the drum of the steering-engine and the tiller, substantially as described.

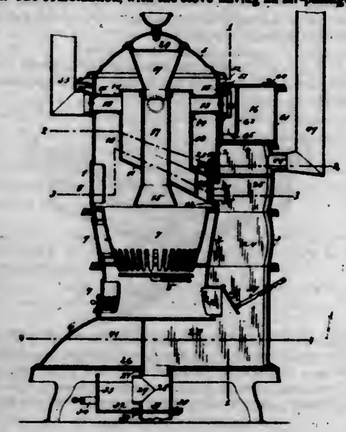
4. In steering apparatus, the combination of the rudder having a cross-head, a screw, and traveling nuts thereon, connected to said cross-head, with a steering-engine the shaft of which is detachably connected to the screw-shaft, and valve apparatus and their operating devices controlling the steering-engine and located at convenient points on the ship remote from the engine, all substantially as specified.

5. The combination of the rudder, its cross-head and tiller, the screw-shaft and its nuts detachably connected to the cross-head, a steam steering apparatus constructed to operate either the screw-shaft or the tiller, and steering-wheels for operating directly by hand either the screw-shaft or the tiller-drum of the steam steering apparatus, all substantially as specified.

385,937. PACKAGE OF SURGEONS' SILK OR CATGUT. J. ELLWOOD LEE, Conshohocken, Pa., assignor to the J. Ellwood Lee Company, same place. Filed Mar. 3, 1888. Serial No. 265,891. (No model.)

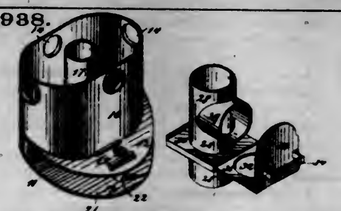
Claim.—1. The herein-described package of surgeons' silk or catgut, consisting of a bottle or other receptacle containing antiseptic fluid, a spool or spools of the thread, and a stopper for the bottle, through the body of which the end of the thread passes with a close fit, substantially as described.

2. The herein-described package of surgeons' silk or catgut, consisting of a bottle or other receptacle containing antiseptic fluid, bobbins of the thread, spindles for the bobbins, and a closing-stopper through which the ends of thread are passed with a close fit, substantially as described.



3. The herein-described package of surgeons' silk or catgut, comprising a bottle or other receptacle containing a wire frame having arms or spindles, and having a coating to resist the action of the antiseptic fluid, bobbins of the thread, and a stopper through which the threads are passed with a close fit, substantially as described.

4. The herein-described package of surgeons' silk or catgut, comprising a bottle or other receptacle containing antiseptic fluid, and the threads, a stopper through which the threads are passed with a close fit, and an inclosing-cap.



385,938. STOVE. HANS LIEBAS, Stoughton, Wis. Filed Oct. 20, 1888. Serial No. 217,576. (No model.)

Claim.—1. The combination, with a stove having an air-supplying passage, of a drum suspended within the stove below its top, and having a rear projection opening through the casing of the stove into the said passage, and provided with hot-air pipes leading outward through the stove-casing, whereby the entire surface of the drum and the pipes will be exposed to the heat, substantially as set forth.

2. The combination, with the stove having an air-passage, 24, and

385,938.

a smoke-outlet above and independent thereof, of a drum, 10, suspended within the stove, and having a rear projection, 12, opening into the said air-passage, hot-air pipes leading outward through the casing of the stove, vertical incased opening 22 through the projection 12 adjacent to the smoke-outlet, and a damper therefor, substantially as set forth.

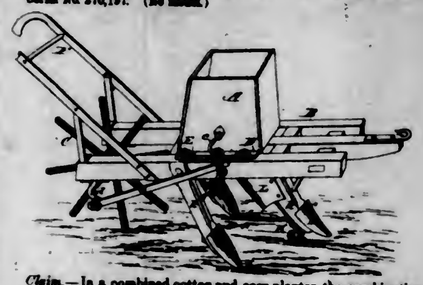
3. The combination, with a stove having a drum suspended therein below the top, provided with an air-supply passage and hot-air pipes, of the fuel-magazine extending down through the drum, and a removable funnel or chute and cover therefor, whereby by removing the said funnel or chute the heating-surface of the drum will be increased, substantially as set forth.

4. The combination, with the stove having a drum suspended within its upper end, provided with outward-extending hot-air pipes, of an air-passage leading upward from the base of the stove, communicating at or near its lower end with the rear end of the ash pit or chamber and opening at its upper end into the said drum, and a damper for the air-passage at the ash-pit, whereby the air supplied the drum for heating purposes may be drawn through the ash-pit, substantially as set forth.

5. In a stove constructed as herein described, the combination, with the air-chamber 24, provided with a lower tubular inlet, 27, of the vertical air-pipe 28, provided with an attached horizontal pipe, 29, and a projecting carrier, 30, together with an apertured slide, 31, adapted to move in said carrier, having one end, 33, turned up at right angles thereto and provided with a handle, 34, substantially as shown and described, and for the purpose herein set forth.

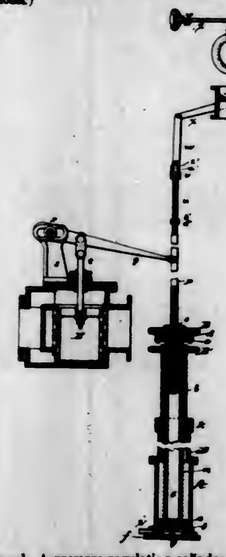
6. The combination, with the stove having a heating-drum, of an air-supply passage leading from the base to the said drum, a cold-air pipe communicating with the lower end of said passage, and having also an outlet or branch opening into the room, and a damper constructed to close the cold-air pipe and open its said outlet or branch, or vice versa, according to the direction in which it is moved, substantially as set forth.

7. The combination, with the stove, its suspended heating-drum, and hot-air pipes, of an air-passage communicating with the drum, leading to the base and having a cold-air inlet, an outlet or branch opening into the room, an opening communicating with the ash-pit, and dampers for the three sources of air-supply, substantially as set forth.



8. The combination, with the stove, the rear extension, flues connected at the base and separated at the upper end of the extension, an air-passage between said flues, openings leading into the stove from the upper ends of the flues, and a smoke-outlet between the flues, of the drum within the stove, having an extension opening into the air-passage, a vertical incased opening through said extension and connected dampers for the said incased opening, and the opening leading directly to the smoke-outlet and a damper for the indirect or return flue opening, substantially as set forth.

385,939. APPARATUS FOR EVAPORATING LIQUIDS. JOHN U. LLOYD, Cincinnati, Ohio. Filed Dec. 1, 1887. Serial No. 256,695. (No model.)



Claim.—In an apparatus for evaporating liquids or solutions, the combination of the shell A, the worm or helix closed at its bottom and open upon the top, supply-pipe C, outlet-pipe D, with removable cover E, having air-entrance F and air-outlet G, a steam-space, *a*, being provided beneath said worm or helix and supplied with suitable inlet and outlet pipes for the entrance and discharge of steam, substantially as and for the purpose specified.

385,940. CORN AND COTTON PLANTER COMBINED. JAMES C. MALLISON, Brenham, Tex. Filed July 19, 1886. Renewed Apr. 10, 1888. Serial No. 270,197. (No model.)

Claim.—In a combined cotton and corn planter, the combination, with a pair of interchangeable hoppers, one being larger at the base than at the top and one being larger at the top than at the base, of a plow-frame provided with a hopper-seat adapted to receive either of the hoppers at pleasure, a rotary distributer adapted to regulate the passage of seed through the bottom of the hopper, and a pitman connecting the wrist-pin of a crank on the end of the distributer-shaft with a crank on the end of the drive-wheel shaft, substantially as set forth.

385,941. SPEED AND PRESSURE REGULATOR FOR BLOWING-ENGINES. FELIX MCCARTHY, Pottstown, assignor of part to the Weimer Machine Works Company, Lebanon, and Edgar S. Cook and Isaac Fegley, Pottstown, Pa. Filed Jan. 12, 1883. Serial No. 260,566. (No model.)

Claim.—1. A pressure-regulating cylinder having a piston operated in both directions by a yielding pressure within the cylinder, in combination with an adjustable rod connected to said piston and to a relief-valve, and a throttle-valve for operating them positively in both directions, substantially as described.

2. The combination, with a pressure-regulating cylinder having a piston or fluid chamber on one side and a yielding medium on the opposite side of said piston and within the cylinder, of a throttle-valve and a relief-valve connected to said piston by a rod having an adjusting mechanism at both ends, substantially as described.

3. A pressure-regulating cylinder having a fluid-chamber, a piston, and a tubular piston-rod, in combination with a spring and an adjustable gland engaging with one end of said cylinder for compressing said spring, substantially as shown and described.

4. A pressure-regulating cylinder having a fluid-chamber, a piston, and a tubular piston-rod, in combination with a spring, an adjustable gland engaging with one end of said cylinder, and an adjustable rod connected to the piston, a throttle and a relief valve, substantially as described.

5. A pressure-regulating cylinder, in combination with a throttle-valve, a relief-valve, and a rod adjustably within the hollow rod of the piston of said cylinder, extending from and connecting said piston with said valves, substantially as described.

6. A pressure-regulating cylinder, in combination with a piston, a spring resting upon the piston, an adjusting-gland, a relief-valve, a throttle-valve, and a rod provided with an adjusting mechanism at both ends connecting the piston and the valves, substantially as described.

7. A pressure-regulating cylinder having a piston provided with a tubular rod extending through one end of said cylinder, and an operating-wheel secured thereto provided with a threaded aperture, in combination with a screw-threaded rod extending into said tubular piston-rod and connected to a throttle-valve, substantially as described.

8. A pressure-regulating cylinder having a piston provided with a tubular rod having an operating-wheel attached thereto, and a rod connected to said piston and to a valve or valves, in combination with an externally-threaded gland provided with an operating-wheel, and a spring between said piston and gland, substantially as described.

385,942. LOAD-INDICATOR FOR CARTRIDGE-MAGAZINES. WILLIAM R. MILLER, Baltimore, Md. Filed Mar. 27, 1888. Serial No. 268,702. (No model.)

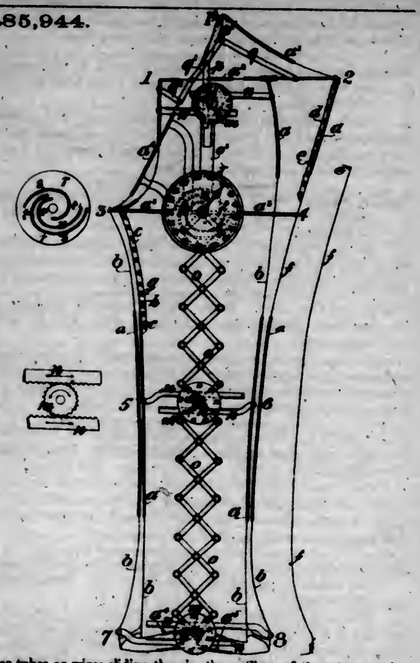
Claim.—1. In a repeating-rifle, the wall of the magazine perforated and the head of the magazine-spring provided with a lateral indentation or cavity, combined with a bolt in the stock which may be operated from the outside of the magazine to bring its end into the said indentation or cavity, substantially as and for the purpose specified.

2. In combination with the magazine C, having the perforation *d*, and the head *b* of the magazine-spring having the indentation or cavity *c*, the spring-bolt E in the stock, the inner end of which is adapted to enter the said cavity, substantially as and for the purpose specified.

385,943. COMMUTATOR FOR DYNAMO-ELECTRIC MACHINES. FRANK B. MITCHELL, Columbus, Ohio. Filed July 15, 1887. Serial No. 244,373. (No model.)

Claim.—1. In a commutator for electrical machines, the combination of the wooden core A, having segments removed therefrom, the conductors B, and the filling-strips F, the inner ring, D, the conducting-segments E upon said rings, and the insulating-segments having cavities *d* therein, substantially as and for the purpose described.

2. In a commutator, the combination, with the core A, having grooves *a* and the conducting and insulating plates, of the conducting-rods B, fitted within said grooves, and filling-strips F, adapted to cover said grooves and rods, substantially as described.



3. In a commutator, the combination, with the core A, grooved at *a*, of the conducting-rod B, having a clamping outer end and an elbow upon its inner end and a conducting-plate secured to said elbow, and a cylindrical insulating-jacket inclosing said elbow and rod, substantially as described, for the purpose specified.

385,944. APPARATUS FOR MARKING OUT PATTERNS FOR GARMENTS. FREDERICK C. HEAP, Manchester, County of Lancaster, England. Filed Dec. 12, 1887. Serial No. 257,703. (No model.) Patented in England Feb. 28, 1887, No. 2,932.

Claim.—1. The improved apparatus for facilitating the marking out of patterns for the manufacture of wearing-apparel, the said apparatus comprising an adjustable frame composed of tubes, and other tubes or wires sliding therein, the outlines of the tubes or wires forming the outlines for the garment, in combination with dials on the frame, and pointers for the dials having pinions and racks gearing into the pinions and connected to the adjustable parts of the frame, substantially as described.

2. The improved apparatus for facilitating the marking out of patterns for the manufacture of wearing-apparel, said apparatus comprising an adjustable frame composed of tubes, and other tubes or wires sliding therein, the outlines of the tubes or wires forming the outlines for the garment, in combination with dials on the frame, and pointers connected to and operated by adjustable parts of the frame, substantially as described.

385,944.

3. The improved apparatus for facilitating the marking out of patterns for the manufacture of wearing-apparel, said apparatus comprising an adjustable frame composed of tubes and other tubes or wires sliding therein, the outlines of the tubes or wires forming the outlines for the garment, in combination with an index carried by one wire and a scale by another, dials on the frame, and pointers connected to and controlled by adjustable parts of the frame, substantially as described.

4. The improved apparatus for facilitating the marking out of patterns for the manufacture of wearing-apparel, said apparatus comprising an adjustable frame composed of tubes and other tubes or wires sliding therein, in combination with two or more dials, lazy-tongs connecting the dials, and pointers therefor connected to adjustable parts of the frame, all substantially as set forth.

5. The improved apparatus for facilitating the marking out of patterns for making trousers, said apparatus comprising an inner and an outer adjustable frame for the front and back portions of the garment, the frames being connected to each other and composed of tubes and other tubes or wires sliding therein, in combination with scales and indexes carried by the tubes, dials and pointers connected to the movable parts of the frames, and lazy-tongs connecting the dials together, all substantially as described.

385,945. ALLOY. DANIEL O'HARA, DANIEL W. ELDRIDGE, and JOHN LOGAN, Waltham, Mass. Filed Mar. 2, 1886. Serial No. 203,925. (No specimens.)

Claim.—An alloy or compound metal composed of gold, nickel, and platinum, in substantially the proportions herein stated.

385,946. ALLOY. DANIEL O'HARA, DANIEL W. ELDRIDGE, and JOHN LOGAN, Waltham, Mass. Filed Mar. 2, 1886. Serial No. 203,926. (No specimens.)

Claim.—An alloy or compound metal composed of platinum, copper, nickel, and gold, in substantially the following parts, viz.: from

seventy-five to ninety parts of platinum, twenty-four parts of copper, eight parts of nickel, and six parts of gold, as set forth.

385,947. ALLOY. DANIEL O'HARA, DANIEL W. ELDRIDGE, and JOHN LOGAN, Waltham, Mass. Filed Mar. 2, 1888. Serial No. 265,927. (No specimens.)

Claim.—An alloy or compound metal composed of platinum, copper, nickel, and gold, in substantially the following parts, viz: from thirty to fifty parts of platinum, thirty parts of copper, ten parts of nickel, and ten parts of gold, as set forth.

385,948. ALLOY. DANIEL O'HARA, DANIEL W. ELDRIDGE, and JOHN LOGAN, Waltham, Mass. Filed Mar. 2, 1888. Serial No. 265,928. (No specimens.)

Claim.—An alloy or compound metal composed of platinum, nickel, and copper, in about the proportions specified, namely: platinum, fifty to sixty parts; nickel, thirty parts, and copper, twenty parts

385,949. ALLOY. DANIEL O'HARA, DANIEL W. ELDRIDGE, and JOHN LOGAN, Waltham, Mass. Filed Mar. 2, 1888. Serial No. 265,929. (No specimens.)

Claim.—An alloy or compound composed of platinum, copper, nickel, and gold, in substantially the following parts, viz: from sixty to seventy-five parts of platinum, twenty-four parts of copper, eight parts of nickel, and eight parts of gold, as set forth.

385,950. ALLOY. DANIEL O'HARA, DANIEL W. ELDRIDGE, and JOHN LOGAN, Waltham, Mass. Filed Mar. 2, 1888. Serial No. 265,930. (No specimens.)

Claim.—An alloy or compound metal composed of platinum, copper, nickel, and gold, in substantially the following parts, viz: sixty parts of platinum, twenty-four parts of copper, ten parts of nickel, and from five to twenty parts of gold, as set forth.

385,951. ALLOY. DANIEL O'HARA, DANIEL W. ELDRIDGE, and JOHN LOGAN, Waltham, Mass. Filed Mar. 2, 1888. Serial No. 265,931. (No specimens.)

Claim.—An alloy or compound metal composed of platinum, copper, nickel, and gold, in about the following proportions, viz: platinum, sixty-two parts; copper, twenty-four parts; nickel, eight parts, and gold, six parts, as set forth.

385,952. ALLOY. DANIEL O'HARA, DANIEL W. ELDRIDGE, and JOHN LOGAN, Waltham, Mass. Filed Mar. 2, 1888. Serial No. 265,932. (No specimens.)

Claim.—An alloy or compound metal composed of platinum, nickel, copper, and gold, in substantially the following parts, viz: fifty parts of platinum, twenty parts of nickel, from five to forty parts of copper, and ten parts of gold, as set forth.

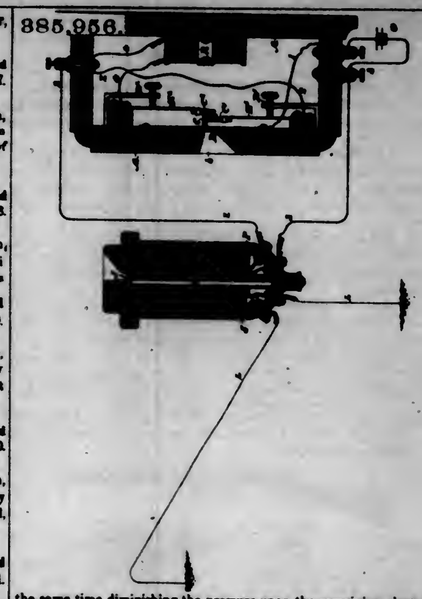
385,953. ALLOY. DANIEL O'HARA, DANIEL W. ELDRIDGE, and JOHN LOGAN, Waltham, Mass. Filed Mar. 2, 1888. Serial No. 265,933. (No specimens.)

Claim.—An alloy or compound metal composed of platinum, copper, nickel, and gold, in substantially the following parts, viz: sixty parts of platinum, twenty-two parts of copper, from five to forty parts of nickel, and eight parts of gold.

385,954. ALLOY. DANIEL O'HARA, DANIEL W. ELDRIDGE, and JOHN LOGAN, Waltham, Mass. Filed Mar. 2, 1888. Serial No. 265,934. (No specimens.)

Claim.—An alloy or compound metal composed of platinum, copper, nickel, and gold, in substantially the following parts, viz: seventy-five parts of platinum, ten parts of copper, ten parts of nickel, and from ten to forty parts of gold, as set forth.

385,955. ALLOY. DANIEL O'HARA, DANIEL W. ELDRIDGE, and JOHN LOGAN, Waltham, Mass. Filed Mar. 2, 1888. Serial No. 265,935. (No specimens.)



Claim.—An alloy or compound metal composed of silver, zinc, tin, lead, arsenic, and cadmium, in substantially the following proportions, viz: silver, sixty parts; zinc, from thirty-five to sixty parts; tin, four and one-half parts; lead, three and one-half parts; arsenic, one-half part, and cadmium, one and one-half part.

385,956. ELECTRIC TELEPHONE. NATHANIEL PARES, Dansville, N. Y. Filed Apr. 20, 1888. Serial No. 271,281. (No model.)

Claim.—1. In a telephonic transmitter, an electrode, two other electrodes applied to opposite sides of the same, means for increasing the pressure of the first-named electrode upon either one of the other electrodes and at the same time diminish the pressure upon the other, branch circuits leading from the two outer electrodes, and an artificial resistance contained in one of the branch conductors.

2. In a telephonic transmitter, an electrode, two contact-electrodes applied to opposite sides of the same, means for increasing the pressure of the first-named electrode upon either of the other electrodes and at

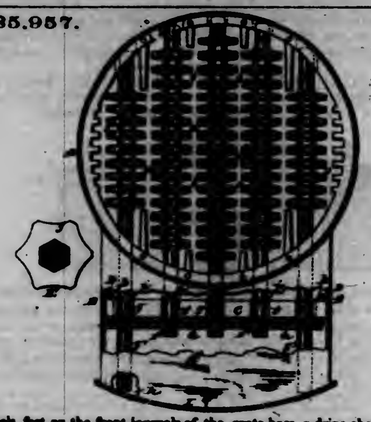
385,956.

the same time diminishing the pressure upon the remaining electrode, branch circuits leading from the two contact-electrodes, an artificial resistance contained in one of the branch conductors, and an inductorium having its primary coil included in the circuit with said branch conductors.

3. A telephonic transmitter consisting of an electrode, two contact-electrodes applied thereto, means for causing the pressure of the first-named electrode upon the other two to vary inversely, two branch circuits leading from the respective contact-electrodes, and an artificial resistance contained in one of the branch circuits.

4. The combination, with a movable diaphragm and an electrode carried or vibrated thereby, of two contact-electrodes applied thereto, the pressure against one electrode being increased as the pressure against the other is diminished, and vice versa, and an electric battery having one pole connected with the first-named electrode and the other pole with the two contact-electrodes, and an artificial resistance interposed between one of the contact-electrodes and said battery.

5. The combination, with a movable diaphragm and an electrode carried or vibrated thereby, of two contact-electrodes applied thereto, the pressure against one electrode being increased as the pressure against the other is diminished, and vice versa, an electric battery having one pole connected with the first-named electrode and the other pole with the two contact-electrodes, and an inductorium having a single primary coil connected in the circuit of said battery and in series with the respective contact-electrodes, substantially as described.



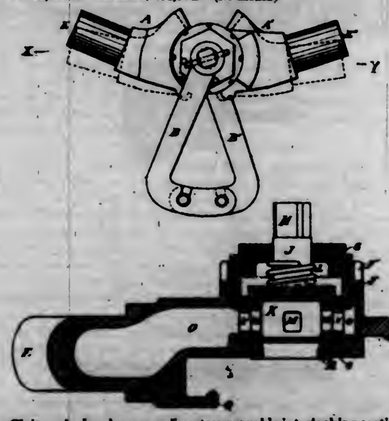
385,957. GRATE FOR FURNACES, &c. WILLIAM PHIPPS, Milwaukee, Wis. Filed Dec. 27, 1886. Serial No. 222,636. (No model.)

Claim.—1. A grate comprising a series of parallel bars and a front supporting-bar therefor, the latter having its ends provided with vertical slots, in combination with angular seats for said ends of the transverse bar having vertical upwardly-extended portions provided with horizontal slots, and pins having right-angular ends and arranged to engage the slots of said transverse bar and seats, substantially as and for the purpose set forth.

2. The combination, with a furnace ash-box having its sides interiorly provided with angular brackets, of a transverse bar having its ends detachably secured to the brackets, a series of parallel grate-bars journaled in a wall of the ash-box, and the transverse-bar, sprocket-

385,957.

wheels fast on the front journals of the grate-bars, a drive-chain arranged on the sprocket-wheels, and one, two, or more of said grate-bars extended outward and shaped to engage a crank, substantially as set forth.



385,958. DOOR CHECK AND SPRING. SAMUEL PEARSON, WILLIAM PEARSON, and JOHN R. HOLDEN, Oldham, County of Lancaster, England; said Samuel Pearson and William Pearson assignors to James Rhodes and Francis Rhodes, both of same place. Filed Feb. 14, 1887. Serial No. 227,982. (No model.) Patented in England Dec. 1, 1886, No. 14,731.

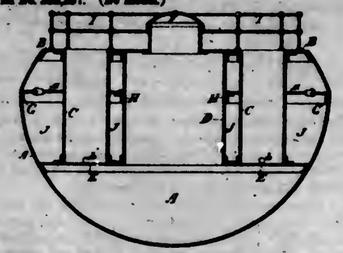
Claim.—1. The combination of a door, a swinging air-cylinder, and a spring-piston therein with a cam connected to the door and having inclines and notches and spring catches or bolts, substantially as set forth.

2. The combination of a spring-piston and swinging air-cylinder with a cam provided with a projection and a fixed stop to limit the action or opening of the door, substantially as set forth.

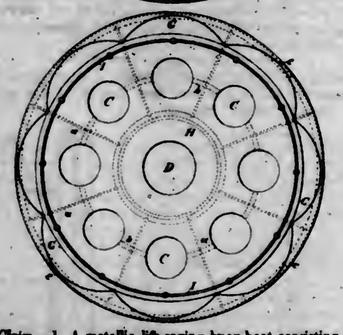
385,959. SELF-LOCKING AUTOMATIC DEVICE FOR OPENING AND CLOSING VALVES TO AIR-BRAKE-HOSE COUPLINGS. JOHN H. PERRIN, Jackson, and EDGAR A. GRAVENBERG, Detroit, Mich. Filed Oct. 10, 1887. Serial No. 251,894. (No model.)

Claim.—1. In a hose-coupling, two movable interlocking sections, a ported valve within each section, and interlocking arms attached to the valves outside the valve-case for preventing rotation of the valves while the sections are being turned upon them to open or close the ports, all combined substantially as described.

2. In a hose-coupling, two movable interlocking sections each provided with a ported inclined valve-seat, a ported valve within each section, and interlocking arms attached to the valves outside the valve-case for preventing rotation of the valves while the sections are being turned to open or close the ports, all combined substantially as described.



3. In a hose-coupling, two movable interlocking sections each provided with an inclined removable ported valve-seat, a ported valve within each section, and interlocking arms attached to the valves outside the valve-case for preventing rotation of the valves while the sections are being turned to open or close the ports, all combined substantially as described.

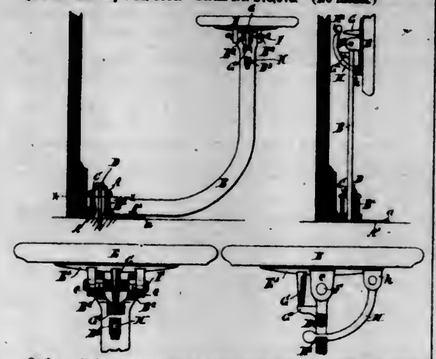


4. In a hose-coupling, two movable interlocking sections each provided with an inclined removable ported valve-seat, a ported valve within each section, and interlocking arms for preventing the rotation of the valves while the sections are being turned to open or close the ports, one end of each arm being secured to the stem of the valve and the other end bent at an acute angle and slotted and provided with a laterally-extending pin, all combined substantially as described.

385,960. SLUG FOR RIBBL-MAILING. FREDERIC P. RAYMOND, Jr., Newton, Mass. Filed Jan. 3, 1888. Serial No. 259,670. (No model.)

Claim.—As an improved article of manufacture, a shoe-slug having the long head *c*, the driving end *b*, of substantially the length of the head, and the wide beveled side or sides *d d*, substantially as described.

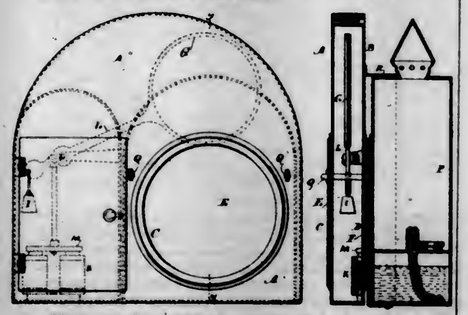
385,961. LIFE-SAVING BUOY-BOAT. JAMES SAMUEL, Newcastle-on-Tyne, County of Northumberland, assignee of one-half to Ralph Rhodes Evans Drake-Brockman, London, England. Filed Oct. 12, 1887. Serial No. 252,257. (No model.)



Claim.—1. A metallic life-saving buoy-boat consisting of an approximately semispherical hull, A, water-tight upper deck, B, having a series of circular openings, water-tight mean deck, E, having a central opening, a central cylindrical tube, D, secured water-tight to the edge of the opening of the mean deck E, provided with a cap and a water-tight cover, F, a series of smaller tubes, C, disposed circularly around the central tube and standing upon and secured water-tight to the mean deck, and open at the top and secured water-tight to the upper deck, a flanged ring, G, secured to the hull, a flanged ring, H, secured to the exterior of the cylinder D, stays *a*, connected to said flanged rings, and a railing, I, at the edge of the main deck, substantially as set forth.

2. The combination, in a metallic life-saving buoy-boat, of the hull A, main deck B, having circular openings for the reception of tubes, a mean deck, D, having a large circular opening, a central cylinder, D, secured at its lower edge water-tight to the edge of the opening in the mean deck and at its upper edge to the main deck, a series of tubes or cylinders, C, standing upon and secured water-tight to the mean deck E, and their upper edges secured water-tight to the edges of the openings in the upper deck, a flanged ring, G, secured internally to the hull, a flanged ring, H, secured externally to the central cylinder, D, stay-rods *a*, passing between the tubes or cylinders C, having their ends secured to the flanged rings G and H, and a railing, I, secured upon the upper deck, substantially as set forth.

3. In a metallic life-saving buoy-boat, the combination of a series of tubes or cylinders, C, open at the top and secured water-tight at their upper edge to the edges of openings in the upper deck, and their bottom secured water-tight to the mean deck, and the tubes *b*, connecting adjacent cylinders near their bottoms with one another, so as to form a communication, substantially as set forth.



385,962. **STORE-COUNTER STOOL.** GEORGE SCOTT, Montreal, Quebec, Canada, assignor of one-half to Frederick Edward Phelan, same place. Filed Apr. 14, 1888. Serial No. 270,673. (No model.)

Claim.—1. In a store-counter stool, and in combination, the hollow hub and foot-plate attached to floor, the sleeve slipped on over hub and made in one, with horizontal and upwardly-curved bracket resting on foot-plate and carrying seat, the cap covering the hub and sleeve, and bolt passing down through cap and hub into floor, all as herein set forth, and for the purposes described.

2. In a store-counter stool, the combination, with the seat pivoted to the forked arm of a bracket-support, of a dog projecting down from under side of seat and resting on projection from one side of bracket, and a curved locking-bar pivoted to seat and with its free end passing through slot in bracket and locking seat in place by gravity, all substantially as herein described.

385,963. **RAILWAY-SIGNAL.** EDWARD A. SHARP, Rogers Park, Ill., assignor to William B. Sterrett, New York, N. Y. Filed Mar. 12, 1888. Serial No. 266,942. (No model.)

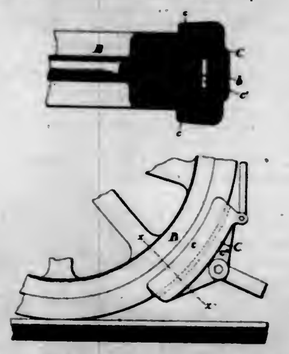
Claim.—1. The combination, with the closed signal-case having within it the swinging signal or banner, of a movable lamp that is independent of the case and hooks or connecting devices for supporting the lamp outside of the signal-case, substantially as set forth.

2. The combination, with the removable independent lamp and the connecting or suspending devices, of a signal-case having coinciding openings containing transparent material, a lever and banner or signal within the case, and counter-weight to the banner-lever, and an electro-magnet for moving such banner and lever, substantially as set forth.

385,964. **ELECTRIC SIGNAL FOR RAILWAYS.** EDWARD A. SHARP, Rogers Park, Ill., assignor to William B. Sterrett, New York, N. Y. Filed Mar. 26, 1888. Serial No. 268,902. (No model.)

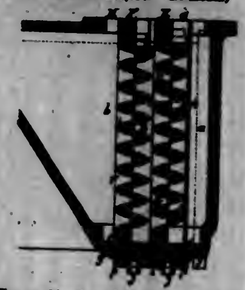
Claim.—1. The combination, with the box B, fastened to the railway-ties of the plunger H, passing vertically through the box, and having a projecting stud, 6, at the upper end and a shank, 5, at the lower end, of the spring S, for raising the plunger, the pairs of circuit-closing springs 10 11 and 13 14, the conducting-bar O between the ends of the said springs, and an insulating-arm connecting the bar O with the plunger, substantially as set forth.

2. The box B, with bevel ends resting upon the cross-ties and the sheet-steel shoe G upon the surface of the same, in combination with the plunger H, passing vertically through the box and the shoe, and the conical socket C, attached below the box B, the nuts 9 and spring S, for raising the plunger, the circuit-closing springs 10 11 and 13 14 in pairs, and the conducting-bar O between the ends of such springs, and the arm connecting the same with the plunger, substantially as set forth.



3. The combination, with the box B, plunger H, arm 18, and bar O, of the circuit-closing springs, in pairs and insulated, the bar O being between the moving ends of such springs, and the pipe 26 and thimble 28 passing through the bottom of the box B, and the jam-nuts for holding the thimble firmly to the box, and the conductors passing through such thimble and pipe, substantially as set forth.

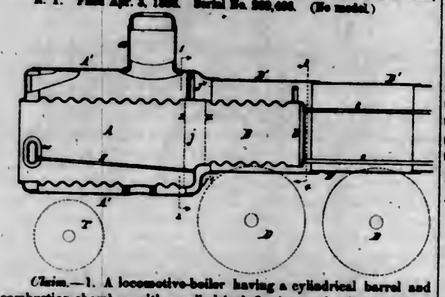
385,965. **TAG-FASTENER.** CHARLES W. SHEPPARD, Milwaukee, Wis. Filed Apr. 3, 1888. Serial No. 269,416. (No model.)



Claim.—As an improved article of manufacture, a tag-fastener that comprises a piece of sheet metal having one or more prongs stamped out therefrom and one edge thereof turned over, and the spring-wire hanger engaged by said turned-over edge and provided with overlapping ends, substantially as set forth.

385,966. **BRAKE-SHOE.** FRANK I. SHEPPARD, Altoona, Pa. Filed Aug. 24, 1887. Serial No. 247,725. (No model.)

Claim.—As a new article of manufacture, a brake-shoe for use with locomotive and car wheels, having a surface corresponding in outline with the face of the wheel, the center of said surface being recessed or cut away, and having a flange or flanges projecting inward along the edge of the wheel, the said shoe being formed of a single casting of mild steel, all substantially as and for the purpose specified.



385,967. **ENGINE-VALVE.** GEORGE S. STRONG, New York, N. Y. Filed Jan. 26, 1888. Serial No. 261,698. (No model.)

Claim.—1. The combination of the casing of an engine-cylinder having a cylindrical orifice with a removable valve-seat having segmental or curved edges adapted to fit snugly to the sides of said orifice and extending throughout the length of the seat on both sides of a central plane through the orifice, and a slide-valve wholly within the seat.

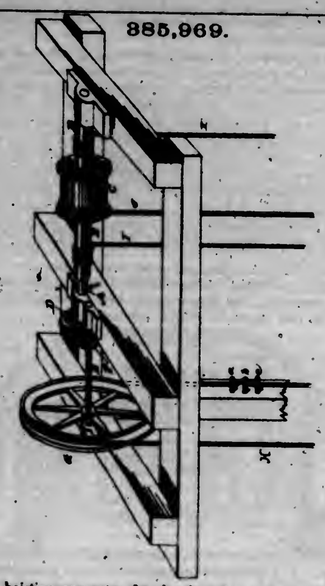
2. The engine-cylinder having inlet and exhaust passages and an orifice with a conical or shouldered bottom, in combination with a corresponding valve-seat adapted to the orifice, plate and bolt securing the seat to the casing, and a slide-valve carried by said seat.

385,968. **LOCOMOTIVE-BOILER.** GEORGE S. STRONG, New York, N. Y. Filed Apr. 3, 1888. Serial No. 269,469. (No model.)

Claim.—1. A locomotive-boiler having a cylindrical barrel and combustion-chamber with a cylindrical fire-box and cylindrical fire-box shell of larger diameters than the combustion-chamber and barrel, respectively, and placed eccentrically to the latter, substantially as described.

2. A locomotive-boiler having a cylindrical barrel and combustion-chamber with a cylindrical fire-box and cylindrical fire-box shell of larger diameters than the combustion-chamber and barrel, respectively, and the top of the fire-box being on a level with the top of the combustion-chamber, substantially as described.

3. The combination of the combustion-chamber and barrel with the enlarged fire-box and shell, junction-pieces, a transverse water-box across the front of the fire-box, and tubular grate-bars extending from the water-box to the lower part of the inner junction-piece, substantially as set forth.



385,969. **SLAUGHTER-HOUSE HOIST.** JULES H. TARDY, Geneva, Ohio. Filed Dec. 16, 1887. Serial No. 257,942. (No model.)

Claim.—1. In a slaughter-house hoist, the combination, with the stationary frame-work, of a shaft journaled in said frame, three hoisting-drums on said shaft, a large and two smaller ones, a second shaft in gear with the drum-shaft, and a rope-wheel on said second shaft, substantially as shown and described.

2. In a slaughter-house hoist, the combination, with the main shaft, and with three hoisting-drums on said shaft, and a suspended hoisting-rope on each of said drums, the hoisting-rope of the larger drum being wound in the opposite direction to those of the smaller drums, of a second shaft in gear with the drum-shaft and a rope-wheel on the second shaft, substantially as shown and described.

3. A slaughter-house hoist comprising a suitable frame, a shaft, A, journaled therein, large hoisting-drum C on said shaft, and smaller hoisting-drums, B B, at the sides of drum C, hoisting-rope J on drum C, and hoisting-ropes I I on drums B, the said shaft having a gear-wheel, D, a second shaft, E, having a gear-wheel, F, in mesh with the gear-wheel D, and a rope-wheel, G, on shaft E, for operating the hoist, substantially as described.

385,969.

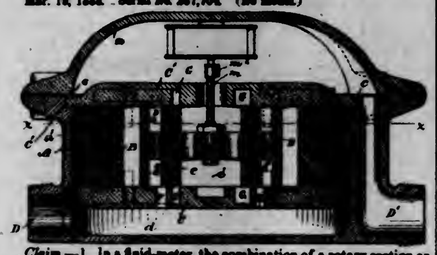
4. A hoisting apparatus for slaughter-houses, comprising the frame, the shaft A, journaled thereon, large hoisting-drum C thereon, its hoisting-cable J, smaller hoisting-drums, B B, also on shaft A, having their hoisting-cables I wound in the same direction, but opposite to that of the larger drum, and gearing connected with shaft A for rotating it independently of either of said drums, substantially as set forth.

385,970. **ROTARY FLUID-METER.** JAMES A. TILDEN, Hyde Park, Mass., assignor to the Harvey Motor Company, Portland, Me. Filed Jan. 26, 1887. Serial No. 225,490. (No model.)

Claim.—1. In a water-meter, the combination of a casing forming a piston-chamber and having projections extending into the chamber to form measuring spaces or recesses, each of which projections has a bearing-surface at its end, with a piston having a series of projections, each of which has a bearing-surface at its end and an angular bearing-surface upon one side, as and for the purposes described.

2. In a water-meter, the combination of a casing forming a piston-chamber and having projections extending into the chamber to form measuring spaces or recesses, each of which projections has an angular bearing-surface upon one side, with a piston having a series of projections, each of which has an angular bearing-surface upon one side, as and for the purposes described.

3. In a water-meter, the combination of a casing forming a piston-chamber and having projections extending into the chamber to form measuring spaces or recesses, each of which projections has an angular bearing-surface upon one side, with a piston having a series of projections, each of which has a bearing-surface at one end and upon one side, as and for the purposes described.



4. In a fluid-meter, a casing forming a piston-chamber having a series of projections extending into the chamber to provide measuring spaces or recesses, each of which has an angular bearing-surface upon one side, as and for the purposes described.

5. In a fluid-meter, a piston having a series of projections, each

of which has an angular bearing-surface upon one side, as and for the purposes described.

6. In a fluid-meter, in combination with suitable inlet and exhaust ports, a ring contained in the meter-case and having projections from its inner side, and forming, in connection with the port-plates, the piston-chamber, each of which projections has an end bearing-surface and a side bearing-surface, with a rotary piston contained in said chamber, having projections, each of which has an end bearing-surface and a side bearing-surface, and which piston and ring co-operate upon the rotation of the piston to divide the piston-chamber into receiving and discharging spaces by the contact at one point of the end bearing-surfaces of a piston and ring projection, and at another point of a sliding contact between the side bearing-surface of one ring projection and the side bearing-surface of a piston projection, substantially as described.

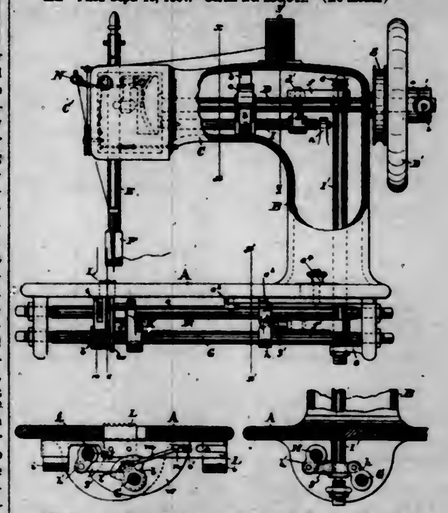
385,971. ROTARY FLUID-METER. JAMES A. TILDEN, Hyde Park, Mass., assignor to the Harvey Meter Company, Portland, Me. Filed Mar. 19, 1888. Serial No. 267,704. (No model.)

Claim.—1. In a fluid-meter, the combination of a rotary section or part having a chamber extending vertically through the same from end to end and of the same area at each end, connected by ports with a source of supply, and which rotary section may be either the ring or the piston of the meter, with said piston and said ring shaped, substantially as represented, to conjointly form fluid-measuring spaces, an upper port-plate and a lower port-plate, between which the piston and ring are held, and passages or ports in each port-plate having the same general curve or direction, and the openings to which are oppositely arranged, so that they act in pairs, each pair of which connects a measuring-chamber with the supply-chamber and with the delivery-chamber, and which by the movement of said movable part of the meter, whether it be the ring or the piston, are caused to alternately connect the supply-chamber with said measuring-chamber and the measuring-chamber with the delivery-chamber, as and for the purposes specified.

2. The combination, in a fluid-meter, of the ring B, having a piston-chamber, *b*, bounded by its inner surface, which is shaped substantially as specified, a piston, E, contained in said piston-chamber and shaped to conjointly form with the wall of the ring B the measuring-chambers H, the said measuring-chambers, the vertical chamber d^3, extending through the piston from end to end and of the same area at each end, the port-plate C, having the inlet-ports F always open to the chamber d^3, and also having the ports or passages G, connecting with the measuring-chambers, and the port-plate C', having the ports or passages G, also connecting with the measuring-chambers, and the inlets to which are opposite the corresponding ports in the port-plate C, the said port-plate also having a central opening or passage connected with the chamber d^3, and the said chamber d^3 in the piston extending vertically through the same from end to end and of the same area at both ends, the distributing or supplying chamber *d*, and the outlet d^2, substantially as described.

385,972. FOLDING SHIPPING-CRATE. SAMUEL G. TRAVIS, Leavenworth, Kans. Filed Jan. 31, 1888. Serial No. 262,543. (Model.)

Claim.—1. The combination, in a crate, of the slatted body, the removable top provided with cross-bars engaging keepers on the slats of the body, the keepers secured thereto, and the bottom hinged to said body, and the cross-bars secured to said bottom and engaging said keepers, substantially as described.



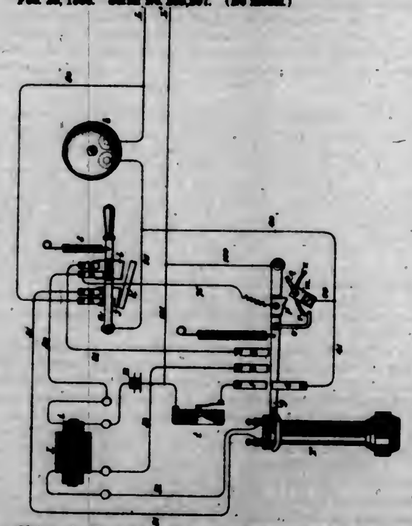
2. The combination, with the slatted body and the wire B, connecting the tops of the slats thereof, of the wire *i*, secured to the tops of the slats, the top provided with cross-bars resting on said wire and having a hinged door, and the clamp and keeper H, pivoted to one of said slats, substantially as described.

3. The folding shipping-crate described, consisting of the folding body A, the bottom hinged thereto, the removable central partition having cross-bars engaging keepers on the body, the removable top having cross-bars and a pivoted door, the wire *i*, secured to the tops of the slats of the body, and the clamp and keeper H, pivoted to one of the slats of the body and extended across the door of the top, all substantially as shown and described.

385,972.

385,973. SEWING-MACHINE. ROBERT H. THEBLER, Baltimore, Md. Filed Sept. 19, 1887. Serial No. 250,041. (No model.)

Claim.—1. In a sewing-machine, the hollow overhanging arm with driving-shaft D journaled therein and having cam *c* thereon, the horizontal oscillating shaft I, with forked arm *b*, the arm *d*, with friction-ball d', the vertical oscillating shaft I', with arm *f* at upper end and forked arm *f'* at lower end, the feed-lifting shaft H and shuttle-shaft G, arms A, and bar f', the latter having friction-ball g', said parts being combined substantially as shown and described.



2. In a sewing-machine, the bed-plate A, with guide *i*, the feed-bar L, with slot *n*, the shuttle-shaft G, the arm *l*, with segmental slot *l'*, and the link *m*, connecting said arm *l* and bar L, the lifting-bar H, with mechanism, substantially as described, connected to bars G and H, for imparting oscillating motion thereto, and the sliding bar *o*, with tapering end inserted in said slot *n*, and having a stud passing through the bed-plate for operating the same, substantially as and for the purpose set forth.

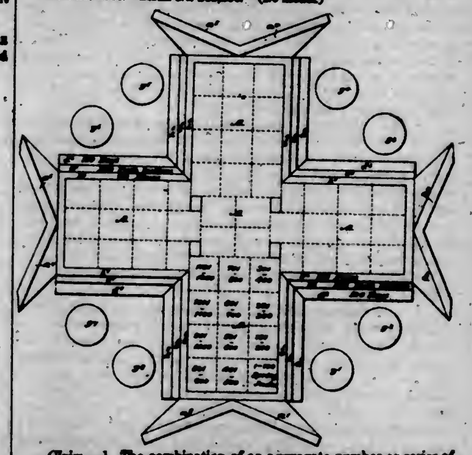
385,974. TELEPHONE CENTRAL-STATION APPARATUS. THEODORE N. VAIL, Boston, Mass., and JOHN A. SIDNEY, New York, N. Y. Filed Apr. 20, 1888. Serial No. 271,202. (No model.)

Claim.—1. The combination of a central station, a series of sub-stations, a series of metallic circuits, one for each sub-station, connected in parallel at said central station, a telephone-instrument for each circuit at the sub-station, a receiving-telephone at the central station in a local circuit having fixed electrical contacts, two separable contacts for each metallic circuit, and a suitable device for separately connecting and disconnecting the two terminals of each metallic circuit with the terminals of the local circuit.

2. The combination of a series of sub-stations, a central station, a series of metallic circuits, one for each sub-station, a telephone-instrument for each circuit at the sub-station, a receiving-telephone at the central station, a local circuit having fixed electrical contacts in which the receiving-telephone is permanently located, a flexible cord forming the terminal of each circuit, and a double-contact switch-plug for each cord having electrical contacts registering with the fixed contacts of the local circuit and normally resting thereon, whereby all circuits are connected in parallel with the receiving-telephone and any circuit may be connected and disconnected therewith independently.

385,975. TELEPHONE SUB-STATION APPARATUS. THEODORE N. VAIL, Boston, Mass., and JOHN A. SIDNEY, New York, N. Y. Filed Feb. 25, 1888. Serial No. 265,267. (No model.)

Claim.—1. The combination, at a telephone-station, of a switch or circuit-changer consisting of a pivoted arm connected with the main line, an electrical contact connected with a main-line branch containing a telephone, a second electrical contact connected with a main-line branch containing an electro-magnet for operating a call or signal, an electrical contact connected to a generator of electricity, an electrical contact connected to the main line, and means, substantially as described, for temporarily connecting the two last-named contacts upon movement of the arm in one direction only.

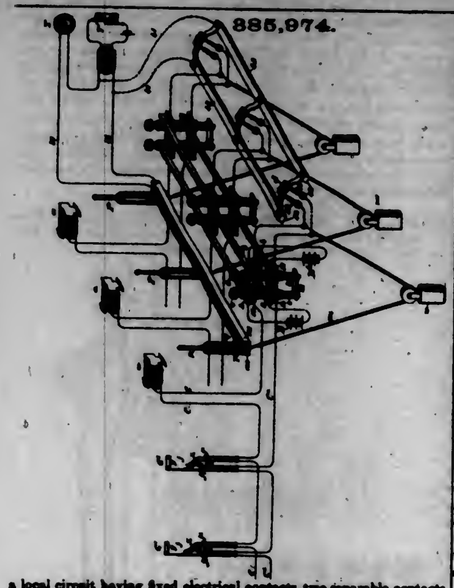


2. At a telephone-station, a switch or circuit-changer consisting of a pivoted arm forming a support for the telephone and capable of movement in two directions, a retractor for producing one movement, the gravity of the telephone when placed thereon producing the other movement, a main line connected to said arm, an electrical contact connected to a main-line branch containing a telephone, and a contact connected to a main-line branch containing an electro-magnetic signaling-instrument, in combination with two additional contacts, one of which is connected to the main line, the other to a generator of electricity, and a tumbler-lever temporarily forming an electrical connection between the last-named contacts upon a movement of the arm in one direction only.

3. At a telephone-station, a switch or circuit-changer having a contact with the main line, a contact with a telephone branch, and a contact with a bell branch, combined with a second switch or circuit-changer having two contacts, the first connected to a generator of electricity and the second to the main circuit, whereby, when the second switch is operated, the generator and main line are connected during the process of calling and preliminary to conversation.

4. The combination, at a telephone-station, of a main line, a contact-varying telephonic transmitter, a local battery for said transmitter, an electrical connection from one side of said battery to the main line, and a switch or circuit-changer having a fixed contact and a movable contact, and an electrical connection from one of said points to the battery and from the other contact to the line, all arranged substantially as described, whereby the operation of the switch includes the said battery in the line for the purpose of signaling.

5. The combination, at a telephone sub-station, of a main line, a branch line containing a bell or signaling-instrument, a second branch containing a contact-varying telephone-transmitter, a local circuit therefor, means for connecting either of said branches with the main line, a supplementary switch or circuit-changer embracing a pair of circuit-closing points in the local circuit, a pair of circuit-closing points in the transmitter branch, and a movable arm normally in position to close both said pairs of points, a battery-contact, and a main-line contact electrically united by the operation of said switch.



385,976. TELEPHONE CENTRAL-STATION APPARATUS. THEODORE N. VAIL, Boston, Mass., and JOHN A. SIDNEY, New York, N. Y. Filed Feb. 25, 1888. Serial No. 265,266. (No model.)

Claim.—1. The combination of an aggregate number or series of electrical circuits connecting a central station with a series of sub-stations, a telephone-instrument at each sub-station, at the central station a series of spring-jacks or circuit-changers — one for each circuit — located in close proximity on one board, two or more groups or subdivisions of said circuits separated from each other, located at said board, each having a second switch or circuit-changer co-operating with the switches or circuit-changers of the first-named series and located in close proximity thereto, whereby any circuit of the first-named series and any circuit of either subdivision may be connected together.

2. The combination of an aggregate number or series of electrical

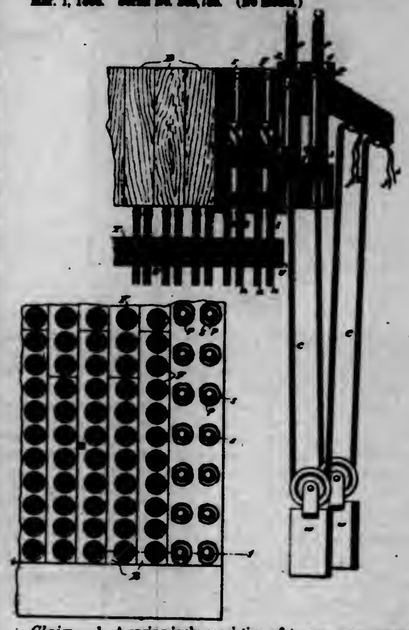
385,974.

circuits connecting a central station with a series of sub-stations, telephonic instruments at each sub-station, at the central station a series of switches or circuit-changers, one for each circuit, two or more separated groups or subdivisions of said circuits, each having a switch or circuit-changer co-operating with the switches or circuit-changers of the first-named series, but located on the same board in proximity thereto, whereby any circuit of the first-named series and any circuit of either subdivision may be connected together, and a receiving-telephone common to the circuits of each group or subdivision to receive calls or communications therefrom.

3. The combination of an aggregate number or series of electrical circuits connecting a central station with a series of sub-stations, a telephonic instrument at each sub-station, at the central station a series of spring-jacks or circuit-changers, one for each circuit, fixed in close proximity, two or more groups or subdivisions of said circuits separated from each other, but at the same board, each circuit of a group terminating in a flexible conducting-cord, and a jack-plug co-operating with the spring-jacks of the first-named series and normally resting in close proximity thereto, whereby any circuit of the first-named series may be connected with any circuit of either group or subdivision.

4. At a telephone-station, a switch-board having the form or outline of a Greek cross, an aggregate number of electrical circuits, each circuit uniting a central station and one sub-station, a series of electrical connections—one for each circuit—located on said switch-board, means for connecting circuits in pairs, eight subdivisions or groups of said circuits, eight electro-magnetic receiving-instruments, one for each group, each instrument being common to all circuits of its group, and eight positions of support for eight operators, one for each group, said positions being so located that one group and the aggregate number of circuits are accessible to an operator therefrom.

5. The combination of two or more switch-boards each having the form or outline of a Greek cross, duplicate electrical connections with an aggregate number of circuits on said boards, means at each board for electrically connecting circuits together, eight different subdivisions or groups of said circuits at each board, and separate indicating devices for each group, the whole being so arranged that eight operators may be assigned to each board, one operator to a group, each operator being in a position of support accessible to one group and to one and the same series of connections with the aggregate number of circuits.



6. The combination of an aggregate number or series of electrical circuits connecting a central station with a series of sub-stations, a telephonic instrument at each sub-station, at the central station a series of duplicate switches or circuit-changers in each circuit of the aggregate number, one switch for each circuit, being located upon each of a series of boards or frames in close proximity, two or more groups or subdivisions of said circuits located upon each board or frame, each circuit of each group having a second switch or circuit-changer, said groups being separated from each other, but located in close proximity to the switches connected with the aggregate number of circuits, the number of boards or supports being equal to the aggregate number of circuits divided by the product of the number of groups at a board into the number of circuits in a group.

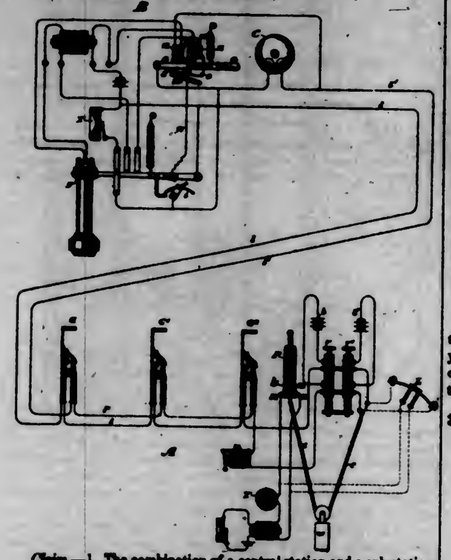
7. The combination of an aggregate number of series of electrical circuits connecting a central station with a series of sub-stations, a telephonic instrument at each substation, at the central station a series of spring-jacks or circuit-changers, one for each circuit, fixed in close proximity, two or more groups or subdivisions of said circuits separated from each other, but at the same board, each circuit of a group terminating in a flexible conducting-cord, and a jack-plug to co-operate with the spring-jacks of the first-named series and normally resting in close proximity thereto, a receiving-telephone common to each circuit of a group, and a ringing-off annunciator in each such circuit.

8. At a telephone-station, the combination of a metallic circuit consisting of two substantially parallel wires or conductors united at or near their terminals, a switch or circuit-changer located in said circuit intermediate said terminals, two pairs of fixed contacts and one pair of movable contacts equally divided between and normally forming part of the circuit of both wires, a third pair of fixed contacts and a second pair of movable contacts, a generator of electricity having its opposite poles connected to one pair of said contacts, and a base of insulating material upon which the two pairs of movable contacts are located, all said contacts being so located with respect to each other that a predetermined change in position of said insulating-base removes a fragment of the circuit and substitutes said generator therefor.

9. At a telephone-station, the combination of a metallic circuit consisting of two substantially parallel wires or conductors united at or near their terminals, two switches or circuit-changers located in said circuit intermediate said terminals, each switch consisting of two pairs of fixed contacts, one pair of movable contacts equally divided between and normally forming part of the circuit of both wires, a third pair of fixed contacts and a second pair of movable contacts, a generator of electricity having its opposite poles connected to one pair of contacts of each switch, and a base of insulating material for each switch, upon which the two pairs of movable contacts are located, the contacts composing the two switches occupying reversed positions, respectively, and the contacts of each switch being so located with respect to each other that a predetermined change in position of one of said insulating-bases divides the line and substitutes the generator for one half a section thereof, while a similar change in position of the second insulating-base divides the line and substitutes the generator for the other half or section.

885,977. TELEPHONE CENTRAL-STATION APPARATUS. THEODORE N. VAIL, Boston, Mass., and JOHN A. GREEN, New York, N. Y. Filed Mar. 1, 1888. Serial No. 265,722. (No model.)

Claim.—1. A spring-jack consisting of two or more severable contact-points, an opening or passage to such points for the insertion of a jack-plug, and a shield or dust-guard constructed of suitable material to shed or deflect falling dust or dirt, movably supported between the mouth of the opening or passage and the severable contact-points.



2. In a spring-jack, the combination of two or more severable contact-points, an opening or passage to such points forming a plug-socket, and a shield or dust-guard forming an electrical contact for the said plug, all arranged substantially as described.

3. A switch-board consisting of a frame or support, two series of blocks of insulating material fitting into said frame or support, located in two parallel planes, a series of electrical instruments composing the operative mechanism of a switch-board, such as spring-jacks, having free terminals located in one series of blocks, one or more in each block, a series of electrical contacts having free terminals located in the second series of blocks in position to register with the terminals of the first series, and a series of electrical conductors connected to the second series of contacts, one conductor for each contact.

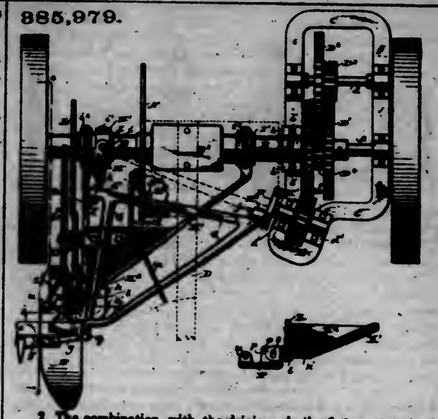
4. The combination, in a switch-board, of two or more insulated electrical contacts located in a plug-socket having an eccentric geometrical outline or formation, a switch-plug of similar geometrical outline or formation, having one or more insulated electrical contacts in position to register with the first-named contacts when said plug is in its normal position, and means for automatically returning such plug to its normal position when free to move, substantially as described.

5. A switch-board composed of a frame or support, one or more electrical instruments located in said frame having two or more free terminals, one or more portable blocks or sections of insulating material fitting into said frame, two or more conducting-sections fixed in said blocks, their free terminals in position to register with the free terminals of the said electrical instruments, and wires or conductors connected to said conducting-sections, substantially as described.

885,978. TELEPHONE-EXCHANGE SIGNALING. THEODORE N. VAIL, Boston, Mass., and JOHN A. GREEN, New York, N. Y. Filed Mar. 1, 1888. Serial No. 265,724. (No model.)

Claim.—1. The combination of a central station and a sub-station united by an electrical conductor at the central station, a circuit-changing device consisting of a switch-plug normally forming part of said circuit at the sub-station, a gravity-switch, a telephone branch, a bell branch, a generator of electricity, and a switch for including said generator in the main circuit, consisting of a pivoted arm operating a line-contact, and a contact connected to said generator, whereby a change in the normal position of said switch at the sub-station and of said apparatus at the central station produces a signal irrespective of the position of the gravity-switch, substantially as described.

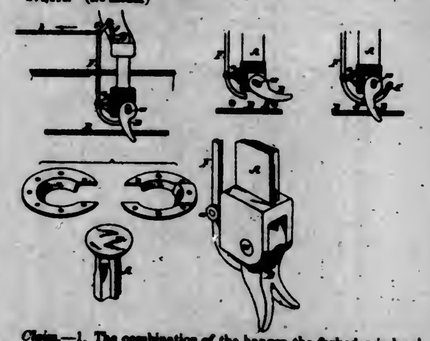
2. The combination of a central station and a sub-station, an electrical conductor uniting said stations, telephone-instruments in said circuit at both stations, a flexible conductor at the central station normally resting upon a section of conductor to complete said circuit, a generator of electricity at the sub-station, and a switch for including said generator in the circuit, all arranged substantially as described, whereby a change in the normal position of the flexible cord sounds a signal at the sub-station.



3. The combination of two telephone-stations, an electrical conductor uniting said stations, a fragment of said conductor containing an electro-magnetic indicating-instrument at each station, a device at one station—say the first—for connecting and disconnecting said fragment with respect to the main circuit, a generator of electricity, and a device for connecting and disconnecting said generator with respect to said conductor at the second station, all arranged and operating substantially as described, whereby a variation in connection of the line-fragment at the first station changes the circuit of the generator and sounds a signal at the second station.

885,979. MOWER. FRANCIS H. VERLEE, Green Bay, Wis. Filed Jan. 17, 1887. Serial No. 224,844. (No model.)

Claim.—1. The combination, in a mowing-machine, of an axle and a sleeve loosely fitted thereon, a frame carried by the axle and suitable gearing, a wrist-wheel driven by the axle through the gearing, a triangular lever wristed to said wheel at one corner, a bar and swiveled yoke connecting another corner of said lever with the sleeve, and a sickle connected to the third corner, substantially as described.



885,979.

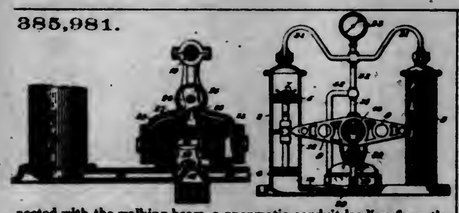
2. The combination, with the driving-wheel, of the wrist-wheel, the sickle, a triangular lever connecting the sickle and wrist-wheel, a yoke swiveled to the triangular lever, the axle and its sleeve, and a collar to which the yoke is pivoted, said collar adapted to revolve on the sleeve, substantially as described.

885,980. GRIPPING MECHANISM FOR CABLE RAILWAYS. JAMES WALSH, Jr., Philadelphia, Pa. Filed May 17, 1886. Serial No. 274,113. (No model.)

Claim.—1. The combination of the hanger, the forked grip-head pivoted thereto and having a rigid bearing therein to resist forward movement, and a lever acting upon the grip-head to force the same backward and release it from the cable, all substantially as specified.

2. The combination of the hanger, the grip-head pivoted thereto and having a rigid bearing therein to resist forward movement, and a lever passing through the grip-head and having a portion acting upon the same to force it rearward, and a bearing in the rear of the grip-head acting upon the same to restore it to the operative position or prevent undue rearward movement, all substantially as specified.

3. The combination of a forked grip-head with a vertically-movable hanger to which said grip-head is hung, and a lever for swinging the grip-head on said hanger, all substantially as specified.

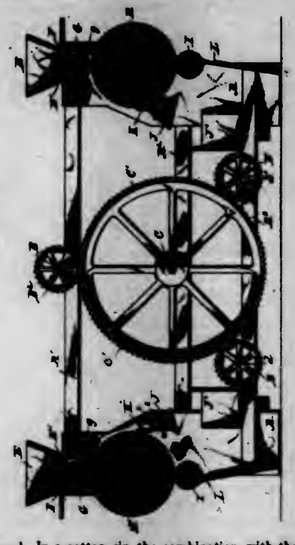


4. The combination of the hanger, the forked grip-head pivoted thereto and slotted to permit vertical movement, but having a rigid bearing in the hanger to resist forward movement, and a lever to operate said grip-head, all substantially as specified.

5. The combination of the grip-head, the hanger having a circular head, and the socket for said head, consisting of a pair of segmental rings applied in reverse positions to the hanger and secured to the frame of the car, all substantially as specified.

885,981. BEER-PUMP. BENNET WILLIAMS, Pittsburg, Pa., assignor of two-thirds to Duncan Ferguson and Joseph Wallace, both of same place. Filed Mar. 19, 1888. Serial No. 267,995. (No model.)

Claim.—1. As an improvement in beer-pumps, the combination of the hydraulic piston-heads and pneumatic piston-heads situate within suitable cylinders having intervening vents, so as to prevent water escaping from the hydraulic piston from passing the pneumatic piston-head, said piston-heads being connected with each other by piston-rods and a walking-beam, a water-conduit leading to the cylinders back of the hydraulic heads, a valve controlling the water and con-



385,981.

nected with the walking-beam, a pneumatic conduit leading from the cylinders above the pneumatic piston-heads to a beer-reservoir, and a valve arranged to admit air above the pneumatic piston-heads on the back-stroke of the same, substantially as and for the purpose specified.

2. In a beer-pump, the combination, with the two cylinders, each containing hydraulic and air piston-heads connected by a rod, of a beam connecting the rods, a hydraulically-operated main valve, which controls the flow of water to the cylinders, and an auxiliary valve, which controls the flow of water to operate the main valve, said auxiliary valve being connected with and operated by the said beam, substantially as and for the purpose specified.

385,982. COTTON-GIN. PIERRE V. WHITFALL, Kalamazoo, Mich. Filed Oct. 15, 1887. Serial No. 252,462. (No model.)

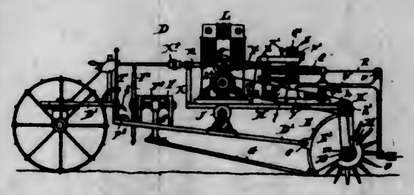
Claim.—1. In a cotton-gin, the combination, with the carding-cylinder and hopper, of the toothed roller G, arranged between said hopper and cylinder, and an apron arranged in proximity to said cylinder on a lower plane than the seed-remover, substantially as described.

2. In a cotton-gin, the combination, with the hopper and carding-cylinder, of the toothed roller G, arranged between said hopper and cylinder, an inclined rest, J, and an apron, K, carried by said rest in proximity to said cylinder, as set forth.

3. In a cotton-gin, the combination, with the hopper and carding-cylinder, of the toothed roller G, arranged between said hopper and cylinder, an inclined rest, J, means for adjusting said rest, and an apron, K, carried by said rest in proximity to said cylinder, as set forth.

4. The combination, with the frame, the hoppers having slatted openings F, feed-rollers, carding-cylinders, and brushes, of the aprons K, the centrally-disposed gearing, and belt-connections between said gearing and the feed-rollers, cylinders, and brushes, substantially as described.

385,983. CLAMP. PARDON A. WHITNEY, Southington, Conn., assignor to the Peck, Stow & Wilcox Company, same place. Filed Mar. 8, 1888. Serial No. 266,543. (No model.)



Claim.—The herein-described clamp, consisting of the body A, having the head *a*, through which the screw passes, provided with an internal screw-thread and an open socket at its inner end below the threaded portion, and the screw B, having the swivel plate or bushing

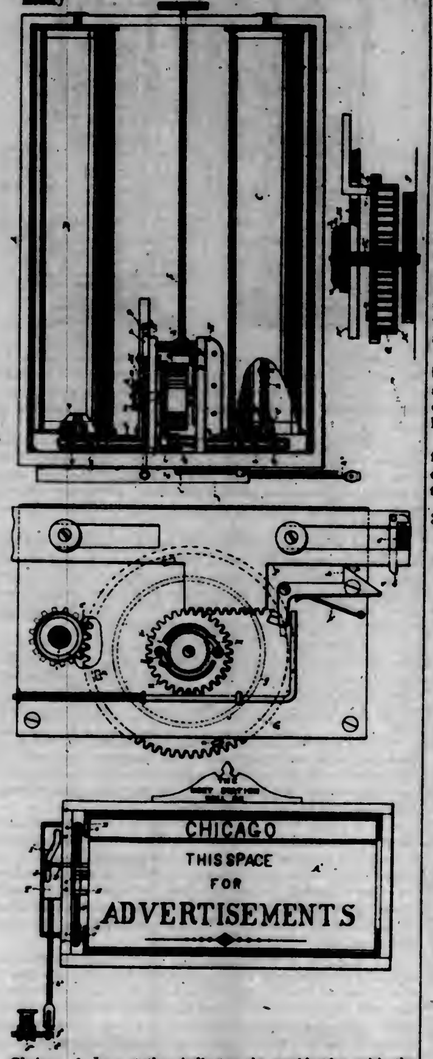
385,983.

c, of a size and form adapted to be received within the socket of the head *a*, substantially as described, and for the purpose specified.

385,984. APPARATUS FOR TILLING GROUND. EDWIN R. WHITNEY, St. Johnsbury, Vt., assignor to the Standard Electric Company of Vermont, same place. Filed Dec. 16, 1887. Serial No. 258,128. (No model.)

Claim.—1. In an electrical apparatus for tilling ground, and in combination, a dynamo-electric machine and an engine for running same, both mounted on a movable platform stationary during the operation, a movable carriage, an electro-magnetic motor mounted on same, tilling mechanism operated from shaft of electric motor, an electrical conductor conveying current from stationary dynamo-machine to moving electric motor, unwound when moving away from source of current and wound up when returning toward same, and a key or lever for closing or opening break in electrical circuit, all as set forth.

2. In an electrical apparatus for tilling ground, and in combination, a dynamo-electric machine and a hydrocarbon-engine for running same, both mounted on a movable platform stationary during the operation, a movable carriage drawn by any power, a rotary tilling-drum connected with same, an electro-magnetic motor mounted on such carriage and operating such tilling-drum, an electrical conductor from said stationary dynamo to said moving electric motor, a holdfast for regulating line of travel of such conductor, and a reel mounted on said carriage on which such electrical conductor is wound, as set forth.



3. In an electrical apparatus for tilling ground, and in combination, a carriage drawn by any power, a rotary tilling-drum connected with such carriage, an electro-magnetic motor mounted on said carriage and operating the tilling-drum, an electrical conductor conveying an electric current from any suitable source to the motor, a reel capable of rotation mounted on said carriage, a lever and a frictional disk carried by it, and a friction-pulley on the motor-shaft, by which such frictional disk is operated to rotate the reel, so as to wind up upon it the conductor as the carriage is drawn toward the point from which it started, as set forth.

4. In an electrical apparatus for tilling ground, the combination, with the carriage drawn by any suitable power and an electro-magnetic motor connected with electric source and a table or carrier on which same is mounted, of a segment of a cylinder provided with spikes on its concave face, pivoted to main frame, and connected pivotally to end of said table or carrier, and a spiked rotary drum carried from ends of said segment and receiving motion from said electric motor, as set forth.

5. In an electrical tilling apparatus, the combination, with the main frame of the carriage drawn by any suitable power, of a segment of a cylinder pivoted thereto on its convex side at a point between its longitudinal edges, pivotally connected also at its upper edge with table or carrier on which electric motor is mounted, and carrying the rotary tilling-drum, a drag-plate pivoted to lower edge of such segment, and means under control of driver for moving said drag-plate forward or backward, so as to oscillate the segment, and thereby vary the vertical position of the tilling-drum, all as set forth.

6. In an electrical tilling-machine, and in combination, the main frame, the carriage supporting forward end of same, and the segment of cylinder pivoted to and supporting rear end of same, a flanged roller mounted on such main frame, and the table or carrier for the electric motor, carried at its forward end on said flanged roller and pivoted at its rear end to and supported by said segment, as shown and described.

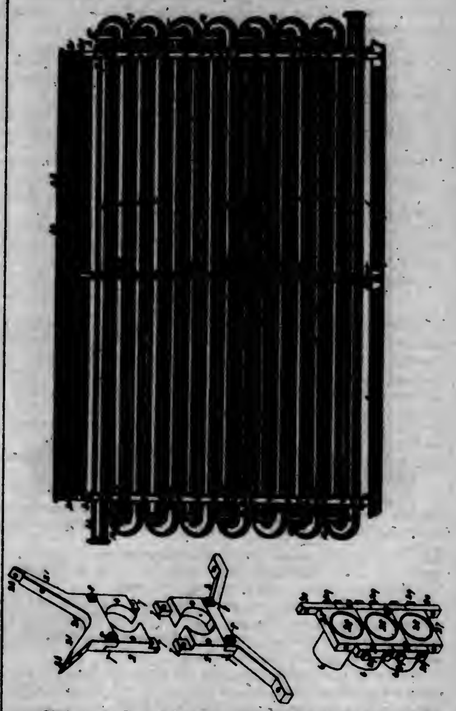
385,985. STREET OR STATION INDICATOR. HARK ANTHONY, San Francisco, Cal. Filed July 14, 1887. Serial No. 244,541. (No model.)

Claim.—1. In a station-indicator, the combination, with the geared horizontal rolls and the indicator-ribbon, of the connecting and shifting rod F, having the intermediate gear, e, the intermittently-moving barrel-gear engaging the gear e, and automatic devices governing its movements, substantially as specified.

2. In a station-indicator, the combination, with the upper geared roll and the lower spring-connected roll, its geared shaft, and the indicator-ribbon, of the vertical geared connecting-rod F, engaging the gears *e d* and the barrel-gear, the intermittently-moving barrel-gear engaging the gear *e*, and automatic devices governing the movements thereof, substantially as specified.

3. In a station-indicator, the combination, with the geared horizontal rolls, the take-up spring, and the indicator-ribbon carried thereby, of the geared connecting-rod F, the barrel-gear in engagement therewith, and the winding-stem, an operating-spring in connection with said gear and winding-stem, the gearing and ratchet of the winding-stem, the steps of the barrel-gear, the reciprocating toothed bar P, engaging the pinion M of the barrel-gear, and the adjusted stop-pawl, substantially as specified.

4. In a station-indicator, the combination, with the horizontal geared rolls and the indicator-ribbon connected thereto, the geared connecting-rod, and step-governed intermittent winding and let-off mechanism, of a vertically-reciprocating thrust-bar, T, in the casing J, provided with the inclined slot I for actuating the toothed rack-bar, the horizontally-reciprocating thrust-bar J', seated in the bearing Q, and having the beveled end to engage in arm d^3 of the rock-shaft *d'*, and connecting devices, substantially as specified.



5. In a station-indicator, the combination, with the ribbon-carrying rolls, the indicator-ribbon, and the gear-connections, of the winding mechanism, consisting of the bar P, operating upon the gear M, the stem K, and the spring H in the barrel-gear, and the automatic stepping mechanism, consisting of the step-pawl *p*, pivoted to the frame-plate, and having the projection *v*, to bear upon the step-lugs *s* in the barrel G, substantially as specified.

6. In a station-indicator, the combination, with the ribbon-carrying rolls, the indicator-ribbon, and the gear-connections, of the main-spring and winding-gear, the reciprocating toothed bar engaging the gear M, thrust-bars T and J', the trip-arm V, extending through the bearing *v'*, and having the roller *z* at its lower end to engage a rack on the trackway, and the link-connection *t*, pivoted at its lower end to a crank on the roller-journal, and its upper end to the crank-arm *t'*, and the crank and other connections, substantially as specified.

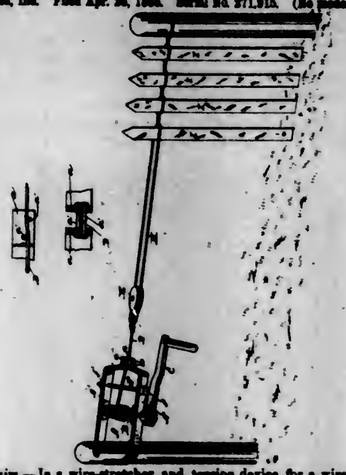
7. In a station-indicator, the combination, with the ribbon-carrying rolls, the indicator-ribbon, and gear-connections, the mainspring, and winding-gear, of a reciprocating thrust-bar having a beveled operating-surface and extended to provide a straight bearing-surface, K', in the direction of motion, substantially as specified.

8. In a station-indicator, the combination, with the drum B, the free drum C, and the vertical geared rod F, of the shaft E, within the drum C and connected thereto by the spring D, designed to take up the ribbon slack, substantially as specified.

385,986. BEER-COOLER. ALOIS ANTHEUNIS, St. Louis, Mo. Filed Feb. 20, 1888. Serial No. 264,867. (No model.)

Claim.—1. In a cooler, the combination, with the pipes, of the joint-flanges 11, and divided blocks 4, embracing said pipes and alternating with and secured to said flanges, as set forth.

2. In a beer-cooler, the combination of the pipes, a joint-flange on the end of one pipe having recesses 19, blocks embracing another pipe having lugs 7 fitting said recesses, and bolts 8, passing through the lugs and the flanges, substantially as set forth.



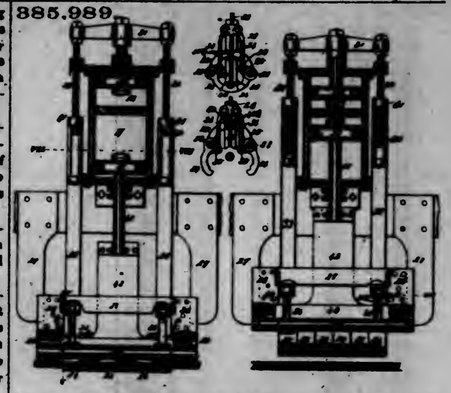
3. The combination of the pipes connected by an elbow having legs of different lengths connecting said pipes, joint-flanges on the pipes and elbow, blocks 4, embracing the pipe which is joined to the shorter leg of the elbow and having lugs 7, the joint-flanges on the other pipe having recesses 19, to receive the lugs 7, and bolts 8, passing through the lugs and both flanges of the joint between the pipe and elbow, substantially as set forth.

4. The combination, in a beer-cooler, of a vertical series of horizontal pipes extending alternately past each other at the ends in opposite directions, a standard at each end formed of the joint-flanges of the shorter ends of the pipes, and intervening blocks engaging the longer ends of the pipes, and elbows having legs of different lengths connected to the pipes with flange-joints.

5. In combination with the sectional end standards of a beer-cooler, the interior standard composed of blocks bearing upon each other, through which the pipes pass, and connecting-cleats attached to the blocks by screws, substantially as set forth.

6. The combination, in a beer-cooler, of the vertical series of horizontal pipes of equal length extending past each other alternately at the ends, connecting-elbows at the ends having legs of different lengths to adapt them to the pipes arranged as set forth, flange-joints between the pipes and elbows, and blocks embracing the extended ends of the pipes and in the plane and secured to the joint-flanges of the shorter ends of the pipes, substantially as and for the purpose set forth.

385,987. WIRE TENSION DEVICE. WILLIAM M. ANDERSON, South Bend, Ind. Filed Apr. 26, 1888. Serial No. 271,915. (No model.)



Claim.—In a wire-stretcher and tension device for a wire-fence machine, the combination of the yoke or frame A, having its ends bent together and forming lips or projections *a a*, the spool or windlass B, mounted in said yoke and carrying the stretching wire or rope D, passing between the lips *a a*, and provided with the equalizing-pulley E, around which the line-wire passes, and the clamping-bolt F and nut *f*, all constructed, arranged, and operating substantially as shown and described.

385,988. HAIR-DRESSING. MERVINA V. BABCOCK, Boston, Mass. Filed Oct. 11, 1887. Serial No. 252,031. (No specimens.)

Claim.—A preparation for a hair-dressing composed of the decoctions of the leaves of sweet fern and bayberry, cayenne-pepper, and castor-oil, mixed together in the proportions substantially as described.

385,989. PNEUMATIC GRIP. SAMUEL P. BAIRD, St. Louis, Mo. Filed Sept. 1, 1887. Serial No. 248,553. (No model.)

Claim.—1. In a cable-grip, the combination, with the lower jaw formed in two members fulcrumed on a vertically-movable plate, of a rod or rods connected to said members and adapted to open and close and raise and lower the same, as set forth.

2. In a grip, in combination with the upper jaw, the lower jaw, consisting of hinged bars provided with fingers, and means for opening and closing the fingers, substantially as set forth.

3. In a grip, in combination with the upper jaw, the lower jaw, composed of hinged bars and fingers formed upon the bars, and means for moving the upper jaw and for opening and closing the fingers of the lower jaw and for raising and lowering the latter, substantially as and for the purpose set forth.

4. In combination with the cylinders 11 and 12 and their pistons, the upper jaw of the grip connected to the piston of the cylinder 11, and the lower jaw of the grip connected to the piston of the cylinder 12, the parts being so arranged that either member may be operated independently of the other, substantially as and for the purpose set forth.

5. In a grip, in combination with the upper jaw, piston to which the jaw is secured, and cylinder in which said piston is located, the lower jaw provided with fingers, piston, cylinder in which said piston is located, and connection between the piston and the jaw, whereby the fingers may be opened and closed, substantially as and for the purpose set forth.

6. In a grip, in combination with the air-chamber, pump connected to the axle of the car for forcing air into the chamber, cylinders, pipes provided with valves, forming communication between the chamber and cylinders, upper and lower grip-jaws, pistons located in the cylinders, and connection between the respective jaws and pistons, substantially as and for the purpose set forth.

7. In a pneumatic grip, the combination, with the jaws of the grip and cylinders having pistons connected to the jaws, of an air-supply connected to the cylinders and controlled by suitable valve-levers, a main pump operated by the car-axle, and a supplemental pump operated by a hand-lever in convenient reach of the grip-man, as set forth.

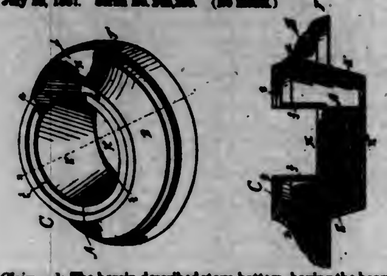
8. In a grip, in combination with the cylinders and pistons and means for admitting and exhausting air therefrom, the upper vertically-movable grip-jaw connected to one of the pistons, and the lower vertically-movable grip-jaw connected to the other piston, substantially as and for the purpose set forth.

9. In a grip, in combination with the cylinders and means for admitting and exhausting air therefrom, the upper grip-jaw connected to the piston in one of the cylinders, lower grip-jaw connected to the piston in the other cylinder, plates provided with prongs to which the lower jaw is pivoted, guides upon which said plates work, and shoulders 50 on said plates, against which the upper jaw impinges when both of the jaws are to be raised from the cable, substantially as and for the purpose set forth.

10. In a grip, in combination with the cylinders and means for supplying and exhausting air therefrom, the piston 30, cross-head 31, rods 32, having head 60, slotted plates 33, links 34, bars 23, having fingers 24, plates 26, having prongs 25, to which said bars are pivoted, jaw 40, guide-plates 40½, shoulders 50 on the plates 26, and plates 43, connecting the jaw 40 to the piston of the cylinder 11, substantially as and for the purpose set forth.

11. A grip consisting of an upper vertically-movable jaw and a lower jaw formed of two meeting or overlapping members adapted to close beneath and pick the cable and then grip it, in connection with the upper jaw, as set forth.

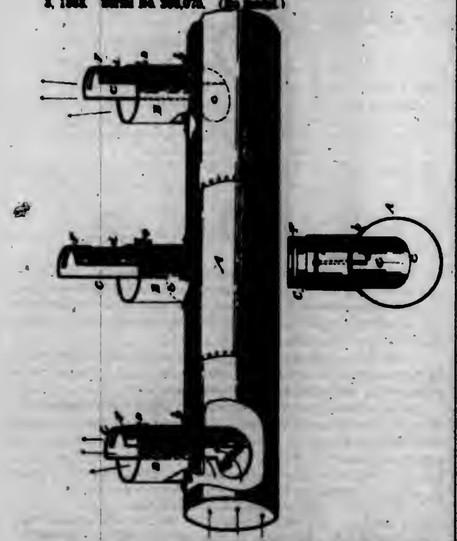
12. In a grip operated by compressed air, the combination, with an air-supply for the grip-operating mechanism, of a main compressing mechanism operated by the car-axle and a supplementary compressing mechanism adapted to be operated by independent means, whereby sufficient air may be compressed to operate the grip before the car starts, as set forth.



385,990. FERTILIZER-DISTRIBUTER. ANDREW J. BAKER, Jonesborough, Ga. Filed Dec. 10, 1887. Serial No. 256,416. (No model.)

Claim.—In a fertilizer-distributer, the combination of the hopper A, having a semicircular bottom, *a*, and a discharge-opening, the spiked roller F, the slide H, the spiked roller I, and the grating J, substantially as shown and described, and for the purpose specified.

385,990.



385,991. STOVE. FIELD B. BENEDICT, Dowagiac, Mich. Filed July 28, 1887. Serial No. 245,284. (No model.)

Claim.—1. The herein-described stove-bottom, having the hearth-opening in one side thereof, the horizontal overhanging open flange C, the ribs *f f*, attached thereto at *a a* and projecting inward flush with said open flange C, the ash-pan formed integral with and onto the under face of the bottom B, the diameter of the ash-pan being greater than the inner diameter, *i*, of the open flange C, as and for the purposes specified.

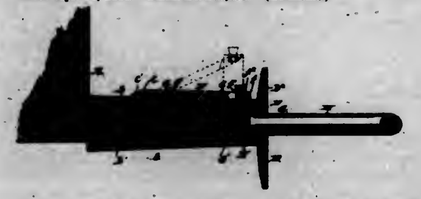
2. In combination with the herein-described stove-bottom, having open flange C, the hearth-opening, the ash-pan formed integral with and joining the under face of the bottom at about midway of the bottom's width, the vertical flanges *f f*, forming side walls to the hearth-opening H, said flanges *f f* extending into the ash-pan flush with the inner edge of the flange C, joining the flange C to the ash-pan, the whole formed integral, as and for the purposes specified.

385,992. HOT-AIR REGULATOR. ALBERT T. BEEH, Louisville, Ky., assignor to himself and Robert Hiatt, Jr., same place. Filed Mar. 3, 1888. Serial No. 266,075. (No model.)

Claim.—1. The combination, with the air-duct and necks B, of the slides C, each consisting of a vertical portion working in said neck and provided with a bottom to close the opening in the bottom of the necks when the slide is raised to its highest position, substantially as described.

2. The combination, with the air-duct A, having openings in its upper side, of the necks B, having flanges *b* secured to said duct about said openings, the slides C, one in each neck, and formed with a vertical portion curved to correspond with the shape of the neck and having a vertical slot, the thumb-bolt, and the bottom *c* to the slide fitting the opening in the bottom of the neck, substantially as and for the purpose specified.

385,993. REFRIGERATING-CAN. VIRGIL W. BLANCHARD, New York, N. Y. Filed Aug. 18, 1887. Serial No. 247,268. (No model.)



Claim.—1. The herein-described refrigerating-can, composed of walls B C, inclined bottom G, and cover C', and the transverse metallic partition E, secured to the inner wall of the can, the inclined bottom F at one side of the partition, the cover S, resting on the partition and a support on the inner wall of the can, and the draw-off faucets and sight-tube, all constructed and arranged substantially as and for the purpose described.

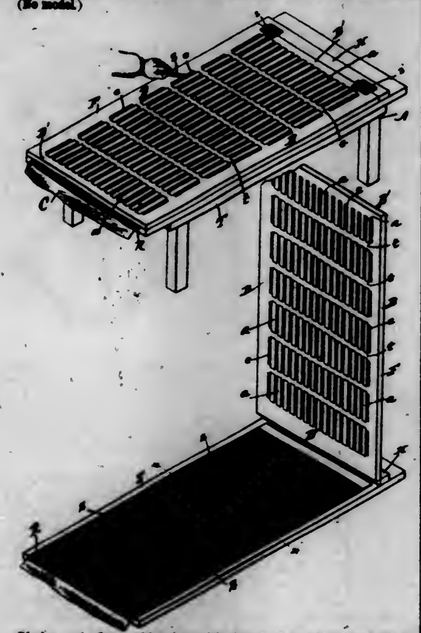
2. The herein-described refrigerating-can having double outer walls and inclined bottom G, valved cover C', said drain-faucet H, with a metallic partition, E, secured vertically and transversely within the can to the inner wall thereof, the ledge S' on the inner wall of the can at one side of partition E, valved cover S, resting on the ledge and partition, bottom F, and faucet *a*, all constructed and arranged substantially as and for the purpose described.

3. A refrigerating-can comprising double walls B C, inclined bottom G, valved cover C', and faucet H, and the vertical metallic partition E in said can, the ledge S' on the inner wall of the can, valved cover S, resting on the partition and ledge, inclined bottom F, faucet *a*, and rack K, all constructed and arranged substantially in the manner as and for the purpose described.

385,994. CAR-COUPLING. CATHERINE A. BOND, Sussex, N. Y. Filed Apr. 30, 1888. Serial No. 272,258. (No model.)

Claim.—The improved car-coupling comprising the draw-head having the longitudinal slots C C in its upper and lower sides, and the boss *c'* on its upper side at the rear end of the slot C, the said boss having its front side beveled downwardly and outwardly, the lever-arm having its rear end pivoted in said boss and similarly beveled, and having its front end bifurcated and provided with the slots *f''* in the arms of the bifurcations, the coupling-pin arranged in the slots C C and having its upper end projecting through the bifurcation of the lever-arm, the pivot-pin *f'*, inserted through the slots *f''* and the coupling-pin, and the arm G, journaled in the boss *c'*, and having the crank-arm *g*, secured to the lever-arm in advance of its pivot, substantially as specified.

385,995. NAPKIN-RING. ERNEST C. BOWLING, Ypsilanti, Mich. Filed Dec. 10, 1887. Serial No. 257,512. (No model.)

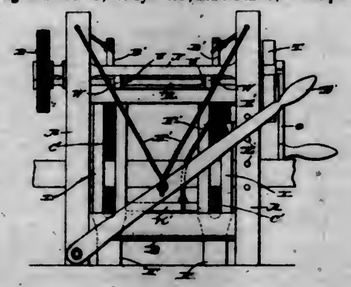


Claim.—The herein-described napkin-ring, comprising a metallic

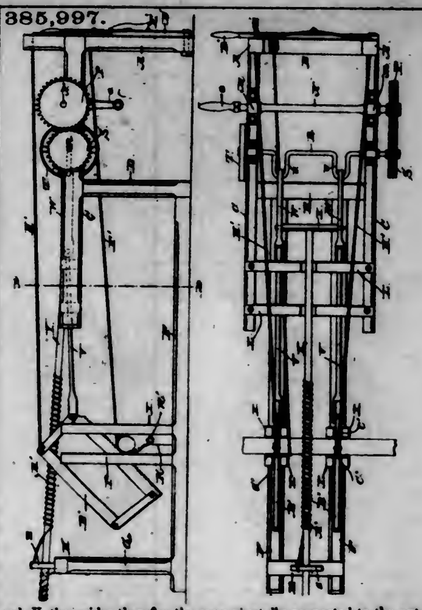
385,995.

band covered with textile fabric, the ends lapped and secured by eyelets, and a ribbon or cord passed through said eyelets and tied on the outer face of said ring, as and for the purposes specified.

385,996. APPARATUS FOR MAKING GARMENT-STAYS. BROOM C. BOWLING, Ypsilanti, Mich. Filed Dec. 16, 1887. Serial No. 258,131. (No model.)



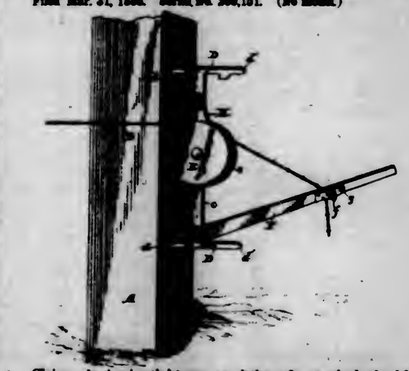
Claim.—1. In combination with the platform, the distributing-frame consisting of the side and end rails, the series of transverse bars *f*, the series of parallel strips *a*, said strips joining the bars *f* at right angles, and the open pockets *e*, extending through the distributing-frame formed within the angles of said bars, as and for the purposes specified.



2. In combination with the platform or table, the frame hinged at one end thereto, said frame consisting of the side rails, B, the end rails, B', the transverse bars *f*, the interposed bars *a*, and the open pockets *e*, extending through the frame, as and for the purposes specified.

385,997. FIRE-WOOD DRAG-SAW. GEORGE H. BRAMER, Michigan City, Ind. Filed Mar. 5, 1888. Serial No. 266,165. (No model.)

Claim.—The combination of the frame having the saw-guides, with the shaft N, journaled in the frame and having the crank O and gear-wheel P, the shaft R, journaled in the frame and having the pinion S meshing with wheel P, the fly-wheel, and cranks U, the reciprocating



385,997.

rods V, the guides therefor, the saws pivotally connected to the outer ends of said rods and arranged in the saw-guides, the pitmen connecting rods V to cranks U, the cross-head X, connecting the pitmen, the rod Y, attached to the said cross-head, the guides for the said rod, and the springs bearing on the rod, for the purpose set forth, substantially as described.

385,998. WIRE-TIGHTENER. ELMER A. CHASE, Yankton, Dak. Filed Mar. 31, 1888. Serial No. 269,151. (No model.)

Claim.—1. A wire-tightener consisting of a toothed wheel having in its edge a double bevel formed by inclining the teeth from side to center, a frame to which said wheel is pivoted, a pawl to hold the wire in and upon said wheel, and a lever for drawing the wire taut, substantially as described.

2. In a wire-tightener, as described, the combination of the frame, the toothed wheel E, and the pawl H with the lever F, having notch *f* and pawl *g*, and pivoted to the frame of the tightener.

3. In a wire-tightener, the combination of the following elements, viz: a frame adapted to be secured, either side up, to the fence-post, provided with a stay or brace to hold it firm, and having a double-beveled toothed wheel pivoted to it, a pawl to engage upon said wheel, and a lever provided with means, as described, for holding it fast to the wire in process of tightening the same, substantially as described.

385,999. VALVE FOR BELLOWS. J. EDMUND CRAIG, Montreal, Quebec, Canada. Filed Aug. 19, 1868. Serial No. 69,751. (No model.)

Claim.—A valve for the bellows of a wind musical instrument,

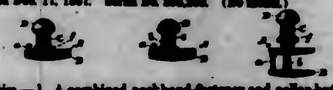
385,999.

compound of a flexible strip secured at one edge, in combination with a flanger which covers said strip secured at one edge, and which is beveled outwardly on its outer or inner side, leaving an open space between it and said strip, substantially as and for the purpose specified.

386,000. SAFETY-PIN. ROBERT P. CLARK and HANNAH D. BURNHAM, Holyoke, Mass. Filed Apr. 2, 1888. Serial No. 269,512. (No model.)

Claim.—1. In a safety-pin, fixed prong *c* and movable prong *c*, having a sharp point, and having in the rear of said point a portion of slightly less diameter, whereby a transverse step is formed thereon, in combination with guard *d*, secured to said fixed prong *c*, said guard having slot *d'* therein, and having an inwardly-projecting engaging device at its open end and at one side of said slot for engaging the step on said prong *c*, substantially as and for the purpose described.

2. In a safety-pin, prong *c*, movable prong *c*, having a transverse depression therein near its point, guard *d*, having therein slot *d'* inclined at an acute angle to said prong *c*, said guard being provided with the inwardly-extending flanges *d*² at its open end, the distance between the adjacent edges of which is slightly greater than the diameter of prong *c* at the bottom of the depression therein and less than the diameter of said prong between said depression and its point, substantially as and for the purpose set forth.

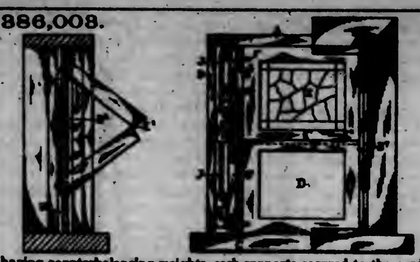


3. In a safety-pin, a fixed prong and a movable pointed prong which near its pointed end is of two diameters, of which the greater is nearest its point, and a guard secured to said fixed prong, said guard being constructed to receive within it the portion of said movable prong which is of greater diameter, and having in its end adjacent to said prongs an opening corresponding substantially in width with that portion of said movable prong which is of less diameter, combined and operating substantially as and for the purpose set forth.

386,001. APPARATUS FOR CUFF-HOLDER. JAMES H. CLARK, Toledo, Ohio, assignor to Orith Brady, Harry B. Wade, and A. L. Just, same place. Filed Feb. 3, 1887. Serial No. 226,494. (No model.)

Claim.—A cuff-holder formed of a single piece of wire bent upon itself, having a center portion corrugated to form adjustments, and the two contiguous ends of the wire bent at an acute angle and attached to a button by means of eyes, substantially as described and shown.

386,002. COLLAR-BUTTON. EDWIN T. BALLARDS, Beloit, Wis. Filed Dec. 17, 1887. Serial No. 258,260. (No model.)



Claim.—1. A combined neck-band-fastener and collar-button consisting of two independent opposite grasping-plates adjustable to and from each other by means of an upright screw-threaded post, *b*, firmly attached to the lower plate rearward of its center, and a collar-button post, C, having an axial screw-threaded bore meshing with the screw-post on the lower plate, substantially as described.

2. A combined neck-band-fastener and collar-button consisting of opposite adjustable grasping-plates A B, screw-threaded post *b*, uprising from the lower plate and firmly attached thereto, collar-button post C, having upper head, D, and lower circumferential flange, *f*, and provided with screw-threaded axial bore of the same pitch as the post *b*, all in combination with stud-headed limiting-pin *a*, firmly attached to the plate B, substantially as described.

386,003. WINDOW. BENJAMIN F. BENTZ, Reading, Pa. Filed Aug. 26, 1887. Serial No. 247,594. (No model.)

Claim.—1. The combination, with a window-frame having guide-grooves, of sashes hinged together at their meeting-rails, sash-cords,

386,003.

having counterbalancing-weights, sash-supports secured to the cords, and having a pivotal connection with the upper end of the upper sash and the lower end of the lower sash, as set forth.

2. A top and bottom sash hinged together at the meeting-rails, and the outside corners of the combined sash provided with socket-pieces, in combination with a sash-casing having the top sash-pulley arranged adjacent to the head-piece of the sash-casing, and guide-grooves formed in the face of the pulley-piece, and with sash-cords having counterbalance weights or springs attached to one end and sash-supports to the other, said sash-supports having bearings adapted to fit said socket-pieces, and integral with said bearings a body adapted to be secured to said cords and to be guided in said guide-grooves, all substantially as shown, and for the purposes set forth.

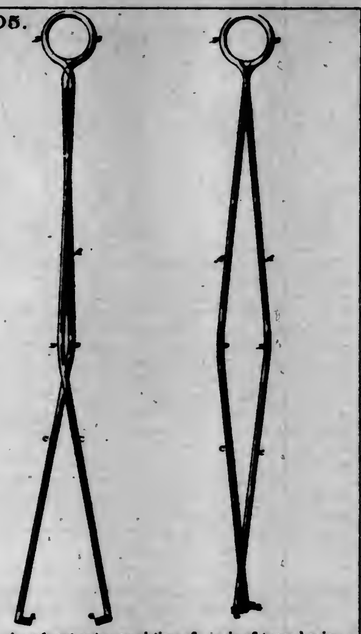
3. The combination, in a window, of a sash-casing provided with counterbalancing-weights, cords J J', sash-supports G, sash-pulleys H, guideways B', and inside beads, B² B³ B⁴, with a combined sash, B E, hinged together and having the meeting-rails beveled, substantially as shown, and a locking device, as set forth.

386,004. REPAIR-CLAMP FOR SPECTACLES. EDWIN J. REDY, Portland, Mich. Filed Feb. 20, 1888. Serial No. 265,711. (No model.)

Claim.—1. In a clamp for holding spectacle-frames while being repaired, the combination, with the arms provided with the pins 9 at their outer ends and adjustably connected at their inner ends, of the clamping-blocks 7, provided with the screws 12 and loosely fitted upon said pins, substantially as described.

2. In a clamp for holding spectacle-frames while being repaired, the combination, with the slotted arms provided with the pins 9 at their outer ends and adjustably connected at their inner ends, of the clamping-blocks 7, provided with the screws 12 and loosely fitted upon said pins, substantially as described.

3. In a clamp for holding spectacle-frames while being repaired, the combination, with the arms provided with the pins 9 at their outer ends and formed with slots at their inner ends, of the clamping-blocks provided with the screws 12 and loosely fitted upon said pins, and a clamping or set screw, 4, for firmly holding together the slotted inner ends of said arms, substantially as described.



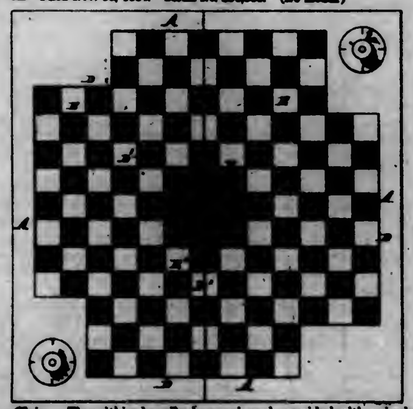
4. In a clamp for holding spectacle-frames while being repaired, the combination of an arm having a clamping-block at its outer end and a screw-threaded hole at its inner end, two other arms having clamping-blocks at their outer ends and longitudinal slots in their inner ends, and a clamping or set screw passed through said slots into said screw-threaded hole in the inner end of the arm first named, substantially as described.

5. In a clamp for holding spectacle-frames while being repaired, the combination of an arm having a pivoted clamping-block at its outer end and a screw-threaded hole at its inner end, a clamping-screw fitted in said screw-threaded hole, and two other arms having pivoted clamping-blocks at their outer ends and slots in their inner ends, which allow them to be longitudinally adjusted over said screw, substantially as described.

6. In a clamp for holding spectacle-frames, the combination of an arm having a pin projecting downwardly from its outer end, a clamping-screw in the inner end of said arm, two other arms having pins projecting downwardly from their outer ends and formed with longitudinal slots in their inner ends, which are movable over said screw, and clamping-blocks provided with perforations in their inner ends, in which are loosely fitted said pins, with lips at their outer ends, and with set-screws arranged with their inner ends opposite the sides of said pins, substantially as described.

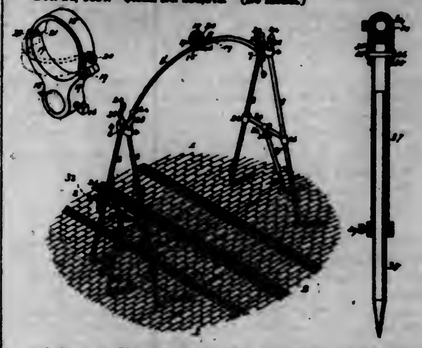
386,005. CORK-EXTRACTOR. GEORGE W. REESE, Ashland, Pa. Filed Feb. 27, 1888. Serial No. 265,572. (No model.)

386,005.



Claim.—A cork-extractor consisting of a pair of tongs having a spring at the center, the two arms of the tongs extending in parallel lines from the spring to the point D, at which point they cross and diverge from each other and terminate in inwardly-extending hooks, substantially as shown.

386,006. METHOD OF MANUFACTURING SUPPORTS FOR PHOTOGRAPHIC EMULSION. FRANCIS H. FREEMAN, Dublin, County of Dublin, Ireland. Filed Mar. 17, 1887. Serial No. 231,316. (No specimens.) Patented in England Aug. 20, 1886, No. 10,999.



Claim.—The process herein described of preparing a base for photographic negatives, the same consisting in forming a sheet of insoluble bichromated gelatine and decolorizing said sheet by means of sulphurous acid, so as to transmit actinic light for the purpose of printing, substantially as specified.

386,007. GAME APPARATUS. FRANK F. GIBSON, Englewood, Ill. Filed Nov. 30, 1887. Serial No. 256,888. (No model.)

Claim.—The within-described game-board, provided with a single central goal, a series of squares, H F, of different colors immediately surrounding the goal, a series of squares, D' E', surrounding the said squares H and F, and four wings composed of different-colored squares, all of the said squares being arranged in rows at right angles to each other, as set forth.

386,008. HOSE-BRIDGE. CHARLES J. P. HUNT, St. Louis, Mo. Filed Dec. 24, 1887. Serial No. 258,572. (No model.)

Claim.—1. The combination, in a hose-bridge, of two pairs of legs or standards, each pair hinged together, and having extensions 22, adapted to hold the hose when the legs are erect, with side extensions, 24, adapted to hold the hose while the legs are prone, and a connection hinged at the ends to the pairs of legs, substantially as and for the purpose set forth.

2. The combination of the two pairs of legs or standards, jointed together near their upper ends and having above the joints branching parts adapted to support a hose, and a curved connection between the legs or standards having a fork adapted to support the hose.

3. The combination of two pairs of legs, with joints near the top of each pair, branching parts above the joints adapted to support a hose, and a connection between the pairs having a fork adapted to support the hose, and a strap adapted to hold the hose down in the fork.

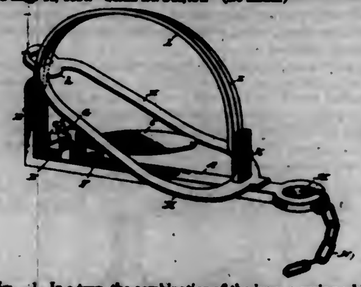
4. The combination, in a hose-bridge, of two pairs of legs connected together, and each pair having a cross piece or bar, 20, pivoted to one of the legs, a fork on the other leg adapted to receive the free end of the cross-piece, and a set-screw adapted to fix the said end in the fork.

5. The combination, in a hose-bridge, of two pairs of legs or standards, the legs of each pair connected by a joint near the top and extending above the joint in parts, forming jaws adapted to embrace a hose, a connecting-bar, 8, between the pairs of legs, with a fork upon it for the support of the hose, a cross-bar between the legs of each pair, and a brace extending from said cross-bar to the ground, substantially as and for the purposes set forth.

6. The combination, in a hose-bridge, of two pairs of legs or standards connected by a bar to which they are jointed, branched parts or forks at the tops of the legs and on the connecting-bar adapted to support the hose, and a brace-leg, 37, connected to each pair of legs, to prevent endwise sway of the bridge.

7. The combination, in a hose-bridge, of two pairs of legs jointed to a connecting-bar, and each pair jointed together and having above the joint parts 23, moving with the legs and adapted to clasp the hose on the separation of the lower ends of the legs, and a cross-bar, 20, pivoted to one leg of the pair and having disconnectible attachment to the other leg of the pair, for the purpose set forth.

8. The combination, in a hose-bridge, of two pairs of legs jointed to a curved connecting-bar, 8, having a fork for support of the hose, the legs of each pair jointed together at 6, and branching parts 23, one fixed to each leg, so as to move therewith, substantially as and for the purpose set forth.



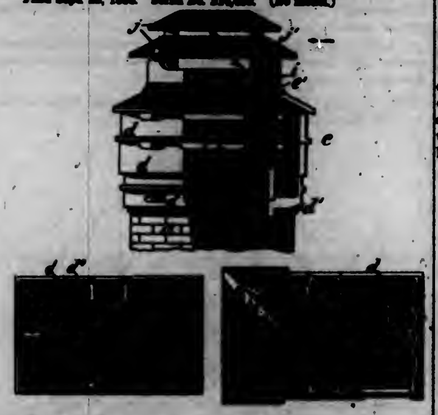
9. The legs for a hose-bridge connected in pairs by joints and the pairs connected by a bar to which they are jointed, and parts 23, with extensions 24, fixed to the legs above the joint, substantially as and for the purpose set forth.

10. The combination, in a hose-bridge, of two pairs of legs connected together by a curved bar, 8, by means of joints, a fork on the curved bar, with a strap connected to it by a double joint, parts 23, with extensions fixed to the legs above the joint, cross-bars 20, having pivotal connection to one leg of each pair and an adjustable attachment to the other leg, and a brace-leg, 37, connected to the cross-bar and having a pivot at 36, substantially as set forth.

11. The combination, in a hose-bridge, of the connecting-bar 8, and hose-supporting fork having horns 17, and a strap, 18, connected to one horn by a universal joint, 19 20, and connected to the other horn by a catch, all constructed substantially as and for the purpose set forth.

12. In a hose-bridge, the connecting-bolt 10, having a cross-bar, 11, pivoted to the bolt and capable of being turned in line with the bolt or crosswise thereto, in combination with a spring, 12, acting to keep the cross-bar 11 in contact with the object through which the bolt passes, substantially as set forth.

386,009. ANIMAL-TRAP. WILLIAM B. HERSLEY, Greenville, Ky. Filed Aug. 11, 1887. Serial No. 246,781. (No model.)



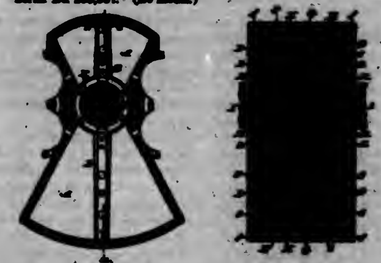
Claim.—1. In a trap, the combination of the jaws, a spring which controls the same, and a pan pivoted to the trap and provided with a catch above the line of the pivotal point of the pan, and a set-screw between the pivotal point of the pan and the outer end of the trap, substantially as and for the purposes specified.

2. In a trap, the jaws and main spring provided with a projection which projects in toward the pan of the trap, in combination with a pan which is pivotally secured to the trap, and which is provided on its inner end with a projection for engagement with the said projection on the spring of the trap, and a secondary spring located beneath the pan of the trap, substantially as and for the purposes specified.

3. In a trap of the character described, the pan pivotally secured to the trap and provided with a projection and a set-screw at one side of the pivotal point, and having a spring beneath the pan and at the opposite side of the pivotal point, in combination with a main spring for the jaws, and a projection on said main spring for engagement with the catch on the pan of the trap, all constructed and combined to operate substantially as described, and for the purposes specified.

386,010. CHIMNEY-TOP. ALBERTUS HENDRICKSON, Putnam, Conn. Filed Sept. 23, 1886. Serial No. 214,059. (No model.)

Claim.—1. The herein-described chimney-top, consisting, essentially, of metallic sections capable of being superposed one upon another, each section being formed in two or more parts, and spacing-clamps, the edges of which interlock with the edges of the part sections to bind the part sections together, whereby the section may be expanded to fit chimneys of different sizes, substantially as set forth.

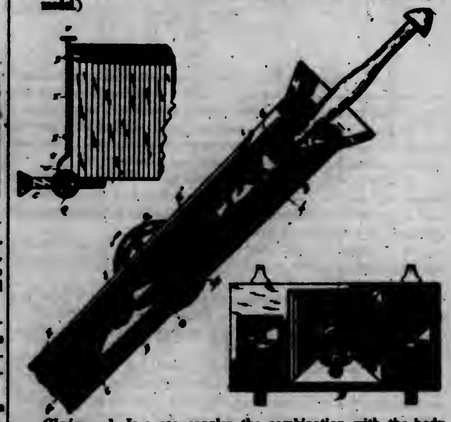


2. The herein-described chimney-top, consisting, essentially, of sections formed of cast metal capable of being superposed one upon another, each section being formed in two or more parts, and spacing-clamps to interlock with and bind together the edges of the part sections, substantially as set forth.

3. A chimney-top section formed in two or more parts, the edges of the parts being dovetailed, and spacing-clamps provided with dovetailed edges to engage the edges of the said parts, substantially as set forth.

4. The combination, with a chimney-top, *c*, of a storm-cap, *j*, having depending arms or legs *f*, provided with vertically-elongated slots, slotted lugs attached to the chimney-top in position to correspond with the legs *f*, and clamping-bolts to lock the legs *f* to the legs on the chimney-top, whereby the storm-cap is secured in the desired vertical adjustment, substantially as set forth.

5. In a chimney-top, the combination, with an interior flue composed of sections capable of being superposed one upon another, the sections each consisting of two or more parts united by spacing-sections, of an exterior flue formed by several sections capable of superposition one upon another, each section consisting of two or more parts united by spacing-sections, the sections of the exterior flue being provided with draft-openings and the sections of the interior flue being provided with draft-openings, substantially as set forth.



386,011. METALLIC PACKING. FRANK P. KELSEAUX, Brooklyn, N. Y., assignor to Alexander Craig, Newark, N. J. Filed Nov. 1, 1887. Serial No. 253,927. (No model.)

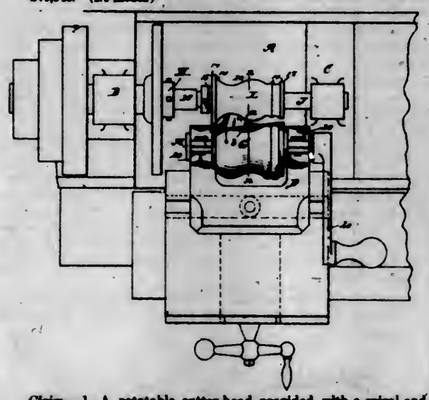
Claim.—1. The combination, in a packing for vibrating pistons, of divided end strips fitted in a longitudinal recess in each end of the piston, lateral strips fitted in longitudinal recesses in the side edges of the piston and jointed and pivoted to the end strips at the corners of the piston, packing-rings seated in the piston to encircle its trunnions and embraced within recesses at the inner ends of the inner sides of the lateral packing-strips, pistons made flat to the side strips to cover the inner faces of each packing-ring, a plate flat to the inner face of one division of each end strip to cover its joint with the proximate division, and a series of springs interposed between the several packing-strips and the piston, substantially in the manner and for the purpose herein set forth.

2. The combination, in a packing for vibrating pistons, having self-adjusting end strips, substantially as described, of lateral strips fitted each in a longitudinal recess in the side edge of the piston, packing-rings seated in the piston to encircle its trunnions, and which are severally embraced within recesses at the inner ends of the inner sides of the lateral packing-strips, and spring devices, substantially as described, for forcing the rings and strips outwardly against the wall of the piston-chamber, substantially in the manner and for the purpose herein set forth.

386,012. CAR-COUPLING. JOHN G. HOSSBARGER, Emporia, Kans. Filed Feb. 21, 1887. Renewed Mar. 24, 1888. Serial No. 268,482. (No model.)

Claim.—1. In a car-coupler, the combination, with the body thereof having a flaring mouth and formed with a recess for the head of the pin to rest in, of a distinct depressing-lever mounted in the body of the coupler and having a recess which incloses the upper por-

tion of the head of the pin, and means to free the pin when it is desired to uncouple the cars.



2. In a car-coupler, the combination, with the body thereof having a flaring mouth, an ejecting-lever for the head of the pin to rest in, pivoted in the bottom of the body of the coupler, and a distinct depressing-lever which incloses the upper portion of the head of the pin, pivoted in the upper portion of the body of the coupler, of an actuating-lever adapted to simultaneously operate the depressing-lever and the ejecting-lever and free the pin.

3. In a car-coupler, the combination, with the body thereof and the pivoted depressing and ejecting levers which hold the pin, of a distinct actuating-lever mounted upon a shaft intermediate the depressing and ejecting levers, provided with a longer and a shorter arm, the longer arm of which engages the depressing-lever, and the shorter arm of which engages the ejecting-lever, whereby when the shaft is turned the pin is ejected from its resting-place and the cars uncoupled.

4. In a car-coupler, the combination, with the body thereof and a distinct depressing-lever pivotally mounted therein and normally held down by a spring, so as to engage the head of the pin, of an actuating-lever mounted on a shaft situated immediately below the depressing-lever, and a hand-wheel on one end of said shaft, whereby when the wheel is turned the actuating-lever is thrown against the depressing-lever and the latter uplifted and the pin released.

5. In a car-coupler, the combination, with the body thereof and the pivotally-mounted depressing and ejecting levers which hold the pin, of a distinct actuating-lever mounted upon a shaft immediately below the depressing and ejecting levers, provided with a longer and a shorter arm, the longer arm of which engages the depressing-lever, and the shorter arm of which engages the ejecting-lever, and a hand-wheel mounted on the shaft of the actuating-lever, whereby when the wheel is turned the actuating-lever is thrown against the depressing-lever and the latter uplifted and the pin released.

386,018. TOOL FOR TURNING AND POLISHING METAL. ERWIN A. HOWE, Springfield, Mass. Filed Apr. 11, 1888. Serial No. 270,340. (No model.)

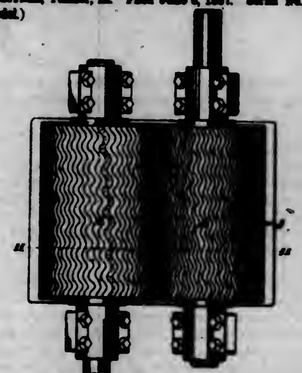
Claim.—1. A rotatable cutter-head provided with a spiral and shearing cutting-edge, *a*, and an eccentric burnishing-surface in the rear of said cutting-edge, for the purpose substantially as set forth.

2. A rotatable cutter-head provided with a spiral and shearing rough cutting-edge, *a*, and a secondary cutting-edge, *d*, at the rear thereof, substantially as and for the purpose described.

3. A rotatable cutter-head provided with a spiral and shearing rough cutting-edge, *a*, a secondary cutting-edge, *d*, at the rear thereof, and an eccentric burnishing-surface at the rear of the latter edge, substantially as and for the purpose described.

4. A rotatable cutter-head provided with a spiral and shearing cutting-edge, *a*, and one or more cutting-off projections, substantially as and for the purpose described.

5. A rotatable cutter-head provided with one or more spiral and shearing cutting-edges, an eccentric burnishing-surface at the rear of said cutting-edge, and one or more cutting-off projections, *g*, substantially as and for the purpose described.



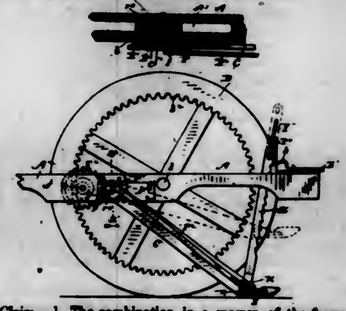
6. The combination, with a cutter-head provided with one or more cutting-edges and a burnishing-surface at the rear thereof, of a shaft provided with eccentric bearings *w w* and a supporting portion or portions, *v*, eccentric to said bearings, on which said cutter-head is mounted, substantially as and for the purpose described.

7. The combination, with a slide-rest of a lathe having bearings 10, of a cutter-head, and a shaft, to which said head is secured, mounted in said bearings and provided with a lever, 20, said cutter-head being provided with one or more spiral and shearing cutting-edges, substantially as and for the purpose described.

8. The combination, with a slide-rest of a lathe having bearings 10, of a cutter-head, and a shaft, to which said head is secured, mounted in said bearings and provided with a lever, 20, said cutter-head being provided with one or more spiral and shearing cutting-edges, and an eccentric burnishing-surface, substantially as and for the purpose described.

9. The combination, with the slide-rest of a lathe having bearings 10, of a cutter-head, and a shaft, to which said head is secured, mounted in said bearings and provided with a lever, 20, said cutter-head being provided with one or more spiral and shearing cutting-edges, an eccentric burnishing-surface at the rear of said cutting-edges, and one or more cutting-off projections, *g*, substantially as and for the purpose described.

386,014. GRINDING-ROLLS FOR FLOUR-MILLS. HENRY A. HEEFNER, Palmer, Ill. Filed June 6, 1887. Serial No. 240,444. (No model.)



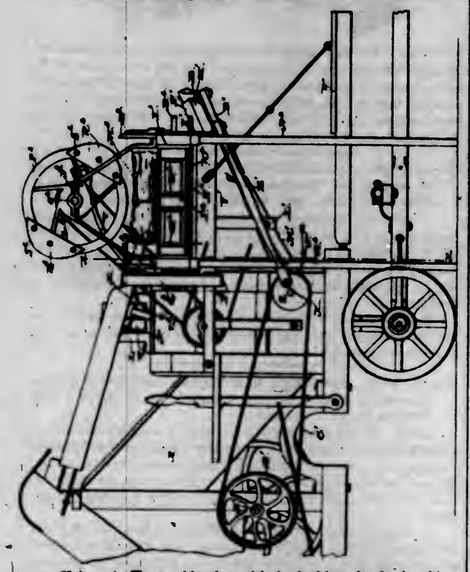
Claim.—1. As a new article of manufacture, a roll for flour-mills provided with curved serpentine corrugations, substantially as set forth.

2. As a new article of manufacture, a roll for flour-mills provided with serpentine corrugations arranged spirally upon the face of the roll, substantially as set forth.

3. The combination of two grinding-rolls, each provided with serpentine spiral corrugations, and one of said rolls having a finer drum than the other, as herein set forth.

386,015. MOWING-MACHINE. FRANK M. HUNT, Round Oak, Ga. Filed May 9, 1887. Serial No. 237,802. (No model.)

Claim.—1. The combination, in a mower, of the frame, the internally-toothed ground-wheel supporting the said frame, the spur-wheels *c'* and r^3, journaled in the frame, the spur-wheel r^2, engaging with the spur-wheel r^3, the spring-plate *t*, secured to the frame and provided with a bushing upon its face, through which the outer end of the shaft of the spur-wheel r^2 passes, the retaining-plate F', secured to the frame and provided with depending arms, the thrust-bar C, pivoted upon the bushing upon the spring-plate and having attached to it the finger-bar S, the upper end of this bar being clamped between the spring-plate *t* and the arms of the retaining-plate F', and the cutting apparatus connected to and operated by the shaft of the said spur-wheel r^2, substantially as described.



2. In a mower, the combination of the frame mounted upon an internally-toothed ground-wheel, the spur-wheel r^3, journaled in the frame, the spur-wheels r^2 and *c'*, the spring-plate *t*, bolted to the frame and perforated for the passage of the shaft of the spur-wheel r^2, and provided with a bushing through which the said shaft passes, the retaining-plate F', bolted to the frame and provided with depending arms, the vertically-vibrating thrust-bar C, pivoted upon the bushing of the spring-plate and clamped between the same and the arms of the retaining-plate, the finger-bar attached to the bar C and carrying the cutting apparatus, the pitman-rod and crank-disk for operating the cutting apparatus, the notched bar L, pivoted to the lower end of the said thrust-bar C, the lever Y, for adjusting the said bar L, the spring-actuated bolt *s*, for engaging the notches in the bar L, and the lever for disengaging the said bolt *s*.

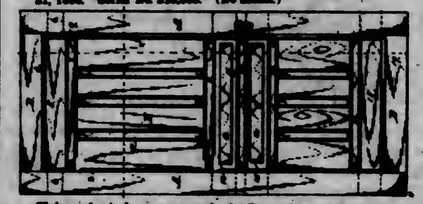
386,016. CORN-PLANTER. JOHN M. JOHNSON, New Albany, Kans. Filed Apr. 14, 1888. Serial No. 270,888. (No model.)

Claim.—The combination of the wheels G, secured rigidly to the revolving shaft, which is mounted upon the front frame, the projections upon the inner sides of the wheels, the pivoted levers secured to the outer sides of the seed-boxes, the connecting-rod for connecting the levers together, a bearing or support, the lever O, mounted in this bearing, and the seed-slide, substantially as shown and described.

386,017. BAND-CUTTER AND FEEDER. EDGAR P. KELLOGG, Marion, Va. Filed Aug. 6, 1887. Serial No. 246,314. (No model.)

Claim.—1. The combination, with the feed-boards of a threshing-machine, of the rotating crank-shaft X, the levers oscillated thereby, and the feeder S', connected to said levers and arranged over the feed-board, whereby the said feeder will be oscillated in a vertical direction, substantially as described.

2. The combination of the feed-board, the rotating shaft X, having the crank Y, the wheel Z on said shaft, the levers M', the spring-arms N', secured to said levers and engaging the crank Y, the arms O', rigidly secured to the outer ends of said levers, the transverse bar R', secured on the upper ends of the arms O', the board S', adjustably secured on said bar and arranged transversely over the feed-board, the vibrating spreader fulcrumed on the feed-board, the bell-crank lever, the link H', and the pitman E' between the bell-crank lever and the wheel Z, substantially as set forth.

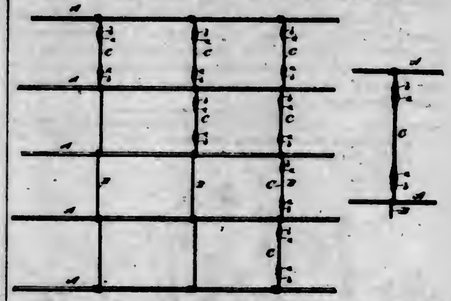


3. The combination of the feed-board, the crank-shaft X below the feed-board, the levers M', the spring-arms N', adapted to engage the crank-shaft, the arms O', and the feeder carried by said arms O' and arranged transversely over the feed-board, substantially as specified.

4. The combination of the feed-board, the levers M', the crank-shaft X, to actuate the same, the arms O', secured to said levers, the transverse bar R', secured to the upper ends of said arms, and the board S', adjustably mounted on said bar R', substantially as set forth.

5. The combination, with the feed-board, of the levers M', the arms O', secured to said levers, the crank-shaft X, to actuate said levers, the transverse bar R', secured to the upper ends of the arms O', the board S', of less length than the bar R' and having the longitudinal slots U', and the bolts T', passing through said slots and engaging the bar R', as set forth.

6. The combination of the endless carrier, the retaining wheel F', arranged transversely over the same, and the cutting-plates E', detachably secured to the said wheel, having the serrated cutting-edges projecting beyond the periphery of the wheel and an intervening plane edge between said serrated edges, substantially as described.

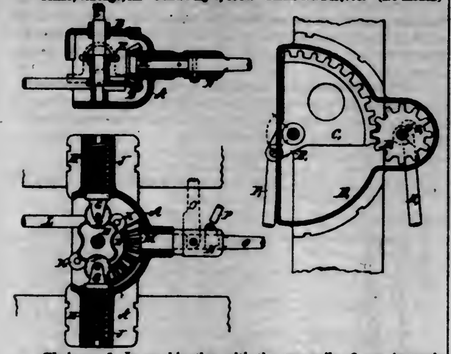


386,018. DOOR. JOHN H. LEUTHEN, Muscatine, Iowa. Filed Oct. 21, 1886. Serial No. 216,388. (No model.)

Claim.—1. A door composed of stiles and top and bottom cross-rails united together and formed with grooves in their inner edges, top, bottom, and central cross-panels of uniform thickness throughout their length, having their ends lodged in mortises through the stiles, thin vertical panels and frieze-pieces, as 7, 11, 12, 13, and 17, having grooves in their longitudinal edges to take and hold the edges of the cross-panels and the ends of the vertical panels, all substantially as described.

2. A door composed of the following elements: the stiles having mortises to receive the tenons of the top and bottom cross-rails, and grooves on their inner edges to receive the edges of the standing panels, top, middle, and bottom cross-panels 5, 14, 15, and 18 thinner than the stiles and cross-rails and having their ends of the same thickness as the panel and lodged in mortises through the stiles; frieze-pieces 7, 11, 12, 13, and 17, having grooves in their longitudinal edges to receive the cross-panels and the ends of the standing panels, the standing panels having their ends in the grooves of the frieze-pieces and their outer edges in the grooves of the stiles, and mortise F on the standing panels having their ends set in the grooves of the frieze-pieces, substantially as described.

386,019. WIRE-FENCE STAY. LAFAYETTE W. LINDLEY, Louisville, Ky. Filed Apr. 7, 1888. Serial No. 269,969. (No model.)



Claim.—1. The combination, with the horizontal wires of a wire fence, of a vertical wire-stay secured to the horizontal wires at the point of intersection with the same, and a loose independent link inserted in the said stay-wire between two of the said horizontal wires of the fence, substantially as described.

2. The combination, with the horizontal wires of a wire fence, of a vertical wire-stay secured to the horizontal wires of the fence at the point of intersection with the same, and a loose independent link, C, inserted in the said vertical stay-wire between two of the horizontal wires of the fence, the said link C having formed on its ends loops or eyes *a a*, which interlock with loops *b b*, formed on the adjacent ends of the stay-wire, substantially as described.

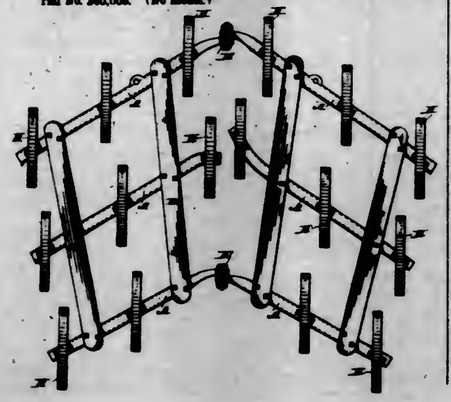
3. The combination, with the horizontal wires of the fence, of a vertical wire-stay secured to the said horizontal wires by wrapping the stay-wire around the same at the point of intersection, and a loose

independent link, C, inserted in the said stay-wire between two of the horizontal wires, substantially as described.

386,020. SWITCH-OPERATING MECHANISM. ALBERT K. MAINFIELD, Chicago, Ill. Filed July 7, 1887. Serial No. 243,703. (No model.)

Claim.—1. In combination with the two rails of a main track and the movable point-rail of a split switch, a movable guard-rail, which, when the switch-rail lies in action against its main rail, stands at suitable guarding distance from the other main rail, and when the switch-rail is out of action the guard-rail is beyond guarding distance from its main rail, together with connecting mechanism, substantially as set forth.

2. In combination, a movable split switch, a movable guard, the general direction of whose motion from one extreme position to the other is opposite to the direction of motion of the switch, but the first increment of whose motion is in the same direction as the motion of the switch, and connecting mechanism between switch and guard, substantially as described.



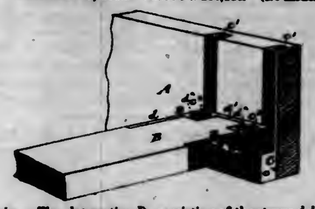
3. The combination of split switch S', guard J', switch-crank E', having a movement of less than half a circle, guard-crank G', having a movement of more than half a circle, and connecting parts, substantially as set forth.

4. In a switch-stand, the segmental gear D, carrying the crank K and the cam E and attached to the vertical revolving shaft C, in combination with horizontal lever-shaft O, spring H, and connecting parts, substantially as set forth.

5. In a switch-stand, the combination of a shaft making about one-fourth of a revolution with a shaft making about one-half a revolution, a hinged operating-lever on and arranged to be locked in line with the axis of the latter shaft, and connecting parts, substantially as set forth.

6. In combination, the vertical revolving shaft C, having its upper bearing in the box Q, the fixed inclined ladder X, supporting-box Q, the inclined tubular braces Y Y, extending from the foundation to a high point of the ladder, the switch-stand A, supporting the lower end of shaft C, the operating-lever O, the switch S, and connecting parts, substantially as set forth.

386,021. HARROW. DEWITT C. HARKMAN, Utica, N. Y., assignor to the Eureka Mower Company, same place. Filed Feb. 28, 1888. Serial No. 265,003. (No model.)



Claim.—1. In a harrow, the combination, with a channel draft-bar having its walls placed vertically, of a tooth mounted on the plain edges of said walls, and a clip to hold said tooth firmly in such position, substantially as described.

2. In a harrow, the combination of the channel draft-bar having its walls placed vertically, a tooth mounted on the plain edges of said walls, and a clip extending over said tooth and confined by the walls of said bar, substantially as described.

3. In combination with a harrow-tooth, the tooth-clip formed with the central span, *g*, shoulder *h*, and lugs *i*, and a channeled bar, the said central span, *g*, extending above the walls of said bar, so as to accommodate and hold the shank of the tooth placed on the said walls, and the said lugs extending between the walls of the bar, substantially as described.

4. In a harrow, the combination of the channel draft-bar, the tooth mounted on the plain edges of said bar, and the clip mounted on and spanning the tooth and held by said tooth above the bottom of the channel, whereby the said clip acts upon the said tooth above the channel-bar, substantially as and for the purpose described.

386,022. BEDSTEAD-SLAT LOCK. REARDEN D. MARVIN, Princeton, Ky. Filed Mar. 12, 1888. Serial No. 267,119. (No model.)

Claim.—The slat-casting D, consisting of the straps *d d*, connected at one end by the strap *d'*, and provided with the corner holes, d^2 d^3, in combination with the rail-casting C, having two parallel straps, *c c*, provided with right-angled flanges *c'*, and the bottom projections, c^2, carrying upwardly-projecting studs c^3, and the cross-strip c^4, having the middle bearing, c^5, as shown and described.

386,023. ENAMELED IRONWARE. HENRY C. MILLIMAN, Brooklyn, assignor to the Iron Clad Manufacturing Company, New York, N. Y. Filed Mar. 26, 1884. Serial No. 125,402. (No specimens.)

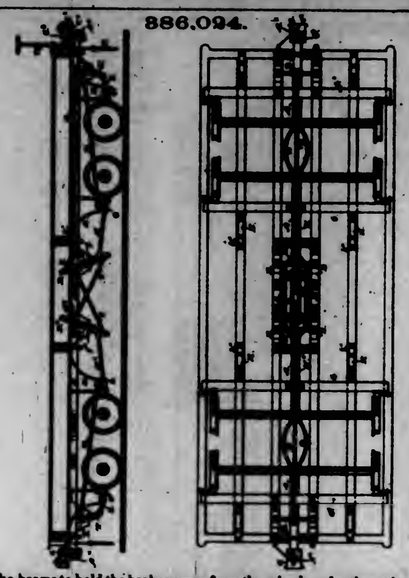
Claim.—1. A "glaze" adapted to be applied to and fused upon the surface of iron, composed of suitable ingredients to form a glaze, and having added thereto after it has been compounded an additional quantity of alkali or other equivalent agent sufficient to neutralize the acid or equivalent resulting from the first admixture, substantially as hereinbefore set forth.

2. As a new article of manufacture, thin uncolored enameled ironware of practically plain appearance and free from spots or mottles, as hereinbefore set forth.

386,024. CAR-BRAKE. ISAAC HUDELSON, San Francisco, assignor of one-half to Joseph B. Hudelson, Sierra City, Cal. Filed Feb. 3, 1888. Serial No. 262,982. (No model.)

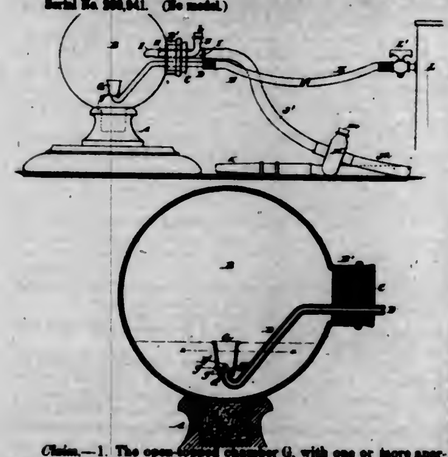
Claim.—1. In a car-brake, the combination of a draw-bar, a loose sliding draw-head, levers D D^x, having their contrary arms or the members on opposite sides of the pivots connected together, the brake-beams connected to the levers, as described, and springs which are applied to hold the brake-beam normally in action against the wheels of the trucks.

2. In a car-brake, a draw-bar, a sliding cross-head, levers D D^x, and diagonal connections F, in combination with brake-beams, which are connected to the said levers, and springs so applied that they act upon the brakes to throw and hold them to the wheels when the pulling force or strain on the draw-bar becomes less than the force of the springs.



3. In a car-brake, a draw-bar extending from end to end of the car, having a loose sliding draw-head in each end, and stop or projection, in combination with levers set with relation to the draw-bar and these stops, as described, and connecting-rods which connect the levers together and to the brake-beams of both trucks, and springs applied to said beams or to the levers, as described, to hold the brakes to the wheels for operation, as set forth.

4. In a car-brake spring applied to throw and hold the brakes in action against the wheels, a draw-bar having a loosely-sliding draw-head on the end thereof, lever-connection between the draw-bar and the brake beam or lever, by which a pulling force or strain upon the draw-head acts upon or contrary to the spring force to hold back the brake, and means, substantially as described, for locking the draw-head to the draw-bar, for operation as set forth.

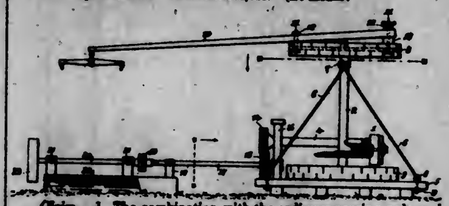


5. In a car-brake, a sliding draw-bar which is connected with the brake-beams to hold the brakes away from the wheels under the action of the pulling force sustained by the draw-bar, a spring applied to act contrary to such force and hold the brakes against the wheels, and a sliding draw-head and a locking-pin, in combination, as set forth.

6. The combination of the pivoted levers D D^x, diagonal connecting-rods F F', sliding bar A, having stops or projections, as A^2, to engage the ends of said levers upon the same side of the pivots, and rods H H, connecting the opposite ends or members of the levers with beams or parts, as G G, to be moved, whereby said parts are simultaneously moved in opposite directions from a rectilinear movement of the slide-bar in one direction, as hereinbefore set forth.

386,024.

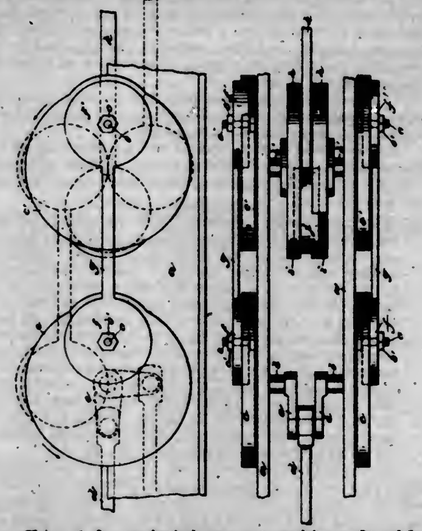
386,025. COMBINED ATOMIZER AND INHALER. ADOLPHUS J. PALMER and GUSTAVE H. PALMER, Brooklyn, N. Y. Filed Apr. 7, 1886. Serial No. 293,941. (No model.)



Claim.—1. The open-topped chamber G, with one or more apertures for the slow admission of the liquid, in combination with the globe or vessel B, air-induction pipe D, with its contracted aperture D', and inhaling-pipe I, arranged and adapted to serve substantially as herein specified.

2. In an atomizer and inhaler, the open-topped chamber G, with one or more apertures, *g*, the vessel B, plug C, pipe D, with its nozzle D', connected by the hose E to the air-reservoir L, and inhaling-pipe I, with its connected hose J', in combination with each other and with the provisions, as the screw-threads *d' g'*, for connecting and disconnecting the chamber G and the nozzle D' at will, to adapt the apparatus for different uses, substantially as herein specified.

3. In an atomizer and inhaler, the annular trap M, with its channeling-plug *m*, arranged, as shown, between two lengths of hose, J' J², in combination therewith and with the tip K, pipe I, plug C, and globe or vessel B, and with the air-reservoir L, cock L', hose E, pipe D, and nozzle D', for atomizing a liquid within the vessel B, all adapted to serve substantially as herein specified.

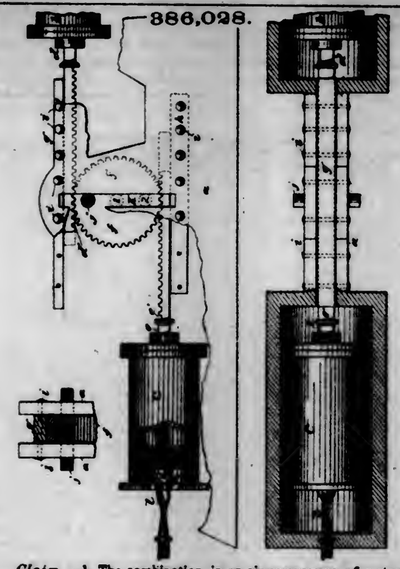


386,026. ROTARY-POWER. MARK B. PATTERSON, Queen City, Mo. Filed Apr. 18, 1888. Serial No. 271,022. (No model.)

Claim.—1. The combination, with the ordinary gearing, axle, and driving-wheels of a mowing-machine, of a lever secured to one of the driving-wheels of the mower, a rod having suitable connection with the gearing of the mower, and a line-shaft provided with a pulley having suitable connection with the rod, substantially as and for the purpose herein set forth.

2. The combination, with the ordinary gear, axle, and driving-wheels of a mower, and a platform on which it is supported on its side, of a collar surrounding the upper end of the axle-shell, and braces extending downwardly therefrom, connected by tightening-bolts with said platform, a lever to which a horse may be attached secured to the upper wheel, and suitable devices for conveying power to the machinery to be driven having gear-connection with the gearing of the mower, substantially as and for the purpose herein set forth.

386,027. MECHANICAL MOVEMENT. WILLIAM A. PITT, Glastonbury, Conn. Filed July 30, 1886. Serial No. 208,889. (No model.)



Claim.—1. In a mechanical movement, revolving cranks and fly-wheels having connecting-rods, each provided with disk-shaped ends fitted into recesses in said fly-wheels, in combination with intermediate fly-wheels, and a rod having a disk-shaped end seated in the opposite faces of said wheels, as and for the purpose set forth.

2. In a mechanical movement, the combination of the shafts *b* and *b'*, fly-wheels *c d*, each provided with a recess, rods *g g*, having disk-shaped ends fitted in said recesses, bolts *e*, nuts *e'*, and fly-wheels A A, with rod *k*, having disk-shaped ends *j*, all arranged and operating as set forth.

386,028. AIR-COMPRESSOR. WILLIAM A. PITT, Glastonbury, Conn. Filed June 30, 1887. Serial No. 243,043. (No model.)

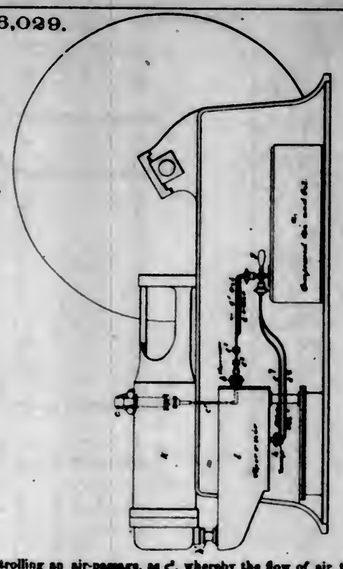
386,028.

Claim.—1. The combination, in an air-compressor, of a steam-cylinder and air-cylinder with their piston-rods, each provided with a rack end, and a gear-wheel having a movable axis arranged to engage with said racks, substantially as set forth.

2. The combination, with the steam-cylinder, air-cylinder, and their piston-rods, each having a rack end, of a spur-wheel mounted on an axis located near the periphery of the wheel and arranged, substantially as described, to have a vertical movement in the frame of the engine during the revolution of the wheel, whereby it becomes a changeable fulcrum from the beginning to the finish of the stroke of the steam-piston, as set forth.

3. In combination, the steam-cylinder *b*, air-cylinder *c*, having an open end, nozzle *l*, piston-rods *d e*, with racks *d'* and *e'*, toothed wheel *f*, shaft *j*, and frame *a*, with slot *k*, as set forth.

4. The combination of the frame *a*, having guideways *g* and *h*, piston-rods *d* and *e*, racks *d'* and *e'*, spur-wheel *f*, adapted to engage said racks, and shaft *j*, arranged to move in a vertical slot in the frame *a*, as set forth.



386,029. MOTOR-ENGINE OPERATED BY THE COMBUSTION OF LIQUID HYDROCARBON. WILLIAM D. PRIESTMAN and SAMUEL PRIESTMAN, Holderness Foundry, Hull, County of York, England. Filed July 20, 1887. Serial No. 244,902. (No model.) Patented in England Dec. 21, 1886, No. 16,779; in Germany June 8, 1887, No. 42,273; in France June 28, 1887, No. 184,426; in Belgium June 28, 1887, No. 67,233; in Norway July 2, 1887, No. 995; in Italy July 7, 1887, XLIV, 421, and May 28, 1888, XLV, 270; in Cape Colony July 13, 1887, No. 401; in Victoria July 18, 1887, No. 5,186; in Queensland July 23, 1887, No. 906; in New Zealand July 27, 1887, No. 2,449; in South Australia July 29, 1887, No. 845; in New South Wales Aug. 2, 1887, No. 37; in India Aug. 15, 1887, No. 1,073; in Spain Aug. 24, 1887, No. 7,127; in Brazil Aug. 30, 1887, No. 504; in Tasmania Sept. 22, 1887, No. 488/9; in Austria-Hungary Dec. 3, 1887, No. 34,061 and No. 56,741; in Argentine Republic Jan. 4, 1888, No. 694, and in Portugal Mar. 8, 1888, No. 1,228.

Claim.—1. A motor-engine operated by the combustion of hydrocarbon vapor, having valves, as *d* and d^6, controlling proportionately the supply of air and liquid hydrocarbon, a heater that heats the vapor, and a three-way valve, as *g*, which controls the supply of air and liquid hydrocarbon from the petroleum-reservoir, all arranged to operate substantially as described.

2. In a hydrocarbon-engine, the combination, with the vapor chamber, as *l*, the petroleum-reservoir, as *a*, a vapor-burner, as *h*, for heating the vapor in chamber *l*, and a mixer, as *b*, for preparing the vapor, of pipes, as *e* and *e'*, which supply air and liquid hydrocarbon to the mixer *b* from the reservoir *a*, pipes, as d^2 and e^2, which supply air and liquid hydrocarbon to the vapor-burner *h* from said reservoir, and a three-way cock, as *g*, controlling the passage of air and liquid hydrocarbon through said pipes, substantially as set forth.

3. In a hydrocarbon-engine, the combination, with a valve, as *d*, controlling an air-passage, as *e*, and a hydrocarbon-passage, as *e'*, of a valve, as d^3, connected with valve *d* and moving therewith, said valve

386,029.

d^3 controlling an air-passage, as e^3, whereby the flow of air through passage e^3 is regulated proportionately to the flow of air and liquid through passages *e* and *e'*, substantially as set forth.

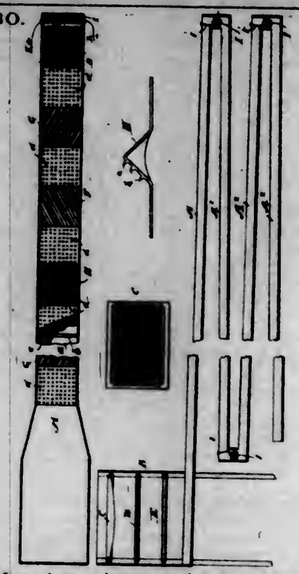
4. In a valve mechanism for regulating the supply of air and liquid hydrocarbon to a hydrocarbon-vapor engine, the combination, with the two passages, as *e* and *e'*, for the aeriform fluid and liquid hydrocarbon, respectively, and each provided with a straining-chamber, as e^5, of the valve, as *d*, controlling said passages, substantially as set forth.

5. In a hydrocarbon-engine, the construction of vaporizer for mixing a liquid hydrocarbon with a gas capable of supporting combustion, and comprising two nozzle-tubes, one arranged within the other, the outer one being formed, as set forth, to cause the fluid conveyed thereby to be deflected inward against the stream of fluid issuing from the inner nozzle-tube and to measurably retard or obstruct the same, substantially as and for the purpose set forth.

6. In a hydrocarbon-engine, the combination, with the vessel for the liquid hydrocarbon, the heating-lamp, as *h*, and a vaporizer, as *b*, of the pipes for conveying air and liquid hydrocarbon to said lamp and vaporizer, and a three-way valve controlling said pipes, whereby the air and liquid hydrocarbon may be supplied to either the lamp or vaporizer at will, or be cut off from both, as set forth.

7. In combination with a vapor-chamber, such as *l*, to which a supplementary air-supply is admitted, the annular passage c^3, and perforated baffle-plate c^4, surrounding the vapor-inlet and serving to equally distribute the additional air among the vapor in the preparation of the working-charge.

8. In a valve mechanism for regulating the supply of air and hydrocarbon to a hydrocarbureted-air engine, the combination, with the two passages, as *e* and *e'*, for the air and hydrocarbon, respectively, of a valve, as *d*, provided with passages, whereof the extremities are formed with enlargements which vanish in a circumferential direction, substantially as and for the purposes set forth.



386,030. SLUICE-BOX. JULIO H. RAE, Boston, Mass. Filed Apr 3, 1888. Serial No. 267,704. (No model.)

Claim.—1. The riffle H, raised in the center and provided with projections *h* on one side of said raised center, in combination with a sluice-box, substantially as shown, and for the purposes described.

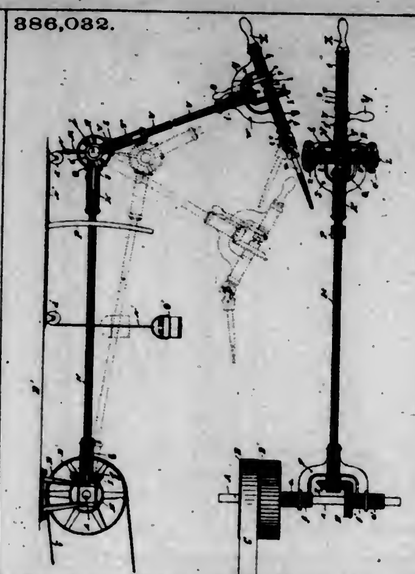
2. In combination, a sluice-box, a wheel, I, having buckets *i*, and bar J, having fingers *j*, and means for transmitting an electrical current

386,030.

to the water from a battery, dynamo, or other electrical source, substantially as and for the purposes described.

386,031. APPARATUS EMPLOYED IN SYSTEMS OF INDIRECT RADIATION. ABRAHAM RAMEIS, Pittsburg, Pa., assignor of one-half to Henry F. Dingee, same place. Filed Feb. 18, 1888. Serial No. 264,353. (Model.)

Claim.—In a casing for radiators, the combination, with the walls thereof having flanged edges and the flanged cleats applied thereto and interlocking with the flanged edges of the walls, of the corner-caps consisting of the three-sided box H, having the notched tongue *h* fitting under or interlocking with the flanges of the bottom wall or plate of the casing, substantially as described.



386,032. STAY-BOLT-HOLE DRILLING AND TAPPING MACHINE. THOMAS REESE, Jr., Erie, Pa. Filed May 2, 1888. Serial No. 272,613. (No model.)

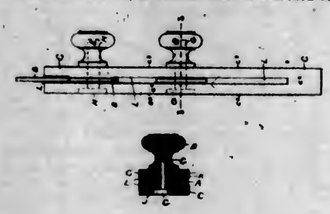
Claim.—1. The combination, in a stay-bolt-hole drilling and tapping machine, of a shaft, H, swinging radially from and driven by a stationary shaft, and counterbalancing pulleys and weights for supporting the free end of said shaft, with a transverse shaft, L, journaled in a yoke, J, mounted on and adapted to be rotated around the free end of said swinging shaft H, a second swinging shaft, U, mounted in a yoke, S, swinging on said transverse shaft and gearing operatively connecting said shafts H L U together, whereby said second swinging shaft can be rotated radially around the first swinging shaft and also swung to and fro, as required, substantially as and for the purpose set forth.

2. The combination, in a stay-bolt-hole drilling and tapping machine, of a shaft swung from a counterbalanced overhead support, with a yoke mounted on the lower end of said swinging shaft and adapted to rotate about the axis of said shaft, and a cross-shaft mounted in bearings on said yoke, substantially as and for the purpose set forth.

3. The combination, in a stay-bolt-hole drilling and tapping machine, of a shaft, H, journaled in a yoke swinging radially upon a stationary driving-shaft and driven by miter or bevel gears on said shafts, and counterbalance-weights adapted to support the free end of said swinging shaft H and the mechanism connected therewith, with a transverse shaft, L, journaled in a yoke mounted on the free end of said

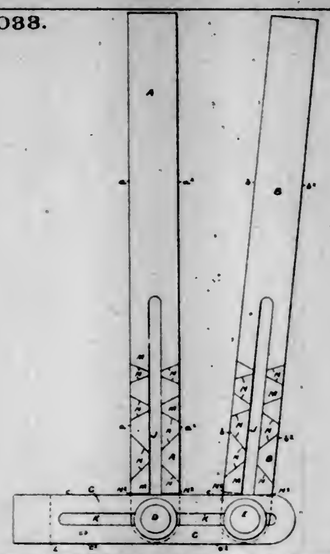
386,032.

swinging shaft and supporting a second yoke, S, having a shaft, U, journaled therein and swinging radially thereon, bevel or miter gears connecting said swinging and cross shafts, and a yoke, W, mounted on the free end of said second swinging shaft having a shaft, A, mounted therein transversely to said swinging shaft U, and bevel or miter gears connecting the same to said second swinging shaft, substantially as and for the purpose set forth.



4. The combination, in a stay-bolt-hole drilling and tapping machine, of a shaft, H, swinging radially from a stationary driving-shaft, A, and counterbalance mechanism N N^9 d d' O, with a yoke, J, mounted on the free end of the shaft H, a transverse shaft, L, mounted in said yoke, a yoke, S, mounted on the shaft L, a shaft, U, journaled in said yoke S radially to the shaft L, and gears Q R V, substantially as and for the purpose set forth.

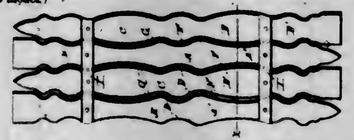
5. The combination, in a stay-bolt-hole drilling and tapping machine, of a shaft, U, swung in a yoke, S, radially to a shaft, L, mounted in a yoke, J, transversely to a swinging shaft, H, with a yoke, W, mounted on the free end of the shaft U, a cross-shaft, A, loose gear-wheel *k*, and clutch mechanism *i* O, and gear *j*, intermeshing with the gear *k*, substantially as and for the purpose set forth.



6. The combination, in a stay-bolt-hole drilling and tapping machine, of a yoke, W, mounted on and adapted to rotate about the free end of a swinging shaft, U, a transverse shaft, A, mounted in said yoke W, a gear-wheel, *k*, on said shaft A, adapted to intermesh with and be driven by a gear, *j*, on the shaft U, clutch mechanism *i* O for engaging the wheel *k* with shaft A, and a knuckle-joint, *t r*, on the end of the shaft A, substantially as and for the purpose set forth.

386,033. TRY-SQUARE AND BEVEL. CHARLES W. REEVES, Boston, Mass., assignor to Joseph Jacobs, same place. Filed Oct. 3, 1887. Serial No. 251,373. (No model.)

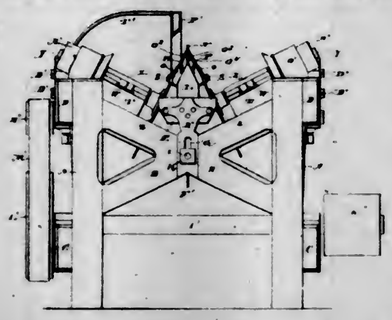
Claim.—A try-square and bevel composed of a crom-head, C, having opposite parallel straight edges, c c^2, and along its length slots K L, through its thickness and across its width, and of steel blades A B, each having opposite parallel straight edges, a a^2 b b^2, guide-setting lines N N^2 across their faces M, and a slot, J, and each entered into the slot L of crom-head C, in combination with headed screw-bolts

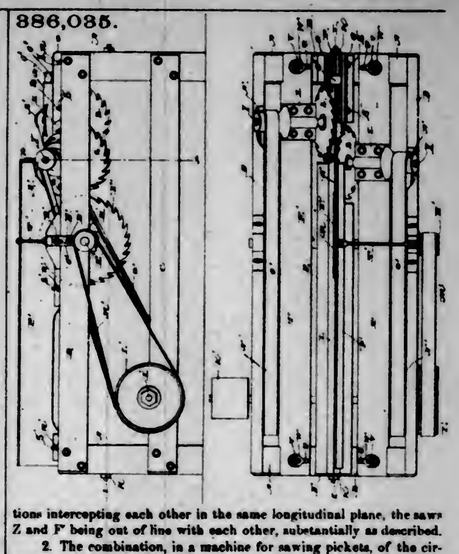


386,033.

G H and screw-nuts D E, fastening blades and cross-head together, as described, for the purposes specified.

386,034. PATTERN FOR PICKETS AND BALUSTERS. SAMUEL D. RIDDEL, Thomasville, Ga. Filed Oct. 1, 1887. Serial No. 251,205. (No model.)





Claim.—1. The pattern comprising the forms A' D', arranged side by side, secured together, and having their edges formed by sinuous lines, the opposing curved edges of the forms being concentric and at a slight distance apart, and thereby forming sinuous kerfs or channels F between the said forms, as set forth.

2. The pattern comprising the forms A' D', arranged side by side and having their edges formed by sinuous lines, the opposing edges of the forms being concentric and at a slight distance apart, and thereby forming kerfs or channels F' between the said forms, and the cross-bars connecting said forms together and bridging the kerfs or channels, substantially as described.

386,035. MACHINE FOR SAWING FENCE-PICKETS. SAMUEL D. RIDDEL, Thomasville, Ga. Filed Oct. 12, 1887. Serial No. 252,167. (No model.)

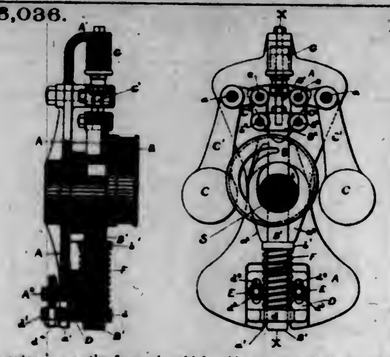
Claim.—1. In a machine for sawing pickets, the combination of the saw F', and the saws Z on opposite sides of the saw F' and vertically inclined in opposite directions, and all having their cutting portions intercepting each other in the same longitudinal plane, the saws Z and F' being out of line with each other, substantially as described.

2. The combination, in a machine for sawing pickets, of the circular saw F', the guide-rail L, vertically adjustable with relation to the said saw and having the opening in its center through which the said saw extends, and the circular saws Z, arranged on opposite sides of the said guide-rail and inclined in opposite directions, the upper edges of the said saws Z extending over the upper edge of the guide-rail, said saws Z being further journaled in bearings which are adjustable toward and from the guide-rail, substantially as described.

3. The combination, in a machine for sawing pickets, of the guide-rail, a circular saw, F', having its upper edge extending through a central opening in the guide-rail, the flange-plate N, projecting from the upper edge of the guide-rail and extending longitudinally thereon in rear of and in line with the saw F', and the inclined circular saw Z, arranged on opposite sides of the guide-rail, and having their upper edges extending in notches or recesses in the upper edge of the flange-plate, substantially as described.

4. The combination, in a machine for sawing pickets, of the circular saw F', the flange-plate N, arranged longitudinally in line with the said saw in rear thereof, the oppositely-inclined circular saws Z on opposite sides of the saw F' and out of line therewith and with each other, and the guides O in rear of the saws Z, substantially as described.

5. The combination, in a machine for sawing pickets, of the guide-rail L, the circular saw F', having its upper edge extending through an opening in the said guide-rail, the bars T, having the transverse slots U at their ends, the inclined bars B, on which the ends of the said bars T are supported, the clamping-bolts extending through the slots U and securing the bars T to the bars B at any desired lateral adjustment toward or from the guide-rail, and the oppositely-inclined circular saws Z, having their arbors journaled in bearings on the bars T, substantially as described.



6. The combination, in a machine for sawing pickets, of the guide-rail E, a circular saw, F', having its upper edge extending through a central opening in the guide-rail and projecting above the same, the inclined circular saws Z on opposite sides of the guide-rail, and the guide-board P', arranged on one side of the guide-rail, substantially as described.

7. In a machine for sawing pickets, the combination of the saw F', for cutting the longitudinal kerf in the board, with the vertically-inclined saws Z, arranged on opposite sides and in rear of the saws F', said saws Z cutting inclined kerfs in the board, the cutting portions of the saws F' Z intercepting each other in the same longitudinal plane, substantially as described.

386,036. STEAM-ENGINE GOVERNOR. FREDERICK A. SCHEFFLER, Erie, Pa., and THEODORE SCHEFFLER, Paterson, N. J., assignors to the Erie City Iron Works, Erie, Pa. Filed Dec. 21, 1887. Serial No. 258,634. (No model.)

Claim.—1. In a steam-engine governor of the class herein named, the combination of the eccentric B, having an elongated shaft-opening, *b*, and a stem, B', extending therefrom in a plane passing through the greatest diameter of said opening *b*, the spring F, coiled on said stem and seated at one end on a collar on said stem and at the other

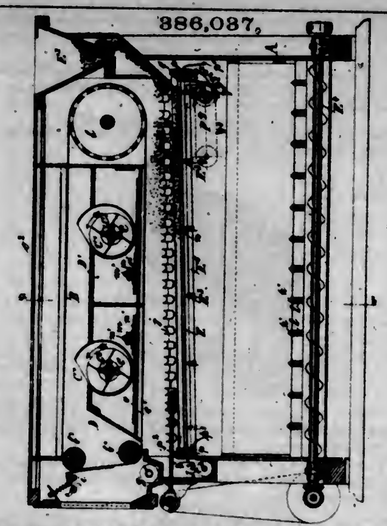
386,036.

on an extension on the frame, in which said stem is guided, the bell-crank weight-lever C', weights C on the long arms of said levers, and links C^2, connecting the short arms of said levers with the said eccentric on the opposite side from said stem.

2. In a steam-engine governor of the class herein named, the combination of the eccentric B, having an elongated shaft-opening, *b*, and a stem, B', extending therefrom in a plane passing through the greatest diameter of the said shaft-opening, the spring F, coiled on said stem and seated at one end on a collar on said stem and at the other on an adjustable seat, *d*, in which said stem is guided, the bell-crank weight-levers C', weights C on the long arm of said levers, and links C^2, connecting the short arms of said levers with the said eccentric on the opposite side from said stem.

3. In a steam-engine governor of the class herein named, the combination of the eccentric B, having an elongated shaft-opening, *b*, and a stem, B', extending therefrom in a plane which passes through the greatest diameter of said shaft-opening, the spring F, coiled on said stem and having a seat at one end on said stem and at the other end on the extension *d*, in which said stem is guided, one of which seats is adjustable, a cross-arm, B^2, extending from said eccentric on the side thereof opposite the said stem, links C^2, pivoted to said cross-arm and to the short arms of the weight-levers C', the said weight-levers C', and the weights C on said levers.

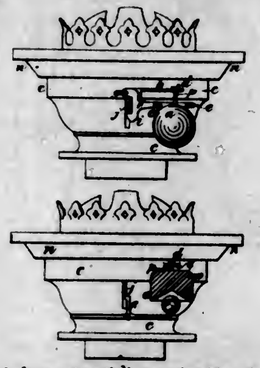
4. In a steam-engine governor of the class herein named, the combination, substantially as set forth, of the eccentric B, having an elongated shaft-opening, *b*, a stem, B', and cross-arm B^2, extending therefrom in opposite directions and in a line passing through the greatest diameter of said shaft-opening, a dash-pot piston-stem extending from said cross-arm B^2 in the said diametrical line, a dash-pot attached to the frame A to receive said piston-stem, an extension, *d*, connected with the frame of the governor, which receives and guides said stem B', a collar, *b'*, on said stem, a coiled spring on said stem B' between said collar and said extension *d*, weights C, bell-crank weight-levers C', and links C^2, connecting the short arms of said levers with said cross-arm B^2.



5. In a steam-engine governor of the class herein named, the combination, with an eccentric adapted, substantially as shown, to be shifted diametrically on the engine-shaft, of centrifugal weights for moving said eccentric, which are on the long arms of bell-crank levers, which have their short arms connected with the eccentric by links of such length, as shown, that said weights are held beyond their line of gravity when they are in their normal position, as set forth.

386,037. DUST-COLLECTOR. HERMANN SAXE, Dresden, Saxony, Germany, assignor of one-half to Henry Simon, Manchester, England. Filed May 22, 1886. Serial No. 203,067. (No model.)

Claim.—1. In a machine for separating light and heavy substances, the combination of an endless traveling filtering-cloth, a partition dividing the space inclosed by the cloth into separate compartments, and a fan located within said space and communicating with one of said compartments through its inlet and with the other compartment through its outlet, whereby air is sucked in through the cloth into one compartment and blown out through the cloth in the other compartment, substantially as described.



2. In a machine for separating light and heavy substances, the combination of an endless traveling filtering-cloth, a box or partition located in the space inclosed by said cloth, whereby one portion of the cloth-surface is exposed to the influence of a suction-blast and another portion is cut off from the influence of the suction-blast, but exposed to the action of a forcing-blast, a fan located within the space inclosed by said cloth to draw air through one portion of the filtering-cloth and force it through another portion, and a beater, located in contact with that portion of the cloth cut off from the influence of the

386,037.

suction-blast, but under the influence of the forcing-blast, substantially as described.

386,038. EXTINGUISHER MECHANISM FOR LAMPS. WILLIAM SHELMERDINE, North Dulwich, County of Surrey, assignor to James Hinks & Son, (Limited,) Birmingham, England. Filed Apr. 13, 1887. Serial No. 234,650. (No model.) Patented in England Mar. 5, 1887, No. 3,414; in Belgium Apr. 5, 1887, No. 77,005, and in France Apr. 7, 1887, No. 182,718.

Claim.—1. In an automatic lamp-extinguisher, the combination, with an extinguisher-lever and a spring for actuating it, of a pendent weight freely suspended from the outer side of the lamp and provided with a sloping surface, a two-armed catch-lever pivoted on the outer side of the lamp, one of the arms of said lever having a catch-tooth that normally holds the extinguisher-lever against the stress of its actuating-spring, the other arm of said lever having an abutment which, when the lamp is appreciably tilted, comes in forcible contact with the sloping part of the pendent weight to release the catch-tooth from the extinguisher-lever, and through the stress of its spring actuate the extinguisher to extinguish the lamp, substantially as set forth.

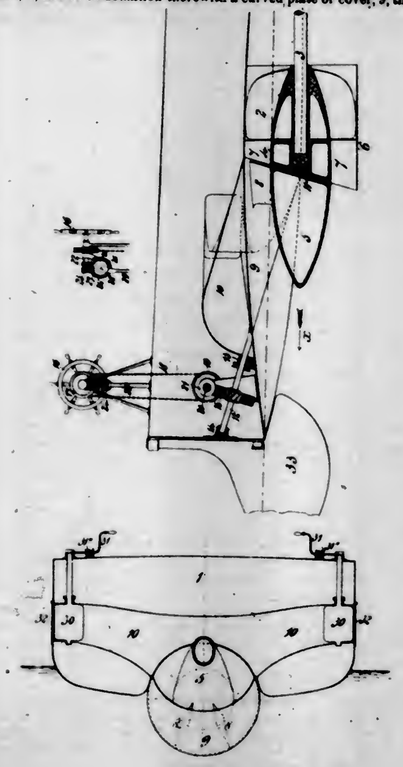
2. In an automatic lamp-extinguisher, the combination, with the shell *c*, the extinguisher-operating lever *j*, pivoted thereto, and the spring *l'*, of the pendent weight *a*, suspended from said shell, the double-armed catch-lever *f*, having a catch-tooth, *i*, on one arm and the ring *e* on the other arm, said parts being arranged for operation substantially as and for the purposes set forth.

386,039. COMPOSITION FOR ARTIFICIAL MARBLE. LEON VAN DEN STEEN, Laeken, Brussels, Belgium. Filed Sept. 16, 1887. Serial No. 249,833. (No specimens.) Patented in Belgium May 18, 1886; in Russia Oct. 11 and 23, 1886; in France Jan. 6, 1887; in Austria-Hungary Jan. 8, 1887, and in Italy Jan. 19, 1887.

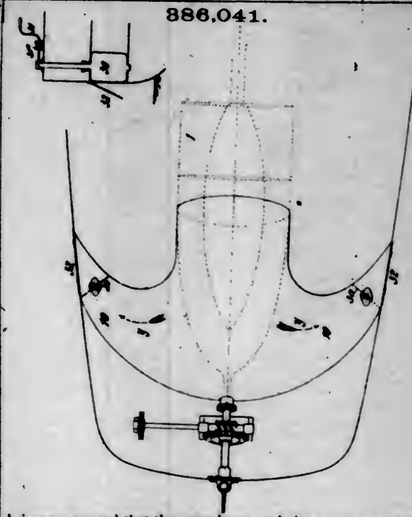
Claim.—1. A composition forming artificial marble, consisting of plaster-of-paris or gypsum and a liquid compound of glue, rosin, turpentine, and water, substantially as set forth.

2. A composition forming artificial marble, consisting of plaster-of-paris or gypsum, glue, rosin, turpentine, a coloring-matter, and water, substantially as described.

386,040. HOE. EDWIN H. SUBLETT, St. Louis, Mo. Filed Jan. 3, 1888. Serial No. 259,583. (No model.)



Claim.—1. As a new article of manufacture, a hoe having a shank provided with diagonal cross-cuts, substantially as and for the purpose set forth.



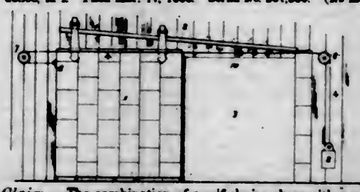
2. A hoe having a shank provided with diagonal cross-cuts and barbs projecting from the corners of the shank, substantially as and for the purpose set forth.

386,041. PROPELLING AND STEERING APPARATUS FOR SHIPS, &c. JOHN I. THORNYCROFT, Church Wharf, Chiswick, County of Middlesex, England. Filed May 27, 1886. Serial No. 203,396. (No model.) Patented in England Jan. 13, 1886, No. 578.

Claim.—1. Apparatus for propelling and steering a vessel, comprising a screw-propeller with a rearward body having a movable part, 5, and in combination therewith a curved plate or cover, 9, these

386,041.

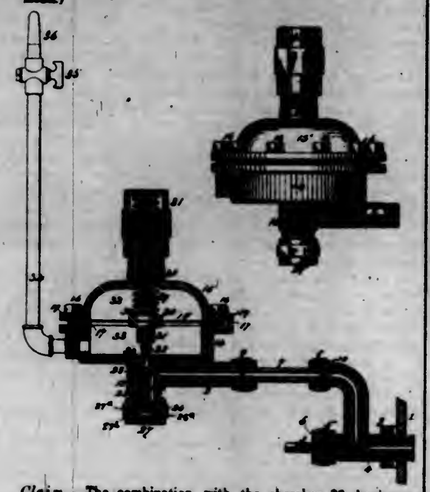
being so arranged that they may be rotated about a common axis to open or close, as required, communication with passages (or a passage with lateral branch) formed in or through the vessel to its respective sides, substantially as herein described, for the purposes specified.



2. Apparatus for propelling and steering a vessel, comprising a screw-propeller with tube 6, a rearward body having a fixed part, 4, and a movable part, 5, with pivot 11, a curved plate or cover, 9, and shaft 12, means for rotating said part 5 and curved plate or cover 9, and passages 10, (or a passage with lateral branches,) formed in or through said vessel to its respective sides, substantially as herein described, for the purposes specified.

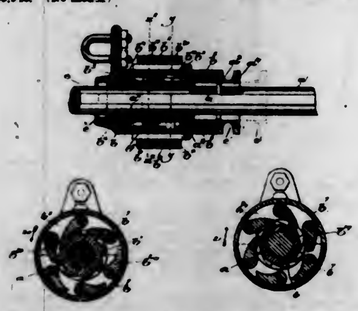
3. The combination, for propelling and steering a vessel, of a screw-propeller with tube 6, a rearward body having a fixed part, 4, and a movable part, 5, with pivot 11, a curved plate or cover, 9, with shaft 12, means for rotating said part 5 and curved plate or cover 9, passages (or a passage with lateral branches) formed in or through said vessel to its respective sides, and valves 30, all substantially as herein described, for the purposes specified.

4. In apparatus for propelling and steering a vessel, the combination, with the propeller, of a tube, 6, surrounding it, a rearward body having a fixed part, 4, and a movable part, 5, which, with a curved plate or cover, 9, is mounted to revolve upon the shaft 12, a hand-wheel, 16, mechanically connected with said shaft, an opening or space in the lower part of the hull of the vessel, adapted to be opened and closed by the said plate 9, and passages connecting with said space and formed in or through said vessel to its respective sides, substantially as described.



5. In apparatus for propelling and steering a vessel, the combination, with a propeller, of a tube surrounding it, a rearward body having a fixed portion, 4, and a movable part, 5, which, with a curved plate, 9, is mounted to revolve upon the shaft 12, a hand-wheel, 16, mechanically connected with said shaft to revolve the same, an opening or space in the lower part of the hull, adapted to be opened and closed by the said plate, passages connecting with said space and formed in or through the vessel to its respective sides, and valves 30, arranged in said passages to open and close the same, substantially as described.

386,042. SELF-CLOSING DOOR. MARSHALL TILLOTSON, Lawrence, Mass., assignor to the Providence Steam and Gas Pipe Company, Providence, R. I. Filed Mar. 17, 1888. Serial No. 267,586. (No model.)

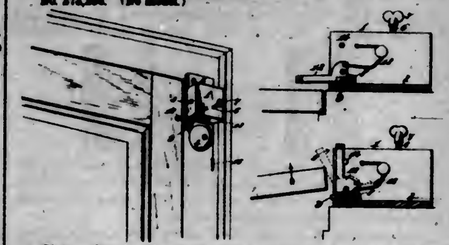


Claim.—The combination of a self-closing door with a counter-balancing-weight tending to hold the door open, a cord connecting the said weight and door and passing over a pulley and across the doorway, the said cord being joined opposite the doorway with a device capable of being severed by heat.

386,043. AUTOMATIC VALVE. DAVID J. TERLIN and GUSTO R. HENDERSON, Belleville, Ill. Filed Dec. 5, 1887. Serial No. 257,232. (No model.)

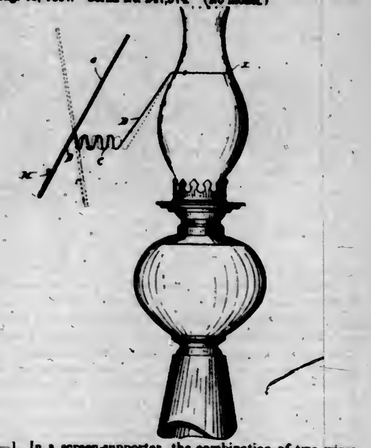
Claim.—The combination, with the chamber 33, having an eduction-port, the diaphragm 18, closing one side of said chamber, a screw-threaded socket on said diaphragm, the extension 13, having a chamber, 12, therein provided with an induction-port and with an eduction-port leading to the chamber 33, and the valve-seat 24, of a screw-threaded valve-stem screwed into said socket 21 and projecting into said chamber 12, a valve on said stem adapted to rest upon the seat 24, a guide-rod projecting from said valve, a removable socket, 26, in said chamber 12, for receiving the end of said guide-rod, a flange, 26', on said socket, packing arranged above and below said flange, and a cap screwed upon the end of the extension 13 over said packing, as shown, and for the purposes set forth.

386,044. REVERSIBLE RATCHET-CLUTCH MECHANISM. WILLIAM B. TURNER, New York, N. Y., assignor to the Turner-Beard Automatic Brake Company, same place. Filed Feb. 14, 1888. Serial No. 263,946. (No model.)



Claim.—1. In a reversible ratchet-clutch mechanism, a shaft, a shell, and a sleeve on the said shaft, combined with two sets of oppositely-inclined teeth and with pawls or latches to co-operate with the said teeth, substantially as described.

2. In a reversible ratchet-clutch mechanism, a shaft, a shell, and a sleeve on the said shaft, combined with two sets of oppositely-inclined teeth and with gravity pawls or latches to co-operate with the said teeth, substantially as described.

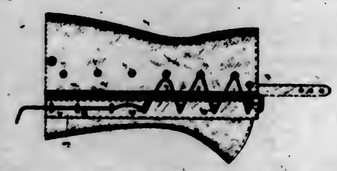


3. In a reversible ratchet-clutch mechanism, a shaft and a sleeve provided with oppositely-inclined teeth, as *b b'*, combined with a shell and a series of pawls pivoted to said shell to co-operate with the said inclined teeth, substantially as described.

386,045. BURGLAR-ALARM. RICHARD H. UEBERROTH, Toledo, Ohio, assignor to Lorey Coats, Chicago, Ill. Filed May 1, 1888. Serial No. 272,204. (No model.)

Claim.—In a burglar-alarm, the combination of a casing having a slot, a vibratory gong-hammer projecting through said slot, a gong to be struck by the hammer, and a swinging locking-plate pivoted outside the casing adjacent to the slot therein to partially cover said slot and hold the hammer from vibration while said locking-plate is turned to project into the path of an opening door or window, substantially as described.

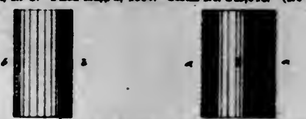
386,046. LAMP-SHADE. GENEVIEVE WATSON, Seattle, Wash. Filed Aug. 19, 1887. Serial No. 247,374. (No model.)



Claim.—1. In a screen-supporter, the combination of two wires united at their mid-length, having a screen-rest at one extremity and an adjustable loop at the other, formed by the wires adjustably secured one to the other, as set forth.

2. In a screen-supporter, the combination, with a screen-rest, of the wires A B, having their ends looped around each other, for the purpose described.

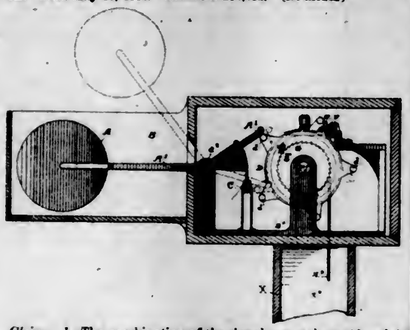
3. In a screen-supporter, the combination, with the loop and the rest, of an integral wire connecting said loop and rest, and said wire being bent in a zigzag shape, as shown, whereby the distance between the loop and rest may be varied, substantially as set forth.



386,047. LEGGIN. WILLIAM H. WILEY, Hartford, Conn. Filed Feb. 27, 1888. Serial No. 265,473. (No model.)

Claim.—As an improved article of manufacture, the leggin consisting of the body having front and rear flaps, the front one of which is provided with a pocket, lacing-studs attached to the outside of the rear flap, a metallic stiffening-strip inclosed within said pocket, inward-projecting eyes attached to the under side of said strip, and the lacing-cord permanently strung through said eyes and adapted to engage the

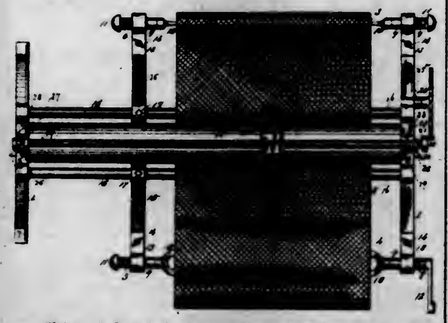
said studs when the flaps are made to overlap one another, substantially as set forth.



386,048. PACKING FOR CONDENSER-TUBES. WILLIAM H. VOSE, New York, N. Y. Filed Aug. 2, 1887. Serial No. 245,918. (No model.)

Claim.—1. A packing for the tubes of surface-condensers, consisting of a cylindrical tube composed of spirally-wound cord or stay-lacing, the coils of said cord or stay-lacing being united edge to edge by an adhesive cement, substantially as described.

2. A packing for the tubes of surface-condensers, consisting of an interior re-enforcing shell composed of a woven fabric, and an exterior layer composed of a spirally-wound cord or stay-lacing, the coils of which are united to the shell and to each other by a cement, substantially as described.



386,049. RAILWAY-SIGNAL. GEORGE H. WEBSTER, San Francisco, Cal. Filed May 10, 1887. Serial No. 237,732. (No model.)

Claim.—1. The combination of the signal arm or lever A', weight C, disk or plate D, with pins *d*, to engage said lever, winding barrel and weight F H, connected to said plate, and a stop mechanism composed of a secondary disk, 8^x, with stop-pins *s s*, an electro-magnet in an electric circuit, and an armature-lever adapted to control said disk, constructed and applied for operation, substantially as set forth.

2. In an electric signal for railways, the combination of the weighted arm or lever A', carrying a signal, the revolving setting disk or plate D, with stops or pins *d d*, means, substantially as described, for moving said plate, a stop mechanism comprising a secondary disk having stop-pins adapted to control the movement of the plate, an electro-magnet in an electric circuit and controlling said stop mechanism, and a circuit-closer, W, located in position to be acted on by a moving train, substantially as set forth.

386,050. CLOTH-MEASURING MACHINE. CHARLES H. YOUNG, Leadville, Colo., assignor of one-half to Roderick F. McLeod and Byron H. Townsend, both of same place. Filed Aug. 18, 1887. Serial No. 247,295. (No model.)

Claim.—1. In a cloth-measurer, the combination of a supporting-frame, 1, the rods 16, secured to the frame, the bar 15, adjustable on the rods, the shafts 5 and 6, mounted on the bar, the shafts 7 and 8, mounted on one end of the frame, the spools or boards supported on the shafts, a friction-roller, 18, journaled on the frame between the rods, having a crank, 22, on one end, provided with a pin, 23, a stud, 25^a, on the frame, and a graduated disk, 25, mounted on the stud, having cogs 24, engaged by the pin, substantially as described.

2. In a cloth-measurer, the combination of a supporting-frame, 1, the rods 16, secured to the frame, the bar 15, adjustable on the rods, the shafts 5 and 6, mounted on the bar, the shafts 7 and 8, mounted on one end of the frame, the spools or boards supported on the shafts, the standards 19, supported on the frame, having slots 20 and catches 26, and the friction-roller 18, between the rods, having journals 21, occupying the slots, substantially as described.

3. In a cloth-measurer, the combination of the supporting-frame 1, the rods 16, secured to the frame, the bar 15, adjustable on the rods, the shafts 5 and 6, mounted on the bar, the shafts 7 and 8, mounted on one end of the frame, the spools or boards supported on the shafts, the standards 19, supported on the frame, having slots 20 and catches 26, the friction-roller 18 between the rods, having journals 21, occupying the slots, a crank, 22, on one of the journals, provided with a pin, 23, a stud, 25^a, on the frame, and a graduated disk, 25, mounted on the stud, having cogs 24, engaged by the pin, substantially as described.

4. In a cloth-measurer, the combination, with a supporting-frame, of the bar, the shafts mounted on the frame and on the bar, the boards or spools supported on the shafts, standards on the frame, having slots, the shaft or rod occupying the slots, and the tape spool and guide mounted on the shaft or rod, substantially as described.

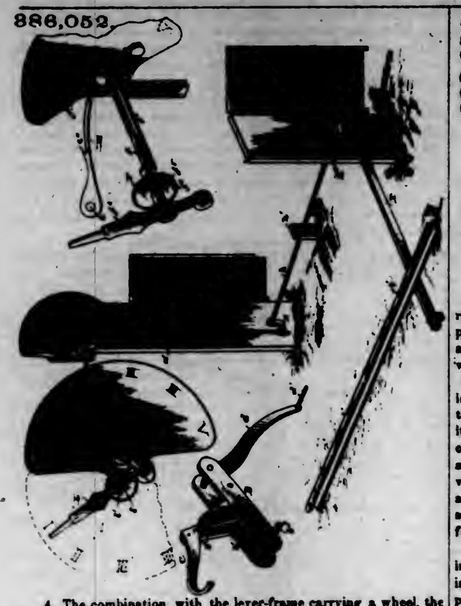
5. In a cloth-measurer, the combination, with a supporting-frame, of the shafts 5 6 7 8, spools or boards 3 4, standards 19, shaft or rod 27, spool 30, having graduated partly-separated tape 31, and the guide 33, by which the spool and tape are held in place, substantially as described.

6. In a cloth-measurer, the combination of the frame 1, shafts 5, 6, 7, and 8, boards 3 4, handle 12, rods 16, bar 15, clamps 13, friction-roller 18, crank 22, pin 23, disk 25, spool 30, and guide 33, substantially as described.

7. In a cloth-measurer, the combination of the frame 1, boards 3 4, shafts 5, 6, 7, and 8, handle 12, clamps 13, adjustable bar 15, friction-roller 18, crank 22, pin 23, disk 25, spool 30, measuring-tape 31, and guide 33, substantially as described, and for the purpose set forth.

386,051. LEATHER COIL FOR WASHERS. GEORGE H. AVERY, Easthampton, Mass. Filed Sept. 19, 1887. Serial No. 250,033. (No model.)

Claim.—The leather-washer coil or sleeve herein described, formed from a strip of leather of trapezoidal form in cross-section, substantially as set forth.

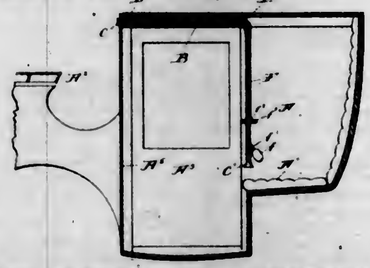


386,052. RAILWAY TIME-SIGNAL. CHARLES BARRY, Corning, N. Y., assignor of fifty-one one-hundredths to Austin Lathrop and George J. McGee, same place. Filed Feb. 1, 1888. Serial No. 262,637. (No model.)

Claim.—1. As an improvement in railroad-signals, the pivoted lever-frame carrying a wheel and having a curved or hooked arm, the index-shaft, the wheel secured thereon, the spring encompassing said shaft, and the vertical rod engaging said curved or hooked arm, substantially as shown and described.

2. The pivoted lever-frame having the curved arm *d*, provided with a projecting pin, in combination with the index-shaft wheel having a pin or stud and the spring-actuated arm, substantially as shown and described.

3. The combination, with the clock mechanism, of the lever-frame, the outer minute-wheel carried thereby, the index-shaft carrying the index-hands, the wheel having a segment of its teeth removed, the curved arm *d*, the spring-actuated arm, and the coil-spring connected to said lever-frame, substantially as shown and described.

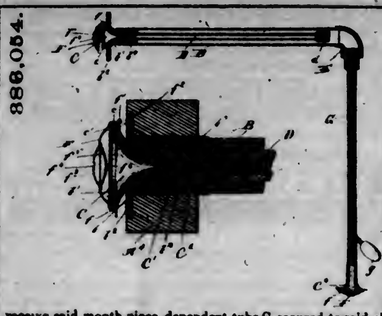


386,052.

4. The combination, with the lever-frame carrying a wheel, the curved or hooked arm C, secured to said frame, and the index-shaft wheel, of the vertical rod having a circular groove and the track-lever having connection with said rod, substantially as shown and described.

5. The combination, with the clock mechanism and the index-hand together with its shaft and wheel, of the vertical rod having a grooved portion in contact with said lever-frame, the bell-crank levers, the rod or pipe, the spring connected to one of said bell-crank levers, and the lever extending under the track, substantially as shown and described.

386,053. CARRIAGE SPEAKING-TUBE. GEORGE A. BEACH, Chicago, Ill., assignor of one-half to James F. Sumes, same place. Filed Mar. 15, 1887. Serial No. 230,988. (No model.)



Claim.—The combination, with a rigid or non-folding closed carriage-body, of a telescoping or sliding speaking-tube, B D F, having mouth-pieces C C', the stationary tube or guide B, communicating with a hole or opening through the carriage-body, and the carriage-body being provided with a socket to receive and conceal said mouth-piece C, said tube D sliding or telescoping entirely within the carriage-body, substantially as specified.

386,054. CARRIAGE SPEAKING-TUBE. GEORGE A. BEACH, Chicago, Ill., assignor to himself and James F. Sumes, same place. Original application filed Mar. 15, 1887, Serial No. 230,988. Divided and this application filed Nov. 26, 1887. Serial No. 256,205. (No model.)

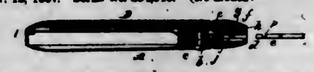
Claim.—1. The combination of a carriage-body, A, stationary tube B, having a thimble, *b'*, at its outer end, said tube B being secured at the top of the carriage under the upholstery and provided with an elbow, E, at its inner end, sliding tube D, provided with a mouth-piece, C, at its outer end, said carriage-body being provided with a socket to

386,054.

receive said mouth-piece, dependent tube C, secured to said elbow and provided with a mouth-piece, C^x, said mouth-piece being furnished with a hinged cap, F, provided with a double-disk whistle, one disk of said whistle being integral with said hinged cap, substantially as specified.

2. The combination of carriage-body A, stationary tube B, having thimble *b'* at its outer end, said tube B being secured at the top of the carriage under the upholstery and provided with an elbow, E, at its inner end, sliding tube D, provided with a mouth-piece, C, at its outer end, said carriage-body being provided with a socket to receive said mouth-piece, dependent tube G, secured to said elbow and provided with a mouth-piece, C^x, said mouth-piece being furnished with a hinged cap, F, provided with a double-disk whistle, and one disk of said whistle being integral with said hinged cap-disk, said tube G being furnished with flexible rubber bulb *g*, substantially as specified.

3. In a carriage speaking-tube, the combination, with a speaking-tube, of its mouth-piece or bell, a hinged perforated cap-disk having a flange fitting over the rim of said mouth-piece, and a second perforated disk inside said cap-disk and forming with said cap-disk a whistle, substantially as specified.



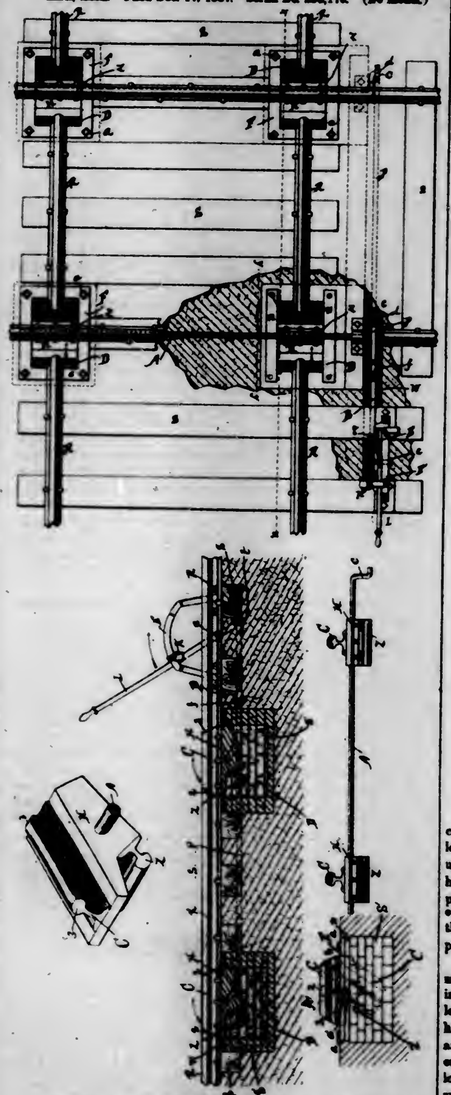
4. The combination, with a carriage and carriage speaking-tube, of a wire spring mouth-piece-holder clamp, H, having a pivot portion, *h'*, hinged to the carriage-frame, and arms A^2 A^3 and A^4 A^5 standing in planes about at right angles to each other and connected by spring-coils A^4 A^4, substantially as specified.

5. The combination, with a speaking-tube, of a wire spring-clamp, H, having hinge *h h'*, arms A^2 A^3, clamp-arms A^2 A^5, connected at an angle to said arms A^2 A^3 by spring-coils A^4 A^4, said clamp-arms A^5 A^5 having coiled or curved ends A^5 A^5, substantially as specified.

6. In a carriage speaking-tube, the combination, with a speaking-tube, of its mouth-piece or bell C, furnished with an inner sleeve, C', and an outer sleeve, C^2, said sleeves C' C^2 forming an annular chamber between them to fit and receive the end of the speaking-tube, substantially as specified.

7. In a carriage speaking-tube, the combination, with a speaking-tube, its mouth-piece or bell C, having a shoulder or rim, *c*, furnished with an inturned flange or rim, *c'*, and a hinged cover, F, having a flange, *f*, adapted to fit over said rim *c*, and provided with a central whistle-perforation, and a second perforated disk inside said cap-disk and forming with said cap-disk a whistle, substantially as specified.

386,055. COMBINATION POCKET-TOOL. WILLIAM R. BURRILL, Shelburne, Mass., assignor to George Thomas Drabble and Joseph Charles Perry, both of same place, and Edward Ritchie, Buckland, Mass. Filed Apr. 12, 1887. Serial No. 234,513. (No model.)



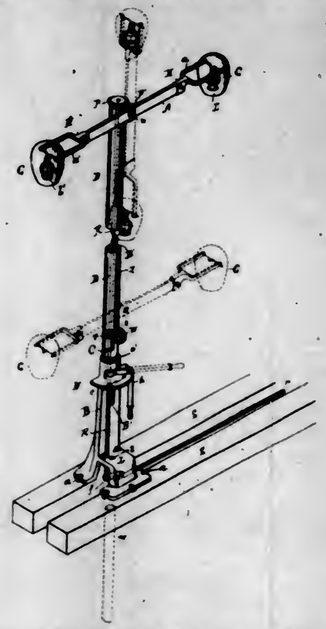
Claim.—1. A tool-handle consisting of a body portion provided with a socket for receiving a tool-shank and a cover pivoted to the upper surface of the body to turn in a plane parallel therewith and provided with a tongue or lug rigidly secured to its under surface and extending partially across the same for engaging a recess in a tool-shank and automatically locking the tool in position when the cover is turned parallel with the body, substantially as described.

2. A tool-handle consisting of a hollow body portion, A, having a socket, *d*, in one end for receiving a tool-shank, and with a grooved surface, *g*, and the cover D, pivoted to the upper surface of the body and provided with a tongue or lug on its under surface for engaging the tool-shank, and with a tongue, *h*, on the end for engaging the grooved surface *g*, substantially as herein shown and described.

3. As an improved article of manufacture, a tool-handle consisting of the body portion A, having the socket *d*, the groove *i*, the grooved surface *g*, and notch *k*, and the cover D, pivoted to the upper surface of the body portion and provided with the tongues *h j* and the nib *l*, as specified.

4. The handle B, consisting of the body portion A, having the socket *d* and groove *i*, and the pivoted cover D, having the tongue *j*, in combination with tools having transversely-grooved shanks, substantially as herein shown and described.

386,056. RAILWAY-CROSSING. EDWARD R. R. COWELL, Ypsilanti, Mich. Filed Dec. 17, 1887. Serial No. 258,176. (No model.)

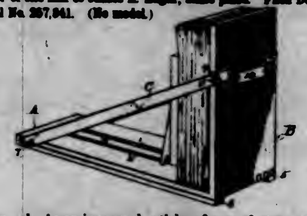


Claim.—1. In combination with the rails of a railway-crossing, the oscillating heads, each head having rail-sections mounted on opposite planes thereof and at an angle to each other, said oscillating heads being located in the four corners of the crossing on rock-shafts, each shaft having a crank at one end, a coupling-bar attached to said crank, said coupling-bar being attached to a suitable lever, whereby said oscillating heads may be simultaneously rotated, as and for the purposes set forth.

2. In combination with the rails of a railway-crossing, the pits formed in the four corners of said crossing, the oscillating heads located in said pits on the rock-shafts, said oscillating heads having rail-sections located thereon at right angles to each other, said rock-shafts coupled together and having a lever for moving simultaneously said oscillating heads, whereby the rail-sections mounted thereon are brought into position so as to register with the main rails of the crossing, substantially as set forth.

3. In a railway-crossing, the combination of the main rails, the pits located in the four corners of the crossing below the separated ends of the main rails, the oscillating heads mounted on the shafts A, said shafts journaled in the top plates, F n, of said pits, the rail-sections C Z, mounted on said oscillating heads, the cranks c, formed on the ends of the shafts A, the pitmen pivoted to said shaft, the bar B, pivoted to the pitman, the lever pivoted to said bar and to the upright frame E, and means for locking said lever to the upright frame, as and for the purposes specified.

386,057. SWITCH-SIGNAL. EDWARD R. R. COWELL, Ypsilanti, Mich. Filed Jan. 21, 1863. Serial No. 261,492. (No model.)



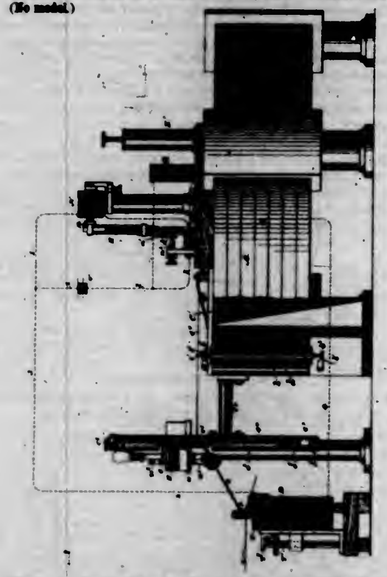
Claim.—1. In a signal device, the combination of the base, the column mounted thereon, having the longitudinal opening, the shaft located in said column, having on the lower end a crank and on its upper end a pinion, the toothed bar located in said column, having the horizontal arm, the pinion mounted on said arm, the supporting-arm pivoted on the sleeve of said pinion, the signal-lights mounted on the ends of said supporting-arm, the cog-wheel for raising and lowering the toothed bar, the lever A, and switch-operating rod n, as and for the purposes specified.

2. In a signal device, the combination of the base, the column mounted thereon, the longitudinal slot in said column, the shaft located in said column, the pinion mounted on the upper end of said shaft, the lever for rotating said shaft, the toothed bar located in said column, having the arm Y, the sleeved pinion mounted thereon, the supporting-arm pivoted on the sleeve of said pinion, signal-lights mounted on the ends of the supporting-arm, and the toothed wheel for raising and lowering said supporting-arm, substantially as and for the purposes specified.

3. In a device for the purposes specified, the combination of the base, the slotted column, the toothed bar located in said column, having the arm Y, the arm A, pivotally carried on said toothed bar and having on its ends the forked heads, the globes pivotally mounted on said forked heads at a point above the horizontal center of said globes, signal-lights supported within said globes, and the cog-wheel and crank for raising and lowering said signal-lights with the supporting-arm, as and for the purposes specified.

4. In combination with the base, the slotted column screw-threaded thereto, the toothed bar having the arm Y, the supporting-arm A, carried by the toothed bar, the globes and lanterns mounted on the ends of the supporting-arm, the cog-wheel and crank for operating the toothed bar, and the pipe m, located in the coil vertically below the toothed bar, so as to receive said toothed bar, as and for the purposes set forth.

386,058. FILE-BOX. HENRY A. GREER, Washington, D. C., assignor of one-half to James A. Edgar, same place. Filed Dec. 14, 1887. Serial No. 257,941. (No model.)



Claim.—1. As an improved article of manufacture, the file-box herein described, consisting of a bottom board, an end board, a sliding adjustable follower, and side pieces and handle formed from a single piece of metal, substantially as described.

2. The file-box herein described, consisting of an end board, the bottom board slotted longitudinally, a follower having a clamping-block rigidly secured thereto and extending below the lower end of the follower, and a loop fixed in the follower to surround the central piece of the bottom board between the slots therein, and a single strip of metal constituting the side pieces and handle of the box, substantially as described.

3. The combination, with a file-box having longitudinal slots in the bottom board and a central piece between said slots, of a T-shaped metal plate arranged with its stem on the face of said central piece and its head across the outer end of the bottom board, substantially as described and shown.

4. The improved file-box herein described, consisting of the bottom board, A, formed with a central piece having slots on each side thereof and strengthening-strips along the bottom sides, an end board, B, arranged as described, the metal strip constituting the side pieces and handle of the box, the T-shaped metal plate on the bottom of the box, and a sliding follower having a loop secured therein to slide on the central piece of the bottom board, all substantially as described.

386,059. TELEGRAPHIC RECORDING APPARATUS. CHARLES CUTTRISS, New York, N. Y. Filed Oct. 17, 1887. Serial No. 252,594. (No model.)

Claim.—1. In a siphon-recorder, a circular magnet having confronting poles, between which there is left a curved opening, one of said poles having a lateral opening, leaving a partially-detached portion, a coil of insulated wire supported upon an axis and turning in bearings, a block of magnetizable material carrying the same and fitting within said lateral opening, and a recording-stylus actuated by the movements of the coil.

2. In a telegraph-recorder, the combination of a movable coil or armature, an axis about which it turns, a recording-arm, a filament strained at an angle to the axis of support of the coil and tending to hold it in a given position, and a second filament secured to the recording arm, through which movements of the coil are communicated to the recording-arm.

3. In a telegraphic recorder, the combination of a movable coil or armature, an axis about which it turns, a recording-arm, a filament strained at an angle to the axis of support of the coil, but supported independently thereof, a connection between the coil and the filament, and connections between the coil and the recording-arm, substantially as described.

4. In a telegraphic recorder, the combination of a movable coil or armature, an axis about which it turns, a recording-arm, a filament strained at an angle to the axis of support of the coil and tending to hold it in a given position, said filament being supported independently of the coil, and a second filament secured to the recording-arm, through which movements of the coil are communicated to the recording-arm, substantially as described.

5. In a siphon-recorder, the combination, with the movable coil and the holder for the siphon, of the supporting-wire for the holder, a filament strained at an angle to the axis of support of the coil and tending to hold it in a given position, and a second filament secured to the holder, through which movements of the coil are communicated thereto.

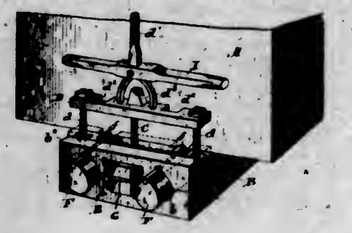
6. In a siphon-recorder, the reservoir, the adjustable shell for carrying the same, and the parallel links upon which the shell is supported.

7. In a siphon-recorder, the combination, with the siphon and the actuating-coil, of a flexible filament or thread having a yielding support at one end and connected at the other with the siphon, and a second filament crossing the former at an angle and attached thereto, and fixed at one end and having a yielding support for the other, and connected with the coil at or near the other end.

8. In a siphon-recorder, the combination, with the marking-point of the recorder and the armature attached thereto or carried thereby, of an electro-magnet having its pole beneath the marking-point and an adjustable polar face for the magnet, substantially as described.

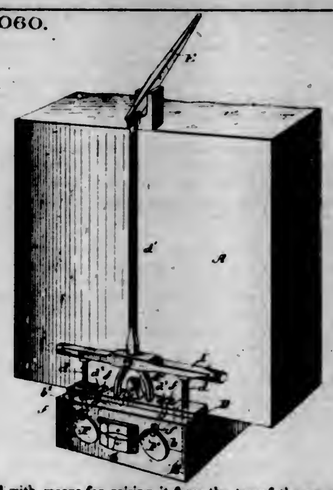
9. In a siphon-recorder, the combination, with the siphon and its armature, of an electro-magnet and means for rapidly changing the magnetization of the same, and an adjustable polar face for the magnet, whereby its plane may be changed with reference to the end of the marking-point, substantially as described.

10. In a siphon-recorder, an armature fixed to the siphon or its holder, in combination with an electro-magnet, said magnet having an adjustable polar face, an electric circuit including the magnet, a circuit-controller applied to said circuit for changing the magnetization of the magnet, and an adjusting device for the controller for adjusting the rate of change of magnetization to the natural rate of vibration of the siphon, substantially as described.



11. A rheotome consisting of a reservoir for holding mercury, a tube connected therewith, means for varying the height of the mercury in the tube, a circuit whose connections are controlled by the movement of the tube, and an electro-magnet connected in said circuit.

386,060. CAR-COUPLING. CYRENUS W. DUNBAUGH, Hutton, Kans., assignor of one-half to J. B. Gardner, same place. Filed Jan. 12, 1888. Serial No. 260,804. (No model.)



Claim.—1. A draw-head having in suitable socket spring-actuated bumpers at each side of the mouth provided with projections on their upper side, and a yoke carrying the coupling-pin adapted to hold up said pin when the car is to be shackled and to lock the yoke and to keep the pin down when the car is shackled, substantially as described.

2. In a draw-head, the combination of the spring-actuated bumpers with the yoke, coupling-pin, and lever, substantially as described.

3. The yoke D, having slots d^3 in each side at the rear and carrying the coupling-pin, combined with the bumpers having projec-

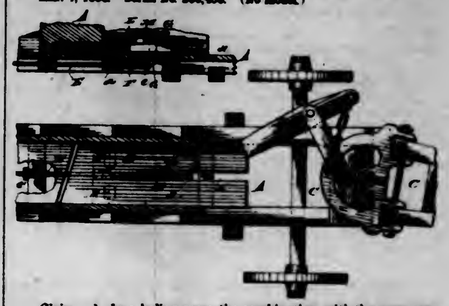
386,060.

tions and with means for raising it from the top of the car or from the ground.

4. The draw-head having slot *b'* and sockets *b* and upwardly-projecting front edge, b^2, the bumpers F, and having shoulders or projections, the springs f^3, the yoke D, slotted at d^3, and means, as described for raising the yoke.

386,061. DISINTEGRATOR AND STRAINER. WILSON P. DOBSON, Philadelphia, Pa., assignor of one-half to F. Howard Eldridge, same place. Filed Apr. 4, 1888. Serial No. 269,623. (No model.)

Claim.—1. In a disintegrator and strainer, the combination of a cup or receptacle having solid unperforated walls, and a perforated pressing-plate hinged to one side of the cup and adapted in its motion on its hinge to sweep three sides of the cup, substantially as specified.



2. In a disintegrator and strainer, the combination of a cup or receptacle having solid unperforated walls, a handle fixed thereto, and a handle pivoted to the receptacle and carrying a perforated pressing-plate adapted to be vibrated therein or entirely withdrawn therefrom, substantially as specified.

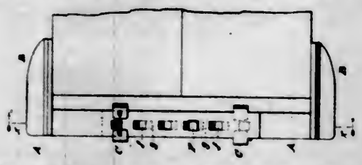
386,062. PROCESS OF DRAWING ON MARBLE. REUBEN DURRIN, Clay Centre, Kans., assignor to himself and Harvey Durrin, same place. Filed Apr. 15, 1887. Serial No. 234,913. (No specimens.)

Claim.—1. The herein-described process of drawing on marble, which consists, essentially, in applying a black substance—such as ivory-black or crayon-sauce—over that portion of the surface of a marble slab or sheet where the picture is to be drawn, preserving as much as possible the high lights, and then grinding or cutting away the same until the shadows have the depth, shape, and grade to represent the desired design, substantially as set forth.

2. The herein-described process of drawing on marble, which consists in soaking the thin sheet or slab of marble in water, then applying a black substance—such as crayon-sauce or ivory-black—upon the dressed surface where the picture is to be drawn, preserving as much as possible the high lights, and then grinding or cutting the same away with pumice or other suitable material or article until the shadows have the depth, shape, and grade to represent the desired design, substantially as set forth.

386,063. BALING-PRESS. GEORGE ESTEL, Quincy, Ill. Filed Mar. 7, 1888. Serial No. 266,402. (No model.)

Claim.—1. In a baling-press, the combination, with the press-case and a plunger fitted therein, of a spring supported near the plunger, and a removable key or stud fitted to the plunger and causing tension or compression of said spring as the plunger moves forward on its effective stroke, and against which key or stud the expansive force of the spring is exerted to assist the retraction of the plunger, and allowing the auxiliary plunger-retracting spring to be rendered inoperative by removing the plunger key or stud, substantially as herein set forth.



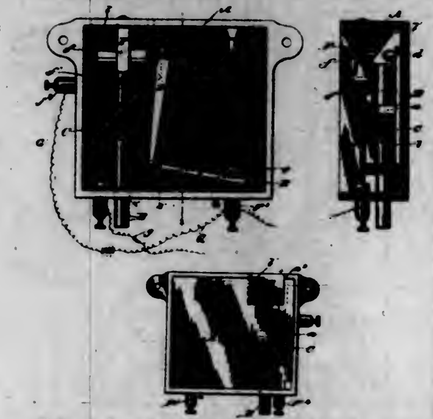
2. A baling-press constructed with a case, a plunger fitted therein, a spring supported near the plunger, a removable key or stud fitted to the plunger and causing a tension or compression of the spring as the plunger moves forward on its effective stroke, and against which key or stud the expansive force of the spring is exerted to assist the retraction of the plunger, and one or more anti-friction rollers supporting the plunger, substantially as shown and described, whereby when the plunger, key, or stud is removed and the auxiliary plunger-retracting spring is rendered inoperative the plunger will move back on the anti-friction rollers while medium-weight bales are being pressed, and when the key or stud is applied to the plunger the latter will be assisted in its backward movement on the rollers by the auxiliary retracting spring device while light bales are being pressed, as herein set forth.

3. A baling-press constructed with a case, a plunger fitted therein, a spring supported near the plunger, a removable key or stud fitted to the plunger and causing a tension or compression of the spring as the plunger moves forward on its effective stroke, and against which key or stud the expansive force of the spring is exerted to assist the retraction of the plunger, and one or more removable anti-friction rollers adapted to support the plunger to assist its free backward movement, substantially as shown and described, whereby when the plunger, key, or stud and the anti-friction roller or rollers are removed the plunger will rest on the press-case to be retracted by the expansive force of the pressed charges of material while heavy bales are being pressed, and when the rollers are placed beneath the plunger it will be retracted more easily on them while medium-weight bales are being pressed, and when the rollers and key or stud are applied to the plunger it will be fully retracted on the rollers by the operation of the auxiliary spring retracting device, as and for the purposes herein set forth.

386,064. MATERIAL FOR RAILWAY-RAILS, BUILDING-BLOCKS, PAVING-BLOCKS, &c. HENRY F. PERRIN, St. Louis, Mo., assignor to the Paperine Manufacturing Company, East St. Louis, Ill. Filed Feb. 16, 1888. Serial No. 264,267. (No specimens.)

Claim.—The material composed of paper-pulp, silicate soda, and barytes, mixed together in substantially the proportions named, and substantially in the manner specified.

386,065. EXTENSION-CLAMP. PETER S. GRAVES, Port Henry, N. Y. Filed Mar. 20, 1888. Serial No. 267,816. (No model.)



Claim.—1. In an extension-clamp, the two bars, each having an end turned outwardly, the short rack, and the recess provided with rack-teeth, substantially as specified.

2. The two clamp-bars, each having the outwardly-turned end, the keeper-straps, the recess, the rack-teeth, and the short rack, substantially as specified.

3. The two clamp-bars, each having an end turned outwardly at right angles, the recess provided with the rack-teeth, the short rack, the slot-openings, and the keeper-straps, substantially as specified.

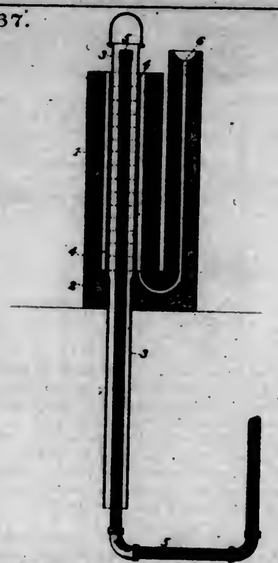
386,066. ELECTRIC LOCK. FRANK J. GRIBLEY, Chicago, Ill., assignor to Frederick G. Wheeler, New York, N. Y. Filed Jan. 30, 1888. Serial No. 262,217. (No model.)

Claim.—1. In an electric lock, the combination, with an electro-magnet, of a bolt or detent under stress and an electrical switch, said switch being adapted to break an electrical connection with the electro-magnet and close the same with another circuit adapted to extend the said circuit by the operation of the bolt, substantially as specified.

2. In an electric lock, the combination, with an electrical switch, of a sliding spring-pressed bolt, an electro-magnet, and a separate insulated point distinct from said electro-magnet, for connecting a separate wire adapted to extend the electric circuit beyond said lock, said switch being connected with said bolt, substantially as shown and described, so that the vibrations thereof will operate said switch and alternately connect and disconnect the same with the coil of the electro-magnet and with said other insulated point, as specified.

3. In an electric lock, the combination, with an electrical switch, of a spring-bolt under stress, a lever and armature mechanism, substantially as shown and described, for holding and releasing said bolt, and an electro-magnet for operating said armature mechanism, said switch being connected with said bolt and the coil of the electro-magnet, substantially as shown and described, so that the vibration of the bolt in the direction required to unlock it will also throw the switch and sever the electrical connection with the electro-magnet, substantially as specified.

4. The combination, with an electric lock having a vibrating bolt under stress and connected with an electrical switch, so as to vibrate the same, and an electro-magnet in connection with mechanism, substantially as shown, for holding and releasing said bolt, of a battery and one set of wires, arranged, substantially as shown, with relation to said switch so as to form a short circuit over the coil of said electro-magnet when the switch is thrown in one direction, and another set of wires employed in connection with part of the first set, and arranged, substantially as shown, with relation to said switch so as to cut out said electro-magnet and form a long circuit extending beyond said lock when said switch is thrown in the other direction, substantially as specified.

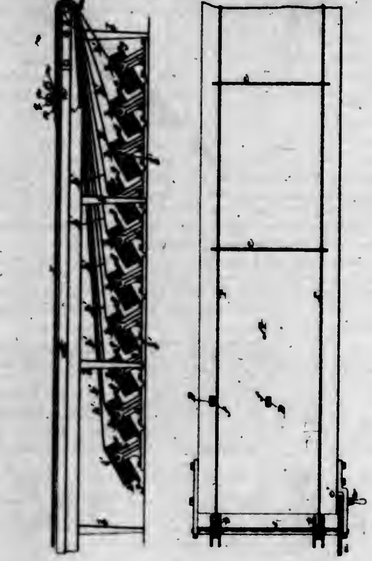


386,067. MOLD FOR HOLLOW ARTICLES. WILLIAM HAINSWORTH, Pittsburg, Pa., assignor to the Pittsburgh Steel Casting Company, same place. Filed May 22, 1888. Serial No. 274,737. (No model.)

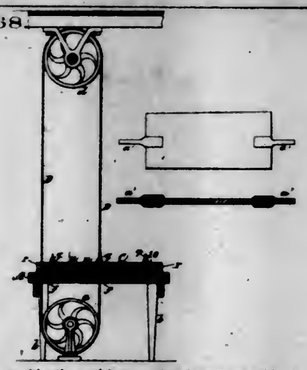
Claim.—1. The combination of a mold, a hollow core-bar, and one or more bands or rings formed of molding material fitting loosely around said core-bar, substantially as set forth.

2. The combination of a mold, a hollow core-bar of a length a little more than twice the length of the mold, a portion thereof being reduced in diameter, and one or more bands or rings formed of molding material fitting loosely around said core-bar, substantially as set forth.

3. The combination of a mold, a hollow core, one or more bands or rings formed of molding material and fitting loosely around said core-bar, and means for applying a cooling medium to the interior of the core-bar, substantially as set forth.



386,067.



4. The combination of a mold, a hollow core-bar of a length a little more than twice the length of the mold, one or more bands or rings formed of molding material and fitting loosely around the core-bar, and a perforated pipe connected with a water-supply arranged within the core-bar, substantially as set forth.

386,068. MACHINE FOR UNWINDING, DRAWING OFF, AND CUTTING CLOTH. NATHAN HARRIS, Boston, Mass. Filed Sept. 24, 1887. Serial No. 250,632. (No model.)

Claim.—1. The combination, with a cutting board or table, A, provided at one end with a roller, *l*, and having the endless band knife or cutter D, passing through slots in said table, of a series of rests or supports for the webs or pieces of cloth, hinged clamping-jaws for grasping and holding the ends of the several pieces of cloth, and a drawing or winding device consisting of straps or ropes *r*, attached to the clamping device and to a winding shaft or winch; all operating substantially in the manner and for the purpose set forth.

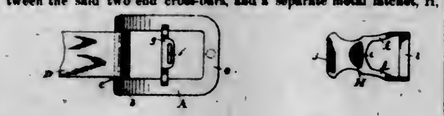
386,068.

2. The combination, with a cutting board or table, A, and the cloth clamping and drawing mechanism, of the arms or brackets *i*, and the removable cloth-supporting boards *g*, placed between the said arms, substantially as and for the purpose set forth.

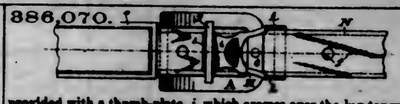
3. The combination, with the cutting board or table A and the cloth clamping and drawing mechanism, of the arms or brackets *i*, provided with open slots or sockets *b'*, and the removable gudgeons or journal-pieces *d'*, provided with jaws adapted to fit over the ends of the boards on which the webs or pieces of cloth are wound, substantially as set forth.

4. The combination, with a cutting board or table provided at one end with a roller, *l*, of a series of rests or supports for the webs or pieces of cloth, a clamping device comprising two jaws hinged together at one end and provided with screws and thumb-nuts, said jaws grasping the ends of the several pieces of cloth and holding them together at one point, and a drawing or winding drum attached to said clamping device, whereby the several folds or thicknesses of cloth are drawn forward simultaneously and laid one over the other upon the table at a single operation, ready for cutting, substantially as described.

386,069. BUTTON-BOOT. FRED J. HASTINGS, Haverhill, Mass., assignor of one-half to Joseph Goodrich, Jr., same place. Filed Feb. 13, 1888. Serial No. 263,789. (No model.)



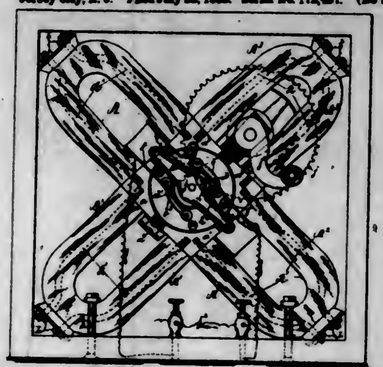
Claim.—1. The combination, with a gaiter, boot, or shoe, of the concealed elastic gore-piece secured at one edge to the lining of the instep-lap, and provided at its free edge with the buttons to engage loosely the button-holes of said lap, and with loops to engage fastenings on the short lip of the upper, substantially as specified.



2. The combination, in a button boot or shoe, of the short lip A, provided with fastenings B, the gore-piece secured to the lining of the instep portion, the loops L, for engaging the fastenings B, and the buttons on said gore-piece for engaging button-holes of the instep-lap, substantially as specified.

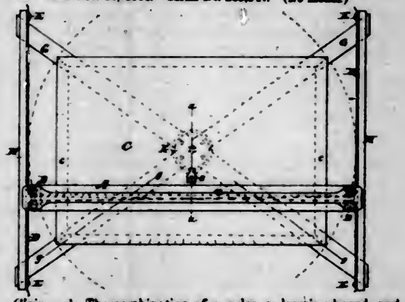
386,070. HARNESS-BUCKLE. JOHN A. HOLLENBERGER, Wichita, Kans., assignor of one-half to John R. McKee, same place. Filed Nov. 15, 1887. Serial No. 255,191. (No model.)

Claim.—A harness-buckle having, in combination, a buckle-frame, A, provided at one end with a cross-bar, *e*, and at the other end with a cross-bar, *c*, having a lug-tongue, *f*, and a central cross-bar, *g*, between the said two end cross-bars, and a separate metal latchet, H,



386,070.

provided with a thumb-plate, *i*, which crosses over the lug-tongue bar, and has on its end an upturned flange, *j*, to engage with the central cross-bar, and a loop to encircle the strap having a cross-bar, *l*, which is to take position on the side of the strap opposite that where the said lug-tongue bar is located.



386,071. MAGNETO-ELECTRIC MACHINE. WILLIAM EDGAR, Cambridge, Mass., assignor to the American Magneto Electric Company, Jersey City, N. J. Filed July 30, 1888. Serial No. 173,427. (No model.)

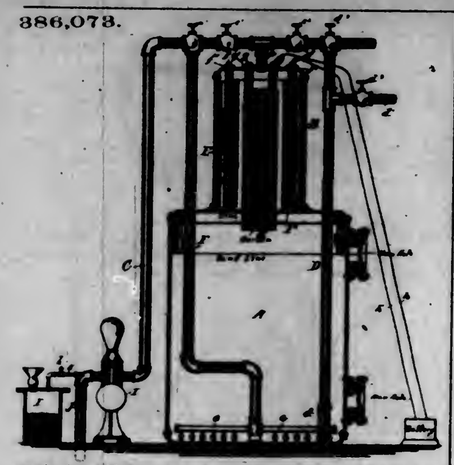
Claim.—1. The double armature above described, composed of the two cores and the two coils, the cores being held together back to back, but magnetically insulated, substantially as shown.

2. In combination, the double armature B B' and its two coils, the magnets A A', &c., and the electrodes *d d'* and *f f'*, whereby the currents are sent in pairs over the line, as set forth.

386,072. DRAWING-BOARD. DANIEL D. HUTSELL, Waynesborough, Pa. Filed Feb. 27, 1888. Serial No. 265,347. (No model.)

Claim.—1. The combination of a ruler, a drawing-board, and a cord having its ends clamped or fixed and passing around pulleys secured to said ruler near its ends, substantially as and for the purpose described.

2. The combination of a drawing-board, a ruler having a pair of pulleys secured near each end, and a cord having fixed ends and passing lengthwise of said ruler, substantially as and for the purpose described.



3. The combination of a frame carrying a ruler, and a cord, with a drawing-board pivotally connected to said frame, for the purpose described.

4. The combination of a frame, a drawing-board pivotally connected to said frame, a ruler carried thereby, and a cord connecting the ruler and frame, for the purpose described.

386,073. APPARATUS FOR PURIFYING WATER. OMAR H. JEWELL, Chicago, Ill., assignor to the Jewell Pure Water Company, same place. Filed Dec. 17, 1887. Serial No. 258,200. (No model.)

Claim.—1. In an apparatus for purifying water, the combination, with the filter-tank containing a suitable filtering medium and provided with a discharge or outlet pipe, of the dome mounted on said filtering-tank and communicating therewith, a supply or inlet pipe

386,073.

opening into said dome, and suitable electrodes arranged in said dome and connected to a battery or other source of electricity, substantially as and for the purposes specified.

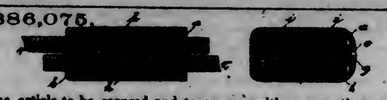
2. In an apparatus for purifying water, the combination, with the filtering-tank A and dome B, of the hollow cylindrical electrode F, arranged in said dome and connected to one pole of the battery, and the cylindrical electrode G, arranged within the electrode F and connected to the other pole of the battery, substantially as and for the purposes specified.

3. In an apparatus for purifying water, the combination, with the filtering-tank and its discharge-pipe, of the electrodes arranged therein and connected to the battery or other source of electricity, a supply-pipe connected to said tank, and a reagent-receiver connected to the supply-pipe, substantially as and for the purposes specified.

4. In an apparatus for purifying water, the combination, with the filtering-tank and its supply and discharge pipes, of suitable electrodes arranged in said tank and connected to a battery or other source of electricity, a pump connected to the supply-pipe, and a suitable reagent receiver or generator connected to the suction-pipe of the pump, substantially as and for the purposes specified.

5. In an apparatus for purifying water, the combination, with the filtering-tank A, of suitable electrodes arranged therein and connected to a battery or other source of electricity, a supply-pipe for said tank, a receiver, M, connected to said supply-pipe, and a generator, I, connected to said receiver, substantially as and for the purposes specified.

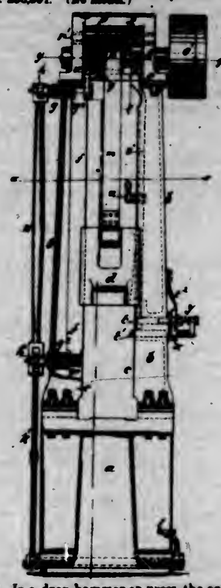
386,074. PROCESS OF MANUFACTURING BOXES. FRANK A. JOHNS, New York, N. Y. Filed Jan. 6, 1886. Serial No. 288,062. (No model.)



Claim.—The process of uniting the body and end of a box—namely, forming the body, placing it onto a glued portion of a sheet of suitable material supplied with glue on its upper side, inserting the end through the body, and pressing it against the glued sheet, as and for the purpose stated.

386,075. BUCKLE. CARL KNOEBERS, Werden, Prussia, Germany. Filed Apr. 26, 1888. Serial No. 271,773. (No model.)

Claim.—The lock or buckle for straps, traces, and other articles herein described, consisting of two sections, *a b*, adapted to engage



386,075.

the article to be secured and to engage with one another at their edges, said sections being provided with lugs *c*, and a case adapted to surround said sections and to be secured thereon by a spring, *f*, substantially as described.

386,076. DROP-HAMMER. FRANK M. LEAVITT, Brooklyn, N. Y., assignor to the E. W. Bliss Company, same place. Filed Sept. 22, 1887. Serial No. 250,391. (No model.)

Claim.—1. In a drop hammer or press, the combination, with the movable hammer-head and the fixed guides in which the same is movable, a hollow standard in which the guides are formed, and mechanisms, substantially as described, for raising the hammer-head, and tappets for tripping said head, of a clamping-bar located on one of the guides in said hollow standard and extending longitudinally or vertically thereupon, and operating devices, substantially as described, connecting with said bar to project or retract the same, and thus clamp or free the hammer-head at any point in the guides, substantially as set forth.

2. In a drop-hammer, the combination, with the hammer-head and the guides, of the longitudinal clamp-bar *f*, arranged in or parallel with the guides, clamp-screws *g g'*, connected to each end of the bar, cranks or levers *h h'*, connected to said screws, a bar connecting said levers, and an operating or manipulating device, substantially as described, connected thereto, whereby both screws can be partly revolved simultaneously and the clamp-bar projected against or retracted from the hammer-head, substantially as shown and described.

3. The combination, with the hammer-head and its guiding-frame, of the clamp-bar *f*, nuts g^2 g^3, screws *g g'*, crank-arms *h h'*, gravitating connector *k*, and a treadle, *l*, operatively connected with said parts, substantially as shown and described.

4. In a drop press or hammer, the combination with two separable friction-pulleys, a belt or band passing between the two, and a hammer-head attached to said belt, of a reciprocating wedge or separator, *s*, arranged to diverge or separate the pulleys and free the belt when thrust in one way, and to allow the pulleys to approach to grip the belt when moved in the opposite direction, and a gravitating rod carrying said wedge, with tappets in the path of the hammer-head operatively connected with said wedge, substantially as shown and described.

5. The combination, in a drop press or hammer, with a fixed driving-pulley and a separable driven pulley, of a pendulous or movable frame in which said pulley is mounted, a belt or band passing over said separable pulley and between the two pulleys, a hammer-head hung from said band, a vertically-reciprocating separator or wedge, *s*, ar-

ranged to separate one pulley from the other, a gravitating rod carrying said wedge, and projections or tappets arranged in the path of the hammer-head and connected with said separator, substantially as shown and described.

6. In a drop press or hammer, the combination, with the separable pulleys *o n*, a belt, *m*, passing between the same, and a hammer-head, *d*, hung to said belt, of a fixed frame to sustain said pulleys and hammer, with the reciprocating wedge *s*, a fixed protuberance, s^2, abutting against one side of said wedge, and a protuberance, s^3, abutting against the opposite side of said wedge and connected to the movable pulley, substantially as shown and described.

7. In a drop press or hammer, the combination, with fixed and separable friction-pulleys *o n*, a belt, *m*, passing between the two and over the friction-pulley, a hammer-head, *d*, hung from said belt and acting to press the separable pulley against the fixed pulley to grip the belt between them, and a reciprocating wedge, *s*, acting when raised to separate said pulleys to free the belt and let the hammer fall, and when lowered to allow the pulleys to approach to grip the belt and lift the hammer, of the gravitating rod *s'*, connected to said wedge, spring-bolt *t*, sustaining said rod, and tappet *t'*, connected to said bolt and arranged in the path of the falling hammer, substantially as shown and described.

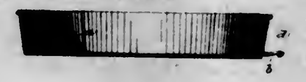
8. In a drop press or hammer, the combination, with the separable friction-pilleys *o n*, the hammer-head *d*, and the belt *m*, connected with said head and passing over and between said pulleys, as described, of the reciprocating separator or wedge *s*, rod *s'*, connected to said wedge, tappets *u* and *t'*, and spring-bolt *t*, arranged and operating substantially as set forth.

9. In a drop press or hammer, the combination, with two separable friction-pulleys, *o n*, a belt or band passing between the two and over one of them, and a hammer-head hung from said belt, of the loose marginal rings *n'* on the pulley *n*, supporting the edges of the belt and holding it free from the pulley when the pulleys are separated, substantially as set forth.

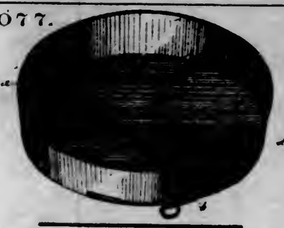
10. In a drop press or hammer, the combination, with a rising and falling hammer-head, of a belt or band on which the same is hung, two separable friction-pulleys between which said belt passes, a vertically-reciprocating separating device for causing the separation and approach of said pulleys, a vertical laterally-movable clamp to clamp the hammer in its guides, a projection connected with the movable pulley, and a projection connected with the clamping device arranged to engage to prevent the action of the clamp when the pulleys are approached, and vice versa, substantially as herein set forth.

11. In a drop-press, the combination, with the hammer-head and a clamping device to hold the same in its guides at any point of its stroke, of the fixed and separable friction-pulleys *o n*, between which the hammer-lifting belt passes, with the movable or pendulous frame *r*, in which the separable pulley is mounted, and an engaging pawl-nose, *v*, on said frame, with the escapement or stop lever *w*, connected to the clamp mechanism and arranged to move across the path of said pawl-nose, substantially as and for the purpose herein set forth.

12. In a drop press or hammer, the combination, with a fixed and a movable pulley, a belt passing between the two and down over the movable pulley, and a hammer-head hung therefrom, of a movable or pendulous frame in which said pulley is mounted, with a clamp arranged to hold the hammer-head at any part of its stroke, a rotary screw-shaft operating said clamp, and a swinging escapement or stop-arm connected to said screw-shaft and arranged to engage said movable frame, substantially as and for the purpose herein set forth.



13. The combination of the pulleys *o n*, movable frame *r*, belt *m*, and hammer *d* with the clamp *f*, screws *g g'*, arms *h h'*, connection *k*, operating device *l*, connected therewith, and escapement-arm *w* on screw *g*, engaging frame *r*, substantially as and for the purpose set forth.



14. The combination, with the clamp-bar *f*, of the screws *g g'*, nuts g^2, arms *h h'*, screwed on ends of said screws, and nuts 3 4, with a reverse thread clamping said arms on opposite sides, substantially as shown and described.

15. The combination, with the tappet *t'* and bolt *t*, of the arm *s*, adjustable screw *y*, and spring t^3, arranged and operating substantially as shown and described.

386,077. CAKE OR PIE PAN. MARIA LITTLETON, Sandusky, Ohio. Filed Nov. 2, 1887. Serial No. 254,122. (No model.)

Claim.—A bake-pan consisting of a side having an inwardly-projecting flange, inward projections, and an opening above said flange, and a spring-arm whose loose end passes through said opening, in combination with a removable bottom.

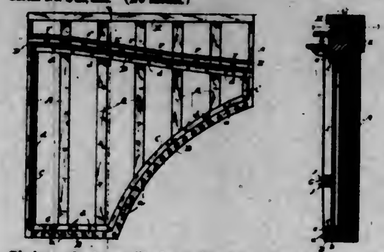
386,078. CANE-UMBRELLA. JOHN MCCORMICK, Washington, D. C., assignor to the McCormick Cane Umbrella Company, same place. Filed Jan. 5, 1887. Serial No. 223,494. (No model.)

Claim.—1. The combination of the shaft A, the thimble B, the runner D, the ribs C, pivoted to the thimble, and the braces C, U-shaped in cross-section and pivoted to the runner with their open edges outward, each of said braces being provided at its outer end with ears which clasp the corresponding rib, C, and with the integrally-formed tongue *c*, and connected with the rib by means of the pivot P, passing through the ears and through the rib at a point approximately in its central line.

2. In an umbrella, the combination, with a suitable shaft, of a runner sliding thereon and having its inner surface longitudinally recessed, a latch pivoted in said recess and having one of its ends turned inward in a lug adapted to enter corresponding notches in the shaft and its opposite end turned outward to form a pin for operating it, and a spring interposed between the latch and the outer surface of the runner and pressing inward the inwardly-turned end of the latch, substantially as and for the purpose set forth.

386,079. PIANO-ACTION. JAMES MCDONALD, Brooklyn, N. Y.; Mary H. McDonald (administratrix of said James McDonald, deceased) assignor to Bunce & Benedict, same place. Filed Feb. 4, 1887. Serial No. 226,602. (No model.)

Claim.—1. In a piano-forte action, the combination of a key, a simple transmitter rigidly fixed with relation to the part to which it is attached, and a pivoted hammer having a hammer-butt made substantially circular or arc-like in outline.



2. In a piano-forte action, the combination of a key, a pivoted hammer having a hammer-butt made substantially circular or arc-like in outline, and a transmitter upon which the circular edge of said hammer-butt rests, substantially as set forth.

3. A pivoted hammer having a hammer-butt made substantially circular or arc-like on one edge, in combination with a piano-key, the rear or transmitting end of which is directly in contact with the circular edge of said hammer-butt, substantially as set forth.

4. In an upright-piano-forte action, a pivoted hammer having a a hammer-butt with its lower edge substantially circular in outline, in combination with a key having a transmitting part in substantially a horizontal plane on its rear end, the curved edge of the hammer-butt resting directly upon said transmitting part in whichever position the key may be held at rest, substantially as set forth.

5. In a piano-forte action, the strings, the damper-rail, the damper-levers pivoted in said damper-rail, and having damper-pads adapted to said strings, in combination with the keys of the piano, the hammer-butt rail behind the rear ends of the keys, the hammers pivoted in said hammer-rail, having hammer-butts and hammer-heads, and being also provided with regulating-screws, carrying pads, which co-operate with said damper-levers, and said hammer-butts having one edge substantially circular in outline, said curved edge being acted upon by a plane transmitting-surface rigidly attached to the key, substantially as set forth.

386,080. PIANO-FORTE. JAMES MCDONALD, New York, N. Y.; Mary H. McDonald (administratrix of said James McDonald, deceased) assignor to Bunce & Benedict, Brooklyn, N. Y. Filed June 24, 1887. Serial No. 242,422. (No model.)

Claim.—1. A metallic frame for pianos, comprising in a single piece longitudinal parallel bars proportional in length to the length of the strings and in line with the strings, a marginal plate, hitch-pins on said marginal plate, a continuous flange for the support of the sounding-board, a hammer-bridge, a top plate above the hammer-bridge having an overhanging flange for the retention of the wrest-plank, said top plate being formed with said parallel bars, which extend above the hammer-bridge, and a down-bearing bar located above the hammer-bridge between it and said top plate, said down-bearing bar being connected to the bridge by intermediate brackets, substantially as set forth.

2. The metallic frame having a supporting-flange for the sounding-board, in combination with the sounding-board resting on said flange, wooden strips on the outer surface of the sounding-board, and attaching-screws extending through said flange and board and into said strips, as set forth.

3. The metallic frame having a marginal plate or rim, the hitch-pins thereon, and a supporting-flange for the sounding-board, in combination with the sounding-board resting on said flange, and strips on said sounding-board which project outward beyond said marginal plate, whereby the strings press upon said strips and hold said sounding-board in place, substantially as set forth.

4. The metallic frame having in one piece longitudinal bars, hammer-bridge, and top plate having an overhanging flange, said top plate being connected to said hammer-bridge by said bars, whereby a space is formed between said top plate and bridge and in front of said bars, which is wide at one end and gradually narrows to the other end, over which space said flange projects, in combination with the wrest-plank, which is inserted into said space and which rests in front of said bars against said hammer-bridge throughout its entire length, and which is held beneath said overhanging flange, substantially as set forth.

5. The metallic frame having hammer-bridge, top plate having overhanging flange, and connecting-bars, in combination with the wrest-plank between said hammer-bridge and top plate and resting on said bars beneath said overhanging flange, blocks inserted between said bars and glued to the wrest-plank, and a back piece behind the bars glued to said blocks, substantially as set forth.

6. In a metallic frame for a piano, comprising longitudinal bars proportioned in length to the length of the strings, a hammer-bridge, and a top plate above the hammer-bridge connected therewith by the longitudinal bars, so that a space is left between said bridge and top plate for the reception of the wrest-plank, said space being widest at the treble end of the frame and gradually narrowing to the bass end, substantially as set forth.

386,081. AUTOMATIC TWINE-HOLDER. DAVID A. MORRISON, Buffalo, N. Y. Filed Jan. 21, 1888. Serial No. 261,482. (No model.)

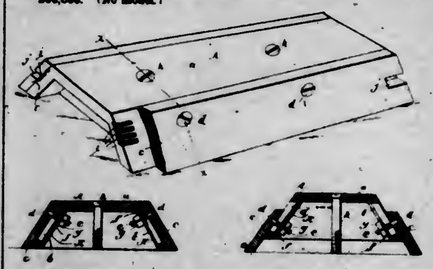
Claim.—In an automatic twine-holder, the combination of a case consisting of two parts hinged together at one side and provided with a spring-catch at the opposite side for releasing it to open it and securing it when closed, the lower half of the case carrying the ball of twine and the upper half having a perforation for the twine to pass through, a stationary axis secured at the top within the upper half of the case, a twine-holding-spool ring having a perforation through which the twine passes and winds around it, and an arched cross-piece by which it is suspended and turns on the stationary axis, a barrel at the top of the cross-piece surrounding the stationary axis and inclosing a coiled spring having one end fastened to the barrel and the other to the axis, a screw portion on the lower end of the stationary axis carrying a nut having a vertical perforation through it, and a pin rigidly secured to the spool-ring cross-piece and projecting down through the perforation in the nut, the whole combined for conjoint operation, substantially as described.

386,082. JOURNAL-BEARING FOR LAWN-MOWERS. CYRUS NEWHALL, Hinsdale, N. H., assignor of one-half to Lorenzo Stebbins, same place. Filed Mar. 17, 1888. Serial No. 267,583. (No model.)

Claim.—1. A journal or wear box consisting of a tubular plug having a tapering outer wall and a longitudinal scarf, *d*, combined with the strips *g* of compressible material, substantially as and for the purpose described.

2. A journal or wear box consisting of a tubular plug having a tapering outer wall and a longitudinal scarf, *d*, and the hole or enlargement *f* through the walls of the plug, substantially as described.

3. The combination, with the driving-shaft 3 and the frame provided with the hubs 4, having the tapering bores 5 and the oil-holes *a*, of the tubular plugs, each having a tapering outer wall provided with the longitudinal scarf *d*, ranged across one of said oil-holes *a*, and the strips *g*, of compressible material, in the ends of said scarf, substantially as and for the purpose described.



4. The combination, with the driving-shaft and the frame provided with the hubs 4, having the tapering bores 5 and the oil-holes *a*, of the tubular plugs, each having a tapering outer wall provided with the longitudinal scarf *d*, ranged across one of said oil-holes, and having the annular groove *h* and the strips *g*, of compressible material, in the ends of said scarf, substantially as shown and described.

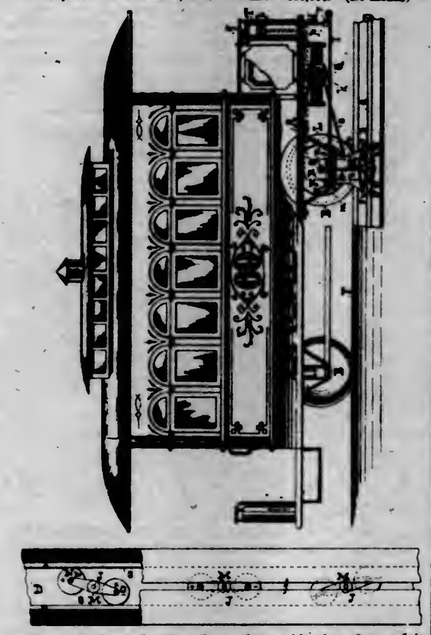
386,083. FENCE OR GUARD. JOSEPH NORWOOD, Brooklyn, N. Y. Filed Apr. 5, 1888. Serial No. 269,736. (No model.)

Claim.—The combination, with the upright pickets or rods A, of the malleable-metal rails or string-pieces B, the said rails or string-pieces having companion lugs upon and formed integral with the same, and between which the upright pickets are adapted to be received and secured, substantially as set forth.

386,084. THRESHOLD OR DOOR-SILL. LEWIS M. PRATT and JAMES M. WALKER, Belleville, Kans. Filed Mar. 3, 1888. Serial No. 266,066. (No model.)

Claim.—1. The combination, in a door-sill, of the body A, having inclined sides, plates bearing on said sides, and devices for adjusting said plates, substantially as described.

2. The combination, in a door-sill, of the body A, having inclined sides provided with elongated slots, plates bearing on said sides, and bolts passing through said plates and slots, and clamp-nuts for said bolts, substantially as described.



3. The combination, in a door-sill, of the body A, having its horizontal top face and inclined sides slotted, as described, plates *c*, beveled at their upper and lower edges, and bolts passing through said plates and slots and provided with clamp-nuts, substantially as described.

4. The combination, with the body A, having inclined sides slotted, as described, and provided on their under side with recesses intersecting said slots, plates bearing on said sides, and screw-bolts passing through said plates and slots, and clamp-nuts engaging said bolts and resting in said recesses, substantially as described.

5. The combination of the body A, having the inclined sides provided with the notches *i*, and the side plates having the slots *j* over said notches, as set forth.

386,085. ELECTRIC RAILWAY.

Elias R. Rihl, Baltimore, Md., assignor, by mesne assignments, to himself and Albert H. Henderson, same place. Filed Jan. 25, 1888. Serial No. 261,681. (No model.)

Claim.—1. In an electric railway, the combination of a conduit, a pair of insulated conducting-rails projecting from the inner sides of the conduit, a yoke supported by a bar within and susceptible of a movement longitudinally of the said conduit, means, substantially as described, applied to the said bar, whereby the yoke to which it is fastened is adapted to have a rocking motion in a practically horizontal plane, and a contact or current-collecting device attached to each end of the said yoke and insulated therefrom, substantially as and for the purpose specified.

2. In an electric railway, the combination of a conduit, a pair of insulated conducting-rails projecting from the inner sides of the conduit, a yoke supported by a bar within and susceptible of a movement longitudinally of the said conduit, means, substantially as described, applied to the said bar, whereby the said yoke to which it is fastened is adapted to have a rocking motion in a practically horizontal plane, an insulated contact-wheel or other current-collecting device attached to each end of the said yoke and insulated therefrom, a wheeled vehicle situated over and adapted to move longitudinally of the said conduit, carrying an electric motor arranged to propel the same, and wires to connect the current-collecting devices on the yoke with the said motor, substantially as specified.

3. The frame or guide-bracket carrying the pendent bar to which the contact devices are attached, and which passes through the longitudinally-extending slot in the conduit, having a downwardly-curved lower edge which is flanged to deflect water from the contact devices, substantially as specified.

4. In an electric railway, a yoke or lever movable horizontally about a central vertical axis and having insulated contact or current-collecting devices at each end thereof, substantially as and for the purpose set forth.

5. In an electric railway, parallel electrical conductors extending along the line of way, combined with contact devices carried by a yoke pivoted so as to rock laterally, and thereby bring each collector in contact with either conductor, as desired, the said yoke and its attachments being connected to adjusting devices on a moving electric motor or car, substantially as and for the purpose specified.

6. In an electric railway, a longitudinally-slotted conduit containing conducting-rails, combined with a pivoted yoke carrying at each end a contact-wheel, and a spring to hold the said wheels against the rails with a yielding pressure, substantially as specified.

7. The frame or guide-bracket entering the conduit-slot, said frame or bracket being provided with a central opening having bearings through which the pendent bar carrying the current-collecting devices extends and in which it is free to turn, said frame or bracket being also provided with an additional opening at the front and rear of the said central opening, through which the leading wires or conductors extend, substantially as and for the purpose set forth.

8. In an electric railway, the combination of a centrally-slotted conduit extending along the railway midway between the track-rails and having electrical conductors therein, a depending vertical bar or rod extending through the conduit-slot from a motor-car and carrying the contact or current-collecting devices at its lower end, the said bar or rod being capable of motion about a vertical axis, so as to bring its contact devices, respectively, into engagement with opposite conductors, or into disengagement therewith, the said bar or rod being supported from the motor-car directly below the center of one of its axles and at a point midway between the track-rails, substantially as and for the purpose set forth.

9. In an electric railway, a longitudinally-slotted conduit containing conducting-rails, combined with a pivoted yoke carrying contact-wheels, a handle on the platform of the car, connections between said handle and the yoke for operating the latter, and means for placing and retaining the contact-wheels in any of three different positions, according as it is desired to advance, stop, or back the car, substantially as set forth.

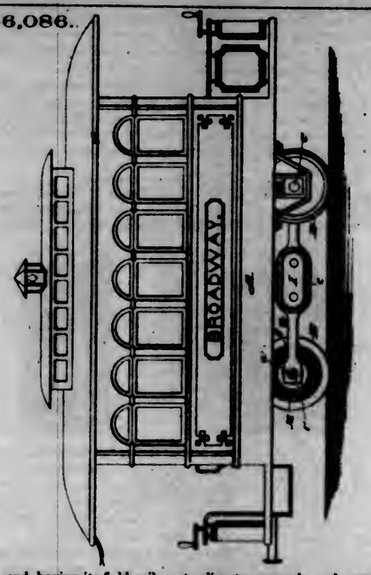
10. In an electric railway, the combination, with parallel line-conductors extending along the line of way, an electro-dynamic motor on a car or vehicle, line-conductors to supply current to same, and collecting devices to bring said motor into circuit with said conductors, of an operating-lever controlling said current-collecting devices and capable of rocking them into three different positions with respect to the line-conductors, and circuit-connections on said collecting devices, in order that the car may be driven forward, backward, or stopped at the will of the operator by the change in the direction of the current flowing from the line-conductors through the motor by way of the current-collecting devices, substantially as and for the purpose specified.

11. In an electric railway, a metallic conduit having interior projections or partitions adapted to hold in position bodies of asphalt or other non-conducting substance, in combination with conducting-rails partially embedded in the said asphalt or other non-conducting substance and extending beyond the face of the said projections or partitions, substantially as specified.

12. In an electric railway, a longitudinally-slotted metallic conduit having a portion of its interior occupied by bodies of asphalt, concrete, or other non-conducting and non-absorbing material in which the conducting-rails are embedded, and having its remaining exposed interior metallic surfaces coated with a covering of asphalt or similar non-conducting water-proof substance, substantially as set forth.

386,086. DRIVING MECHANISM FOR ELECTRIC-RAILWAY CARS.

Elias R. Rihl, Baltimore, Md., assignor of one-half to Albert H. Henderson, same place. Filed Oct. 19, 1886. Serial No. 216,610. (No model.)



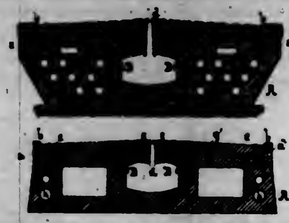
Claim.—1. The combination, in a railway-car, of parallel supporting bars or frames extending between and sustained by the driving-axles thereof, said bars being provided with openings provided with gaskets or rings for holding the electro-dynamic motor, substantially as set forth.

2. The combination, in a railway-car, of parallel supporting bars or frames extending between the driving-axles of said car, a gear-wheel on each driving-axle for revolving the same, and an electro-dynamic motor centrally mounted upon said supporting bars or frames, and having its armature-shaft provided with driving-pinions for engaging with said gears, the armature-shaft of said motor being in line with the diametrical center of both gear-wheels, substantially as and for the purpose set forth.

3. The combination, in a railway-car, of parallel supporting-bars extending between and sustained by the driving-axles of said car, said bars being provided with bearings for the motor, and a motor journaled in the bearings of said bars centrally between the driving-axles, substantially as specified.

4. In a railway-car, the combination, with an electric motor having its armature mounted centrally and longitudinally of the vehicle-

386,086.



truck and having its field-coils extending transversely and centrally of said truck, of the armature-shaft of said motor geared to each axle and extending longitudinally and centrally between the sides of said truck, and a flexible supporting-frame for said motor.

5. In a traveling vehicle, the combination, with an electric motor, of supporting-bars therefor having enlarged flexible bearings for said motor.

386,087. COMBINED ELECTRIC RAILWAY AND WIRE-CONDUIT.

Elias R. Rihl, Baltimore, Md., assignor of one-half to Albert H. Henderson, same place. Filed Nov. 30, 1886. Serial No. 219,661. (No model.)

Claim.—1. A road-bed formed of non-conducting concrete or other non-conducting material having a longitudinally-extending conduit with longitudinally-extending surface slot, and independent ducts arranged at the sides of the conduit, substantially as and for the purpose specified.

2. A road-bed formed of a series of blocks having therein a longitudinally-extending conduit, a longitudinally-extending surface slot, and independent ducts arranged exteriorly of the said conduit, substantially as and for the purpose specified.

3. A road-bed having a longitudinally-extending conduit with a longitudinally-extending surface slot, and independent ducts arranged exteriorly of the said conduit, the said road-bed having alcoves which extend transversely of the said road-bed from the side thereof to near the conduit and break the continuity of the said ducts, whereby access may be had to them, substantially as and for the purpose specified.

4. A road-bed formed of a series of blocks having ducts, as described, with certain of the said blocks provided with alcoves which extend from one or both sides of the said blocks transversely of the same to near the conduit-opening, whereby access may be had to the said ducts, substantially as and for the purpose specified.

5. A block forming a portion of a road-bed having therein ducts, as described, and provided with one or more alcoves which break the continuity of the said ducts, combined with one or more vaults or chambers in communication with the said alcoves, which give access to the same from the street, substantially as and for the purpose specified.

6. A block forming a portion of a road-bed having therein ducts, as described, and provided with one or more alcoves which break the continuity of the said ducts, combined with one or more vaults or working-chambers in communication with the said alcoves to give access to the same from the street, and suitable covering-plates for the said vaults or chambers, substantially as and for the purpose specified.

7. A road-bed having a longitudinally-extending conduit with a longitudinally-extending surface slot, and independent ducts arranged exteriorly of the said conduit, the said road-bed having an alcove which extends transversely of the said road-bed from the side thereof to near the conduit to break the continuity of the said ducts, whereby access may be had to them, and a vault in communication with the said alcove, which extends from the surface of the street to a point below or beneath the said conduit, substantially as and for the purpose specified.

8. A road-bed having a conduit which extends longitudinally thereof and ducts arranged at the side of the said conduit, as described, and an alcove at either side of the said conduit, which breaks the continuity of the said ducts and gives access to them, combined with a vault in communication with the said alcoves to give access to them from the street, and one or more tunnel-pipes to connect the two vaults at a point below the said block, substantially as and for the purpose specified.

9. A road-bed having a continuous concrete conduit for carrying the line-conductors of an electric railway, provided with alcoves, as described, and having in its upper surface depressions for the reception of stringers or other supports for the traction-rails of the said railway, substantially as and for the purpose specified.

10. A road-bed containing a longitudinally-slotted conduit formed of a series of non-conducting blocks or sections, metallic plates situated within the said longitudinal slot and separated to form the conduit-opening, and bolts or rods passing transversely through the material forming the conduit-blocks, designed and arranged to firmly hold the slot-plates in position, substantially as and for the purpose specified.

11. A road-bed containing a longitudinally-slotted conduit formed of a series of non-conducting conduit blocks or sections having depressions therein for the reception of the stringers which sustain the traction-rails, and provided with a longitudinally-extending slot, vertical or flanged plates situated within the said slot, and bolts or rods which pass transversely through the material forming the conduit and tie the slot-plates to the stringers, substantially as and for the purpose specified.

12. A road-bed containing a conduit having a longitudinally-extending slot therein and depressions in its upper surface for the reception of stringers to which the traction-rails are secured, combined with vertical separated plates situated in the said slot, having flanges with lips which rest with the said stringers in the depressions in the said blocks, substantially as and for the purpose specified.

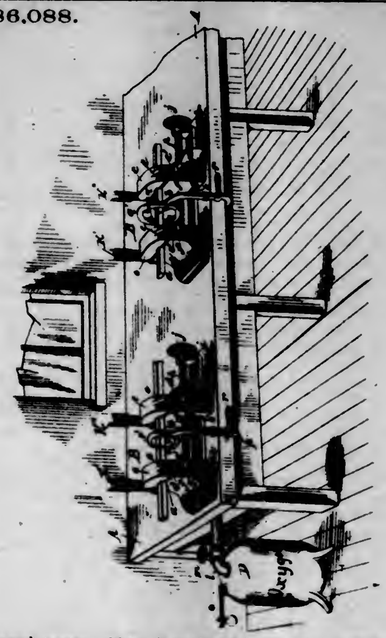
13. A conduit for an electrical railway, formed in three sections, a lower and two upper ones, combined with electric conductors which are laid in the lower section of conduit and held in position by the upper sections which bear thereon, substantially as and for the purpose specified.

14. A conduit formed of a series of blocks or conduit-sections divided longitudinally into a lower and two upper portions, the said lower portion containing the conduit-opening and ducts, and serving as a support and foundation for the two upper portions, which latter are removably secured to the lower portion, substantially as and for the purpose specified.

386,088. METHOD OF WELDING BY ELECTRICITY.

Elias R. Rihl, Baltimore, Md., assignor of one-half to Albert H. Henderson, same place. Filed Mar. 14, 1888. Serial No. 267,173. (No model.)

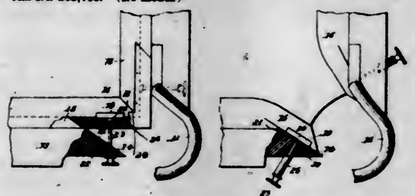
Claim.—1. The method of effecting union between two metals in contact, consisting in the application of heating-currents of electricity to traverse the joint to be welded, and simultaneously subjecting said joint to the action of oxygen gas.



2. The method of welding, consisting in the application of heating-currents of electricity to the portions of the metals in contact, gradually increasing the current strength until the desired strength of current traverses the said portions of metal, and simultaneously subjecting the joint to the action of oxygen gas.

3. The method of welding, consisting in the application of heating-currents of electricity to the portions of the metals in contact, assisting the fusion of said portions of metal by subjecting the same to the action of oxygen gas, and treating said portions of metal with a substance for preventing the products of combustion from attacking the metals simultaneously with the administration of oxygen gas.

4. The method of effecting a weld or union between metals in contact, which consists, first, in the application of currents of electricity having a predetermined heating effect to traverse the joint or weld to be formed, and, second, in re-enforcing the heating effect of the said electric currents by subjecting the said joint to the action of oxygen gas.



5. The method of welding together two metals of hardened or

386,088.

tempered structure without destroying their respective retempering properties at the point of union, which consists, first, in passing an electric current of a certain heating effect through the ends of the metals in contact, and gradually increasing the current strength until a certain temperature of the metals is obtained, and, second, in subjecting the said ends of the metals in contact to action of oxygen gas, and gradually increasing the flow of the said gas until the metals are fused and united.

386,089. COMBINATION POOL AND BILLIARD TABLE. RICHARD I. RINK, New York, N. Y., assignor of two-thirds to Mark H. Sandford and Henry Wagner, both of same place. Filed Feb. 29, 1888. Serial No. 265,709. (No model.)

Claim.—1. A combined pool and billiard table having the ends of its cushion pliable and abutting at about the center of the pocket-openings, and provided with means for retaining the said ends straight with the body of the cushion, or at an angle thereto, substantially as described.

2. In a combined pool and billiard table, the combination, with the cushion-rail, of cushions secured to the rail having pliable abutting ends extending across the pocket, and means, substantially as described, for retaining the pliable ends in engagement with each other to form a continuous cushion, or in engagement with the walls of the pocket-openings, as and for the purposes specified.

3. In a combined pool and billiard table, the combination, with the cushion-rails, of cushions secured to said rails having pliable abutting ends extending across the pockets, a clamp engaging the said projecting ends of the cushion, and a bolt passing through the table to an attachment with the said clamp, substantially as and for the purpose specified.

4. In a combined pool and billiard table, the combination, with cushions having pliable abutting ends projecting across the pockets, of a removable block engaging said pliable cushion ends, forming a temporary rail therefor, substantially as and for the purposes specified.

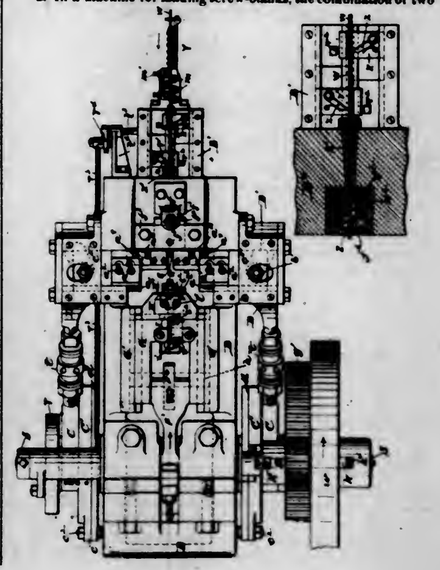
5. In a combined pool and billiard table, the combination, with a cushion extending across and divided opposite the pockets, of a removable block or rail section engaging and sustaining the cushions in front of the pockets, substantially as shown and described.

6. In a combined pool and billiard table, the combination, with a cushion extending across and divided opposite the pockets, of a removable block or rail section engaging and sustaining the cushions in front of the pockets, and means, substantially as described, for securing the block and cushion in engagement, substantially as and for the purposes specified.

386,090. ELECTRIC BATTERY. ISAIAH L. ROBERTS, Brooklyn, N. Y., assignor to the Roberts-Brevoort Electric Company, (Limited,) of New York. Filed June 7, 1888. Serial No. 204,315. (No model.)

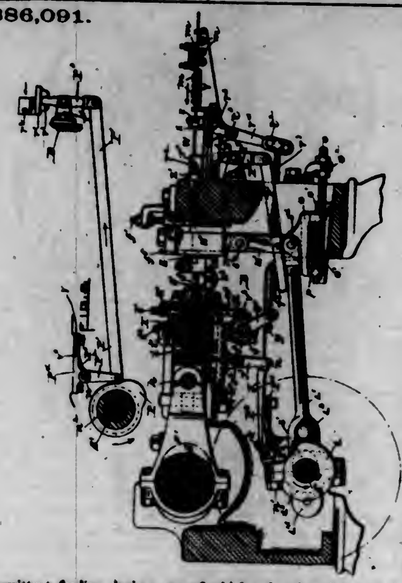
Claim.—1. The combination, in an electric battery having the exciting material in the form of a paste, of a permanganate, bichromate of soda, and the salt of an alkali, substantially as described.

2. The combination, in an electric battery having the exciting material in the form of a paste, of permanganate of potash, bichromate of soda, and the salt of an alkali, substantially as described.



3. An electric battery composed of a containing-vessel and a pasty exciting-mass consisting of bichromate of soda, a permanganate, and the salt of an alkali, in combination with the negative and positive elements and a cover of asphalt, or asphalt and rosin, substantially as herein shown and described.

4. As a new article of manufacture, an exciting-mass for an electric battery, consisting of bichromate of soda, a salt of an alkali, and a permanganate combined, substantially as described.



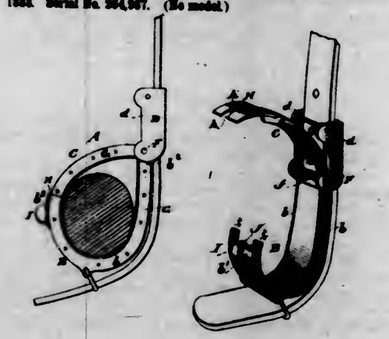
386,091. MACHINE FOR MAKING SCREW-BLANKS. CHARLES D. ROGERS, Providence, R. I., assignor to the American Screw Company, same place. Filed July 7, 1887. Serial No. 243,657. (No model.)

Claim.—1. In a machine for making screw-blanks, a gripping-clamp with its cavity forming an extension of the cylindrical hole of the separate solid die, which is provided with a cavity in which heads are to be formed to grasp and hold the wire in the proper position in the solid die against the thrust of the heading-hammers in upsetting the metal to form a head, substantially as set forth and described.

2. In a machine for making screw-blanks, the combination of two

386,091.

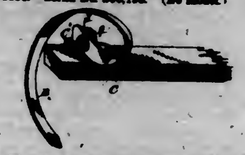
intermittent feeding devices, one of which grips the wire near the entrance of the supporting-tube which leads to the gripping-clamp and solid die and by a short movement starts the wire in the solid die, and the other of which grips the wire at a sufficient distance from the end of the supporting-tube to feed forward the length of wire required for a screw-blank, substantially as set forth and described.



3. In a machine for making screw-blanks, a series of three or more heading-hammers mounted in a support which is provided with means for bringing each hammer in turn into line with a die in which the head of a blank is to be formed, and means for locking it in such position until it has been forced against the metal in the die, substantially as set forth and described.

386,092. WOOD-SCREW. CHARLES D. ROGERS, Providence, R. I., assignor to the American Screw Company, same place. Filed July 7, 1887. Serial No. 243,673. (No model.)

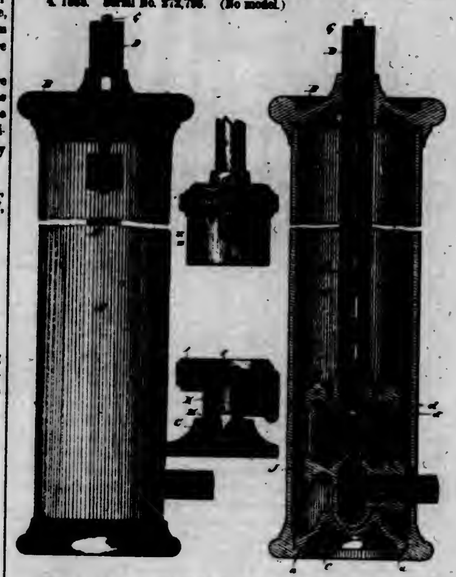
Claim.—A wood-screw with a flat-faced head formed by forging in a solid die and having a slot across the face, with walls or sides vertical, or nearly so, and closed at the ends and so adapted to receive the blade of an ordinary screw-driver to force the screw into the wood.



386,093. HARness SHAFT-LOOP. CARL C. SMITH, Hamilton, Ohio, assignor of one-half to C. F. Bittenmyer, same place. Filed Feb. 23, 1888. Serial No. 264,967. (No model.)

Claim.—1. A two-part shaft-loop, one of the parts provided with a swiveled spring-hold catch and the other with an open slot and shoulder, as shown and described.

2. The combination of the metallic hooks *b b*, connected by a cross-bar, *b'*, and filled intermediately with leather, the hinged metallic plates *G G*, intermediately filled with leather, the slotted and shouldered plate H, and the swiveled spring-hold catch I, all constructed and arranged substantially as shown and described.



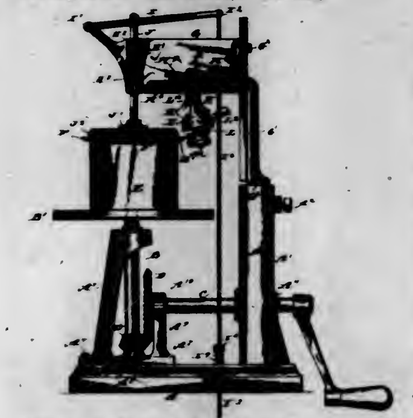
386,094. HARROW-TOOTH. GILMAN SWEET, Dansville, N. Y. Filed Jan. 9, 1888. Serial No. 260,193. (No model.)

Claim.—1. The combination of the standard having a vertical face on one side, the curved spring-metal twisted harrow-tooth having a vertical face at its upper end, adapted to rest against the vertical face of the standard, the serrations on the upper end of the harrow-tooth, the serrations on the standard, with which the serrations on the harrow-tooth engage, and the securing-bolt extending through holes in the standard and tooth for locking the tooth to the standard.

2. The combination of the standard, the boss formed thereon, the serrations on the standard on opposite sides of the boss, the twisted tooth having a bolt-hole in its upper end, and serrations formed in the arc of a circle on opposite sides of the bolt-hole, adapted to engage with the serrations on the standard, and a securing-bolt extending through the boss and through the harrow-tooth, substantially as set forth.

386,095. HYDRANT. AARON J. TYLER, Albion, N. Y. Filed May 4, 1888. Serial No. 272,788. (No model.)

Claim.—1. The combination, with the casing, the cap therefor having the depending stand-pipe attached to it, a valve-casing attached to the lower end of stand-pipe, bolts *b*, for drawing the parts together, and a base-plate in the bottom of the casing, of a flanged head, J, pivotally supported on this base-plate and provided with an elbow, K, substantially as described.



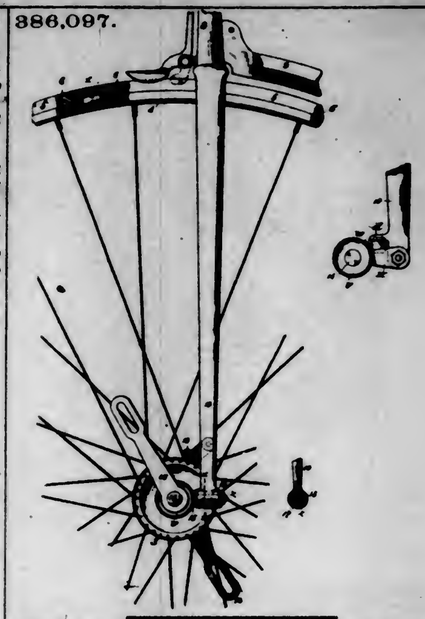
2. The combination, with the casing, base-plate inserted in the bottom of same and provided with a central depression, a cap placed over the upper end of the casing and provided with a depending stand-pipe, D', a valve-casing attached to lower end of stand-pipe, and tightening-bolts *b*, of a flanged head, J, for the reception of the lower end of the valve-casing, the said head being provided with an elbow and a central knob on its under side, the knob being adapted to rest in

the depression in the base-plate, and pivotally support the said head J, substantially as described.

3. The combination of a casing, a base-plate in the bottom of the same provided with a central depression, a head, J, provided with a knob on its lower side adapted to rest in the said depression in the base-plate, whereby the head is pivotally supported, a valve-casing and stand-pipe, and means for forcing the said stand-pipe and valve-casing down upon the said head J, substantially as described.

4. The combination of a casing provided with an internal flange, *c*, near its bottom, a base-plate, C, inserted in the casing and resting upon the flange *c*, this plate having a central depression in its upper face, a lower flanged head, J, provided with an elbow, K, and a knob, M, the latter resting in the depression in the base-plate and pivotally supporting said head J, an inlet-pipe, L, attached to elbow K, a valve-cylinder, H, inserted in the said flanged head J, a head, I, bolted to the cylinder H, a stand-pipe secured to the head I, a cap secured to the stand-pipe, and tightening-bolts, substantially as described.

386,096. CAN-MACHINE. EMILE F. VERDEL, Memphis, Tenn. Filed Aug. 27, 1887. Serial No. 248,071. (No model.)



Claim.—1. In a machine of the class described, a standard having a socket, a head comprising a back plate terminating in a tenon and provided with longitudinal slots, a bracket having bolts passing through the slots to adjustably connect said head and bracket, a seaming-roller-supporting plate adjustably mounted in the bracket for longitudinal movement thereon, and a capping-plate connected with a lever pivoted to the bracket and connected with a treadle-rod, substantially as specified.

2. In a machine of the class described, a base provided with an integral standard, a head removably mounted thereon, and carrying an adjustable seaming-roller-supporting plate and a capping-plate, in combination with a table and its spindle mounted in a standard adjustable upon the base and provided with bearings for the spindle, and a crank-shaft passing through the rigid standard and taking bearing upon the movable standard of the base, substantially as specified.

3. The combination, with the standard A', having the socket, of the back plate, G', having the tenon G^{3x}, the bracket H, having the slots H^4, the roller-supporting plate K, having circular curved end, the roller M, having the spindle L, adapted to fit the end of the plate K, and the extensions L', adapted to embrace the same and pivoted, as at L'^x, to the plate K, substantially as specified.

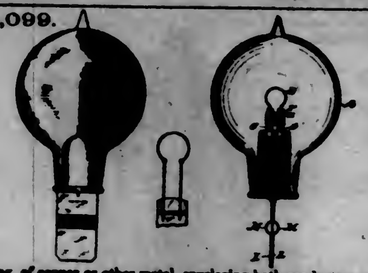
4. In a machine of the class described, a seaming-roller journaled upon a stem having extensions L', in combination with a seaming-roller-supporting plate, K, having a curved end, substantially as specified.

386,097.

386,098. CUT-OFF TO PREVENT FREEZING IN WATER-PIPES. HIRAM K. WHITNEY, New York, N. Y., assignor to Henry H. White, trustee, same place. Filed Jan. 27, 1887. Serial No. 226,710. (No model.)

Claim.—1. The combination, with a water-service pipe, of a tube connected therewith, a contractible and expansible bar arranged in said tube, a cock provided with a port connected with said tube, a lever connected to said bar and arranged in the cock, and a valve connected to the lever, substantially as described, whereby variations of temperature in the water in the tube will cause said bar to operate the lever to open the port of the cock and cause a flow of water from the service-pipe or to cause the closing of said port and a stoppage of flow of the water.

2. The combination of a water-service pipe, a receptacle for water connected therewith, a contractible and expansible bar arranged in said receptacle, a cock provided with a port connected with said receptacle and arranged approximately in line therewith, a lever connected with said bar and arranged in the cock, and having a portion extending approximately parallel therewith and another portion at right angles thereto, a valve connected to the lever, and an approximately non-contractible and non-expansible abutment for said bar arranged in the receptacle and extending into the cock, substantially as specified.



386,099. AUTOMATIC CUT-OUT FOR INCANDESCENT LAMPS. MIGUEL J. WIRSTEAD and HERMANN LEMP, Hartford, Conn. Filed Mar. 2, 1888. Serial No. 265,782. (No model.)

Claim.—1. An incandescent lamp having conductors within its globe connected to opposite ends of the lamp and placed in proper proximity to be fused into electric contact with one another by an electric arc formed across the space between them on rupture of the incandescent conductor.

2. An incandescent lamp having its entering conductors brought into proximity electrically, as described, and sufficiently near to be electrically united by fusion through the influence of an electric arc forming between them on rupture of the incandescent conductor.

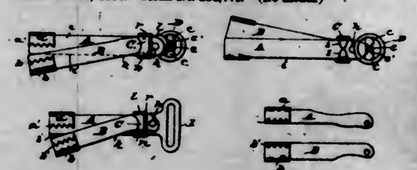
3. The combination, with the conductors within the lamp, of a

386,099.

wrapping, of copper or other metal, enveloping both conductors, and an insulating material applied in proper manner to prevent said wrapping from forming a circuit while the lamp is operating normally.

4. In an incandescent electric lamp, an entering conductor formed at the point of sealing from a thin metal plate and having the glass compressed against its flat or plane surfaces, as and for the purpose described.

5. The herein-described improvement in methods of constructing incandescing lamps, consisting in forming a sheet-metal blank with two legs or bifurcations separated from one another, sealing the said bifurcated portion of the blank, and dividing the blank longitudinally on a line passing between the two legs or bifurcations to make the separate insulated supports for attachment to the ends of the incandescing conductor.

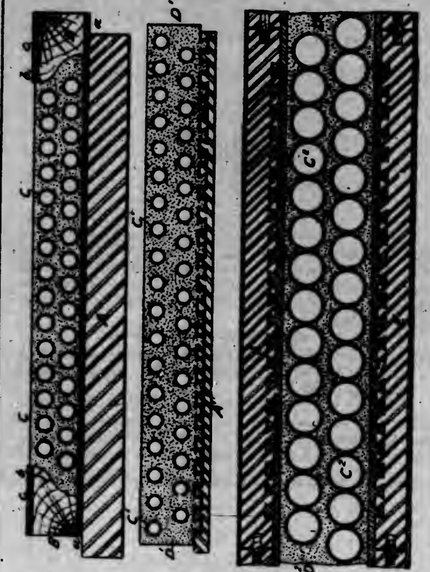


386,100. TYPE-WRITING MACHINE. GEORGE W. H. YOST, New York, N. Y., assignor, by mesne assignments, to the American Writing Machine Company, of New York. Filed Aug. 13, 1878.

Claim.—1. In a type-writing machine, the combination of a type-bar provided with lateral conical journals, a connecting-rod for actuating said type-bar, a bifurcated hanger having flexible arms provided with conical bearings for the journals of the type-bar, and an intermediate transverse connection uniting said flexible arms and adapted to adjust and set their free ends, whereby lateral movement of the journals of the type-bar may be prevented and the alignment of the printing be always preserved, substantially as set forth.

2. In a type-writing machine, the combination of a top plate or support, a type-bar provided with lateral conical journals, a connecting-rod for actuating said type-bar, a bifurcated hanger secured to the top plate or support and having flexible arms provided with conical bearings for the journals of the type-bar, one of said arms having a threaded perforation and the other a countersink perforation, and a transverse countersink-screw engaging said perforations and having its body portion between the arms of the hanger constructed for engagement by a suitable tool to effect its rotation, whereby any projection of the ends of the screw is avoided, (thus enabling the hangers to be set close together,) and whereby any screw of the series employed may be turned to adjust the arms without removing the hanger from its position upon the top plate or support, substantially as set forth.

386,101. CUFF-HOLDER. SHERMAN B. BACON, Waterbury, Conn. Filed Dec. 22, 1887. Serial No. 258,779. (No model.)



Claim.—1. The combination, in a cuff-holder or garment-supporter, of the two laterally-movable levers pivoted together, as shown, each of said levers provided with gripping-jaws, a slide to embrace both of said levers and having a free longitudinal movement thereon, one or both of said levers having their outer edges irregular or cam-shaped, or the equivalent, to engage with said movable slide, so that by such engagement the levers may be opened or closed, as described and set forth.

2. The combination, in a cuff-holder, of two laterally-movable levers connected together, and provided each with gripping-jaws to engage the fabric, one or both of said levers having their opposite edges irregular or cam-shaped, a longitudinally-movable slide to engage therewith, one of said levers having a button attached thereto to engage with the button-hole of the cuff, as set forth.

3. The combination of lever A, having jaw *a*, parallel edges *i i'*, lever B, having jaw *b*, cam projections *l* and *k*, rivet A, slide C, having taper ends *c*, and finger projection *c'*, with button D, having central bar, *e*, said bar engaging with and operating within the eye *f* of lever A, the outer edges, 1 and 2, of said bar engaging with the upper and lower walls, 3 and 4, of said eye, to maintain the button rigidly in an upright position, said bar also engaging with shoulder *g'* of the upright *g*, to support said button in a horizontal position, as described and set forth.

4. The laterally-movable levers A B, having jaws *a b*, said jaws bent or curved over the body of said levers, and a short distance above the same and parallel thereto, the extreme ends *a' b'* of the jaws curved upward to enable them to readily take a surface-grip on the fabric, as shown and described.

386,102. BOARD OF COMPOSITE MATERIAL. ADOLF MANZ, Ludwigsburg, Wurtemberg, Germany. Filed Nov. 28, 1887. Serial No. 256,628. (No model.) Patented in Belgium Dec. 31, 1886, No. 73,709, and Oct. 15, 1887, No. 79,995; in England Dec. 31, 1886; No. 17,130; in Austria-Hungary Apr. 12, 1887, No. 37; in Italy Feb. 4, 1888, No. 22,734, and May 1, 1888, No. 23,156, and in France Feb. 28, 1888, No. 187,247.

Claim.—1. A board for building and industrial purposes, consisting of plastic material and a number of small tubes (either specially made of paper or other suitable material or formed of vegetable stalks) embedded in the said material, substantially as described.

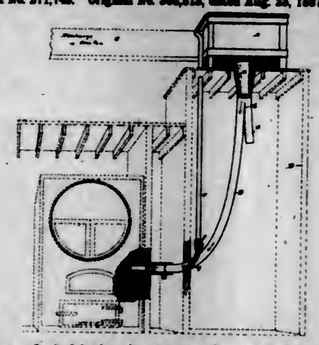
2. A board consisting of plastic material, of a number of small tubes (either specially made of paper or other suitable material or formed of vegetable stalks) embedded in the same material, and a wooden base, substantially as described.

3. A board consisting of plastic material and of a number of small tubes (either specially made of paper or other suitable material or formed of vegetable stalks) embedded in the said material, a wooden base, and a rectangular wooden frame, substantially as described.

4. A board consisting of a mixture of plastic mineral matter with wool, hair, or feathers, and tubes or vegetable stalks embedded in the said mixture, substantially as described.

5. A board consisting of a plastic mixture of burnt gypsum with hair, wool, or feathers, and tubes or vegetable stalks embedded in the said mixture, substantially as described.

6. A board consisting of a mixture of plastic mineral matter with finely-divided solid particles of organic origin, and tubes or vegetable stalks uniformly embedded in the said mixture, substantially as described.



7. A board consisting of a mixture of plastic mineral matter with a liquid binding substance and finely-divided solid particles of organic origin, and tubes or vegetable stalks uniformly embedded in the said mixture, substantially as described.

8. A board consisting of a plastic mixture of burnt gypsum with a liquid binding substance, finely-divided solid particles of organic origin, and tubes or vegetable stalks embedded in the said mixture, substantially as described.

9. A board consisting of a plastic mixture principally composed of mineral matter, tubular cores uniformly distributed and embedded in the said mixture, and a wooden base rendered fire-proof by impregnation or coating, substantially as described.

REISSUES.

10,942. **FURNACE FUEL-FEEDER.** LOYAL Y. COGHAN, Allegheny City, Pa., and WILLIAM I. LIGGAT, Cleveland, Ohio. Filed Apr. 24, 1888. Serial No. 271,749. Original No. 366,813, dated Aug. 23, 1887.

Claim.—In fuel-feeders for furnaces, the combination, with the collector A, having discharge-pipe E, of conductor-pipe D, having branch H and regulating-valve I, and connecting the collector with the furnace, and with means for forcing air into the conductor for discharging the shavings into the furnace, substantially as and for the purpose specified.

10,943. **HYDRAULIC VALVE.** HUDSON R. KINSLER, McKee's Rocks, Pa. Filed May 24, 1888. Serial No. 275,261. Original No. 362,003, dated May 1, 1888.

Claim.—1. In a hydraulic valve, the combination, with the valve-casing having an enlarged chamber, 6, a pressure-port communicating therewith, a machine-port, 5, and a cylindrical bore between the port 5 and the chamber 6, of a valve-stem having a packing-disk which

10,948.

encircles the valve-stem and closes the space between the stem and the side of the said cylindrical bore, said packing-disk working with the valve-stem between the port 5 and the chamber 6 and into the chamber 6, substantially as and for the purpose set forth.

2. In a hydraulic valve, the combination, with the valve-casing having an enlarged chamber, 6, a pressure-port communicating therewith, a machine-port, 5, and a cylindrical bore between the port 5 and the chamber 6, of a valve-stem having a packing-disk which encircles the valve-stem and closes the space between the stem and the side of the said cylindrical bore, said packing-disk working with the valve-stem between the port 5 and the chamber 6 and into the chamber 6, said disk being cup-shaped and the concavity being on the side next the chamber, substantially as and for the purpose set forth.

3. In a hydraulic valve, the combination, with the valve-casing having a pressure-port, a machine-port, and an exhaust-port, of a valve-stem working within the casing and having a packing-disk which moves between the pressure-port and the machine-port, and a second packing-disk which moves over the exhaust-port, said disk being concave, the concavity being on that side of the disk which is foremost in the motion of the valve over the port when the disk is not under pressure, substantially as and for the purpose set forth.

DECISIONS
OF THE
COMMISSIONER OF PATENTS
AND OF
UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Supreme Court of the United States.

HOLLAND *v.* THE SHIPLEY-TYRRELL MANUFACTURING COMPANY.

Decided May 14, 1888.

1. HOLLAND—LEAD-HOLDERS FOR PENCILS.
Letters Patent No. 292,313, granted January 22, 1884, to John Holland, for improvements in lead-holders for pencils, adjudged invalid for lack of patentable invention.

2. PATENTABLE INVENTION—WHAT IS NOT.
The specification disclosing that the slots, the screw-thread within, and the outer sleeve being all old, and the combination of two or more slots with the sleeve and a single slot with the screw-thread being also old, it required no invention to make two or more slots in a tube threaded inside.

APPEAL from the Circuit Court of the United States for the Southern District of Ohio.

Mr. G. J. Murray, *Mr. E. E. Wood*, and *Mr. Edward Boyd* for the appellee.

Mr. Justice GRAY delivered the opinion of the Court.

This is an appeal from a decree dismissing a bill in equity for the infringement of Letters Patent granted to the plaintiff January 22, 1884, for improvements in lead-holders for pencils, which (omitting the drawings and the explanation of them) fully shows the invention claimed, and the form of lead-holders or lead-tubes previously in use and known to the patentee, as follows:

The object of my present invention is to hold the lead or crayon in pencils from slipping back within the tube when pressed upon by the act of writing, without danger of breaking the lead.

Lead-tubes now in common use are usually slotted at the lower end to form elastic clamping-fingers, which fingers are closed upon the lead, near its point end by a sleeve or a tube which moves longitudinally over the fingers. These fingers are either smooth upon the inside, or terminate at their ends in sharp inward projections or claws. The first kind soon become so smooth that the lead slips back when borne upon in the act of writing, and the second frequently breaks the lead when the clamping-sleeve is tightened up, and when tightened up carefully the lead often breaks in use, when writing with the pencil inclined. I overcome both of these objections by making a fine screw-thread within the lower end of the tube before it is slotted to form the clamping-fingers.

* * * * * * *

The clamping-fingers may, instead of being screw-threaded upon the inside, be serrated or roughened to accomplish the same result; but the screw-thread is much better, because by this means a uniformly-even roughened surface can be made within the lower end of the tube at comparatively small expense; and, as these pencils are designed to take the place of the common lead-pencil, they must be made cheaply to insure their introduction into general use.

I am aware that it is old to provide a pencil-case for holding ordinary lead-pencils with a sliding ring, to which are secured spring-clamps having their holding-surfaces serrated, and having their shanks bent to approach each other, then jut outwardly and downwardly at their free ends, so that a ring-slide may be moved upon said shanks to cause the free ends of the clamps to grasp or release a pencil; and I am also aware that it is old to provide the lead-holding tube of a pencil with an interior thread and a single slot. I therefore do not claim either of these devices.

I claim as my invention—

1. As a new article of manufacture, a lead-tube for pencils consisting, substantially as before set forth, of a tube provided at one end with internal or female threads and two or more longitudinal slots to form threaded fingers.

2. The combination, with the lead-tube provided at one end with internal threads and two or more longitudinal slots, of a clamping-sleeve adapted to be adjusted upon the slotted end of the tube to press the threaded fingers upon a lead, substantially as described.

It thus appears upon the face of the plaintiff's specification that there were already in use lead-holding tubes for pencils with two or more slots at the lower end, so as to form elastic clamping-fingers, closing upon the lead by means of a sliding sleeve, as well as tubes with a single slot and an interior screw-thread. The slots, the screw-thread within, and the outer sleeve being all old, and the combination of two or more slots with the sleeve, or of a single slot with the screw-thread, being also old, it is too clear for discussion that to make two or more slots in a tube threaded inside and sleeved outside required no invention, and it is therefore unnecessary to consider the evidence upon the question whether the plaintiff was the first person who did this.

Decree affirmed.

U. S. Circuit Court—Northern District of Illinois.

GRAHAM *et al. v.* PLANO MANUFACTURING COMPANY *et al.*

Decided February 20, 1888.

1. GRAHAM—HARVESTER.
Letters Patent No. 74,342, granted February 11, 1868, to Alvaro B. Graham, for an improvement in harvesters, again sustained, and Graham *Held* to have been the first to employ in a practical working machine the device covered by his patent.

2. INFRINGEMENT.
The first and second claims, covering the device by which the finger-bar is made to rise and fall at either end and rock forward or backward independently of the gearing-carriage by maintaining its connection with it, *Held* to be infringed by the defendant.

Messrs. Banning & Banning for the complainants.
Messrs. Coburn & Thacher for the defendants.

BLODGETT, *J.*:

The bill in this case charges the defendants with the infringement of Letters Patent No. 74,342, granted February 11, 1868, to Alvaro B. Graham, for an improvement in harvesters.

Infringement is charged of the first and second claims of the patent, which describe and cover the de-

vice by which the finger-bar is made to rise and fall at either end and rock forward or backward independently of the gearing-carriage, while maintaining its connection with it. The first claim is for the device shown, whereby the finger-beam is enabled to rise and fall at either end and rock forward or backward independently of the gearing-carriage; and the second claim covers this device, together with a lever, by which the finger-beam may be rocked by the driver or operator of the machine, for the purpose of setting its guard-fingers at any desirable inclination to the horizontal line.

The defenses interposed are, first, want of patentable novelty; second, public use of the device for more than two years before the patent in question was applied for; third, that defendants do not infringe.

This patent has been twice before this court, first in the case of *Graham* v. *Gammon et al.*, in July, 1877, where the controversy was as to the validity of the claims now in question, (reported 7 Biss., 490,) and second in *Graham* v. *McCormick et al.*, (10 Biss., 39,) where the same claims were in controversy, and in the Eastern District of Wisconsin in the case of *Graham* v. *Geneva Lake Manufacturing Company*, decided by his honor Judge Dyer in October, 1880, involving a controversy over the same claims.

The defense in this case has made an exhaustive presentation in their proofs of the prior art covered by these two claims, and also several cases of alleged prior use of the devices for more than two years before the patent was applied for.

It seems to me, in view of the thorough and careful examination which this patent has heretofore received from this and other courts, that the only questions left open for consideration in this case are that of infringement and whether the defendants have shown by the proof any substantially different state of facts upon the question of novelty than was shown in the earlier litigation. It is true that a larger number of exhibits of former patents, illustrating the condition of the prior art, are introduced in this case than were introduced or considered in the former cases; but I see nothing in the additional exhibits, patents, models, and drawings offered in this case which is or can be treated as anything but mere cumulative evidence, and nothing which seems to me to any more nearly anticipate the devices here in question than were shown in the Dolph, Zug, Ball, Bartlett, and Bramer devices considered in the former cases. The Bramer patent having been considered by Judge Dyer in the *Geneva Lake Manufacturing Company* case, and it appearing in this case that while the Bramer patent is not alluded to in the opinion in *Graham* v. *McCormick*, yet it was brought to the attention of the court on a motion for rehearing and strenuously pressed as an anticipation of the complainant's device, and yet, notwithstanding this exhibition of the Bramer patent, the motion for rehearing was denied, a fact of much cogency to my mind in view of my knowledge of the exceedingly thorough and cautious methods of the late circuit judge of this circuit before whom *Graham* v. *McCormick* was heard.

In regard to all the testimony in this case, illustrating the state of the art in the field to which the complainant's invention belongs, both that which has been passed upon in the former cases and that which is brought forward for the first time in this case, it may be said that a review of this proof, in the light of what Graham did, shows that several inventors who preceded him in point of time groped about or approximated to his device, and it is now comparatively easy, with the Graham machine before us, to make a Graham machine out of several of these older efforts in that direction; but the fact seems to remain unshaken by the proof in this case, as it did in the former cases, that none of them accomplished the result obtained by his invention, or made a machine organized and intended to secure that result by the means which he adopted and described. In other words, Graham seems to me to have been the first to embody in a practical working machine the device covered by his patent. A mere mechanic with a Graham machine before him may, without invention now, so alter and improve some of the clumsy attempts at the same object in the older art as to make these machines do what Graham's machine does; but they need the instruction of the Graham device to make these old machines a success. Graham achieved success, while his predecessors in the field had failed.

In the former litigation no attempt was made to defeat the patent by showing prior use for the term of two years before the patent was applied for, except use by the patentee himself, and this use was held to be only experimental, and it becomes necessary for a moment to consider the cases of prior use which are shown in this record. There are three instances of such alleged prior use presented by the defendants and relied upon.

First, what is known as the Bradley machine, which is claimed to have been manufactured and sold by the firm of C. C. Bradley & Son, or the Bradley Manufacturing Company, at Syracuse, New York, in 1863 and 1864. In regard to this machine it is sufficient to say that the proof is not satisfactory to my mind that it was made and in use prior to the invention of Graham; second, that it does not, as illustrated by the model produced in evidence, show the free rocking movement which is provided for and obtained in the complainant's patent, and, thirdly, that whatever was contained in this Bradley machine was but an experiment, which was abandoned after a trial of a couple of seasons, and the experiments were never carried so far as to produce an acceptable and practical device like that covered by the complainant's patent. The proof in this case shows that C. C. Bradley & Sons were manufacturers of harvesting-machines at Syracuse, New York, under a license from Mr. M. G. Hubbard, the inventor and patentee of the main features of their machines; that in 1862 Hubbard invented the tilting and rocking device which the Bradleys claimed was embodied in the machine now urged as an anticipation of this patent, and yet the proofs show that neither Hubbard nor Bradley ever patented this device, and that after using it for two seasons it was abandoned and none thereafter made. With the knowledge that this court has acquired by long experience of the characteristics of inventors and manufacturers I can hardly deem it probable that if Hubbard had made the improvement shown in the Bradley model he would not have secured it by letters patent, as Bradley was at that time paying him a royalty on all machines manufactured, and this feature was certainly a new and useful improvement worthy of a patent at that time. The advantages of a floating finger-bar readily adjusting itself to the inequalities of the surface of the ground upon which the machine was to operate were so obvious and so manifestly a step in advance of the art as it existed at that time that it seems to me that an alert inventor like Hubbard, or an intelligent manufacturer like Bradley, who had devised or thought he had devised a practical device for such a finger-bar, would have made haste to cover it by a patent, and this improbability certainly goes far in my mind to raise doubt as to whether this machine, even if its use was fully established, could be held to be an anticipation of the complainant's device. A working machine constructed after this model might be said to contain a germ or suggestion of the Graham device, but so imperfect as to be no practical improvement, and I think I am fully supported by the proof in the conclusion that the Bradley machine should be considered as an abandoned experiment.

The next machine presented as an anticipation is what is described as the Preston machine, and the use of it is established by the testimony of Mr. King and H. C. Preston, who testifies that he made a machine in the summer of 1861, at Manlius, New York, embodying substantially the features covered by the patent now under consideration and sold it to a Mr. J. L. Pope, a farmer living at that time near Manlius. The machine itself is not produced, and we have only the unaided recollection of Mr. Preston and Mr. Pope as to how the machine embodied the features of the first two claims of the complainant's patent. Mr. Preston has put into the case with his deposition an illustrative model of the machine which he made and sold to Pope, which shows a machine very similar, as far as the features in question are concerned, to the Bradley machine as shown by the Bradley illustrative model. In fact, one might conclude that the Bradley machine was but an embodiment of the idea shown in this model. I attach but very little importance to the testimony of Mr. Pope, as he was a farmer not specially conversant with the construction of harvesters any further than any farmer who has used them and cannot be supposed to remember after the lapse of over twenty-five years what particular mechanical devices were used to secure a rocking and tilting finger-bar in his machine, if the machine contained any such characteristics. Mr. Preston does not, I must say, stand in the best light before the court as a witness, as the proof certainly tends to show that he attempted, at least, to dispose of his testimony to the highest bidder in this case; but even if it is all true, it only shows the production of a machine like the Bradley, in which it may possibly be said the embryo of the Graham invention may be found—that is, it is an attempt to secure a floating finger-bar, but by different devices from those adopted by complainants or by any of the later machines. From Preston's own testimony, given on cross-examination, I conclude that this single machine, which he says he made and sold to Pope, did not contain the devices in question, and the most satisfactory circumstance in support of that conclusion is the fact that Preston afterward took a patent for an improvement in harvesting-machines in which the device in question was entirely omitted, and I cannot believe that he would have failed to claim a patent for such device if he had invented and put it into use. I conclude, therefore, that this one machine made by him and sold to Pope, if it contained any attempt at an adjustable finger-bar, was so far a failure in that respect that he did not consider it worth his while to either follow the improvement further or cover it by a patent.

The last case of prior use cited by the defendant is by Frank Bramer. It is claimed on the part of the defendants that Bramer conceived the idea of a machine in the fall of 1863, embodying the adjustable finger-bar in substantially the same form in which it is now shown in the defendant's machine, defendant's machine being manufactured under what is known in the art as the Bramer patent, issued in 1865 to this same Frank Bramer. Bramer himself is dead, and his testimony is not obtainable in the case; but the proof in regard to his having made this machine at the early day now claimed is so contradictory that I cannot say that it is established so as to come even within the rule contended for by the defendant that Bramer, having obtained a patent at an earlier day than Graham, the burden of proof is shifted from the defendant to Graham to show that he (Graham) really was older in point of invention than Bramer. Taking the testimony as it now stands, I do not think it is established by the defendants that Bramer perfected his invention so far as the floating finger-bar is concerned until some time after Graham's device was perfected and he had made an operative machine. The conduct of Bramer himself in dealing with the owners of this patent after its validity had been sustained by the courts is such as to throw great doubt upon this picked-up testimony from persons who claim now to have had knowledge of the facts in reference to the time when Bramer made his completed machine. Bramer himself must certainly be presumed to have known better than these witnesses now produced when he made a machine with a floating finger-bar, such as is shown in his patent, and if he had in fact made such a machine as early as now stated by these witnesses it seems incredible to me that he would have settled, or consented to a settlement, with the owners of the Graham patent. It must, I think, be conceded that the testimony in regard to prior use has been industriously collected, and if it could all be accepted as true no doubt there is enough in this record to defeat this patent in the light of the late decision of the Supreme Court in *Andrews et al.* v. *Hovey*, (41 O. G. 1162.)

As to the issue of infringement, Graham secures the tilting and rocking motions of the finger-beam by means of the swivel-joint M', which attaches the vibratable link to the body of the machine, and the swivel-joint M', located in the draft-rod at the point where the draft-rod is attached to the shoe. Defendants insist that their machine does not contain these two swivel-joints. Defendants use in place of the swivel-joint M' a ball-and-socket joint, which is in all respects

the equivalent of and substitute for Graham's swivel-joint. In fact, this ball-and-socket joint, as shown in defendants' machine, is nothing but a swivel-joint, as it is limited to the rotary motion instead of being a universal joint, which is the characteristic of the ball-and-socket joint proper, so that defendants' ball-and-socket joint is in effect nothing but the Graham swivel-joint located at the same place and performing the same function as Graham's swivel-joint M'.

The defendants' machine is what is known as a "front-cut" machine—that is, the sickle-bar operates in front of the carrying-wheel instead of behind it, and the movement of the sickle-bar and vibratable link of the machine is accomplished by means of a push-bar or thrust-rod instead of Graham's drag-bar; but Graham provided in his specifications that the cutter-bar might be located in front of the wheels, and in that event his draft-rod would become a push-bar. This change in the location of parts involves some change, of course, in the adaptation of the elements of the device to produce the same result in a front-cut machine as in a rear-cut machine; but I find no difficulty in locating the Graham swivel-joint M' in the defendants' machine. Instead of locating this joint in the draft-bar where it connected with the shoe, as Graham does, the defendant has placed the swivel-joint in the shoe at the place where the shoe is attached to the vibratable link. This joint in the shoe, whereby the cutter-bar is attached to the vibratable link, in my opinion, corresponds in function, location, and every other characteristic with Graham's swivel-joint M'.

The defendants' push-rod is attached by a hinge-joint to the vibratable link, so that the link can rock, and thereby rock the cutter-bar, thus allowing the defendants' vibratable link the same motion allowed to the Graham link by his swivel-joint M', and, in my opinion, even if the proofs required that Graham should in the construction of his patent be limited to his special devices, I think the defendant has adopted those special devices.

I am therefore of opinion that no sufficient defense is made out in this case, and that the complainants are entitled to a decree for an accounting.

U. S. Circuit Court—Eastern District of Missouri, Eastern Division.

HUBER *et al. v.* N. C. NELSON MANUFACTURING COMPANY.

Decided April 9, 1888.

DEMURRER—PRACTICE.

After complainants had made out a *prima facie* case, it is too late for defendants to withdraw answer and file a demurrer.

Mr. Paul Bakewell for the complainants.
Mr. Benjamin F. Rex and *Messrs. Taylor & Pollard* for the defendant.

THAYER, *D. J.*, (orally:)

This is a proceeding in equity. After the issues had been made up and the complainants had made their *prima facie* case, the defendants appeared and asked leave to withdraw their answer and file a demurrer to the bill on the ground that Huber and Boyle were improperly joined as complainants.

I have looked at the bill, and it appears that Henry Huber and Boyle, the complainants, are each the owner of a patent for an improvement in different parts of the same machine or piece of mechanism. The bill shows that Huber is also a licensee under the Boyle patent, and, as such licensee, has the right to make, use, and sell the invention covered by the Boyle patent throughout the United States. It furthermore appears that he is engaged in the manufacture and sale of a machine or piece of mechanism that embodies both his own invention and that of Boyle, the two inventions being susceptible of conjoint use. The bill also shows that the defendant is engaged in selling a machine or piece of mechanism which is claimed to be an infringement upon the claims both of Huber and of Boyle under their respective patents. Now, on this state of facts I am of the opinion that the leave to withdraw the answer and file a demurrer because of a misjoinder of parties plaintiff should be denied for the following reasons: In the first place, the motion comes too late, after the issues have been made up and the complainants have made their *prima facie* case. In the second place, it does not appear to me that any harm will be done to the defendants in allowing both of the complainants (who are now complainants) to remain parties to the proceeding; and in the third place, it does not appear to me at all clear that a demurrer would be tenable upon the facts which I have stated, even if the answer was withdrawn and the demurrer was filed. It seems to me probable that both complainants may lawfully join in the bill. It appears to me there are some reasons shown by the bill why both of these complainants should remain parties to the proceeding.

THE OFFICIAL GAZETTE is published every Tuesday, simultaneously with the weekly issue of patents. From January 1, 1872, (the commencement of its publication,) to June 30, 1886, it was published and bound in semi-annual volumes; since July 1, 1886, in quarterly volumes. All subscriptions must commence with the beginning of a volume; none taken for less than three months. Terms: To all subscribers within the United States and Canada, $5 per annum; to foreign subscribers, $7; single copies, 10 cents; bound semi-annual volumes, (prior to June 30, 1886,) full sheep, $4 per volume; bound quarterly volumes, (subsequent to July 1, 1886,) full sheep, $2.75 per volume. No club rates. Payment in advance. All orders should be addressed to "The Commissioner of Patents, Washington, D. C."

Fraudulent Practices by Attorneys.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., April 16, 1888.

The attention of this Office having frequently been called to circulars and communications of persons pretending to have access to the records of this Bureau, and claiming to possess information of the pendency of applications for patents, notice is hereby given the public that all such persons in so advertising themselves are acting under false representations and are guilty of unprofessional conduct, and should not be entitled to credit.

The Office has also received information that certain attorneys disbarred from practice under section 487 of the Revised Statutes are continuing to prosecute applications for patents under the names of other persons.

Hereafter a list will be published in the OFFICIAL GAZETTE containing the names and addresses of all such persons, and the public warned against employing them or intrusting applications or interests to their charge.

BENTON J. HALL, *Commissioner.*

The Office has information that *Isaac S. McGiehan, No. 135 Broadway, New York*, a disbarred attorney, has been practicing under the name of *Alexander Mehnde*.

Publishers' Catalogues.

This Office would be pleased to receive from manufacturers and publishers such catalogues, circulars, price-lists, or other advertisements relating to the sciences and mechanical arts as are published by them for gratuitous distribution; but notice is hereby given such manufacturers or dealers who feel disposed to send their publications that not less than three copies should be forwarded in order that the subjects may be properly indexed, classified, and substantiated in the Scientific Library for convenient and ready reference.

Issue of July 17, 1888.

DESIGNS.

18,457.—MUSTARD-CUP.—*Thomas B. Atterbury*, Pittsburg, Pa. Application filed May 26, 1888. Serial No. 275,348. Term of patent 7 years.

18,458.—HANDLE FOR SPOONS AND LIKE ARTICLES.—*John M. Culver*, Newburyport, Mass. Application filed April 5, 1888. Serial No. 269,761. Term of patent 7 years.

18,459.—ORNAMENTATION OF A SPOON, FORK, OR KNIFE HANDLE.—*Julius H. Davis*, Philadelphia, Pa. Application filed April 12, 1888. Serial No. 270,494. Term of patent 7 years.

18,460.—LADY'S BLOUSE.—*Henrietta F. Duke*, New York, N. Y., assignor to *The Butterick Publishing Company, (Limited,)* same place. Application filed June 15, 1888. Serial No. 277,268. Term of patent 3½ years.

18,461.—TOP FOR INCASED VESSELS.—*John A. Frey*, New York, N. Y., assignor to *C. Riessner and Company*, same place. Application filed May 19, 1888. Serial No. 274,401. Term of patent 14 years.

18,462.—HANDKERCHIEF.—*Francis M. Gideon* and *Daniel Rhodes*, Washington, D. C. Application filed June 14, 1888. Serial No. 277,156. Term of patent 3½ years.

18,463.—DRESS-MAKING TOOL.—*Lovett B. Hale*, Buffalo, N. Y. Application filed September 21, 1885. Serial No. 177,780. Term of patent 14 years.

18,464.—FRINGE.—*George S. Hensel*, *Louis D. Valetton*, and *Frank E. Cook*, Philadelphia, Pa., assignors to *The Hensel, Colladay Company*, same place. Application filed April 28, 1888. Serial No. 272,211. Term of patent 7 years.

18,465.—LAMP-SHADE.—*Louis Hinrichs*, New York, N. Y. Application filed April 19, 1888. Serial No. 271,227. Term of patent 7 years.

18,466.—PITCHER.—*Louis Hinrichs*, New York, N. Y. Application filed June 6, 1888. Serial No. 276,264. Term of patent 7 years.

18,467.—SURFACE ORNAMENTATION OF WALLS.—*Frederick Koskul*, Williamsport, Pa. Application filed March 17, 1888. Serial No. 267,580. Term of patent 14 years.

18,468.—BADGE.—*Edwin I. Nottingham*, Washington, D. C. Application filed June 16, 1888. Serial No. 277,377. Term of patent 3½ years.

18,469.—HANDKERCHIEF.—*Rufus H. Rose*, New York, N. Y. Application filed June 16, 1888. Serial No. 277,376. Term of patent 3½ years.

18,470.—ORNAMENTATION OF GAME-TABLETS.—*J. Walter Spalding*, New York, N. Y., assignor to *A. G. Spalding & Brothers*, Chicago, Ill. Application filed January 12, 1888. Serial No. 260,379. Term of patent 7 years.

18,471.—VASE FOR LAMPS, &c.—*Charles S. Upton*, New York, N. Y. Application filed April 23, 1888. Serial No. 271,646. Term of patent 7 years.

18,472.—RANGE OR COOKING-STOVE.—*George C. Bascom*, Lansingburg, assignor to *J. S. & M. Peckham*, Utica, N. Y. Application filed June 7, 1888. Serial No. 276,412. Term of patent 7 years.

18,473.—FRONT FOR MAIL-BOXES.—*Archibald Culbert* and *John L. Culbert*, New York, N. Y. Application filed May 25, 1888. Serial No. 275,081. Term of patent 7 years.

18,474.—HELMET.—*Julius Heimann*, New York, N. Y. Application filed June 14, 1888. Serial No. 277,153. Term of patent 3½ years.

TRADE-MARKS.

[Certificates of registration of Trade-Marks numbered 6,191 and upward are registered under the act of March 3, 1881.]

15,681.—PERFUMES AND PERFUMED ARTICLES FOR THE TOILET.—*J. & E. Atkinson*, London, England. Application filed June 13, 1887. Used since April 19, 1887.

"A shield-shaped label having a groundwork composed of microscopic manuscript lettering."

15,682.—BOOTS AND SHOES.—*Belknap, Carpenter & Co.*, Columbus, Ohio. Application filed March 5, 1888. Used since July 1, 1887.

"The name 'BELKNAP, CARPENTER & CO.' and the words 'SUGAR GROVE KIP,' arranged on an elliptical green-colored label."

15,683.—RAILWAY STOCK-CARS.—*George D. Burton*, Boston, Mass. Application filed May 31, 1888. Used since 1886.

"The representation of a stock-car having the interior exposed by removing the end of the car and showing a number of cattle standing crosswise of the car, some quietly feeding or drinking from a trough, and devices on either side of the car for the comfort of the animals and for the convenience of the persons in charge of the car."

15,684.—BOOTS AND SHOES OF ALL DESCRIPTIONS.—*Alfred J. Cammeyer*, New York, N. Y. Application filed June 15, 1888. Used since June 1, 1888.

"The words 'CAMMEYER'S TRUE-FORM.'"

15,685.—CHEWING-GUM.—*William D. Chase*, New York, N. Y. Application filed June 8, 1888. Used since March, 1888.

"The word 'BASEBALL.'"

15,686.—CATARRH SPECIFIC.—*Drs. Filkins Bros.*, Albany and Rochester, N. Y. Application filed May 15, 1888. Used since August, 1883.

"The three pictures or portraits of the three members of the registrants' firm."

15,687.—COLLARS AND CUFFS.—*Joseph Fowler*, Glens Falls, N. Y. Application filed June 11, 1888. Used since April 2, 1888.

"The word 'GLEN.'"

15,688.—BAKING-POWDER.—*Gans & Miller*, Brooklyn, N. Y. Application filed June 1, 1888. Used since April 1, 1888.

"The word 'RIVAL.'"

15,689.—MEN'S AND BOYS' HATS.—*C. H. Garden & Co.*, Philadelphia, Pa. Application filed June 11, 1888. Used since April 15, 1887.

"The word 'ELK' and the representation of an elk."

15,690.—UMBRELLAS.—*Alvah Hall & Co.*, New York, N. Y. Application filed June 1, 1888. Used since May 23, 1888.

"The word 'REGENT.'"

15,691.—SHIRTS AND DRAWERS.—*Havens, Geddes & Co.*, Terre Haute, Ind. Application filed May 28, 1888. Used since November 1, 1886.

"The words 'WABASH MANUFACTURING COMPANY.'"

15,692.—GOAT AND SHEEP SKIN LEATHER.—*Julius Helburn*, New York, N. Y. Application filed June 6, 1888. Used since January 1, 1887.

"The representation of a child's head with wings extending therefrom and clouds about the head and wings."

15,693.—BOOTS AND SHOES.—*Hill & Greene*, Beverly, Mass. Application filed June 9, 1888. Used since March 1, 1886.

"The words 'LITTLE GIANT.'"

15,694.—PAINTS AND PIGMENTS.—*Thomas Hubbuck & Son*, London, England. Application filed June 7, 1888. Used since February, 1856.

"The representation of a lion and unicorn supporting a shield quartered surmounted by a crown."

15,695.—POCKET CUTLERY.—*The Humason & Beckley Manufacturing Company*, New Britain, Conn. Application filed June 18, 1888. Used since 1854.

"The letters and character 'H. & B.'"

15,696.—PANTALOONS.—*The Improved Newburgher Pantaloons Manufacturers*, Brooklyn, N. Y. Application filed May 14, 1888. Used since February 1, 1887.

"The representation of two lions facing each other, with their fore feet upon stumps of trees, in the act of attempting to tear a pair of pantaloons, each lion holding between its teeth one leg of the pantaloons."

15,697.—GIN.—*P. Loopuyt & Co.*, Schiedam, Holland. Application filed June 14, 1888. Used since January, 1840.

"The representation of an hour-glass."

15,698.—GIN.—*P. Loopuyt & Co.*, Schiedam, Holland. Application filed June 14, 1888. Used since January, 1840.

"The word 'HOUR-GLASS.'"

15,699.—PHOTOGRAPHIC FLASH-LIGHT MATERIAL.—*Thomas H. McCollin & Co.*, Philadelphia, Pa. Application filed June 6, 1888. Used since December 1, 1887.

"The word 'BLITZ.'"

15,700.—COLLARS AND CUFFS.—*Reversible Collar Company*, Boston and Cambridge, Mass. Application filed June 2, 1888. Used since July 1, 1878.

"The word 'LINENE.'"

15,701.—BEER-OIL.—*Joseph Stern*, New York, N. Y. Application filed May 23, 1888. Used since January 1, 1882.

"The representation of a woman and churn and the word 'PROGRESS.'"

15,702.—COFFEE.—*Humphrey P. Webster*, Boston, Mass. Application filed June 9, 1888. Used since May 1, 1888.

"The word 'MALT.'"

15,703.—LAUNDRY BLUE.—*Hiram W. Weeks*, Philadelphia, Pa. Application filed June 6, 1888. Used since April 12, 1888.

"The words 'SNOW FLAKE.'"

15,704.—CORSETS.—*Worcester Corset Company*, Worcester, Mass., and Chicago, Ill. Application filed June 16, 1888. Used since May 20, 1888.

"The words 'ROYAL WORCESTER.'"

LABELS.

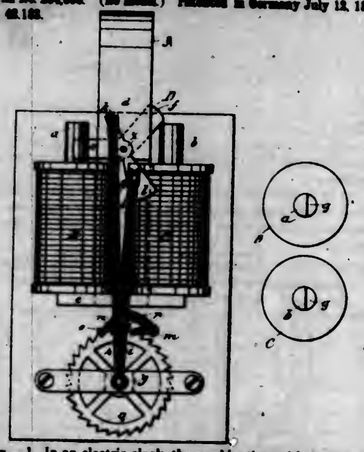
5,652.—Title: "DR. J. H. BARBER'S LINIMENT."—*James E. Barber*, Davis City, Iowa. Application filed January 31, 1888.

5,653.—Title: "DOLE'S PERFECT HORSE & CATTLE INVIGORATOR." *Wm. H. Dole*, Melrose, Mass. Application filed June 25, 1888.

5,654.—Title: "WEST INDIA SKIN CREAM."—*I. W. Earnest*, San Antonio, Tex. Application filed April 3, 1888.

5,655.—Title: "DR. HOFFMANN'S SWEDISH HERBAL ELIXIR."—*Edward J. Liebetrut*, Buffalo, N. Y. Application filed June 26, 1888.

5,656.—Title: "PUCHTA'S INSTANTANEOUS FLASH-LIGHT-TABLETS." *Charles Puchta*, New York, N. Y. Application filed June 4, 1888.

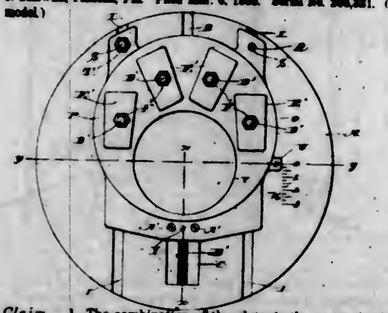


5,657.—Title: "HOT SPRINGS BLOOD PURIFIER." (FOR A MEDICINE.) *A. J. Saguin*, Jacksonville, Fla. Application filed June 19, 1888.

5,658.—Title: "STONAKER'S CHERRY."—*William Stonaker*, Cranbury, N. J. Application filed June 20, 1888.

PATENTS

GRANTED JULY 17, 1888.



886,103. SECONDARY ELECTRIC-CLOCK MOVEMENT. CARL BORGSTEDE, Halle-on-the-Saale, Prussia, Germany. Filed Feb. 20, 1888. Serial No. 264,692. (No model.) Patented in Germany July 12, 1887, No. 42,183.

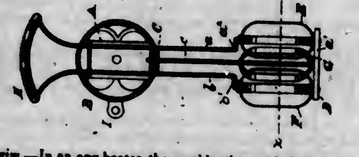
Claim.—1. In an electric clock, the combination, with magnet A, of cores *a b*, in connection with one pole of said magnet, a two-armed armature, D, in connection with the opposite pole of said magnet, coils B and C on said cores, levers *k l h i*, adapted to be operated by movement of said armature, as set forth, and pawls *n m* on said levers *h i*, respectively, together with ratchet-wheel *q*, adapted to be revolved by said pawls, for the purpose set forth.

2. The combination of magnet A, cores *a b*, having recesses *g*, coils B C thereon, armature D, having arms *e f*, levers *k l h i*, pawls *n m*, pins *o p*, and ratchet-wheel *q*, substantially as and for the purpose set forth.

886,104. LATHE-CHUCK FOR TURNING EXCENTRICS. WILLIAM T. BREWER, Palatka, Fla. Filed Mar. 6, 1888. Serial No. 266,321. (No model.)

Claim.—1. The combination of the plate A, the eccentric-plate secured thereto and adjustable thereon, for the purpose set forth, said eccentric-plate having the circular offset P and the eccentric-opening V, and means, substantially as specified, to clamp the eccentric to the eccentric-plate.

2. The combination of the face-plate having the slots I, the eccentric-plate, and the bolts S, having their heads secured in slots I and movable longitudinally therein, said bolts clamping the eccentric-plate to plate A, substantially as described.



3. The combination of the plate A, having slot B, opening C, communicating therewith, and parallel slots I, the eccentric-plate fitted on the face-plate A and having the rib or flange C', engaging slot B, and the nut X, engaging opening C, and the adjusting-screw B', swiveled to plate A and engaging nut X, substantially as described.

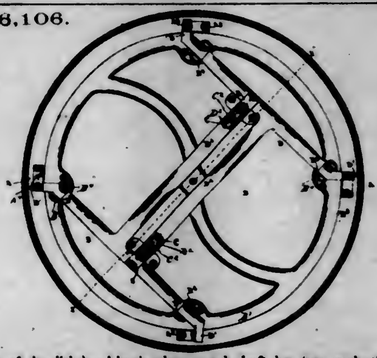
4. The combination of the face-plate having the graduated scale K and the eccentric-plate secured to the face-plate, adjustable thereon, and having the ear or pointer U, sweeping over the scale, for the purpose set forth, said eccentric-plate being further provided with the circular offset P and the eccentric-opening V, substantially as described.

5. The combination of the face-plate, the eccentric-plate secured thereto and adjustable thereon, the bolts D', projecting from the said plate, clamps E' on said bolts, and the adjusting-nuts F', engaging the bolts, substantially as described.

6. The combination of the face-plate and the eccentric-plate secured thereto and adjustable laterally thereon, said eccentric-plate having the circular offset P, provided with eccentric-opening V, substantially as described.

886,105. EGG-BEATER. CHARLES A. BRYANT, Wakefield, Mass. Filed Apr. 26, 1887. Serial No. 236,066. (No model.)

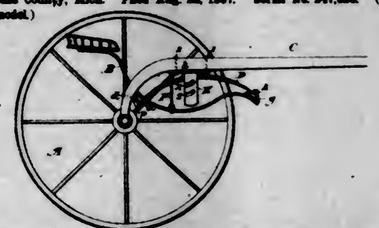
Claim.—In an egg-beater, the combination, with the frame A and the driving gear-wheel B, supported thereby and provided with a crank or handle, L, of the foot *a'*, connected with the said frame, a shaft, *c*, having bearings in the said foot and frame and provided with a pinion, C, meshing with the said gear-wheel, and with a set of cutting beater-blades, G, fixed thereto, one or more sets of auxiliary beater-blades intermeshing with and thus adapted to be rotated by the positively-driven blades G, and one or more rods or wires on which the said auxiliary blades rotate, and which are connected to the said frame and foot at their ends, said rods having beads to prevent the said auxiliary blades from rising, substantially as set forth.



886,106. CLOSURE FOR CHURNS. ELISHA P. BRYDEN, Rockford, Ill. Filed May 1, 1888. Serial No. 273,023. (No model.)

Claim.—1. In combination, the disk-head, the ratches, the rock-shafts provided with outwardly-projecting cams adapted to engage with retaining-lugs projecting from the end of a churn, and inwardly-projecting detents arranged and adapted to engage endwise with the ratches, and suitable bearings for attaching and supporting the same in operative position and relation.

2. In combination, the ring-head adapted to be peripherally seated in the recess of a churn and provided with upwardly-projecting studs, the latter being furnished with retaining-lugs, a disk-head with the ratches and upper rock-shaft bearing mounted thereon, the peripheral



386,106.

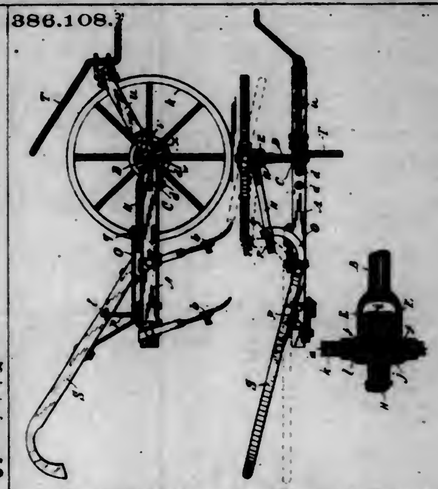
casing of the disk-head having lower rock-shaft bearings projecting upward therefrom, and the rock-shafts provided with outwardly-projecting cams adapted to engage with said retaining-lugs, and inwardly-projecting detents arranged and adapted to engage with said ratches, substantially as described, and for the purpose set forth.

386,107. TWO-WHEELED VEHICLE. J. WESLEY BOYD, Milton, Cass County, Mich. Filed Aug. 23, 1887. Serial No. 247,628. (No model.)

Claim.—1. In a two-wheeled vehicle and attachments, a hanger with slots S to receive the check-pin X, acting as a fulcrum to spring D by being connected thereto with eyebolt *t*, as above described, and for the purpose specified.

2. In a two-wheeled-vehicle spring attachment, a slot in the spring, in combination with the hanger E, slot S, check-pin X, connection-rod *t*, link U, thill C, and seat-frame B, as described, and for the purpose specified.

3. In a two-wheeled-vehicle spring and attachments, the connecting-clamp *g*, with extending member or post passing through hole in the spring near the end and held by a nut, substantially as described, and for the purpose specified.

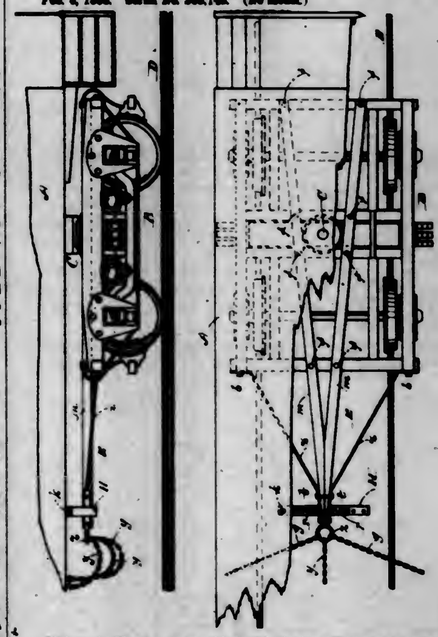


4. In a two-wheeled-vehicle spring and attachments, a link coupled to the spring and thill to allow the spring a forward and backward motion, in combination with the hanger E, spring D, connecting-clip *g*, connecting-rod *t*, and seat-frame B, as above described, and for the purpose specified.

386,108. WHEEL-CULTIVATOR. ROSS CONCOR, Crawfordsville, Ind. Filed Apr. 2, 1888. Serial No. 269,304. (No model.)

Claim.—1. In a cultivator, the combination of the following elements, namely: a plow-beam having a cultivator-plow attached thereto, an axle rigidly secured to the forward end of the plow-beam and projecting from one side thereof, a wheel-spindle pivoted to the outer end of the axle so as to swing in a horizontal plane, a carrying-wheel mounted on said spindle, a lever pivoted to the plow-beam and having the plow-handle secured thereto, and intermediate connecting mechanism connecting said lever and wheel-spindle, whereby the wheel-spindle is caused to swing in a horizontal plane by the swinging movement of the handle upon the plow-beam, substantially as and for the purpose specified.

2. In a cultivator, the combination of the arched draft-bar, the plow-beam having a cultivator-plow attached thereto, the forked axle rigidly secured to the plow-beam, the coupling-beam hinged at its rear end to said axle, so as to swing in a vertical plane thereon, and hinged at its forward end to the draft-bar to allow the latter to swing in a horizontal plane thereon, the wheel-spindle pivoted in the forked end of said axle, so as to swing in a horizontal plane, the carrying-wheel mounted on the spindle, the arm rigidly secured to the spindle and projecting backward therefrom, the lever pivoted to the plow-beam and connected with said arm, and the plow-handle secured to said



386,108.
